
No instrument has ever been placed before the medical profession which has given such universal satisfaction. The combination is such that the physician is able to meet every indication of Uterine Displacements. Falling Womb, Anteversion, Retroversion and Flexions are overcome by this instrument, where others fail. This is proven by the fact that, since its introduction to the profession it has come into more general use than all other instruments combined.

Among the many reasons which recommend this Supporter to the physician is its self-adjusting qualities The physician, after applying it, need have no fear that he will be called in haste to remove or readjust it, as is often the case with rings and various pessaries held in position by pressure against the vaginal wall, as the patient can remove it at will, and replace it without assistance.

The Abdominal Supporter is a broad morocco leather belt, with elastic straps to buckle around the hips, with concave front, so shaped as to hold up the abdomen. The Uterine Support is a cup and stem, made of highly polished hard rubber, very light and durable, shaped to fit the neck of the womb, with openings for the secretions to pass out, as shown by the cuts. Cups are made with extended lips, to correct flexions and versions of the womb. The cup and stem is suspended to the belt by two soft elastic rubber tubes, which are fastened to the front of the belt by simple loops. pass down through the stem of the cup and up to the back of the belt. These soft rubber tubes being elastic, adapt themselves to all the varying positions of the body, and perform the service of the ligaments of the womb. The instrument is very comfortable to the patient, can be removed or replaced by her at will, can be worn at all times, will not interfere with nature's necessities, will not corrode, and is lighter than metal. It will answer for all cases of Anteversion, Retroversions, or any Flexions of the womb, and is used by the leading physicians with never-failing success, even in the most difficult cases.

Our Reduced Prices are to Physicians, $6.00; to Patients, $10.00.

Instruments sent by mail, at our risk, on receipt of price, or by Express, C. O. D., with the Express charges for returning the money added.

☞ CAUTION.—Owing to the great sale and popularity of our instrument various and base imitations are sold by unscrupulous parties. In order to get the genuine, it is best to order direct from us.

Our valuable pamphlet, "Some Practical Facts about Displacements of the Womb," will be sent you free on application. 1281-1332

For Consumption and Wasting Diseases.

HYDROLEINE

Has been proved of the highest value in CONSUMPTION and all WASTING DISEASES, invariably producing IMMEDIATE INCREASE in FLESH and WEIGHT.

FORMULA OF HYDROLEINE.

Each dose of two teaspoonfuls, equal to 120 drops, contains:

Pure Oil,	**80 m. (drops.)**	**Soda,**	**1-3 grain.**
Distilled Water,	**35 m.**	**Boric Acid,**	**1-4 "**
Soluble Pancreatin,	**5 grains.**	**Hyocholic Acid,**	**1-20 "**

DOSE.—Two teaspoonfuls alone, or mixed with twice the quantity of soft water, to be taken thrice daily, with meals.

The principles upon which this discovery is based have been described in a treatise on "THE DIGESTION AND ASSIMILATION OF FATS IN THE HUMAN BODY," by H. C. BARTLETT, PH.D., F.C.S., and the experiments which were made, together with cases illustrating the effect of Hydrated Oil in practice, are concisely stated in a treatise on "CONSUMPTION AND WASTING DISEASES," by G. OVEREND DREWRY, M.D.

In these treatises the Chemistry and Physiology of the Digestion of the Fats and Oils is made clear, not only by the description of a large number of experiments scientifically conducted, but by cases in which the deductions are most fully borne out by the results.

☞ *Copies of these valuable works will be sent free, on application, to all who mention THE MEDICAL AND SURGICAL REPORTER.*

HYDRATED OIL,

HYDROLEINE,

WATER AND OIL,

May be described as partially digested oil, which will nourish and produce increase in weight in those cases where oils or fats not so treated are difficult or impossible to digest. In CONSUMPTION and other WASTING DISEASES the most prominent symptom is EMACIATION, of which the first is the starvation of the fatty tissues of the body, including the brain and nerves. This tendency to emaciation and loss of weight is arrested by the regular use of HYDROLEINE, which may be discontinued when the usual average weight has been permanently regained.

The ordinary so-called emulsions of Cod-liver oil and other fats, WHETHER PANCREATIZED OR NOT, merely remain in the form of a coarse mechanical mixture for a short time after agitation. The digestion of oil having in no sense been artificially produced, still devolves upon those functional powers the deficiency of which is the most prominent symptom in these cases.

HYDROLEINE is not a patent medicine or a secret preparation; the formula is on every bottle. Can be taken by the most delicate stomach; is immediately assimilated.

The permanence and perfection of the emulsion, and the extreme solubility of the HYDRATED OIL, solely prepared and sold by us under the name of HYDROLEINE, is shown by its retaining its cream-like condition as long as the purest Cod-liver Oil will retain its sweetness. Unlike the preparations mentioned, or simple Cod-liver Oil, it produces no unpleasant eructation or sense of nausea, and should be taken in such very much smaller doses, according to the directions, as will insure its complete assimilation; this, at the same time, renders its use economical in the highest degree.

To brain-workers of all classes Hydrated Oil is invaluable, supplying as it does the true brain food.

Economical in use—certain in result Tonic—Digestive and Highly Nutritive.

GRIMAULT & CO.'S PHARMACEUTICAL PRODUCTS.

Prepared with scrupulous care, under the immediate supervision of a practical chemist, at their model laboratory, at Neuilly, near Paris.

Offices and Salesrooms, No. 8 Rue Vivienne, Paris.

The attention of the medical profession is directed to a few leading products:—

CHAPOTEAUT'S PEPSICAL PEPTONES.—These *Peptones*, prepared with great care, contain only *Beef*, digested and rendered assimilable by a *Pepsin* made from the *Stomach* of the sheep, digesting 700 to 800 times its weight of fibrine. They possess great alimentary power and give to the digestive organs intense nutritive action.

These *Peptones* must not be confounded with other *Peptones*, prepared either with rennet of sheep or with the pancreas of pork. These Peptones come in three forms:

1. CHAPOTEAUT'S PEPSICAL PEPTONE POWDER. 2. CHAPOTEAUT'S PEPSICAL PEPTONE, CONSERVE. 3. CHAPOTEAUT'S PEPSICAL PEPTONE WINE.

IODIZED SYRUP OF HORSE RADISH.—A pleasant substitute for Cod-Liver Oil, prepared from juices of anti-scorbutic plants. Each tablespoonful contains one grain of Iodine so intimately combined as to be insensible to the action of starch.

DUSART'S SYRUP AND WINE OF LACTO-PHOSPHATE OF LIME.—In these preparations phosphate of lime is presented in the combination in which it exists in the stomach, after it has been acted upon by the gastric fluid. They are especially adapted, and have been used with great success in *Rachitic* and *Scrofulous Affections* in children; the *Languor* caused by too rapid a growth and development in youth; the *Debility* attendant upon old age; *Weakness in Females*, caused by the nursing of children; *Slow Convalescence;* certain forms of *Dyspepsia*, caused by the low vitality of the system. In cases of *Fractures*, their use has been found to cause a more *rapid formation of the Callus*, and in cases of wounds, the *cicatrization has been more prompt*, while the administration to children facilitates the general development, and especially the *process of Ossification and Dentition.*

Dusart's work on the "Physiological and Therapeutic Action of Phosphate of Lime" will be sent free, on application to Messrs. E. FOUGERA & CO.

DR. LERAS' PHOSPHATE OF IRON IN SOLUTION OR SYRUP.—A pleasant combination of Pyrophosphate of Iron and Soda, colorless and tasteless. It is readily assimilated and used with great success in *Chlorosis*, *Anæmia*, *Dysmenorrhœa*, *etc.*, replacing all other ferruginous preparations. It never cause constipation.

JULIEN'S LAXATIVE FRUIT.—A pleasant confection for constipation, and all diseases resulting therefrom, as *headache*, *hemorrhoids*, *cerebral congestions*, *biliousness.*

The above and all the other Preparations of *Messrs. Grimault & Co.*, and information in regard to the same may be obtained at all times from

Messrs. E. FOUGERA & CO., Importing Pharmacists, New York.

1294–1319eow.

THE INVENTION OF AN EMINENT FRENCH CHEMIST.

The Salvator for Invalids and the Aged. An Incomparable Ailment for the Growth and Protection of Infants and Children. A Superior Nutritive in Continued Fevers, and a Reliable Remedial Agent in all Diseases of the Stomach and Intestines.

TO PHYSICIANS AND THE PUBLIC.

THIS preparation is, as advertised, principally the GLUTEN derived, by chemical process, from VERY SUPERIOR GROWTHS OF WHEAT, and should not be confounded with burnt or boiled Flour, in which the GLUTEN or sanative qualities are destroyed or made medicinally inert, nor with Crushed Wheat, or finely ground Wheaten Grits, styled "Medicinal Food," and sold under various names, in which the starch and impurities contained in wheat are retained in larger quantity.

By Dubisson's formula, the starch, impurities and soluble matter found in the Wheat Cereal are effectually excluded, the GLUTEN only retained, which is condensed, granulated and prepared to keep in all climates, and justly entitled

—IMPERIAL GRANUM—

It is well known, and should be fairly considered, that nothing of merit can be favorably received and commended by the public without being followed by imitations of a questionable character. IMPERIAL GRANUM is not the exception, for no preparation has attracted more attention, nor been more fiercely imitated by competition, even to wording and shipping order.

Whilst again it can be truly said that no preparation ever offered for sale has been more carefully prepared and thoroughly tested, nor has met with a more welcome reception and universal approval, or afforded more relief to invalids or to young and suffering children and aged persons. This has been confirmed by thousands of testimonials from Chemists, Physicians, Heads of Families and the Press.

Respectfully,

E. HEATON.

This College has for its *collegiate year* two sessions.

Regular Session commences Wednesday, September 7th, 1881, and closes March 1st, 1882.

Recitation Term (optional) commences March 15th, 1882, and closes June 14th, 1882.

Graded Course of three terms, of six months each.

PLAN OF INSTRUCTION.

By *Lectures*, *Recitations* and *Clinics*, together with *practical work* in the Anatomical, Physiological, Chemical and Pharmaceutical Laboratories.

Clinics are held *daily*.

Clinical Work in Hospitals and Dispensaries is given to the Senior Class (see Clinics), in *small sections*, under the charge of a *Clinical Teacher*, in all the departments of Medicine and Surgery.

Three Large Hospitals and *two Dispensaries* afford unlimited material for instruction.

ADMISSION.—Candidates for admission are required to pass a preliminary examination, unless satisfactory documentary evidence can be presented, that is equivalent to the standard adopted. (See Catalogue.)

FEES.

Regular Session.—Matriculation, $5.00; Lecture Tickets, $50.00; Hospital Tickets, $10.00
Examination (final), $25.00.

Recitation Term.—$10.00 for those who have attended Regular Session; all others, $25.00, $15.00 of which will be applied on the next Regular Term.

Board and Rooms can be obtained for $3.00 to $5.00 per week, the average being $4.00.

For Catalogue and other particulars, address

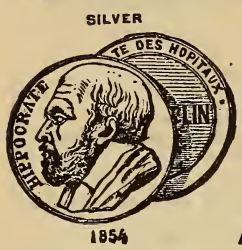
MATHEY-CAYLUS' GLUTEN



CAPSULES

OF

PURE COPAIBA AND OTHER MEDICINES.

Adapted and recommended for the cure of recent or chronic Gleets, Fluor Albus, etc., etc.

The MATHEY-CAYLUS' CAPSULES, *coated with gluten*, present the most perfect mode for administering Copaiba, Cubebs, Norway Tar, Turpentine, and other remedies, the disagreeable odor and taste of which are often a hindrance to their use. This mode of preparing capsules, which has been approved by the Academy of Medicine, has been recommended in their clinical lectures by eminent Professors in the hospitals of Paris, as well as in those of New York and London.

By the first physicians of the hospitals of Paris, London, and New York.

SPECIAL ADVANTAGES OF MATHEY-CAYLUS' GLUTEN CAPSULES.—Being formed of thin, transparent, and readily assimilated coating, they so cover and disguise the medicine to be given, that it can be taken without disgust, but with ease. In this respect, they differ widely from the gelatine capsules, which have a hard, thick coating, which swells beyond measure, in the stomach, are hard to be swallowed, and what is of great importance, they create disturbance in the digestive functions.

The special advantage of the coating of gluten consists in the fact that, notwithstanding its extra thinness, and although it softens under the action of the gastric juice, it can pass the stomach without breaking, and only in the intestines is the medicinal matter liberated; this accounts for the fact that Mathey-Caylus' Capsules never cause the nausea, eructations, and dyspeptic symptoms, which are complained of by many persons using other preparations.

Finally, their regular ovoid form, which is so favorable to swallowing, their pleasant appearance, which dispels all disgust, and the advantage of being entirely free from taste and smell, recommend the use of these capsules even to the most delicate persons.

Thankful to the Medical Profession for the liberal patronage heretofore bestowed upon us, we hope that they will continue their favors, and we are convinced that they will never have any reason to regret the generous welcome they have given to our preparations.

MATHEY-CAYLUS' CAPSULES are never sold, except in bottles having the following inscription printed in the glass: MATHEY-CAYLUS A PARIS. And each bottle contains 64 capsules, making them the cheapest capsules in the market.

The following different kinds of Mathey-Caylus' Gluten Capsules are now offered:

COPAIBA AND TANNIC ACID,
COPAIBA AND S. N. OF BISMUTH,
COPAIBA AND CATECHU,
COPAIBA AND MAGNESIA,
COPAIBA, CUBEBS AND ALUM,
COPAIBA, CUBEBS AND RHATANY,
COPAIBA AND RHATANY,
COPAIBA AND CITRATE OF IRON,
COPAIBA AND CUBEBS,
COPAIBA PURE,
COPAIBA, CUBEBS AND CARB. OF IRON,
VENICE TURPENTINE, NORWAY TAR, PURIFIED,
CUBEBS AND TURPENTINE,
CUBEBS AND TANNATE OF IRON,
CUBEBS AND ALUM,
CUBEBS PURE,
COPAIBA AND MATICO,
COPAIBA, IRON AND OIL OF SANDAL,
COPAIBA AND OIL OF SANDAL,
COPAIBA, PEPSIN AND BISMUTH,
COPAIBA AND TAR,
COPAIBA, CUBEBS AND OIL OF SANDAL.

JOHNSTONE'S IMPROVED

ADAPTABLE POROUS FELT SPLINTS.

AHL'S SPLINT MANUFACTURING COMPANY, LIMITED,

123 & 125 South Eleventh Street, PHILADELPHIA, PA.

THE ADAPTABLE POROUS SPLINTS, invented and improved by W. H. JOHNSTONE, have been tested extensively in both civil and military practice for a number of years, and have been endorsed and recommended in the most unqualified manner by the celebrated and distinguished Surgeons of America.

Their *porosity* is a peculiar and a valuable property. While the material is firm and insoluble, it permits readily the passage of air and fluids, so that, on one hand, the heat from the inflamed surface, the perspiration, and the morbid exhalations, are not confined, to the detriment of the patient, *as is the case in every other kind of splint*, but pass off freely; and on the other hand, lotions of cold or warm water, medicated or not with weak alcohol, carbolic acid, arnica, tincture, solutions of the sulphites, etc., can be constantly applied without disturbing the dressings. This, it will readily be seen, is a most invaluable property when the parts are bruised, lacerated, filled with extravasated blood, or erysipelatous, and give these splints a conspicuous advantage over all others.

From FRANK H. HAMILTON, M. D., Professor of Fractures and Dislocations in the Bellevue Hospital Medical College, author of "A Treatise on Fractures and Dislocations," etc.

Having examined carefully *JOHNSTONE'S IMPROVED ADAPTABLE POROUS FELT SPLINTS*, I feel warranted in recommending them to the Profession as superior to all other manufactured splints now in use. They possess all the essential qualities of a good splint, having firmness, pliability and lightness.

FRANK H. HAMILTON, M. D.,
Prof. Military Surgery and Fractures and Dislocations, Bellevue Hospital Col.

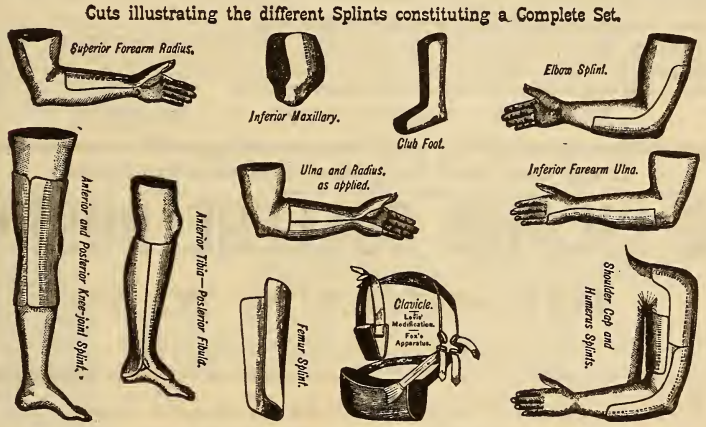
From PROF. D. HAYES AGNEW, Prof. Surgery, University of Penna.

1611 CHESTNUT STREET, PHILADELPHIA, *February 6th*, 1879.

The Adaptable Felt Splints, formerly known as those of Dr. Ahl, with the improvement now made by W. H. Johnstone, which renders them in every way superior to the former, I regard as very excellent appliances in the treatment of fractures.

D. HAYES AGNEW,
Prof. Surgery, University of Pennsylvania.

Cuts illustrating the different Splints constituting a Complete Set.



SPECIAL NOTICE TO THE PROFESSION AND TRADE.

Our *policy* heretofore in the introduction of JOHNSTONE'S IMPROVED ADAPTABLE POROUS FELT SPLINTS, has been to confine the sales and business negotiations directly to the Doctors themselves, declining in every case to sell our goods through Dealers; we having assured the Profession generally, both through our agents and catalogues, that *JOHNSTONE'S IMPROVED SPLINTS* could only be obtained by subscription.

We wish to announce, that owing to the large demand for our goods and the constant importunity on the part of *Surgeons* everywhere to place our Splints on sale with their Instrument Dealer or Druggist, to afford them greater convenience and facility in obtaining the pieces in duplicate, **we have at last acceded to that request, and hereafter** *JOHNSTONE'S CELEBRATED FELT SPLINTS* **can be obtained at most dealers in Instruments and Drugs throughout the United States, at the same price which they were heretofore sold, viz:**

A complete set, embracing fifty (50) pieces—twenty-five for adults and twenty-five for children—is thirty ($30) dollars. Extra or duplicate pieces can always be obtained from your DEALER, at one dollar each.

JOHNSTONE'S CELEBRATED SPINAL JACKET, for Curvatures and Deformities, have met with unparalleled success, and, from their merit, secured the unqualified endorsement and approbation of our celebrated orthopædic specialists, and particular expression of gratitude from the patients who are wearing them. For full information, send for Descriptive Circulars.

Should your Instrument dealer fail to have a supply of our Splints, and decline to carry them in stock, orders sent to us will receive prompt attention.

AHL'S SPLINT MANUFACTURING CO., Limited.
W. H. JOHNSTONE, Manager.

N. B.—If the Instrument Dealers of Philadelphia decline to supply its Physicians with our JOHNSTONE'S FELT SPLINTS on call, they will be furnished and delivered by us to any part of the city, at any time, on receipt of the price, viz. $1.00 each.

JOHNSTONE'S SPINAL FELT JACKET, any size, - - - - - - - - $25.00

MURDOCK LIQUID FOOD CO., Boston,

THE ONLY MANUFACTURERS OF

RAW FOOD EXTRACTS IN THE WORLD.

It can be retained by the weakest stomach, when all other food extracts, and even water, is rejected.

Nutritious food, if raw, condensed, and free from insoluble matter, will cure chronic diseases, as it will make blood faster than all preparations or food, and new blood will cleanse the system.

MURDOCK'S LIQUID FOOD is made from Beef, Mutton and Fruits; contains corpuscles; is 12½ per cent. soluble albumen, and free from insoluble matter, drugs, minerals, salts and acids, and can be retained by the stomach when so weak as to refuse food.

Ask your Druggists, or send to us, for Essays read before the American Medical Association, at Richmond, Va., May 6, 1881, on the value of Raw Food Extracts, by Geo. R. Shepherd, of Hartford, Conn., and other Essays and Testimonials from Medical Journals and Physicians that have used Liquid Food, in cass of Consumption, Scrofula, Nervous and General Debility, Dyspepsia, acute and chronic, Constipation, Diphtheria, Intemperance, Cholera Infantum, Infantile Diarrhœa, Post partum Hemorrhage, Purpura Hemorrhagica with Waxy Liver, Pelvic Cellulitis, Malarial and other Fevers, Chronic Strumous Arthritis, Sclerosis of the Spinal Cord, Senile Gangrene, Perinephritic Abscess, and other diseases of malnutrition. No cases of Cholera Infantum have occurred where it has been used daily, and no lives have been lost from Cholera Infantum where it has been prescribed by a physician. Excellent for Eczema, Diabetes, Rheumatism and Neuralgia.

At the request of any physician who has not tried our Extracts, and would like to, we will deliver sample bottles to the Express in Boston. To any Medical Society wishing to investigate the value of our Extracts, through a committee, hospital, or individual members, we will furnish a supply of Liquid Food equal to a six-ounce bottle for every member present at the time of action. We are induced to do this, knowing that our Extracts are saving life, and that an increased use of them, which will follow after a trial of them, will be the means of saving more lives daily. (*We ask no testimonials of results obtained.*) Raw Extracts are available where cooked ones are not, or if available, contain only one-third as much nourishment.

Liquid Food is in general use at all Hospitals, Infant and Insane Asylums, and Washingtonian Homes, U. S. Navy Hospitals, and by all physicians that have tried it.

If not kept by your Druggist, can be obtained in any of the commercial cities. In Philadelphia, by Johnston, Holloway & Co., Boericke & Tafel; in Pittsburg, by A. Kelly & Co.; in Baltimore, by Thomsen & Wirth; or you can order direct and we will pay express. 1 oz., 15 cents; 6 oz., 55 cents; 12 oz., $1.00.

See Philadelphia MEDICAL AND SURGICAL REPORTER, *Boston Medical and Surgical Journal*, and *New York Medical Record*, for chronic cases that were at our quarterly reception to physicians, in Boston, December 30, 1881—cases of Eczema, Rheumatism, Neuralgia, Diabetes, Consumption, and other diseases. If all were not restored to perfect health, they were gaining daily, and able to enjoy life and attend to their business. 1297–1348

MURDOCK LIQUID FOOD CO., BOSTON.

It is the only food that will relieve the Consumptive from Hunger.

It will make Blood faster than all preparations known.

LONG ISLAND COLLEGE HOSPITAL,

BROOKLYN, N. Y.

☞ THE READING AND RECITATION TERM will commence September 28th, 1881, and close at the beginning of the Regular Term.

☞ THE REGULAR TERM will open January 25th, 1882, and continue five months.

FACULTY OF THE COLLEGE.

DANIEL AYRES, M.D., LL.D.,
Emeritus Professor of Surgical Pathology and Clinical Surgery.

SAMUEL G. ARMOR, M.D., LL.D.,
Professor of the Principles and Practice of Medicine and Clinical Medicine, and Dean of the Faculty.

GEORGE W. PLYMPTON, M.D.,
Professor of Chemistry and Toxicology

CORYDON L. FORD, M.D.,
Professor of Anatomy.

ALEXANDER J. C. SKENE, M.D.,
Professor of the Medical and Surgical Diseases of Women, and Diseases of Children.

JARVIS S. WIGHT, M.D.,
Professor of the Principles and Practice of Surgery and Clinical Surgery and Registrar.

JOSEPH H. RAYMOND, M.D.,
Professor of Physiology and Microscopic Anatomy.

EDWARD SEAMAN BUNKER, M.D.,
Professor of Histology and General Pathology.

JOHN A. McCORKLE, M.D.,
Professor of Materia Medica and Therapeutics.

CHARLES JEWETT, M.D.,
Professor of Obstetrics.

The Faculty, by the establishment of THE READING AND RECITATION TERM, give a *thorough systematic training in the elements of medical science.* To this end, the instruction for junior students is confined to the *primary branches*, and consists mainly of recitations from standard text-books. Senior students are admitted to higher studies.

The Regular Term embraces the usual Course of Didactic and Clinical Lectures, and a thorough graded system of instruction in the practical branches.

There are over 12,000 patients treated annually in the Hospital, which is under the control of the College authorities, and therefore available for practical teaching. Advanced students in classes of ten or more accompany the Clinical Teacher in his daily hospital service. By this system of constant rotation of classes from the Medical to the Surgical wards of the Hospital, the student receives the largest possible amount of instruction daily in all the practical branches. This mode of teaching is *peculiar* to the Long Island College Hospital, the Clinical advantages of which are unsurpassed in this country.

For circulars, address

1272-1297 **PROF. S. G. ARMOR, M.D., Dean.**

UNIVERSITY OF PENNSYLVANIA.

POST-GRADUATE INSTRUCTION.

A Post-Graduate Course has been organized for Bedside and Dispensary Instruction in the following named branches:—

ON PHYSICAL DIAGNOSIS AND CLINICAL MEDICINE, Prof. WM. PEPPER and Dr. ED. T. BRUEN.
" NERVOUS DISEASES AND ELECTRO-THERAPEUTICS, - - - - Prof. H. C. WOOD.
" DERMATOLOGY, - - - - - - - - - - - - Prof. L. A. DUHRING.
" OTOLOGY, - - - - - - - - - - - - - Dr. GEO. STRAWBRIDGE.
" OPHTHALMOLOGY, - - - - - - - - - - - Dr. S. D. RISLEY.
" GYNÆCOLOGY, - - - - - - - - - - - - - Dr. B. F. BAER.
" LARYNGOSCOPY, - - - - - - - - - - - - - Dr. C. SEILER.
" OPERATIVE SURGERY AND VENEREAL DISEASES, - - - - Dr. J. WM. WHITE.

Two courses will be given annually; beginning the first week in November and the first week in April; continuing three months, two lectures each week. A certificat will be given to each person having taken the full course. Fee $100, for seven branches—elective—or $25 for each branch taken separately, invariably in advance. For further information apply to the undersigned, or any of the Lecturers.

McINTOSH COMBINED

Galvanic AND Faradic Battery.

THIS CELEBRATED BATTERY COMBINES BOTH THE GALVANIC AND FARADIC CURRENT,

Which can be used separately or combined. Any strength and intensity desired can be obtained for use in Electro-therapeutics. THIS BATTERY is constructed on an IMPROVED PLAN, as follows: The zinc and carbon plates are arranged in couples, securely clamped to hard rubber plates, with thumb screws. These screws are also used for binding posts. All the connections are positive. The cells are made in sections of six, of hard rubber, with hard rubber drip cup. The following points of excellence render our Batteries superior to others:

1. They combine the only Portable Galvanic and Faradic Battery in one case.

2. They weigh one-half less than other Batteries of the same number of cells.

3. The cells are made insections of six, of one solid piece of hard, vulcanized rubber; by this arrangement they can be emptied, cleaned and filled as easily and quickly as one cell, and will not crack, break or leak.
4. A hard rubber drip cup is placed by the side of each section of cells, to receive the zinc and carbon plates when removed from them. By this arrangement we avoid the use of absorbent materials and soiling the Battery
5. The Hydrostat is perfect. The rubber plates which hold the elements project over on one side enough to cover the cells when the zinc and carbon plates are placed in the drip cups. The under side of this projection is covered with thick, soft rubber, which is securely clamped to the cells sections, and makes them water tight.
6. This is the only Battery in which the zinc and carbon plates can be kept clean by simply rinsing them.
7. A zinc or carbon plate can be removed by simply loosening a binding post; and all parts of the Battery can be duplicated, as like parts are made exactly alike. We will be pleased to send circulars and our illustrated catalogue giving full information, price, etc., free, upon application.

McINTOSH GALVANIC BELT AND BATTERY CO.,

1281-1332 **Nos. 192 and 194 Jackson Street, CHICAGO, ILL**

SEABURY & JOHNSON'S

PHARMACOPŒIA PLASTERS

(IN RUBBER COMBINATION)

And Surgical Dressings.

ADVANTAGES OF THE RUBBER BASE FOR PLASTERS.

A cold process, through which volatilization by heat is avoided; preservative character of the rubber combination, thus insuring uniform reliability; pliability in any temperature; great convenience, as the plaster adheres without heat or moisture; cleanliness.

BELLADONNA PLASTER

SEABURY & JOHNSON.

IN RUBBER COMBINATION. Recent analytical tests conducted by Prof. R. O. Doremus, of Bellevue Hospital Med. College, and J. P. Battershall, Ph.D., analytical chemists, New York, to determine the comparative quantities of atropine in Belladonna Plaster prepared by the different American manufacturers, disclosed, in each case, that our article contains a greater proportion of the active principle of Belladonna than any other manufactured. Samples of the various manufactures, including our own, for this test, were procured in open market by the above-named chemists themselves. In the preparation of this article we incorporate the best alcoholic extract of Belladonna only, with the rubber base. It is packed in elegant tin cases (one yard in each case), which can be forwarded by mail to any part of the country.

Price, by mail, postpaid, $1.00.

BLISTERING PLASTER

SEABURY & JOHNSON

IN RUBBER COMBINATION. We incorporate, by a cold process, the whole fly (best selected Russian), with the rubber base, which constitutes, we believe, the most reliable cantharidal plaster known. It is superior to the cerate, and other cantharidal preparations, the value of which is frequently greatly impaired by the excessive heat used in preparing them, which volatilizes or drives off an active principle of the fly. By our peculiar process no heat is used. It remains serviceable almost any length of time.

Price, by mail, per yard, $1.00.

MUSTARD PLASTER

SEABURY & JOHNSON

(Spread on Cotton Cloth.)

Our Mustard Plaster is a decided improvement over the best French makes. The mustard is manipulated so as to exclude all the moisture, retaining unimpaired, by such treatment, its essential properties. They are always reliable, conform quickly to the part, and when thoroughly wet do not break into pieces, as is the case with all other mustard plasters. They do not crack or peel off, and can be removed without soiling the skin or linen. Being **manufactured only of pure mustard,** they are perfectly free from Croton Oil or other dangerous substitutes often employed to induce intense irritation.

Samples sent on application to

SEABURY & JOHNSON,

NO. 21 PLATT STREET, NEW YORK.

PLEASE SPECIFY SEABURY & JOHNSON'S PLASTERS.

Medical Practitioners who have not yet received our special Physician's and Surgeon's Catalogue, will be furnished same promptly on application.—SEABURY & JOHNSON, 21 Platt St., N.Y. 1271-1311eow

MEAT AND QUINIA.

AROUD'S WINE WITH QUINIA,

And all the Nutritive Principles of Meat.

Aroud's Preparations recommend themselves to the most serious attention of Physicians, and deserve their preference:

1st.—Because they combine all the active principles of the richest barks of quinia carefully selected.

2d.—Because 30 grammes of them contain 3 grammes of quinia and all the nutritious principles of 27 grammes of meat, which are soluble in alcohol and water.

3d.—Because the combination of meat with the barks of quinia has not only the advantage of acting as a tonic, nutritive, and febrifuge, but also that of paralyzing and guarding against any local irritation caused by the prolonged use of quinia barks, and of preparing the stomach to endure the salutary influence of this friendly compound.

4th.—Because these preparations with meat as a basis, containing in their composition the entire nutritious elements of muscular fibre, blood and bone, answer alone to the immortal maxim of Hippocrates, fundamental basis of all good reparative medication, "*Ars imitatio natura.*"

5th.—Because, if meat occupies the first rank among the articles of food, if quinia is placed at the head of tonics, the combination of these highly reparative substances must necessarily be a reconstructor par excellence.

Finally, because the experiments with Aroud's Wine and Quinia prove, better than theory, that, to reconstruct the shattered and enfeebled forces, no other tonic can be compared to it.

MEAT, IRON AND QUINIA.

AROUD'S

FERRUGINOUS WINE WITH QUINIA,

And all the Nutritive Principles of Meat.

MEAT, IRON AND QUINIA, that is so say, the most reparative food combined with a reconstituent and a nerve tonic par excellence: such is the remarkable composition of this ferruginous preparation, which, in all respects, merits the preference of physicians. It prevents impoverishment of the blood, anæmia, chlorosis, etc.; presented in a form at once attractive to the eye and pleasant to the palate—an assimilable iron united with all the constitutive principles of bone and of muscle; it can, therefore, form and regenerate the forces, and this without causing nausea, constipation, or disturbing the digestive organs. By its generous alimentation it corrects and modifies the bad effect of the prolonged use of quinia.

The excellence of this preparation justifies that which Hippocrates proclaimed over 2000 years ago, and all clinics have confirmed: "That the soluble nutritive principles of meat is the food best adapted for the sick and convalescents: that these principles, being the integral parts of muscle, have the faculty of forming flesh rapidly, and of restoring muscle."

It is, therefore, a precious specific for all the maladies caused by impoverishment or deterioration of the blood, because meat, iron and quinia combined give nourishment, act as a tonic, regenerate, reconstitute, and regulate the entire system. 1261-1312-eow

E. FOUGERA & CO., Agents, No. 30 N. William St., N. Y.

PENNSYLVANIA SCHOOL of ANATOMY and SURGERY,

10th STREET ABOVE WALNUT STREET, PHILADELPHIA.

(*Entrance on Medical Street.*)

WILLIAM S. JANNEY, M.D., Lecturer on Anatomy. GEORGE McCLELLAN, M.D., Lecturer on Surgery.

THIS School will be devoted to the practical teaching of Anatomy and Surgery.

A systematic course of lectures will be given during the Winter Session, and students will receive the personal attention of the lecturers in Dissecting and Operative Surgery.

OFFICE STUDENTS will be received by either DR. JANNEY or DR. MCCLELLAN, at $100 per annum which will include the full course of teaching at the school.

Private instruction to candidates for the Army and Navy, by special arrangement.

For further information apply at the school, or to

GEORGE McCLELLAN, M.D.,

279-91 Broad and Spruce Streets, Philadelphia.

PACKER'S

TAR

SOAP.

ABSOLUTELY PURE

AND NON-IRRITATING.

Made from Vegetable Oils, Refined Pine Tar, and Chemically Pure Glycerine. Extensively used in public and private practice in the treatment of ***Diseases of the Skin.*** Useful for cleansing sores, ulcers, etc.

Many Physicians recommend the exclusive use of this Soap for ***Washing Infants.*** It purifies, soothes, prevents chafing, and is tonic to the skin.

For the bath and toilet, only those who have used it can appreciate its refreshing and cleansing properties.

THE PACKER MANUFACTURING CO.,

P. O. Box 2985. 100 Fulton Street, New York.

NEW BOOKS AND NEW EDITIONS.

Published by D. G. BRINTON, M.D., 115 South Seventh Street, Philadelphia.

The Physician's Daily Pocket Record and Visiting List.

By S. W. BUTLER, M.D. SIXTEENTH YEAR.

A New Revised Edition for 1882, with Metric Posological Table, etc. Strongly Bound in Dark Morocco, with Pocket for Blanks, and a PATENT STEEL SPRING CLASP.

THE PHYSICIAN'S CLINICAL RECORD AND CASE BOOK.

For 100 Patients. Neatly Bound in Cloth, with Pocket and Stencil Plate. Price $1.00.

This very convenient little book, adapted to be carried in the pocket, gives, in the briefest and neatest arrangement, the best forms for preserving the records of cases.

THE "MODERN THERAPEUTICS" SERIES.

I. MODERN MEDICAL THERAPEUTICS.

A Compendium of Recent Formulæ and Specific Therapeutical Directions, from the practice of eminent contemporary physicians, American and foreign. By GEO. H. NAPHEYS, A.M., M.D. Seventh Edition. One volume. 8vo. 607 pp. Price, Cloth $4.00; Sheep $5.00.

II. MODERN SURGICAL THERAPEUTICS.

A Compendium of Current Formulæ, Approved Dressings and Specific Methods for the treatment of Surgical Diseases and Injuries. By GEO. H. NAPHEYS, A.M., M.D. Seventh Edition (1881). One volume. 8vo. 608 pp. Price, Cloth $4.00; Sheep $5.00.

III. THERAPEUTICS OF GYNECOLOGY AND OBSTETRICS.

Edited by WILLIAM B. ATKINSON, M.D., etc. Second Edition, Greatly Enlarged (1881). One volume. 8vo. Price, Cloth $4.00; Sheep $5.00.

This Series of Therapeutics has been recognized by the Medical Press, both of England and the United States, to be the most practically valuable to the physician of any which is now in the market.

THE PRINCIPLES AND METHODS OF THERAPEUTICS.

BY ADOLPHE GUBLER, M.D.

Professor of Therapeutics in the Faculty of Medicine, Paris, Member of the Academy of Medicine, Physician to the Beaujon Hospital, etc. Translated by M. J. Halloran, M.D., etc. 1 Vol. 8vo. 445 pp. Heavy tinted paper. Bound in Half Morocco, Muslin Sides. Price $4.00.

Among the Scientific Therapeutists of the age, Professor Gubler stood in the front rank. This work is a translation of his lectures in this specialty, and is rich in practical information and profound suggestions. There is no work on the principles of Therapeutics which will better repay close reading. It is a new book, having first appeared this year.

LESSONS IN GYNECOLOGY.

BY WM. GOODELL, A.M., M.D.

Professor of Clinical Gynecology in the University of Pennsylvania. With Numerous Illustrations. Second Edition. Thoroughly Revised and Considerably Enlarged. One Volume. 8vo. Price, Cloth $4.00; Sheep $4.50.

DIFFERENTIAL DIAGNOSIS.

A MANUAL OF THE COMPARATIVE SEMEIOLOGY OF THE MORE IMPORTANT DISEASES.

BY F. DE HAVILLAND HALL, M.D.

Assistant Physician to the Westminster Hospital, London. Second American Edition, with Extensive Additions. Edited by FRANK WOODBURY, M.D. One Volume. 8vo. 205 pp. Printed on Handsome Tinted Paper. Bound in English Pebble Cloth, with Beveled Boards. Price $2.00.

Dr. Hall's work has received the highest encomiums from the English medical press for its lucid arrangement, completeness and accuracy. He himself is known in London as a practioner of great skill, and an unusually successful medical teacher.

A MANUAL OF OPHTHALMIC PRACTICE.

BY HENRY S. SCHELL, M.D.

Surgeon to the Wills Eye Hospital, Ophthalmic and Aural Surgeon to the Children's Hospital, etc. With 53 Illustrations, Test Types etc. Price, Cloth, $2.00.

This is a new and valuable work on Ophthalmic Practice, especially designed for the use of the general practitioner who desires a clear and compact manual of instruction in the management of diseases of the eye.

COMPENDIUM OF MICROSCOPICAL TECHNOLOGY.

A GUIDE TO PHYSICIANS AND STUDENTS IN THE USE OF THE MICROSCOPE AND IN THE PREPARATION OF HISTOLOGICAL AND PATHOLOGICAL SPECIMENS.

BY CARL SEILER, M.D.

Director of the Microscopical and Biological Section of the Natural Sciences of Philadelphia; Curator of the Pathological Society; Pathologist and Microscopist to the Presbyterian Hospital, etc., etc. Illustrated. One Volume. 8vo. Cloth. 111 pp. Price $1.00.

THE CARE AND CULTURE OF CHILDREN.

BY THOMAS S. SOZINSKEY, A.M., M.D., Ph.D., etc.

One Volume. Cloth. 8vo. Illustrated. 500 pp. Price $2.50.

A most excellent book on this all important theme. No better one can be recommended to the perusal of intelligent parents.

FOR FIVE THOUSAND DOLLARS, WILL sell a nice and comfortable home in Delaware, together with my practice, which is worth three thousand dollars per year, to any physician of experience.

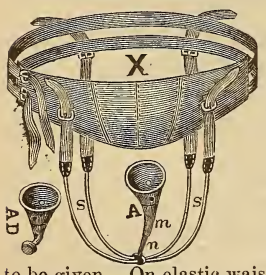
STAUFER'S

SERIES OF HARD RUBBER UTERINE INSTRUMENTS SIMPLIFIED.



Pessary and Abdominal Supporter combined, Fig. x represents a fine satteen belt, with whalebone stay, elastic back straps and spring stem Uterine Supporter. Shifting Cup A, to be transformed into self sustaining Cup A. D. Price, (A X) $7.00. Hip measure to be given. On elastic waist belt, (or A Z), $600, waist measure. Permanent Stem Cup (or *E. C. Economy*) on belt x, $5.50, or E C, on waist belt, Z, only $4.50. Belt (X), alone, $2.00.

The full catalogue and plate exhibit in addition, Retroversion Cups; Anteversion and posterior cul-de-sac levers; Globe Tops and Oblong Tops; all on spring or permanent stems, to be selected according to the requirements of cases; Also, intra-uterine stem cup. The cups are graded every ⅛ inch, from 1¼ to 2½ inches. Globe Tops from 1 to 2¼ inches; thus, making about 125 in style and size Stem Uterine Supporters to meet the various displacements. The medium, 1¾ inch cup meets over three-fourths of the cases presented.

Examining Instruments.—This series contains the much admired Examining Case of ten articulating pieces, probes, sounds, swab, movers, caustic, and brush-holders and cases; wt. 4 oz. Reflector, Fenestrated Vaginal, Anal and Hymen, together with the series of Vaginal Speculums, by which the examination is reduced to great simplicity, and the vaginal portion of the uterus to be seen without exposure; manipulated upon, and can be shown to husband or member of the family as clear as if loeateed externally. The case Q, contains four graded Speculums, with shifting conductors; compact and weight but 12 oz. No. 2, or next to largest answers in over three fourths of cases called for treatment. Dental red enameled inside. Price, full case, $12.00; single, $2.50 each.

Exchanges.—All the hard rubber parts in the catalogue have the exchange and interchange privilege, at cost. Even single Speculums received back when a case becomes preferable. All without limit of time. Necessary repairs only to be paid for.

Staufer's Catalogue and Physician's Price List, with instructions to the use of these instruments, is mailed free, on application to this office.

Delivery—All the instruments on the catalogue are mailed all over the United States, on receipt of quotation prices, from this office.

Registered COSMOLINE Trade Mark.

Unguentum Petrolei

Prepared by E.F.Houghton & Co. Philadelphia, U.S.A.

Put up in 1, 5, 10, 25, 50, and 100-lb. cans. Samples furnished on application. The post-office laws forbid anything of an oleaginous nature being sent through the mail.

In chemical composition, Cosmoline [Unguentum Petrolei] is an oleaginous hydrocarbon, corresponding to the heavy petroleum oils, and containing a large amount of the paraffines and olefines of the formulæ $C_{16}H_{34}$ and $C_{16}H_{32}$. It contains but a small percentage of the paraffines and olefines, corresponding to the formulæ C_7H_{16} and C_7H_{14}, respectively, and the offensive and irritating properties of the crude oil have been carefully removed. In the process of purification, no acids, alkalies, or other chemicals are employed, and no injurious additions of any kind are made to the natural product. The result is a semi-solid, translucent substance, with a faint odor and unctuous feel.

Cosmoline [Unguentum Petrolei] melts at about 100° Fah. (38° Cent.); and boils at about 625° Fah. (329° Cent.); its specific gravity is about 0.875 at 60° Fah.

As it contains no oxydizable or organic matter capable of change by putrefaction or fermentation, and is absolutely without affinity for moisture, it offers to the profession an admirable unguent, which can never decompose, ferment, or become rancid in any climate or temperature.

291 MADISON AVENUE, NEW YORK, February 26th 1878.

I have examined the preparations of Cosmoline as manufactured by E. F. Houghton & Co., Philadelphia, and believe them well adapted to the purposes for which they are designed. As lubricants, and as the bases of simple or medicated ointments, they have a decided advantage over the fixed oils and fatty substances in ordinary use, in that they do not become rancid, and do not acquire irritating qualities from atmospheric exposure. ALFRED C. POST, M.D., LL.D.,
Emeritus Professor of Clinical Surgery in the University of New York, Visiting Surgeon to Presbyterian Hospital, etc.

PHILADELPHIA, July 10, 1880.

MESSRS. E. F. HOUGHTON & CO.:

I have for a number of years made extensive use of Cosmoline [Unguentum Petrolei] and consider it a most valuable article for surgical purposes. Either as a dressing by itself, or as a vehicle for the application of medicaments, it is greatly superior to lard or other fatty matters, especially by reason of its non-liability to change by time or temperature.

Yours truly,
JOHN H. PACKARD, M.D.
1031 WALNUT ST., PHILADELPHIA.

MESSRS. E. F. HOUGHTON & CO.:

I have used extensively Cosmoline [Unguentum Petrolei] both in Dispensary and private practice, with very great satisfaction. As a vehicle in making ointments it is invaluable, and far superior to lard, for the reason that it will not become rancid or undergo chemical change like the latter, when exposed to the atmosphere. I cannot too highly commend it as an application in various skin diseases.

Yours truly, JOHN V. SHOEMAKER, A.M., M.D.,
Physician to the Pennsylvania Free Dispensary for Skin Diseases

208 WEST 34TH ST., NEW YORK.

MESSRS. E. F. HOUGHTON & CO.:

Gents:—I fully appreciate the value of your Cosmoline, or Unguentum Petrolei, and prescribe it frequently in ointments. Fluid Cosmoline I have used constantly for several years, as a lubricant of urethral sounds. It is the cleanest oil I know of for this purpose.

Yours truly, GEO. HENRY FOX.

TO THE MEDICAL PROFESSION.

LACTOPEPTINE.

We take pleasure in calling the attention of the Profession to LACTOPEPTINE. After a long series of careful experiments, we are able to produce its various components in an absolutely pure state, thus removing all unpleasant odor and taste (also slightly changing the color). We can confidently claim that its digestive properties are largely increased thereby, and can assert without hesitation that it is as perfect a digestive as can be produced.

LACTOPEPTINE is the most important remedial agent ever presented to the Profession for Indigestion, Dyspepsia, Vomiting in Pregnancy, Cholera Infantum, Constipation, and all diseases arising from imperfect nutrition. It contains the five active agents of digestion, viz: Pepsin, Pancreatine, Diastase, or Veg. Ptyalin, Lactic and Hydrochloric Acids, in combination with Sugar of Milk.

FORMULA OF LACTOPEPTINE.

Sugar of Milk	40 ounces.	Veg. Ptyalin or Diastase	4 drachms.
Pepsin	8 ounces.	Lactic Acid	5 fl. drachms.
Pancreatine	6 ounces.	Hydrochloric Acid	5 fl. drachms.

LACTOPEPTINE is sold entirely by Physicians' Prescriptions, and its almost universal adoption by physicians is the strongest guarantee we can give that its therapeutic value has been most thoroughly established.

The undersigned having tested LACTOPEPTINE, recommend it to the profession.

COMPRESSED SOLUBLE HYPODERMIC TABLETS.

We have recently given much attention to the preparation of Soluble Compressed Tablets to be used in hypodermic medication. This idea was brought to the notice of the medical profession by H. Augustus Wilson, M.D., of this city, in a paper read before the Philadelphia County Medical Society. His views were based upon carefully made experiments, and were received with much interest. At his instance we undertook to prepare in this manner a number of combinations, which have upon trial proved eminently satisfactory. We therefore feel warranted in offering these articles to the profession as superior in several respects to all other forms for hypodermic purposes.

They are convenient, both to carry and to use; they are accurate, enabling the physician to administer precisely the dose desired; and they are not liable to change by keeping. Solutions are bulky, the bottles are apt to break or to leak, and the liquid often becomes decomposed or deteriorated by time. Powders become inert, from atmospheric influences; the papers become torn and part of the medicament is often lost in the necessary handling. The patented gelatine discs are not quickly soluble, and are sometimes slow in taking effect. Their use is apt to be followed by abscesses, which is rarely the case with crystalloid substances.

An extensive experience of many years in the manufacture of compressed powders (or pills), and the precision and accuracy of our mechanical appliances, enable us to make these articles with a degree of perfection not attainable in any other way, or by any other process. The exact amount specified of each drug is thoroughly incorporated and distributed throughout every tablet. In water at ordinary temperatures a perfect solution may be made in from thirty to sixty seconds.

No extraneous material is employed, except the Sulphate of Sodium, and this only in such proportions as to facilitate solution.

CAUTION.—The dose of Morphia for hypodermic use varies from $\frac{1}{12}$ to $\frac{1}{2}$ of a grain. We would suggest to the profession the necessity for caution. The large doses sometimes recommended—$\frac{1}{2}$, $\frac{3}{4}$ and even 1 grain—are unsafe for the first trial, unless the conditions requiring the injection be exceptional. *In commencing, it should not exceed one-third of that ordinarily administered internally.*

DIRECTIONS.—The syringe is charged with about twenty minims of water, which is poured into a teaspoon or other convenient receptacle; the pellet being dropped in, is crushed with the end of the syringe, to which the needle fits, and after all the lumps are broken the solution is drawn up and forced out three or four times, when usually the whole mass will be entirely dissolved and ready for use.

If warm water is used or the spoon is heated over a lamp or gas jet, a perfect solution is effected in a moment. The tablets may be readily powdered with the blade of a knife, and a solution is even more speedily made in this way.

The following formulæ and combinations embrace all those in general request. Others will be added as the demands of the profession warrant their manufacture.

We claim for our Hypodermic Tablets: Absolute accuracy of dose. Ready and entire solubility. Perfect preservation of the drug.

Their convenience and utility will at once be apparent on examination.

We are under many obligations to Professor Roberts Bartholow, who, from his thorough scientific investigations and extensive experience in hypodermic medication, is recognized as the highest authority on the subcutaneous treatment of disease, for suggestions and advice in regard to the care required in preparing our Hypodermic Tablets, also for the kind interest in devising the above formulæ.

His book on "Hypodermic Medication" is well known as the standard work on that subject, and has reached a third edition.

The success of our efforts to furnish the medical profession a much needed improvement in hypodermic medication is due to the happy suggestion of Dr. H. Augustus Wilson and to the kind interest of other medical friends, who have advised us as to the absolute essentials in preparing so delicate and important a series of medicaments.

Recent Introductions to the Materia Medica,

BY

PARKE, DAVIS & CO.,

Manufacturing Chemists, DETROIT, MICH.

CHEKEN. (*Eugenia Cheken, Myrtus Chekan.*) This remedy, a native of Chili, is very popular in that country, where it is employed as an *inhalation* in diphtheria, laryngitis, bronchitis, bronchorrhœa, etc.; as an *injection* in gonorrhœa, leucorrhœa, cystitis, etc.; and *internally* as an aid to digestion, to allay cough, to facilitate expectoration and to stimulate the kidneys. It is also an astringent, and is said to be of great value in hæmoptysis.

Cheken (known also as Chekan and Chequen), was introduced to the profession of England, through a report of results following its use in chronic bronchitis or winter cough, by Wm Murrell, M D., M.R.C.P., Assistant Physician to the Royal Hospital for Diseases of the Chest, and Lecturer on Practical Physiology at the Westminster Hospital. Dr. Murrell's report is very favorable, and he has supplemented it by private advices to us, expressing great satisfaction with the drug in the affections in which he has employed it. He regards it as one of the most valuable introductions of late years, and pronounces it a drug of very superior properties in the treatment of **chronic bronchitis,** acting in this affection both as an anodyne and exerting a favorable influence over the organic changes in the mucous membrane. It is certainly a remedy which merits a thorough trial at the hands of the profession of this country.

SIERRA SALVIA. ("MOUNTAIN SAGE.") *Artemisia Frigida.* Fluid extract of the herb. Dose one to two fluidrachms. **Diaphoretic and diuretic.**

The success which has attended the administration of this drug in "Mountain fever" has suggested its employment in all febrile conditions attended with suppression of the secretions of the skin and kidneys. Its action in fever seems to be twofold, acting directly on the nervous centre, thus inducing a direct lowering of the temperature, and facilitating the radiation of the heat through diaphoresis, which it stimulates. Under its use the kidneys are also aroused to activity, and the solid constituents of the urine proportionately increased. Therapeutic tests have corroborated the opinion formed of it on theoretical grounds.

PERSEA. (ALLIGATOR PEAR.) Fluid extract of the seeds. Dose 30 to 60 minims. This remedy is now for the first time presented to the profession of this country. It is introduced on the recommendation of Dr. Henry Froehling, of Baltimore, Maryland, who, while acting in the capacity of botanist and scientist to an exploring expedition in Southern Mexico, became familiar with the drug, both from reports of the natives and personal experience, as a remedy in **intercostal neuralgia.** The following extract from Dr. Froehling's report will give some conception of the nature of this remedy:

"A common experience among physicians is, that some cases of intercostal neuralgia are very troublesome and obstinate, resisting almost every kind of treatment; particularly is this the case in malarial districts. In such cases I would recommend the fluid extract of Persea seed. In my own person and in every case in which I have employed it, I have been highly gratified with the result. Those of my medical friends to whom I have given samples of the preparation warmly endorse my opinion of it as above, and I cannot but believe that further trial of it will cause it to be regarded as a valuable addition to our list of medicines."

Dr. Froehling also mentions the fact that Persea has been employed with benefit in the expulsion of tapeworm.

COCA. (ERYTHROXYLON COCA.) The evidence in favor of Coca is to prove it a powerful nervous stimulant, through which property it retards waste of tissue, increases muscular strength and endurance, and removes fatigue and languor, due to prolonged physical or mental effort. While indicated in all conditions presenting these symptoms, it has an especial indication in the treatment of **the opium and alcohol habits.** In these deplorable conditions it has been found to possess extraordinary properties—relieving the sense of untold bodily and mental misery which follows the withdrawal of the accustomed stimulus, thus preventing a return to the narcotic, and affording an opportunity for building up the system by the administration of restorative tonics.

We prepare Fluid Extracts of all the above drugs.

PARKE, DAVIS & CO.,

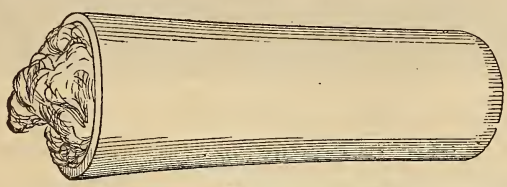
Manufacturing Chemists, DETROIT, MICH.

SOLUBLE MEDICATED

HOLLOW VAGINAL SUPPOSITORIES,

For the Treatment of LEUCORRHŒA, VAGINITIS, VAGINISMUS, etc.,

(See MEDICAL AND SURGICAL REPORTER, Jan. 7, 1882, p. 7.)



CLEAN. LIGHT. RELIABLE. EFFICIENT.

These Suppositories are made of medicated gelatin, moulded in a hollow form. The interior is to be filled with either absorbent, carbolized, or salicylized cotton, so as to act as a support, and keep the Suppository, while melting, in close contact with the vaginal walls. The following advantages are claimed for them:—

FIRST.—Being hollow, the use of a large quantity of inert material is avoided, and there is no soiling of the clothes or person.

SECOND.—The composition of which the suppository is made greatly assists the absorption of the remedy, instead of forming a greasy, slowly permeable medium, like that of a cacao butter suppository.

THIRD.—By the large amount of surface over which the medicating ingredient is distributed, absorption is greatly assisted, and the effect of the remedy very soon obtained.

FOURTH.—By their close contact and prolonged action on the mucous substance of the vagina, a much more powerful and lasting effect is obtained, than by any other similar method of local medication.

FIFTH.—Being light, the suppository remains in the upper part of the vagina, where it is most needed, and does not sink and slip out, as does the old-fashioned article made of cacao butter.

These Suppositories are neatly put up in boxes, *each box containing six of a kind only*, and are medicated as follows:—

1. Sulphate Zinc, – – 5 grs.
2. " " – – 10 "
3. Acetate " – – 10 "
4. Chloride " – – 2 "
5. Hydrastis Ext. Fld., – 10 "
6. Ext. Opium Aq., – – 1 gr.
7. " " " – – 2 grs.
8. Sulphate Morphia, – ½ gr.
9. " " – – 1 "
10. Ext. Belladonna Alc., – ½ "
11. " " " – 1 "
12. Ext. Krameria Fld, – 10 grs.
13. Catechu, Powd, – – 10 "
14. Ext. Krameria Fld., – 10 grs.
    Sulphate Morphia, – ¼ gr.
15. Ext. Hyoscyamus, – – 3 grs.
16. Ext. Hyoscyamus, – – 2 grs.
    Ext. Belladonna, – – ½ gr.
17. Ext. Aconite Rad., Fld., – 2 grs.
18. Carbolic Acid, – – 2 "
19. " " – – 4 "
19½. Iodoform, – – – 5 "
20. " – – – 10 "
21. Sulphate Zinc, – – 10 grs.
    Ext. Opium Aq., – – 2 "
22. Sulphate Zinc, – – 10 "
    Ext. Belladonna Alc., – 1 gr.
23. Sulphate Zinc, – – 10 grs.
    Sulphate Morphia, – – ½ gr.
24. Sulphate Zinc, – – 10 grs.
    Carbolic Acid, – – 1 gr.
25. Sulphate Zinc, – – 10 grs.
    Acet. Lead, – – – 8 "
    Tinct. Catechu, – – 5 "
    Ext. Opium Aq., – – 1 gr.
26. Sulphate Zinc. – – 10 grs.
    Hydrastis F. E., – – 10 "
    Carbolic Acid, – – 1 gr.
    Ext. Belladonna, – – ½ "
27. Formula of Dr. W. Thornton Parker, Plymouth, Mass.
    Sulph-carbolate Zinc, – 10 grs
    Sulphate Morphia, – – ½ gr.
28. Iodoform, – – – 5 grs.
    Ext. Belladonna, – – ½ gr.

SCOTT'S EMULSION

PURE COD LIVER OIL

WITH

HYPOPHOSPHITES OF LIME AND SODA

PERFECT, PERMANENT, PALATABLE.

The well-known virtues of this preparation, that has now been before the profession for a number of years, hardly requires comment from us. But we desire, for the information of those whose attention may not have been directed to it, to present the following facts:—

FIRST.—We use in the manufacture of our Emulsion, Cod-Liver Oil that is prepared expressly for us, and is strictly pure, which is the most important consideration to the Physician.

SECOND.—By our process of Emulsifying, we so thoroughly incorporate the Oil with the Hypophosphite Salts, that the mixture is perfectly homogeneous and remains in that condition, without the slightest separation or change, for years, unless exposed to the air or intense heat.

THIRD.—It is so palatable and easy of digestion that it can be administered to children and persons with most sensitive stomachs without the slightest repugnance, and we are confident, from the results that have been obtained in the use of this preparation, and the flattering testimonials we have received from prominent physicians, that the proper manner of administering Cod-Liver Oil, even to patients that can tolerate the crude oil, is in the form of a palatable and easily digested Emulsion. There are some in the profession who adhere to the use of the plain oil, but, with all due deference, if they will make a trial of our Emulsion, we believe their prejudices will be removed, and they will find it much more beneficial to their patients.

With all the numerous Foods, Cereals and so-called Constructive Agents of uncertain value that are being introduced the physician must sometimes be at a loss to know what to prescribe. But we are assured that the profession will bear us out in the statement that in all pulmonary troubles, especially where the lung tissue is involved, in Scrofulous children and in Anæmic women of consumptive tendencies, as well as in general nervous debility, our combination will produce results, if properly administered, unequaled by any other preparation, and most satisfactory to the physician and patient. We most respectfully ask those who have never prescribed or seen its results to give it a trial, and if you desire to make a personal inspection of it we will be pleased to send a sample by express, prepaid.

FORMULA.—50 per cent. of pure Cod-Liver Oil, 6 grains of the Hypophosphite of Lime, and 3 grains of the Hypophosphite of Soda to a fluid ounce. Emulsified with mucilage and glycerine

BUCKTHORN CORDIAL

RHAMNUS FRANGULA.

We desire to call the attention of the profession to this preparation, and although they may be familiar with its name and general characteristics, yet, on account of there not being a preparation in the market of uniform strength and quality, may not have a proper appreciation of its value. As far as our experience goes in the various tests made by our medical friends, we can present the German bark, *Rhamnus Frangula*, in the form of our *Buckthorn Cordial*, with perfect confidence that we will secure the encouragement and assistance of the profession in promoting its growth and giving it the position it deserves as a medicine. It seems to be almost a specific for Habitual Constipation and Indigestion, acting mildly but efficiently, without causing the nausea that usually accompanies the use of a cathartic. At the same time producing a tonic effect upon the bowels, so that as the patient recovers, the dose may be gradually decreased until a normal condition takes place. We use great care in the selection of the Bark, as we find it necessary that it should be of the proper age and condition, and carefully exhausted, to secure its true active principle.

We combine it with aromatics in such a manner as to make a pleasant cordial, acceptable to the most sensitive stomach. We shall be very glad to furnish samples free to all physicians, upon application, giving instructions for its use, etc. Prepared by SCOTT & BOWNE

SCOTT & BOWNE'S PALATABLE CASTOR OIL

IN AN EMULSION.

We respectfully submit the above elegant preparation to the notice of the profession, and desire them to favor us with a trial. So far as it has been tested, it has met with their entire approval; and we believe it is not only destined to take the place of the crude oil, but to be used much more extensively. In our process of emulsifying, it is not only *permanent* and *palatable*, but is deprived entirely of its griping properties. The inestimable nature of Castor Oil as a laxative and cathartic, in the varied intestinal derangements of children, and in Diarrhœa, Colds, etc., is accepted by all, and in the available form in which we present it in a perfectly palatable mixture, deprived entirely of its nauseous, sickening properties, and kindly received by the most sensitive stomach, it must occupy the exalted position it deserves as a medicine. In its administration, it requires very little more than the crude oil, but the experience of the physician will soon guide him in its use. It is put up in 4 oz. bottles, that sell for 25 cents; also in quarts for physicians to prescribe as desired. Samples will be furnished free on application. FORMULA:—50 *per cent. of Pure Cold Pressed Castor Oil*, 15 *per cent. of Chemically Pure Glycerine.* Prepared by

1252-1303eow **SCOTT & BOWNE, Manufacturing Chemists, 108 and 110 Wooster St., N. Y**

NOTES ON THE USE OF PEPSINE IN MEDICINE,

WITH RECOMMENDATIONS REGARDING SACCHARATED AND PURE PEPSINE.

That many of the diseases from which mankind suffer during infant and adult life are caused by malnutrition, there can be no doubt; and the extent to which non-assimilation of the life-giving properties of food interferes with recovery from severe illness, baffling the best directed efforts of the physician, points the necessity for an agent sufficiently potent to replace the deficient principle and aid nature in renewing the degenerated tissues.

Realizing this need, the science of chemistry produced pepsine; and even if medical literature were silent as to testimony of the results obtained, the large amount manufactured and consumed would amply attest its usefulness. But such is not the case, for, after long and careful investigation on the part of practical therapeutists, it is accepted as the remedy *par excellence* in all cases where the gastric juice fails to afford a sufficient amount of ferment for the reduction of aliment to a condition suitable for healthy assimilation.

As the undoubted value of pepsine as a remedial agent became evident, competition in its manufacture was stimulated; and as a natural result, the supply was varied both in purity and strength, and the medical profession, while anxious to avail themselves of its usefulness, were nearly as often misled into erroneous conclusions regarding its efficacy, as satisfied with its results, solely in consequence of their misfortune in not using such qualities as were likely to produce the much-lauded effects. Under these circumstances, a definite understanding regarding reliable preparations is desirable, and of great importance. Pure pepsine, without acid, thoroughly triturated with finely powdered sugar of milk (saccharated pepsine*), will, without doubt, produce the perfect results in all cases where the remedy is exhibited.

Routh, in his "Infant Feeding," gives an account of a result obtained in the case of an infant. "Small, wrinkled, emaciated, four days old, yet presenting almost the appearance of decrepitude. The voice was weak but distinct, and respiration not obstructed. The mother was an excellent nurse, but, although the infant took the breast readily, it constantly threw up every meal. What passed through the bowels was unchanged, although slightly tinged with bile. Diarrhœa was also present." The usual external remedies were applied, but without avail. "Emaciation was on the increase; the child was, in fact, dying." At this stage saccharated pepsine was administered, fifteen grains divided into ten powders, mixed with a little of the mother's milk, and after the second day the diarrhœa ceased and the child appeared much stronger. Twenty days of this treatment and the child was quite well. The eminent author adds: "This is a case which speaks strongly to the convictions. If at so early a period of life, when vitality and digestion were so weak, the artificial pepsine effected a cure, *a fortiori* will it be likely to do so in the case of older children; and so I have found it in practice. The digestive powers are thus assisted, and the food, which before was useless because undigested, readily becomes assimilated."

When administering pepsine, the slight acidity of the natural fluid should be produced as nearly as possible, and, as the necessities differ with the circumstances, it is desirable that the preparation be quite free from acidulation, and the proper dose be given in combination with the requisite amount of dilute acid. Of Kidder & Laird's pure pepsine, five to ten grains for an adult can, if necessary, be taken in an ounce of water, with five drops of muriatic acid.

For infants, however, the saccharated pepsine will be found to yield the most satisfactory results, and the acid should be dispensed with. Quantitatively it represents one-tenth of the strength of pure pepsine; but it has been found to be but about one-fourth less in efficacy. The absence of acid, which would otherwise tend to produce harmful results, will be recognized when it is considered that even the slight acidity of most cow's milk, when used as food for infants, is sufficient to disagree with them.

With regard to the proper time for its administration, as before or after taking of food, opinions vary, but reason would suggest that about half an hour before eating will afford the ferment a sufficient time to combine with the existing condition of the stomach, and produce the most natural effect upon the food when it has been acted upon by the salivary fluids in its passage to the stomach.

When once the formation of peptone has been established in the stomach, and as strength is acquired, the system will soon respond toward resuming the natural production of its normal fluids. Thus it is that many of the disorders of digestion which accompany severe attacks of fever, phthisis, etc., and also the exceedingly sensitive condition of the stomach caused by vomiting in pregnancy and alcoholism, are controlled, and a natural condition resumed.

Having mentioned the necessity of great care in the selection of pepsine, with reference to its purity and strength, it is proper to say that, even with the superior article above recommended, negative results may be obtained, unless attention is given to the form of its administration. Combinations beyond those above mentioned are not advised, but rather discouraged, as many of the substances usually recommended as efficacious with it are incompatible and render the pepsine inert.

* Saccharated pepsine, free from acid, is prepared by Messrs. Kidder & Laird, No 83 John Street, New York, who generously furnish samples of both this and the pure pepsine, free of charge, upon application.

1264-1315

IN MORNING SICKNESS

AND OTHER DISEASES

INCIDENT TO PREGNANCY.

The action of the Acid Phosphate upon the system during pregnancy is very effective; the morning sickness being treated with good results; and where indigestion is a sympathetic trouble it has been found a valuable and pleasant remedy.

In cases of exhaustion and nervous prostration from lactation, it has been used with excellent results.

During pregnancy the consumption of phosphate of lime is very great; so that at this period of woman's life fractures heal, if at all, with great difficulty. The Acid Phosphate supplies the phosphates needed at such times.

DR. D. T. NELSON, of Chicago, says: "I find Horsford's Acid Phosphate a pleasant and valuable remedy in indigestion, particularly in pregnant women."

DR. W. L. ATLEE, of Philadelphia, says: "Having used Horsford's Acid Phosphate very extensively in my practice, which consists mostly of uterine diseases and disorders incident thereto, it is with pleasure I attest my appreciation of its usefulness."

Let the patient put eight or ten drops of Acid Phosphate into half a glass of cold water, and take a sip of it, say a few minutes before rising, or whenever the sickness or nausea is coming on.

It is equally effective in hot water, or tea without milk or sugar, and to some may thus be more palatable. In such cases use the same dilution as above. Some constitutions may need a stronger dilution, which fact experience alone can decide.

Prices reasonable. Pamphlet giving further particulars mailed free on application to manufacturers.

Physicians desiring to test it will be furnished a bottle free of expense, except express charges.

MANUFACTURED BY THE

RUMFORD CHEMICAL WORKS

1297-1348 **PROVIDENCE, R. I.**

An experience of more than a quarter of a century convinces us that sugar, properly applied, is the only correct coating for a pill.

Physicians should be careful to specify Warner & Co., when prescribing or ordering.

Special attention is called to the following selected Recipes prepared for Physicians' Prescriptions.

PIL: PHOSPHORI COMP: (WARNER & CO.) ℞. Phosphori, - - 1-100 gr. Ext. Nuc. Vom. - ¼ gr.

THERAPEUTICS.—As a nerve tonic and stimulant, this form of pill is well adapted for such nervous disorders as are associated with impaired nutrition and spinal debility, increasing the appetite and stimulating digestion.

The practical value of Phosphorus as a therapeutic agent, and its applicability to the cure of disease, and especially in those varied disordered conditions consequent upon OVERWORK, which are characteristic of modern civilization.

Pil. Phosphori Comp. may be taken; one or two pills three times daily, after eating.

Price, per 100, $1.50.

PIL: IODOFORM ET FERRI. (WARNER & CO.) ℞. Iodoform, - - 1 gr. Ferri Redacti, - 1¼ gr.

THERAPEUTICS.—A powerful general tonic and alterative, valuable as a remedy in Anæmia, Scrofula, Neuralgia, Chlorosis, Rheumatism, etc.

Pil. Iodoform et Ferri may be given in doses of from one to two pills, as occasion may require.

Price, per 100, $2.00.

PIL: DIGESTIVA. (WARNER & CO.) ℞. Pepsin Conc't, 1 gr. Gingerine, 1-16 gr. Pv. Nuc. Vom., ¼ gr. Sulphur, ⅛ gr.

THERAPEUTICS.—Useful in relieving various forms of Dyspepsia and Indigestion, and of permanent benefit in cases of enfeebled digestion, where the gastric juices are not properly secreted. It is also a gentle laxative and excellent dinner pill, may be taken one after dinner, or one before each meal, three times daily.

Price, per 100, 75 cts

PIL: CALCIUM SULPHIDE. (WARNER & CO.) 1-10, ¼, ½ & 1 gr. each.

THERAPEUTICS.—Extremely useful in the treatment of acne, scrofula and cutaneous diseases.

Sulphide of Calcium is usually administered in doses of from 1-10 to ¼ grain four times daily, gradually increasing the dose to one grain six times daily, or according to the progress or severity of the case.

Price, per 100, 1-10 gr. .50; 1-4 gr. .60; 1-2 gr. .75; 1 gr. $1.00.

WARNER & CO.'S PILLS MAY BE OBTAINED FROM ALL DRUGGISTS, OR BY MAIL, ON RECEIPT OF PRICE.

It is most efficacious when taken in the morning fasting, warmed to a temperature not below 60°, or when an equal quantity of hot water is added to it. 1273-1325eow

In corresponding with Advertisers, please mention THE MEDICAL AND SURGICAL REPORTER.

CRINON'S HÆMOGLOBIN,

The Albuminoid Ferruginous Principle of Blood.

HÆMOGLOBIN is the only physiological chalybeate. Associated as it is with the phosphates of the blood, it forms the most powerful of tonics, and at the same time a most nourishing food. It is especially useful in cases of *Anæmia, Chlorosis, Cachexias, Exhaustion* caused by excess of work, nervous debility, fatigue resulting from parturition and lactation. It replaces entirely liquid blood, which has been recommended and used with success in *Phthisis* and *wasting away.*

It is offered in two forms: In cachets (wafers), 60 of which are contained in a box; combined with chocolate in small squares, 30 of which are in a box; both forms can be sent by mail.

Prepared by C. CRINON, Paris, Pharmacist of the first class, Laureate of the Hospitals of Paris Samples may be obtained by application to

E. FOUGERA & CO., New York, Agents for the U. S

DOCTOR RABUTEAU'S

(Laureate of the Institute of France.)

DRAGEES, ELIXIR & SYRUP OF IRON.

"The experiments made in the hospitals of Paris have demonstrated that *Dr. Rabuteau's Dragees, Elixir and Syrup* regenerate the red globules of the blood with a rapidity never observed with the use of the other ferruginous preparations. These results have been proved by the various *Compt-Globules.*

"The ferruginous preparations of *Dr. Rabuteau* do not cause any constipation, and are perfectly tolerated by the weakest persons."—*Gazette des Hospitaux.*

Dr. Rabuteau's Elixir is prescribed when some difficulty is experienced in swallowing the Dragees; it is especially adapted to weak persons, whose digestive functions need strengthening or stimulating.

Dr. Rabuteau's Syrup is especially prepared for children, who take it readily, because of its agreeable taste.

FOUGERA'S COMPOUND IODINISED

COD LIVER OIL.

Since the introduction of this oil in 1858, it has been found to be superior to all other kinds of Cod Liver Oil for the treatment of **General Debility, Consumption, Scrofula, Rickets, etc.**

It possesses not only all the **nourishing** qualities of the best Cod Liver Oil, but also the **tonic, stimulant** and **alterative** properties of **Iodine, Bromine** and **Phosphorus,** which are added in such proportions as to render it therapeutically five times as efficacious as pure Cod Liver Oil.

Through its **increased curative action, FOUGERA'S COD LIVER OIL** will be found to cure disease in a much shorter time than the pure oil; while favorable results will be obtained by its use in many advanced cases when the pure Cod Liver Oil would fail entirely.

FOUGERA'S READY-MADE MUSTARD PLASTERS.

A most useful, convenient, clean, and economical preparation. Not liable to change if kept in a dry place. Made of two strengths. Plasters No. 1, of pure mustard; Plasters No. 2, of one-half mustard. Price 40 cents, the tin box, or tin roll, of 10 plasters each. DIRECTIONS.—Dip the Plaster, or Plasters, a minute or two, in cold water; apply on the part, and cover with a band.

FOUGERA'S COMPOUND ICELAND MOSS PASTE.

(Iceland Moss, Lactucarium, Ipecac and Tolu.)

Used with great success against nervous and convulsive coughs, Whooping Cough, Acute Bronchitis, Chronic Catarrh, Influenza, etc.

Wakefulness, Cough, and other sufferings in Consumption, are greatly relieved by the soothing and expectorant properties of this Paste.

FOUGERA'S IODO-FERRO-PHOSPHATED ELIXIR OF HORSE-RADISH.

This Elixir contains Iodine, Pyrophosphate of Iron, the active principles of antiscorbutic and aromatic plants, and acts as a **tonic, stimulant, emmenagogue,** and a **powerful regenerator of the blood.** It is an invaluable remedy for all constitutional disorders due to the impurity and poverty of the blood. One of the advantages of this new preparation consists in combining the virtues of Iodine and Iron without the inky taste of Iodide of Iron.

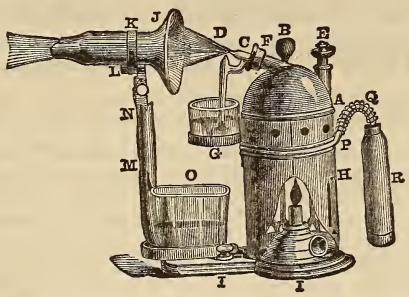
CODMAN & SHURTLEFF'S

ATOMIZING APPARATUS.

PRICES REDUCED.



THE COMPLETE STEAM ATOMIZER (Patented March 24, 1868.)

All its joints are hard-soldered.

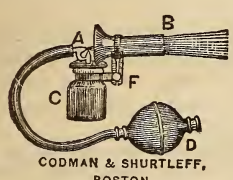
Every one is tested by hydrostatic pressure, to more than one hundred pounds to the square inch.

It cannot be injured by exhaustion of water, or any attainable pressure, and will last for many years.

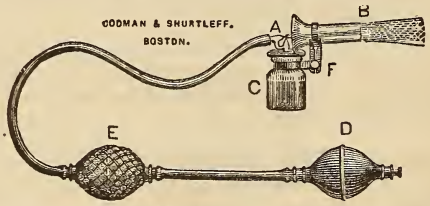
It does not throw spirts of hot water, is convenient, durable, portable, compact, and cheap, in the best sense of the word. Price $5.00. Postage 59c.

Brass parts, nickel-plated, additional, $2.00.

Neatly made, strong Black Walnut Box, with convenient Handle, additional, $2.50. Postage 44c.



THE BOSTON ATOMIZER. (Patented.)



SHURTLEFF'S ATOMIZING APPARATUS. (Patented.)

The most desirable Hand Apparatus. Rubber warranted of the very best quality. Valves imperishable, every one carefully fitted, and will work perfectly in all positions. Price $3.50.

The Bulbs are adapted to all the Atomizing Tubes made by us.

Each of the above Apparatus is supplied with two carefully-made annealed glass Atomizing Tubes, and accompanied with directions for use. Each Apparatus is carefully packed for transportation, and warranted perfect.

The Antiseptic Atomizer		*$15.00, $25.00, $45.00, and $50.00*

BUFFALO LITHIA WATER.

FOR

BRIGHT'S DISEASE OF THE KIDNEYS, THE GOUTY OR URIC ACID DIATHESIS, CHRONIC INFLAMMATIONS OF THE BLADDER, ETC.

Dr. Wm. A. Hammond, of New York, Surgeon General U. S. Army (retired), Professor of Diseases of the Mind and Nervous System in the University of New York, etc.

"I have for some time made use of the Buffalo Lithia Water in cases of affections of the Nervous System, complicated with Bright's Disease of the Kidneys, or with a Gouty Diathesis. The results have been eminently satisfactory. Lithia has for many years been a favorite remedy with me in like cases, but the Buffalo Water certainly acts better than any extemporaneous solution of the Lithia Salts, and is, moreover, better borne by the stomach. I also often prescribe it in those cases of Cerebral Hyperæmia, *resulting from mental overwork*—in which the condition called Nervous Dyspepsia exists—and generally with marked benefit."

Dr. J. Marion Sims, of New York, says of this water, in general terms:—

"I have used in my practice the Buffalo Lithia Water, Spring No. 2, for two years past, and have, in many cases, found it highly efficacious."

Dr. Alexander B. Mott, of New York, Professor Surgery, Bellevue Hospital Medical College, Surgeon Bellevue Hospital.

"I have made sufficient use of the Buffalo Lithia Water to be satisfied that it possesses very valuable therapeutic properties. In the Gouty Diathesis, Chronic Inflammation of the Bladder, and other diseases affecting the Urinary Organs, it may be relied on to give the most satisfactory results."

Dr. Hunter McGuire, Richmond, Virginia, late Professor Surgery Medical College of Virginia; Medical Director on the Staff of Gen. T. J. (Stonewall) Jackson; Vice-President of the International Medical Congress; Vice-President American Medical Association.

"Buffalo Lithia Water as an Alkaline Diuretic is invaluable. In Uric Acid Gravel, and, indeed, in diseases generally of the Uric Acid Diathesis, it will be found a remedy of extraordinary potency. I have prescribed it in cases of Old Rheumatic Gout, which had resisted the ordinary remedies, with wonderfully good results. I have also used it in my own case, being a great sufferer from this malady, and have derived more benefit from it than from any other remedy. It has remarkable adaptation in diseases of the Digestive Organs. In that condition especially known as Nervous Dyspepsia, caused by over-mental taxation, where, too, there is an excess of acid in the process of digestion, the happiest results may be anticipated from it.

Dr. Robert Battey, of Georgia, Suggestor of Battey's Operation; Member of the American Medical Association, etc.

"I would state that I have been using the Buffalo Lithia Water No. 2, in my practice for three years past, in cases of Chronic Inflammation of the Bladder, whether induced by STONE, by ENLARGED PROSTATE in the aged, or by neglected GONORRHŒA, and have secured excellent results, which encourage me to prescribe it for the future."

This Water, in Cases of One Dozen Half-Gallon Bottles, $5.00 per Case, at the Springs.

On Sale in Philadelphia by JOHNSTON, HOLLOWAY & CO.; JOHN WYETH & BRO.; FRENCH, RICHARDS & CO.

Springs Pamphlet sent to any address. Springs open from 1st of June to 1st of October.

MURDOCK LIQUID FOOD CO., Boston,

THE ONLY MANUFACTURERS OF

RAW FOOD EXTRACTS IN THE WORLD.

It can be retained by the weakest stomach, when all other food extracts, and even water, is rejected.

Nutritious food, if raw, condensed, and free from insoluble matter, will cure chronic diseases, as it will make blood faster than all preparations or food, and new blood will cleanse the system.

MURDOCK'S LIQUID FOOD is made from Beef, Mutton and Fruits; contains corpuscles; is 12½ per cent. soluble albumen, and free from insoluble matter, drugs, minerals, salts and acids, and can be retained by the stomach when so weak as to refuse food.

Ask your Druggists, or send to us, for Essays read before the American Medical Association, at Richmond, Va., May 6, 1881, on the value of Raw Food Extracts, by Geo. R. Shepherd, of Hartford, Conn., and other Essays and Testimonials from Medical Journals and Physicians that have used Liquid Food, in cases of Consumption, Scrofula, Nervous and General Debility, Dyspepsia, acute and chronic, Constipation, Diphtheria, Intemperance, Cholera Infantum, Infantile Diarrhœa, Post-partum Hemorrhage, Purpura Hemorrhagica with Waxy Liver, Pelvic Cellulitis, Malarial and other Fevers, Chronic Strumous Arthritis, Sclerosis of the Spinal Cord, Senile Gangrene, Perinephritic Abscess, and other diseases of malnutrition. No cases of Cholera Infantum have occurred where it has been used daily, and no lives have been lost from Cholera Infantum where it has been prescribed by a physician. Excellent for Eczema, Diabetes, Rheumatism and Neuralgia.

At the request of any physician who has not tried our Extracts, and would like to, we will deliver sample bottles to the Express in Boston. To any Medical Society wishing to investigate the value of our Extracts, through a committee, hospital, or individual members, we will furnish a supply of Liquid Food equal to a six-ounce bottle for every member present at the time of action. We are induced to do this knowing that our Extracts are saving life, and that an increased use of them, which will follow after a trial of them, will be the means of saving more lives daily. (*We ask no testimonials of results obtained.*) Raw Extracts are available where cooked ones are not, or if available, contain only one-third as much nourishment.

Liquid Food is in general use at all Hospitals, Infant and Insane Asylums, and Washingtonian Homes, U. S. Navy Hospitals, and by all physicians that have tried it.

If not kept by your Druggist, can be obtained in any of the commercial cities. In Philadelphia, by Johnston, Holloway & Co., Boericke & Tafel; in Pittsburg, by A. Kelly & Co.; in Baltimore, by Thomsen & Wirth; or you can order direct and we will pay express. 1 oz, 15 cents; 6 oz., 55 cents; 12 oz., $1.00.

See Philadelphia MEDICAL AND SURGICAL REPORTER, *Boston Medical and Surgical Journal*, and *New York Medical Record*, for chronic cases that were at our quarterly reception to physicians, in Boston, December 30, 1881—cases of Eczema, Rheumatism, Neuralgia, Diabetes, Consumption, and other diseases. If all were not restored to perfect health, they were gaining daily, and able to enjoy life and attend to their business. 1297-1348

MURDOCK LIQUID FOOD CO., BOSTON.

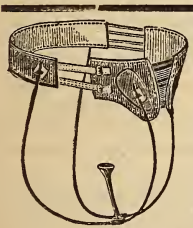
It is the only food that will relieve the Consumptive from Hunger.

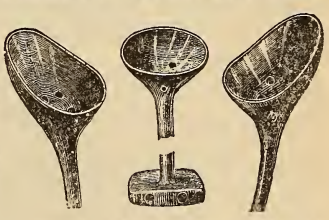
It will make Blood faster than all preparations known.

Hall's Differential Diagnosis, second edition, edited by Dr. Frank Woodbury. Price, cloth, $2.00.

D. G. BRINTON, 115 South Seventh St.

DR. McINTOSH'S
NATURAL UTERINE SUPPORTER.





No instrument has ever been placed before the medical profession which has given such universal satisfaction. The combination is such that the physician is able to meet every indication of Uterine Displacements. Falling Womb, Anteversion, Retroversion and Flexions are overcome by this instrument, where others fail. This is proven by the fact that, since its introduction to the profession it has come into more general use than all other instruments combined.

Among the many reasons which recommend this Supporter to the physician is its self-adjusting qualities. The physician, after applying it, need have no fear that he will be called in haste to remove or readjust it, as is often the case with rings and various pessaries held in position by pressure against the vaginal wall, as the patient can remove it at will, and replace it without assistance.

The Abdominal Supporter is a broad morocco leather belt, with elastic straps to buckle around the hips, with concave front, so shaped as to hold up the abdomen. The Uterine Support is a cup and stem, made of highly polished hard rubber, very light and durable, shaped to fit the neck of the womb, with openings for the secretions to pass out, as shown by the cuts. Cups are made with extended lips, to correct flexions and versions of the womb. The cup and stem is suspended to the belt by two soft elastic rubber tubes, which are fastened to the front of the belt by simple loops, pass down through the stem of the cup and up to the back of the belt. These soft rubber tubes being elastic, adapt themselves to all the varying positions of the body, and perform the service of the ligaments of the womb. The instrument is very comfortable to the patient, can be removed or replaced by her at will, can be worn at all times, will not interfere with nature's necessities, will not corrode, and is lighter than metal. It will answer for all cases of Anteversion, Retroversions, or any Flexions of the womb, and is used by the leading physicians with never-failing success, even in the most difficult cases.

Our Reduced Prices are to Physicians, $6.00; to Patients, $10.00.

Instruments sent by mail, at our risk, on receipt of price, or by Express, C. O. D., with the Express charges for returning the money added.

☞ CAUTION.—Owing to the great sale and popularity of our instrument various and base imitations are sold by unscrupulous parties. In order to get the genuine, it is best to order direct from us.

DR. McINTOSH'S NATURAL UTERINE SUPPORTER CO.,
192 Jackson Street, Chicago, Ill.

Our valuable pamphlet, "Some Practical Facts about Displacements of the Womb," will be sent you free on application. 1281-1332

For Consumption and Wasting Diseases.

HYDROLEINE

Has been proved of the highest value in CONSUMPTION and all WASTING DISEASES, invariably producing IMMEDIATE INCREASE in FLESH and WEIGHT.

FORMULA OF HYDROLEINE.

Each dose of two teaspoonfuls, equal to 120 drops, contains:

Pure Oil,	**80 m. (drops.)**	**Soda,**	**1-3 grain.**
Distilled Water,	**35 m.**	**Boric Acid,**	**1-4 "**
Soluble Pancreatin,	**5 grains.**	**Hyocholic Acid,**	**1-20 "**

DOSE.—Two teaspoonfuls alone, or mixed with twice the quantity of soft water, to be taken thrice daily, with meals.

The principles upon which this discovery is based have been described in a treatise on "THE DIGESTION AND ASSIMILATION OF FATS IN THE HUMAN BODY," by H. C. BARTLETT, PH.D., F.C.S., and the experiments which were made, together with cases illustrating the effect of Hydrated Oil in practice, are concisely stated in a treatise on "CONSUMPTION AND WASTING DISEASES," by G. OVEREND DREWRY, M.D.

In these treatises the Chemistry and Physiology of the Digestion of the Fats and Oils is made clear, not only by the description of a large number of experiments scientifically conducted, but by cases in which the deductions are most fully borne out by the results.

☞ *Copies of these valuable works will be sent free, on application, to all who mention THE MEDICAL AND SURGICAL REPORTER.*

HYDRATED OIL,

HYDROLEINE,

WATER AND OIL,

May be described as partially digested oil, which will nourish and produce increase in weight in those cases where oils or fats not so treated are difficult or impossible to digest. In CONSUMPTION and other WASTING DISEASES the most prominent symptom is EMACIATION, of which the first is the starvation of the fatty tissues of the body, including the brain and nerves. This tendency to emaciation and loss of weight is arrested by the regular use of HYDROLEINE, which may be discontinued when the usual average weight has been permanently regained.

The ordinary so-called emulsions of Cod-liver oil and other fats, WHETHER PANCREATIZED OR NOT, merely remain in the form of a coarse mechanical mixture for a short time after agitation. The digestion of oil having in no sense been artificially produced, still devolves upon those functional powers the deficiency of which is the most prominent symptom in these cases.

HYDROLEINE is not a patent medicine or a secret preparation; the formula is on every bottle. Can be taken by the most delicate stomach; is immediately assimilated.

The permanence and perfection of the emulsion, and the extreme solubility of the HYDRATED OIL, solely prepared and sold by us under the name of HYDROLEINE, is shown by its retaining its cream-like condition as long as the purest Cod-liver Oil will retain its sweetness. Unlike the preparations mentioned, or simple Cod-liver Oil, it produces no unpleasant eructation or sense of nausea, and should be taken in such very much smaller doses, according to the directions, as will insure its complete assimilation; this, at the same time, renders its use economical in the highest degree.

To brain-workers of all classes, Hydrated Oil is invaluable, supplying as it does the true brain food.

Economical in use—certain in result Tonic—Digestive and Highly Nutritive.

This College has for its *collegiate year* two sessions.

Regular Session commences Wednesday, September 7th, 1881, and closes March 1st, 1882.

Recitation Term (optional) commences March 15th, 1882, and closes June 14th, 1882.

Graded Course of three terms, of six months each.

PLAN OF INSTRUCTION.

By *Lectures*, *Recitations* and *Clinics*, together with *practical work* in the Anatomical, Physiological, Chemical and Pharmaceutical Laboratories.

Clinics are held *daily*.

Clinical Work in Hospitals and Dispensaries is given to the Senior Class (see Clinics), in *small sections*, under the charge of a *Clinical Teacher*, in all the departments of Medicine and Surgery.

Three Large Hospitals and *two Dispensaries* afford unlimited material for instruction.

ADMISSION.—Candidates for admission are required to pass a preliminary examination, unless satisfactory documentary evidence can be presented, that is equivalent to the standard adopted. (See Catalogue.)

FEES.

Regular Session.—Matriculation, $5.00; Lecture Tickets, $50.00; Hospital Tickets, $10.00 Examination (final), $25.00.

Recitation Term.—$10.00 for those who have attended Regular Session; all others, $25.00, $15.00 of which will be applied on the next Regular Term.

Board and Rooms can be obtained for $3.00 to $5.00 per week, the average being $4.00.

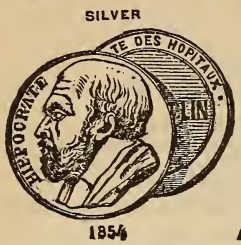
MATHEY-CAYLUS' GLUTEN



CAPSULES

OF

PURE COPAIBA AND OTHER MEDICINES.

Adapted and recommended for the cure of recent or chronic Gleets, Fluor Albus, etc., etc.

The MATHEY-CAYLUS' CAPSULES, *coated with gluten*, present the most perfect mode for administering Copaiba, Cubebs, Norway Tar, Turpentine, and other remedies, the disagreeable odor and taste of which are often a hindrance to their use. This mode of preparing capsules, which has been approved by the Academy of Medicine, has been recommended in their clinical lectures by eminent Professors in the hospitals of Paris, as well as in those of New York and London.

By the first physicians of the hospitals of Paris, London, and New York.

SPECIAL ADVANTAGES OF MATHEY-CAYLUS' GLUTEN CAPSULES.—Being formed of thin, transparent, and readily assimilated coating, they so cover and disguise the medicine to be given, that it can be taken without disgust, but with ease. In this respect, they differ widely from the gelatine capsules, which have a hard, thick coating, which swells beyond measure, in the stomach, are hard to be swallowed, and what is of great importance, they create disturbance in the digestive functions.

The special advantage of the coating of gluten consists in the fact that, notwithstanding its extra thinness, and although it softens under the action of the gastric juice, it can pass the stomach without breaking, and only in the intestines is the medicinal matter liberated; this accounts for the fact that Mathey-Caylus' Capsules never cause the nausea, eructations, and dyspeptic symptoms, which are complained of by many persons using other preparations.

Finally, their regular ovoid form, which is so favorable to swallowing, their pleasant appearance, which dispels all disgust, and the advantage of being entirely free from taste and smell, recommend the use of these capsules even to the most delicate persons.

Thankful to the Medical Profession for the liberal patronage heretofore bestowed upon us, we hope that they will continue their favors, and we are convinced that they will never have any reason to regret the generous welcome they have given to our preparations.

MATHEY-CAYLUS' CAPSULES are never sold, except in bottles having the following inscription printed in the glass: MATHEY-CAYLUS A PARIS. And each bottle contains 64 capsules, making them the cheapest capsules in the market.

The following different kinds of Mathey-Caylus' Gluten Capsules are now offered:

COPAIBA AND TANNIC ACID,
COPAIBA AND S. N. OF BISMUTH,
COPAIBA AND CATECHU,
COPAIBA AND MAGNESIA,
COPAIBA, CUBEBS AND ALUM,
COPAIBA, CUBEBS AND RHATANY,
COPAIBA AND RHATANY,
COPAIBA AND CITRATE OF IRON,
COPAIBA AND CUBEBS,
COPAIBA PURE,
COPAIBA, CUBEBS AND CARB. OF IRON,
VENICE TURPENTINE, NORWAY TAR, PURIFIED,

JOHNSTONE'S IMPROVED

ADAPTABLE POROUS FELT SPLINTS.

AHL'S SPLINT MANUFACTURING COMPANY, LIMITED,

123 & 125 South Eleventh Street, PHILADELPHIA, PA.

THE ADAPTABLE POROUS SPLINTS, invented and improved by W. H. JOHNSTONE, have been tested extensively in both civil and military practice for a number of years, and have been endorsed and recommended in the most unqualified manner by the celebrated and distinguished Surgeons of America.

Their *porosity* is a peculiar and a valuable property. While the material is firm and insoluble, it permits readily the passage of air and fluids, so that, on one hand, the heat from the inflamed surface, the perspiration, and the morbid exhalations, are not confined, to the detriment of the patient, *as is the case in every other kind of splint*, but pass off freely; and on the other hand, lotions of cold or warm water, medicated or not with weak alcohol, carbolic acid, arnica, tincture, solutions of the sulphites, etc., can be constantly applied without disturbing the dressings. This, it will readily be seen, is a most invaluable property when the parts are bruised, lacerated, filled with extravasated blood, or erysipelatous, and give these splints a conspicuous advantage over all others.

From FRANK H. HAMILTON, M. D., Professor of Fractures and Dislocations in the Bellevue Hospital Medical College, author of "A Treatise on Fractures and Dislocations," etc.

Having examined carefully *JOHNSTONE'S IMPROVED ADAPTABLE POROUS FELT SPLINTS*, I feel warranted in recommending them to the Profession as superior to all other manufactured splints now in use. They possess all the essential qualities of a good splint, having firmness, pliability and lightness.

FRANK H. HAMILTON, M. D.,
Prof. Military Surgery and Fractures and Dislocations, Bellevue Hospital Col.

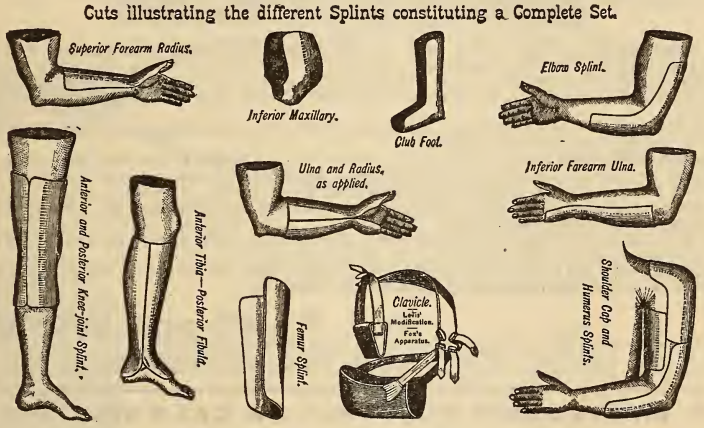
From PROF. D. HAYES AGNEW, Prof. Surgery, University of Penna.

1611 CHESTNUT STREET, PHILADELPHIA, *February 6th*, 1879.

The Adaptable Felt Splints, formerly known as those of Dr. Ahl, with the improvement now made by W. H. Johnstone, which renders them in every way superior to the former, I regard as very excellent appliances in the treatment of fractures.

D. HAYES AGNEW,
Prof. Surgery, University of Pennsylvania.

Cuts illustrating the different Splints constituting a Complete Set.



SPECIAL NOTICE TO THE PROFESSION AND TRADE.

Our *policy* heretofore in the introduction of JOHNSTONE'S IMPROVED ADAPTABLE POROUS FELT SPLINTS, has been to confine the sales and business negotiations directly to the Doctors themselves, declining in every case to sell our goods through Dealers; we having assured the Profession generally, both through our agents and catalogues, that *JOHNSTONE'S IMPROVED SPLINTS* could only be obtained by subscription.

We wish to announce, that owing to the large demand for our goods and the constant importunity on the part of *Surgeons* everywhere to place our Splints on sale with their Instrument Dealer or Druggist, to afford them greater convenience and facility in obtaining the pieces in duplicate, we have at last acceded to that request, and hereafter *JOHNSTONE'S CELEBRATED FELT SPLINTS* can be obtained at most dealers in Instruments and Drugs throughout the United States, at the same price which they were heretofore sold, viz:

A complete set, embracing fifty (50) pieces—twenty-five for adults and twenty-five for children—is thirty ($30) dollars. Extra or duplicate pieces can always be obtained from your DEALER, at one dollar each.

JOHNSTONE'S CELEBRATED SPINAL JACKET, for Curvatures and Deformities, have met with unparalleled success, and, from their merit, secured the unqualified endorsement and approbation of our celebrated orthopædic specialists, and particular expression of gratitude from the patients who are wearing them. For full information, send for Descriptive Circulars.

Should your Instrument dealer fail to have a supply of our Splints, and decline to carry them in stock, orders sent to us will receive prompt attention.

AHL'S SPLINT MANUFACTURING CO., Limited.
W. H. JOHNSTONE, Manager.

N. B.—If the Instrument Dealers of Philadelphia decline to supply its Physicians with our JOHNSTONE'S FELT SPLINTS on call, they will be furnished and delivered by us to any part of the city, at any time, on receipt of the price, viz.

$1.00 each.

JOHNSTONE'S SPINAL FELT JACKET, any size, - - - - - - - - - - $25.00
JOHNSTONE'S LACED SPLINT FOR THE LIMBS, any size, - - - - - - - - - - 10.00

JOHNSTONE'S MODIFICATION OF DR. R. J. LEVIS' SPLINT

For the FRACTURE OF THE LOWER END OF THE RADIUS.

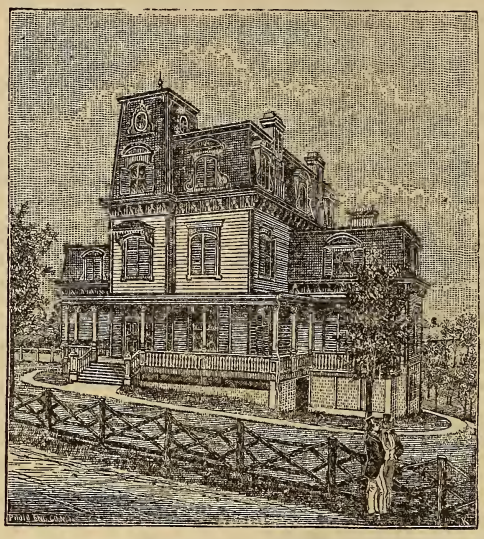
1281–1332 **Price $2.00 per Pair.**

THE DE QUINCEY HOME,

FORT WASHINGTON, NEW YORK CITY.

A Private Asylum for the Treatment of the Opium, Morphine, Chloral, Chloroform and Hashisch Habits, Nervous Diseases and Inebriety.

Drs. H. H. Kane
and
W. H. Vittum,
in charge.



Consulting Physicians.

Prof. Wm. A. Hammond,

Prof. T. Gaillard Thomas,

Dr. Edward C. Spitzka,

Dr. Daniel M. Stimson,

Dr. Edward T. Ely,

Dr. G. H. Wynkoop,

Dr. Andrew H. Smith.

The plan of treatment pursued in the cure of opium, morphine and chloral takers is that of *rapid reduction*, which possesses all the advantages, and none of the dangers of Levenstein's *sudden deprivation*, or the prolonged agony of *gradual reduction*. Each case is studied and treated in accordance with its peculiarities and the idiosyncrasies of the patient, no set plan of treatment being pursued, at the expense of the person's health or comfort.

All patients being of the better classes, and selected, there need be no fear of meeting those with whom one would not care to associate in their own homes.

Time consumed in breaking the habit (morphia, chloral, etc.) from two to ten days, according to the amount and length of time used, patient's general condition, etc. Patients required to remain from two to eight weeks.

TERMS: From $15.00 to $150.00 per week, payable weekly or monthly, in advance, according to accommodations. This includes a trained nurse (day and night), private room, fire, gas, medicine, stimulants, board, washing, medical attendance, carriage riding, etc.

Physicians sending patients should forward a full history of the case, as the patient's word cannot always be relied upon, especially as regards the amount of morphia used.

Insanity and inebriety are treated by careful, special and general medication, exercise, amusement, generous diet, pleasant surroundings, *non-restraint* and careful watching.

Drs. KANE and VITTUM,

1299-1350 DE QUINCEY HOME, FORT WASHINGTON, NEW YORK CITY.

DR. McINTOSH'S ELECTRIC OR GALVANIC BELT.

This Belt is a perfect Galvanic Battery, composed of sixteen cells, placed in pockets on a belt. Each cell is made of hard vulcanized rubber, lined with copper, which constitutes the negative plate. The rubber coating perfectly insulates each cell. The positive plates are of zinc, wrapped in a porous material to absorb the exciting fluid, preventing contact with the copper, and permitting the current to pass from the copper to the zinc. The cells are charged without wetting the belt.

A current selector is so arranged that one or more cells can be used at pleasure. The electrodes are covered similar to ordinary battery electrodes, and connected with the cells by connecting cords. By this arrangement, a current from the belt can be applied to any part of the body. Physicians who have used this belt in their practice do not hesitate to recommend it to the profession.

Our pamphlet on "Medical Electricity," containing a full description of the belt and diseases, with manner of treatment, sent free on application. Address

McINTOSH GALVANIC BATTERY CO.,

1281-1332 192 AND 194 JACKSON STREET, CHICAGO, ILL.

COMPOUND PETROLEUM PILLS.

The attention of the *Profession* is called to my new *Combination* for the alleviation of **BRONCHIAL** and **PULMONARY TROUBLES—CONSUMPTION, CHRONIC BRONCHITIS, CATARRH** and **ASTHMA.** Sample Boxes with Formula furnished *Physicians.*

Price Fifty Cents and One Dollar per Box. Sent on receipt of price by Registered Letter.

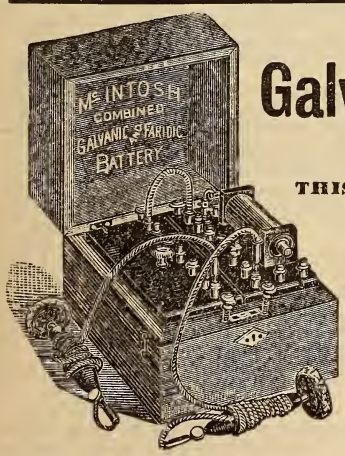
Price, $3.00. Sent per mail on receipt of price. The Rubber Tubes are free from all woolen or silk coverings thus avoiding all friction sounds arising from this source. ☞ **A Descriptive Circular sent to any address.**



McINTOSH'S COMBINED

Galvanic AND Faradic Battery.

THIS CELEBRATED BATTERY COMBINES BOTH THE GALVANIC AND FARADIC CURRENT,

Which can be used separately or combined. Any strength and intensity desired can be obtained for use in Electro-therapeutics. THIS BATTERY is constructed on an IMPROVED PLAN, as follows: The zinc and carbon plates are arranged in couples, securely clamped to hard rubber plates, with thumb screws. These screws are also used for binding posts. All the connections are positive. The cells are made in sections of six, of hard rubber, with hard rubber drip cup. The following points of excellence render our Batteries superior to others:

1. They combine the only Portable Galvanic and Faradic Battery in one case.

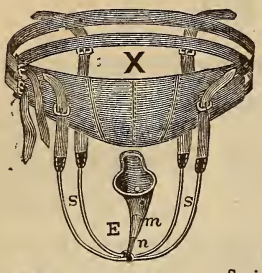
2. They weigh one-half less than other Batteries of the same number of cells.

3. The cells are made in sections of six, of one solid piece of hard, vulcanized rubber; by this arrangement they can be emptied, cleaned and filled as easily and quickly as one cell, and will not crack, break or leak.
4. A hard rubber drip cup is placed by the side of each section of cells, to receive the zinc and carbon plates when removed from them. By this arrangement we avoid the use of absorbent materials and soiling the Battery
5. The Hydrostat is perfect. The rubber plates which hold the elements project over on one side enough to cover the cells when the zinc and carbon plates are placed in the drip cups. The under side of this projection is covered with thick, soft rubber, which is securely clamped to the cells sections, and makes them water tight.
6. This is the only Battery in which the zinc and carbon plates can be kept clean by simply rinsing them.
7. A zinc or carbon plate can be removed by simply loosening a binding post; and all parts of the Battery can be duplicated, as like parts are made exactly alike. We will be pleased to send circulars and our illustrated catalogue, giving full information, price, etc., free, upon application.

McINTOSH GALVANIC BELT AND BATTERY CO.,

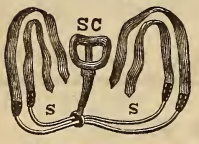
1281-1332 **Nos. 192 and 194 Jackson Street, CHICAGO, ILL.**

STAUFER'S
HARD RUBBER INSTRUMENTS AND PRICE LIST.



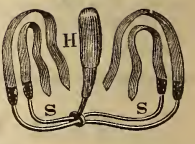
Prices.—Spring Stem Retroversion (E) on belt X, or Y, $8.00; or on Z, $7 00.

Intra-Uterine Stem Cup **(I U).**—Price on belt X, or Y, $7 00; on Z, $6 00. The intra-uterine stem cup may be first introduced and the cup turned. The stem has no spring, but joints the cup when in position by lodging in a socket.

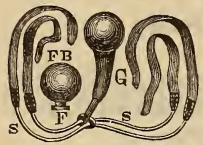


Spring Stem Prolapsus and Procidentia cup (A) on belt X, or Y, $7.00; on Z, $6.00.

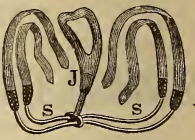
Spring Stem Anteversion (S C) Spring Stem Globe Top (G). Spring Stem Oblong (H); and Spring Stem Lever (J). Each on X, or Y, $7.00, or on Z, $6.00.



Springs.—The tops of all spring stems unscrew, and a non-corrosive coil spring is placed in tube *m*, Fig X. The base stem *n*, slides against the spring and arrests any external touch. This together with the pure elastic gums S S, suspends the heretofore displaced uterus on a double elastic motion.

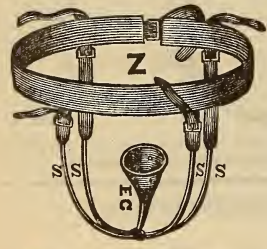


Transformation.—The self-sustaining cup A D, is formed by covering the screw when cup A, is unscrewed. So is also F B, with globe G. They are to be pressed in position at night, in sensitive cases, and stem and bandage laid aside. They have a similar use when contraction of the vagina takes place, before it is safe to suspend the support entirely.

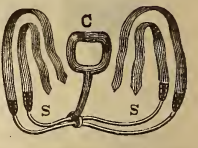


Curve.—All the stems are curved so as the base does not become struck from seating. And the cups even in the *Economy*, moulded oblique to set in the normal axis of the uterus and vagina, as plainly seen in E, Fig X.

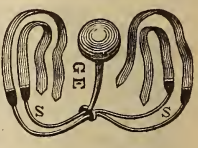
ECONOMY AND PERMANENT STEMS.



Prices.—E C, on elastic waist belt Z, is a permanent deep stem cup, no spring, but elastic gums S S, at only $4.50. On X, or Y, $5 50. Retroversion E, on Economy stem and belt Z, $6 00; X, or Y, $7 00. Permanent stems Anteversion C; Stem Globe G E; Oblong H E; and I, on Z, $4.50, and on X or Y, each $5.50. These deep leaning cups, if correct in size, correct all prolapsus uteri and procidentia, and also overcome by mere elevation partial anteversion and partial retroversion. Stem Globes and Stem Levers, by alternating the cups, assist the straightening up the uterus in difficult cases. ***Cystocele*** is drawn in by G, H, G E, or H E.

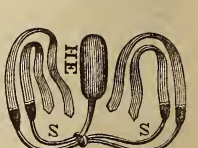


Belts.—X, and Y. have fine satteen, whale bone stay, fronts. X, two elastic back straps and closing on right hip. Y, closes on back and has elastic hip straps. Strict hip measure required. Waist measure for Z. Overlap is allowed here.

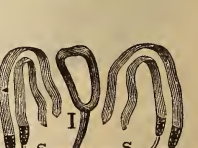


Self-Sustaining Globe B.—This is a mere hard rubber shell graded a little less than ⅛ inch from 1 to 2½ inches. It ascends in the vagina by its lightness. A cord attached to a non-corrosive staple for removal; and all the objectionable features of the glass balls are overcome. It is simple and entirely manageable by the patient at will. Harmless and still of more service, especially in the beginning of uterine troubles than any ring or lever. Actual wear does not depreciate them in value. They are always exchangeable at cost, for another style; when found not to answer, by reason of a too heavy uterus; collapsed vagina, or the case of too long standing. No. 10, 1⅞; 11, 2 inches, are the usual sizes used after having had several children. ***Price,*** $1 50 each

Cup D.—This sustains itself by its brim and suction. Some physicians use it as a common supporter; but it is mostly used to alternate Cup E C; for which purpose it should be selected ⅛ to ¼ inch larger than the E C, in use. ***Price,*** $1 50 each.



Selection —The correction of a displaced womb and its successful support, depends entirely on the instrument and its proper selection in size and style. Since the elastic support from outside and spring stem within for sensitive cases; this important department in gynecology is rendered simple and within the scope of every family physician. The construction of this series of stem supporters obviates hindrance to seating and all objection to the external protrusion is overcome. The cups are usually selected by giving the full diameter across the top, thus for nullipara, 1¼ to 1⅝; Multipara, 1⅝ to 2. and procidentia. 1⅞ to 2¼ inches and over some times. Stems, longer or shorter than ordinary, are made to order and among the exchange privileges. Stem Globes are numbered—Stem Levers and oblong, are usually designated by small, medium and large.



Description of Cases.—Age of patient, state of catamenia; now and heretofore. If children, miscarriages, and how many? If urine trouble, helplessness in the spine, bed-ridden, &c., whether by accident or unknown cause. If a pessary already worn, its name, size, and result. How displaced; as the touch or speculum reveals.

Exchanges.—All the hard rubber parts in the catalogue are exchanged and interchanged without limit of time. Only needed repair and difference of higher price instruments charged when required for complicated cases.

Obtained through the Medical and Surgical Reporter Office.

MAILED ON RECEIPT OF QUOTATION PRICES. CATALOGUES ON APPLICATION.

BEEF PEPTONE,

IN TRANSPARENT GLASSY SCALES,

Containing only the animal or azotized matter of the Beef. Each ounce is equal to 16 ounces of raw beef, easily soluble, and still faster in hot water.

This Beef Peptone is digested from tender, juicy Beef, by the aid of the *Crystal Pepsin,* of my manufacture (Jensen's Crystal Pepsin). Unlike the various BEEF EXTRACTS, this preparation contains all the nutritive constituents of the Beef, in a thoroughly digested state, ready for absorption into the system, while the Beef Extracts are entirely devoid of the chief elements of nutrition, such as the fibrinous, gelatinous and albuminous portions of the Beef, they only consisting of the concentrated saline constituents, with barely a trace of animal matter to keep its consistence. The difficulty so long experienced by the profession throughout the world, in preparing a PEPTONE entirely free from those chemical agents necessary for its manufacture, so as to render it fit for use, is hereby demonstrated to be successfully overcome, as it contains no foreign matter, and will stand the most severely scrutinizing test as to perfectness, also possessing flavor of the Beef, and so palatable as to render it highly agreeable.

Put up in bottles holding One ounce, Eight ounces, and one Pound.

Kept by the Wholesale and Dispensing Druggists in general.

DEPOT—L. WOLFF'S Pharmacy,

Northwest corner Twelfth and Chestnut Streets.

JENSEN'S CRYSTAL PEPSIN,

IN ARTIFICIAL CRYSTALS,

Strictly inodorous and tasteless, and perfectly soluble in water without acid.

THIS PEPSIN, now so popular with the profession, has created an impetus in the consumption of the same, and physicians of the highest standing, who before the introduction of this active PEPSIN, with good reason, entirely abandoned the use of PEPSIN, are now the most eager in prescribing JENSEN'S CRYSTAL PEPSIN, whenever it is indicated, and since the knowledge of its great solvent power (gr. j. of it will dissolve the boiled whites from two to three eggs) has been established even among those susceptible to be great doubters, it has caused itself to be utilized in many novel ways, by the thinking profession; for instance, in substituting morphia, chloral, etc., as a hypnotic, relieving gastric troubles where the above remedies have been prescribed, creating morphine and chloral habits. In removing diphtheritic patches it is successfully used combined with water, glycerine, and muriatic acid, and the same composition, diluted with more water, as a spray in bronchial troubles, dissolving muco-purulent matter, as well as a spray for same in catarrhal affections.

THIS PEPSIN

Has also been used with success in dissolving and evacuating coagulated blood in the bladder, dispensing with surgical operations in such cases. Many other novel applications could be mentioned, if not in want of space. It is found to be FORTY times stronger than saccharated pepsin. One to three grains is an active dose.

KEPT BY ALL DRUGGISTS.

The above preparations are only manufactured and put up by

CARL L. JENSEN, M.D., PH.G.,

865 North 26th Street, Philadelphia, Pa.

No other Wholesale Agents for this Pepsin are longer engaged, than the Wholesale Druggists throughout the United States.

"The Most Popular and Practically Useful Medical Journals in the United States."

THE MEDICAL AND SURGICAL REPORTER,

PUBLISHED EVERY WEEK.

THE COMPENDIUM OF MEDICAL SCIENCE,

PUBLISHED HALF-YEARLY.

The REPORTER gives 1500 pages yearly, the COMPENDIUM 600 pages of the best quality of reading matter. No better and no cheaper medical journals are published in America or elsewhere.

The Medical and Surgical Reporter,

A WEEKLY JOURNAL.

Edited by D. G. BRINTON, M. D.

ISSUED EVERY SATURDAY.

Large Octavo, Double Columns, 26 to 28 Pages of Reading Matter in Each Number.

The REPORTER was established in 1848, and now has attained as large, if not the largest, circulation of any medical weekly in this country. It has achieved this through its independence of all cliques, its steady devotion to the highest interests of the regular profession, its energy in obtaining the most important scientific news, the value of its original articles, its broad national character, and its attention to the practical and clinical aspects of professional study.

FOR 1882.

Some important improvements will be added to the REPORTER in 1882, and we have arranged with several of the most distinguished American medical writers to contribute to its pages. We suggest to our subscribers to send in their renewals at an early date, and should be glad to have them bring the REPORTER to the notice of their friends. We can guarantee them a satisfactory periodical the coming year.

PRICES:

The regular price for the COMPENDIUM for one year (two numbers, 300 pages each, bound in paper,) is $2.50.

A discount is allowed on the REPORTER and COMPENDIUM when taken together, as follows:

The Weekly Medical and Surgical Reporter, - -	$5 00
The Half-Yearly Compendium of Medical Science, - -	2 50
The Reporter and Compendium, taken together, - -	7 00

☞Payable in advance, direct to the publisher.

A *Table of Contents* of a number of Half-Yearly Compendium will be sent on application to the publisher.

A single copy will be sent for examination for One Dollar.

Specimen copy of the REPORTER free, on application.

FOR SALE.—A PHYSICIAN IN A PLEASant village in New Jersey, 40 miles from Philadelphia (by a railroad passing through it), will sell outfit and practice, on reasonable terms. The village has nearly 500 inhabitants, and is surrounded by a prosperous farming country, in which most of the practice lies. Nearest physician 4 miles distant. Satisfactory reasons given for selling. Address
1299-1300 DR. C. H. MULFORD, Fairton, N. J.

TANRET'S PELLETIERINE.

For the TREATMENT of TAPE-WORM (Tænia Solium).

This new Tanifuge, the Active Alkaloid of Pomegranate Bark, has of late come into extensive uss in France, for the treatment of Tape-worm (Tænia Solium). The results of numerous experiments with it at the Marine Hospitals of Toulon, St. Mandrier, etc., and in the Hospitals of Paris, St. Antoine, La Charite, Necker Beaujon, etc., have all been most satisfactory. Doctor Dujardin Beaumetz, Member of the Academy of Medicine, and Prof. Laboulbene, in their report to the Society of Therapeutics, have given it their unqualified approval, after the most searching experiments. This preparation is pleasant to administer, and if certain preliminaries are observed success will be insured.

PELLETIERINE is prepared by Mr. CHAS. TANRET, Pharmacien de First Class, 64 Rue Basse du Rempart, Paris. 1242eow-t

GENERAL AGENTS, E. FOUGERA & CO., 30 N. William St., N. Y.

MELLIN'S FOOD.

Young infants cannot digest farinaceous substances. MELLIN'S FOOD is not farinaceous. It is easily prepared for use. It is recommended by the highest medical authorities in Europe and America, as the best artificial food for infants, either sick or well, that has ever been produced. For sale by all druggists and apothecaries. Price, 75c. per large bottle. Observe the trade-makr and our name on the label. Pamphlet and sample free to any physician.

VINUM DIGESTIVUM (PROCTER.)

DIGESTIVE WINE, used with unvarying success by so many of our prominent physicians for the last three years, is offered with increased confidence to the profession as a sure and rapid means for the exhibition of the artificial digestive function. The nausea of pregnancy and sea sickness are greatly alleviated or entirely relieved by its use. One fluid-ounce dissolves 500 grains of coagulated albumen. One or two teaspoonfuls may be given, or varied as desired. We would suggest that the above title be used in prescribing. 1257-1308, 1y.

Manufactured by **WM. PROCTER, Jr., CO.,** S. W. Cor. 9th and Lombard Sts., Phila.

BOUDAULT'S PEPSINE

IN POWDER, also WINE, ELIXIR, SYRUP, PILLS, AND LOZENGES OF PEPSINE.

Since the introduction of Pepsine by Boudault in 1854, **BOUDAULT'S PEPSINE HAS BEEN, AND IS STILL CONSIDERED, THE MOST RELIABLE,** as is attested by the awards it has received at the Exhibitions of 1867, 1868, 1872, 1873, and in 1876 at the Centennial Exposition in Philadelphia.

IT IS THE ONLY PEPSINE USED IN THE PARIS HOSPITALS.

Careful tests will enable any one to satisfy himself that **BOUDAULT'S PEPSINE HAS A DIGESTIVE POWER AT LEAST DOUBLE** that of the best Pepsines in the market, and that it is really the cheapest.

It is Sold in 1 ounce, 8 ounce, and 16 ounce Bottles.

Beware of so-called **French** Pepsines bearing fictitious names, and prescribe Boudault's **only.**

BLANCARD'S PILLS

OF UNCHANGEABLE IODIDE OF IRON.

Blancard's Pills of Iodide of Iron are so scrupulously prepared, and so well made, that none other have acquired a so well deserved favor among physicians and pharmaceutists. Each pill, containing one grain of proto-iodide of iron, is covered with finely pulverized iron, and covered with balsam of tolu. Dose, two to six pills a day. The genuine have a *reactive silver seal* attached to the lower part of the cork, and a green label on the wrapper, bearing the fac-simile of the signature of

Pharmacien, No. 40 Rue Bonaparte, Paris
without which none are genuine.

Registered COSMOLINE Trade Mark.

Unguentum Petrolei

Prepared by E.F.Houghton & Co. Philadelphia, U.S.A.

Put up in 1, 5, 10, 25, 50, and 100-lb. cans. Samples furnished on application. The post-office laws forbid anything of an oleaginous nature being sent through the mail.

In chemical composition, Cosmoline [Unguentum Petrolei] is an oleaginous hydrocarbon, corresponding to the heavy petroleum oils, and containing a large amount of the paraffines and olefines of the formulæ $C_{16}H_{34}$ and $C_{16}H_{32}$. It contains but a small percentage of the paraffines and olefines. corresponding to the formulæ C_7H_{16} and C_7H_{14}, respectively, and the offensive and irritating properties of the crude oil have been carefully removed. In the process of purification, no acids, alkalies, or other chemicals are employed, and no injurious additions of any kind are made to the natural product. The result is a semi-solid, translucent substance, with a faint odor and unctuous feel.

Cosmoline [Unguentum Petrolei] melts at about 100° Fah. (38° Cent.); and boils at about 625° Fah. (329° Cent.); its specific gravity is about 0.875 at 60° Fah.

As it contains no oxydizable or organic matter capable of change by putrefaction or fermentation, and is absolutely without affinity for moisture, it offers to the profession an admirable unguent, which can never decompose, ferment, or become rancid in any climate or temperature.

291 MADISON AVENUE, NEW YORK, February 26th 1878.

I have examined the preparations of Cosmoline as manufactured by E. F. Houghton & Co., Philadelphia, and believe them well adapted to the purposes for which they are designed. As lubricants, and as the bases of simple or medicated ointments, they have a decided advantage over the fixed oils and fatty substances in ordinary use, in that they do not become rancid, and do not acquire irritating qualities from atmospheric exposure. ALFRED C. POST, M.D., LL.D.,
Emeritus Professor of Clinical Surgery in the University of New York, Visiting Surgeon to Presbyterian Hospital, etc.

PHILADELPHIA, July 10, 1880.

MESSRS. E. F. HOUGHTON & CO.:

I have for a number of years made extensive use of Cosmoline [Unguentum Petrolei] and consider it a most valuable article for surgical purposes. Either as a dressing by itself, or as a vehicle for the application of medicaments, it is greatly superior to lard or other fatty matters, especially by reason of its non-liability to change by time or temperature.

Yours truly,
JOHN H. PACKARD, M.D.
1031 WALNUT ST., PHILADELPHIA.

MESSRS. E. F. HOUGHTON & CO.:

I have used extensively Cosmoline [Unguentum Petrolei] both in Dispensary and private practice, with very great satisfaction. As a vehicle in making ointments it is invaluable, and far superior to lard, for the reason that it will not become rancid or undergo chemical change like the latter, when exposed to the atmosphere. I cannot too highly commend it as an application in various skin diseases.

Yours truly, JOHN V. SHOEMAKER, A.M., M.D.,
Physician to the Pennsylvania Free Dispensary for Skin Diseases

208 WEST 34TH ST., NEW YORK.

MESSRS. E. F. HOUGHTON & CO.:

Gents:—I fully appreciate the value of your Cosmoline, or Unguentum Petrolei, and prescribe it frequently in ointments. Fluid Cosmoline I have used constantly for several years, as a lubricant of urethral sounds. It is the cleanest oil I know of for this purpose.

Yours truly, GEO. HENRY FOX.

E. F. HOUGHTON & CO.,

1297-1348 **211 S. Front Street, Philadelphia.**

MALTINE,

A CONCENTRATED EXTRACT OF

MALTED WHEAT, OATS, AND BARLEY.

In its preparation the temperature employed does not exceed 150 deg. Fahr., thereby retaining all the nutritive and digestive agents unimpaired. Extracts of Malt are made from Barley alone, by the German process, which directs that the mash be heated to 212 deg. Fahr., thereby coagulating the Albuminoids, and almost wholly destroying the starch digestive principle, Diastase.

LIST OF MALTINE PREPARATIONS.

MEDICAL ENDORSEMENTS.

We append, *by permission*, a few names of the many prominent Members of the Medical Profession who are prescribing our Maltine Preparations :

J. K. BAUDUY, M. D., St. Louis, Mo.,
Physician to St. Vincent's Insane Asylum, and Prof. Nervous Diseases and Clinical Medicine, Missouri Medical College.

WM. PORTER, A. M., M. D., St. Louis, Mo.

E. S. DUNSTER, M. D., Ann Harbor, Mich.,
Prof. Obs. and Dis. Women and Children University and in Dartmouth College.

THOMAS H. ANDREWS, M.D., Philadelphia, Pa.,
Demonstrator of Anatomy, Jefferson Medical College.

B. F. HAMMEL, M. D., Philadelphia, Pa.,
Supt. Hospital of the University of Penn.

F. R. PALMER, M. D., Louisville. Ky.,
Prof. of Physiology and Personal Diagnosis, University of Louisville.

HUNTER McGUIRE, M. D., Richmond, Va.,
Prof. of Surgery, Med. Col. of Virginia.

F. A. MARDEN, M. D., Milwaukee, Wis.,
Supt. and Physician, Milwaukee County Hospital.

L. P. YANDELL, M. D., Louisville. Ky.,
Prof. of Clinical Medicine and Diseases of Children, University, Louisville.

JOHN. A. LARRABEE, M. D., Louisville, Ky.,
Professor of Materia Medica and Therapeutics, and Clinical Lecturer on Diseases of Children in the Hospital College of Medicine.

R. OGDEN DOREMUS, M.D., LL.D., New York,
Professor of Chemistry and Toxicology, Bellevue Hospital Medical College; Professor of Chemistry and Physics, College of the City of New York.

WALTER S. HAINES, M. D., Chicago, Ill.,
Professor of Chemistry and Toxicology, Rush Medical College, Chicago.

E. F. INGALLS, A. M., M. D., Chicago, Ill.,
Clinical Professor of Diseases of Chest and Throat, Woman's Medical College.

H. F. BIGGAR, M. D.,
Prof. of Surgical and Medical Diseases of Women, Homœopathic Hospital College, Cleveland, Ohio.

DR. DOBELL, London, England,
Consulting Physician to Royal Hospital for Diseases of the Chest.

DR. T. F. GRIMSDALE, Liverpool, England,
Consulting Physician, Ladies' Charity and Lying-in-Hospital.

WM. ROBERTS, M.D., F.R.C.P., F.R.S., Manchester, England,
Prof. of Clinical Medicine, Owens' College School of Medicine; Physician Manchester Royal Infirmary and Lunatic Hospital.

J. C. THOROWGOOD, M.D., F.R.C.P., London, England,
Physician City of London Hospital for Chest Diseases; Physician West London Hospital.

W. C. PLAYFAIR, M. D., F.R.C.P., London, England,
Prof. of Obstetric Medicine in King's College, and Physician for the Diseases of Women and Children to King's College Hospital.

W. H. WALSHE, M.D., F.R.C.P., Brompton, England,
Consulting Physician Consumption Hospital, Brompton, and to the University College Hospital.

A. WYNN WILLIAMS, M.D., M.R.C.S., London, England,
Physician Samaritan Free Hospital for Diseases of Women and Children.

A. C. MACRAE, M.D., Calcutta, Ind.,
Dep. Insp.-Gen. Hosp. Indian Service, late Pres. Surg., Calcutta.

EDWARD SHOPPEE, M. D., L. R. C. P., M.R.C.S., London, England.

LENNOX BROWN, F.R.C.S., London, England,
Senior Surgeon, Central Throat and Ear Hospital.

J. CARRICK MURRAY, M. D., Newcastle-on-Tyne, England,
Physician to the N. C. H. for Diseases of Chest.

J. A. GRANT, M. D., F.R.C.S., Ottawa, Canada.

A. A. MEUNIER, M.D., Montreal, Canada,
Prof. Victoria University.

MALTINE is prescribed by the most eminent members of the Medical Profession in the United States, Great Britain, India, China and the English Colonies, and is largely used for patients at the principal Hospitals in preference to any of the Extracts of Malt.

We will furnish gratuitously a one pound bottle of any of the Maltine Preparations to Physicians who will pay the express charges. Send for our 28 page Pamphlet on Maltine for further particulars. Address,

NEW MEDICINAL AGENTS

WORTHY OF THE

Attention of Therapeutists.

JAMAICA DOGWOOD.

[Piscidia Erythrina.]

This remedy, introduced by us to the profession of the United States, has already largely taken the place of opium, as an anodyne and narcotic. It obtunds sensibility, and allays nervous irritability, inducing sleep, without "locking up the secretions" or producing the constipation and gastric disturbance following the use of opium. It has been submitted to a sufficient physiological test, and accorded a sufficient therapeutic trial to test these claims, and it may now be regarded as a remedy of fixed and decided therapeutic properties.

QUEBRACHO.

[Aspidosperma Quebracho Blanco.]

The experiments of Penzoldt, of Germany, justified that observer in speaking of quebracho as an article supplying a place in medicine hitherto unoccupied, and making it, literally, a "long felt want." He found it to increase the depth of inspiration, and to facilitate oxygenation of the blood in dyspnœa from whatever cause. It is thus a desideratum in the treatment of emphysema, capillary bronchitis, pneumonia, asthma, etc. Its use in the hands of physicians in this country has corroborated this estimate of its properties.

EXTRACT OF DUBOISIA.

[Duboisia Myoporoides.]

Duboisia, the new mydriatic, has been found to be more prompt than atropia as a dilator of the pupil and as a paralyzer of the muscles of accommodation, while at the same time it is less prone to cause the conjunctivitis, cerebral disturbance, dryness of the throat, etc., so intimately connected with the use of the belladonna alkaloid. It is now largely employed by ophthalmologists, and bids fair to almost, if not entirely, supplant atropia in eye practice.

We are in receipt of a large direct importation of this rare drug.

MANACA.

[Franciscea Uniflora.]

This drug, although long officinal in the Brazilian Dispensatories, was unknown to the profession of this country until introduced by us, a little over a year ago. It is highly esteemed in Brazil as an alterative, and in the damp, shady forests of that country, where rheumatism is very prevalent, it is regarded as a valuable anti-rheumatic, particularly in the chronic and subacute varieties of the affection.

Believing it to be an article of much value in these forms of rheumatism, we ask for it a thorough trial.

TO THOSE DESIRING FULLER INFORMATION ON THE ABOVE DRUGS,

We will furnish Descriptive Circulars Free, on application.

PARKE, DAVIS & CO., Detroit, Mich.,

MANUFACTURING CHEMISTS.

McKESSON & ROBBINS'

BI-MURIATE QUINIA WITH UREA

(Quinia Bi-Muriatica Carbamidata),

THE MOST SOLUBLE SALT OF QUINIA.

Specially Adapted to Hypodermic Use.

Will completely dissolve in double its weight of cold water, or in its own weight of boiling distilled water, which is preferable.

This Salt may be procured through retail druggists, from McKesson & Robbins, in original vials of 1, 2 and 4 grammes, and their solution, containing 50 per cent. of the Salt, in $\frac{1}{8}$ oz. and one ounce vials.

ALOIN AND STRYCHNIA GRANULES

LAXATIVE AND TONIC.

INVALUABLE IN CHRONIC CONSTIPATION.

Prescribed with the most satisfactory results in cases in which, from infirmity or morbid condition, the tone of the system is impaired, and in which the administration of more violent purgatives might be attended with danger.

Write McKesson & Robbins on your Prescriptions and Orders.

McKESSON & ROBBINS, Manufacturing Chemists,

91 FULTON STREET, NEW YORK.

NEW BOOKS AND NEW EDITIONS.

Published by D. G. BRINTON, M.D., 115 South Seventh Street, Philadelphia.

The Physician's Daily Pocket Record and Visiting List.

By S. W. BUTLER, M.D. SIXTEENTH YEAR.

A New Revised Edition for 1882, with Metric Posological Table, etc. Strongly Bound in Dark Morocco, with Pocket for Blanks, and a PATENT STEEL SPRING CLASP.

THE PHYSICIAN'S CLINICAL RECORD AND CASE BOOK.

For 100 Patients. Neatly Bound in Cloth, with Pocket and Stencil Plate. Price $1.00.

This very convenient little book, adapted to be carried in the pocket, gives, in the briefest and neatest arrangement, the best forms for preserving the records of cases.

THE "MODERN THERAPEUTICS" SERIES.

I. MODERN MEDICAL THERAPEUTICS.

A Compendium of Recent Formulæ and Specific Therapeutical Directions, from the practice of eminent contemporary physicians, American and foreign. By GEO. H. NAPHEYS, A.M., M.D. Seventh Edition. One volume. 8vo. 607 pp. Price, Cloth $4.00; Sheep $5.00.

II. MODERN SURGICAL THERAPEUTICS.

A Compendium of Current Formulæ, Approved Dressings and Specific Methods for the treatment of Surgical Diseases and Injuries. By GEO. H. NAPHEYS, A.M., M.D. Seventh Edition (1881). One volume. 8vo. 608 pp. Price, Cloth $4.00; Sheep $5.00.

III. THERAPEUTICS OF GYNECOLOGY AND OBSTETRICS.

Edited by WILLIAM B. ATKINSON, M.D., etc. Second Edition, Greatly Enlarged (1881). One volume. 8vo. Price, Cloth $4.00; Sheep $5.00.

This Series of Therapeutics has been recognized by the Medical Press, both of England and the United States, to be the most practically valuable to the physician of any which is now in the market.

THE PRINCIPLES AND METHODS OF THERAPEUTICS.

BY ADOLPHE GUBLER, M.D.,

Professor of Therapeutics in the Faculty of Medicine, Paris, Member of the Academy of Medicine, Physician to the Beaujon Hospital, etc. Translated by M. J. Halloran, M.D., etc. 1 Vol. 8vo. 445 pp. Heavy tinted paper. Bound in Half Morocco, Muslin Sides. Price $4.00.

Among the Scientific Therapeutists of the age, Professor Gubler stood in the front rank. This work is a translation of his lectures in this specialty, and is rich in practical information and profound suggestions. There is no work on the principles of Therapeutics which will better repay close reading. It is a new book, having first appeared this year.

LESSONS IN GYNECOLOGY.

BY WM. GOODELL, A.M., M.D.,

Professor of Clinical Gynecology in the University of Pennsylvania. With Numerous Illustrations. Second Edition. Thoroughly Revised and Considerably Enlarged. One Volume. 8vo. Price, Cloth $4.00; Sheep $4.50.

DIFFERENTIAL DIAGNOSIS.

A MANUAL OF THE COMPARATIVE SEMEIOLOGY OF THE MORE IMPORTANT DISEASES.

BY F. DE HAVILLAND HALL, M.D.,

Assistant Physician to the Westminster Hospital, London. Second American Edition, with Extensive Additions. Edited by FRANK WOODBURY, M.D. One Volume. 8vo. 205 pp. Printed on Handsome Tinted Paper. Bound in English Pebble Cloth, with Beveled Boards. Price $2.00.

Dr. Hall's work has received the highest encomiums from the English medical press for its lucid arrangement, completeness and accuracy. He himself is known in London as a practitioner of great skill, and an unusually successful medical teacher.

A MANUAL OF OPHTHALMIC PRACTICE.

BY HENRY S. SCHELL, M.D.,

Surgeon to the Wills Eye Hospital, Ophthalmic and Aural Surgeon to the Children's Hospital, etc. With 53 Illustrations, Test Types, etc. Price, Cloth, $2.00.

This is a new and valuable work on Ophthalmic Practice, especially designed for the use of the general practitioner who desires a clear and compact manual of instruction in the management of diseases of the eye.

COMPENDIUM OF MICROSCOPICAL TECHNOLOGY.

A GUIDE TO PHYSICIANS AND STUDENTS IN THE USE OF THE MICROSCOPE AND IN THE PREPARATION OF HISTOLOGICAL AND PATHOLOGICAL SPECIMENS.

BY CARL SEILER, M.D.,

Late Director of the Microscopical and Biological Section of the Academy of Natural Sciences of Philadelphia; Curator of the Pathological Society; Pathologist and Microscopist to the Presbyterian Hospital, etc., etc. Illustrated. One Volume. 8vo. Cloth. 111 pp. Price $1.00.

THE CARE AND CULTURE OF CHILDREN.

BY THOMAS S. SOZINSKEY, A.M., M.D., Ph.D., etc.

One Volume. Cloth. 8vo. Illustrated. 500 pp. Price $2.50.

A most excellent book on this all important theme. No better one can be recommended to the perusal of intelligent parents.

NOTES ON THE USE OF PEPSINE IN MEDICINE,

WITH RECOMMENDATIONS REGARDING SACCHARATED AND PURE PEPSINE.

That many of the diseases from which mankind suffer during infant and adult life are caused by malnutrition, there can be no doubt; and the extent to which non-assimilation of the life-giving properties of food interferes with recovery from severe illness, baffling the best directed efforts of the physician, points the necessity for an agent sufficiently potent to replace the deficient principle and aid nature in renewing the degenerated tissues.

Realizing this need, the science of chemistry produced pepsine; and even if medical literature were silent as to testimony of the results obtained, the large amount manufactured and consumed would amply attest its usefulness. But such is not the case, for, after long and careful investigation on the part of practical therapeutists, it is accepted as the remedy *par excellence* in all cases where the gastric juice fails to afford a sufficient amount of ferment for the reduction of aliment to a condition suitable for healthy assimilation.

As the undoubted value of pepsine as a remedial agent became evident, competition in its manufacture was stimulated; and as a natural result, the supply was varied both in purity and strength, and the medical profession, while anxious to avail themselves of its usefulness, were nearly as often misled into erroneous conclusions regarding its efficacy, as satisfied with its results, solely in consequence of their misfortune in not using such qualities as were likely to produce the much-lauded effects. Under these circumstances, a definite understanding regarding reliable preparations is desirable, and of great importance. Pure pepsine, without acid, thoroughly triturated with finely powdered sugar of milk (saccharated pepsine*), will, without doubt, produce the perfect results in all cases where the remedy is exhibited.

Routh, in his "Infant Feeding," gives an account of a result obtained in the case of an infant. "Small, wrinkled, emaciated, four days old, yet presenting almost the appearance of decrepitude. The voice was weak but distinct, and respiration not obstructed. The mother was an excellent nurse, but, although the infant took the breast readily, it constantly threw up every meal. What passed through the bowels was unchanged, although slightly tinged with bile. Diarrhœa was also present." The usual external remedies were applied, but without avail. "Emaciation was on the increase; the child was, in fact, dying." At this stage saccharated pepsine was administered, fifteen grains divided into ten powders, mixed with a little of the mother's milk, and after he second day the diarrhœa ceased and the child appeared much stronger. Twenty days of this treatment and the child was quite well. The eminent author adds: "This is a case which speaks strongly to the convictions. If at so early a period of life, when vitality and digestion were so weak, the artificial pepsine effected a cure, *a fortiori* will it be likely to do so in the case of older children; and so I have found it in practice. The digestive powers are thus assisted, and the food, which before was useless because undigested, readily becomes assimilated."

When administering pepsine, the slight acidity of the natural fluid should be produced as nearly as possible, and, as the necessities differ with the circumstances, it is desirable that the preparation be quite free from acidulation, and the proper dose be given in combination with the requisite amount of dilute acid. Of Kidder & Laird's pure pepsine, five to ten grains for an adult can, if necessary, be taken in an ounce of water, with five drops of muriatic acid.

For infants, however, the saccharated pepsine will be found to yield the most satisfactory results, and the acid should be dispensed with. Quantitatively it represents one-tenth of the strength of pure pepsine; but it has been found to be but about one-fourth less in efficacy. The absence of acid, which would otherwise tend to produce harmful results, will be recognized when it is considered that even the slight acidity of most cow's milk, when used as food for infants, is sufficient to disagree with them.

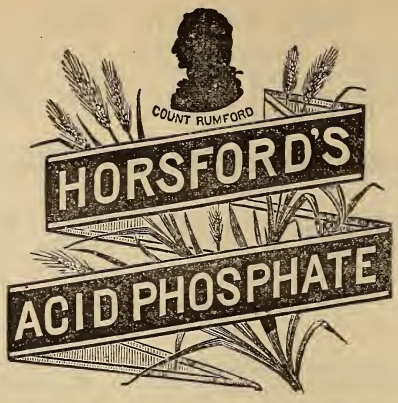
With regard to the proper time for its administration, as before or after taking of food, opinions vary, but reason would suggest that about half an hour before eating will afford the ferment a sufficient time to combine with the existing condition of the stomach, and produce the most natural effect upon the food when it has been acted upon by the salivary fluids in its passage to the stomach.

When once the formation of peptone has been established in the stomach, and as strength is acquired, the system will soon respond toward resuming the natural production of its normal fluids. Thus it is that many of the disorders of digestion which accompany severe attacks of fever, phthisis, etc., and also the exceedingly sensitive condition of the stomach caused by vomiting in pregnancy and alcoholism, are controlled, and a natural condition resumed.

Having mentioned the necessity of great care in the selection of pepsine, with reference to its purity and strength, it is proper to say that, even with the superior article above recommended, negative results may be obtained, unless attention is given to the form of its administration. Combinations beyond those above mentioned are not advised, but rather discouraged, as many of the substances usually recommended as efficacious with it are incompatible and render the pepsine inert.

* Saccharated pepsine, free from acid, is prepared by Messrs. Kidder & Laird, No 83 John Street, New York, who generously furnish samples of both this and the pure pepsine, free of charge, upon application.

1264-1315



IN MORNING SICKNESS

AND OTHER DISEASES

INCIDENT TO PREGNANCY.

The action of the Acid Phosphate upon the system during pregnancy is very effective; the morning sickness being treated with good results; and where indigestion is a sympathetic trouble it has been found a valuable and pleasant remedy.

In cases of exhaustion and nervous prostration from lactation, it has been used with excellent results.

During pregnancy the consumption of phosphate of lime is very great; so that at this period of woman's life fractures heal, if at all, with great difficulty. The Acid Phosphate supplies the phosphates needed at such times.

DR. D. T. NELSON, of Chicago, says: "I find Horsford's Acid Phosphate a pleasant and valuable remedy in indigestion, particularly in pregnant women."

DR. W. L. ATLEE, of Philadelphia, says: "Having used Horsford's Acid Phosphate very extensively in my practice, which consists mostly of uterine diseases and disorders incident thereto, it is with pleasure I attest my appreciation of its usefulness."

Let the patient put eight or ten drops of Acid Phosphate into half a glass of cold water, and take a sip of it, say a few minutes before rising, or whenever the sickness or nausea is coming on.

It is equally effective in hot water, or tea without milk or sugar, and to some may thus be more palatable. In such cases use the same dilution as above. Some constitutions may need a stronger dilution, which fact experience alone can decide.

Prices reasonable. Pamphlet giving further particulars mailed free on application to manufacturers.

Physicians desiring to test it will be furnished a bottle free of expense, except express charges.

MANUFACTURED BY THE

RUMFORD CHEMICAL WORKS

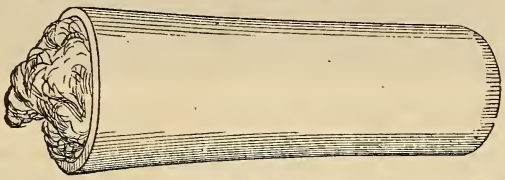
In corresponding with Advertisers please mention THE MEDICAL AND SURGICAL REPORTER.

SOLUBLE MEDICATED

HOLLOW VAGINAL SUPPOSITORIES,

For the Treatment of LEUCORRHŒA, VAGINITIS, VAGINISMUS, etc.,

(See MEDICAL AND SURGICAL REPORTER, Jan. 7, 1882, p. 7.)



CLEAN. LIGHT. RELIABLE. EFFICIENT.

These Suppositories are made of medicated gelatin, moulded in a hollow form. The interior is to be filled with either absorbent, carbolized, or salicylized cotton, so as to act as a support, and keep the Suppository, while melting, in close contact with the vaginal walls. The following advantages are claimed for them:—

FIRST.—Being hollow, the use of a large quantity of inert material is avoided, and there is no soiling of the clothes or person.

SECOND.—The composition of which the suppository is made greatly assists the absorption of the remedy, instead of forming a greasy, slowly permeable medium, like that of a cacao butter suppository.

THIRD.—By the large amount of surface over which the medicating ingredient is distributed, absorption is greatly assisted, and the effect of the remedy very soon obtained.

FOURTH.—By their close contact and prolonged action on the mucous substance of the vagina, a much more powerful and lasting effect is obtained, than by any other similar method of local medication.

FIFTH.—Being light, the suppository remains in the upper part of the vagina, where it is most needed, and does not sink and slip out, as does the old-fashioned article made of cacao butter.

These Suppositories are neatly put up in boxes, *each box containing six of a kind only*, and are medicated as follows:—

1. Sulphate Zinc, – – 5 grs.
2. " " – – 10 "
3. Acetate " – – 10 "
4. Chloride " – – 2 "
5. Hydrastis Ext. Fld., – 10 "
6. Ext. Opium Aq., – – 1 gr.
7. " " " – – 2 grs.
8. Sulphate Morphia, – ½ gr.
9. " " – – 1 "
10. Ext. Belladonna Alc., – ½ "
11. " " " – 1 "
12. Ext. Krameria Fld, – 10 grs.
13. Catechu, Powd, – – 10 "
14. Ext. Krameria Fld., – 10 grs.
    Sulphate Morphia, – ¼ gr.
15. Ext. Hyoscyamus, – – 3 grs.
16. Ext. Hyoscyamus, – – 2 grs.
    Ext. Belladonna, – – ½ gr.
17. Ext. Aconite Rad., Fld., – 2 grs.
18. Carbolic Acid, – – 2 "
19. " " – – 4 "
19½. Iodoform, – – – 5 "
20. " – – – 10 "
21. Sulphate Zinc, – – 10 grs.
    Ext. Opium Aq, – – 2 "
22. Sulphate Zinc, – – 10 "
    Ext. Belladonna Alc., – 1 gr.
23. Sulphate Zinc, – – 10 grs.
    Sulphate Morphia, – – ½ gr.
24. Sulphate Zinc, – – 10 grs.
    Carbolic Acid, – – 1 gr.

SCOTT'S EMULSION

PURE COD LIVER OIL

WITH

HYPOPHOSPHITES OF LIME AND SODA

PERFECT, PERMANENT, PALATABLE.

The well-known virtues of this preparation, that has now been before the profession for a number of years, hardly requires comment from us. But we desire, for the information of those whose attention may not have been directed to it, to present the following facts:—

FIRST.—We use in the manufacture of our Emulsion, Cod-Liver Oil that is prepared expressly for us, and is strictly pure, which is the most important consideration to the Physician.

SECOND.—By our process of Emulsifying, we so thoroughly incorporate the Oil with the Hypophosphite Salts, that the mixture is perfectly homogeneous and remains in that condition, without the slightest separation or change, for years, unless exposed to the air or intense heat.

THIRD.—It is so palatable and easy of digestion that it can be administered to children and persons with most sensitive stomachs without the slightest repugnance, and we are confident, from the results that have been obtained in the use of this preparation, and the flattering testimonials we have received from prominent physicians, that the proper manner of administering Cod-Liver Oil, even to patients that can tolerate the crude oil, is in the form of a palatable and easily digested Emulsion. There are some in the profession who adhere to the use of the plain oil, but, with all due deference, if they will make a trial of our Emulsion, we believe their prejudices will be removed, and they will find it much more beneficial to their patients.

With all the numerous Foods, Cereals and so-called Constructive Agents of uncertain value that are being introduced the physician must sometimes be at a loss to know what to prescribe. But we are assured that the profession will bear us out in the statement that in all pulmonary troubles, especially where the lung tissue is involved, in Scrofulous children and in Anæmic women of consumptive tendencies, as well as in general nervous debility, our combination will produce results, if properly administered, unequaled by any other preparation, and most satisfactory to the physician and patient. We most respectfully ask those who have never prescribed or seen its results to give it a trial, and if you desire to make a personal inspection of it we will be pleased to send a sample by express, prepaid.

FORMULA.—50 per cent. of pure Cod-Liver Oil, 6 grains of the Hypophosphite of Lime, and 3 grains of the Hypophosphite of Soda to a fluid ounce. Emulsified with mucilage and glycerine.

BUCKTHORN CORDIAL

RHAMNUS FRANGULA.

We desire to call the attention of the profession to this preparation, and although they may be familiar with its name and general characteristics, yet, on account of there not being a preparation in the market of uniform strength and quality, may not have a proper appreciation of its value. As far as our experience goes in the various tests made by our medical friends, we can present the German bark, *Rhamnus Frangula*, in the form of our *Buckthorn Cordial*, with perfect confidence that we will secure the encouragement and assistance of the profession in promoting its growth and giving it the position it deserves as a medicine. It seems to be almost a specific for Habitual Constipation and Indigestion, acting mildly but efficiently, without causing the nausea that usually accompanies the use of a cathartic. At the same time producing a tonic effect upon the bowels, so that as the patient recovers, the dose may be gradually decreased until a normal condition takes place. We use great care in the selection of the Bark, as we find it necessary that it should be of the proper age and condition, and carefully exhausted, to secure its true active principle.

We combine it with aromatics in such a manner as to make a pleasant cordial, acceptable to the most sensitive stomach. We shall be very glad to furnish samples free to all physicians, upon application, giving instructions for its use, etc. Prepared by SCOTT & BOWNE

SCOTT & BOWNE'S

PALATABLE CASTOR OIL

IN AN EMULSION.

We respectfully submit the above elegant preparation to the notice of the profession, and desire them to favor us with a trial. So far as it has been tested, it has met with their entire approval; and we believe it is not only destined to take the place of the crude oil, but to be used much more extensively. In our process of emulsifying, it is not only *permanent* and *palatable*, but is deprived entirely of its griping properties. The inestimable nature of Castor Oil as a laxative and cathartic, in the varied intestinal derangements of children, and in Diarrhœa, Colds, etc., is accepted by all, and in the available form in which we present it in a perfectly palatable mixture, deprived entirely of its nauseous, sickening properties, and kindly received by the most sensitive stomach, it must occupy the exalted position it deserves as a medicine. In its administration, it requires very little more than the crude oil, but the experience of the physician will soon guide him in its use. It is put up in 4 oz. bottles, that sell for 25 cents; also in quarts for physicians to prescribe as desired. Samples will be furnished free on application. FORMULA:—*50 per cent. of Pure Cold Pressed Castor Oil, 15 per cent. of Chemically Pure Glycerine.* Prepared by

1252-1303eow **SCOTT & BOWNE, Manufacturing Chemists, 108 and 110 Wooster St., N. Y.**

NOTES ON THE

USE OF PEPSINE IN MEDICINE,

WITH RECOMMENDATIONS REGARDING

SACCHARATED AND PURE PEPSINE.

That many of the diseases from which mankind suffer during infant and adult life are caused by malnutrition, there can be no doubt; and the extent to which non-assimilation of the life-giving properties of food interferes with recovery from severe illness, baffling the best directed efforts of the physician, points the necessity for an agent sufficiently potent to replace the deficient principle and aid nature in renewing the degenerated tissues.

Realizing this need, the science of chemistry produced pepsine; and even if medical literature were silent as to testimony of the results obtained, the large amount manufactured and consumed would amply attest its usefulness. But such is not the case, for, after long and careful investigation on the part of practical therapeutists, it is accepted as the remedy *par excellence* in all cases where the gastric juice fails to afford a sufficient amount of ferment for the reduction of aliment to a condition suitable for healthy assimilation.

As the undoubted value of pepsine as a remedial agent became evident, competition in its manufacture was stimulated; and as a natural result, the supply was varied both in purity and strength, and the medical profession, while anxious to avail themselves of its usefulness, were nearly as often misled into erroneous conclusions regarding its efficacy, as satisfied with its results, solely in consequence of their misfortune in not using such qualities as were likely to produce the much-lauded effects. Under these circumstances, a definite understanding regarding reliable preparations is desirable, and of great importance. Pure pepsine, without acid, thoroughly triturated with finely powdered sugar of milk (saccharated pepsine*), will, without doubt, produce the perfect results in all cases where the remedy is exhibited.

Routh, in his "Infant Feeding," gives an account of a result obtained in the case of an infant. "Small, wrinkled, emaciated, four days old, yet presenting almost the appearance of decrepitude. The voice was weak but distinct, and respiration not obstructed. The mother was an excellent nurse, but, although the infant took the breast readily, it constantly threw up every meal. What passed through the bowels was unchanged, although slightly tinged with bile. Diarrhœa was also present." The usual external remedies were applied, but without avail. "Emaciation was on the increase; the child was, in fact, dying." At this stage saccharated pepsine was administered, fifteen grains divided into ten powders, mixed with a little of the mother's milk, and after he second day the diarrhœa ceased and the child appeared much stronger. Twenty days of this treatment and the child was quite well. The eminent author adds: "This is a case which speaks strongly to the convictions. If at so early a period of life, when vitality and digestion were so weak, the artificial pepsine effected a cure, *a fortiori* will it be likely to do so in the case of older children; and so I have found it in practice. The digestive powers are thus assisted, and the food, which before was useless because undigested, readily becomes assimilated."

When administering pepsine, the slight acidity of the natural fluid should be produced as nearly as possible, and, as the necessities differ with the circumstances, it is desirable that the preparation be quite free from acidulation, and the proper dose be given in combination with the requisite amount of dilute acid. Of Kidder & Laird's pure pepsine, five to ten grains for an adult can, if necessary, be taken in an ounce of water, with five drops of muriatic acid.

For infants, however, the saccharated pepsine will be found to yield the most satisfactory results, and the acid should be dispensed with. Quantitatively it represents one-tenth of the strength of pure pepsine; but it has been found to be but about one-fourth less in efficacy. The absence of acid, which would otherwise tend to produce harmful results, will be recognized when it is considered that even the slight acidity of most cow's milk, when used as food for infants, is sufficient to disagree with them.

With regard to the proper time for its administration, as before or after taking of food, opinions vary, but reason would suggest that about half an hour before eating will afford the ferment a sufficient time to combine with the existing condition of the stomach, and produce the most natural effect upon the food when it has been acted upon by the salivary fluids in its passage to the stomach.

When once the formation of peptone has been established in the stomach, and as strength is acquired, the system will soon respond toward resuming the natural production of its normal fluids. Thus it is that many of the disorders of digestion which accompany severe attacks of fever, phthisis, etc., and also the exceedingly sensitive condition of the stomach caused by vomiting in pregnancy and alcoholism, are controlled, and a natural condition resumed.

Having mentioned the necessity of great care in the selection of pepsine, with reference to its purity and strength, it is proper to say that, even with the superior article above recommended, negative results may be obtained, unless attention is given to the form of its administration. Combinations beyond those above mentioned are not advised, but rather discouraged, as many of the substances usually recommended as efficacious with it are incompatible and render the pepsine inert.

* Saccharated pepsine, free from acid, is prepared by Messrs. Kidder & Laird, No 83 John Street, New York, who generously furnish samples of both this and the pure pepsine, free of charge, upon application.

1264-1315

HORSFORD'S ACID PHOSPHATE

IN

IMPOTENCE,

Seminal Losses,

Impaired Vitality,

Spermatorrhœa.

We wish to call the attention of the profession to the action of Horsford's Acid Phosphate on the organs of generation, when their power has become impaired through sexual excess, or from senile impotence. It is at once rejuvenating and aphrodisiac in its effect. It appears to restore the secretory organs that have been deranged to their normal condition, giving vigor where there has been debility, and renewed strength where there has been exhaustion.

H. B. STORER, M.D., Boston, says: "I have found Horsford's Acid Phosphate serviceable, in a marked degree, in my treatment of spermatorrhœa."

E. W. JONES, M.D., Taunton, Mass., says: "Horsford's Acid Phosphate was prescribed in a case of nervous prostration from seminal losses, with decided beneficial effect."

C. S. ELLIS, M.D., Wabash, Ind., says: "I prescribed Horsford's Acid Phosphate in a case of nervous debility and weakness of the sexual organs; patient forty-eight years old; he was much benefited."

R. W. ERWIN, M.D., Bay City, Michigan, says: "In some cases of weakness following sexual indiscretions, attended with nervousness, it is useful."

Each case presents its own peculiarities for treatment, but, as a general rule, we would suggest a half teaspoonful of Horsford's Acid Phosphate, in half a tumbler of hot or cold water, or tea without milk, to be taken shortly after each meal, and upon retiring.

Pamphlet giving further details mailed free, on application to the manufacturers.

Physicians who have not had a bottle of the Horsford's Acid Phosphate, and who wish to test it, will be furnished with a sample without expense, except express charges.

In corresponding with Advertisers, please mention THE MEDICAL AND SURGICAL REPORTER.

An experience of more than a quarter of a century convinces us that sugar, properly applied, is the only correct coating for a pill.

Physicians should be careful to specify Warner & Co., when prescribing or ordering.

Special attention is called to the following selected Recipes prepared for Physicians' Prescriptions.

PIL: PHOSPHORI COMP: (WARNER & CO.) ℞. Phosphori, - - 1-10 gr. Ext. Nuc. Vom. - ¼ gr.

THERAPEUTICS.—As a nerve tonic and stimulant, this form of pill is well adapted for such nervous disorders as are associated with impaired nutrition and spinal debility, increasing the appetite and stimulating digestion

The practical value of Phosphorus as a therapeutic agent, and its applicability to the cure of disease, and especially in those varied disordered conditions consequent upon OVERWORK, which are characteristic of modern civilization.

Pil. Phosphori Comp. may be taken, one or two pills three times daily, after eating.

Price, per 100, $1.50.

PIL: IODOFORM ET FERRI. (WARNER & CO.) ℞. Iodoform, - - 1 gr. Ferri Redacti, - 1¼ gr.

THERAPEUTICS.—A powerful general tonic and alterative, valuable as a remedy in Anæmia, Scrofula, Neuralgia, Chlorosis, Rheumatism, etc.

Pil. Iodoform et Ferri may be given in doses of from one to two pills, as occasion may require.

Price, per 100, $2.00.

PIL: DIGESTIVA. (WARNER & CO.) ℞. Pepsin Conc't, 1 gr. Gingerine, 1-16 gr. Pv. Nuc. Vom., ¼ gr. Sulphur, ⅛ gr.

THERAPEUTICS.—Useful in relieving various forms of Dyspepsia and Indigestion, and of permanent benefit in cases of enfeebled digestion, where the gastric juices are not properly secreted. It is also a gentle laxative and excellent dinner pill, may be taken one after dinner, or one before each meal, three times daily.

Price, per 100, 75 cts

PIL: CALCIUM SULPHIDE. (WARNER & CO.) 1-10, ¼, ½ & 1 gr. each.

THERAPEUTICS.—Extremely useful in the treatment of acne, scrofula and cutaneous diseases.

Sulphide of Calcium is usually administered in doses of from 1-10 to ¼ grain four times daily, gradually increasing the dose to one grain six times daily, or according to the progress or severity of the case.

Price, per 100, 1-10 gr. .50; 1-4 gr. .60; 1-2 gr. .75; 1 gr. $1.00.

WARNER & CO.'S PILLS MAY BE OBTAINED FROM ALL DRUGGISTS, OR BY MAIL, ON RECEIPT OF PRICE.

SAVORY & MOORE beg to call the attention of the Profession to some of their Special Preparations, the purity and uniform strength of which are Guaranteed.

PANCREATIC EMULSION,

Prepared in accordance with the direction of the Physician who introduced this purely

MEDICINAL FOOD FOR CONSUMPTION AND WASTING DISEASES.

Pancreatic Emulsion will always take precedence of Cod-Liver Oil, by reason of its introducing the STABLE SOLID FATS INTO THE SYSTEM, instead of the evanescent fluid fats or oils.

Neither Cod-Liver Oil nor EMULSIONS of COD-LIVER OIL can supply the kind of fat necessary for sound and vigorous human life. In addition to this, all the Oily Emulsions are liable to rancidity, and most of them are highly objectionable in consequence of the SAPONIFICATION and ULTIMATE PUTREFACTION, produced by the chemical agents used instead of Pancreatic Juice.

Pancreatic Emulsion (properly so-called), is THE NECESSARY FOOD OF THE CONSUMPTIVE, and the most reliable form of nutriment for counteracting the tendency to Phthisis and other wasting diseases. It presents to the lacteals fat, in essentially the same condition for assimilation and absorption as in a vigorous human frame, and THE AGENT of the important change is THE NATURAL SECRETION of the PANCREAS.

Pancreatic Emulsion may therefore be regarded as Chyle obtained by nature's own process. In certain cases both Cod-Liver Oil and Pancreatic Emulsion are required—one to supply the blood with oil or liquid fat, the other with the more stable solid fats; but it cannot be too strongly urged that both PANCREATIC EMULSION and Cod-Liver Oil are *not to be regarded as Medicines, but as articles of diet*, without which patients, with their defect of health, will as surely starve as healthy persons would if deprived of the most nutritive part of their food.

Pancreatized (Digestive) Cod-Liver Oil. By Pancreatized Cod-Liver Oil, the active digestive principle of the Pancreatic Juice is imparted to it, which renders it in a highly favorable condition for rapid and complete digestion and assimilation, preventing nausea, and largely increasing the beneficial properties of the Oil.

Pancreatine effects the digestion and assimilation of Cod-Liver Oil and Fat, as well as Food generally. This palatable and popular remedy is therefore invaluable to PATIENTS WHO ARE UNABLE TO DIGEST COD-LIVER OIL, and who are thus deprived of its nourishing and invigorating properties.

Pancreatine Wine. An excellent vehicle for taking Cod-Liver Oil and promoting the digestion of it.

Tins, 1*s*, 2*s*, 5*s*, 10*s*.

NEW HYPODERMIC SYRINGES.

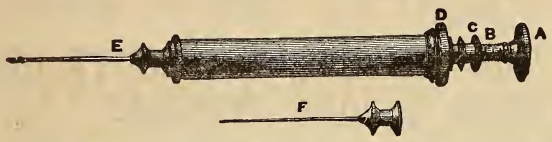

FIG. 48.—No. 2.

These cuts (two-thirds the actual size) represent a New Hypodermic Syringe of our Manufacture. With the exception of the needles, it is of German Silver, a material chosen as possessing, next to steel, the greatest rigidity and durability, while free from liability to oxydation. The barrel is formed by a process peculiar to ourselves, securing uniformity of calibre without soldered joint or seam. It is plated inside and outside with nickel. The piston is packed in the double parachute form, with leather prepared expressly for the purpose. It will be found to retain its elasticity, to operate smoothly, to resist all tendency of fluid to pass above, as of air below it. A nicely-engraved scale upon the piston-rod indicates minims, thirty being the capacity of the syringe.

Syringes Nos. 2, 3, and 4 have also a screw thread upon the piston-rod, and a traverse nut, thereby favoring the utmost nicety in the graduation of doses.

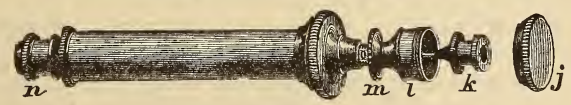
No. 3, Compact, has hollow piston-rod to receive one needle, also a protecting cover and fluid retainer; it may be carried in the Pocket Instrument or Vial Case, or without any case.

No. 4, Compact, is like No. 3, with the addition of a second needle, carried upon the syringe in the usual place, protected by a metal shield.

Nos. 1 and 2 are put up in neat morocco-covered case, with vial.

Two sizes of needles are furnished with each instrument, Nos. 1, 2, and 4; one only with No 3. They are of refined steel, carefully tempered, and thoroughly plated with gold; they are of small diameter and large relative calibre, sharpened to such an angle as will offer least resistance to penetration, and therefore cause least pain. At the point of union with the socket they are reinforced with an outer covering of German silver, thereby overcoming the tendency to become broken at this place. They are connected with the barrels by a screw thread.

Prices: No. 1, *$3 50* No. 2, *$4.00* Postage, .03
" No. 3, *2.50* No. 4, *3.50* " .02



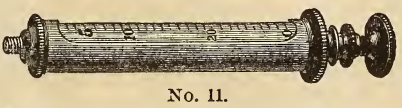
No. 3.

These Syringes are so thoroughly and strongly made as to be free from the annoying accidents common to most Hypodermic Syringes; and we believe that, for convenience, durability, and nicety of construction, they have no superior.

OTHER HYPODERMIC SYRINGES.

		Postage.
No. 7, glass-barrel, graduation engraved on barrel, with screw nut on piston, nickel-plated mountings, two best steel gilt needles, in neat case	*$3.00*	.02
No. 9, glass, graduation engraved and numbered on piston-rod, with screw nut, best steel gilt needles, in neat case	*3.00*	.02
No. 7 or No. 9, with two steel unplated needles either	*2.50*	.02
No. 10, glass, Luer's (French), graduation as No. 9, one gold needle and two steel needles, silver mountings, neat velvet-lined morocco case	*12.00*	.02

No. 11, glass cylinder, fenestrated, nickel plated metal mounting (see cut).



No. 11.

		Postage.
As represented in the cut, the glass cylinder is encased in a metal mounting, fenestrated to show the graduations for minims. The instrument may readily be taken apart for cleaning, and for those who prefer glass, is recommended for its non-liability to breakage. Price, with two best steel gilt needles, in a neat case	*$3.50*	.02

BUFFALO LITHIA WATER.

FOR

BRIGHT'S DISEASE OF THE KIDNEYS, THE GOUTY OR URIC ACID DIATHESIS, CHRONIC INFLAMMATIONS OF THE BLADDER, ETC.

Dr. Wm. A. Hammond, of New York, Surgeon General U. S. Army (retired), Professor of Diseases of the Mind and Nervous System in the University of New York, etc.

"I have for some time made use of the Buffalo Lithia Water in cases of affections of the Nervous System, complicated with Bright's Disease of the Kidneys, or with a Gouty Diathesis. The results have been eminently satisfactory. Lithia has for many years been a favorite remedy with me in like cases, but the Buffalo Water certainly acts better than any extemporaneous solution of the Lithia Salts, and is, moreover, better borne by the stomach. I also often prescribe it in those cases of Cerebral Hyperæmia, *resulting from mental overwork*—in which the condition called Nervous Dyspepsia exists—and generally with marked benefit."

Dr. J. Marion Sims, of New York, says of this water, in general terms:—

"I have used in my practice the Buffalo Lithia Water, Spring No. 2, for two years past, and have, in many cases, found it highly efficacious."

Dr. Alexander B. Mott, of New York, Professor Surgery, Bellevue Hospital Medical College, Surgeon Bellevue Hospital.

"I have made sufficient use of the Buffalo Lithia Water to be satisfied that it possesses very valuable therapeutic properties. In the Gouty Diathesis, Chronic Inflammation of the Bladder, and other diseases affecting the Urinary Organs, it may be relied on to give the most satisfactory results."

Dr. Hunter McGuire, Richmond, Virginia, late Professor Surgery Medical College of Virginia; Medical Director on the Staff of Gen. T. J. (Stonewall) Jackson; Vice-President of the International Medical Congress; Vice-President American Medical Association.

"Buffalo Lithia Water as an Alkaline Diuretic is invaluable. In Uric Acid Gravel, and, indeed, in diseases generally of the Uric Acid Diathesis, it will be found a remedy of extraordinary potency. I have prescribed it in cases of Old Rheumatic Gout, which had resisted the ordinary remedies, with wonderfully good results. I have also used it in my own case, being a great sufferer from this malady, and have derived more benefit from it than from any other remedy. It has remarkable adaptation in diseases of the Digestive Organs. In that condition especially known as Nervous Dyspepsia, caused by over-mental taxation, where, too, there is an excess of acid in the process of digestion, the happiest results may be anticipated from it.

Dr. Robert Battey, of Georgia, Suggestor of Battey's Operation; Member of the American Medical Association, etc.

"I would state that I have been using the Buffalo Lithia Water No. 2, in my practice for three years past, in cases of Chronic Inflammation of the Bladder, whether induced by STONE, by ENLARGED PROSTATE in the aged, or by neglected GONORRHŒA, and have secured excellent results, which encourage me to prescribe it for the future."

This Water, in Cases of One Dozen Half-Gallon Bottles, $5.00 per Case, at the Springs.

On Sale in Philadelphia by JOHNSTON, HOLLOWAY & CO.; JOHN WYETH & BRO.; FRENCH, RICHARDS & CO.

Springs Pamphlet sent to any address. Springs open from 1st of June to 1st of October.

THOMAS F. GOODE, Proprietor,

Buffalo Lithia Springs, Virginia.

MURDOCK LIQUID FOOD CO., Boston,

THE ONLY MANUFACTURERS OF

RAW FOOD EXTRACTS IN THE WORLD.

It can be retained by the weakest stomach, when all other food extracts, and even water, is rejected.

Nutritious food, if raw, condensed, and free from insoluble matter, will cure chronic diseases, as it will make blood faster than all preparations or food, and new blood will cleanse the system.

MURDOCK'S LIQUID FOOD is made from Beef, Mutton and Fruits; contains corpuscles; is 12½ per cent. soluble albumen, and free from insoluble matter, drugs, minerals, salts and acids, and can be retained by the stomach when so weak as to refuse food.

Ask your Druggists, or send to us, for Essays read before the American Medical Association, at Richmond, Va., May 6, 1881, on the value of Raw Food Extracts, by Geo. R. Shepherd, of Hartford, Conn., and other Essays and Testimonials from Medical Journals and Physicians that have used Liquid Food, in cases of Consumption, Scrofula, Nervous and General Debility, Dyspepsia, acute and chronic, Constipation, Diphtheria, Intemperance, Cholera Infantum, Infantile Diarrhœa, Post-partum Hemorrhage, Purpura Hemorrhagica with Waxy Liver, Pelvic Cellulitis, Malarial and other Fevers, Chronic Strumous Arthritis, Sclerosis of the Spinal Cord, Senile Gangrene, Perinephritic Abscess, and other diseases of malnutrition. No cases of Cholera Infantum have occurred where it has been used daily and no lives have been lost from Cholera Infantum where it has been prescribed by a physician. Excellent for Eczema, Diabetes, Rheumatism and Neuralgia.

At the request of any physician who has not tried our Extracts, and would like to, we will deliver sample bottles to the Express in Boston. To any Medical Society wishing to investigate the value of our Extracts, through a committee, hospital, or individual members, we will furnish a supply of Liquid Food equal to a six-ounce bottle for every member present at the time of action. We are induced to do this knowing that our Extracts are saving life, and that an increased use of them, which will follow after a trial of them, will be the means of saving more lives daily. (*We ask no testimonials of results obtained.*) Raw Extracts are available where cooked ones are not, or if available, contain only one-third as much nourishment.

Liquid Food is in general use at all Hospitals, Infant and Insane Asylums, and Washingtonian Homes, U. S. Navy Hospitals, and by all physicians that have tried it.

If not kept by your Druggist, can be obtained in any of the commercial cities In Philadelphia, by Johnston, Holloway & Co., Boericke & Tafel; in Pittsburg, by A. Kelly & Co.; in Baltimore, by Thomsen & Wirth; or you can order direct and we will pay express. 1 oz, 15 cents; 6 oz., 55 cents; 12 oz., $1.00.

See Philadelphia MEDICAL AND SURGICAL REPORTER, *Boston Medical and Surgical Journal*, and *New York Medical Record*, for chronic cases that were at our quarterly reception to physicians, in Boston, December 30, 1881—cases of Eczema, Rheumatism, Neuralgia, Diabetes, Consumption, and other diseases. If all were not restored to perfect health, they were gaining daily, and able to enjoy life and attend to their business. 1297–1348

MURDOCK LIQUID FOOD CO., BOSTON.

It is the only food that will relieve the Consumptive from Hunger.

It will make Blood faster than all preparations known.

PARIS, 1867. 1868. 1872. 1873, VIENNA.

Since the introduction of Pepsine by Boudault in 1854, **BOUDAULT'S PEPSINE HAS BEEN, AND IS STILL CONSIDERED, THE MOST RELIABLE,** as is attested by the awards it has received at the Exhibitions of 1867, 1868, 1872, 1873, and in 1876 at the Centennial Exposition in Philadelphia.

IT IS THE ONLY PEPSINE USED IN THE PARIS HOSPITALS.

Careful tests will enable any one to satisfy himself that **BOUDAULT'S PEPSINE HAS A DIGESTIVE POWER AT LEAST DOUBLE** that of the best Pepsines in the market, and that it is really the cheapest.

It is Sold in 1 ounce, 8 ounce, and 16 ounce Bottles.

Beware of so-called French Pepsines bearing fictitious names, and prescribe Boudault's only.

BLANCARD'S PILLS

OF UNCHANGEABLE IODIDE OF IRON.

Blancard's Pills of Iodide of Iron are so scrupulously prepared, and so well made, that none other have acquired a so well deserved favor among physicians and pharmaceutists. Each pill, containing one grain of proto-iodide of iron, is covered with finely pulverized iron, and covered with balsam of tolu. Dose, two to six pills a day. The genuine have a *reactive silver seal* attached to the lower part of the cork, and a green label on the wrapper, bearing the fac-simile of the signature of

Blancard

Pharmacien, No. 40 Rue Bonaparte, Paris.

without which none are genuine.

BEWARE OF IMITATIONS.

E. FOUGERA & AGENTS, NEW YORK. 1297 tf

For Consumption and Wasting Diseases.

HYDROLEINE

Has been proved of the highest value in CONSUMPTION and all WASTING DISEASES, invariably producing IMMEDIATE INCREASE in FLESH and WEIGHT.

FORMULA OF HYDROLEINE.

Each dose of two teaspoonfuls, equal to 120 drops, contains:

Pure Oil,	**80 m. (drops.)**	**Soda,**	**1-3 grain.**
Distilled Water,	**35 m.**	**Boric Acid,**	**1-4 "**
Soluble Pancreatin,	**5 grains.**	**Hyocholic Acid,**	**1-20 "**

DOSE.—Two teaspoonfuls alone, or mixed with twice the quantity of soft water, to be taken thrice daily, with meals.

The principles upon which this discovery is based have been described in a treatise on "THE DIGESTION AND ASSIMILATION OF FATS IN THE HUMAN BODY," by H. C. BARTLETT, PH.D., F.C.S., and the experiments which were made, together with cases illustrating the effect of Hydrated Oil in practice, are concisely stated in a treatise on "CONSUMPTION AND WASTING DISEASES," by G. OVEREND DREWRY, M.D.

In these treatises the Chemistry and Physiology of the Digestion of the Fats and Oils is made clear, not only by the description of a large number of experiments scientifically conducted, but by cases in which the deductions are most fully borne out by the results.

☞ *Copies of these valuable works will be sent free, on application, to all who mention THE MEDICAL AND SURGICAL REPORTER.*

HYDRATED OIL,

HYDROLEINE,

WATER AND OIL,

May be described as partially digested oil, which will nourish and produce increase in weight in those cases where oils or fats not so treated are difficult or impossible to digest. In CONSUMPTION and other WASTING DISEASES the most prominent symptom is EMACIATION, of which the first is the starvation of the fatty tissues of the body, including the brain and nerves. This tendency to emaciation and loss of weight is arrested by the regular use of HYDROLEINE, which may be discontinued when the usual average weight has been permanently regained.

The ordinary so-called emulsions of Cod-liver oil and other fats, WHETHER PANCREATIZED OR NOT, merely remain in the form of a coarse mechanical mixture for a short time after agitation. The digestion of oil having in no sense been artificially produced, still devolves upon those functional powers the deficiency of which is the most prominent symptom in these cases.

HYDROLEINE is not a patent medicine or a secret preparation; the formula is on every bottle. Can be taken by the most delicate stomach; is immediately assimilated.

The permanence and perfection of the emulsion, and the extreme solubility of the HYDRATED OIL, solely prepared and sold by us under the name of HYDROLEINE, is shown by its retaining its cream-like condition as long as the purest Cod-liver Oil will retain its sweetness. Unlike the preparations mentioned, or simple Cod-liver Oil, it produces no unpleasant eructation or sense of nausea, and should be taken in such very much smaller doses, according to the directions, as will insure its complete assimilation; this, at the same time, renders its use economical in the highest degree.

To brain-workers of all classes, Hydrated Oil is invaluable, supplying as it does the true brain food.

Economical in use—certain in result Tonic—Digestive and Highly Nutritive.

NEW PRINCIPLE FOR THE ASSIMILATION FAT.

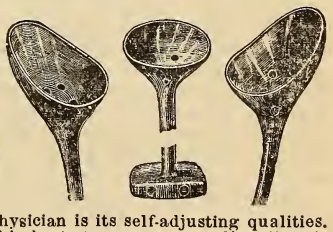
DR. McINTOSH'S
NATURAL UTERINE SUPPORTER.



No instrument has ever been placed before the medical profession which has given such universal satisfaction. The combination is such that the physician is able to meet every indication of Uterine Displacements. Falling Womb, Anteversion, Retroversion and Flexions are overcome by this instrument, where others fail. This is proven by the fact that, since its introduction to the profession it has come into more general use than all other instruments combined.

Among the many reasons which recommend this Supporter to the physician is its self-adjusting qualities. The physician, after applying it, need have no fear that he will be called in haste to remove or readjust it, as is often the case with rings and various pessaries held in position by pressure against the vaginal wall, as the patient can remove it at will, and replace it without assistance.

The Abdominal Supporter is a broad morocco leather belt, with elastic straps to buckle around the hips, with concave front, so shaped as to hold up the abdomen. The Uterine Support is a cup and stem, made of highly polished hard rubber, very light and durable, shaped to fit the neck of the womb, with openings for the secretions to pass out, as shown by the cuts. Cups are made with extended lips, to correct flexions and versions of the womb. The cup and stem is suspended to the belt by two soft elastic rubber tubes, which are fastened to the front of the belt by simple loops, pass down through the stem of the cup and up to the back of the belt. These soft rubber tubes being elastic, adapt themselves to all the varying positions of the body, and perform the service of the ligaments of the womb. The instrument is very comfortable to the patient, can be removed or replaced by her at will, can be worn at all times, will not interfere with nature's necessities, will not corrode, and is lighter than metal. It will answer for all cases of Anteversion, Retroversions, or any Flexions of the womb, and is used by the leading physicians with never-failing success, even in the most difficult cases.

Our Reduced Prices are to Physicians, $6.00; to Patients, $10.00.

Instruments sent by mail, at our risk, on receipt of price, or by Express, C. O. D., with the Express charges for returning the money added.

☞CAUTION.—Owing to the great sale and popularity of our instrument various and base imitations are sold by unscrupulous parties. In order to get the genuine, it is best to order direct from us.

DR. McINTOSH'S NATURAL UTERINE SUPPORTER CO.,
192 Jackson Street, Chicago, Ill.

Our valuable pamphlet, "Some Practical Facts about Displacements of the Womb," will be sent you free on application. 1281-13-22

In corresponding with Advertisers please mention THE MEDICAL AND SURGICAL REPORTER.

BEEF PEPTONE,

IN TRANSPARENT GLASSY SCALES,

Containing only the animal or azotized matter of the Beef. Each ounce is equal to 16 ounces of raw beef, easily soluble, and still faster in hot water.

This Beef Peptone is digested from tender, juicy Beef, by the aid of the *Crystal Pepsin,* of my manufacture (Jensen's Crystal Pepsin). Unlike the various BEEF EXTRACTS, this preparation contains all the nutritive constituents of the Beef, in a thoroughly digested state, ready for absorption into the system, while the Beef Extracts are entirely devoid of the chief elements of nutrition, such as the fibrinous, gelatinous and albuminous portions of the Beef, they only consisting of the concentrated saline constituents, with barely a trace of animal matter to keep its consistence. The difficulty so long experienced by the profession throughout the world, in preparing a PEPTONE entirely free from those chemical agents necessary for its manufacture, so as to render it fit for use, is hereby demonstrated to be successfully overcome, as it contains no foreign matter, and will stand the most severely scrutinizing test as to perfectness, also possessing flavor of the Beef, and so palatable as to render it highly agreeable.

Put up in bottles holding One ounce, Eight ounces, and one Pound.

Kept by the Wholesale and Dispensing Druggists in general.

DEPOT—L. WOLFF'S Pharmacy,

Northwest corner Twelfth and Chestnut Streets.

JENSEN'S CRYSTAL PEPSIN,

IN ARTIFICIAL CRYSTALS,

Strictly inodorous and tasteless, and perfectly soluble in water without acid.

THIS PEPSIN, now so popular with the profession, has created an impetus in the consumption of the same, and physicians of the highest standing, who before the introduction of this active PEPSIN, with good reason, entirely abandoned the use of PEPSIN, are now the most eager in prescribing JENSEN'S CRYSTAL PEPSIN, whenever it is indicated, and since the knowledge of its great solvent power (gr. j. of it will dissolve the boiled whites from two to three eggs) has been established even among those susceptible to be great doubters, it has caused itself to be utilized in many novel ways, by the thinking profession; for instance, in substituting morphia, chloral, etc., as a hypnotic, relieving gastric troubles where the above remedies have been prescribed, creating morphine and chloral habits. In removing diphtheritic patches it is successfully used combined with water, glycerine, and muriatic acid, and the same composition, diluted with more water, as a spray in bronchial troubles, dissolving muco-purulent matter, as well as a spray for same in catarrhal affections.

THIS PEPSIN

Has also been used with success in dissolving and evacuating coagulated blood in the bladder, dispensing with surgical operations in such cases. Many other novel applications could be mentioned, if not in want of space. It is found to be FORTY times stronger than saccharated pepsin. One to three grains is an active dose.

KEPT BY ALL DRUGGISTS.

The above preparations are only manufactured and put up by

CARL L. JENSEN, M.D., PH.G.,

865 North 26th Street, Philadelphia, Pa.

No other Wholesale Agents for this Pepsin are longer engaged, than the Wholesale Druggists throughout the United States.

Instructor in Pharmacy.

A. M. HAWES, M.D.,
Demonstrator of Anatomy.

This College has for its *collegiate year* two sessions.

Regular Session commences Wednesday, September 7th, 1881, and closes March 1st, 1882.

Recitation Term (optional) commences March 15th, 1882, and closes June 14th, 1882.

Graded Course of three terms, of six months each.

PLAN OF INSTRUCTION.

By *Lectures*, *Recitations* and *Clinics*, together with *practical work* in the Anatomical, Physiological, Chemical and Pharmaceutical Laboratories.

Clinics are held *daily*.

Clinical Work in Hospitals and Dispensaries is given to the Senior Class (see Clinics), in *small sections*, under the charge of a *Clinical Teacher*, in all the departments of Medicine and Surgery.

Three Large Hospitals and *two Dispensaries* afford unlimited material for instruction.

ADMISSION.—Candidates for admission are required to pass a preliminary examination, unless satisfactory documentary evidence can be presented, that is equivalent to the standard adopted. (See Catalogue.)

FEES.

Regular Session.—Matriculation, $5.00; Lecture Tickets, $50.00; Hospital Tickets, $10.00
Examination (final), $25.00.

Recitation Term.—$10.00 for those who have attended Regular Session; all others, $25.00, $15.00 of which will be applied on the next Regular Term.

Board and Rooms can be obtained for $3.00 to $5.00 per week, the average being $4.00.

For Catalogue and other particulars, address

177 Griswold Street, Detroit, Mich.

1274-tf

CRINON'S HÆMOGLOBIN,

The Albuminoid Ferruginous Principle of Blood.

HÆMOGLOBIN is the only physiological chalybeate. Associated as it is with the phosphates of the blood, it forms the most powerful of tonics, and at the same time a most nourishing food. It is especially useful in cases of *Anæmia, Chlorosis, Cachexias, Exhaustion* caused by excess of work, nervous debility, fatigue resulting from parturition and lactation. It replaces entirely liquid blood, which has been recommended and used with success in *Phthisis* and *wasting away.*

It is offered in two forms: In cachets (wafers), 60 of which are contained in a box; combined with chocolate in small squares, 30 of which are in a box; both forms can be sent by mail.

Prepared by C. CRINON, Paris, Pharmacist of the first class, Laureate of the Hospitals of Paris Samples may be obtained by application to

E. FOUGERA & CO., New York, Agents for the U. S

DOCTOR RABUTEAU'S

(Laureate of the Institute of France.)

DRAGEES, ELIXIR & SYRUP

OF IRON.

"The experiments made in the hospitals of Paris have demonstrated that *Dr. Rabuteau's Dragees, Elixir and Syrup* regenerate the red globules of the blood with a rapidity never observed with the use of the other ferruginous preparations. These results have been proved by the various *Compt-Globules.*

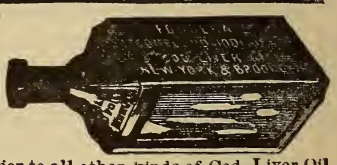
"The ferruginous preparations of *Dr. Rabuteau* do not cause any constipation, and are perfectly tolerated by the weakest persons."—*Gazette des Hospitaux.*

Dr. Rabuteau's Elixir is prescribed when some difficulty is experienced in swallowing the Dragees; it is especially adapted to weak persons, whose digestive functions need strengthening or stimulating.

Dr. Rabuteau's Syrup is especially prepared for children, who take it readily, because of its agreeable taste.

FOUGERA'S COMPOUND IODINISED

COD LIVER OIL.



Since the introduction of this oil in 1858, it has been found to be superior to all other kinds of Cod Liver Oil for the treatment of **General Debility, Consumption, Scrofula, Rickets, etc.**

It possesses not only all the **nourishing** qualities of the best Cod Liver Oil, but also the **tonic, stimulant** and **alterative** properties of **Iodine, Bromine** and **Phosphorus,** which are added in such proportions as to render it therapeutically five times as efficacious as pure Cod Liver Oil.

Through its **increased curative action, FOUGERA'S COD LIVER OIL** will be found to cure disease in a much shorter time than the pure oil; while favorable results will be obtained by its use in many advanced cases when the pure Cod Liver Oil would fail entirely.

FOUGERA'S READY-MADE MUSTARD PLASTERS.

A most useful, convenient, clean, and economical preparation. Not liable to change if kept in a dry place. Made of two strengths. Plasters No. 1, of pure mustard; Plasters No. 2, of one-half mustard. Price 40 cents, the tin box, or tin roll, of 10 plasters each. DIRECTIONS.—Dip the Plaster, or Plasters, a minute or two, in cold water; apply on the part, and cover with a band.

FOUGERA'S COMPOUND ICELAND MOSS PASTE.

(Iceland Moss, Lactucarium, Ipecac and Tolu.)

Used with great success against nervous and convulsive coughs, Whooping Cough, Acute Bronchitis, Chronic Catarrh, Influenza, etc.

Wakefulness, Cough, and other sufferings in Consumption, are greatly relieved by the soothing and expectorant properties of this Paste.

FOUGERA'S IODO-FERRO-PHOSPHATED ELIXIR OF HORSE-RADISH.

This Elixir contains Iodine, Pyrophosphate of Iron, the active principles of antiscorbutic and aromatic plants, and acts as a **tonic, stimulant, emmenagogue,** and a **powerful regenerator of the blood.** It is an invaluable remedy for all constitutional disorders due to the impurity and poverty of the blood. One of the advantages of this new preparation consists in combining the virtues of Iodine and Iron without the inky taste of Iodide of Iron.

E. FOUGERA, Pharmacist,
372 Seventh Street, Brooklyn, L. I.,
SOLE PROPRIETOR & MANUFACTURER OF THE ABOVE,
To whom all special communications should be addressed.

E. FOUGERA & CO.,
30 North William Street, New York.
SOLE GENERAL AGENTS for the ABOVE,
To whom all orders should be addressed.

SOLD BY DRUGGISTS GENERALLY.

JOHNSTONE'S IMPROVED

ADAPTABLE POROUS FELT SPLINTS.

AHL'S SPLINT MANUFACTURING COMPANY, LIMITED,

123 & 125 South Eleventh Street, PHILADELPHIA, PA.

THE ADAPTABLE POROUS SPLINTS, invented and improved by W. H. JOHNSTONE, have been tested extensively in both civil and military practice for a number of years, and have been endorsed and recommended in the most unqualified manner by the celebrated and distinguished Surgeons of America.

Their *porosity* is a peculiar and a valuable property. While the material is firm and insoluble, it permits readily the passage of air and fluids, so that, on one hand, the heat from the inflamed surface, the perspiration, and the morbid exhalations, are not confined, to the detriment of the patient, *as is the case in every other kind of splint*, but pass off freely; and on the other hand, lotions of cold or warm water, medicated or not with weak alcohol, carbolic acid, arnica, tincture, solutions of the sulphites, etc., can be constantly applied without disturbing the dressings. This, it will readily be seen, is a most invaluable property when the parts are bruised, lacerated, filled with extravasated blood, or erysipelatous, and give these splints a conspicuous advantage over all others.

From FRANK H. HAMILTON, M. D., Professor of Fractures and Dislocations in the Bellevue Hospital Medical College, author of "A Treatise on Fractures and Dislocations," etc.

Having examined carefully *JOHNSTONE'S IMPROVED ADAPTABLE POROUS FELT SPLINTS*, I feel warranted in recommending them to the Profession as superior to all other manufactured splints now in use. They possess all the essential qualities of a good splint, having firmness, pliability and lightness.

FRANK H. HAMILTON, M. D.,
Prof. Military Surgery and Fractures and Dislocations, Bellevue Hospital Col.

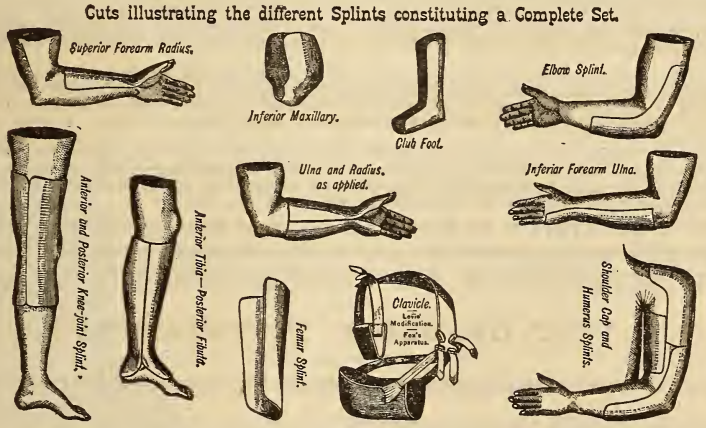
From PROF. D. HAYES AGNEW, Prof. Surgery, University of Penna.

1611 CHESTNUT STREET, PHILADELPHIA, *February 6th*, 1879.

The Adaptable Felt Splints, formerly known as those of Dr. Ahl, with the improvement now made by W. H. Johnstone, which renders them in every way superior to the former, I regard as very excellent appliances in the treatment of fractures.

D. HAYES AGNEW,
Prof. Surgery, University of Pennsylvania.

Cuts illustrating the different Splints constituting a Complete Set.



SPECIAL NOTICE TO THE PROFESSION AND TRADE.

Our *policy* heretofore in the introduction of JOHNSTONE'S IMPROVED ADAPTABLE POROUS FELT SPLINTS, has been to confine the sales and business negotiations directly to the Doctors themselves, declining in every case to sell our goods through Dealers; we having assured the Profession generally, both through our agents and catalogues, that *JOHNSTONE'S IMPROVED SPLINTS* could only be obtained by subscription.

We wish to announce, that owing to the large demand for our goods and the constant importunity on the part of *Surgeons* everywhere to place our Splints on sale with their Instrument Dealer or Druggist, to afford them greater convenience and facility in obtaining the pieces in duplicate, **we have at last acceded to that request, and hereafter** *JOHNSTONE'S CELEBRATED FELT SPLINTS* **can be obtained at most dealers in Instruments and Drugs throughout the United States, at the same price which they were heretofore sold, viz:**

A complete set, embracing fifty (50) pieces—twenty-five for adults and twenty-five for children—is thirty ($30) dollars. Extra or duplicate pieces can always be obtained from your DEALER, at one dollar each.

JOHNSTONE'S CELEBRATED SPINAL JACKET, for Curvatures and Deformities, have met with unparalleled success, and, from their merit, secured the unqualified endorsement and approbation of our celebrated orthopædic specialists, and particular expression of gratitude from the patients who are wearing them. For full information, send for Descriptive Circulars.

Should your Instrument dealer fail to have a supply of our Splints, and decline to carry them in stock, orders sent to us will receive prompt attention.

AHL'S SPLINT MANUFACTURING CO., Limited.
W. H. JOHNSTONE, Manager.

N. B.—If the Instrument Dealers of Philadelphia decline to supply its Physicians with our JOHNSTONE'S FELT SPLINTS on call, they will be furnished and delivered by us to any part of the city, at any time, on receipt of the price, viz.

$1.00 each.

JOHNSTONE'S SPINAL FELT JACKET, any size, - - - - - - - - - - $25.00

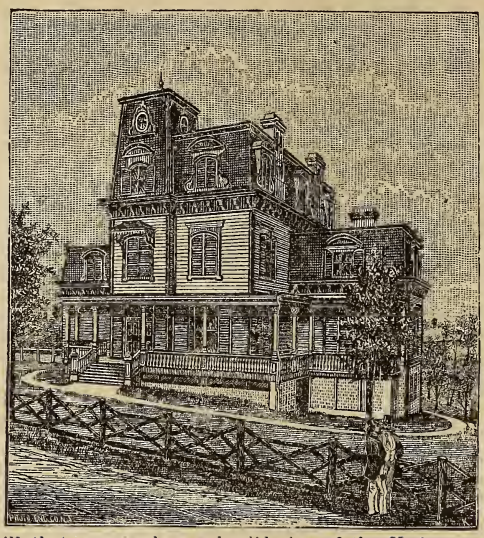
THE DE QUINCEY HOME,

Fort Washington, **New York City.**

A Private Asylum for the Treatment of the Opium, Morphine, Chloral, Chloroform and Hashisch Habits, Nervous Diseases and Inebriety.



Consulting Physicians.

Prof. Wm. A. Hammond,

Prof. T. Gaillard Thomas,

Dr. Edward C. Spitzka,

Dr. Daniel M. Stimson,

Dr. Edward T. Ely,

Dr. G. H. Wynkoop,

Dr. Andrew H. Smith.

Drs. H. H. Kane and W. H. Vittum, in charge.

Situated upon a high hill that commands a splendid view of the Hudson and Harlem rivers, Spuyten Duyvil Creek, and the beautiful country for miles around; surrounded by ample grounds and magnificent drives; in easy communication with the city by means of the Sixth and Ninth Avenue Elevated and the Hudson River Railroads; away from the dust, noise, crowding and malaria of the city; with hot and cold water in every room, furnace and grate-fire heating, croquet, horses and carriages, boats and fishing, an excellent *cuisine*, trained nurses and careful medical attendance, it possesses unequaled advantages for the treatment of cases of this kind.

The plan of treatment pursued in the cure of opium, morphine and chloral takers is that of *rapid reduction*, which possesses all the advantages, and none of the dangers of Levenstein's *sudden deprivation*, or the prolonged agony of *gradual reduction*. Each case is studied and treated in accordance with its peculiarities and the idiosyncrasies of the patient, no set plan of treatment being pursued, at the expense of the person's health or comfort.

Our Home, furthermore, offers special facilities for the treatment by *rest, diet, and massage*, according to the plan of Weir Mitchell, of that large class of nervous diseases so commonly met with in ladies suffering from uterine troubles. This plan of treatment has been specially studied, and nurses competent to carry out its provisions in every detail will be furnished. For further particulars, etc., address 1299-1350

Drs. KANE and VITTUM, De Quincey Home, Fort Washington, New York City.

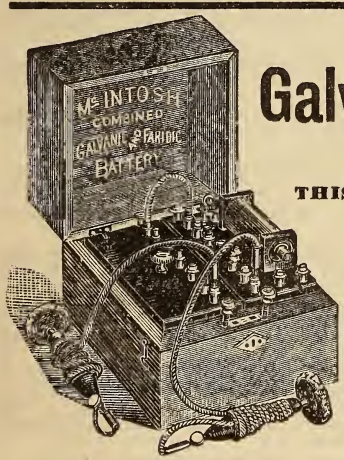
TANRET'S PELLETIERINE.

For the TREATMENT of TAPE-WORM (Tænia Solium).

This new Tænifuge, the Active Alkaloid of Pomegranate Bark, has of late come into extensive use in France, for the treatment of Tape-worm (Tænia Solium). The results of numerous experiments with it at the Marine Hospitals of Toulon, St. Mandrier, etc., and in the Hospitals of Paris, St. Antoine, La Charité, Neckar, Beaujon, etc., have all been most satisfactory. Doctor Dujardin Beaumetz, Member of the Academy of Medicine, and Prof Laboulbene, in their report to the Society of Therapeutics, have given it their unqualified approval, after the most searching experiments. This preparation is pleasant to administer, and if certain preliminaries are observed success will be insured.

PELLETIERINE is prepared by Mr. CHAS. TANRET, Pharmacien de First Class, 64 Rue Basse du Rempart, Paris. 1242eow-tf

GENERAL AGENTS. E. FOUGERA & CO., 30 N. William St., N. Y.



McINTOSH'S COMBINED

Galvanic AND Faradic Battery.

THIS CELEBRATED BATTERY COMBINES BOTH THE GALVANIC AND FARADIC CURRENT,

Which can be used separately or combined. Any strength and intensity desired can be obtained for use in Electro-therapeutics. THIS BATTERY is constructed on an IMPROVED PLAN, as follows: The zinc and carbon plates are arranged in couples, securely clamped to hard rubber plates, with thumb screws. These screws are also used for binding posts. All the connections are positive. The cells are made in sections of six, of hard rubber, with hard rubber drip cup. The following points of excellence render our Batteries superior to others:

1. They combine the only Portable Galvanic and Faradic Battery in one case.

2. They weigh one-half less than other Batteries of the same number of cells.

3. The cells are made in sections of six, of one solid piece of hard, vulcanized rubber; by this arrangement they can be emptied, cleaned and filled as easily and quickly as one cell, and will not crack, break or leak.

4. A hard rubber drip cup is placed by the side of each section of cells, to receive the zinc and carbon plates when removed from them. By this arrangement we avoid the use of absorbent materials and soiling the Battery

5. The Hydrostat is perfect. The rubber plates which hold the elements project over on one side enough to cover the cells when the zinc and carbon plates are placed in the drip cups. The under side of this projection is covered with thick, soft rubber, which is securely clamped to the cells sections, and makes them water tight.

6. This is the only Battery in which the zinc and carbon plates can be kept clean by simply rinsing them.

7. A zinc or carbon plate can be removed by simply loosening a binding post; and all parts of the Battery can be duplicated, as like parts are made exactly alike. We will be pleased to send circulars and our illustrated catalogue, giving full information, price, etc., free, upon application.

McINTOSH GALVANIC BELT AND BATTERY CO.,

1281-1332 **Nos. 192 and 194 Jackson Street, CHICAGO, ILL.**

TO PHYSICIANS.

IODIA.

FORMULA.—Iodia is a combination of Active Principles obtained from the Green Roots of STILLINGIA, HELONIAS, SAXIFRAGA, Menispermum, and Aromatics. Each *fluid* drachm also contains *five* grains IOD.-POTAS. and *three* grains PHOS.-IRON.

DOSE.—One or two *fluid* drachms (more or less, as indicated) *three* times a day, before meals.

IODIA is the *Ideal* Alterative. It has been LARGELY PRESCRIBED in Syphilitic, Scrofulous, Cutaneous, and Female Diseases, and has an Established Reputation as being the best Alterative ever introduced to the Profession.

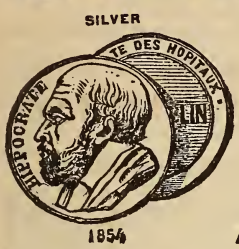
MATHEY-CAYLUS' GLUTEN



CAPSULES

OF

PURE COPAIBA AND OTHER MEDICINES.

Adapted and recommended for the cure of recent or chronic Gleets, Fluor Albus, etc., etc.

The MATHEY-CAYLUS' CAPSULES, *coated with gluten*, present the most perfect mode for administering Copaiba, Cubebs, Norway Tar, Turpentine, and other remedies, the disagreeable odor and taste of which are often a hindrance to their use. This mode of preparing capsules, which has been approved by the Academy of Medicine, has been recommended in their clinical lectures by eminent Professors in the hospitals of Paris, as well as in those of New York and London.

By the first physicians of the hospitals of Paris, London, and New York.

SPECIAL ADVANTAGES OF MATHEY-CAYLUS' GLUTEN CAPSULES.—Being formed of thin, transparent, and readily assimilated coating, they so cover and disguise the medicine to be given, that it can be taken without disgust, but with ease. In this respect, they differ widely from the gelatine capsules, which have a hard, thick coating, which swells beyond measure, in the stomach, are hard to be swallowed, and what is of great importance, they create disturbance in the digestive functions.

The special advantage of the coating of gluten consists in the fact that, notwithstanding its extra thinness, and although it softens under the action of the gastric juice, it can pass the stomach without breaking, and only in the intestines is the medicinal matter liberated; this accounts for the fact that Mathey-Caylus' Capsules never cause the nausea, eructations, and dyspeptic symptoms, which are complained of by many persons using other preparations.

Finally, their regular ovoid form, which is so favorable to swallowing, their pleasant appearance, which dispels all disgust, and the advantage of being entirely free from taste and smell, recommend the use of these capsules even to the most delicate persons.

Thankful to the Medical Profession for the liberal patronage heretofore bestowed upon us, we hope that they will continue their favors, and we are convinced that they will never have any reason to regret the generous welcome they have given to our preparations.

MATHEY-CAYLUS' CAPSULES are never sold, except in bottles having the following inscription printed in the glass: MATHEY-CAYLUS A PARIS. And each bottle contains 64 capsules, making them the cheapest capsules in the market.

The following different kinds of Mathey-Caylus' Gluten Capsules are now offered:

COPAIBA AND TANNIC ACID,
COPAIBA AND S. N. OF BISMUTH,
COPAIBA AND CATECHU,
COPAIBA AND MAGNESIA,
COPAIBA, CUBEBS AND ALUM,
COPAIBA, CUBEBS AND RHATANY,
COPAIBA AND RHATANY,
COPAIBA AND CITRATE OF IRON,
COPAIBA AND CUBEBS,
COPAIBA PURE,
COPAIBA, CUBEBS AND CARB. OF IRON,
VENICE TURPENTINE, NORWAY TAR, PURIFIED,
CUBEBS AND TURPENTINE,
CUBEBS AND TANNATE OF IRON,
CUBEBS AND ALUM,
CUBEBS PURE,
COPAIBA AND MATICO,
COPAIBA, IRON AND OIL OF SANDAL,
COPAIBA AND OIL OF SANDAL,
COPAIBA, PEPSIN AND BISMUTH,
COPAIBA AND TAR,
COPAIBA, CUBEBS AND OIL OF SANDAL.

HOLLOW SUPPOSITORIES.

WITH STOPPERS. ALL MADE FROM PURE BUTTER OF COCOA, ONLY.

Aural, Nasal, Rectal, Urethral, Cystic, Vaginal, Intra-Uterine, and Veterinary Suppositories.

The object of this invention is to supply Physicians, Druggists, Veterinary Surgeons, and others, with HOLLOW SUPPOSITORIES, into which they can put any kind of medicine or nutriment, thus producing firm, smooth, and evenly medicated Suppositories, that are cheaper and more reliable than those made by the old method.

RECTAL ABSORPTION.

"The mucous membrane of the rectum, like that of other portions of the alimentary canal, possesses all the requisites, more or less, for the exercise of absorption."

Liebig states that a strong solution of common salt disappeared so completely in the rectum, that an evacuation one hour afterward was found to contain no more than the usual portion of salt.

Many medicinal substances act more energetically when applied to the rectum than when received into the stomach.

Baron Dupuytren said: "The rectum *absorbs*, but does not *digest*. The medicinal agent," he says, "owing to the absence of digestion, passes more directly, more purely, and more surely to its destination, than the same medicine does when taken into the stomach."

M. Orfila asserts that those medical agents which operate through the medium of absorption, such as opium, tobacco, etc., are much more active by the rectum than by the stomach.

Dr. J. H. Scorff reports four cases where he was successful in removing the vomiting of pregnancy, by introducing 20 grains of chloral into the rectum, night and morning. He only found it necessary to use the remedy three or four times.

Chloral is the remedy *par excellence* in the ravings of delirium tremens, and in cases of delirium and insomnia combined; also in infantile convulsions and attacks of laryngysmus stridulus.

Dr. Hickman reports a case of typho-malarial fever, which chloral was found to control in a happy manner. The chloral was introduced per rectum.

"REST TO THE STOMACH,"

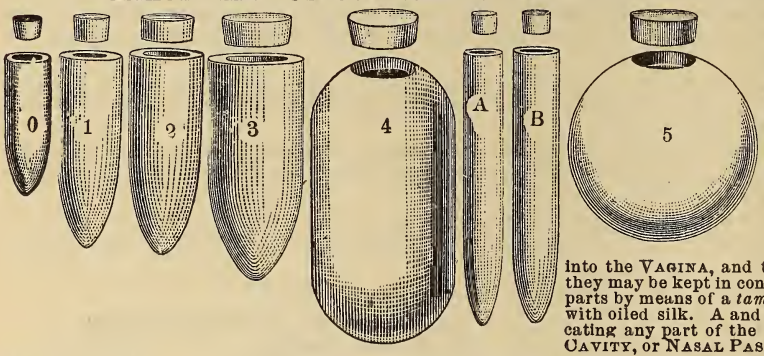
says Mr. Theodore Williams (in London *Lancet*, October 24th, 1874), is of the highest importance in some of the diseases of this organ. In such cases we possess in the rectum an effective second stomach, which, if it does not afford us the pleasure of digestion, spares us many of its pains."

Nutritious substances are taken up by the absorbents, and thus find their way into the economy, and produce their assimilative and nutritive effect. Haller demonstrated the fact that digestion can and does take place in the alimentary canal. He had the greatest confidence in the absorptive and digestive powers of the rectum to sustain life indefinitely.

HYPODERMIC MEDICATION.

Dr. William Bodenhamer says: "This now very common and often misused method is of great value in numerous cases, yet I am decidedly of the opinion that rectal medi ation is of greater importance; indeed, it is greatly preferable in many instances, being much less dangerous, much more convenient and simple; and the remedies, too, act through this medium with almost equal celerity. But very few remedies can be used hypodermically in comparison to those which can be used by the rectum."

EXACT SIZES OF OUR VARIOUS HOLLOW SUPPOSITORIES.



Size 0 is for children. It may also be used for the EAR and in the NASAL PASSAGES. Nos. 1, 2 and 3 are RECTAL SUPPOSITORIES. Nos. 3 and 4 may be used for introducing nutriment into the system, *via rectum*. No. 4 is also a VAGINAL SUPPOSITORY. No. 5 is a "SPHERICAL HOLLOW SUPPOSITORY," to introduce remedies into the VAGINA, and to the *os uteri*, where they may be kept in contact with the diseased parts by means of a *tampon* of cotton covered with oiled silk. A and B are used for medicating any part of the URETHRA or UTERINE CAVITY, or NASAL PASSAGES.

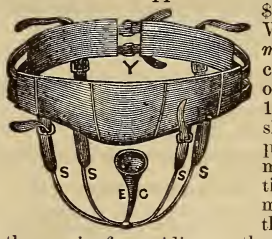
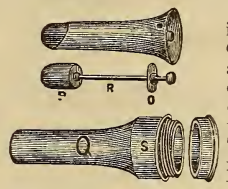
GYNECOLOGICAL TREATMENT SIMPLIFIED.

Abdominal Supporter and Pessary combined, for $5.50, or on Elastic, Waist, Belt, (*Economy*) only $4.50. Deep cups, graduated every one eighth inch, from 1¼ to 2¼ inches, outside diameter. Simple, harmless, and manageable by the patient. The cups are moulded leaning on the stems, to obviate the cervix from riding on the anterior edge—S. S., are pure elastic gums.





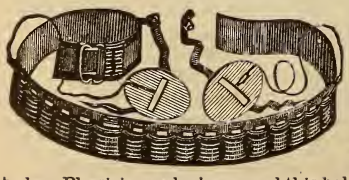
Speculums.—The Series in the Hard Rubber Case Q, consists of four graduated speculums and conductors R, weight but 12 oz.; Price, $12.00; Single, with conductor, $2.50 each. The slight taper and the flesh color enamel give a view as clear as if the cervix was located externally.

Exchanges.—Single Speculums received back when a full case is desired, and all the hard rubber parts are exchanged throughout the catalogue at cost, without limit of time; only cost of needed repairs charged.

Full Catalogue.—Includes "Bird's eye view" of Gynecology. Its Treatment Simplified, and illustrates over 150 in size and style uterine instruments.

All obtained through this Office, and delivered free when pre-paid.

DR. McINTOSH'S ELECTRIC OR GALVANIC BELT.



This Belt is a perfect Galvanic Battery, composed of sixteen cells, placed in pockets on a belt. Each cell is made of hard vulcanized rubber, lined with copper, which constitutes the negative plate. The rubber coating perfectly insulates each cell. The positive plates are of zinc, wrapped in a porous material to absorb the exciting fluid, preventing contact with the copper, and permitting the current to pass from the copper to the zinc. The cells are charged without wetting the belt.

A current selector is so arranged that one or more cells can be used at pleasure. The electrodes are covered similar to ordinary battery electrodes, and connected with the cells by connecting cords. By this arrangement, a current from the belt can be applied to any part of the body. Physicians who have used this belt in their practice do not hesitate to recommend it to the profession.

Our pamphlet on "Medical Electricity," containing a full description of the belt and diseases, with manner of treatment, sent free on application. Address

HERCULES MALT WINE,

MANUFACTURED BY

CHAS. WOLTERS,

PROSPECT BREWERY, PHILADELPHIA.

This new and extremely palatable *Extract of Malt* is designed as an *invigorating Health and Table Beverage.* It is an agreeable and reliable remedy for *Indigestion, Debility, Anæmia* and *Malnutrition*, and is peculiarly adapted to *Enfeebled Persons, Convalescents* and *Nursing Mothers.*

The perfection of this excellent article has been reached after a long series of careful experiments, and it surpasses other Malt Extracts in flavor, efficiency, cheapness, and in the quality and combination of its constituents, as it essentially contains a large proportion of *Peptones*, which act as Digestors, a rich quantity of *Phosphates*, which are valuable Nutrients, and a medium proportion of *Hops*, serving as a general Stomachic and Nervine. 1301-1356m

Sold in Drug Stores, at 25 cents per Pint Bottle.

VINUM DIGESTIVUM (PROCTER.)

DIGESTIVE WINE, used with unvarying success by so many of our prominent physicians for the last three years, is offered with increased confidence to the profession as a sure and rapid means for the exhibition of the artificial digestive function. The nausea of pregnancy and sea sickness are greatly alleviated or entirely relieved by its use. One fluid-ounce dissolves 500 grains of coagulated albumen. One or two teaspoonfuls may be given, or varied as desired. We would suggest that the above title be used in prescribing. 1257-1308, 1y.

Manufactured by **WM. PROCTER, Jr., CO.,** S. W. Cor. 9th and Lombard Sts., Phila.

MELLIN'S FOOD

FOR

INFANTS AND INVALIDS

PHYSICIANS who make a specialty of infantile diseases say that the great desideratum in *holera infantum* is *food*—PROPER FOOD. Secure that, and the medical treatment becomes an easy matter. Mellin's Food is the best food for infants, sick or well. It is not *farinaceous;* it is entirely *soluble;* and when dissolved in warm milk and water it forms the most perfect substitute for mother's milk that has ever been produced. The philosophy of its action is fully explained in the pamphlet which, with a sample of the Food, will be sent free to any address.

For sale by all druggists.

1258-1309eow **THEODORE METCALF & CO., Boston, Mass.**

Registered COSMOLINE Trade Mark.

Unguentum Petrolei

Prepared by E. F. Houghton & Co. Philadelphia, U.S.A.

Put up in 1, 5, 10, 25, 50, and 100-lb. cans. Samples furnished on application. The post-office laws forbid anything of an oleaginous nature being sent through the mail.

In chemical composition, Cosmoline [Unguentum Petrolei] is an oleaginous hydrocarbon, corresponding to the heavy petroleum oils, and containing a large amount of the paraffines and olefines of the formulæ $C_{16}H_{34}$ and $C_{16}H_{32}$. It contains but a small percentage of the paraffines and olefines, corresponding to the formulæ C_7H_{16} and C_7H_{14}, respectively, and the offensive and irritating properties of the crude oil have been carefully removed. In the process of purification, no acids, alkalies, or other chemicals are employed, and no injurious additions of any kind are made to the natural product. The result is a semi-solid, translucent substance, with a faint odor and unctuous feel.

Cosmoline [Unguentum Petrolei] melts at about 100° Fah. (38° Cent.); and boils at about 625° Fah. (329° Cent.); its specific gravity is about 0.875 at 60° Fah.

As it contains no oxydizable or organic matter capable of change by putrefaction or fermentation, and is absolutely without affinity for moisture, it offers to the profession an admirable unguent, which can never decompose, ferment, or become rancid in any climate or temperature.

291 MADISON AVENUE, NEW YORK, February 26th 1878.

I have examined the preparations of Cosmoline as manufactured by E. F. Houghton & Co., Philadelphia, and believe them well adapted to the purposes for which they are designed. As lubricants, and as the bases of simple or medicated ointments, they have a decided advantage over the fixed oils and fatty substances in ordinary use, in that they do not become rancid, and do not acquire irritating qualities from atmospheric exposure. ALFRED C. POST, M.D., LL.D.,
Emeritus Professor of Clinical Surgery in the University of New York, Visiting Surgeon to Presbyterian Hospital, etc.

PHILADELPHIA, July 10, 1880.

MESSRS. E. F. HOUGHTON & CO.:

I have for a number of years made extensive use of Cosmoline [Unguentum Petrolei] and consider it a most valuable article for surgical purposes. Either as a dressing by itself, or as a vehicle for the application of medicaments, it is greatly superior to lard or other fatty matters, especially by reason of its non-liability to change by time or temperature.

Yours truly,
JOHN H. PACKARD, M.D.
1031 WALNUT ST., PHILADELPHIA.

MESSRS. E. F. HOUGHTON & CO.:

I have used extensively Cosmoline [Unguentum Petrolei] both in Dispensary and private practice, with very great satisfaction. As a vehicle in making ointments it is invaluable, and far superior to lard, for the reason that it will not become rancid or undergo chemical change like the latter, when exposed to the atmosphere. I cannot too highly commend it as an application in various skin diseases.

Yours truly, JOHN V. SHOEMAKER, A.M., M.D.,
Physician to the Pennsylvania Free Dispensary for Skin Diseases

208 WEST 34TH ST., NEW YORK.

MESSRS. E. F. HOUGHTON & CO.:

Gents:—I fully appreciate the value of your Cosmoline, or Unguentum Petrolei, and prescribe it frequently in ointments. Fluid Cosmoline I have used constantly for several years, as a lubricant of urethral sounds. It is the cleanest oil I know of for this purpose.

Yours truly, GEO. HENRY FOX.

PREPARED BY

MALTINE,

A CONCENTRATED EXTRACT OF

MALTED WHEAT, OATS, AND BARLEY.

In its preparation the temperature employed does not exceed 150 deg. Fahr., thereby retaining all the nutritive and digestive agents unimpaired. Extracts of Malt are made from Barley alone, by the German process, which directs that the mash be heated to 212 deg. Fahr., thereby coagulating the Albuminoids, and almost wholly destroying the starch digestive principle, Diastase.

LIST OF MALTINE PREPARATIONS.

MALTINE (Plain).
MALTINE with Hops.
MALTINE with Alteratives.
MALTINE with Beef and Iron.
MALTINE with Cod Liver Oil.
MALTINE with Cod Liver Oil and Pancreatine.
MALTINE with Hypophosphites.
MALTINE with Phosphorus Comp.
MALTINE with Peptones.
MALTINE with Pepsin and Pancreatine.
MALTINE with Phosphates.
MALTINE with Phosphates Iron and Quinia.
MALTINE with Phosphates Iron, Quinia and Strychnia.
MALTINE Ferrated.
MALTINE WINE.
MALTINE WINE with Pepsin and Pancreatine.
MALTO-YERBINE.
MALTO-VIBURNIN.

MEDICAL ENDORSEMENTS.

We append, *by permission*, a few names of the many prominent Members of the Medical Profession who are prescribing our Maltine Preparations :

J. K. BAUDUY, M. D., St. Louis, Mo.,
Physician to St. Vincent's Insane Asylum, and Prof. Nervous Diseases and Clinical Medicine, Missouri Medical College.

WM. PORTER, A. M., M. D., St. Louis, Mo.

E. S. DUNSTER, M. D., Ann Harbor, Mich.,
Prof. Obs. and Dis. Women and Children University and in Dartmouth College.

THOMAS H. ANDREWS, M.D., Philadelphia, Pa.,
Demonstrator of Anatomy, Jefferson Medical College.

B. F. HAMMEL, M. D., Philadelphia, Pa.,
Supt. Hospital of the University of Penn.

F. R. PALMER, M. D., Louisville, Ky.,
Prof. of Physiology and Personal Diagnosis, University of Louisville.

HUNTER McGUIRE, M. D., Richmond, Va.,
Prof. of Surgery, Med. Col. of Virginia.

F. A. MARDEN, M. D., Milwaukee, Wis.,
Supt. and Physician, Milwaukee County Hospital.

L. P. YANDELL, M. D., Louisville, Ky.,
Prof. of Clinical Medicine and Diseases of Children, University, Louisville.

JOHN. A. LARRABEE, M. D., Louisville, Ky.,
Professor of Materia Medica and Therapeutics, and Clinical Lecturer on Diseases of Children in the Hospital College of Medicine.

R. OGDEN DOREMUS, M.D., LL.D., New York,
Professor of Chemistry and Toxicology, Bellevue Hospital Medical College ; Professor of Chemistry and Physics, College of the City of New York.

WALTER S. HAINES, M. D., Chicago, Ill.,
Professor of Chemistry and Toxicology, Rush Medical College, Chicago.

E. F. INGALLS, A. M., M. D., Chicago, Ill.,
Clinical Professor of Diseases of Chest and Throat, Woman's Medical College.

H. F. BIGGAR, M. D.,
Prof. of Surgical and Medical Diseases of Women, Homœopathic Hospital College, Cleveland, Ohio.

DR. DOBELL, London, England,
Consulting Physician to Royal Hospital for Diseases of the Chest.

DR. T. F. GRIMSDALE, Liverpool, England,
Consulting Physician, Ladies' Charity and Lying-in-Hospital.

WM. ROBERTS. M.D., F.R.C.P., F.R.S., Manchester England,
Prof. of Clinical Medicine, Owens' College School of Medicine; Physician Manchester Royal Infirmary and Lunatic Hospital.

J. C. THOROWGOOD, M.D., F.R.C.P., London, England,
Physician City of London Hospital for Chest Diseases ; Physician West London Hospital.

W. C. PLAYFAIR, M. D., F.R.C.P., London, England,
Prof. of Obstetric Medicine in King's College, and Physician for the Diseases of Women and Children to King's College Hospital.

W. H. WALSHE, M.D., F.R.C.P., Brompton, England,
Consulting Physician Consumption Hospital, Brompton, and to the University College Hospital.

A. WYNN WILLIAMS. M.D., M.R.C.S., London, England,
Physician Samaritan Free Hospital for Diseases of Women and Children.

A. C. MACRAE. M.D., Calcutta, Ind.,
Dep. Insp.-Gen. Hosp. Indian Service, late Pres. Surg., Calcutta.

EDWARD SHOPPEE, M. D., L. R. C. P., M.R.C.S., London, England.

LENNOX BROWN, F.R.C.S., London, England,
Senior Surgeon, Central Throat and Ear Hospital.

J. CARRICK MURRAY, M. D., Newcastle-on-Tyne, England,
Physician to the N. C. H. for Diseases of Chest.

J. A. GRANT, M. D., F.R.C.S., Ottawa, Canada.

A. A. MEUNIER, M.D., Montreal, Canada,
Prof. Victoria University.

MALTINE is prescribed by the most eminent members of the Medical Profession in the United States, Great Britain, India, China and the English Colonies, and is largely used for patients at the principal Hospitals in preference to any of the Extracts of Malt.

We will furnish gratuitously a one pound bottle of any of the Maltine Preparations to Physicians who will pay the express charges. Send for our 28 page Pamphlet on Maltine for further particulars. Address,

NEW PHARMACEUTICALS

WORTHY OF THE

Attention of Physicians.

NITRO-GLYCERINE PILLS.

Nitro-glycerine is introduced on the authority of Dr. Murrell, of London, as a remedy in angina pectoris and in cases of chronic neuralgia in any part of the body. Cases of angina pectoris which had resisted all attempts at even alleviation, much less cure, have promptly yielded to nitro-glycerine, and a number of cases of actual cure are reported. This is more than can be said of any other known remedy. In neuralgia the effects of this drug have, in some instances, been scarcely less marked.

The pill form is very eligible, besides ensuring exactness of dose.

Liquor Ergotæ Purificatus.

This form of ergot is of constant strength. In its preparation only the active principles of the drug are retained, all inert and noxious ingredients being removed. As these active principles are assayed the l quor contains them in constant and definite proportions, and thus is obviated the uncertainty of strength due to variability in the quality of the sample of the drug employed. Liquor ergotæ purificatus is as constant in its strength as morphia, quinia, or any of the other alkaloids of vegetable drugs.

Sanguis Bovinus Exsiccatus.

In this preparation of blood we have a true food, the albumen being entirely retained. In this respect it differs from the various beef extracts, beef essences, etc., in the market. These preparations are, from the very methods of their manufacture, entirely deprived of albumen, the true nutritive principle of beef, and are thus not foods in any proper sense of the word.

Sanguis bovinus exsiccatus is blood deprived of nothing but its water and fibrin, which latter is naturally small in quantity and practically of no nutritive value.

CASCARA CORDIAL.

This laxative and alterative preparation stands unequaled among pharmaceutical preparations as a remedy in constipation. Its agreeable and efficient action has been abundantly attested by the medical profession of this country, and it stands now as a remedy of unquestionable efficacy in chronic constipation. Great care should be exercised in not prescribing too large a dose, inasmuch as cascara sagrada, its active ingredient, overcomes constipation by its tonic action on the bowel, rather than by direct laxative influence.

—FULL DESCRIPTIVE CIRCULARS OF THE ABOVE—

WILL BE SENT FREE, ON APPLICATION TO

PARKE, DAVIS & CO., DETROIT, MICHIGAN,

MANUFACTURING CHEMISTS AND SPECIAL DEALERS IN NEW AND RARE DRUGS.

An experience of more than a quarter of a century convinces us that sugar, properly applied, is the only correct coating for a pill.

Physicians should be careful to specify Warner & Co., when prescribing or ordering.

Special attention is called to the following selected Recipes prepared for Physicians' Prescriptions.

PIL: PHOSPHORI COMP: (WARNER & CO.)

℞. Phosphori, - - 1-100 gr.
Ext. Nuc. Vom. - ¼ gr.

THERAPEUTICS.—As a nerve tonic and stimulant, this form of pill is well adapted for such nervous disorders as are associated with impaired nutrition and spinal debility, increasing the appetite and stimulating digestion.

The practical value of Phosphorus as a therapeutic agent, and its applicability to the cure of disease, and especially in those varied disordered conditions consequent upon OVERWORK, which are characteristic of modern civilization.

Pil. Phosphori Comp. may be taken, one or two pills three times daily, after eating.

Price, per 100, $1.50.

PIL: IODOFORM ET FERRI. (WARNER & CO.)

℞. Iodoform, - - 1 gr.
Ferri Redacti, - 1¼ gr.

THERAPEUTICS.—A powerful general tonic and alterative, valuable as a remedy in Anæmia, Scrofula, Neuralgia, Chlorosis, Rheumatism, etc.

Pil. Iodoform et Ferri may be given in doses of from one to two pills, as occasion may require.

Price, per 100, $2.00.

PIL: DIGESTIVA. (WARNER & CO.)

℞. Pepsin Conc't, 1 gr. Gingerine, 1-16 gr.
Pv. Nuc. Vom., ¼ gr. Sulphur, ⅛ gr.

THERAPEUTICS.—Useful in relieving various forms of Dyspepsia and Indigestion, and of permanent benefit in cases of enfeebled digestion, where the gastric juices are not properly secreted. It is also a gentle laxative and excellent dinner pill, may be taken one after dinner, or one before each meal, three times daily.

Price, per 100, 75 cts.

PIL: CALCIUM SULPHIDE. (WARNER & CO.) 1-10, ¼, ½ & 1 gr. each.

THERAPEUTICS.—Extremely useful in the treatment of acne, scrofula and cutaneous diseases.

Sulphide of Calcium is usually administered in doses of from 1-10 to ¼ grain four times daily, gradually increasing the dose to one grain six times daily, or according to the progress or severity of the case.

Price, per 100, 1-10 gr. .50; 1-4 gr. .60; 1-2 gr. .75; 1 gr. $1.00.

WARNER & CO.'S PILLS MAY BE OBTAINED FROM ALL DRUGGISTS, OR BY MAIL, ON RECEIPT OF PRICE.

1273-1325eow

SAVORY & MOORE beg to call the attention of the Profession to some of their Special Preparations, the purity and uniform strength of which are Guaranteed.

PANCREATIC EMULSION,

Prepared in accordance with the direction of the Physician who introduced this purely

MEDICINAL FOOD FOR CONSUMPTION AND WASTING DISEASES.

Pancreatic Emulsion will always take precedence of Cod-Liver Oil, by reason of its introducing the STABLE SOLID FATS INTO THE SYSTEM, instead of the evanescent fluid fats or oils.

Neither Cod-Liver Oil nor EMULSIONS of COD-LIVER OIL can supply the kind of fat necessary for sound and vigorous human life. In addition to this, all the Oily Emulsions are liable to rancidity, and most of them are highly objectionable in consequence of the SAPONIFICATION and ULTIMATE PUTREFACTION, produced by the chemical agents used instead of Pancreatic Juice.

Pancreatic Emulsion (properly so-called), is THE NECESSARY FOOD OF THE CONSUMPTIVE, and the most reliable form of nutriment for counteracting the tendency to Phthisis and other wasting diseases. It presents to the lacteals fat, in essentially the same condition for assimilation and absorption as in a vigorous human frame, and THE AGENT of the important change is THE NATURAL SECRETION of the PANCREAS.

Pancreatic Emulsion may therefore be regarded as Chyle obtained by nature's own process. In certain cases both Cod-Liver Oil and Pancreatic Emulsion are required—one to supply the blood with oil or liquid fat, the other with the more stable solid fats; but it cannot be too strongly urged that both PANCREATIC EMULSION and Cod-Liver Oil are *not to be regarded as Medicines, but as articles of diet*, without which patients, with their defect of health, will as surely starve as healthy persons would if deprived of the most nutritive part of their food.

Pancreatized (Digestive) Cod-Liver Oil. By Pancreatized Cod-Liver Oil, the active digestive principle of the Pancreatic Juice is imparted to it, which renders it in a highly favorable condition for rapid and complete digestion and assimilation, preventing nausea, and largely increasing the beneficial properties of the Oil.

Pancreatine effects the digestion and assimilation of Cod-Liver Oil and Fat, as well as Food generally. This palatable and popular remedy is therefore invaluable TO PATIENTS WHO ARE UNABLE TO DIGEST COD-LIVER OIL, and who are thus deprived of its nourishing and invigorating properties.

Pancreatine Wine. An excellent vehicle for taking Cod-Liver Oil and promoting the digestion of it.

Tins, 1*s*, 2*s*, 5*s*, 10*s*.

SAVORY & MOORE, 143 New Bond Street, London.

1244-1295 **Agents for America, E. FOUGERA & CO., NEW YORK.**

PNEUMATIC ASPIRATION,

AFTER THE MANNER OF DIEULAFOY.

"It is always possible, owing to Aspiration, to search for a fluid collection without any danger, whatever may be its seat or its nature."

"I have thrust these needles into almost every part of the body; into the Joints the Liver, the Spleen the Bladder the Intestines, the Lungs and the Meninges; and I can affirm, and a great number of observers affirm with me, that we have never seen consecutive accidents."—*Dieulafoy on Pneumatic Aspiration*, pp. 21, 24.

We invite the attention of the Medical Profession to this New Apparatus for Aspiration, constructed upon the general plan of Potain's modification of Dieulafoy's Aspirator, but containing the following improvements and inventions of our own:—

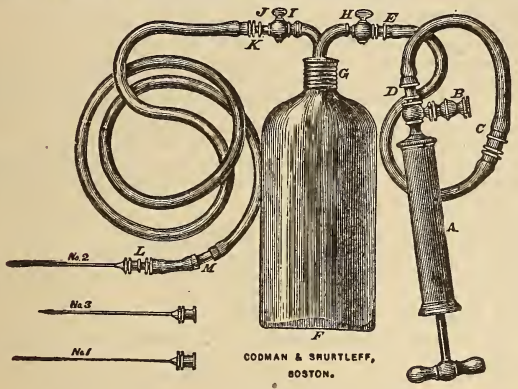

Fig. 68.

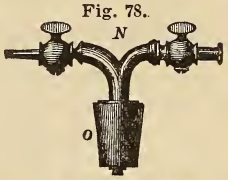
Fig. 77.

Fig. 78.



The Stopper and Cocks supplied with Apparatus No. 2.

1st. Means of changing the pump from an exhaust to a force-pump, and *vice versa*, thereby enabling the operator not only to draw an abnormal fluid, but to inject the cavity through the tubes and needle of the apparatus with one adapted to induce healthy action.—*See Dieulafoy on Aspiration*, pp. 276, 278.

2d. The employment, in our apparatus No. 1, of a metal Screw Cap, fitting the neck of the receiver supplied with this apparatus so securely that it cannot be forced from its place by condensed air while injecting, or accidentally removed while the receiver is in a state of vacuum for aspiration

3d. The substitution, for the ordinary oiled silk valves of other apparatus, of a kind indestructible, both in form and material.

4th. A simple and comparatively inexpensive attachment for evacuating the contents of the stomach, equal, if not superior, to any in use hitherto.

Commendations bestowed upon our Aspirators, by physicians familiar with the latest European and American ones, lead us to believe that, in some important particulars, at least, they are superior to any.

In his work on Pneumatic Aspiration, Dieulafoy shows the harmlessness of the Aspiratory puncture, and its great superiority to the Exploring Trocar as a means of accurate diagnosis in all collections of Pathological Fluids. It has been used with unprecedented success in the Retention of Urine, Reduction of Strangulated Hernia, in Ascites, Hydrothorax, Empyema, Pneumothorax, Effusions into the Pericardium, Serous, Purulent and Hematic Effusions of the Knee, Hydrocele, Hydatid Cysts, Abscesses of the Liver, and in various other Pathological Lesions.

PRICES OF APPARATUS.

No. 1. Air Pump—exhaust or condensing as described; 16 oz. receiver, of strong glass, with screw-cap; three steel, gold plated Aspiratory Needles, together with the necessary tubes, stop-cocks, etc., as shown in Fig. 77, fitted in a neat case, accompanied with printed directions $16.00. Postage 64 cents.

No. 2. The same, without receiver, and with rubber stopper (see Fig. 78) to fit almost any bottle of quart capacity, or less, instead of screw-cap arrangement, also with printed directions $14.00. Postage 32 cents.

No. 3. Dieulafoy's Notched Aspirator, Nickel-plated, with two Needles, Tubes, etc., in case $14 00

No. 4. Stomach Attachment, as described, adapted to pump accompanying Nos. 1 and 2, additional $6.00. Postage 22 cents.

The foregoing are the product of our own factory, and are warranted in every respect.

Also, **Dieulafoy on Pneumatic Aspiration,** post paid, by mail, on receipt of..... 3 40

☞ *Full description on application.*

☞ In corresponding with Advertisers please mention the MEDICAL AND SURGICAL REPORTER.

GRIMAULT & CO.'S PHARMACEUTICAL PRODUCTS.

Prepared with scrupulous care, under the immediate supervision of a practical chemist, at their model laboratory at Neuilly, near Paris.

OFFICES AND SALESROOMS, No. 8 RUE VIVIENNE, PARIS.

The attention of the medical profession is directed to a few leading products:

DUSART'S SYRUP AND WINE OF LACTO-PHOSPHATE OF LIME.

In these preparations phosphate of lime is presented in the combination in which it exists in the stomach, after it has been acted upon by the gastric fluid. They are especially adapted, and have been used with great success in *Rachitic* and *Scrofulous Affections* in children; the *Languor* caused by too rapid a growth and development in youth; the *Debility* attendant upon old age; *Weakness in Females*, caused by the nursing of children; *Slow Convalescence*; certain forms of dyspepsia, caused by the low vitality of the system. In cases of *Fractures*, their use has been found to cause a more *rapid formation of the Callus*, and in cases of wounds, the *cicatrization has been more prompt*, while its administration to children facilitates the general developement, and especially the *the process of Ossification and Dentition*.

Dusart's work on the "Physiological and Therapeutic Action of Phosphate of Lime" will be sent free, on application to Messrs. E. Fougera & Co.

LEBAICUE'S DIALYSED IRON, or Pure Peroxide of Iron,

IN SOLUTION, WITHOUT THE AID OF ACIDS OR OTHER SOLVENTS.

It is nearly tasteless, does not blacken the teeth, is very readily absorbed, will not constipate or cause any disturbance of the digestive apparatus, and is tolerated by persons who could not support any other preparation of iron. It is offered in the form of a *solution*, which is generally preferred; or of an *elixir*, when a slight stimulant is desired.

DEFRESNE'S PILLS AND ELIXIR OF PANCREATINE.

Pancreatine is a very important remedy in a great many cases of *indigestion*, *atony* of the digestive organs, and *dyspepsia*, where pepsine and other remedies have failed. It is especially serviceable as a help for the digestion of fats. The preparations especially recommended are: *Defresne's Pills*—dose, two to four pills before each meal; the *Elixir* and *Wine*—dose, one or two tablespoonfuls after meals.

GRIMAULT & CO.'S MATICO CAPSULES.

A preparation of the leaves of Matico, of more certain effect than most of the medicines recommended for the same class of diseases. The capsules contain the essential oil of Matico, combined with the balsam of copaiba, and do not cause any unpleasant eructations.

JULIEN'S LAXATIVE FRUIT.

A pleasant confection for constipation, and all diseases resulting therefrom, as *headache*, *hemorrhoids*, *cerebral congestions*, *biliousness*.

The above and all other preparations of *Messrs. Grimault & Co.*, and information in regard to the same, may be obtained at all times from

1294-1319eow ***Messrs. E. FOUGERA & CO., Importing Pharmacists, New York.***

THE INVENTION OF AN EMINENT FRENCH CHEMIST.

The Salvator for Invalids and the Aged. An Incomparable Ailment for the Growth and Protection of Infants and Children. A Superior Nutritive in Continued Fevers, and a Reliable Remedial Agent in all Diseases of the Stomach and Intestines.

TO PHYSICIANS AND THE PUBLIC.

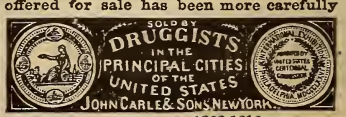
THIS preparation is, as advertised, principally the GLUTEN derived, by chemical process, from VERY SUPERIOR GROWTHS OF WHEAT, and should not be confounded with burnt or boiled Flour, in which the GLUTEN or sanative qualities are destroyed or made medicinally inert, nor with Crushed Wheat, or finely ground Wheaten Grits, styled "Medicinal Food," and sold under various names, in which the starch and impurities contained in wheat are retained in larger quantity.

By Dubisson's formula, the starch, impurities and soluble matter found in the Wheat Cereal are effectually excluded, the GLUTEN only retained, which is condensed, granulated and prepared to keep in all climates, and justly entitled

—⁂ IMPERIAL GRANUM ⁂—

It is well known, and should be fairly considered, that nothing of merit can be favorably received and commended by the public without being followed by imitations of a questionable character. IMPERIAL GRANUM is not the exception, for no preparation has attracted more attention, nor been more fiercely imitated by competition, even to wording and shipping order.

Whilst again it can be truly said that no preparation ever offered for sale has been more carefully prepared and thoroughly tested, nor has met with a more welcome reception and universal approval, or afforded more relief to invalids or to young and suffering children and aged persons. This has been confirmed by thousands of testimonials from Chemists, Physicians, Heads of Families and the Press.



Respectfully,

E. HEATON.

1262-1313eow

MURDOCK LIQUID FOOD CO., Boston,

THE ONLY MANUFACTURERS OF

RAW FOOD EXTRACTS IN THE WORLD.

It can be retained by the weakest stomach, when all other food extracts, and even water, is rejected.

Nutritious food, if raw, condensed, and free from insoluble matter, will cure chronic diseases, as it will make blood faster than all preparations or food, and new blood will cleanse the system.

MURDOCK'S LIQUID FOOD is made from Beef, Mutton and Fruits; contains corpuscles; is 12½ per cent. soluble albumen, and free from insoluble matter, drugs, minerals, salts and acids, and can be retained by the stomach when so weak as to refuse food.

Ask your Druggists, or send to us, for Essays read before the American Medical Association, at Richmond, Va., May 6, 1881, on the value of Raw Food Extracts, by Geo. R. Shepherd, of Hartford, Conn., and other Essays and Testimonials from Medical Journals and Physicians that have used Liquid Food, in cases of Consumption, Scrofula, Nervous and General Debility, Dyspepsia, acute and chronic, Constipation, Diphtheria, Intemperance, Cholera Infantum, Infantile Diarrhœa, Post-partum Hemorrhage, Purpura Hemorrhagica with Waxy Liver, Pelvic Cellulitis, Malarial and other Fevers, Chronic Strumous Arthritis, Sclerosis of the Spinal Cord, Senile Gangrene, Perinephritic Abscess, and other diseases of malnutrition. No cases of Cholera Infantum have occurred where it has been used daily and no lives have been lost from Cholera Infantum where it has been prescribed by a physician. Excellent for Eczema, Diabetes, Rheumatism and Neuralgia.

At the request of any physician who has not tried our Extracts, and would like to, we will deliver sample bottles to the Express in Boston. To any Medical Society wishing to investigate the value of our Extracts, through a committee, hospital, or individual members, we will furnish a supply of Liquid Food equal to a six-ounce bottle for every member present at the time of action. We are induced to do this knowing that our Extracts are saving life, and that an increased use of them, which will follow after a trial of them, will be the means of saving more lives daily. (*We ask no testimonials of results obtained.*) Raw Extracts are available where cooked ones are not, or if available, contain only one-third as much nourishment.

Liquid Food is in general use at all Hospitals, Infant and Insane Asylums, and Washingtonian Homes, U. S. Navy Hospitals, and by all physicians that have tried it.

If not kept by your Druggist, can be obtained in any of the commercial cities In Philadelphia, by Johnston, Holloway & Co., Boericke & Tafel; in Pittsburg, by A. Kelly & Co.; in Baltimore, by Thomsen & Wirth; or you can order direct and we will pay express. 1 oz, 15 cents; 6 oz., 55 cents; 12 oz., $1.00.

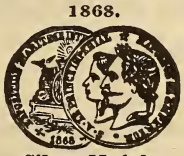
See Philadelphia MEDICAL AND SURGICAL REPORTER, *Boston Medical and Surgical Journal*, and *New York Medical Record*, for chronic cases that were at our quarterly reception to physicians, in Boston, December 30, 1881—cases of Eczema, Rheumatism, Neuralgia, Diabetes, Consumption, and other diseases. If all were not restored to perfect health, they were gaining daily, and able to enjoy life and attend to their business. 1297-1348

MURDOCK LIQUID FOOD CO., BOSTON.

It is the only food that will relieve the Consumptive from Hunger.

It will make Blood faster than all preparations known.

PARIS, 1867. 1868. 1872. 1873, VIENNA.



Prize Medal. Silver Medal. Gold Medal. Medal of Merit.

BOUDAULT'S PEPSINE

IN POWDER, also WINE, ELIXIR, SYRUP, PILLS, AND LOZENGES OF PEPSINE.

Since the introduction of Pepsine by Boudault in 1854, BOUDAULT'S PEPSINE HAS BEEN, AND IS STILL CONSIDERED, THE MOST RELIABLE, as is attested by the awards it has received at the Exhibitions of 1867, 1868, 1872, 1873, and in 1876 at the Centennial Exposition in Philadelphia.

IT IS THE ONLY PEPSINE USED IN THE PARIS HOSPITALS.

Careful tests will enable any one to satisfy himself that BOUDAULT'S PEPSINE HAS A DIGESTIVE POWER AT LEAST DOUBLE that of the best Pepsines in the market, and that it is really the cheapest.

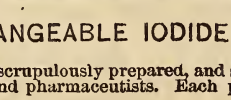
It is Sold in 1 ounce, 8 ounce, and 16 ounce Bottles.

Beware of so-called French Pepsines bearing fictitious names, and prescribe Boudault's only.

BLANCARD'S PILLS

OF UNCHANGEABLE IODIDE OF IRON.

Blancard's Pills of Iodide of Iron are so scrupulously prepared, and so well made, that none other have acquired a so well deserved favor among physicians and pharmaceutists. Each pill, containing one grain of proto-iodide of iron, is covered with finely pulverized iron, and covered with balsam of tolu. Dose, two to six pills a day. The genuine have a *reactive silver seal* attached to the lower part of the cork, and a green label on the wrapper, bearing the fac-simile of the signature of



Pharmacien, No. 40 Rue Bonaparte, Paris

without which none are genuine.

BEWARE OF IMITATIONS.

SEABURY & JOHNSON'S
PHARMACOPŒIA PLASTERS

IN RUBBER COMBINATION.

BELLADONNA, ADHESIVE, { Price, per mail, 1 yard roll, $1. *CANTHARIDAL,* Price, 1 yard, $1. *MUSTARD ON COTTON CLOTH, AND OTHER FORMULAS.*

ADVANTAGES OF THE RUBBER BASE:

A cold process through which volatilization by heat is avoided. Preservative character of the rubber combination, thus ensuring uniform reliability. Perfect pliability in any temperature; convenience of application, as the plaster adheres without heat or moisture; cleanliness.

This article is intended to take the place of the unreliable Emp. Adhesive, on account of its superior qualities and cheapness.

It is Pliable, Antiseptic, Waterproof, Non-Irritating, and Strong.

Does not become Dry.
Does not become Stiff.
Is not affected by Age.
Does not crack off the Muslin.
Is spread on honest Cotton Cloth.
Is not affected by Dampness.
Is not affected by Heat or Cold.
Will adhere firmer than Emp. Adhesive.
Will adhere longer than Emp. Adhesive.
Does not require heat or moisture to make it adhere.
Is an entirely new article, free from all irritating properties.
Is used by the New York, Bellevue, and other large Hospitals, and by many of our leading Surgeons.

FURNISHED { In Rolls 5 yards long by 14 inches wide. 1 yard x 7½ inches. In 10 yard lengths, on spools, ½, 1, 2, or 3 inches wide.

Supplied by Druggists. Physicians in remote sections can be supplied by mail, at following prices: 5 yard rolls, per yard, 40 cents; 1 yard rolls, per yard, 50 cents.

PREPARED ONLY BY

SEABURY & JOHNSON,

21 PLATT STREET, NEW YORK.

Received Highest Award Over All Competitors, Philadelphia 1876, Paris 1878.

Medical Practitioners who have not yet received our special Physician's and Surgeon's Catalogue, will be furnished same promptly on application.—SEABURY & JOHNSON, 21 Platt St., N.Y. 1271-1311eow

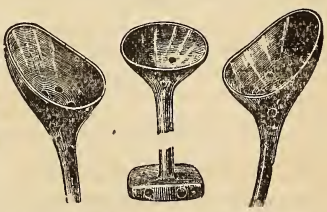
DR. McINTOSH'S
NATURAL UTERINE SUPPORTER.



No instrument has ever been placed before the medical profession which has given such universal satisfaction. The combination is such that the physician is able to meet every indication of Uterine Displacements. Falling Womb, Anteversion, Retroversion and Flexions are overcome by this instrument, where others fail. This is proven by the fact that, since its introduction to the profession it has come into more general use than all other instruments combined.

Among the many reasons which recommend this Supporter to the physician is its self-adjusting qualities. The physician, after applying it, need have no fear that he will be called in haste to remove or readjust it, as is often the case with rings and various pessaries held in position by pressure against the vaginal wall, as the patient can remove it at will, and replace it without assistance.

The Abdominal Supporter is a broad morocco leather belt, with elastic straps to buckle around the hips, with concave front, so shaped as to hold up the abdomen. The Uterine Support is a cup and stem, made of highly polished hard rubber, very light and durable, shaped to fit the neck of the womb, with openings for the secretions to pass out, as shown by the cuts. Cups are made with extended lips, to correct flexions and versions of the womb. The cup and stem is suspended to the belt by two soft elastic rubber tubes, which are fastened to the front of the belt by simple loops, pass down through the stem of the cup and up to the back of the belt. These soft rubber tubes being elastic, adapt themselves to all the varying positions of the body, and perform the service of the ligaments of the womb. The instrument is very comfortable to the patient, can be removed or replaced by her at will, can be worn at all times, will not interfere with nature's necessities, will not corrode, and is lighter than metal. It will answer for all cases of Anteversion, Retroversions, or any Flexions of the womb, and is used by the leading physicians with never-failing success, even in the most difficult cases.

Our Reduced Prices are to Physicians, $6.00; to Patients, $10.00.

Instruments sent by mail, at our risk, on receipt of price, or by Express, C. O. D., with the Express charges for returning the money added.

☞ CAUTION.—Owing to the great sale and popularity of our instrument various and base imitations are sold by unscrupulous parties. In order to get the genuine, it is best to order direct from us.

DR. McINTOSH'S NATURAL UTERINE SUPPORTER CO.,
192 Jackson Street, Chicago, Ill.

Our valuable pamphlet, "Some Practical Facts about Displacements of the Womb," will be sent you free on application. 1281-1332

In corresponding with Advertisers please mention THE MEDICAL AND SURGICAL REPORTER.

BEEF PEPTONE,

IN TRANSPARENT GLASSY SCALES,

Containing only the animal or azotized matter of the Beef. Each ounce is equal to 16 ounces of raw beef, easily soluble, and still faster in hot water.

This Beef Peptone is digested from tender, juicy Beef, by the aid of the *Crystal Pepsin,* of my manufacture (Jensen's Crystal Pepsin). Unlike the various BEEF EXTRACTS, this preparation contains all the nutritive constituents of the Beef, in a thoroughly digested state, ready for absorption into the system, while the Beef Extracts are entirely devoid of the chief elements of nutrition, such as the fibrinous, gelatinous and albuminous portions of the Beef, they only consisting of the concentrated saline constituents, with barely a trace of animal matter to keep its consistence. The difficulty so long experienced by the profession throughout the world, in preparing a PEPTONE entirely free from those chemical agents necessary for its manufacture, so as to render it fit for use, is hereby demonstrated to be successfully overcome, as it contains no foreign matter, and will stand the most severely scrutinizing test as to perfectness, also possessing flavor of the Beef, and so palatable as to render it highly agreeable.

Put up in bottles holding One ounce, Eight ounces, and one Pound.

Kept by the Wholesale and Dispensing Druggists in general.

DEPOT—L. WOLFF'S Pharmacy,

Northwest corner Twelfth and Chestnut Streets.

JENSEN'S CRYSTAL PEPSIN,

IN ARTIFICIAL CRYSTALS,

Strictly inodorous and tasteless, and perfectly soluble in water without acid.

THIS PEPSIN, now so popular with the profession, has created an impetus in the consumption of the same, and physicians of the highest standing, who before the introduction of this active PEPSIN, with good reason, entirely abandoned the use of PEPSIN, are now the most eager in prescribing JENSEN'S CRYSTAL PEPSIN, whenever it is indicated, and since the knowledge of its great solvent power (gr. j. of it will dissolve the boiled whites from two to three eggs) has been established even among those susceptible to be great doubters, it has caused itself to be utilized in many novel ways, by the thinking profession; for instance, in substituting morphia, chloral, etc., as a hypnotic, relieving gastric troubles where the above remedies have been prescribed, creating morphine and chloral habits. In removing diphtheritic patches it is successfully used combined with water, glycerine, and muriatic acid, and the same composition, diluted with more water, as a spray in bronchial troubles, dissolving muco-purulent matter, as well as a spray for same in catarrhal affections.

THIS PEPSIN

Has also been used with success in dissolving and evacuating coagulated blood in the bladder, dispensing with surgical operations in such cases. Many other novel applications could be mentioned, if not in want of space. It is found to be FORTY times stronger than saccharated pepsin. One to three grains is an active dose.

KEPT BY ALL DRUGGISTS.

The above preparations are only manufactured and put up by

CARL L. JENSEN, M.D., PH.G.,

865 North 26th Street, Philadelphia, Pa.

No other Wholesale Agents for this Pepsin are longer engaged, than the Wholesale Druggists throughout the United States.

DETROIT MEDICAL COLLEGE.

SESSIONS OF 1881-82.

FACULTY.

THEO. A. McGRAW, M.D., PRESIDENT,
Professor of Principles and Practice of Surgery, and Clinical Surgery.

N. W. WEBBER, M.D.,
Professor of Gynæcology and Obstetrics.

H. O. WALKER, M.D., SECRETARY,
Professor of Orthopædic Surgery, Genito-Urinary Diseases, and Clinical Surgery.

E. L. SHURLEY, M.D.,
Professor of Principles and Practice of Medicine and Laryngology.

J. H. CARSTENS, M.D.,
Professor of Materia Medica and Therapeutics, and Clinical Gynæcology.

J. S. JOHNSON, M.D.,
Professor of Diseases of the Mind and Nervous System.

F. A. SPALDING, M.D.,
Professor of Clinical Obstetrics.

A. E. CARRIER, M.D.,
Professor of Anatomy.

A. S. HEATON, M.D.,
Professor of Clinical Medicine,

EUGENE SMITH, M.D.,
Professor of Ophthalmology and Otology.

E. A. CHAPOTON, M.D.,
Adjunct Professor of Principles and Practice of Medicine.

DAVID INGLIS, M.D.,
Adjunct Professor of Principles and Practice of Medicine.

J. W. ROBERTSON, M.D.,
Lecturer on Laryngology and Physical Diagnosis.

J. E BROWN, M.D.,
Lecturer on Physiology.

CHAS. S. JENNINGS, M.D.,
Lecturer on Chemistry.

A. F. HOKE, M.D.,
Instructor in Obstetrics.

T. N. REYNOLDS, M.D.,
Instructor in Materia Medica and Therapeutics.

JOHN BOICE, M.D.,
Instructor in Minor Surgery.

O. W. OWEN, M.D.,
Instructor in Experimental Physiology, Histology, and Curator of Museum.

F. W. BROWN, M.D.,
Instructor in Physiology and Morbid Histology.

R. A. JAMIESON, M.D.,
Instructor in Clinical Medicine.

A. S. PARKER, PH.C.,
Instructor in Pharmacy.

A. M. HAWES, M.D.,
Demonstrator of Anatomy.

This College has for its *collegiate year* two sessions.

Regular Session commences Wednesday, September 7th, 1881, and closes March 1st, 1882.

Recitation Term (optional) commences March 15th, 1882, and closes June 14th, 1882.

Graded Course of three terms, of six months each.

PLAN OF INSTRUCTION.

By *Lectures*, *Recitations* and *Clinics*, together with *practical work* in the Anatomical, Physiological, Chemical and Pharmaceutical Laboratories.

Clinics are held *daily*.

Clinical Work in Hospitals and Dispensaries is given to the Senior Class (see Clinics), in *small sections*, under the charge of a *Clinical Teacher*, in all the departments of Medicine and Surgery.

Three Large Hospitals and *two Dispensaries* afford unlimited material for instruction.

ADMISSION.—Candidates for admission are required to pass a preliminary examination, unless satisfactory documentary evidence can be presented, that is equivalent to the standard adopted. (See Catalogue.)

FEES.

Regular Session.—Matriculation, $5.00; Lecture Tickets, $50.00; Hospital Tickets, $10.00 Examination (final), $25.00.

Recitation Term.—$10.00 for those who have attended Regular Session; all others, $25.00, $15.00 of which will be applied on the next Regular Term.

Board and Rooms can be obtained for $3.00 to $5.00 per week, the average being $4.00.

For Catalogue and other particulars, address

H. O. WALKER, M.D., Secretary,
177 Griswold Street, Detroit, Mich.

1274-tf

CRINON'S HÆMOGLOBIN.

The Albuminoid Ferruginous Principle of Blood.

HÆMOGLOBIN is the only physiological chalybeate. Associated as it is with the phosphates of the blood, it forms the most powerful of tonics, and at the same time a most nourishing food. It is especially useful in cases of *Anœmia, Chlorosis, Cachexias, Exhaustion* caused by excess of work, nervous debility, fatigue resulting from parturition and lactation. It replaces entirely liquid blood, which has been recommended and used with success in *Phthisis* and *wasting away.*

It is offered in two forms. In cachets (wafers), 60 of which are contained in a box; combined with chocolate in small squares, 30 of which are in a box; both forms can be sent by mail.

Prepared by C. CRINON, Paris, Pharmacist of the first class, Laureate of the Hospitals of Paris. Samples may be obtained by application to

E. FOUGERA & CO., New York, Agents for the U. S

DOCTOR RABUTEAU'S

(Laureate of the Institute of France.)

DRAGEES, ELIXIR & SYRUP OF IRON.

"The experiments made in the hospitals of Paris have demonstrated that *Dr. Rabuteau's Dragees, Elixir and Syrup* regenerate the red globules of the blood with a rapidity never observed with the use of the other ferruginous preparations. These results have been proved by the various *Compt-Globules.*

"The ferruginous preparations of *Dr. Rabuteau* do not cause any constipation, and are perfectly tolerated by the weakest persons."—*Gazette des Hospitaux.*

Dr. Rabuteau's Elixir is prescribed when some difficulty is experienced in swallowing the Dragees; it is especially adapted to weak persons, whose digestive functions need strengthening or stimulating.

Dr. Rabuteau's Syrup is especially prepared for children, who take it readily, because of its agreeable taste.

FOUGERA'S COMPOUND IODINISED COD LIVER OIL.

Since the introduction of this oil in 1858, it has been found to be superior to all other kinds of Cod Liver Oil for the treatment of **General Debility, Consumption, Scrofula, Rickets, etc.**

It possesses not only all the **nourishing** qualities of the best Cod Liver Oil, but also the **tonic, stimulant** and **alterative** properties of **Iodine, Bromine** and **Phosphorus,** which are added in such proportions as to render it therapeutically five times as efficacious as pure Cod Liver Oil.

Through its **increased curative action, FOUGERA'S COD LIVER OIL** will be found to cure disease in a much shorter time than the pure oil; while favorable results will be obtained by its use in many advanced cases when the pure Cod Liver Oil would fail entirely.

FOUGERA'S READY-MADE MUSTARD PLASTERS.

A most useful, convenient, clean, and economical preparation. Not liable to change if kept in a dry place. Made of two strengths. Plasters No. 1, of pure mustard; Plasters No. 2, of one-half mustard. Price 40 cents, the tin box, or tin roll, of 10 plasters each. DIRECTIONS.—Dip the Plaster, or Plasters, a minute or two, in cold water; apply on the part, and cover with a band.

FOUGERA'S COMPOUND ICELAND MOSS PASTE.

(Iceland Moss, Lactucarium, Ipecac and Tolu.)

Used with great success against nervous and convulsive coughs, Whooping Cough, Acute Bronchitis, Chronic Catarrh, Influenza, etc.

Wakefulness, Cough, and other sufferings in Consumption, are greatly relieved by the soothing and expectorant properties of this Paste.

FOUGERA'S IODO-FERRO-PHOSPHATED ELIXIR OF HORSE-RADISH.

This Elixir contains Iodine, Pyrophosphate of Iron, the active principles of antiscorbutic and aromatic plants, and acts as a **tonic, stimulant, emmenagogue,** and a **powerful regenerator of the blood.** It is an invaluable remedy for all constitutional disorders due to the impurity and poverty of the blood. One of the advantages of this new preparation consists in combining the virtues of Iodine and Iron without the inky taste of Iodide of Iron.

E. FOUGERA, Pharmacist,
372 Seventh Street, Brooklyn, L. I.,
SOLE PROPRIETOR & MANUFACTURER OF THE ABOVE,
To whom all special communications should be addressed.

E. FOUGERA & CO.,

SOLE GENERAL AGENTS for the ABOVE,
To whom all orders should be addressed.

SOLD BY DRUGGISTS GENERALLY.

JOHNSTONE'S IMPROVED

ADAPTABLE POROUS FELT SPLINTS.

AHL'S SPLINT MANUFACTURING COMPANY, LIMITED,

123 & 125 South Eleventh Street, PHILADELPHIA, PA.

THE ADAPTABLE POROUS SPLINTS, invented and improved by W. H. JOHNSTONE, have been tested extensively in both civil and military practice for a number of years, and have been endorsed and recommended in the most unqualified manner by the celebrated and distinguished Surgeons of America.

Their *porosity* is a peculiar and a valuable property. While the material is firm and insoluble, it permits readily the passage of air and fluids, so that, on one hand, the heat from the inflamed surface, the perspiration, and the morbid exhalations, are not confined, to the detriment of the patient, *as is the case in every other kind of splint*, but pass off freely; and on the other hand, lotions of cold or warm water, medicated or not with weak alcohol, carbolic acid, arnica, tincture, solutions of the sulphites, etc., can be constantly applied without disturbing the dressings. This, it will readily be seen, is a most invaluable property when the parts are bruised, lacerated, filled with extravasated blood, or erysipelatous, and give these splints a conspicuous advantage over all others.

From FRANK H. HAMILTON, M. D., Professor of Fractures and Dislocations in the Bellevue Hospital Medical College, author of "A Treatise on Fractures and Dislocations," etc.

Having examined carefully *JOHNSTONE'S IMPROVED ADAPTABLE POROUS FELT SPLINTS*, I feel warranted in recommending them to the Profession as superior to all other manufactured splints now in use. They possess all the essential qualities of a good splint, having firmness, pliability and lightness.

FRANK H. HAMILTON, M. D.,
Prof. Military Surgery and Fractures and Dislocations, Bellevue Hospital Col.

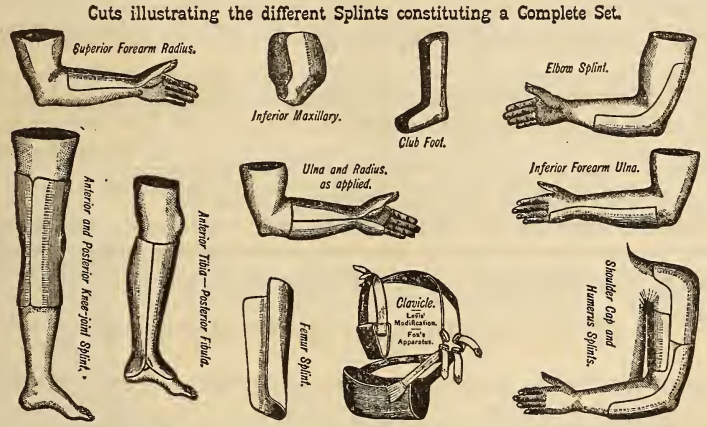
From PROF. D. HAYES AGNEW, Prof. Surgery, University of Penna.

1611 CHESTNUT STREET, PHILADELPHIA, *February 6th*, 1879.

The Adaptable Felt Splints, formerly known as those of Dr. Ahl, with the improvement now made by W. H. Johnstone, which renders them in every way superior to the former, I regard as very excellent appliances in the treatment of fractures.

D. HAYES AGNEW,
Prof. Surgery, University of Pennsylvania.

Cuts illustrating the different Splints constituting a Complete Set.



SPECIAL NOTICE TO THE PROFESSION AND TRADE.

Our *policy* heretofore in the introduction of JOHNSTONE'S IMPROVED ADAPTABLE POROUS FELT SPLINTS, has been to confine the sales and business negotiations directly to the Doctors themselves, declining in every case to sell our goods through Dealers; we having assured the Profession generally, both through our agents and catalogues, that *JOHNSTONE'S IMPROVED SPLINTS* could only be obtained by subscription.

We wish to announce, that owing to the large demand for our goods and the constant importunity on the part of *Surgeons* everywhere to place our Splints on sale with their Instrument Dealer or Druggist, to afford them greater convenience and facility in obtaining the pieces in duplicate, we have at last acceded to that request, and hereafter *JOHNSTONE'S CELEBRATED FELT SPLINTS* can be obtained at most dealers in Instruments and Drugs throughout the United States, at the same price which they were heretofore sold, viz:

A complete set, embracing fifty (50) pieces—twenty-five for adults and twenty-five for children—is thirty ($30) dollars. Extra or duplicate pieces can always be obtained from your DEALER, at one dollar each.

JOHNSTONE'S CELEBRATED SPINAL JACKET, for Curvatures and Deformities, have met with unparalleled success, and, from their merit, secured the unqualified endorsement and approbation of our celebrated orthopædic specialists, and particular expression of gratitude from the patients who are wearing them. For full information, send for Descriptive Circulars.

Should your Instrument dealer fail to have a supply of our Splints, and decline to carry them in stock, orders sent to us will receive prompt attention.

AHL'S SPLINT MANUFACTURING CO., Limit
W. H. JOHNSTONE, Manager.

N. B.—If the Instrument Dealers of Philadelphia decline to supply its Physicians with our JOHNSTONE'S FELT SPLINTS on call, they will be furnished and delivered by us to any part of the city, at any time, on receipt of the price, viz.

$1.00 each.

JOHNSTONE'S SPINAL FELT JACKET, any size, - - - - - - - - - - $25.00

JOHNSTONE'S LACED SPLINT FOR THE LIMBS, any size, - - - - - - - - - - 10.00

JOHNSTONE'S MODIFICATION OF DR. R. J. LEVIS' SPLINT

For the FRACTURE OF THE LOWER END OF THE RADIUS.

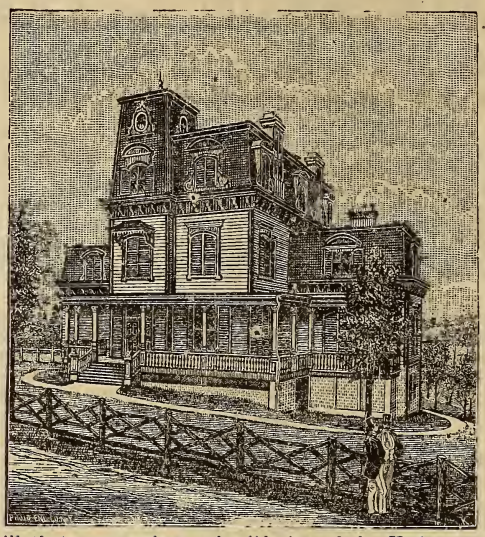
THE DE QUINCEY HOME,

Fort Washington, **New York City.**

A Private Asylum for the Treatment of the Opium, Morphine, Chloral, Chloroform and Hashisch Habits, Nervous Diseases and Inebriety.



Drs. H. H. Kane
and
W. H. Vittum,
in charge.

Consulting Physicians.

Prof. Wm. A. Hammond,
Prof. T. Gaillard Thomas,
Dr. Edward C. Spitzka,
Dr. Daniel M. Stimson,
Dr. Edward T. Ely,
Dr. G. H. Wynkoop,
Dr. Andrew H. Smith.

Situated upon a high hill that commands a splendid view of the Hudson and Harlem rivers, Spuyten Duyvil Creek, and the beautiful country for miles around; surrounded by ample grounds and magnificent drives; in easy communication with the city by means of the Sixth and Ninth Avenue Elevated and the Hudson River Railroads; away from the dust, noise, crowding and malaria of the city; with hot and cold water in every room, furnace and grate-fire heating, croquet, horses and carriages, boats and fishing, an excellent *cuisine*, trained nurses and careful medical attendance, it possesses unequaled advantages for the treatment of cases of this kind.

The plan of treatment pursued in the cure of opium, morphine and chloral takers is that of *rapid reduction*, which possesses all the advantages, and none of the dangers of Levenstein's *sudden deprivation*, or the prolonged agony of *gradual reduction*. Each case is studied and treated in accordance with its peculiarities and the idiosyncrasies of the patient, no set plan of treatment being pursued, at the expense of the person's health or comfort.

Our Home, furthermore, offers special facilities for the treatment by *rest, diet, and massage*, according to the plan of Weir Mitchell, of that large class of nervous diseases so commonly met with in ladies suffering from uterine troubles. This plan of treatment has been specially studied, and nurses competent to carry out its provisions in every detail will be furnished. For further particulars, etc., address 1299-1350

Drs. KANE and VITTUM, De Quincey Home, Fort Washington, New York City.

UNIVERSITY OF PENNSYLVANIA.

POST-GRADUATE INSTRUCTION.

A Post-Graduate Course has been organized for Bedside and Dispensary Instruction in the following named branches:—

ON PHYSICAL DIAGNOSIS AND CLINICAL MEDICINE, Prof. WM. PEPPER and Dr. ED. T. BRUEN.
" NERVOUS DISEASES AND ELECTRO-THERAPEUTICS, - - - Prof. H. C. WOOD.
" DERMATOLOGY, - - - - - - - - - - - Prof. L. A. DUHRING.
" OTOLOGY, - - - - - - - - - - - Dr. GEO. STRAWBRIDGE.
" OPHTHALMOLOGY, - - - - - - - - - - - Dr. S. D. RISLEY.
" GYNÆCOLOGY, - - - - - - - - - - - - Dr. B. F. BAER.
" LARYNGOSCOPY, - - - - - - - - - - - - Dr. C. SEILER.
" OPERATIVE SURGERY AND VENEREAL DISEASES, - - - Dr. J. WM. WHITE.

Two courses will be given annually; beginning the first week in November and the first week in April; continuing three months, two lectures each week. A certificate will be given to each person having taken the full course. Fee $100, for seven branches—elective—or $25 for each branch taken separately, invariably in advance. For further information apply to the undersigned, or any of the Lecturers.

1291-1315 Dr. EDWARD T. BRUEN, Sec'y, 1531 Chestnut St.

COMPOUND PETROLEUM PILLS.

The attention of the *Profession* is called to my new *Combination* for the alleviation of **BRONCHIAL** and **PULMONARY TROUBLES—CONSUMPTION, CHRONIC BRONCHITIS, CATARRH** and **ASTHMA.** Sample Boxes with Formula furnished *Physicians.*

Price Fifty Cents and One Dollar per Box. Sent on receipt of price by Registered Letter.

Price, $3.00. Sent per mail on receipt of price. The Rubber Tubes are free from all woolen or silk coverings thus avoiding all friction sounds arising from this source. ☞ A Descriptive Circular sent to any address.

PACKER'S

TAR

SOAP.

1285-1348eow

ABSOLUTELY PURE

AND NON-IRRITATING.

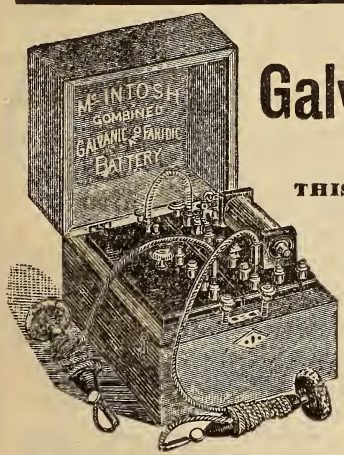
Made from Vegetable Oils, Refined Pine Tar, and Chemically Pure Glycerine. Extensively used in public and private practice in the treatment of ***Diseases of the Skin.*** Useful for cleansing sores, ulcers, etc.

Many Physicians recommend the exclusive use of this Soap for ***Washing Infants.*** It purifies, soothes, prevents chafing, and is tonic to the skin.

For the bath and toilet, only those who have used it can appreciate its refreshing and cleansing properties.

THE PACKER MANUFACTURING CO.,

P. O. Box 2985. 100 Fulton Street, New York.



McINTOSH'S COMBINED

Galvanic AND Faradic Battery.

THIS CELEBRATED BATTERY COMBINES BOTH THE GALVANIC AND FARADIC CURRENT,

Which can be used separately or combined. Any strength and intensity desired can be obtained for use in Electro-therapeutics. THIS BATTERY is constructed on an IMPROVED PLAN, as follows: The zinc and carbon plates are arranged in couples, securely clamped to hard rubber plates, with thumb screws. These screws are also used for binding posts. All the connections are positive. The cells are made in sections of six, of hard rubber, with hard rubber drip cup. The following points of excellence render our Batteries superior to others:

1. They combine the only Portable Galvanic and Faradic Battery in one case.

2. They weigh one-half less than other Batteries of the same number of cells.

3. The cells are made in sections of six, of one solid piece of hard, vulcanized rubber; by this arrangement they can be emptied, cleaned and filled as easily and quickly as one cell, and will not crack, break or leak.

4. A hard rubber drip cup is placed by the side of each section of cells, to receive the zinc and carbon plates when removed from them. By this arrangement we avoid the use of absorbent materials and soiling the Battery

5. The Hydrostat is perfect. The rubber plates which hold the elements project over on one side enough to cover the cells when the zinc and carbon plates are placed in the drip cups. The under side of this projection is covered with thick, soft rubber, which is securely clamped to the cells sections, and makes them water tight.

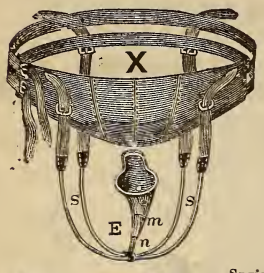
6. This is the only Battery in which the zinc and carbon plates can be kept clean by simply rinsing them.

7. A zinc or carbon plate can be removed by simply loosening a binding post; and all parts of the Battery can be duplicated, as like parts are made exactly alike. We will be pleased to send circulars and our illustrated catalogue, giving full information, price, etc., free, upon application.

McINTOSH GALVANIC BELT AND BATTERY CO.,

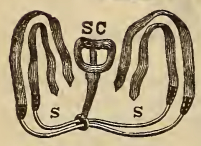
1281-1332 **Nos. 192 and 194 Jackson Street, CHICAGO, ILL.**

STAUFER'S
HARD RUBBER INSTRUMENTS AND PRICE LIST.



Prices.—Spring Stem Retroversion (E) on belt X, or Y, $8.00; or on Z, $7 00.

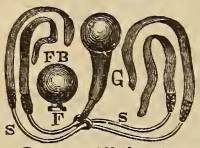
Intra-Uterine Stem Cup (I U).—Price on belt X, or Y, $7 00; on Z. $6 00. The intra-uterine stem cup may be first introduced and the cup turned. The stem has no spring, but joints the cup when in position by lodging in a socket.



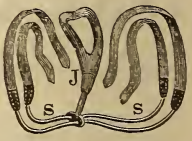
Spring Stem Prolapsus and Procidentia cup (A) on belt X, or Y, $7.00; on Z. $6.00.

Spring Stem Anteversion (S C) Spring Stem Globe Top (G). Spring Stem Oblong (H); and Spring Stem Lever (J). Each on X. or Y, $7.00, or on Z, $6.00.

Springs.—The tops of all spring stems unscrew, and a non-corrosive coil spring is placed in tube *m*, Fig X. The base stem *n*, slides against the spring and arrests any external touch. This together with the pure elastic gums S S, suspends the heretofore displaced uterus on a double elastic motion.

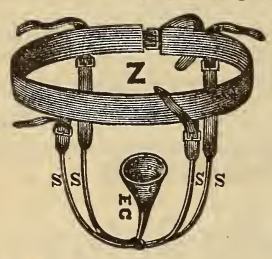


Transformation —The self-sustaining cup A D, is formed by covering the screw when cup A, is unscrewed. So is also F B, with globe G. They are to be pressed in position at night, in sensitive cases, and stem and bandage laid aside. They have a similar use when contraction of the vagina takes place, before it is safe to suspend the support entirely.

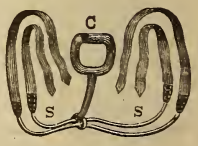


Curve.—All the stems are curved so as the base does not become struck from seating. And the cups even in the *Economy*, moulded oblique to set in the normal axis of the uterus and vagina, as plainly seen in E, Fig X.

ECONOMY AND PERMANENT STEMS.



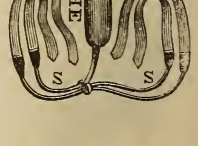
Prices.—E C, on elastic waist belt Z, is a permanent deep stem cup, no spring, but elastic gums S S, at only $4.50. On X, or Y. $5 50. Retroversion E, on Economy stem and belt Z, $6 00; X, or Y. $7 00. Permanent stems Anteversion C; Stem Globe G E; Oblong H E; and I, on Z. $4.50, and on X or Y, each $5.50. These deep leaning cups, if correct in size, correct all prolapsus uteri and procidentia, and also overcome by mere elevation partial anteversion and partial retroversion. Stem Globes and Stem Levers, by alternating the cups. assist the straightening up the uterus in difficult cases. ***Cystocele*** is drawn in by G, H, G E. or H E.



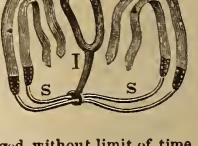
Belts.—X, and Y have fine satteen, whale bone stay, fronts. X, two elastic back straps and closing on right hip. Y, closes on back and has elastic hip straps. Strict hip measure required. Waist measure for Z. Overlap is allowed here.

Self-Sustaining Globe B.—This is a mere hard rubber shell graded a little less than ⅛ inch from 1 to 2½ inches. It ascends in the vagina by its lightness. A cord attached to a non-corrosive staple for removal; and all the objectionable features of the glass balls are overcome. It is simple and entirely manageable by the patient at will. Harmless and still of more service, especially in the beginning of uterine troubles than any ring or lever. Actual wear does not depreciate them in value. They are always exchangeable at cost, for another style; when found not to answer by reason of a too heavy uterus; collapsed vagina, or the case of too long standing. No. 10, 1⅞; 11, 2 inches, are the usual sizes used after having had several children. ***Price***, $1 50 each

Cup D.—This sustains itself by its brim and suction. Some physicians use it as a common supporter; but it is mostly used to alternate Cup E C; for which purpose it should be selected ⅛ to ¼ inch larger than the E C, in use. ***Price***, $1 50 each.



Selection —The correction of a displaced womb and its successful support, depends entirely on the instrument and its proper selection in size and style. Since the elastic support from outside and spring stem within for sensitive cases; this important department in gynecology is rendered simple and within the scope of every family physician. The construction of this series of stem supporters obviates hindrance to seating and all objection to the external protrusion is overcome. The cups are usually selected by giving the full diameter across the top, thus for nullipara, 1¼ to 1⅝; Multipara, 1⅝ to 2. and procidentia. 1⅞ to 2¼ inches and over some times. Stems, longer or shorter than ordinary, are made to order and among the exchange privileges. Stem Globes are numbered—Stem Levers and oblong, are usually designated by small, medium and large.



Description of Cases.—Age of patient, state of catamenia; now and heretofore. If children, miscarriages, and how many? If urine trouble, helplessness in the spine, bed-ridden, &c., whether by accident or unknown cause. If a pessary already worn, its name, size, and result. How displaced; as the touch or speculum reveals.

Exchanges.—All the hard rubber parts in the catalogue are exchanged and interchanged without limit of time. Only needed repair and difference of higher price instruments charged when required for complicated cases.

Obtained through the Medical and Surgical Reporter Office.

MAILED ON RECEIPT OF QUOTATION PRICES. CATALOGUES ON APPLICATION.

MEAT AND QUINIA.

AROUD'S WINE WITH QUINIA,

And all the Nutritive Principles of Meat.

Aroud's Preparations recommend themselves to the most scrupulous attention of Physicians, and deserve their preference:

1st.—Because they combine all the active principles of the richest barks of quinia carefully selected.

2d.—Because 30 grammes of them contain 3 grammes of quinia and all the nutritious principles of 27 grammes of meat, which are soluble in alcohol and water.

3d.—Because the combination of meat with the barks of quinia has not only the advantage of acting as a tonic, nutritive, and febrifuge, but also that of paralyzing and guarding against any local irritation caused by the prolonged use of quinia barks, and of preparing the stomach to endure the salutary influence of this friendly compound.

4th.—Because these preparations with meat as a basis, containing in their composition the entire nutritious elements of muscular fibre, blood and bone, answer alone to the immortal maxim of Hippocrates, fundamental basis of all good reparative medication, "*Ars imitatio natura.*"

5th.—Because, if meat occupies the first rank among the articles of food, if quinia is placed at the head of tonics, the combination of these highly reparative substances must necessarily be a reconstructor par excellence.

Finally, because the experiments with Aroud's Wine and Quinia prove, better than theory, that, to reconstruct the shattered and enfeebled forces, no other tonic can be compared to it.

MEAT, IRON AND QUINIA.

AROUD'S

FERRUGINOUS WINE WITH QUINIA,

And all the Nutritive Principles of Meat.

MEAT, IRON AND QUINIA, that is so say, the most reparative food combined with a reconstituent and a nerve tonic par excellence: such is the remarkable composition of this ferruginous preparation, which, in all respects, merits the preference of physicians. It prevents impoverishment of the blood, anæmia, chlorosis, etc.; presented in a form at once attractive to the eye and pleasant to the palate—an assimilable iron united with all the constitutive principles of bone and of muscle; it can, therefore, form and regenerate the forces, and this without causing nausea, constipation, or disturbing the digestive organs. By its generous alimentation it corrects and modifies the bad effect of the prolonged use of quinia.

The excellence of this preparation justifies that which Hippocrates proclaimed over 2000 years ago, and all clinics have confirmed: "That the soluble nutritive principles of meat is the food best adapted for the sick and convalescents; that these principles, being the integral parts of muscle, have the faculty of forming flesh rapidly, and of restoring muscle."

It is, therefore, a precious specific for all the maladies caused by impoverishment or deterioration of the blood, because meat, iron and quinia combined give nourishment, act as a tonic, regenerate, reconstitute, and regulate the entire system. 1261-1312-eow

HOLLOW SUPPOSITORIES.

WITH STOPPERS. ALL MADE FROM PURE BUTTER OF COCOA, ONLY.

Aural, Nasal, Rectal, Urethral, Cystic, Vaginal, Intra-Uterine, and Veterinary Suppositories.

The object of this invention is to supply Physicians, Druggists, Veterinary Surgeons, and others, with HOLLOW SUPPOSITORIES, into which they can put any kind of medicine or nutriment, thus producing firm, smooth, and evenly medicated Suppositories, that are cheaper and more reliable than those made by the old method.

RECTAL ABSORPTION.

"The mucous membrane of the rectum, like that of other portions of the alimentary canal, possesses all the requisites, more or less, for the exercise of absorption."

Liebig states that a strong solution of common salt disappeared so completely in the rectum, that an evacuation one hour afterward was found to contain no more than the usual portion of salt.

Many medicinal substances act more energetically when applied to the rectum than when received into the stomach.

Baron Dupuytren said: "The rectum *absorbs*, but does not *digest*. The medicinal agent," he says, "owing to the absence of digestion, passes more directly, more purely, and more surely to its destination, than the same medicine does when taken into the stomach."

M. Orfila asserts that those medical agents which operate through the medium of absorption, such as opium, tobacco, etc., are much more active by the rectum than by the stomach.

Dr. J. H. Scorff reports four cases where he was successful in removing the vomiting of pregnancy, by introducing 20 grains of chloral into the rectum, night and morning. He only found it necessary to use the remedy three or four times.

Chloral is the remedy *par excellence* in the ravings of delirium tremens, and in cases of delirium and insomnia combined; also in infantile convulsions and attacks of laryngysmus stridulus.

Dr. Hickman reports a case of typho-malarial fever, which chloral was found to control in a happy manner. The chloral was introduced per rectum.

"REST TO THE STOMACH,"

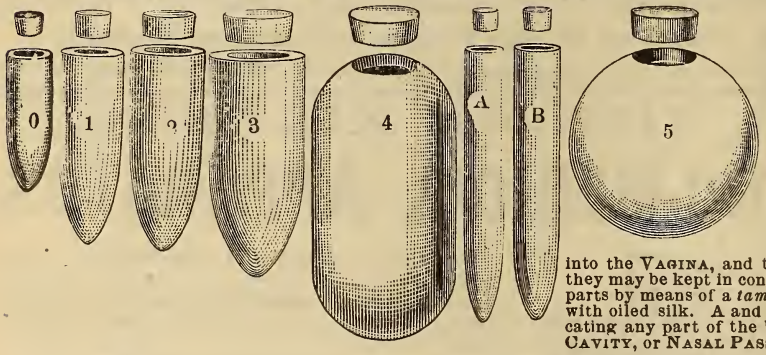
says Mr. Theodore Williams (in London *Lancet*, October 24th, 1874), is of the highest importance in some of the diseases of this organ. In such cases we possess in the rectum an effective second stomach, which, if it does not afford us the pleasure of digestion, spares us many of its pains."

Nutritious substances are taken up by the absorbents, and thus find their way into the economy, and produce their assimilative and nutritive effect. Haller demonstrated the fact that digestion can and does take place in the alimentary canal. He had the greatest confidence in the absorptive and digestive powers of the rectum to sustain life indefinitely.

HYPODERMIC MEDICATION.

Dr. William Bodenhamer says: "This now very common and often misused method is of great value in numerous cases, yet I am decidedly of the opinion that rectal medication is of greater importance; indeed, it is greatly preferable in many instances, being much less dangerous, much more convenient and simple; and the remedies, too, act through this medium with almost equal celerity. But very few remedies can be used hypodermically in comparison to those which can be used by the rectum."

EXACT SIZES OF OUR VARIOUS HOLLOW SUPPOSITORIES.



Size 0 is for children. It may also be used for the EAR and in the NASAL PASSAGES. Nos. 1, 2 and 3 are RECTAL SUPPOSITORIES. Nos. 3 and 4 may be used for introducing nutriment into the system, *via rectum*. No. 4 is also a VAGINAL SUPPOSITORY. No. 5 is a "SPHERICAL HOLLOW SUPPOSITORY," to introduce remedies into the VAGINA, and to the *os uteri*, where they may be kept in contact with the diseased parts by means of a *tampon* of cotton covered with oiled silk. A and B are used for medicating any part of the URETHRA or UTERINE CAVITY, or NASAL PASSAGES.

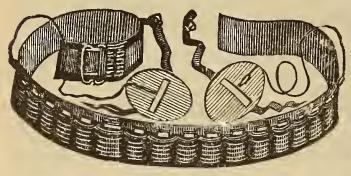
DR. McINTOSH'S ELECTRIC OR GALVANIC BELT.



This Belt is a perfect Galvanic Battery, composed of sixteen cells, placed in pockets on a belt. Each cell is made of hard vulcanized rubber, lined with copper, which constitutes the negative plate. The rubber coating perfectly insulates each cell. The positive plates are of zinc, wrapped in a porous material to absorb the exciting fluid, preventing contact with the copper, and permitting the current to pass from the copper to the zinc. The cells are charged without wetting the belt.

A current selector is so arranged that one or more cells can be used at pleasure. The electrodes are covered similar to ordinary battery electrodes, and connected with the cells by connecting cords. By this arrangement, a current from the belt can be applied to any part of the body. Physicians who have used this belt in their practice do not hesitate to recommend it to the profession.

Our pamphlet on "Medical Electricity," containing a full description of the belt and diseases, with manner of treatment, sent free on application. Address

PROCTER'S PEPSIN (SACCHARATED.

This standard article is prepared from *Pepsin*, carefully purified and freed from mucus, and is not a *dried Peptone*. It is inodorous and non deliquescent, and retains its digestive power indefinitely. It is so well known that extended comment is superfluous. We would, however, call attention to its uniform purity and solubility, which, with extraordinary *digestive power*, commend its use in preference to other less carefully *made* articles. It is tested to the solution of 250 grains of coagulated albumen by 10 grains of Pepsin.

PROCTER'S "PEPSIN FORTIOR," (Stronger or Concentrated Pepsin.) A powerful form of Pepsin, eligible when minimum dose is desirable. It is of the same exceptional purity with our *Procter's Pepsin*, while the strength is far greater. Dose one to three grains. 1275-1308, 1y.

Manufactured by WM. PROCTER, Jr., CO., S. W. Cor. 9th and Lombard Sts., Phila.

Registered COSMOLINE Trade Mark.

Unguentum Petrolei

Prepared by E.F.Houghton & Co. Philadelphia, U.S.A.

Put up in 1, 5, 10, 25, 50, and 100-lb. cans. Samples furnished on application. The post-office laws forbid anything of an oleaginous nature being sent through the mail.

In chemical composition, Cosmoline [Unguentum Petrolei] is an oleaginous hydrocarbon, corresponding to the heavy petroleum oils, and containing a large amount of the paraffines and olefines of the formulæ $C_{16}H_{34}$ and $C_{16}H_{32}$. It contains but a small percentage of the paraffines and olefines, corresponding to the formulæ C_7H_{16} and C_7H_{14}, respectively, and the offensive and irritating properties of the crude oil have been carefully removed. In the process of purification, no acids, alkalies, or other chemicals are employed, and no injurious additions of any kind are made to the natural product. The result is a semi-solid, translucent substance, with a faint odor and unctuous feel.

Cosmoline [Unguentum Petrolei] melts at about 100° Fah. (38° Cent.); and boils at about 625° Fah. (329° Cent.); its specific gravity is about 0.875 at 60° Fah.

As it contains no oxydizable or organic matter capable of change by putrefaction or fermentation, and is absolutely without affinity for moisture, it offers to the profession an admirable unguent, which can never decompose, ferment, or become rancid in any climate or temperature.

291 MADISON AVENUE, NEW YORK, February 26th 1878.

I have examined the preparations of Cosmoline as manufactured by E. F. Houghton & Co., Philadelphia, and believe them well adapted to the purposes for which they are designed. As lubricants, and as the bases of simple or medicated ointments, they have a decided advantage over the fixed oils and fatty substances in ordinary use, in that they do not become rancid, and do not acquire irritating qualities from atmospheric exposure. ALFRED C. POST, M.D., LL.D.,
Emeritus Professor of Clinical Surgery in the University of New York, Visiting Surgeon to Presbyterian Hospital, etc.

PHILADELPHIA, July 10, 1880.

MESSRS. E. F. HOUGHTON & CO.:

I have for a number of years made extensive use of Cosmoline [Unguentum Petrolei] and consider it a most valuable article for surgical purposes. Either as a dressing by itself, or as a vehicle for the application of medicaments, it is greatly superior to lard or other fatty matters, especially by reason of its non-liability to change by time or temperature.

Yours truly,
JOHN H. PACKARD, M.D.
1031 WALNUT ST., PHILADELPHIA.

MESSRS. E. F. HOUGHTON & CO.:

I have used extensively Cosmoline [Unguentum Petrolei] both in Dispensary and private practice, with very great satisfaction. As a vehicle in making ointments it is invaluable, and far superior to lard, for the reason that it will not become rancid or undergo chemical change like the latter, when exposed to the atmosphere. I cannot too highly commend it as an application in various skin diseases.

Yours truly, JOHN V. SHOEMAKER, A.M., M.D.,
Physician to the Pennsylvania Free Dispensary for Skin Diseases

208 WEST 34TH ST., NEW YORK.

MESSRS. E. F. HOUGHTON & CO.:

Gents:—I fully appreciate the value of your Cosmoline, or Unguentum Petrolei, and prescribe it frequently in ointments. Fluid Cosmoline I have used constantly for several years, as a lubricant of urethral sounds. It is the cleanest oil I know of for this purpose.

Yours truly, GEO. HENRY FOX.

PREPARED BY

E. F. HOUGHTON & CO.,

1297-1348 **211 S. Front Street, Philadelphia.**

TO THE MEDICAL PROFESSION.

LACTOPEPTINE.

We take pleasure in calling the attention of the Profession to LACTOPEPTINE. After a long series of careful experiments, we are able to produce its various components in an absolutely pure state, thus removing all unpleasant odor and taste (also slightly changing the color). We can confidently claim that its digestive properties are largely increased thereby, and can assert without hesitation that it is as perfect a digestive as can be produced.

LACTOPEPTINE is the most important remedial agent ever presented to the Profession for Indigestion, Dyspepsia, Vomiting in Pregnancy, Cholera Infantum, Constipation, and all diseases arising from imperfect nutrition. It contains the five active agents of digestion, viz: Pepsin, Pancreatine, Diastase, or Veg. Ptyalin, Lactic and Hydrochloric Acids, in combination with Sugar of Milk.

FORMULA OF LACTOPEPTINE.

Sugar of Milk	40 ounces.	Veg. Ptyalin or Diastase	4 drachms.
Pepsin	8 ounces.	Lactic Acid	5 fl. drachms.
Pancreatine	6 ounces.	Hydrochloric Acid	5 fl. drachms.

LACTOPEPTINE is sold entirely by Physicians' Prescriptions, and its almost universal adoption by physicians is the strongest guarantee we can give that its therapeutic value has been most thoroughly established.

The undersigned having tested LACTOPEPTINE, recommend it to the profession.

For Consumption and Wasting Diseases.

HYDROLEINE

Has been proved of the highest value in CONSUMPTION and all WASTING DISEASES, invariably producing IMMEDIATE INCREASE in FLESH and WEIGHT.

FORMULA OF HYDROLEINE.

Each dose of two teaspoonfuls, equal to 120 drops, contains:

Pure Oil,	**80 m. (drops.)**	**Soda,**	**1-3 grain.**
Distilled Water,	**35 m.**	**Boric Acid,**	**1-4 "**
Soluble Pancreatin,	**5 grains.**	**Hyocholic Acid,**	**1-20 "**

DOSE.—Two teaspoonfuls alone, or mixed with twice the quantity of soft water, to be taken thrice daily, with meals.

The principles upon which this discovery is based have been described in a treatise on "THE DIGESTION AND ASSIMILATION OF FATS IN THE HUMAN BODY," by H. C. BARTLETT, PH.D., F.C.S., and the experiments which were made, together with cases illustrating the effect of Hydrated Oil in practice, are concisely stated in a treatise on "CONSUMPTION AND WASTING DISEASES," by G. OVEREND DREWRY, M.D.

In these treatises the Chemistry and Physiology of the Digestion of the Fats and Oils is made clear, not only by the description of a large number of experiments scientifically conducted, but by cases in which the deductions are most fully borne out by the results.

☞ *Copies of these valuable works will be sent free, on application, to all who mention THE MEDICAL AND SURGICAL REPORTER.*

HYDRATED OIL,

HYDROLEINE,

WATER AND OIL,

May be described as partially digested oil, which will nourish and produce increase in weight in those cases where oils or fats not so treated are difficult or impossible to digest. In CONSUMPTION and other WASTING DISEASES the most prominent symptom is EMACIATION, of which the first is the starvation of the fatty tissues of the body, including the brain and nerves. This tendency to emaciation and loss of weight is arrested by the regular use of HYDROLEINE, which may be discontinued when the usual average weight has been permanently regained.

The ordinary so-called emulsions of Cod-liver oil and other fats, WHETHER PANCREATIZED OR NOT, merely remain in the form of a coarse mechanical mixture for a short time after agitation. The digestion of oil having in no sense been artificially produced, still devolves upon those functional powers the deficiency of which is the most prominent symptom in these cases.

HYDROLEINE is not a patent medicine or a secret preparation; the formula is on every bottle. Can be taken by the most delicate stomach; is immediately assimilated.

The permanence and perfection of the emulsion, and the extreme solubility of the HYDRATED OIL, solely prepared and sold by us under the name of HYDROLEINE, is shown by its retaining its cream-like condition as long as the purest Cod-liver Oil will retain its sweetness. Unlike the preparations mentioned, or simple Cod-liver Oil, it produces no unpleasant eructation or sense of nausea, and should be taken in such very much smaller doses, according to the directions, as will insure its complete assimilation; this, at the same time, renders its use economical in the highest degree.

To brain-workers of all classes, Hydrated Oil is invaluable, supplying as it does the true brain food.

Economical in use—certain in result. Tonic—Digestive and Highly Nutritive.

NEW PRINCIPLE FOR THE ASSIMILATION FAT.

KIDDER & LAIRD,

AGENTS FOR THE UNITED STATES.

DEPOT, No. 83 JOHN STREET, NEW YORK.

NEW PHARMACEUTICALS

WORTHY OF THE

Attention of Physicians.

SOLUTION OF

Chloride of Bromine Compound.

The ingredients which enter into the formation of this compound are those which science has long recognized as the most effective destroyers of the products of decomposition. They are true disinfectants, entering into chemical union with noxious exhalations to form innocuous compounds.

Solution of Chloride of Bromine Compound is especially adapted to the purifying of cesspools, privy vaults, sewers, drains, etc., and to the disinfection of clothing and apartments after contagious diseases.

Ozonized Aromatic Liquid.

The disinfecting principle of this combination is ozone—nature's own disinfectant—possessing also antiseptic properties in a high degree. As active as bromine and chlorine, it possesses none of the irritant nature of these agents, but is of entirely unobjectionable odor, and a positively agreeable perfume in the sick chamber. Its method of employment is extremely simple, all that is required being to place a tablespoonful in a shallow dish or saucer, from which it readily evaporates with the aid of heat. The ozone thus given off may be inhaled without producing any sense of discomfort.

Empty Capsules.

The advantages accruing from the use of gelatine capsules in practice need not be enumerated.

The capsules of our manufacture are very readily soluble in the juices of the stomach. The facility with which they may be filled after a little practice makes them scarcely less desirable, on the score of convenience, than powders.

We put them up in boxes containing 100 each, which may be conveniently carried in a physician's pocket.

Our capsules do not absorb moisture, and thus become sticky, an objection very often attaching to capsules.

Gelatine-Coated Pills.

We solicit a critical comparison of our gelatine-coated pills with those of other manufacturers. We claim for them a regularity of shape and a degree of solubility not excelled. In their manufacture, also, a process peculiar to ourselves is employed, through which perfect continuity in the coating is secured. We employ no metallic points, in the use of which holes are apt to be left, through which volatile principles are liable to escape, and chemical changes take place from contact of the pill mass with the metallic substance.

ON THE ABOVE, AND PRICE LISTS, WILL BE SENT FREE, ON APPLICATION TO

PARKE, DAVIS & CO., DETROIT, MICHIGAN,

MANUFACTURING CHEMISTS AND SPECIAL DEALERS IN NEW AND RARE DRUGS.

McKESSON & ROBBINS'

BI-MURIATE QUINIA WITH UREA

(Quinia Bi-Muriatica Carbamidata),

THE MOST SOLUBLE SALT OF QUINIA.

Specially Adapted to Hypodermic Use.

Will completely dissolve in double its weight of cold water, or in its own weight of boiling distilled water, which is preferable.

This Salt may be procured through retail druggists, from McKesson & Robbins, in original vials of 1, 2 and 4 grammes, and their solution, containing 50 per cent. of the Salt, in $\frac{1}{8}$ oz. and one ounce vials.

ALOIN AND STRYCHNIA GRANULES

LAXATIVE AND TONIC.

INVALUABLE IN CHRONIC CONSTIPATION.

Prescribed with the most satisfactory results in cases in which, from infirmity or morbid condition, the tone of the system is impaired, and in which the administration of more violent purgatives might be attended with danger.

Write McKesson & Robbins on your Prescriptions and Orders.

McKESSON & ROBBINS, Manufacturing Chemists,

91 FULTON STREET, NEW YORK.

1297-1348eow.

NEW BOOKS AND NEW EDITIONS.

Published by D. G. BRINTON, M.D., 115 South Seventh Street, Philadelphia.

The Physician's Daily Pocket Record and Visiting List.

By S. W. BUTLER, M.D. SIXTEENTH YEAR.

A New Revised Edition for 1882, with Metric Posological Table, etc. Strongly Bound in Dark Morocco, with Pocket for Blanks, and a PATENT STEEL SPRING CLASP.

THE PHYSICIAN'S CLINICAL RECORD AND CASE BOOK.

For 100 Patients. Neatly Bound in Cloth, with Pocket and Stencil Plate. Price $1.00.

This very convenient little book, adapted to be carried in the pocket, gives, in the briefest and neatest arrangement, the best forms for preserving the records of cases.

THE "MODERN THERAPEUTICS" SERIES.

I. MODERN MEDICAL THERAPEUTICS.

A Compendium of Recent Formulæ and Specific Therapeutical Directions, from the practice of eminent contemporary physicians, American and foreign. By GEO. H. NAPHEYS, A.M., M.D. Seventh Edition. One volume. 8vo. 607 pp. Price, Cloth $4.00; Sheep $5.00.

II. MODERN SURGICAL THERAPEUTICS.

A Compendium of Current Formulæ, Approved Dressings and Specific Methods for the treatment of Surgical Diseases and Injuries. By GEO. H. NAPHEYS, A.M., M.D. Seventh Edition (1881). One volume. 8vo. 608 pp. Price, Cloth $4.00; Sheep $5.00.

III. THERAPEUTICS OF GYNECOLOGY AND OBSTETRICS.

Edited by WILLIAM B. ATKINSON, M.D., etc. Second Edition, Greatly Enlarged (1881). One volume. 8vo. Price, Cloth $4.00; Sheep $5.00.

This Series of Therapeutics has been recognized by the Medical Press, both of England and the United States, to be the most practically valuable to the physician of any which is now in the market.

THE PRINCIPLES AND METHODS OF THERAPEUTICS.

BY ADOLPHE GUBLER, M.D.,

Professor of Therapeutics in the Faculty of Medicine, Paris, Member of the Academy of Medicine, Physician to the Beaujon Hospital, etc. Translated by M. J. Halloran, M.D., etc. 1 Vol. 8vo. 445 pp. Heavy tinted paper. Bound in Half Morocco, Muslin Sides. Price $4.00.

Among the Scientific Therapeutists of the age, Professor Gubler stood in the front rank. This work is a translation of his lectures in this specialty, and is rich in practical information and profound suggestions. There is no work on the principles of Therapeutics which will better repay close reading. It is a new book, having first appeared this year.

LESSONS IN GYNECOLOGY.

BY WM. GOODELL, A.M., M.D.,

Professor of Clinical Gynecology in the University of Pennsylvania. With Numerous Illustrations. Second Edition. Thoroughly Revised and Considerably Enlarged. One Volume. 8vo. Price, Cloth $4.00; Sheep $4.50.

DIFFERENTIAL DIAGNOSIS.

A MANUAL OF THE COMPARATIVE SEMEIOLOGY OF THE MORE IMPORTANT DISEASES.

BY F. DE HAVILLAND HALL, M.D.,

Assistant Physician to the Westminster Hospital, London. Second American Edition, with Extensive Additions. Edited by FRANK WOODBURY, M.D. One Volume. 8vo. 205 pp. Printed on Handsome Tinted Paper. Bound in English Pebble Cloth, with Beveled Boards. Price $2.00.

Dr. Hall's work has received the highest encomiums from the English medical press for its lucid arrangement, completeness and accuracy. He himself is known in London as a practitioner of great skill, and an unusually successful medical teacher.

A MANUAL OF OPHTHALMIC PRACTICE.

BY HENRY S. SCHELL, M.D.,

Surgeon to the Wills Eye Hospital, Ophthalmic and Aural Surgeon to the Children's Hospital, etc. With 53 Illustrations, Test Types, etc. Price, Cloth, $2.00.

This is a new and valuable work on Ophthalmic Practice, especially designed for the use of the general practitioner who desires a clear and compact manual of instruction in the management of diseases of the eye.

COMPENDIUM OF MICROSCOPICAL TECHNOLOGY.

A GUIDE TO PHYSICIANS AND STUDENTS IN THE USE OF THE MICROSCOPE AND IN THE PREPARATION OF HISTOLOGICAL AND PATHOLOGICAL SPECIMENS.

BY CARL SEILER, M.D.,

Late Director of the Microscopical and Biological Section of the Academy of Natural Sciences of Philadelphia; Curator of the Pathological Society; Pathologist and Microscopist to the Presbyterian Hospital, etc., etc. Illustrated. One Volume. 8vo. Cloth. 111 pp. Price $1.00.

THE CARE AND CULTURE OF CHILDREN.

BY THOMAS S. SOZINSKEY, A.M., M.D., Ph.D., etc.

One Volume. Cloth. 8vo. Illustrated. 500 pp. Price $2.50.

A most excellent book on this all important theme. No better one can be recommended to the perusal of intelligent parents.

NOTES ON THE USE OF PEPSINE IN MEDICINE,

WITH RECOMMENDATIONS REGARDING SACCHARATED AND PURE PEPSINE.

That many of the diseases from which mankind suffer during infant and adult life are caused by malnutrition, there can be no doubt; and the extent to which non-assimilation of the life-giving properties of food interferes with recovery from severe illness, baffling the best directed efforts of the physician, points the necessity for an agent sufficiently potent to replace the deficient principle and aid nature in renewing the degenerated tissues.

Realizing this need, the science of chemistry produced pepsine; and even if medical literature were silent as to testimony of the results obtained, the large amount manufactured and consumed would amply attest its usefulness. But such is not the case, for, after long and careful investigation on the part of practical therapeutists, it is accepted as the remedy *par excellence* in all cases where the gastric juice fails to afford a sufficient amount of ferment for the reduction of aliment to a condition suitable for healthy assimilation.

As the undoubted value of pepsine as a remedial agent became evident, competition in its manufacture was stimulated; and as a natural result, the supply was varied both in purity and strength, and the medical profession, while anxious to avail themselves of its usefulness, were nearly as often misled into erroneous conclusions regarding its efficacy, as satisfied with its results, solely in consequence of their misfortune in not using such qualities as were likely to produce the much-lauded effects. Under these circumstances, a definite understanding regarding reliable preparations is desirable, and of great importance. Pure pepsine, without acid, thoroughly triturated with finely powdered sugar of milk (saccharated pepsine*), will, without doubt, produce the perfect results in all cases where the remedy is exhibited.

Routh, in his "Infant Feeding," gives an account of a result obtained in the case of an infant. "Small, wrinkled, emaciated, four days old, yet presenting almost the appearance of decrepitude. The voice was weak but distinct, and respiration not obstructed. The mother was an excellent nurse, but, although the infant took the breast readily, it constantly threw up every meal. What passed through the bowels was unchanged, although slightly tinged with bile. Diarrhœa was also present." The usual external remedies were applied, but without avail. "Emaciation was on the increase; the child was, in fact, dying." At this stage saccharated pepsine was administered, fifteen grains divided into ten powders, mixed with a little of the mother's milk, and after he second day the diarrhœa ceased and the child appeared much stronger. Twenty days of this treatment and the child was quite well. The eminent author adds: "This is a case which speaks strongly to the convictions. If at so early a period of life, when vitality and digestion were so weak, the artificial pepsine effected a cure, *a fortiori* will it be likely to do so in the case of older children; and so I have found it in practice. The digestive powers are thus assisted, and the food, which before was useless because undigested, readily becomes assimilated."

When administering pepsine, the slight acidity of the natural fluid should be produced as nearly as possible, and, as the necessities differ with the circumstances, it is desirable that the preparation be quite free from acidulation, and the proper dose be given in combination with the requisite amount of dilute acid. Of Kidder & Laird's pure pepsine, five to ten grains for an adult can, if necessary, be taken in an ounce of water, with five drops of muriatic acid.

For infants, however, the saccharated pepsine will be found to yield the most satisfactory results, and the acid should be dispensed with. Quantitatively it represents one-tenth of the strength of pure pepsine; but it has been found to be but about one-fourth less in efficacy. The absence of acid, which would otherwise tend to produce narmful results, will be recognized when it is considered that even the slight acidity of most cow's milk, when used as food for infants, is sufficient to disagree with them.

With regard to the proper time for its administration, as before or after taking of food, opinions vary, but reason would suggest that about half an hour before eating will afford the ferment a sufficient time to combine with the existing condition of the stomach, and produce the most natural effect upon the food when it has been acted upon by the salivary fluids in its passage to the stomach.

When once the formation of peptone has been established in the stomach, and as strength is acquired, the system will soon respond toward resuming the natural production of its normal fluids. Thus it is that many of the disorders of digestion which accompany severe attacks of fever, phthisis, etc., and also the exceedingly sensitive condition of the stomach caused by vomiting in pregnancy and alcoholism, are controlled, and a natural condition resumed.

Having mentioned the necessity of great care in the selection of pepsine, with reference to its purity and strength, it is proper to say that, even with the superior article above recommended, negative results may be obtained, unless attention is given to the form of its administration. Combinations beyond those above mentioned are not advised, but rather discouraged, as many of the substances usually recommended as efficacious with it are incompatible and render the pepsine inert.

* Saccharated pepsine, free from acid, is prepared by Messrs. Kidder & Laird, No 83 John Street, New York, who generously furnish samples of both this and the pure pepsine, free of charge, upon application.

1264-1315

HORSFORD'S ACID PHOSPHATE

IN

IMPOTENCE,

Seminal Losses,

Impaired Vitality,

Spermatorrhœa.

We wish to call the attention of the profession to the action of Horsford's Acid Phosphate on the organs of generation, when their power has become impaired through sexual excess, or from senile impotence. It is at once rejuvenating and aphrodisiac in its effect. It appears to restore the secretory organs that have been deranged to their normal condition, giving vigor where there has been debility, and renewed strength where there has been exhaustion.

H. B. STORER, M.D., Boston, says: "I have found Horsford's Acid Phosphate serviceable, in a marked degree, in my treatment of spermatorrhœa."

E. W. JONES, M.D., Taunton, Mass., says: "Horsford's Acid Phosphate was prescribed in a case of nervous prostration from seminal losses, with decided beneficial effect."

C. S. ELLIS, M.D., Wabash, Ind., says: "I prescribed Horsford's Acid Phosphate in a case of nervous debility and weakness of the sexual organs; patient forty-eight years old; he was much benefited."

R. W. ERWIN, M.D., Bay City, Michigan, says: "In some cases of weakness following sexual indiscretions, attended with nervousness, it is useful."

Each case presents its own peculiarities for treatment, but, as a general rule, we would suggest a half teaspoonful of Horsford's Acid Phosphate, in half a tumbler of hot or cold water, or tea without milk, to be taken shortly after each meal, and upon retiring.

Pamphlet giving further details mailed free, on application to the manufacturers.

Physicians who have not had a bottle of the Horsford's Acid Phosphate, and who wish to test it, will be furnished with a sample without expense, except express charges.

RUMFORD CHEMICAL WORKS,

PROVIDENCE, R. I.

1297-1348

In corresponding with Advertisers, please mention THE MEDICAL AND SURGICAL REPORTER.

An experience of more than a quarter of a century convinces us that sugar, properly applied, is the only correct coating for a pill.

Physicians should be careful to specify Warner & Co., when prescribing or ordering.

Special attention is called to the following selected Recipes prepared for Physicians' Prescriptions.

PIL: PHOSPHORI COMP: (WARNER & CO.)

℞. Phosphori, - - 1-100 gr.
Ext. Nuc. Vom. - ¼ gr.

THERAPEUTICS.—As a nerve tonic and stimulant, this form of pill is well adapted for such nervous disorders as are associated with impaired nutrition and spinal debility, increasing the appetite and stimulating digestion.

The practical value of Phosphorus as a therapeutic agent, and its applicability to the cure of disease, and especially in those varied disordered conditions consequent upon OVERWORK, which are characteristic of modern civilization.

Pil. Phosphori Comp. may be taken, one or two pills three times daily, after eating.

Price, per 100, $1.50.

PIL: IODOFORM ET FERRI. (WARNER & CO.)

℞. Iodoform, - - 1 gr.
Ferri Redacti, - 1¼ gr.

THERAPEUTICS.—A powerful general tonic and alterative, valuable as a remedy in Anæmia, Scrofula, Neuralgia, Chlorosis, Rheumatism, etc.

Pil. Iodoform et Ferri may be given in doses of from one to two pills, as occasion may require.

Price, per 100, $2.00.

PIL: DIGESTIVA. (WARNER & CO.)

℞. Pepsin Conc't, 1 gr. Gingerine, 1-16 gr.
Pv. Nuc. Vom., ¼ gr. Sulphur, ⅛ gr.

THERAPEUTICS.—Useful in relieving various forms of Dyspepsia and Indigestion, and of permanent benefit in cases of enfeebled digestion, where the gastric juices are not properly secreted. It is also a gentle laxative and excellent dinner pill, may be taken one after dinner, or one before each meal, three times daily.

Price, per 100, 75 cts.

PIL: CALCIUM SULPHIDE. (WARNER & CO.) 1-10, ¼, ½ & 1 gr. each.

THERAPEUTICS.—Extremely useful in the treatment of acne, scrofula and cutaneous diseases.

Sulphide of Calcium is usually administered in doses of from 1-10 to ¼ grain four times daily, gradually increasing the dose to one grain six times daily, or according to the progress or severity of the case.

Price, per 100, 1-10 gr. .50; 1-4 gr. .60; 1-2 gr. .75; 1 gr. $1.00.

WARNER & CO.'S PILLS MAY BE OBTAINED FROM ALL DRUGGISTS, OR BY MAIL, ON RECEIPT OF PRICE.

1273-1326eow

SAVORY & MOORE beg to call the attention of the Profession to some of their Special Preparations, the purity and uniform strength of which are Guaranteed.

PANCREATIC EMULSION,

Prepared in accordance with the direction of the Physician who introduced this purely

MEDICINAL FOOD FOR CONSUMPTION AND WASTING DISEASES.

Pancreatic Emulsion will always take precedence of Cod-Liver Oil, by reason of its introducing the STABLE SOLID FATS INTO THE SYSTEM, instead of the evanescent fluid fats or oils.

Neither Cod-Liver Oil nor EMULSIONS of COD-LIVER OIL can supply the kind of fat necessary for sound and vigorous human life. In addition to this, all the Oily Emulsions are liable to rancidity, and most of them are highly objectionable in consequence of the SAPONIFICATION and ULTIMATE PUTREFACTION, produced by the chemical agents used instead of Pancreatic Juice.

Pancreatic Emulsion (properly so-called), is THE NECESSARY FOOD OF THE CONSUMPTIVE, and the most reliable form of nutriment for counteracting the tendency to Phthisis and other wasting diseases. It presents to the lacteals fat, in essentially the same condition for assimilation and absorption as in a vigorous human frame, and THE AGENT of the important change is THE NATURAL SECRETION of the PANCREAS.

Pancreatic Emulsion may therefore be regarded as Chyle obtained by nature's own process. In certain cases both Cod-Liver Oil and Pancreatic Emulsion are required—one to supply the blood with oil or liquid fat, the other with the more stable solid fats; but it cannot be too strongly urged that both PANCREATIC EMULSION and Cod-Liver Oil are *not to be regarded as Medicines, but as articles of diet*, without which patients, with their defect of health, will as surely starve as healthy persons would if deprived of the most nutritive part of their food.

Pancreatized (Digestive) Cod-Liver Oil. By Pancreatized Cod-Liver Oil, the active digestive principle of the Pancreatic Juice is imparted to it, which renders it in a highly favorable condition for rapid and complete digestion and assimilation, preventing nausea, and largely increasing the beneficial properties of the Oil.

Pancreatine effects the digestion and assimilation of Cod-Liver Oil and Fat, as well as Food generally. This palatable and popular remedy is therefore invaluable TO PATIENTS WHO ARE UNABLE TO DIGEST COD-LIVER OIL, and who are thus deprived of its nourishing and invigorating properties.

Pancreatine Wine. An excellent vehicle for taking Cod-Liver Oil and promoting the digestion of it.

Tins, 1*s*, 2*s*, 5*s*, 10*s*.

VACCINE VIRUS,

AND

PRICES REDUCED. VACCINATORS PRICES REDUCED.

We continue, as for several years, to supply **ANIMAL VIRUS** propagated at our own stables from lymph of the "Beaugency Stock," imported by ourselves expressly for this purpose. Results of experience enable us to recommend it as of unsurpassed excellence.

The establishment is under the care of a competent physician of long experience in this specialty, who will spare no pains to produce a perfectly *reliable* and *pure* article, which we are prepared at all times to furnish in *fresh* and *active* condition.

Our new method Kine Crusts will be found much superior to the ordinary form, though points are recommended as the most reliable form of virus attainable.

All our Virus is put up in strong, *air-tight*, *sealed packages*, for safe conveyance by mail or express, and will be sent (postpaid if by mail) upon the following terms: —

Fifteen large Ivory Points, well charged on both sides.....$2.00
Seven large Ivory Points, well charged on both sides. 1.00
Large Ivory Points, less than seven, well charged on both sides, each..... .25
One Crust, new method, in air-tight Glass Capsule, prepared for immediate use..... 2.00

Also **Humanized Virus,** from HEALTHY CHILDREN, procured for us by physicians of undoubted reliability.

One Crust from Unruptured Vesicles (one remove from heifer if preferred).....$2.00

We will give a fresh supply, in case of failure reported within twenty days for Points, thirty days for Human, and ninety days for Kine Crusts.

Orders by mail or telegraph answered by return train.

Liberal discounts upon large supplies for Cities, Towns and Institutions.

Scarifying Vaccinator. Steel, Nickel Plated. (See Cut.) Each 25 cents.

GRIMAULT & CO.'S PHARMACEUTICAL PRODUCTS.

Prepared with scrupulous care, under the immediate supervision of a practical chemist, at their model laboratory, at Neuilly, near Paris.

Offices and Salesrooms, No. 8 Rue Vivienne, Paris.

The attention of the medical profession is directed to a few leading products:—

CHAPOTEAUT'S PEPSICAL PEPTONES.—These *Peptones*, prepared with great care, contain only *Beef*, digested and rendered assimilable by a *Pepsin* made from the *Stomach* of the sheep, digesting 700 to 800 times its weight of fibrine. They possess great alimentary power and give to the digestive organs intense nutritive action.

These *Peptones* must not be confounded with other *Peptones*, prepared either with rennet of sheep or with the pancreas of pork. These Peptones come in three forms:

1. CHAPOTEAUT'S PEPSICAL PEPTONE POWDER. 2. CHAPOTEAUT'S PEPSICAL PEPTONE, CONSERVE. 3. CHAPOTEAUT'S PEPSICAL PEPTONE WINE.

IODIZED SYRUP OF HORSE RADISH.—A pleasant substitute for Cod-Liver Oil, prepared from juices of anti-scorbutic plants. Each tablespoonful contains one grain of Iodine so intimately combined as to be insensible to the action of starch.

DUSART'S SYRUP AND WINE OF LACTO-PHOSPHATE OF LIME.—In these preparations phosphate of lime is presented in the combination in which it exists in the stomach, after it has been acted upon by the gastric fluid. They are especially adapted, and have been used with great success in *Rachitic* and *Scrofulous Affections* in children; the *Languor* caused by too rapid a growth and development in youth; the *Debility* attendant upon old age; *Weakness in Females*, caused by the nursing of children; *Slow Convalescence*; certain forms of *Dyspepsia*, caused by the low vitality of the system. In cases of *Fractures*, their use has been found to cause a more *rapid formation of the Callus*, and in cases of wounds, the *cicatrization has been more prompt*, while the administration to children facilitates the general development, and especially the *process of Ossification and Dentition*.

Dusart's work on the "Physiological and Therapeutic Action of Phosphate of Lime" will be sent free, on application to Messrs. E. FOUGERA & CO.

DR. LERAS' PHOSPHATE OF IRON IN SOLUTION OR SYRUP.—A pleasant combination of Pyrophosphate of Iron and Soda, colorless and tasteless. It is readily assimilated and used with great success in *Chlorosis*, *Anæmia*, *Dysmenorrhœa*, *etc.*, replacing all other ferruginous preparations. It never causes constipation.

JULIEN'S LAXATIVE FRUIT.—A pleasant confection for constipation, and all diseases resulting therefrom, as *headache*, *hemorrhoids*, *cerebral congestions*, *biliousness*.

The above and all the other Preparations of *Messrs. Grimault & Co.*, and information in regard to the same, may be obtained at all times from

1294-1319eow. **Messrs. E. FOUGERA & CO., Importing Pharmacists, New York.**

THE INVENTION OF AN EMINENT FRENCH CHEMIST.

The Salvator for Invalids and the Aged. An Incomparable Ailment for the Growth and Protection of Infants and Children. A Superior Nutritive in Continued Fevers, and a Reliable Remedial Agent in all Diseases of the Stomach and Intestines.

TO PHYSICIANS AND THE PUBLIC.

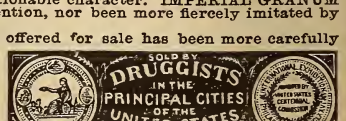
THIS preparation is, as advertised, principally the GLUTEN derived, by chemical process, from VERY SUPERIOR GROWTHS OF WHEAT, and should not be confounded with burnt or boiled Flour, in which the GLUTEN or sanative qualities are destroyed or made medicinally inert, nor with Crushed Wheat, or finely ground Wheaten Grits, styled "Medicinal Food," and sold under various names, in which the starch and impurities contained in wheat are retained in larger quantity.

By Dubisson's formula, the starch, impurities and soluble matter found in the Wheat Cereal are effectually excluded, the GLUTEN only retained, which is condensed, granulated and prepared to keep in all climates, and justly entitled

—⁂ IMPERIAL GRANUM ⁂—

It is well known, and should be fairly considered, that nothing of merit can be favorably received and commended by the public without being followed by imitations of a questionable character. IMPERIAL GRANUM is not the exception, for no preparation has attracted more attention, nor been more fiercely imitated by competition, even to wording and shipping order.

Whilst again it can be truly said that no preparation ever offered for sale has been more carefully prepared and thoroughly tested, nor has met with a more welcome reception and universal approval, or afforded more relief to invalids or to young and suffering children and aged persons. This has been confirmed by thousands of testimonials from Chemists, Physicians, Heads of Families and the Press.



Respectfully,

E. HEATON.

1262-1313eow

MURDOCK LIQUID FOOD CO., Boston,

THE ONLY MANUFACTURERS OF

RAW FOOD EXTRACTS IN THE WORLD.

It can be retained by the weakest stomach, when all other food extracts, and even water, is rejected.

Nutritious food, if raw, condensed, and free from insoluble matter, will cure chronic diseases, as it will make blood faster than all preparations or food, and new blood will cleanse the system.

MURDOCK'S LIQUID FOOD is made from Beef, Mutton and Fruits; contains corpuscles; is 12½ per cent. soluble albumen, and free from insoluble matter, drugs, minerals, salts and acids, and can be retained by the stomach when so weak as to refuse food.

Ask your Druggists, or send to us, for Essays read before the American Medical Association, at Richmond, Va., May 6, 1881, on the value of Raw Food Extracts, by Geo. R. Shepherd, of Hartford, Conn., and other Essays and Testimonials from Medical Journals and Physicians that have used Liquid Food, in cases of Consumption, Scrofula, Nervous and General Debility, Dyspepsia, acute and chronic, Constipation, Diphtheria, Intemperance, Cholera Infantum, Infantile Diarrhœa, Post-partum Hemorrhage, Purpura Hemorrhagica with Waxy Liver, Pelvic Cellulitis, Malarial and other Fevers, Chronic Strumous Arthritis, Sclerosis of the Spinal Cord, Senile Gangrene, Perinephritic Abscess, and other diseases of malnutrition. No cases of Cholera Infantum have occurred where it has been used daily, and no lives have been lost from Cholera Infantum where it has been prescribed by a physician. Excellent for Eczema, Diabetes, Rheumatism and Neuralgia.

At the request of any physician who has not tried our Extracts, and would like to, we will deliver sample bottles to the Express in Boston. To any Medical Society wishing to investigate the value of our Extracts, through a committee, hospital, or individual members, we will furnish a supply of Liquid Food equal to a six-ounce bottle for every member present at the time of action. We are induced to do this knowing that our Extracts are saving life, and that an increased use of them, which will follow after a trial of them, will be the means of saving more lives daily. (*We ask no testimonials of results obtained.*) Raw Extracts are available where cooked ones are not, or if available, contain only one-third as much nourishment.

Liquid Food is in general use at all Hospitals, Infant and Insane Asylums, and Washingtonian Homes, U. S. Navy Hospitals, and by all physicians that have tried it.

If not kept by your Druggist, can be obtained in any of the commercial cities In Philadelphia, by Johnston, Holloway & Co., Boericke & Tafel; in Pittsburg, by A. Kelly & Co.; in Baltimore, by Thomsen & Wirth; or you can order direct and we will pay express. 1 oz, 15 cents; 6 oz., 55 cents; 12 oz., $1.00.

See Philadelphia MEDICAL AND SURGICAL REPORTER, *Boston Medical and Surgical Journal*, and *New York Medical Record*, for chronic cases that were at our quarterly reception to physicians, in Boston, December 30, 1881—cases of Eczema, Rheumatism, Neuralgia, Diabetes, Consumption, and other diseases. If all were not restored to perfect health, they were gaining daily, and able to enjoy life and attend to their business. 1297-1348

BOUDAULT'S PEPSINE

IN POWDER, also WINE, ELIXIR, SYRUP, PILLS, AND LOZENGES OF PEPSINE.

Since the introduction of Pepsine by Boudault in 1854, BOUDAULT'S PEPSINE HAS BEEN, AND IS STILL CONSIDERED, THE MOST RELIABLE, as is attested by the awards it has received at the Exhibitions of 1867, 1868, 1872, 1873, and in 1876 at the Centennial Exposition in Philadelphia.

IT IS THE ONLY PEPSINE USED IN THE PARIS HOSPITALS.

Careful tests will enable any one to satisfy himself that BOUDAULT'S PEPSINE HAS A DIGESTIVE POWER AT LEAST DOUBLE that of the best Pepsines in the market, and that it is really the cheapest.

It is Sold in 1 ounce, 8 ounce, and 16 ounce Bottles.

Beware of so-called French Pepsines bearing fictitious names, and prescribe Boudault's only.

BLANCARD'S PILLS

OF UNCHANGEABLE IODIDE OF IRON.

Blancard's Pills of Iodide of Iron are so scrupulously prepared, and so well made, that none other have acquired a so well deserved favor among physicians and pharmaceutists. Each pill, containing one grain of proto-iodide of iron, is covered with finely pulverized iron, and covered with balsam of tolu. Dose, two to six pills a day. The genuine have a *reactive silver seal* attached to the lower part of the cork, and a green label on the wrapper, bearing the fac-simile of the signature of

Blancard

Pharmacien, No. 40 Rue Bonaparte, Paris

For Consumption and Wasting Diseases.

HYDROLEINE

Has been proved of the highest value in CONSUMPTION and all WASTING DISEASES, invariably producing IMMEDIATE INCREASE in FLESH and WEIGHT.

FORMULA OF HYDROLEINE.

Each dose of two teaspoonfuls, equal to 120 drops, contains:

Pure Oil,	**80 m. (drops.)**	**Soda,**	**1-3 grain.**
Distilled Water,	**35 m.**	**Boric Acid,**	**1-4 "**
Soluble Pancreatin,	**5 grains.**	**Hyocholic Acid,**	**1-20 "**

DOSE.—Two teaspoonfuls alone, or mixed with twice the quantity of soft water, to be taken thrice daily, with meals.

The principles upon which this discovery is based have been described in a treatise on "THE DIGESTION AND ASSIMILATION OF FATS IN THE HUMAN BODY," by H. C. BARTLETT, PH.D., F.C.S., and the experiments which were made, together with cases illustrating the effect of Hydrated Oil in practice, are concisely stated in a treatise on "CONSUMPTION AND WASTING DISEASES," by G. OVEREND DREWRY, M.D.

In these treatises the Chemistry and Physiology of the Digestion of the Fats and Oils is made clear, not only by the description of a large number of experiments scientifically conducted, but by cases in which the deductions are most fully borne out by the results.

☞ *Copies of these valuable works will be sent free, on application, to all who mention THE MEDICAL AND SURGICAL REPORTER.*

HYDRATED OIL,

HYDROLEINE,

WATER AND OIL,

May be described as partially digested oil, which will nourish and produce increase in weight in those cases where oils or fats not so treated are difficult or impossible to digest. In CONSUMPTION and other WASTING DISEASES the most prominent symptom is EMACIATION, of which the first is the starvation of the fatty tissues of the body, including the brain and nerves. This tendency to emaciation and loss of weight is arrested by the regular use of HYDROLEINE, which may be discontinued when the usual average weight has been permanently regained.

The ordinary so-called emulsions of Cod-liver oil and other fats, WHETHER PANCREATIZED OR NOT, merely remain in the form of a coarse mechanical mixture for a short time after agitation. The digestion of oil having in no sense been artificially produced, still devolves upon those functional powers the deficiency of which is the most prominent symptom in these cases.

HYDROLEINE is not a patent medicine or a secret preparation; the formula is on every bottle. Can be taken by the most delicate stomach; is immediately assimilated.

The permanence and perfection of the emulsion, and the extreme solubility of the HYDRATED OIL, solely prepared and sold by us under the name of HYDROLEINE, is shown by its retaining its cream-like condition as long as the purest Cod-liver Oil will retain its sweetness. Unlike the preparations mentioned, or simple Cod-liver Oil, it produces no unpleasant eructation or sense of nausea, and should be taken in such very much smaller doses, according to the directions, as will insure its complete assimilation; this, at the same time, renders its use economical in the highest degree.

To brain-workers of all classes Hydrated Oil is invaluable, supplying as it does the true brain food.

Economical in use—certain in result Tonic—Digestive and Highly Nutritive.

NEW PRINCIPLE FOR THE ASSIMILATION FAT.

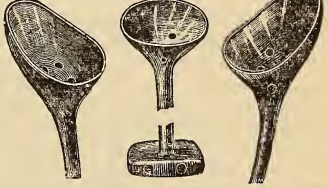
DR. McINTOSH'S
NATURAL UTERINE SUPPORTER.



No instrument has ever been placed before the medical profession which has given such universal satisfaction. The combination is such that the physician is able to meet every indication of Uterine Displacements. Falling Womb, Anteversion, Retroversion and Flexions are overcome by this instrument, where others fail. This is proven by the fact that, since its introduction to the profession it has come into more general use than all other instruments combined.

Among the many reasons which recommend this Supporter to the physician is its self-adjusting qualities. The physician, after applying it, need have no fear that he will be called in haste to remove or readjust it, as is often the case with rings and various pessaries held in position by pressure against the vaginal wall, as the patient can remove it at will, and replace it without assistance.

The Abdominal Supporter is a broad morocco leather belt, with elastic straps to buckle around the hips, with concave front, so shaped as to hold up the abdomen. The Uterine Support is a cup and stem, made of highly polished hard rubber, very light and durable, shaped to fit the neck of the womb, with openings for the secretions to pass out, as shown by the cuts. Cups are made with extended lips, to correct flexions and versions of the womb. The cup and stem is suspended to the belt by two soft elastic rubber tubes, which are fastened to the front of the belt by simple loops, pass down through the stem of the cup and up to the back of the belt. These soft rubber tubes being elastic, adapt themselves to all the varying positions of the body, and perform the service of the ligaments of the womb. The instrument is very comfortable to the patient, can be removed or replaced by her at will, can be worn at all times, will not interfere with nature's necessities, will not corrode, and is lighter than metal. It will answer for all cases of Anteversion, Retroversions, or any Flexions of the womb, and is used by the leading physicians with never-failing success, even in the most difficult cases.

Our Reduced Prices are to Physicians, $6.00; to Patients, $10.00.

Instruments sent by mail, at our risk, on receipt of price, or by Express, C. O. D., with the Express charges for returning the money added.

☞ CAUTION.—Owing to the great sale and popularity of our instrument various and base imitations are sold by unscrupulous parties. In order to get the genuine, it is best to order direct from us.

DR. McINTOSH'S NATURAL UTERINE SUPPORTER CO.,
192 Jackson Street, Chicago, Ill.

Our valuable pamphlet, "Some Practical Facts about Displacements of the Womb," will be sent you free on application. 1281-1332

In corresponding with Advertisers please mention THE MEDICAL AND SURGICAL REPORTER.

BEEF PEPTONE,

IN TRANSPARENT GLASSY SCALES,

Containing only the animal or azotized matter of the Beef. Each ounce is equal to 16 ounces of raw beef, easily soluble, and still faster in hot water.

This Beef Peptone is digested from tender, juicy Beef, by the aid of the *Crystal Pepsin,* of my manufacture (Jensen's Crystal Pepsin). Unlike the various BEEF EXTRACTS, this preparation contains all the nutritive constituents of the Beef, in a thoroughly digested state, ready for absorption into the system, while the Beef Extracts are entirely devoid of the chief elements of nutrition, such as the fibrinous, gelatinous and albuminous portions of the Beef, they only consisting of the concentrated saline constituents, with barely a trace of animal matter to keep its consistence. The difficulty so long experienced by the profession throughout the world, in preparing a PEPTONE entirely free from those chemical agents necessary for its manufacture, so as to render it fit for use, is hereby demonstrated to be successfully overcome, as it contains no foreign matter, and will stand the most severely scrutinizing test as to perfectness, also possessing flavor of the Beef, and so palatable as to render it highly agreeable.

Put up in bottles holding One ounce, Eight ounces, and one Pound.

Kept by the Wholesale and Dispensing Druggists in general.

DEPOT—L. WOLFF'S Pharmacy,

Northwest corner Twelfth and Chestnut Streets.

JENSEN'S CRYSTAL PEPSIN,

IN ARTIFICIAL CRYSTALS,

Strictly inodorous and tasteless, and perfectly soluble in water without acid.

THIS PEPSIN, now so popular with the profession, has created an impetus in the consumption of the same, and physicians of the highest standing, who before the introduction of this active PEPSIN, with good reason, entirely abandoned the use of PEPSIN, are now the most eager in prescribing JENSEN'S CRYSTAL PEPSIN, whenever it is indicated, and since the knowledge of its great solvent power (gr j. of it will dissolve the boiled whites from two to three eggs) has been established even among those susceptible to be great doubters, it has caused itself to be utilized in many novel ways, by the thinking profession; for instance, in substituting morphia, chloral, etc., as a hypnotic, relieving gastric troubles where the above remedies have been prescribed, creating morphine and chloral habits. In removing diphtheritic patches it is successfully used combined with water, glycerine, and muriatic acid, and the same composition, diluted with more water, as a spray in bronchial troubles, dissolving muco-purulent matter, as well as a spray for same in catarrhal affections.

THIS PEPSIN

Has also been used with success in dissolving and evacuating coagulated blood in the bladder, dispensing with surgical operations in such cases. Many other novel applications could be mentioned, if not in want of space. It is found to be FORTY times stronger than saccharated pepsin. One to three grains is an active dose.

KEPT BY ALL DRUGGISTS.

The above preparations are only manufactured and put up by

CARL L. JENSEN, M.D., PH.G.,

865 North 26th Street, Philadelphia, Pa.

No other Wholesale Agents for this Pepsin are longer engaged, than the Wholesale Druggists throughout the United States.

Instructor in Experimental Physiology, Histology, and Curator of Museum.

F. W. BROWN, M.D.,
Instructor in Physiology and Morbid Histology.

R. A. JAMIESON, M.D.,
Instructor in Clinical Medicine.

A. S. PARKER, PH.C.,
Instructor in Pharmacy.

A. M. HAWES, M.D.,
Demonstrator of Anatomy.

This College has for its *collegiate year* two sessions.

Regular Session commences Wednesday, September 7th, 1881, and closes March 1st, 1882.

Recitation Term (optional) commences March 15th, 1882, and closes June 14th, 1882.

Graded Course of three terms, of six months each.

PLAN OF INSTRUCTION.

By *Lectures*, *Recitations* and *Clinics*, together with *practical work* in the Anatomical, Physiological, Chemical and Pharmaceutical Laboratories.

Clinics are held *daily*.

Clinical Work in Hospitals and Dispensaries is given to the Senior Class (see Clinics), in *small sections*, under the charge of a *Clinical Teacher*, in all the departments of Medicine and Surgery.

Three Large Hospitals and *two Dispensaries* afford unlimited material for instruction.

ADMISSION.—Candidates for admission are required to pass a preliminary examination, unless satisfactory documentary evidence can be presented, that is equivalent to the standard adopted. (See Catalogue.)

FEES.

Regular Session.—Matriculation, $5.00; Lecture Tickets, $50.00; Hospital Tickets, $10.00
Examination (final), $25.00.

Recitation Term.—$10.00 for those who have attended Regular Session; all others, $25.00, $15.00 of which will be applied on the next Regular Term.

Board and Rooms can be obtained for $3.00 to $5.00 per week, the average being $4.00.

For Catalogue and other particulars, address

H. O. WALKER, M.D., Secretary,
177 Griswold Street, Detroit, Mich.

1274-tf

CRINON'S HÆMOGLOBIN,

The Albuminoid Ferruginous Principle of Blood.

HÆMOGLOBIN is the only physiological chalybeate. Associated as it is with the phosphates of the blood, it forms the most powerful of tonics, and at the same time a most nourishing food. It is especially useful in cases of *Anœmia, Chlorosis, Cachexias, Exhaustion* caused by excess of work, nervous debility, fatigue resulting from parturition and lactation. It replaces entirely liquid blood, which has been recommended and used with success in *Phthisis* and *wasting away.*

It is offered in two forms. In cachets (wafers), 60 of which are contained in a box; combined with chocolate in small squares, 30 of which are in a box; both forms can be sent by mail.

Prepared by C. CRINON, Paris, Pharmacist of the first class, Laureate of the Hospitals of Paris Samples may be obtained by application to

E. FOUGERA & CO., New York, Agents for the U. S

DOCTOR RABUTEAU'S

(Laureate of the Institute of France.)

DRAGEES, ELIXIR & SYRUP OF IRON.

"The experiments made in the hospitals of Paris have demonstrated that *Dr. Rabuteau's Dragees, Elixir and Syrup* regenerate the red globules of the blood with a rapidity never observed with the use of the other ferruginous preparations. These results have been proved by the various *Compt-Globules.*

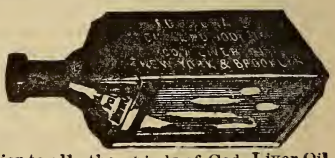
"The ferruginous preparations of *Dr. Rabuteau* do not cause any constipation, and are perfectly tolerated by the weakest persons."—*Gazette des Hospitaux.*

Dr. Rabuteau's Elixir is prescribed when some difficulty is experienced in swallowing the Dragees; it is especially adapted to weak persons, whose digestive functions need strengthening or stimulating.

Dr. Rabuteau's Syrup is especially prepared for children, who take it readily, because of its agreeable taste.

FOUGERA'S COMPOUND IODINISED

COD LIVER OIL.



Since the introduction of this oil in 1858, it has been found to be superior to all other kinds of Cod Liver Oil for the treatment of **General Debility, Consumption, Scrofula, Rickets, etc.**

It possesses not only all the **nourishing** qualities of the best Cod Liver Oil, but also the **tonic, stimulant** and **alterative** properties of **Iodine, Bromine** and **Phosphorus,** which are added in such proportions as to render it therapeutically five times as efficacious as pure Cod Liver Oil.

Through its **increased curative action, FOUGERA'S COD LIVER OIL** will be found to cure disease in a much shorter time than the pure oil; while favorable results will be obtained by its use in many advanced cases when the pure Cod Liver Oil would fail entirely.

FOUGERA'S READY-MADE MUSTARD PLASTERS.

A most useful, convenient, clean, and economical preparation. Not liable to change if kept in a dry place. Made of two strengths. Plasters No. 1, of pure mustard; Plasters No. 2, of one-half mustard. Price 40 cents, the tin box. or tin roll, of 10 plasters each. DIRECTIONS.—Dip the Plaster, or Plasters, a minute or two, in cold water; apply on the part, and cover with a band.

FOUGERA'S COMPOUND ICELAND MOSS PASTE.

(Iceland Moss, Lactucarium, Ipecac and Tolu.)

Used with great success against nervous and convulsive coughs, Whooping Cough, Acute Bronchitis, Chronic Catarrh, Influenza, etc.

Wakefulness, Cough, and other sufferings in Consumption, are greatly relieved by the soothing and expectorant properties of this Paste.

FOUGERA'S IODO-FERRO-PHOSPHATED ELIXIR OF HORSE-RADISH.

This Elixir contains Iodine, Pyrophosphate of Iron, the active principles of antiscorbutic and aromatic plants, and acts as a **tonic, stimulant, emmenagogue,** and a **powerful regenerator of the blood.** It is an invaluable remedy for all constitutional disorders due to the impurity and poverty of the blood. One of the advantages of this new preparation consists in combining the virtues of Iodine and Iron without the inky taste of Iodide of Iron.

E. FOUGERA, Pharmacist,
372 Seventh Street, Brooklyn, L. I.,
SOLE PROPRIETOR & MANUFACTURER OF THE ABOVE,
To whom all special communications should be addressed.

E. FOUGERA & CO.,
30 North William Street, New York.
SOLE GENERAL AGENTS for the ABOVE,
To whom all orders should be addressed.

SOLD BY DRUGGISTS GENERALLY.

JOHNSTONE'S IMPROVED

ADAPTABLE POROUS FELT SPLINTS.

AHL'S SPLINT MANUFACTURING COMPANY, LIMITED,

123 & 125 South Eleventh Street, PHILADELPHIA, PA.

THE ADAPTABLE POROUS SPLINTS, invented and improved by W. H. JOHNSTONE, have been tested extensively in both civil and military practice for a number of years, and have been endorsed and recommended in the most unqualified manner by the celebrated and distinguished Surgeons of America.

Their *porosity* is a peculiar and a valuable property. While the material is firm and insoluble, it permits readily the passage of air and fluids, so that, on one hand, the heat from the inflamed surface, the perspiration, and the morbid exhalations, are not confined, to the detriment of the patient, *as is the case in every other kind of splint*, but pass off freely; and on the other hand, lotions of cold or warm water, medicated or not with weak alcohol, carbolic acid, arnica, tincture, solutions of the sulphites, etc., can be constantly applied without disturbing the dressings. This, it will readily be seen, is a most invaluable property when the parts are bruised, lacerated, filled with extravasated blood, or erysipelatous, and give these splints a conspicuous advantage over all others.

From FRANK H. HAMILTON, M. D., Professor of Fractures and Dislocations in the Bellevue Hospital Medical College, author of "A Treatise on Fractures and Dislocations," etc.

Having examined carefully *JOHNSTONE'S IMPROVED ADAPTABLE POROUS FELT SPLINTS*, I feel warranted in recommending them to the Profession as superior to all other manufactured splints now in use. They possess all the essential qualities of a good splint, having firmness, pliability and lightness.

FRANK H. HAMILTON, M. D.,
Prof. Military Surgery and Fractures and Dislocations, Bellevue Hospital Col.

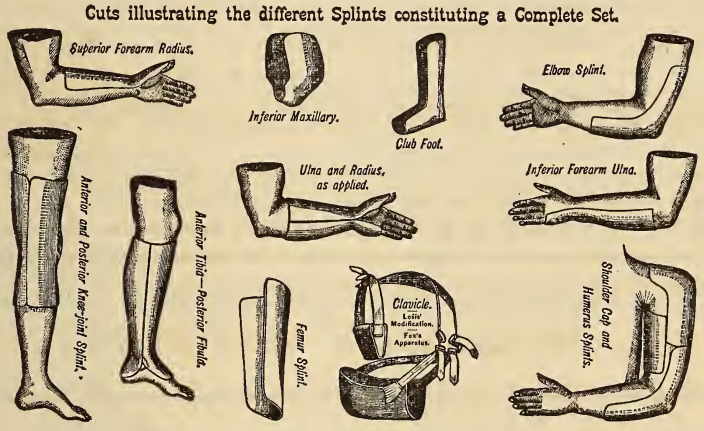
From PROF. D. HAYES AGNEW, Prof. Surgery, University of Penna.

1611 CHESTNUT STREET, PHILADELPHIA, *February 6th*, 1879.

The Adaptable Felt Splints, formerly known as those of Dr. Ahl, with the improvement now made by W. H. Johnstone, which renders them in every way superior to the former, I regard as very excellent appliances in the treatment of fractures.

D. HAYES AGNEW,
Prof. Surgery, University of Pennsylvania.

Cuts illustrating the different Splints constituting a Complete Set.



SPECIAL NOTICE TO THE PROFESSION AND TRADE.

Our *policy* heretofore in the introduction of JOHNSTONE'S IMPROVED ADAPTABLE POROUS FELT SPLINTS, has been to confine the sales and business negotiations directly to the Doctors themselves, declining in every case to sell our goods through Dealers; we having assured the Profession generally, both through our agents and catalogues, that *JOHNSTONE'S IMPROVED SPLINTS* could only be obtained by subscription.

We wish to announce, that owing to the large demand for our goods and the constant importunity on the part of *Surgeons* everywhere to place our Splints on sale with their Instrument Dealer or Druggist, to afford them greater convenience and facility in obtaining the pieces in duplicate, **we have at last acceded to that request, and hereafter *JOHNSTONE'S CELEBRATED FELT SPLINTS* can be obtained at most dealers in Instruments and Drugs throughout the United States, at the same price which they were heretofore sold, viz:**

A complete set, embracing fifty (50) pieces—twenty-five for adults and twenty-five for children—is thirty ($30) dollars. Extra or duplicate pieces can always be obtained from your DEALER, at one dollar each.

JOHNSTONE'S CELEBRATED SPINAL JACKET, for Curvatures and Deformities, have met with unparalleled success, and, from their merit, secured the unqualified endorsement and approbation of our celebrated orthopædic specialists, and particular expression of gratitude from the patients who are wearing them. For full information, send for Descriptive Circulars.

Should your Instrument dealer fail to have a supply of our Splints, and decline to carry them in stock, orders sent to us will receive prompt attention.

AHL'S SPLINT MANUFACTURING CO., Limit.
W. H. JOHNSTONE, Manager.

N. B.—If the Instrument Dealers of Philadelphia decline to supply its Physicians with our JOHNSTONE'S FELT SPLINTS on call, they will be furnished and delivered by us to any part of the city, at any time, on receipt of the price, viz.

JOHNSTONE'S SPINAL FELT JACKET, any size, - - - - - - - $25.00
JOHNSTONE'S LACED SPLINT FOR THE LIMBS, any size, - - - - - 10.00
$1.00 each.

JOHNSTONE'S MODIFICATION OF DR. R. J. LEVIS' SPLINT

For the FRACTURE OF THE LOWER END OF THE RADIUS.

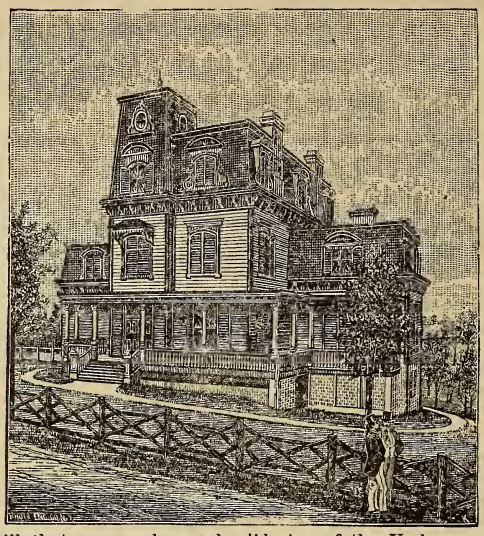
We make a Palmar and Dorsal Splint for each arm, from Felt, beautifully moulded to adjust to any size arm.

1281-1332 **Price $2.00 per Pair.**

THE DE QUINCEY HOME,

Fort Washington, **New York City.**

A Private Asylum for the Treatment of the Opium, Morphine, Chloral, Chloroform and Hashisch Habits, Nervous Diseases and Inebriety.



Drs. H. H. Kane and W. H. Vittum, in charge.

Consulting Physicians.

Prof. Wm. A. Hammond,

Prof. T. Gaillard Thomas,

Dr. Edward C. Spitzka,

Dr. Daniel M. Stimson,

Dr. Edward T. Ely,

Dr. G. H. Wynkoop,

Dr. Andrew H. Smith.

Situated upon a high hill that commands a splendid view of the Hudson and Harlem rivers, Spuyten Duyvil Creek, and the beautiful country for miles around: surrounded by ample grounds and magnificent drives; in easy communication with the city by means of the Sixth and Ninth Avenue Elevated and the Hudson River Railroads; away from the dust, noise, crowding and malaria of the city; with hot and cold water in every room, furnace and grate-fire heating, croquet, horses and carriages, boats and fishing, an excellent *cuisine*, trained nurses and careful medical attendance, it possesses unequaled advantages for the treatment of cases of this kind.

The plan of treatment pursued in the cure of opium, morphine and chloral takers is that of *rapid reduction*, which possesses all the advantages, and none of the dangers of Levenstein's *sudden deprivation*, or the prolonged agony of *gradual reduction*. Each case is studied and treated in accordance with its peculiarities and the idiosyncrasies of the patient, no set plan of treatment being pursued, at the expense of the person's health or comfort.

Our Home, furthermore, offers special facilities for the treatment by *rest, diet, and massage*, according to the plan of Weir Mitchell of that large class of nervous diseases so commonly met with in ladies suffering from uterine troubles. This plan of treatment has been specially studied, and nurses competent to carry out its provisions in every detail will be furnished. For further particulars, etc., address 1299-1350

Drs. KANE and VITTUM, De Quincey Home, Fort Washington, New York City.

UNIVERSITY OF PENNSYLVANIA.

POST-GRADUATE INSTRUCTION.

A Post Graduate Course has been organized for Bedside and Dispensary Instruction in the following named branches:—

ON PHYSICAL DIAGNOSIS AND CLINICAL MEDICINE, Prof. WM. PEPPER and Dr. ED. T. BRUEN.
" NERVOUS DISEASES AND ELECTRO-THERAPEUTICS, - - - Prof. H. C. WOOD.
" DERMATOLOGY, - - - - - - - - - - - Prof. L. A. DUHRING.
" OTOLOGY, - - - - - - - - - - - - Dr. GEO. STRAWBRIDGE.
" OPHTHALMOLOGY, - - - - - - - - - - - Dr. S. D. RISLEY.
" GYNÆCOLOGY, - - - - - - - - - - - - - Dr. B. F. BAER.
" LARYNGOSCOPY, - - - - - - - - - - - - - Dr. C. SEILER.
" OPERATIVE SURGERY AND VENEREAL DISEASES, - - - - Dr. J. WM. WHITE.

Two courses will be given annually; beginning the first week in November and the first week in April; continuing three months, two lectures each week. A certificate will be given to each person having taken the full course. Fee $100, for seven branches—elective—or $25 for each branch taken separately, invariably in advance. For further information apply to the undersigned, or any of the Lecturers.

1291-1315 Dr. EDWARD T. BRUEN, Sec'y, 1531 Chestnut St.

Price, $3.00. Sent per mail on receipt of price. The Rubber Tubes are free from all woolen or silk coverings thus avoiding all friction sounds arising from this source. ☞ **A Descriptive Circular sent to any address.**

PACKER'S

TAR

SOAP.

1297-1348eow

ABSOLUTELY PURE

AND NON-IRRITATING.

Made from Vegetable Oils, Refined Pine Tar, and Chemically Pure Glycerine. Extensively used in public and private practice in the treatment of ***Diseases of the Skin.*** Useful for cleansing sores, ulcers, etc.

Many Physicians recommend the exclusive use of this Soap for ***Washing Infants.*** It purifies, soothes, prevents chafing, and is tonic to the skin.

For the bath and toilet, only those who have used it can appreciate its refreshing and cleansing properties.

THE PACKER MANUFACTURING CO.,

P. O. Box 2985. **100 Fulton Street, New York.**

McINTOSH'S COMBINED

Galvanic AND Faradic Battery.

THIS CELEBRATED BATTERY COMBINES BOTH THE GALVANIC AND FARADIC CURRENT,

Which can be used separately or combined. Any strength and intensity desired can be obtained for use in Electro-therapeutics. THIS BATTERY is constructed on an IMPROVED PLAN, as follows: The zinc and carbon plates are arranged in couples, securely clamped to hard rubber plates, with thumb screws. These screws are also used for binding posts. All the connections are positive. The cells are made in sections of six, of hard rubber, with hard rubber drip cup. The following points of excellence render our Batteries superior to others:

1. They combine the only Portable Galvanic and Faradic Battery in one case.

2. They weigh one-half less than other Batteries of the same number of cells.

3. The cells are made in sections of six, of one solid piece of hard, vulcanized rubber; by this arrangement they can be emptied, cleaned and filled as easily and quickly as one cell, and will not crack, break or leak.

4. A hard rubber drip cup is placed by the side of each section of cells, to receive the zinc and carbon plates when removed from them. By this arrangement we avoid the use of absorbent materials and soiling the Battery

5. The Hydrostat is perfect. The rubber plates which hold the elements project over on one side enough to cover the cells when the zinc and carbon plates are placed in the drip cups. The under side of this projection is covered with thick, soft rubber, which is securely clamped to the cells sections, and makes them water tight.

6. This is the only Battery in which the zinc and carbon plates can be kept clean by simply rinsing them.

7. A zinc or carbon plate can be removed by simply loosening a binding post; and all parts of the Battery can be duplicated, as like parts are made exactly alike. We will be pleased to send circulars and our illustrated catalogue, giving full information, price, etc., free, upon application.

McINTOSH GALVANIC BELT AND BATTERY CO.,

1281-1332 **Nos. 192 and 194 Jackson Street, CHICAGO, ILL.**

SEABURY & JOHNSON'S

PHARMACOPŒIA PLASTERS

(IN RUBBER COMBINATION)

And Surgical Dressings.

ADVANTAGES OF THE RUBBER BASE FOR PLASTERS.

A cold process, through which volatilization by heat is avoided; preservative character of the rubber combination, thus insuring uniform reliability; pliability in any temperature; great convenience, as the plaster adheres without heat or moisture; cleanliness.

BELLADONNA PLASTER

SEABURY & JOHNSON.

IN RUBBER COMBINATION. Recent analytical tests conducted by Prof. R. O. Doremus, of Bellevue Hospital Med. College, and J. P. Battershall, Ph.D., analytical chemists, New York, to determine the comparative quantities of atropine in Belladonna Plaster prepared by the different American manufacturers, disclosed, in each case, that our article contains a greater proportion of the active principle of Belladonna than any other manufactured. Samples of the various manufactures, including our own, for this test, were procured in open market by the above-named chemists themselves. In the preparation of this article we incorporate the best alcoholic extract of Belladonna only, with the rubber base. It is packed in elegant tin cases (one yard in each case), which can be forwarded by mail to any part of the country.

Price, by mail, postpaid, $1.00.

BLISTERING PLASTER

SEABURY & JOHNSON

IN RUBBER COMBINATION. We incorporate, by a cold process, the whole fly (best selected Russian), with the rubber base, which constitutes, we believe, the most reliable cantharidal plaster known. It is superior to the cerate, and other cantharidal preparations, the value of which is frequently greatly impaired by the excessive heat used in preparing them, which volatilizes or drives off an active principle of the fly. By our peculiar process no heat is used. It remains serviceable almost any length of time.

Price, by mail, per yard, $1.00.

MUSTARD PLASTER

SEABURY & JOHNSON

(Spread on Cotton Cloth.)

Our Mustard Plaster is a decided improvement over the best French makes. The mustard is manipulated so as to exclude all the moisture, retaining unimpaired, by such treatment, its essential properties. They are always reliable, conform quickly to the part, and when thoroughly wet do not break into pieces, as is the case with all other mustard plasters. They do not crack or peel off, and can be removed without soiling the skin or linen. Being **manufactured only of pure mustard,** they are perfectly free from Croton Oil or other dangerous substitutes often employed to induce intense irritation.

Samples sent on application to

SEABURY & JOHNSON,

NO. 21 PLATT STREET, NEW YORK.

MEAT AND QUINIA.

AROUD'S WINE WITH QUINIA,

And all the Nutritive Principles of Meat.

Aroud's Preparations recommend themselves to the most se ious attent on of Physicians, and deserve their preference:

1st.—Because they combine all the active principles of the richest barks of quinia carefully selected.

2d.—Because 30 grammes of them contain 3 grammes of quinia and all the nutritious principles of 27 grammes of meat, which are soluble in alcohol and water.

3d.—Because the combination of meat with the barks of quinia has not only the advantage of acting as a tonic, nutritive, and febrifuge, but also that of paralyzing and guarding against any local irritation caused by the prolonged use of quinia barks, and of preparing the stomach to endure the salutary influence of this friendly compound.

4th.—Because these preparations with meat as a basis, containing in their composition the entire nutritious elements of muscular fibre, blood and bone, answer alone to the immortal maxim of Hippocrates, fundamental basis of all good reparative medication, "*Ars imitatio natura.*"

5th.—Because, if meat occupies the first rank among the articles of food, if quinia is placed at the head of tonics, the combination of these highly reparative substances must necessarily be a reconstructor par excellence.

Finally, because the experiments with Aroud's Wine and Quinia prove, better than theory, that, to reconstruct the shattered and enfeebled forces, no other tonic can be compared to it.

MEAT, IRON AND QUINIA.

AROUD'S

FERRUGINOUS WINE WITH QUINIA,

And all the Nutritive Principles of Meat.

MEAT, IRON AND QUINIA, that is so say, the most reparative food combined with a reconstituent and a nerve tonic par excellence: such is the remarkable composition of this ferruginous preparation, which, in all respects, merits the preference of physicians. It prevents impoverishment of the blood, anæmia, chlorosis, etc.; presented in a form at once attractive to the eye and pleasant to the palate—an assimilable iron united with all the constitutive principles of bone and of muscle; it can, therefore, form and regenerate the forces, and this without causing nausea, constipation, or disturbing the digestive organs. By its generous alimentation it corrects and modifies the bad effect of the prolonged use of quinia.

The excellence of this preparation justifies that which Hippocrates proclaimed over 2000 years ago, and all clinics have confirmed: "That the soluble nutritive principles of meat is the food best adapted for the sick and convalescents; that these principles, being the integral parts of muscle, have the faculty of forming flesh rapidly, and of restoring muscle."

It is, therefore, a precious specific for all the maladies caused by impoverishment or deterioration of the blood, because meat, iron and quinia combined give nourishment, act as a tonic, regenerate, reconstitute, and regulate the entire system. 1261-1312-eow

HOLLOW SUPPOSITORIES.

WITH STOPPERS. ALL MADE FROM PURE BUTTER OF COCOA, ONLY.

Aural, Nasal, Rectal, Urethral, Cystic, Vaginal, Intra-Uterine, and Veterinary Suppositories.

The object of this invention is to supply Physicians, Druggists, Veterinary Surgeons, and others, with HOLLOW SUPPOSITORIES, into which they can put any kind of medicine or nutriment, thus producing firm, smooth, and evenly medicated Suppositories, that are cheaper and more reliable than those made by the old method.

RECTAL ABSORPTION.

"The mucous membrane of the rectum, like that of other portions of the alimentary canal, possesses all the requisites, more or less, for the exercise of absorption."

Liebig states that a strong solution of common salt disappeared so completely in the rectum, that an evacuation one hour afterward was found to contain no more than the usual portion of salt.

Many medicinal substances act more energetically when applied to the rectum than when received into the stomach.

Baron Dupuytren said: "The rectum *absorbs*, but does not *digest*. The medicinal agent," he says, "owing to the absence of digestion, passes more directly, more purely, and more surely to its destination, than the same medicine does when taken into the stomach."

M. Orfila asserts that those medical agents which operate through the medium of absorption, such as opium, tobacco, etc, are much more active by the rectum than by the stomach.

Dr. J. H. Scorff reports four cases where he was successful in removing the vomiting of pregnancy, by introducing 20 grains of chloral into the rectum, night and morning. He only found it necessary to use the remedy three or four times.

Chloral is the remedy *par excellence* in the ravings of delirium tremens, and in cases of delirium and insomnia combined; also in infantile convulsions and attacks of laryngysmus stridulus.

Dr. Hickman reports a case of typho-malarial fever, which chloral was found to control in a happy manner. The chloral was introduced per rectum.

"REST TO THE STOMACH,"

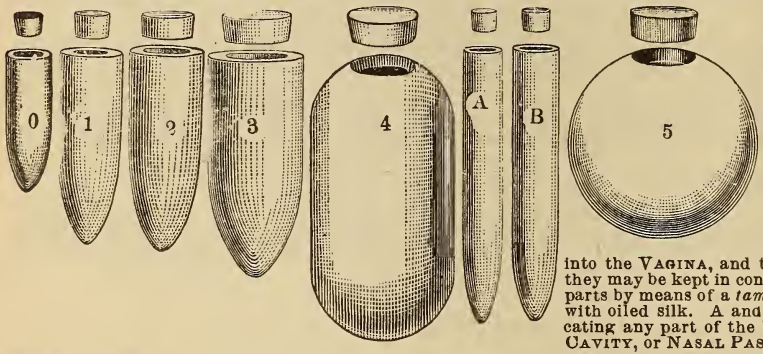
says Mr. Theodore Williams (in London *Lancet*, October 24th, 1874), is of the highest importance in some of the diseases of this organ. In such cases we possess in the rectum an effective second stomach, which, if it does not afford us the pleasure of digestion, spares us many of its pains."

Nutritious substances are taken up by the absorbents, and thus find their way into the economy, and produce their assimilative and nutritive effect. Haller demonstrated the fact that digestion can and does take place in the alimentary canal. He had the greatest confidence in the absorptive and digestive powers of the rectum to sustain life indefinitely.

HYPODERMIC MEDICATION.

Dr. William Bodenhamer says: "This now very common and often misused method is of great value in numerous cases, yet I am decidedly of the opinion that rectal medication is of greater importance; indeed, it is greatly preferable in many instances, being much less dangerous, much more convenient and simple; and the remedies, too, act through this medium with almost equal celerity. But very few remedies can be used hypodermically in comparison to those which can be used by the rectum."

EXACT SIZES OF OUR VARIOUS HOLLOW SUPPOSITORIES.



Size 0 is for children. It may also be used for the EAR and in the NASAL PASSAGES. Nos. 1, 2 and 3 are RECTAL SUPPOSITORIES. Nos. 3 and 4 may be used for introducing nutriment into the system, *via rectum*. No. 4 is also a VAGINAL SUPPOSITORY. No. 5 is a "SPHERICAL HOLLOW SUPPOSITORY," to introduce remedies into the VAGINA, and to the *os uteri*, where they may be kept in contact with the diseased parts by means of a *tampon* of cotton covered with oiled silk. A and B are used for medicating any part of the URETHRA or UTERINE CAVITY, or NASAL PASSAGES.

A MANUAL OF

OPHTHALMIC PRACTICE.

A COURSE OF LECTURES DELIVERED AT THE "ÉCOLE PRATIQUE,"

BY DR. E. LANDOLT,

Directeur-Adjoint of the Ophthalmological Laboratory at the Sorbonne, Paris.

TRANSLATED BY

SWAN M. BURNETT, M.D.,

Lecturer on Ophthalmology and Otology in the Medical Department of the University of Georgetown, and Ophthalmic Surgeon to the Central Dispensary, Washington, D. C.

REVISED AND ENLARGED BY THE AUTHOR.

1 vol. 8vo, pp. 307. With numerous Illustrations and a large Chart. Price, cloth, $3.00.

This entirely new and valuable work has received the very highest testimonials, both in Europe and America. We quote the following from the American press:—

"Dr. Landolt is one of the clearest writers of the day This little manual will certainly, in its English dress, prove of very great value to students of ophthalmology, and to those general practitioners who have a taste for examining eyes, for it gives instructions on very complicated subjects in a very terse and clear way. It would hardly seem possible to get so great an amount of matter into so small a space as Dr. Landolt has done in this book."—*Cincinnati Lancet and Clinic*, April, 1879.

"The author of this excellent work has succeeded in simplifying the subjects which he has put before the profession to such an extent as to render his book far superior to anything of the kind that has yet appeared in print.

"The plain, easy, and yet scientific manner in which Dr. Landolt presents the various subjects contained in his work is emphatically suggestive of an honest, earnest, astute student, and shows at once that the contents of the volume are the result of the work of a careful and conscientious observer. The book has no scent of scissors or paste pot. Although reference is made to other authors, I believe there is not a single quotation in it.

"The twenty-second lecture is upon examination of the fundus in detail. The special feature of this lecture is the manner in which the optic nerve and its sheaths are described. Nowhere can there be found a cut which so nearly represents the true nature and relations of the optic nerve and its sheaths. I believe that it is unique: at all events, it far excels all other efforts in this direction.

"The book is one that can be recommended to the doctor and student, with the assurance that it will meet every demand. May the author live long and continue his work in the same direction, is the wish of the reviewer."—*Louisville Medical News*, July, 1879.

"This book is a most admirable and complete *exposé* of our means and methods of making a thorough scientific examination of the human eye. Written in the attractive, easy style of lectures, unincumbered by unnecessary mathematical formulas, printed on heavy paper and in large and clear type, translated with care and skill into fluent English, this book will contribute largely toward awakening greater interest for ophthalmology among the reading members of our profession."—*Chicago Medical Journal and Examiner*, August, 1879.

"In the diseases of this organ diagnosis is of prime importance. Accurate diagnosis is impossible except as based on an exhaustive examination. Directions for making such examinations are here given with great explicitness. * * * Many other points of general interest we had marked, but the foregoing must suffice to indicate the character of the work. Two charts are added to the text, exhibiting the various movements of the eyes and their derangements, and the general laws of paralysis of the ocular muscles.

"The book is an excellent one for specialist, practitioner and medical student. Written in good style, thoroughly abreast with modern investigation, broad in its statements and reasonings, it cannot fail to meet with a hearty welcome from all interested in its subject matter."—*The Detroit Lancet*, August, 1879.

"We often see book notices containing the phrase, "This book supplies a want long felt in the profession." While we do not want to say anything against this phrase as applied to some publications, we will say that there is certainly no book, from the pen of even the ablest medical writers of the age, of which this can more truly be said than of the above volume. There was a want in the profession of just such a work, which is especially of great value to the busy practitioner, who has no time to spend in wading through the many volumes on Diseases of the Eye, in order to learn how to properly examine an eye, and diagnosticate its diseases correctly. It is a system of twenty-four lectures delivered by the author, in which he lays down correct rules for a systematic examination of the eye, so as to guard against errors in diagnosis, which in this branch of medicine are only too frequent. It is admirably written, clear and comprehensive, so that no one can help understanding the meaning of the author, and by following his directions many mistakes will be avoided, which, in as delicate an organ as the eye, would cause its destruction."—*The Southern Practitioner*, May, 1879.

"The Most Popular and Practically Useful Medical Journals in the United States."

THE MEDICAL AND SURGICAL REPORTER,

PUBLISHED EVERY WEEK.

THE COMPENDIUM OF MEDICAL SCIENCE,

PUBLISHED HALF-YEARLY.

The REPORTER gives 1500 pages yearly, the COMPENDIUM 600 pages of the best quality of reading matter. No better and no cheaper medical journals are published in America or elsewhere.

The Medical and Surgical Reporter,

A WEEKLY JOURNAL.

Edited by D. G. BRINTON, M. D.

ISSUED EVERY SATURDAY.

Large Octavo, Double Columns, 26 to 28 Pages of Reading Matter in Each Number.

The REPORTER was established in 1848, and now has attained as large, if not the largest, circulation of any medical weekly in this country. It has achieved this through its independence of all cliques, its steady devotion to the highest interests of the regular profession, its energy in obtaining the most important scientific news, the value of its original articles, its broad national character, and its attention to the practical and clinical aspects of professional study.

FOR 1882.

Some important improvements will be added to the REPORTER in 1882, and we have arranged with several of the most distinguished American medical writers to contribute to its pages. We suggest to our subscribers to send in their renewals at an early date, and should be glad to have them bring the REPORTER to the notice of their friends. We can guarantee them a satisfactory periodical the coming year.

PRICES:

The regular price for the COMPENDIUM for one year (two numbers, 300 pages each, bound in paper,) is $2.50.

A discount is allowed on the REPORTER and COMPENDIUM when taken together, as follows:

The Weekly Medical and Surgical Reporter, - -	$5 00
The Half-Yearly Compendium of Medical Science, - -	2 50
The Reporter and Compendium, taken together, - -	7 00

☞Payable in advance, direct to the publisher.

A *Table of Contents* of a number of Half-Yearly Compendium will be sent on application to the publisher.

A single copy will be sent for examination for One Dollar.

Specimen copy of the REPORTER free, on application.

HERCULES MALT WINE,

MANUFACTURED BY

CHAS. WOLTERS,

PROSPECT BREWERY, PHILADELPHIA.

This new and extremely palatable *Extract of Malt* is designed as an *invigorating Health and Table Beverage*. It is an agreeable and reliable remedy for *Indigestion*, *Debility*, *Anæmia* and *Malnutrition*, and is peculiarly adapted to *Enfeebled Persons*, *Convalescents* and *Nursing Mothers*.

The perfection of this excellent article has been reached after a long series of careful experiments, and it surpasses other Malt Extracts in flavor, efficacy, cheapness, and in the quality and combination of its constituents, as it essentially contains a large proportion of *Peptones*, which act as Digestors, a rich quantity of *Phosphates*, which are valuable Nutrients, and a medium proportion of *Hops*, serving as a general Stomachic and Nervine. 1301-1356m

Sold in Drug Stores, at 25 cents per Pint Bottle.

PROCTER'S PEPSIN (SACCHARATED.

This standard article is prepared from *Pepsin*, carefully purified and freed from mucus, and is not a *dried Peptone*. It is inodorous and non-deliquescent, and retains its digestive power indefinitely. It is so well known that extended comment is superfluous. We would, however, call attention to its uniform purity and solubility, which, with extraordinary *digestive power*, commend its use in preference to other less carefully *made* articles. It is tested to the solution of 250 grains of coagulated albumen by 10 grains of Pepsin.

PROCTER'S "PEPSIN FORTIOR," (Stronger or Concentrated Pepsin.) A powerful form of Pepsin, eligible when minimum dose is desirable. It is of the same exceptional purity with our *Procter's Pepsin*, while the strength is far greater. Dose one to three grains. 1275-1308, 1y.

Manufactured by **WM. PROCTER, Jr., CO.,** S. W. Cor. 9th and Lombard Sts., Phila.

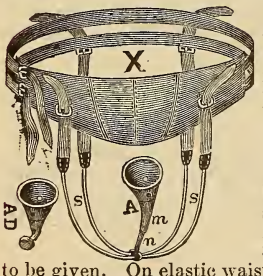
H. T. HOYT,

FINE TAILORING,

1297-1348 **CHESTNUT STREET, WEST OF FIFTEENTH ST.**

STAUFER'S

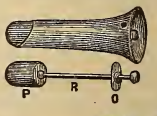
SERIES OF HARD RUBBER UTERINE INSTRUMENTS SIMPLIFIED.



Pessary and Abdominal Supporter combined. Fig. x represents a fine satteen belt, with whalebone stay, elastic back straps and spring stem Uterine Supporter. Shifting Cup A, to be transformed into self sustaining Cup A. D. Price, (A X) $7.00. Hip measure to be given. On elastic waist belt, (or A Z), $600, waist measure. Permanent Stem Cup (or *E. C. Economy)* on belt x, $5.50, or E C, on waist belt, Z, only $4.50. Belt (X), alone, $2.00.

The full catalogue and plate exhibit in addition, Retroversion Cups; Anteversion and posterior cul-de-sac levers; Globe Tops and Oblong Tops; all on spring or permanent stems, to be selected according to the requirements of cases; Also extra-uterine stem cup. The cups are graded eve ⅛ inch, from 1¼ to 2½ inches. Globe Tops from 1 to 2¼ inches; thus, making about 125 in style and size Stem Uterine Supporters to meet the various displacements. The medium, 1¾ inch cup meets over three-fourths of the cases presented.

Examining Instruments.—This series contains the much admired Examining Case of ten articulating pieces, probes, sounds, swab, movers, caustic, and brush-holders and cases; wt. 4 oz. Reflector, Fenestrated Vaginal, Anal and Hymen, together with the series of Vaginal Speculums, by which the examination is reduced to great simplicity, and the vaginal portion of the uterus to be seen without exposure; manipulated upon, and can be shown to husband or member of the family as clear as if loeateed externally. The case Q, contains four graded Speculums, with shifting conductors; compact and weight but 12 oz. No. 2, or next to largest answers in over three fourths of cases called for treatment. Dental red enameled inside. Price, full case, $12.00; single, $2.50 each.



Exchanges.—All the hard rubber parts in the catalogue have the exchange and interchange privilege, at cost. Even single Speculums received back when a case becomes preferable. All without limit of time. Necessary repairs only to be paid for.

Staufer's Catalogue and Physician's Price List, with instructions to the use of these instruments, is mailed free, on application to this office.

Delivery—All the instruments on the catalogue are mailed all over the United States, on receipt of quotation prices, from this office.

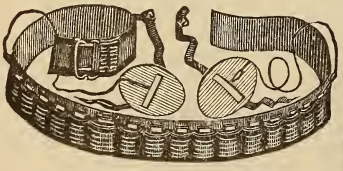
DR. McINTOSH'S ELECTRIC OR GALVANIC BELT.



This Belt is a perfect Galvanic Battery, composed of sixteen cells, placed in pockets on a belt. Each cell is made of hard vulcanized rubber, lined with copper, which constitutes the negative plate. The rubber coating perfectly insulates each cell. The positive plates are of zinc, wrapped in a porous material to absorb the exciting fluid, preventing contact with the copper, and permitting the current to pass from the copper to the zinc. The cells are charged without wetting the belt.

A current selector is so arranged that one or more cells can be used at pleasure. The electrodes are covered similar to ordinary battery electrodes, and connected with the cells by connecting cords. By this arrangement, a current from the belt can be applied to any part of the body. Physicians who have used this belt in their practice do not hesitate to recommend it to the profession.

Our pamphlet on "Medical Electricity," containing a full description of the belt and diseases, with manner of treatment, sent free on application. Address

McINTOSH GALVANIC BATTERY CO.,

1281-1332 **192 AND 194 JACKSON STREET, CHICAGO, ILL.**

Registered COSMOLINE Trade Mark.

Unguentum Petrolei

Prepared by E.F.Houghton & Co. Philadelphia U.S.A.

Put up in 1, 5, 10, 25, 50, and 100-lb. cans. Samples furnished on application. The post-office laws forbid anything of an oleaginous nature being sent through the mail.

In chemical composition, Cosmoline [Unguentum Petrolei] is an oleaginous hydrocarbon, corresponding to the heavy petroleum oils, and containing a large amount of the paraffines and olefines of the formulæ $C_{16}H_{34}$ and $C_{16}H_{32}$. It contains but a small percentage of the paraffines and olefines, corresponding to the formulæ C_7H_{16} and C_7H_{14}, respectively, and the offensive and irritating properties of the crude oil have been carefully removed. In the process of purification, no acids, alkalies, or other chemicals are employed, and no injurious additions of any kind are made to the natural product. The result is a semi-solid, translucent substance, with a faint odor and unctuous feel.

Cosmoline [Unguentum Petrolei] melts at about 100° Fah, (38° Cent.); and boils at about 625° Fah. (329° Cent.); its specific gravity is about 0.875 at 60° Fah.

As it contains no oxydizable or organic matter capable of change by putrefaction or fermentation, and is absolutely without affinity for moisture, it offers to the profession an admirable unguent, which can never decompose, ferment, or become rancid in any climate or temperature.

291 MADISON AVENUE, NEW YORK, February 26th 1878.

I have examined the preparations of Cosmoline as manufactured by E. F. Houghton & Co., Philadelphia, and believe them well adapted to the purposes for which they are designed. As lubricants, and as the bases of simple or medicated ointments, they have a decided advantage over the fixed oils and fatty substances in ordinary use, in that they do not become rancid, and do not acquire irritating qualities from atmospheric exposure. ALFRED C. POST, M.D., LL.D.,
Emeritus Professor of Clinical Surgery in the University of New York, Visiting Surgeon to Presbyterian Hospital, etc.

PHILADELPHIA, July 10, 1880.

MESSRS. E. F. HOUGHTON & CO.:

I have for a number of years made extensive use of Cosmoline [Unguentum Petrolei] and consider it a most valuable article for surgical purposes. Either as a dressing by itself, or as a vehicle for the application of medicaments, it is greatly superior to lard or other fatty matters, especially by reason of its non-liability to change by time or temperature.

Yours truly,
JOHN H. PACKARD, M.D.
1031 WALNUT ST., PHILADELPHIA.

MESSRS. E. F. HOUGHTON & CO.:

I have used extensively Cosmoline [Unguentum Petrolei] both in Dispensary and private practice, with very great satisfaction. As a vehicle in making ointments it is invaluable, and far superior to lard, for the reason that it will not become rancid or undergo chemical change like the latter, when exposed to the atmosphere. I cannot too highly commend it as an application in various skin diseases.

Yours truly, JOHN V. SHOEMAKER, A.M., M.D.,
Physician to the Pennsylvania Free Dispensary for Skin Diseases

208 WEST 34TH ST., NEW YORK.

MESSRS. E. F. HOUGHTON & CO.:

Gents:—I fully appreciate the value of your Cosmoline, or Unguentum Petrolei, and prescribe it frequently in ointments. Fluid Cosmoline I have used constantly for several years, as a lubricant of urethral sounds. It is the cleanest oil I know of for this purpose.

Yours truly, GEO. HENRY FOX.

TO THE MEDICAL PROFESSION.

LACTOPEPTINE.

We take pleasure in calling the attention of the Profession to LACTOPEPTINE. After a long series of careful experiments, we are able to produce its various components in an absolutely pure state, thus removing all unpleasant odor and taste (also slightly changing the color). We can confidently claim that its digestive properties are largely increased thereby, and can assert without hesitation that it is as perfect a digestive as can be produced.

LACTOPEPTINE is the most important remedial agent ever presented to the Profession for Indigestion, Dyspepsia, Vomiting in Pregnancy, Cholera Infantum, Constipation, and all diseases arising from imperfect nutrition. It contains the five active agents of digestion, viz: Pepsin, Pancreatine, Diastase, or Veg. Ptyalin, Lactic and Hydrochloric Acids, in combination with Sugar of Milk.

FORMULA OF LACTOPEPTINE.

Sugar of Milk	40 ounces.	Veg. Ptyalin or Diastase	4 drachms.
Pepsin	8 ounces.	Lactic Acid	5 fl. drachms.
Pancreatine	6 ounces.	Hydrochloric Acid	5 fl. drachms.

LACTOPEPTINE is sold entirely by Physicians' Prescriptions, and its almost universal adoption by physicians is the strongest guarantee we can give that its therapeutic value has been most thoroughly established.

The undersigned having tested LACTOPEPTINE, recommend it to the profession.

COMPRESSED SOLUBLE HYPODERMIC TABLETS.

We have recently given much attention to the preparation of Soluble Compressed Tablets to be used in hypodermic medication. This idea was brought to the notice of the medical profession by H. Augustus Wilson, M.D., of this city, in a paper read before the Philadelphia County Medical Society. His views were based upon carefully made experiments, and were received with much interest. At his instance we undertook to prepare in this manner a number of combinations, which have upon trial proved eminently satisfactory. We therefore feel warranted in offering these articles to the profession as superior in several respects to all other forms for hypodermic purposes.

They are convenient, both to carry and to use; they are accurate, enabling the physician to administer precisely the dose desired; and they are not liable to change by keeping. Solutions are bulky, the bottles are apt to break or to leak, and the liquid often becomes decomposed or deteriorated by time. Powders become inert, from atmospheric influences; the papers become torn and part of the medicament is often lost in the necessary handling. The patented gelatine discs are not quickly soluble, and are sometimes slow in taking effect. Their use is apt to be followed by abscesses, which is rarely the case with crystalloid substances.

An extensive experience of many years in the manufacture of compressed powders (or pills), and the precision and accuracy of our mechanical appliances, enable us to make these articles with a degree of perfection not attainable in any other way, or by any other process. The exact amount specified of each drug is thoroughly incorporated and distributed throughout every tablet. In water at ordinary temperatures a perfect solution may be made in from thirty to sixty seconds.

No extraneous material is employed, except the Sulphate of Sodium, and this only in such proportions as to facilitate solution.

CAUTION.—The dose of Morphia for hypodermic use varies from $\frac{1}{12}$ to $\frac{1}{2}$ of a grain. We would suggest to the profession the necessity for caution. The large doses sometimes recommended—$\frac{1}{2}$, $\frac{3}{4}$ and even 1 grain—are unsafe for the first trial, unless the conditions requiring the injection be exceptional. *In commencing, it should not exceed one-third of that ordinarily administered internally.*

DIRECTIONS.—The syringe is charged with about twenty minims of water, which is poured into a teaspoon or other convenient receptacle; the pellet being dropped in, is crushed with the end of the syringe, to which the needle fits, and after all the lumps are broken the solution is drawn up and forced out three or four times, when usually the whole mass will be entirely dissolved and ready for use.

If warm water is used or the spoon is heated over a lamp or gas jet, a perfect solution is effected in a moment. The tablets may be readily powdered with the blade of a knife, and a solution is even more speedily made in this way.

The following formulæ and combinations embrace all those in general request. Others will be added as the demands of the profession warrant their manufacture.

We claim for our Hypodermic Tablets: Absolute accuracy of dose. Ready and entire solubility. Perfect preservation of the drug.

Their convenience and utility will at once be apparent on examination.

Morphiæ Sulphas 1-2 grain.

Strychniæ Sulphas 1-150 grain.
Sodæ Sulphas 1-4 grain.

We are under many obligations to Professor Roberts Bartholow, who, from his thorough scientific investigations and extensive experience in hypodermic medication, is recognized as the highest authority on the subcutaneous treatment of disease, for suggestions and advice in regard to the care required in preparing our Hypodermic Tablets, also for the kind interest in devising the above formulæ.

His book on "Hypodermic Medication" is well known as the standard work on that subject, and has reached a third edition.

The success of our efforts to furnish the medical profession a much needed improvement in hypodermic medication is due to the happy suggestion of Dr. H. Augustus Wilson and to the kind interest of other medical friends, who have advised us as to the absolute essentials in preparing so delicate and important a series of medicaments.

Recent Introductions to the Materia Medica,

BY

PARKE, DAVIS & CO.,

Manufacturing Chemists, DETROIT, MICH.

CHEKEN. (*Eugenia Cheken, Myrtus Chekan.*) This remedy, a native of Chili, is very popular in that country, where it is employed as an *inhalation* in diphtheria, laryngitis, bronchitis, bronchorrhœa, etc.; as an *injection* in gonorrhœa, leucorrhœa, cystitis, etc.; and *internally* as an aid to digestion, to allay cough, to facilitate expectoration and to stimulate the kidneys. It is also an astringent, and is said to be of great value in hæmoptysis.

Cheken (known also as Chekan and Chequen), was introduced to the profession of England, through a report of results following its use in chronic bronchitis or winter cough, by Wm Murrell, M D., M.R.C.P., Assistant Physician to the Royal Hospital for Diseases of the Chest, and Lecturer on Practical Physiology at the Westminster Hospital. Dr. Murrell's report is very favorable, and he has supplemented it by private advices to us, expressing great satisfaction with the drug in the affections in which he has employed it. He regards it as one of the most valuable introductions of late years, and pronounces it a drug of very superior properties in the treatment of **chronic bronchitis,** acting in this affection both as an anodyne and exerting a favorable influence over the organic changes in the mucous membrane. It is certainly a remedy which merits a thorough trial at the hands of the profession of this country.

SIERRA SALVIA. ("MOUNTAIN SAGE.") *Artemisia Frigida.* Fluid extract of the herb. Dose one to two fluidrachms. **Diaphoretic and diuretic.**

The success which has attended the administration of this drug in "Mountain fever" has suggested its employment in all febrile conditions attended with suppression of the secretions of the skin and kidneys. Its action in fever seems to be twofold, acting directly on the nervous centre, thus inducing a direct lowering of the temperature, and facilitating the radiation of the heat through diaphoresis, which it stimulates. Under its use the kidneys are also aroused to activity, and the solid constituents of the urine proportionately increased. Therapeutic tests have corroborated the opinion formed of it on theoretical grounds.

PERSEA. (ALLIGATOR PEAR.) Fluid extract of the seeds. Dose 30 to 60 minims. This remedy is now for the first time presented to the profession of this country. It is introduced on the recommendation of Dr. Henry Froehling, of Baltimore, Maryland, who, while acting in the capacity of botanist and scientist to an exploring expedition in Southern Mexico, became familiar with the drug, both from reports of the natives and personal experience, as a remedy in **intercostal neuralgia.** The following extract from Dr. Froehling's report will give some conception of the nature of this remedy:

"A common experience among physicians is, that some cases of intercostal neuralgia are very troublesome and obstinate, resisting almost every kind of treatment; particularly is this the case in malarial districts. In such cases I would recommend the fluid extract of Persea seed. In my own person and in every case in which I have employed it, I have been highly gratified with the result. Those of my medical friends to whom I have given samples of the preparation warmly endorse my opinion of it as above, and I cannot but believe that further trial of it will cause it to be regarded as a valuable addition to our list of medicines."

Dr. Froehling also mentions the fact that Persea has been employed with benefit in the expulsion of tapeworm.

COCA. (ERYTHROXYLON COCA.) The evidence in favor of Coca is to prove it a powerful nervous stimulant, through which property it retards waste of tissue, increases muscular strength and endurance, and removes fatigue and languor, due to prolonged physical or mental effort. While indicated in all conditions presenting these symptoms, it has an especial indication in the treatment of **the opium and alcohol habits.** In these deplorable conditions it has been found to possess extraordinary properties—relieving the sense of untold bodily and mental misery which follows the withdrawal of the accustomed stimulus, thus preventing a return to the narcotic, and affording an opportunity for building up the system by the administration of restorative tonics.

We prepare Fluid Extracts of all the above drugs.

PARKE, DAVIS & CO.,

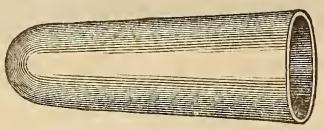
Manufacturing Chemists, DETROIT, MICH.

SOLUBLE MEDICATED

HOLLOW VAGINAL SUPPOSITORIES,

For the Treatment of LEUCORRHŒA, VAGINITIS, VAGINISMUS, etc.,

(See MEDICAL AND SURGICAL REPORTER, Jan. 7, 1882, p. 7.)



CLEAN. LIGHT. RELIABLE. EFFICIENT.

These Suppositories are made of medicated gelatin, moulded in a hollow form. The interior is to be filled with either absorbent, carbolized, or salicylized cotton, so as to act as a support, and keep the Suppository, while melting, in close contact with the vaginal walls. The following advantages are claimed for them:—

FIRST.—Being hollow, the use of a large quantity of inert material is avoided, and there is no soiling of the clothes or person.

SECOND.—The composition of which the suppository is made greatly assists the absorption of the remedy, instead of forming a greasy, slowly permeable medium, like that of a cacao butter suppository.

THIRD.—By the large amount of surface over which the medicating ingredient is distributed, absorption is greatly assisted, and the effect of the remedy very soon obtained.

FOURTH.—By their close contact and prolonged action on the mucous substance of the vagina, a much more powerful and lasting effect is obtained, than by any other similar method of local medication.

FIFTH.—Being light, the suppository remains in the upper part of the vagina, where it is most needed, and does not sink and slip out, as does the old-fashioned article made of cacao butter.

These Suppositories are neatly put up in boxes, *each box containing six of a kind only*, and are medicated as follows:—

1. Sulphate Zinc, – – 5 grs.
2. " " – – 10 "
3. Acetate " – – 10 "
4. Chloride " – – 2 "
5. Hydrastis Ext. Fld., – 10 "
6. Ext. Opium Aq., – – 1 gr.
7. " " " – – 2 grs.
8. Sulphate Morphia, – ½ gr.
9. " " – – 1 "
10. Ext. Belladonna Alc., – ½ "
11. " " " – 1 "
12. Ext. Krameria Fld, – 10 grs.
13. Catechu, Powd, – – 10 "
14. Ext. Krameria Fld., – 10 grs.
    Sulphate Morphia, – ¼ gr.
15. Ext. Hyoscyamus, – – 3 grs.
16. Ext. Hyoscyamus, – – 2 grs.
    Ext. Belladonna, – – ½ gr.
17. Ext. Aconite Rad., Fld., – 2 grs.
18. Carbolic Acid, – – 2 "
19. " " – – 4 "
19½. Iodoform, – – – 5 "
20. " – – – 10 "
21. Sulphate Zinc, – – 10 grs.
    Ext. Opium Aq., – – 2 "
22. Sulphate Zinc, – – 10 "
    Ext. Belladonna Alc., – 1 gr.
23. Sulphate Zinc, – – 10 grs.
    Sulphate Morphia, – – ½ gr.
24. Sulphate Zinc, – – 10 grs.
    Carbolic Acid, – – 1 gr.
25. Sulphate Zinc, – – 10 grs.
    Acet. Lead, – – – 8 "
    Tinct. Catechu, – – 5 "
    Ext. Opium Aq., – – 1 gr.
26. Sulphate Zinc. – – 10 grs.
    Hydrastis F. E., – – 10 "
    Carbolic Acid, – – 1 gr.
    Ext. Belladonna, – – ½ "
27. Formula of Dr. W. Thornton Parker, Plymouth, Mass.
    Sulph-carbolate Zinc, – 10 grs
    Sulphate Morphia, – – ½ gr.
28. Iodoform, – – – 5 grs.
    Ext. Belladonna, – – ½ gr.

SCOTT'S EMULSION

PURE COD LIVER OIL

WITH

HYPOPHOSPHITES OF LIME AND SODA

PERFECT, PERMANENT, PALATABLE.

The well-known virtues of this preparation, that has now been before the profession for a number of years, hardly requires comment from us. But we desire, for the information of those whose attention may not have been directed to it, to present the following facts:—

FIRST.—We use in the manufacture of our Emulsion, Cod-Liver Oil that is prepared expressly for us, and is strictly pure, which is the most important consideration to the Physician.

SECOND.—By our process of Emulsifying, we so thoroughly incorporate the Oil with the Hypophosphite Salts, that the mixture is perfectly homogeneous and remains in that condition, without the slightest separation or change, for years, unless exposed to the air or intense heat.

THIRD.—It is so palatable and easy of digestion that it can be administered to children and persons with most sensitive stomachs without the slightest repugnance, and we are confident, from the results that have been obtained in the use of this preparation, and the flattering testimonials we have received from prominent physicians, that the proper manner of administering Cod-Liver Oil, even to patients that can tolerate the crude oil, is in the form of a palatable and easily digested Emulsion. There are some in the profession who adhere to the use of the plain oil, but, with all due deference, if they will make a trial of our Emulsion, we believe their prejudices will be removed, and they will find it much more beneficial to their patients.

With all the numerous Foods, Cereals and so-called Constructive Agents of uncertain value that are being introduced the physician must sometimes be at a loss to know what to prescribe. But we are assured that the profession will bear us out in the statement that in all pulmonary troubles, especially where the lung tissue is involved, in Scrofulous children and in Anæmic women of consumptive tendencies, as well as in general nervous debility, our combination will produce results, if properly administered, unequaled by any other preparation, and most satisfactory to the physician and patient. We most respectfully ask those who have never prescribed or seen its results to give it a trial, and if you desire to make a personal inspection of it we will be pleased to send a sample by express, prepaid.

FORMULA.—50 per cent. of pure Cod-Liver Oil, 6 grains of the Hypophosphite of Lime, and 3 grains of the Hypophosphite of Soda to a fluid ounce. Emulsified with mucilage and glycerine.

BUCKTHORN CORDIAL

RHAMNUS FRANGULA.

We desire to call the attention of the profession to this preparation, and although they may be familiar with its name and general characteristics, yet, on account of there not being a preparation in the market of uniform strength and quality, may not have a proper appreciation of its value. As far as our experience goes in the various tests made by our medical friends, we can present the German bark, *Rhamnus Frangula*, in the form of our *Buckthorn Cordial*, with perfect confidence that we will secure the encouragement and assistance of the profession in promoting its growth and giving it the position it deserves as a medicine. It seems to be almost a specific for Habitual Constipation and Indigestion, acting mildly but efficiently, without causing the nausea that usually accompanies the use of a cathartic. At the same time producing a tonic effect upon the bowels, so that as the patient recovers, the dose may be gradually decreased until a normal condition takes place. We use great care in the selection of the Bark, as we find it necessary that it should be of the proper age and condition, and carefully exhausted, to secure its true active principle.

We combine it with aromatics in such a manner as to make a pleasant cordial, acceptable to the most sensitive stomach. We shall be very glad to furnish samples free to all physicians, upon application, giving instructions for its use, etc. Prepared by SCOTT & BOWNE

SCOTT & BOWNE'S

PALATABLE CASTOR OIL

IN AN EMULSION.

We respectfully submit the above elegant preparation to the notice of the profession, and desire them to favor us with a trial. So far as it has been tested, it has met with their entire approval; and we believe it is not only destined to take the place of the crude oil, but to be used much more extensively. In our process of emulsifying, it is not only *permanent* and *palatable*, but is deprived entirely of its griping properties. The inestimable nature of Castor Oil as a laxative and cathartic, in the varied intestinal derangements of children, and in Diarrhœa, Colds, etc., is accepted by all, and in the available form in which we present it in a perfectly palatable mixture, deprived entirely of its nauseous, sickening properties, and kindly received by the most sensitive stomach, it must occupy the exalted position it deserves as a medicine. In its administration, it requires very little more than the crude oil, but the experience of the physician will soon guide him in its use. It is put up in 4 oz. bottles, that sell for 25 cents; also in quarts for physicians to prescribe as desired. Samples will be furnished free on application. FORMULA:—*50 per cent. of Pure Cold Pressed Castor Oil*, 15 *per cent. of Chemically Pure Glycerine.* Prepared by

1252-1303eow

SCOTT & BOWNE, Manufacturing Chemists, 108 and 110 Wooster St., N. Y.

NOTES ON THE USE OF PEPSINE IN MEDICINE,

WITH RECOMMENDATIONS REGARDING SACCHARATED AND PURE PEPSINE.

That many of the diseases from which mankind suffer during infant and adult life are caused by malnutrition, there can be no doubt; and the extent to which non-assimilation of the life-giving properties of food interferes with recovery from severe illness, baffling the best directed efforts of the physician, points the necessity for an agent sufficiently potent to replace the deficient principle and aid nature in renewing the degenerated tissues.

Realizing this need, the science of chemistry produced pepsine; and even if medical literature were silent as to testimony of the results obtained, the large amount manufactured and consumed would amply attest its usefulness. But such is not the case, for, after long and careful investigation on the part of practical therapeutists, it is accepted as the remedy *par excellence* in all cases where the gastric juice fails to afford a sufficient amount of ferment for the reduction of aliment to a condition suitable for healthy assimilation.

As the undoubted value of pepsine as a remedial agent became evident, competition in its manufacture was stimulated; and as a natural result, the supply was varied both in purity and strength, and the medical profession, while anxious to avail themselves of its usefulness, were nearly as often misled into erroneous conclusions regarding its efficacy, as satisfied with its results, solely in consequence of their misfortune in not using such qualities as were likely to produce the much-lauded effects. Under these circumstances, a definite understanding regarding reliable preparations is desirable, and of great importance. Pure pepsine, without acid, thoroughly triturated with finely powdered sugar of milk (saccharated pepsine*), will, without doubt, produce the perfect results in all cases where the remedy is exhibited.

Routh, in his "Infant Feeding," gives an account of a result obtained in the case of an infant. "Small, wrinkled, emaciated, four days old, yet presenting almost the appearance of decrepitude. The voice was weak but distinct, and respiration not obstructed. The mother was an excellent nurse, but, although the infant took the breast readily, it constantly threw up every meal. What passed through the bowels was unchanged, although slightly tinged with bile. Diarrhœa was also present." The usual external remedies were applied, but without avail. "Emaciation was on the increase; the child was, in fact, dying." At this stage saccharated pepsine was administered, fifteen grains divided into ten powders, mixed with a little of the mother's milk, and after he second day the diarrhœa ceased and the child appeared much stronger. Twenty days of this treatment and the child was quite well. The eminent author adds: "This is a case which speaks strongly to the convictions. If at so early a period of life, when vitality and digestion were so weak, the artificial pepsine effected a cure, *a fortiori* will it be likely to do so in the case of older children; and so I have found it in practice. The digestive powers are thus assisted, and the food, which before was useless because undigested, readily becomes assimilated."

When administering pepsine, the slight acidity of the natural fluid should be produced as nearly as possible, and, as the necessities differ with the circumstances, it is desirable that the preparation be quite free from acidulation, and the proper dose be given in combination with the requisite amount of dilute acid. Of Kidder & Laird's pure pepsine, five to ten grains for an adult can, if necessary, be taken in an ounce of water, with five drops of muriatic acid.

For infants, however, the saccharated pepsine will be found to yield the most satisfactory results, and the acid should be dispensed with. Quantitatively it represents one-tenth of the strength of pure pepsine; but it has been found to be but about one-fourth less in efficacy. The absence of acid, which would otherwise tend to produce narmful results, will be recognized, when it is considered that even the slight acidity of most cow's milk, when used as food for infants, is sufficient to disagree with them.

With regard to the proper time for its administration, as before or after taking of food, opinions vary, but reason would suggest that about half an hour before eating will afford the ferment a sufficient time to combine with the existing condition of the stomach, and produce the most natural effect upon the food when it has been acted upon by the salivary fluids in its passage to the stomach.

When once the formation of peptone has been established in the stomach, and as strength is acquired, the system will soon respond toward resuming the natural production of its normal fluids. Thus it is that many of the disorders of digestion which accompany severe attacks of fever, phthisis, etc., and also the exceedingly sensitive condition of the stomach caused by vomiting in pregnancy and alcoholism, are controlled, and a natural condition resumed.

Having mentioned the necessity of great care in the selection of pepsine, with reference to its purity and strength, it is proper to say that, even with the superior article above recommended, negative results may be obtained, unless attention is given to the form of its administration. Combinations beyond those above mentioned are not advised, but rather discouraged, as many of the substances usually recommended as efficacious with it are incompatible and render the pepsine inert.

* Saccharated pepsine, free from acid, is prepared by Messrs. Kidder & Laird, No. 83 John Street, New York, who generously furnish samples of both this and the pure pepsine, free of charge, upon application.

1264-1315

HORSFORD'S ACID PHOSPHATE

IN

IMPOTENCE,

Seminal Losses,

Impaired Vitality,

Spermatorrhœa.

We wish to call the attention of the profession to the action of Horsford's Acid Phosphate on the organs of generation, when their power has become impaired through sexual excess, or from senile impotence. It is at once rejuvenating and aphrodisiac in its effect. It appears to restore the secretory organs that have been deranged to their normal condition, giving vigor where there has been debility, and renewed strength where there has been exhaustion.

H. B. STORER, M.D., Boston, says: "I have found Horsford's Acid Phosphate serviceable, in a marked degree, in my treatment of spermatorrhœa."

E. W. JONES, M.D., Taunton, Mass., says: "Horsford's Acid Phosphate was prescribed in a case of nervous prostration from seminal losses, with decided beneficial effect."

C. S. ELLIS, M.D., Wabash, Ind., says: "I prescribed Horsford's Acid Phosphate in a case of nervous debility and weakness of the sexual organs; patient forty-eight years old; he was much benefited."

R. W. ERWIN, M.D., Bay City, Michigan, says: "In some cases of weakness following sexual indiscretions, attended with nervousness, it is useful."

Each case presents its own peculiarities for treatment, but, as a general rule, we would suggest a half teaspoonful of Horsford's Acid Phosphate, in half a tumbler of hot or cold water, or tea without milk, to be taken shortly after each meal, and upon retiring.

Pamphlet giving further details mailed free, on application to the manufacturers.

Physicians who have not had a bottle of the Horsford's Acid Phosphate, and who wish to test it, will be furnished with a sample without expense, except express charges.

RUMFORD CHEMICAL WORKS,

PROVIDENCE, R. I.

1297-1348

An experience of more than a quarter of a century convinces us that sugar, properly applied, is the only correct coating for a pill.

Physicians should be careful to specify Warner & Co., when prescribing or ordering.

Special attention is called to the following selected Recipes prepared for Physicians' Prescriptions.

PIL: PHOSPHORI COMP: (WARNER & CO.) ℞. Phosphori, - - 1-100 gr. Ext. Nuc. Vom. - ¼ gr.

THERAPEUTICS.—As a nerve tonic and stimulant, this form of pill is well adapted for such nervous disorders as are associated with impaired nutrition and spinal debility, increasing the appetite and stimulating digestion.

The practical value of Phosphorus as a therapeutic agent, and its applicability to the cure of disease, and especially in those varied disordered conditions consequent upon OVERWORK, which are characteristic of modern civilization.

Pil. Phosphori Comp. may be taken, one or two pills three times daily, after eating.

Price, per 100, $1.50.

PIL: IODOFORM ET FERRI. (WARNER & CO.) ℞. Iodoform, - - 1 gr. Ferri Redacti, - 1¼ gr.

THERAPEUTICS.—A powerful general tonic and alterative, valuable as a remedy in Anæmia, Scrofula, Neuralgia, Chlorosis, Rheumatism, etc.

Pil. Iodoform et Ferri may be given in doses of from one to two pills, as occasion may require.

Price, per 100, $2.00.

PIL: DIGESTIVA. (WARNER & CO.) ℞. Pepsin Conc't, 1 gr. Gingerine, 1-16 gr. Pv. Nuc. Vom., ¼ gr. Sulphur, ⅛ gr.

THERAPEUTICS.—Useful in relieving various forms of Dyspepsia and Indigestion, and of permanent benefit in cases of enfeebled digestion, where the gastric juices are not properly secreted. It is also a gentle laxative and excellent dinner pill, may be taken one after dinner, or one before each meal, three times daily.

Price, per 100, 75 cts.

PIL: CALCIUM SULPHIDE. (WARNER & CO.) 1-10, ¼, ½ & 1 gr. each.

THERAPEUTICS.—Extremely useful in the treatment of acne, scrofula and cutaneous diseases.

Sulphide of Calcium is usually administered in doses of from 1-10 to ¼ grain four times daily, gradually increasing the dose to one grain six times daily, or according to the progress or severity of the case.

Price, per 100, 1-10 gr. .50; 1-4 gr. .60; 1-2 gr. .75; 1 gr. $1.00.

WARNER & CO.'S PILLS MAY BE OBTAINED FROM ALL DRUGGISTS, OR BY MAIL, ON RECEIPT OF PRICE.

SAVORY & MOORE beg to call the attention of the Profession to some of their Special Preparations, the purity and uniform strength of which are Guaranteed.

PANCREATIC EMULSION,

Prepared in accordance with the direction of the Physician who introduced this purely

MEDICINAL FOOD FOR CONSUMPTION AND WASTING DISEASES.

Pancreatic Emulsion will always take precedence of Cod-Liver Oil, by reason of its introducing the STABLE SOLID FATS INTO THE SYSTEM, instead of the evanescent fluid fats or oils.

Neither Cod-Liver Oil nor EMULSIONS of COD-LIVER OIL can supply the kind of fat necessary for sound and vigorous human life. In addition to this, all the Oily Emulsions are liable to rancidity, and most of them are highly objectionable in consequence of the SAPONIFICATION and ULTIMATE PUTREFACTION, produced by the chemical agents used instead of Pancreatic Juice.

Pancreatic Emulsion (properly so-called), is THE NECESSARY FOOD OF THE CONSUMPTIVE, and the most reliable form of nutriment for counteracting the tendency to Phthisis and other wasting diseases. It presents to the lacteals fat, in essentially the same condition for assimilation and absorption as in a vigorous human frame, and THE AGENT of the important change is THE NATURAL SECRETION of the PANCREAS.

Pancreatic Emulsion may therefore be regarded as Chyle obtained by nature's own process. In certain cases both Cod-Liver Oil and Pancreatic Emulsion are required—one to supply the blood with oil or liquid fat, the other with the more stable solid fats; but it cannot be too strongly urged that both PANCREATIC EMULSION and Cod-Liver Oil are *not to be regarded as Medicines, but as articles of diet*, without which patients, with their defect of health, will as surely starve as healthy persons would if deprived of the most nutritive part of their food.

Pancreatized (Digestive) Cod-Liver Oil. By Pancreatized Cod-Liver Oil, the active digestive principle of the Pancreatic Juice is imparted to it, which renders it in a highly favorable condition for rapid and complete digestion and assimilation, preventing nausea, and largely increasing the beneficial properties of the Oil.

Pancreatine effects the digestion and assimilation of Cod-Liver Oil and Fat, as well as Food generally. This palatable and popular remedy is therefore invaluable to PATIENTS WHO ARE UNABLE TO DIGEST COD-LIVER OIL, and who are thus deprived of its nourishing and invigorating properties.

Pancreatine Wine. An excellent vehicle for taking Cod-Liver Oil and promoting the digestion of it.

Tins, 1*s*, 2*s*, 5*s*, 10*s*.

BUFFALO LITHIA WATER.

FOR

BRIGHT'S DISEASE OF THE KIDNEYS, THE GOUTY OR URIC ACID DIATHESIS, CHRONIC INFLAMMATIONS OF THE BLADDER, ETC.

Dr. Wm. A. Hammond, of New York, Surgeon General U. S. Army (retired), Professor of Diseases of the Mind and Nervous System in the University of New York, etc.

"I have for some time made use of the Buffalo Lithia Water in cases of affections of the Nervous System, complicated with Bright's Disease of the Kidneys, or with a Gouty Diathesis. The results have been eminently satisfactory. Lithia has for many years been a favorite remedy with me in like cases, but the Buffalo Water certainly acts better than any extemporaneous solution of the Lithia Salts, and is, moreover, better borne by the stomach. I also often prescribe it in those cases of Cerebral Hyperæmia, *resulting from mental overwork*—in which the condition called Nervous Dyspepsia exists—and generally with marked benefit."

Dr. J. Marion Sims, of New York, says of this water, in general terms:—

"I have used in my practice the Buffalo Lithia Water, Spring No. 2, for two years past, and have, in many cases, found it highly efficacious."

Dr. Alexander B. Mott, of New York, Professor Surgery, Bellevue Hospital Medical College, Surgeon Bellevue Hospital.

"I have made sufficient use of the Buffalo Lithia Water to be satisfied that it possesses very valuable therapeutic properties. In the Gouty Diathesis, Chronic Inflammation of the Bladder, and other diseases affecting the Urinary Organs, it may be relied on to give the most satisfactory results."

Dr. Hunter McGuire, Richmond, Virginia, late Professor Surgery Medical College of Virginia; Medical Director on the Staff of Gen. T. J. (Stonewall) Jackson; Vice-President of the International Medical Congress; Vice-President American Medical Association.

"Buffalo Lithia Water as an Alkaline Diuretic is invaluable. In Uric Acid Gravel, and, indeed, in diseases generally of the Uric Acid Diathesis, it will be found a remedy of extraordinary potency. I have prescribed it in cases of Old Rheumatic Gout, which had resisted the ordinary remedies, with wonderfully good results. I have also used it in my own case, being a great sufferer from this malady, and have derived more benefit from it than from any other remedy. It has remarkable adaptation in diseases of the Digestive Organs. In that condition especially known as Nervous Dyspepsia, caused by over-mental taxation, where, too, there is an excess of acid in the process of digestion, the happiest results may be anticipated from it.

Dr. Robert Battey, of Georgia, Suggestor of Battey's Operation; Member of the American Medical Association, etc.

"I would state that I have been using the Buffalo Lithia Water No. 2, in my practice for three years past, in cases of Chronic Inflammation of the Bladder, whether induced by STONE, by ENLARGED PROSTATE in the aged, or by neglected GONORRHŒA, and have secured excellent results, which encourage me to prescribe it for the future."

This Water, in Cases of One Dozen Half-Gallon Bottles, $5.00 per Case, at the Springs.

On Sale in Philadelphia by JOHNSTON, HOLLOWAY & CO.; JOHN WYETH & BRO.; FRENCH, RICHARDS & CO.

Springs Pamphlet sent to any address. Springs open from 1st of June to 1st of October.

1297-1348eow

Buffalo Lithia Springs, Virginia.

MURDOCK LIQUID FOOD CO., Boston,

THE ONLY MANUFACTURERS OF

RAW FOOD EXTRACTS IN THE WORLD.

It can be retained by the weakest stomach, when all other food extracts, and even water, is rejected.

Nutritious food, if raw, condensed, and free from insoluble matter, will cure chronic diseases, as it will make blood faster than all preparations or food, and new blood will cleanse the system.

MURDOCK'S LIQUID FOOD is made from Beef, Mutton and Fruits; contains corpuscles; is 12½ per cent. soluble albumen, and free from insoluble matter, drugs, minerals, salts and acids, and can be retained by the stomach when so weak as to refuse food.

Ask your Druggists, or send to us, for Essays read before the American Medical Association, at Richmond, Va., May 6, 1881, on the value of Raw Food Extracts, by Geo. R. Shepherd, of Hartford, Conn., and other Essays and Testimonials from Medical Journals and Physicians that have used Liquid Food, in cases of Consumption, Scrofula, Nervous and General Debility, Dyspepsia, acute and chronic, Constipation, Diphtheria, Intemperance, Cholera Infantum, Infantile Diarrhœa, Post-partum Hemorrhage, Purpura Hemorrhagica with Waxy Liver, Pelvic Cellulitis, Malarial and other Fevers, Chronic Strumous Arthritis, Sclerosis of the Spinal Cord, Senile Gangrene, Perinephritic Abscess, and other diseases of malnutrition. No cases of Cholera Infantum have occurred where it has been used daily, and no lives have been lost from Cholera Infantum where it has been prescribed by a physician. Excellent for Eczema, Diabetes, Rheumatism and Neuralgia.

At the request of any physician who has not tried our Extracts, and would like to, we will deliver sample bottles to the Express in Boston. To any Medical Society wishing to investigate the value of our Extracts, through a committee, hospital, or individual members, we will furnish a supply of Liquid Food equal to a six-ounce bottle for every member present at the time of action. We are induced to do this, knowing that our Extracts are saving life, and that an increased use of them, which will follow after a trial of them, will be the means of saving more lives daily. (*We ask no testimonials of results obtained.*) Raw Extracts are available where cooked ones are not, or if available, contain only one-third as much nourishment.

Liquid Food is in general use at all Hospitals, Infant and Insane Asylums, and Washingtonian Homes, U. S. Navy Hospitals, and by all physicians that have tried it.

If not kept by your Druggist, can be obtained in any of the commercial cities In Philadelphia, by Johnston, Holloway & Co., Boericke & Tafel; in Pittsburg, by A. Kelly & Co.; in Baltimore, by Thomsen & Wirth; or you can order direct and we will pay express. 1 oz., 15 cents; 6 oz., 55 cents; 12 oz., $1.00.

See Philadelphia MEDICAL AND SURGICAL REPORTER, *Boston Medical and Surgical Journal*, and *New York Medical Record*, for chronic cases that were at our quarterly reception to physicians, in Boston, December 30, 1881—cases of Eczema, Rheumatism, Neuralgia, Diabetes, Consumption, and other diseases. If all were not restored to perfect health, they were gaining daily, and able to enjoy life and attend to their business. 1297-1348

MURDOCK LIQUID FOOD CO., BOSTON.

It is the only food that will relieve the Consumptive from Hunger.

It will make Blood faster than all preparations known.

PARIS, 1867. Prize Medal. | 1868. Silver Medal. | 1872. Gold Medal. | 1873, VIENNA. Medal of Merit.

BOUDAULT'S PEPSINE

IN POWDER, also WINE, ELIXIR, SYRUP, PILLS, AND LOZENGES OF PEPSINE.

Since the introduction of Pepsine by Boudault in 1854, BOUDAULT'S PEPSINE HAS BEEN, AND IS STILL CONSIDERED, THE MOST RELIABLE, as is attested by the awards it has received at the Exhibitions of 1867, 1868, 1872, 1873, and in 1876 at the Centennial Exposition in Philadelphia.

IT IS THE ONLY PEPSINE USED IN THE PARIS HOSPITALS.

Careful tests will enable any one to satisfy himself that BOUDAULT'S PEPSINE HAS A DIGESTIVE POWER AT LEAST DOUBLE that of the best Pepsines in the market, and that it is really the cheapest.

It is Sold in 1 ounce, 8 ounce, and 16 ounce Bottles.

Beware of so-called French Pepsines bearing fictitious names, and prescribe Boudault's only.

BLANCARD'S PILLS

OF UNCHANGEABLE IODIDE OF IRON.

Blancard's Pills of Iodide of Iron are so scrupulously prepared, and so well made, that none other have acquired a so well deserved favor among physicians and pharmaceutists. Each pill, containing one grain of proto-iodide of iron, is covered with finely pulverized iron, and covered with balsam of tolu. Dose, two to six pills a day. The genuine have a *reactive silver seal* attached to the lower part of the cork, and a green label on the wrapper, bearing the fac-simile of the signature of

Blancard

Pharmacien, No. 40 Rue Bonaparte, Paris

without which none are genuine.

BEWARE OF IMITATIONS.

E. FOUGERA & AGENTS, NEW YORK. 1297-tf

For Consumption and Wasting Diseases.

HYDROLEINE

Has been proved of the highest value in CONSUMPTION and all WASTING DISEASES, invariably producing IMMEDIATE INCREASE in FLESH and WEIGHT.

FORMULA OF HYDROLEINE.

Each dose of two teaspoonfuls, equal to 120 drops, contains:

Pure Oil,	**80 m. (drops.)**	**Soda,**	**1-3 grain.**
Distilled Water,	**35 m.**	**Boric Acid,**	**1-4 "**
Soluble Pancreatin,	**5 grains.**	**Hyocholic Acid,**	**1-20 "**

DOSE.—Two teaspoonfuls alone, or mixed with twice the quantity of soft water, to be taken thrice daily, with meals.

The principles upon which this discovery is based have been described in a treatise on "THE DIGESTION AND ASSIMILATION OF FATS IN THE HUMAN BODY," by H. C. BARTLETT, PH.D., F.C.S., and the experiments which were made, together with cases illustrating the effect of Hydrated Oil in practice, are concisely stated in a treatise on "CONSUMPTION AND WASTING DISEASES," by G. OVEREND DREWRY, M.D.

In these treatises the Chemistry and Physiology of the Digestion of the Fats and Oils is made clear, not only by the description of a large number of experiments scientifically conducted, but by cases in which the deductions are most fully borne out by the results.

☞ *Copies of these valuable works will be sent free, on application, to all who mention THE MEDICAL AND SURGICAL REPORTER.*

HYDRATED OIL,

HYDROLEINE,

WATER AND OIL,

May be described as partially digested oil, which will nourish and produce increase in weight in those cases where oils or fats not so treated are difficult or impossible to digest. In CONSUMPTION and other WASTING DISEASES the most prominent symptom is EMACIATION, of which the first is the starvation of the fatty tissues of the body, including the brain and nerves. This tendency to emaciation and loss of weight is arrested by the regular use of HYDROLEINE, which may be discontinued when the usual average weight has been permanently regained.

The ordinary so-called emulsions of Cod-liver oil and other fats, WHETHER PANCREATIZED OR NOT, merely remain in the form of a coarse mechanical mixture for a short time after agitation. The digestion of oil having in no sense been artificially produced, still devolves upon those functional powers the deficiency of which is the most prominent symptom in these cases.

HYDROLEINE is not a patent medicine or a secret preparation; the formula is on every bottle. Can be taken by the most delicate stomach; is immediately assimilated.

The permanence and perfection of the emulsion, and the extreme solubility of the HYDRATED OIL, solely prepared and sold by us under the name of HYDROLEINE, is shown by its retaining its cream-like condition as long as the purest Cod-liver Oil will retain its sweetness. Unlike the preparations mentioned, or simple Cod-liver Oil, it produces no unpleasant eructation or sense of nausea, and should be taken in such very much smaller doses, according to the directions, as will insure its complete assimilation; this, at the same time, renders its use economical in the highest degree.

To brain-workers of all classes Hydrated Oil is invaluable, supplying as it does the true brain food.

Economical in use—certain in result Tonic—Digestive and Highly Nutritive.

NEW PRINCIPLE FOR THE ASSIMILATION FAT.

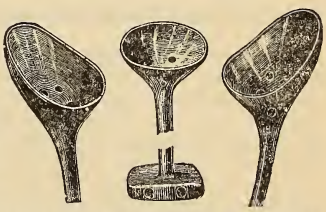
DR. McINTOSH'S
NATURAL UTERINE SUPPORTER.



No instrument has ever been placed before the medical profession which has given such universal satisfaction. The combination is such that the physician is able to meet every indication of Uterine Displacements. Falling Womb, Anteversion, Retroversion and Flexions are overcome by this instrument, where others fail. This is proven by the fact that, since its introduction to the profession it has come into more general use than all other instruments combined.

Among the many reasons which recommend this Supporter to the physician is its self-adjusting qualities. The physician, after applying it, need have no fear that he will be called in haste to remove or readjust it, as is often the case with rings and various pessaries held in position by pressure against the vaginal wall, as the patient can remove it at will, and replace it without assistance.

The Abdominal Supporter is a broad morocco leather belt, with elastic straps to buckle around the hips, with concave front, so shaped as to hold up the abdomen. The Uterine Support is a cup and stem, made of highly polished hard rubber, very light and durable, shaped to fit the neck of the womb, with openings for the secretions to pass out, as shown by the cuts. Cups are made with extended lips, to correct flexions and versions of the womb. The cup and stem is suspended to the belt by two soft elastic rubber tubes, which are fastened to the front of the belt by simple loops, pass down through the stem of the cup and up to the back of the belt. These soft rubber tubes being elastic, adapt themselves to all the varying positions of the body, and perform the service of the ligaments of the womb. The instrument is very comfortable to the patient, can be removed or replaced by her at will, can be worn at all times, will not interfere with nature's necessities, will not corrode, and is lighter than metal. It will answer for all cases of Anteversion, Retroversions, or any Flexions of the womb, and is used by the leading physicians with never-failing success, even in the most difficult cases.

Our Reduced Prices are to Physicians, $6.00; to Patients, $10.00.

Instruments sent by mail, at our risk, on receipt of price, or by Express, C. O. D., with the Express charges for returning the money added.

☞ CAUTION.—Owing to the great sale and popularity of our instrument various and base imitations are sold by unscrupulous parties. In order to get the genuine, it is best to order direct from us.

DR. McINTOSH'S NATURAL UTERINE SUPPORTER CO.,
192 Jackson Street, Chicago, Ill.

Our valuable pamphlet, "Some Practical Facts about Displacements of the Womb," will be sent you free on application. 1281-1332

BEEF PEPTONE,

IN TRANSPARENT GLASSY SCALES,

Containing only the animal or azotized matter of the Beef. Each ounce is equal to 16 ounces of raw beef, easily soluble, and still faster in hot water.

This Beef Peptone is digested from tender, juicy Beef, by the aid of the *Crystal Pepsin,* of my manufacture (Jensen's Crystal Pepsin). Unlike the various BEEF EXTRACTS, this preparation contains all the nutritive constituents of the Beef, in a thoroughly digested state, ready for absorption into the system, while the Beef Extracts are entirely devoid of the chief elements of nutrition, such as the fibrinous, gelatinous and albuminous portions of the Beef, they only consisting of the concentrated saline constituents, with barely a trace of animal matter to keep its consistence. The difficulty so long experienced by the profession throughout the world, in preparing a PEPTONE entirely free from those chemical agents necessary for its manufacture, so as to render it fit for use, is hereby demonstrated to be successfully overcome, as it contains no foreign matter, and will stand the most severely scrutinizing test as to perfectness, also possessing flavor of the Beef, and so palatable as to render it highly agreeable.

Put up in bottles holding One ounce, Eight ounces, and one Pound.

Kept by the Wholesale and Dispensing Druggists in general.

DEPOT—L. WOLFF'S Pharmacy,

Northwest corner Twelfth and Chestnut Streets.

JENSEN'S CRYSTAL PEPSIN,

IN ARTIFICIAL CRYSTALS,

Strictly inodorous and tasteless, and perfectly soluble in water without acid.

THIS PEPSIN, now so popular with the profession, has created an impetus in the consumption of the same, and physicians of the highest standing, who before the introduction of this active PEPSIN, with good reason, entirely abandoned the use of PEPSIN, are now the most eager in prescribing JENSEN'S CRYSTAL PEPSIN, whenever it is indicated, and since the knowledge of its great solvent power (gr. j. of it will dissolve the boiled whites from two to three eggs) has been established even among those susceptible to be great doubters, it has caused itself to be utilized in many novel ways, by the thinking profession; for instance, in substituting morphia, chloral, etc., as a hypnotic, relieving gastric troubles where the above remedies have been prescribed, creating morphine and chloral habits. In removing diphtheritic patches it is successfully used combined with water, glycerine, and muriatic acid, and the same composition, diluted with more water, as a spray in bronchial troubles, dissolving muco-purulent matter, as well as a spray for same in catarrhal affections.

THIS PEPSIN

Has also been used with success in dissolving and evacuating coagulated blood in the bladder, dispensing with surgical operations in such cases. Many other novel applications could be mentioned, if not in want of space. It is found to be FORTY times stronger than saccharated pepsin. One to three grains is an active dose.

KEPT BY ALL DRUGGISTS.

The above preparations are only manufactured and put up by

CARL L. JENSEN, M.D., PH.G.,

865 North 26th Street, Philadelphia, Pa.

No other Wholesale Agents for this Pepsin are longer engaged, than the Wholesale Druggists throughout the United States.

DETROIT MEDICAL COLLEGE.

SESSIONS OF 1881-82.

FACULTY.

THEO. A. McGRAW, M.D., PRESIDENT,
Professor of Principles and Practice of Surgery, and Clinical Surgery.

N. W. WEBBER, M.D.,
Professor of Gynæcology and Obstetrics.

H. O. WALKER, M.D., SECRETARY,
Professor of Orthopædic Surgery, Genito-Urinary Diseases, and Clinical Surgery.

E. L. SHURLEY, M.D.,
Professor of Principles and Practice of Medicine and Laryngology.

J. H. CARSTENS, M.D.,
Professor of Materia Medica and Therapeutics, and Clinical Gynæcology.

J. S. JOHNSON, M.D.,
Professor of Diseases of the Mind and Nervous System.

F. A. SPALDING, M.D.,
Professor of Clinical Obstetrics.

A. E. CARRIER, M.D.,
Professor of Anatomy.

A. S. HEATON, M.D.,
Professor of Clinical Medicine,

EUGENE SMITH, M.D.,
Professor of Ophthalmology and Otology.

E. A. CHAPOTON, M.D.,
Adjunct Professor of Principles and Practice of Medicine.

DAVID INGLIS, M.D.,
Adjunct Professor of Principles and Practice of Medicine.

J. W. ROBERTSON, M.D.,
Lecturer on Laryngology and Physical Diagnosis.

J. E. BROWN, M.D.,
Lecturer on Physiology.

CHAS. S. JENNINGS, M.D.,
Lecturer on Chemistry.

A. F. HOKE, M.D.,
Instructor in Obstetrics.

T. N. REYNOLDS, M.D.,
Instructor in Materia Medica and Therapeutics.

JOHN BOICE, M.D.,
Instructor in Minor Surgery.

O. W. OWEN, M.D.,
Instructor in Experimental Physiology, Histology, and Curator of Museum.

F. W. BROWN, M.D.,
Instructor in Physiology and Morbid Histology.

R. A. JAMIESON, M.D.,
Instructor in Clinical Medicine.

A. S. PARKER, PH.C.,
Instructor in Pharmacy.

A. M. HAWES, M.D.,
Demonstrator of Anatomy.

This College has for its *collegiate year* two sessions.

Regular Session commences Wednesday, September 7th, 1881, and closes March 1st, 1882.

Recitation Term (optional) commences March 15th, 1882, and closes June 14th, 1882.

Graded Course of three terms, of six months each.

PLAN OF INSTRUCTION.

By *Lectures*, *Recitations* and *Clinics*, together with *practical work* in the Anatomical, Physiological, Chemical and Pharmaceutical Laboratories.

Clinics are held *daily*.

Clinical Work in Hospitals and Dispensaries is given to the Senior Class (see Clinics), in *small sections*, under the charge of a *Clinical Teacher*, in all the departments of Medicine and Surgery.

Three Large Hospitals and *two Dispensaries* afford unlimited material for instruction.

ADMISSION.—Candidates for admission are required to pass a preliminary examination, unless satisfactory documentary evidence can be presented, that is equivalent to the standard adopted. (See Catalogue.)

FEES.

Regular Session.—Matriculation, $5.00; Lecture Tickets, $50.00; Hospital Tickets, $10.00
Examination (final), $25.00.

Recitation Term.—$10.00 for those who have attended Regular Session; all others, $25.00, $15.00 of which will be applied on the next Regular Term.

Board and Rooms can be obtained for $3.00 to $5.00 per week, the average being $4.00.

For Catalogue and other particulars, address

H. O. WALKER, M.D., Secretary,
177 Griswold Street, Detroit, Mich.

1274-tf

CRINON'S HÆMOGLOBIN,

The Albuminoid Ferruginous Principle of Blood.

HÆMOGLOBIN is the only physiological chalybeate. Associated as it is with the phosphates of the blood, it forms the most powerful of tonics, and at the same time a most nourishing food. It is especially useful in cases of *Anæmia, Chlorosis, Cachexias, Exhaustion* caused by excess of work, nervous debility, fatigue resulting from parturition and lactation. It replaces entirely liquid blood, which has been recommended and used with success in *Phthisis* and *wasting away.*

It is offered in two forms: In cachets (wafers), 60 of which are contained in a box; combined with chocolate in small squares, 30 of which are in a box; both forms can be sent by mail.

Prepared by C. CRINON, Paris, Pharmacist of the first class, Laureate of the Hospitals of Paris Samples may be obtained by application to

E. FOUGERA & CO., New York, Agents for the U. S

DOCTOR RABUTEAU'S

(Laureate of the Institute of France.)

DRAGEES, ELIXIR & SYRUP OF IRON.

"The experiments made in the hospitals of Paris have demonstrated that *Dr. Rabuteau's Dragees, Elixir and Syrup* regenerate the red globules of the blood with a rapidity never observed with the use of the other ferruginous preparations. These results have been proved by the various *Compt-Globules.*

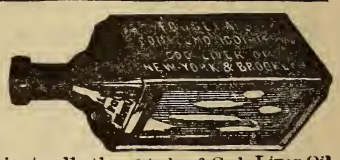
"The ferruginous preparations of *Dr. Rabuteau* do not cause any constipation, and are perfectly tolerated by the weakest persons."—*Gazette des Hospitaux.*

Dr. Rabuteau's Elixir is prescribed when some difficulty is experienced in swallowing the Dragees; it is especially adapted to weak persons, whose digestive functions need strengthening or stimulating.

Dr. Rabuteau's Syrup is especially prepared for children, who take it readily, because of its agreeable taste.

FOUGERA'S COMPOUND IODINISED

COD LIVER OIL.



Since the introduction of this oil in 1858, it has been found to be superior to all other kinds of Cod Liver Oil for the treatment of **General Debility, Consumption, Scrofula, Rickets, etc.**

It possesses not only all the **nourishing** qualities of the best Cod Liver Oil, but also the **tonic, stimulant** and **alterative** properties of **Iodine, Bromine** and **Phosphorus,** which are added in such proportions as to render it therapeutically five times as efficacious as pure Cod Liver Oil.

Through its **increased curative action, FOUGERA'S COD LIVER OIL** will be found to cure disease in a much shorter time than the pure oil; while favorable results will be obtained by its use in many advanced cases when the pure Cod Liver Oil would fail entirely.

FOUGERA'S READY-MADE MUSTARD PLASTERS.

A most useful, convenient, clean, and economical preparation. Not liable to change if kept in a dry place. Made of two strengths. Plasters No. 1, of pure mustard; Plasters No. 2, of one-half mustard. Price 40 cents, the tin box, or tin roll, of 10 plasters each. DIRECTIONS.—Dip the Plaster, or Plasters, a minute or two, in cold water; apply on the part, and cover with a band.

FOUGERA'S COMPOUND ICELAND MOSS PASTE.

(Iceland Moss, Lactucarium, Ipecac and Tolu.)

Used with great success against nervous and convulsive coughs, Whooping Cough, Acute Bronchitis, Chronic Catarrh, Influenza, etc.

Wakefulness, Cough, and other sufferings in Consumption, are greatly relieved by the soothing and expectorant properties of this Paste.

FOUGERA'S IODO-FERRO-PHOSPHATED ELIXIR OF HORSE-RADISH.

This Elixir contains Iodine, Pyrophosphate of Iron, the active principles of antiscorbutic and aromatic plants, and acts as a **tonic, stimulant, emmenagogue,** and a **powerful regenerator of the blood.** It is an invaluable remedy for all constitutional disorders due to the impurity and poverty of the blood. One of the advantages of this new preparation consists in combining the virtues of Iodine and Iron without the inky taste of Iodide of Iron.

E. FOUGERA, Pharmacist,
372 Seventh Street, Brooklyn, L. I.,
SOLE PROPRIETOR & MANUFACTURER OF THE ABOVE,
To whom all special communications should be addressed.

E. FOUGERA & CO.,
30 North William Street, New York.
SOLE GENERAL AGENTS for the ABOVE,
To whom all orders should be addressed.

SOLD BY DRUGGISTS GENERALLY.

JOHNSTONE'S IMPROVED

ADAPTABLE POROUS FELT SPLINTS.

AHL'S SPLINT MANUFACTURING COMPANY, LIMITED,

123 & 125 South Eleventh Street, PHILADELPHIA, PA.

THE ADAPTABLE POROUS SPLINTS, invented and improved by W. H. JOHNSTONE, have been tested extensively in both civil and military practice for a number of years, and have been endorsed and recommended in the most unqualified manner by the celebrated and distinguished Surgeons of America.

Their *porosity* is a peculiar and a valuable property. While the material is firm and insoluble, it permits readily the passage of air and fluids, so that, on one hand, the heat from the inflamed surface, the perspiration, and the morbid exhalations, are not confined, to the detriment of the patient, *as is the case in every other kind of splint*, but pass off freely; and on the other hand, lotions of cold or warm water, medicated or not with weak alcohol, carbolic acid, arnica, tincture, solutions of the sulphites, etc., can be constantly applied without disturbing the dressings. Thus, it will readily be seen, is a most invaluable property when the parts are bruised, lacerated, filled with extravasated blood, or erysipelatous, and give these splints a conspicuous advantage over all others.

From FRANK H. HAMILTON, M. D., Professor of Fractures and Dislocations in the Bellevue Hospital Medical College, author of "A Treatise on Fractures and Dislocations," etc.

Having examined carefully *JOHNSTONE'S IMPROVED ADAPTABLE POROUS FELT SPLINTS*, I feel warranted in recommending them to the Profession as superior to all other manufactured splints now in use. They possess all the essential qualities of a good splint, having firmness, pliability and lightness.

FRANK H. HAMILTON, M. D.,
Prof. Military Surgery and Fractures and Dislocations, Bellevue Hospital Col.

From PROF. D. HAYES AGNEW, Prof. Surgery, University of Penna.

1611 CHESTNUT STREET, PHILADELPHIA, *February 6th*, 1879.

The Adaptable Felt Splints, formerly known as those of Dr. Ahl, with the improvement now made by W. H. Johnstone, which renders them in every way superior to the former, I regard as very excellent appliances in the treatment of fractures.

D. HAYES AGNEW,
Prof. Surgery, University of Pennsylvania.

Cuts illustrating the different Splints constituting a Complete Set.

SPECIAL NOTICE TO THE PROFESSION AND TRADE.

Our *policy* heretofore in the introduction of JOHNSTONE'S IMPROVED ADAPTABLE POROUS FELT SPLINTS, has been to confine the sales and business negotiations directly to the Doctors themselves, declining in every case to sell our goods through Dealers; we having assured the Profession generally, both through our agents and catalogues, that *JOHNSTONE'S IMPROVED SPLINTS* could only be obtained by subscription.

We wish to announce, that owing to the large demand for our goods and the constant importunity on the part of *Surgeons* everywhere to place our Splints on sale with their Instrument Dealer or Druggist, to afford them greater convenience and facility in obtaining the pieces in duplicate, we have at last acceded to that request, and hereafter *JOHNSTONE'S CELEBRATED FELT SPLINTS* can be obtained at most dealers in Instruments and Drugs throughout the United States, at the same price which they were heretofore sold, viz:

A complete set, embracing fifty (50) pieces—twenty-five for adults and twenty-five for children—is thirty ($30) dollars. Extra or duplicate pieces can always be obtained from your DEALER, at one dollar each.

JOHNSTONE'S CELEBRATED SPINAL JACKET, for Curvatures and Deformities, have met with unparalleled success, and, from their merit, secured the unqualified endorsement and approbation of our celebrated orthopædic specialists, and particular expression of gratitude from the patients who are wearing them. For full information, send for Descriptive Circulars.

Should your Instrument dealer fail to have a supply of our Splints, and decline to carry them in stock, orders sent to us will receive prompt attention.

AHL'S SPLINT MANUFACTURING CO., Limited.
W. H. JOHNSTONE, Manager.

N. B.—If the Instrument Dealers of Philadelphia decline to supply its Physicians with our JOHNSTONE'S FELT SPLINTS on call, they will be furnished and delivered by us to any part of the city, at any time, on receipt of the price, viz.

$1.00 each.

JOHNSTONE'S SPINAL FELT JACKET, any size, - - - - $25.00
JOHNSTONE'S LACED SPLINT FOR THE LIMBS, any size, - - - 10.00

JOHNSTONE'S MODIFICATION OF DR. R. J. LEVIS' SPLINT

For the FRACTURE OF THE LOWER END OF THE RADIUS.

We make a Palmar and Dorsal Splint for each arm, from Felt, beautifully moulded to adjust to any size arm.

THE DE QUINCEY HOME,

Fort Washington, **New York City.**

A Private Asylum for the Treatment of the Opium, Morphine, Chloral, Chloroform and Hashisch Habits, Nervous Diseases and Inebriety.

Drs. H. H. Kane
and
W. H. Vittum,
in charge.

Consulting Physicians.

Prof. Wm. A. Hammond,
Prof. T. Gaillard Thomas,
Dr. Edward C. Spitzka,
Dr. Daniel M. Stimson,
Dr. Edward T. Ely,
Dr. G. H. Wynkoop,
Dr. Andrew H. Smith.

Situated upon a high hill that commands a splendid view of the Hudson and Harlem rivers, Spuyten Duyvil Creek, and the beautiful country for miles around; surrounded by ample grounds and magnificent drives; in easy communication with the city by means of the Sixth and Ninth Avenue Elevated and the Hudson River Railroads; away from the dust, noise, crowding and malaria of the city; with hot and cold water in every room, furnace and grate-fire heating, croquet, horses and carriages, boats and fishing, an excellent *cuisine*, trained nurses and careful medical attendance, it possesses unequaled advantages for the treatment of cases of this kind.

The plan of treatment pursued in the cure of opium, morphine and chloral takers is that of *rapid reduction*, which possesses all the advantages, and none of the dangers of Levenstein's *sudden deprivation*, or the prolonged agony of *gradual reduction*. Each case is studied and treated in accordance with its peculiarities and the idiosyncrasies of the patient, no set plan of treatment being pursued, at the expense of the person's health or comfort.

Our Home, furthermore, offers special facilities for the treatment by *rest, diet, and massage*, according to the plan of Weir Mitchell, of that large class of nervous diseases so commonly met with in ladies suffering from uterine troubles. This plan of treatment has been specially studied, and nurses competent to carry out its provisions in every detail will be furnished. For further particulars, etc., address 1299-1350

Drs. KANE and VITTUM, De Quincey Home, Fort Washington, New York City.

TANRET'S PELLETIERINE.

For the TREATMENT of TAPE-WORM (Tænia Solium).

This new Tænifuge, the Active Alkaloid of Pomegranate Bark, has of late come into extensive use in France, for the treatment of Tape-worm (Tænia Solium). The results of numerous experiments with it at the Marine Hospitals of Toulon, St. Mandrier, etc., and in the Hospitals of Paris, St. Antoine, La Charité, Neckar, Beaujon, etc., have all been most satisfactory. Doctor Dujardin Beaumetz, Member of the Academy of Medicine, and Prof. Laboulbene, in their report to the Society of Therapeutics, have given it their unqualified approval, after the most searching experiments. This preparation is pleasant to administer, and if certain preliminaries are observed success will be insured.

PELLETIERINE is prepared by Mr. CHAS. TANRET, Pharmacien de First Class, 64 Rue Basse du Rempart, Paris. 1242eow-tf

McINTOSH'S COMBINED

Galvanic AND Faradic Battery.

THIS CELEBRATED BATTERY COMBINES BOTH THE GALVANIC AND FARADIC CURRENT,

Which can be used separately or combined. Any strength and intensity desired can be obtained for use in Electro-therapeutics. THIS BATTERY is constructed on an IMPROVED PLAN, as follows: The zinc and carbon plates are arranged in couples, securely clamped to hard rubber plates, with thumb screws. These screws are also used for binding posts. All the connections are positive. The cells are made in sections of six, of hard rubber, with hard rubber drip cup. The following points of excellence render our Batteries superior to others:

1. They combine the only Portable Galvanic and Faradic Battery in one case.

2. They weigh one-half less than other Batteries of the same number of cells.

3. The cells are made in sections of six, of one solid piece of hard, vulcanized rubber; by this arrangement they can be emptied, cleaned and filled as easily and quickly as one cell, and will not crack, break or leak.

4. A hard rubber drip cup is placed by the side of each section of cells, to receive the zinc and carbon plates when removed from them. By this arrangement we avoid the use of absorbent materials and soiling the Battery

5. The Hydrostat is perfect. The rubber plates which hold the elements project over on one side enough to cover the cells when the zinc and carbon plates are placed in the drip cups. The under side of this projection is covered with thick, soft rubber, which is securely clamped to the cells sections, and makes them water tight.

6. This is the only Battery in which the zinc and carbon plates can be kept clean by simply rinsing them.

7. A zinc or carbon plate can be removed by simply loosening a binding post; and all parts of the Battery can be duplicated, as like parts are made exactly alike. We will be pleased to send circulars and our illustrated catalogue, giving full information, price, etc., free, upon application.

McINTOSH GALVANIC BELT AND BATTERY CO.,

1281-1332 **Nos. 192 and 194 Jackson Street, CHICAGO, ILL.**

TO PHYSICIANS.

IODIA.

FORMULA.—Iodia is a combination of Active Principles obtained from the Green Roots of STILLINGIA, HELONIAS, SAXIFRAGA, Menispermum, and Aromatics. Each *fluid* drachm also contains *five* grains IOD.-POTAS. and *three* grains PHOS.-IRON.

DOSE.—One or two *fluid* drachms (more or less, as indicated) *three* times a day, before meals.

IODIA is the *Ideal* Alterative. It has been LARGELY PRESCRIBED in Syphilitic, Scrofulous, Cutaneous, and Female Diseases, and has an Established Reputation as being the best Alterative ever introduced to the Profession.

Ex-President Illinois State Medical Society.

BROMIDIA.

FORMULA.—Every *fluid drachm* contains fifteen grains EACH of pure Brom.-Potas. and *purified* Chloral, and one-eighth grain EACH of *gen. imp. ext.* Cannabis-Ind. and Hyoscyam.

DOSE.—*One-half* to *one fluid drachm* in WATER or SYRUP, every hour until sleep is produced.

BROMIDIA is *the* Hypnotic *par excellence*. It produces refreshing sleep, and is *exceedingly* valuable in Sleeplessness, Nervousness, Neuralgia, Headache, Convulsions, Colic, etc., and will relieve *when opiates fail. Unlike* preparations of opium, *it does not lock up the secretions.* In the Restlessness and Delirium of Fevers *it is absolutely invaluable.*

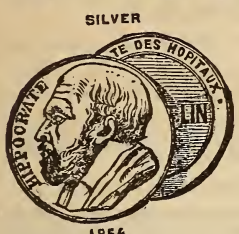
MATHEY-CAYLUS' GLUTEN



CAPSULES

OF

PURE COPAIBA AND OTHER MEDICINES.

Adapted and recommended for the cure of recent or chronic Gleets, Fluor Albus, etc., etc.

The MATHEY-CAYLUS' CAPSULES, *coated with gluten*, present the most perfect mode for administering Copaiba, Cubebs, Norway Tar, Turpentine, and other remedies, the disagreeable odor and taste of which are often a hindrance to their use. This mode of preparing capsules, which has been approved by the Academy of Medicine, has been recommended in their clinical lectures by eminent Professors in the hospitals of Paris, as well as in those of New York and London.

By the first physicians of the hospitals of Paris, London, and New York.

SPECIAL ADVANTAGES OF MATHEY-CAYLUS' GLUTEN CAPSULES.—Being formed of thin, transparent, and readily assimilated coating, they so cover and disguise the medicine to be given, that it can be taken without disgust, but with ease. In this respect, they differ widely from the gelatine capsules, which have a hard, thick coating, which swells beyond measure, in the stomach, are hard to be swallowed, and what is of great importance, they create disturbance in the digestive functions.

The special advantage of the coating of gluten consists in the fact that, notwithstanding its extra thinness, and although it softens under the action of the gastric juice, it can pass the stomach without breaking, and only in the intestines is the medicinal matter liberated; this accounts for the fact that Mathey-Caylus' Capsules never cause the nausea, eructations, and dyspeptic symptoms, which are complained of by many persons using other preparations.

Finally, their regular ovoid form, which is so favorable to swallowing, their pleasant appearance, which dispels all disgust, and the advantage of being entirely free from taste and smell, recommend the use of these capsules even to the most delicate persons.

Thankful to the Medical Profession for the liberal patronage heretofore bestowed upon us, we hope that they will continue their favors, and we are convinced that they will never have any reason to regret the generous welcome they have given to our preparations.

MATHEY-CAYLUS' CAPSULES are never sold, except in bottles having the following inscription printed in the glass: MATHEY-CAYLUS A PARIS. And each bottle contains 64 capsules, making them the cheapest capsules in the market.

The following different kinds of Mathey-Caylus' Gluten Capsules are now offered:

COPAIBA AND TANNIC ACID,
COPAIBA AND S. N. OF BISMUTH,
COPAIBA AND CATECHU,
COPAIBA AND MAGNESIA,
COPAIBA, CUBEBS AND ALUM,
COPAIBA, CUBEBS AND RHATANY,
COPAIBA AND RHATANY,
COPAIBA AND CITRATE OF IRON,
COPAIBA AND CUBEBS,
COPAIBA PURE,
COPAIBA, CUBEBS AND CARB. OF IRON,
VENICE TURPENTINE, NORWAY TAR, PURIFIED,
CUBEBS AND TURPENTINE,
CUBEBS AND TANNATE OF IRON,
CUBEBS AND ALUM,
CUBEBS PURE,
COPAIBA AND MATICO,
COPAIBA, IRON AND OIL OF SANDAL,
COPAIBA AND OIL OF SANDAL,
COPAIBA, PEPSIN AND BISMUTH,
COPAIBA AND TAR,
COPAIBA, CUBEBS AND OIL OF SANDAL.

HOLLOW SUPPOSITORIES.

WITH STOPPERS. ALL MADE FROM PURE BUTTER OF COCOA, ONLY.

Aural, Nasal, Rectal, Urethral, Cystic, Vaginal, Intra-Uterine, and Veterinary Suppositories.

The object of this invention is to supply Physicians, Druggists, Veterinary Surgeons, and others, with HOLLOW SUPPOSITORIES, into which they can put any kind of medicine or nutriment, thus producing firm, smooth, and evenly medicated Suppositories, that are cheaper and more reliable than those made by the old method.

RECTAL ABSORPTION.

"The mucous membrane of the rectum, like that of other portions of the alimentary canal, possesses all the requisites, more or less, for the exercise of absorption."

Liebig states that a strong solution of common salt disappeared so completely in the rectum, that an evacuation one hour afterward was found to contain no more than the usual portion of salt.

Many medicinal substances act more energetically when applied to the rectum than when received into the stomach.

Baron Dupuytren said: "The rectum *absorbs*, but does not *digest*. The medicinal agent," he says, "owing to the absence of digestion, passes more directly, more purely, and more surely to its destination, than the same medicine does when taken into the stomach."

M. Orfila asserts that those medical agents which operate through the medium of absorption, such as opium, tobacco, etc., are much more active by the rectum than by the stomach.

Dr. J. H. Scorff reports four cases where he was successful in removing the vomiting of pregnancy, by introducing 20 grains of chloral into the rectum, night and morning. He only found it necessary to use the remedy three or four times.

Chloral is the remedy *par excellence* in the ravings of delirium tremens, and in cases of delirium and insomnia combined; also in infantile convulsions and attacks of laryngysmus stridulus.

Dr. Hickman reports a case of typho-malarial fever, which chloral was found to control in a happy manner. The chloral was introduced per rectum.

"REST TO THE STOMACH,"

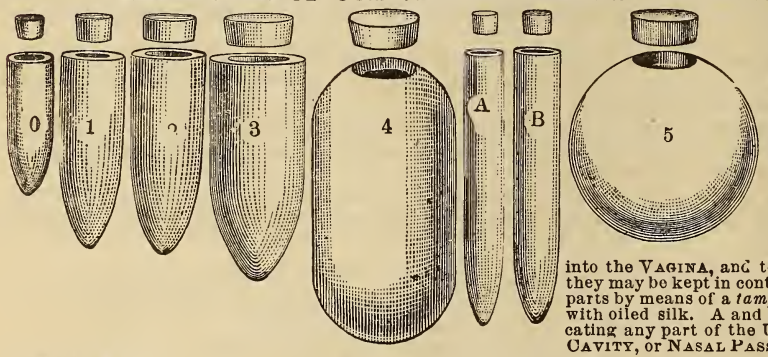
says Mr. Theodore Williams (in London *Lancet*, October 24th, 1874), is of the highest importance in some of the diseases of this organ. In such cases we possess in the rectum an effective second stomach, which, if it does not afford us the pleasure of digestion, spares us many of its pains."

Nutritious substances are taken up by the absorbents, and thus find their way into the economy, and produce their assimilative and nutritive effect. Haller demonstrated the fact that digestion can and does take place in the alimentary canal. He had the greatest confidence in the absorptive and digestive powers of the rectum to sustain life indefinitely.

HYPODERMIC MEDICATION.

Dr. William Bodenhamer says: "This now very common and often misused method is of great value in numerous cases, yet I am decidedly of the opinion that rectal medication is of greater importance; indeed, it is greatly preferable in many instances, being much less dangerous, much more convenient and simple; and the remedies, too, act through this medium with almost equal celerity. But very few remedies can be used hypodermically in comparison to those which can be used by the rectum."

EXACT SIZES OF OUR VARIOUS HOLLOW SUPPOSITORIES.



Size 0 is for children. It may also be used for the EAR and in the NASAL PASSAGES. Nos. 1, 2 and 3 are RECTAL SUPPOSITORIES. Nos. 3 and 4 may be used for introducing nutriment into the system, *via rectum*. No. 4 is also a VAGINAL SUPPOSITORY. No. 5 is a "SPHERICAL HOLLOW SUPPOSITORY," to introduce remedies into the VAGINA, and to the *os uteri*, where they may be kept in contact with the diseased parts by means of a *tampon* of cotton covered with oiled silk. A and B are used for medicating any part of the URETHRA or UTERINE CAVITY, or NASAL PASSAGES.

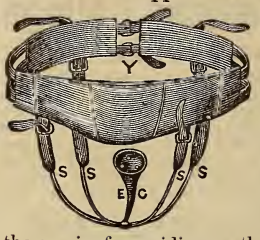
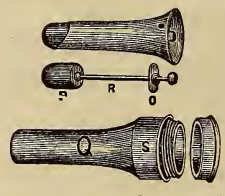
GYNECOLOGICAL TREATMENT SIMPLIFIED.

Abdominal Supporter and Pessary combined, for $5.50, or on Elastic, Waist, Belt, (*Economy*) only $4.50. Deep cups, graduated every one eighth inch, from 1¼ to 2¼ inches, outside diameter. Simple, harmless, and manageable by the patient. The cups are moulded leaning on the stems, to obviate the cervix from riding on the anterior edge—S. S., are pure elastic gums.





Speculumns.—The Series in the Hard Rubber Case Q, consists of four graduated speculums and conductors R, weight but 12 oz.; Price, $12.00; Single, with conductor, $2.50 each. The slight taper and the flesh color enamel give a view as clear as if the cervix was located externally.

Exchanges.—Single Speculums received back when a full case is desired, and all the hard rubber parts are exchanged throughout the catalogue at cost, without limit of time; only cost of needed repairs charged.

Full Catalogue.—Includes "Bird's eye view" of Gynecology. Its Treatment Simplified, and illustrates over 150 in size and style uterine instruments.

All obtained through this Office, and delivered free when pre-paid.

DR. McINTOSH'S ELECTRIC OR GALVANIC BELT.

This Belt is a perfect Galvanic Battery, composed of sixteen cells, placed in pockets on a belt. Each cell is made of hard vulcanized rubber, lined with copper, which constitutes the negative plate. The rubber coating perfectly insulates each cell. The positive plates are of zinc, wrapped in a porous material to absorb the exciting fluid, preventing contact with the copper, and permitting the current to pass from the copper to the zinc. The cells are charged without wetting the belt.

A current selector is so arranged that one or more cells can be used at pleasure. The electrodes are covered similar to ordinary battery electrodes, and connected with the cells by connecting cords. By this arrangement, a current from the belt can be applied to any part of the body. Physicians who have used this belt in their practice do not hesitate to recommend it to the profession.

Our pamphlet on "Medical Electricity," containing a full description of the belt and diseases, with manner of treatment, sent free on application. Address

ANGLO-SWISS

MILK FOOD

FOR INFANTS and INVALIDS.

RECOMMENDATIONS
OF THE STRONGEST KIND
FROM PROMINENT
PHYSICIANS.

CEREALS AND MILK
SCIENTIFICALLY PREPARED.
IN POUND CANS OF
FULL WEIGHT.

Closest Resemblance to Mothers' Milk.

See Analysis on Every Can.

THIS IS NOT A SHORT WEIGHT INFANTS' FOOD.

"The starchy constituents ordinarily objectionable in prepared Foods are, in the Anglo-Swiss Milk Food, in a great degree, converted into soluble and more easily digestible Dextrine and Sugar; effecting in the food itself changes which, in other foods, are left to the digestive organs to accomplish.

"*A simple test:* Mix one part Food to three parts cold water—a smaller proportion of water than for use—occupy five to eight minutes in bringing it slowly to boiling point; boil one minute; the result is not a pulp or pap, but a liquid resembling milk. Submit other prepared foods to same test, and you obtain a mucilaginous paste. A heavy, pasty appearance should not be accepted as evidence or measure of nutriment; it only betrays the raw or unconverted starch contained." *☞See pamphlet at Drug Stores.*

VINUM DIGESTIVUM (PROCTER.)

DIGESTIVE WINE, used with unvarying success by so many of our prominent physicians for the last three years, is offered with increased confidence to the profession as a sure and rapid means for the exhibition of the artificial digestive function. The nausea of pregnancy and sea sickness are greatly alleviated or entirely relieved by its use. One fluid-ounce dissolves 500 grains of coagulated albumen. One or two teaspoonfuls may be given, or varied as desired. We would suggest that the above title be used in prescribing. 1257-1308, 1y.

Manufactured by **WM. PROCTER, Jr., CO.,** S. W. Cor. 9th and Lombard Sts., Phila.

Registered COSMOLINE Trade Mark.

Unguentum Petrolei

Prepared by E.F.Houghton & Co. Philadelphia, U.S.A.

Put up in 1, 5, 10, 25, 50, and 100-lb. cans. Samples furnished on application. The post-office laws forbid anything of an oleaginous nature being sent through the mail.

In chemical composition, Cosmoline [Unguentum Petrolei] is an oleaginous hydrocarbon, corresponding to the heavy petroleum oils, and containing a large amount of the paraffines and olefines of the formulæ $C_{16}H_{34}$ and $C_{16}H_{32}$. It contains but a small percentage of the paraffines and olefines, corresponding to the formulæ C_7H_{16} and C_7H_{14}, respectively, and the offensive and irritating properties of the crude oil have been carefully removed. In the process of purification, no acids, alkalies, or other chemicals are employed, and no injurious additions of any kind are made to the natural product. The result is a semi-solid, translucent substance, with a faint odor and unctuous feel.

Cosmoline [Unguentum Petrolei] melts at about 100° Fah. (38° Cent.); and boils at about 625° Fah. (329° Cent.); its specific gravity is about 0.875 at 60° Fah.

As it contains no oxydizable or organic matter capable of change by putrefaction or fermentation, and is absolutely without affinity for moisture, it offers to the profession an admirable unguent, which can never decompose, ferment, or become rancid in any climate or temperature.

291 MADISON AVENUE, NEW YORK, February 26th 1878.

I have examined the preparations of Cosmoline as manufactured by E. F. Houghton & Co., Philadelphia, and believe them well adapted to the purposes for which they are designed. As lubricants, and as the bases of simple or medicated ointments, they have a decided advantage over the fixed oils and fatty substances in ordinary use, in that they do not become rancid, and do not acquire irritating qualities from atmospheric exposure. ALFRED C. POST, M.D., LL.D.,
Emeritus Professor of Clinical Surgery in the University of New York, Visiting Surgeon to Presbyterian Hospital, etc.

PHILADELPHIA, July 10, 1880.

MESSRS. E. F. HOUGHTON & CO.:

I have for a number of years made extensive use of Cosmoline [Unguentum Petrolei] and consider it a most valuable article for surgical purposes. Either as a dressing by itself, or as a vehicle for the application of medicaments, it is greatly superior to lard or other fatty matters, especially by reason of its non-liability to change by time or temperature.

Yours truly,
JOHN H. PACKARD, M.D.
1031 WALNUT ST., PHILADELPHIA.

MESSRS. E. F. HOUGHTON & CO.:

I have used extensively Cosmoline [Unguentum Petrolei] both in Dispensary and private practice, with very great satisfaction. As a vehicle in making ointments it is invaluable, and far superior to lard, for the reason that it will not become rancid or undergo chemical change like the latter, when exposed to the atmosphere. I cannot too highly commend it as an application in various skin diseases.

Yours truly, JOHN V. SHOEMAKER, A.M., M.D.,
Physician to the Pennsylvania Free Dispensary for Skin Diseases

208 WEST 34TH ST., NEW YORK.

MESSRS. E. F. HOUGHTON & CO.:

Gents:—I fully appreciate the value of your Cosmoline, or Unguentum Petrolei, and prescribe it frequently in ointments. Fluid Cosmoline I have used constantly for several years, as a lubricant of urethral sounds. It is the cleanest oil I know of for this purpose.

Yours truly, GEO. HENRY FOX.

NEW MEDICINAL AGENTS

WORTHY OF THE

Attention of Therapeutists.

JAMAICA DOGWOOD.

[Piscidia Erythrina.]

This remedy, introduced by us to the profession of the United States, has already largely taken the place of opium, as an anodyne and narcotic. It obtunds sensibility, and allays nervous irritability, inducing sleep, without "locking up the secretions" or producing the constipation and gastric disturbance following the use of opium. It has been submitted to a sufficient physiological test, and accorded a sufficient therapeutic trial to test these claims, and it may now be regarded as a remedy of fixed and decided therapeutic properties.

QUEBRACHO.

[Aspidosperma Quebracho Blanco.]

The experiments of Penzoldt, of Germany, justified that observer in speaking of quebracho as an article supplying a place in medicine hitherto unoccupied, and making it, literally, a "long felt want." He found it to increase the depth of inspiration, and to facilitate oxygenation of the blood in dyspnœa from whatever cause. It is thus a desideratum in the treatment of emphysema, capillary bronchitis, pneumonia, asthma, etc. Its use in the hands of physicians in this country has corroborated this estimate of its properties.

EXTRACT OF DUBOISIA.

[Duboisia Myoporoides.]

Duboisia, the new mydriatic, has been found to be more prompt than atropia as a dilator of the pupil and as a paralyzer of the muscles of accommodation, while at the same time it is less prone to cause the conjunctivitis, cerebral disturbance, dryness of the throat, etc., so intimately connected with the use of the belladonna alkaloid. It is now largely employed by ophthalmologists, and bids fair to almost, if not entirely, supplant atropia in eye practice.

We are in receipt of a large direct importation of this rare drug.

MANACA.

[Franciscea Uniflora.]

This drug, although long officinal in the Brazilian Dispensatories, was unknown to the profession of this country until introduced by us, a little over a year ago. It is highly esteemed in Brazil as an alterative, and in the damp, shady forests of that country, where rheumatism is very prevalent, it is regarded as a valuable anti-rheumatic, particularly in the chronic and subacute varieties of the affection.

Believing it to be an article of much value in these forms of rheumatism, we ask for it a thorough trial.

—TO THOSE DESIRING FULLER INFORMATION ON THE ABOVE DRUGS,—

We will furnish Descriptive Circulars Free, on application.

PARKE, DAVIS & CO., Detroit, Mich.,

MANUFACTURING CHEMISTS.

IMPORTANT ADDITIONS TO

McKESSON & ROBBINS' PILLS AND GRANULES.

McK. & R. ACONITIA CRYSTALS (Duquesnel's), 1-200 gr., per 100, 60c.
The most uniform and reliable preparation of Aconitia, but very powerful, and should be prescribed with caution as regards amount and frequency of dose.

McK. & R. ALOIN AND STRYCHNINE { Aloin, 1-5 gr. / Strychnine, 1-60 gr. } . . . per 100, 60c.
A tonic laxative granule, prescribed for chronic constipation where a painless peristaltic action is desired. Especially useful in the treatment of the aged. Since introducing this formula to the profession and adding the granules to our list our sales have been exceedingly large. We have received numerous letters and reports from physicians speaking in the highest terms of the results of their administration, and thanking us for introducing this granule to their notice. It is necessary to specify "McK. & R."

McK. & R. ALOIN, STRYCHNINE AND BELLADONNA, ... per 100, 60c.
The same formula as the preceding, with the addition of 1-8 gr. Ext. Belladonna to each granule.

McK. & R. ATROPIA AND MORPHIA, No. 1. { Atropia 1-300 gr. / Morphia, 1-24 gr. } . . per 100, 75c.

McK. & R. ATROPIA AND MORPHIA, No. 2. { Atropia, 1-60 gr. / Morphia, 1-8 gr. } . . per 100, $1.00.

McK. & R. CINCHONIDIA AND CAPSICUM. { Cinchonidiæ Sulph., 2 grs. / Pulv. Capsici, 1-2 gr. } . . per 100, 1.50.

McK. & R. DIURETIC. { Saponis Pulv., 1 1-2 grs. / Sodii Carb. Exsic., 1 1-2 grs. / Ol. Juniperi Bacc., 1-16 gr. } . . . . per 100, 60c.

McK. & R. ERGOTIN PURIF., 1 gr. (each pill = 10 grs. Ergot of Rye), . 90c.
" " " 3 grs. (" " = 30 grs. " "), . $1.60.
" " " 5 grs. (" " = 50 grs. " "), . 2.40.
We manufacture our Purif. Ergotin with great care, from the best quality of fresh, selected Ergot, and it contains in the most potent form all the active constituents of Ergot of Rye, each grain representing 10 grs. Ergot, and each 3 gr. pill being equal to half a teaspoonful of officinal fluid extract. The value of Ergotin, in the place of the crude drug and the Fluid Preparations, is conceded, and it is being largely administered both in this country and in Europe. It has taken a prominent place in the treatment of Neurotic diseases. Many of our most reliable practitioners, and particularly those of extended experience in Gynæcology, assert that they have never found a preparation of Ergot in which, by experience, they felt as much confidence as in McKesson & Robbins' Ergotin Pills The advantages of prescribing it in this form are obvious. (Dose, 2 to 9 grs.)
WE OFFER OUR ERGOTIN, PREPARED SPECIALLY FOR HYPODERMIC USE, IN ONE OUNCE BOTTLES. SPECIFY McK. & R.'S FOR HYPODERMIC USE, AS WE ALSO MANUFACTURE AN ERGOTIN AFTER BONJEAN'S FORMULA.

McK. & R. ERGOTIN AND ALOIN. { Ergotin Purif., 1 gr. / Aloin, 1-2 gr. } . . . per 100, $1.25.
The use of Ergotin is rapidly increasing in scope. This pill is recommended for its peristaltic action on the mucous membrane.

McK. & R. ERGOTIN AND CANNABIS INDICA. { Ergotin Purif., 1 gr. / Ext. Cannab. Indic, 1-2 gr. } . per 100, $1.25.
Where a continued treatment with Ergot is necessary, the addition of Cannab. Indica is frequently preferred, and many physicians who have employed this combination for sleepless cases of mania, hemicrania, and congestive nervous conditions that follow uterine disorders of women, give the quality of these Extracts a very satisfactory mention. Dose, 1 to 3.

McK. & R. EXTRACT CASCARA SAGRADA, 2 grs. . . . . per 100, 40c.
Recommended in bilious affections.

McK. & R. GLONOINUM (Nitro Glycerin) 1-100 gr., ... per 100, 60c.
Pronounced beneficial in Neuralgic Headaches.

McK. & R. HELONIAS COMPOUND, 2 grs. { Helonin, Viburnin, aa, 1-8 gr. / Caulophyllin, 1-4 gr. / Mitchella, rep., 1 1-2 grs. } . . per 100, 80c.

McK. & R. IODOFORM AND OPIUM, { Iodoformum, 1 gr. / Pulv. Opii, 1 gr. } . . . . per 100, $1.50.
Useful in chronic diarrhœa.

McK. & R. LAXATIVE, SPECIAL (See Dr. Fordyce Barker's work on Puerperal Diseases.) . per 100, 50c.
{ Ext. Coloc. Comp pulv., 1 2-3 grs. / Ext. Hyoscyami, 1 1-4 grs. / Aloes Socotrin, pulv., 5-6 gr. / Ext. Nucis Vomicæ, 5-12 gr. / Res. Podophylli, Ipecac., pulv., āā, 1-12 gr. }

McK. & R. MERCURY PROTOIODIDE, 1-8, 1-5, 1-4, 1-3 and 1-2 gr., . . per 100, 40c.
The Protoiodide Mercury used in our granules is freshly made in our own laboratory, and is guaranteed to be reliable. Our immense demand proves that the profession have found them as represented. We have added the 1-8 gr. size, as we have received many inquiries for it, approximating as it does more closely to the size of the sugar-coated pills of foreign manufacture.

McK. & R. MORPHINE, SULPHATE, 1-20, 1 16, 1-10, 1-8, 1-6, and 1-4 gr.
We have increased the list of sizes of these reliable granules.

McK. & R. NITRO-GLYCERIN. (See GLONOINUM.)

McK. & R. PETROLEUM CRUDE, ... per 100, 60c.
Each pill contains 2 minims of the Crude Oil of Petroleum. Our pills furnish the best form for administering this remedy.

McK. & R. PICROTOXIN, 1-80 gr., ... per 100, 60c.
A prominent physician, in referring to this alkaloid, says that his success with Picrotoxine in the treatment of night sweating in Phthisis and other diseases has been decidedly superior to any attained by the use of the mineral acids, belladonna and ergot, singly or combined. He writes: "I have not employed this drug in the night sweats of phthisis solely. I recall a case of chronic pleurisy in which, the effusion having been absorbed, convalescence was unaccountably retarded and prostration was so extreme that a latent, incipient phthisis was suspected. The skin was bathed in perspiration during the greater portion of the twenty-four hours, and this being the only discoverable morbid condition, I resolved to treat it with picrotoxine. It was promptly checked, and convalescence set in immediately. I have employed the drug in nearly one hundred cases." "My custom has been to give a pill containing gr. 1-80 at bedtime, which dose may be repeated once or twice during the day in obstinate cases, and, at my suggestion, the firm of McKesson & Robbins, of New York, have added such a pill to their list."

McK. & R. QUININE AND CAPSICUM, No. 1. { Quinæ Sulph., 1 gr. / Pulv. Capsici, 1-4 gr. } . . per 100, $1.50.

McK. & R. QUININE AND CAPSICUM, No. 2. { Quinæ Sulph., 1 gr. / Pulv. Capsici, 1-2 gr. } . . per 100, $2.50.

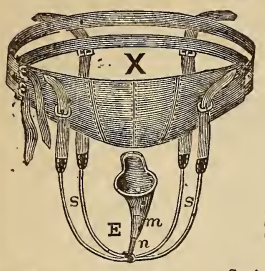
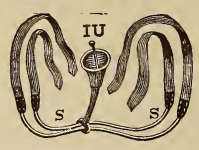
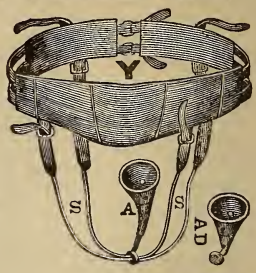
STAUFFER'S
HARD RUBBER INSTRUMENTS AND PRICE LIST.

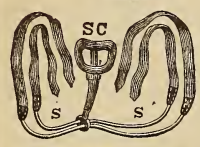






Prices.—Spring Stem Retroversion (E) on belt X, or Y, $8.00; or on Z, $7.00.

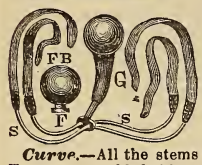
Intra-Uterine Stem Cup **(I U).**—Price on belt X, or Y, $7 00; on Z, $6 00. The intra-uterine stem cup may be first introduced and the cup turned. The stem has no spring, but joints the cup when in position by lodging in a socket.

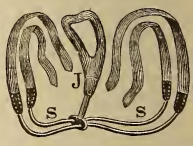


Spring Stem Prolapsus and Procidentia cup (A) on belt X, or Y, $7.00; on Z, $6.00.

Spring Stem Anteversion (S C) Spring Stem Globe Top (G). Spring Stem Oblong (H); and Spring Stem Lever (J). Each on X, or Y, $7.00, or on Z, $6.00.

Springs.—The tops of all spring stems unscrew, and a non-corrosive coil spring is placed in tube *m*, Fig X. The base stem *n*, slides against the spring and arrests any external touch. This together with the pure elastic gums S S, suspends the heretofore displaced uterus on a double elastic motion.

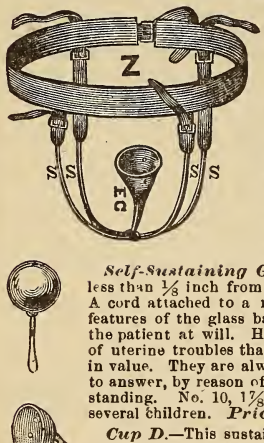




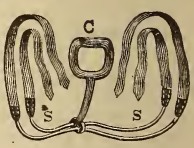
Transformation.—The self-sustaining cup A D, is formed by covering the screw when cup A, is unscrewed. So is also F B, with globe G. They are to be pressed in position at night, in sensitive cases, and stem and bandage laid aside. They have a similar use when contraction of the vagina takes place, before it is safe to suspend the support entirely.

Curve.—All the stems are curved so as the base does not become struck from seating. And the cups even in the *Economy*, moulded oblique to set in the normal axis of the uterus and vagina, as plainly seen in E, Fig X.

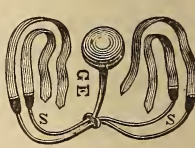
ECONOMY AND PERMANENT STEMS.



Prices.—E C, on elastic waist belt Z, is a permanent deep stem cup, no spring, but elastic gums S S, at only $4.50. On X, or Y. $5 50. Retroversion E, on Economy stem and belt Z, $6 00; X, or Y. $7 00. Permanent stems Anteversion C; Stem Globe G E; Oblong H E; and I, on Z, $4.50, and on X or Y, each $5.50. These deep leaning cups, if correct in size, correct all prolapsus uteri and procidentia, and also overcome by mere elevation partial anteversion and partial retroversion. Stem Globes and Stem Levers, by alternating the cups, assist the straightening up the uterus in difficult cases. ***Cystocele*** is drawn in by G, H, G E, or H E.

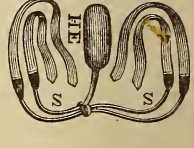


Belts.—X, and Y. have fine satteen, whale bone stay, fronts. X, two elastic back straps and closing on right hip. Y, closes on back and has elastic hip straps. Strict hip measure required. Waist measure for Z. Overlap is allowed here.



Self-Sustaining Globe B.—This is a mere hard rubber shell graded a little less than ⅛ inch from 1 to 2½ inches. It ascends in the vagina by its lightness. A cord attached to a non-corrosive staple for removal; and all the objectionable features of the glass balls are overcome. It is simple and entirely manageable by the patient at will. Harmless and still of more service, especially in the beginning of uterine troubles than any ring or lever. Actual wear does not depreciate them in value. They are always exchangeable at cost, for another style; when found not to answer, by reason of a too heavy uterus; collapsed vagina, or the case of too long standing. No. 10, 1⅛; 11, 2 inches, are the usual sizes used after having had several children. ***Price,*** $1 50 each.

Cup D.—This sustains itself by its brim and suction. Some physicians use it as a common supporter; but it is mostly used to alternate Cup E C; for which purpose it should be selected ⅛ to ¼ inch larger than the E C, in use. ***Price,*** $1.50 each.



Selection —The correction of a displaced womb and its successful support, depends entirely on the instrument and its proper selection in size and style. Since the elastic support from outside and spring stem within for sensitive cases; this important department in gynecology is rendered simple and within the scope of every family physician. The construction of this series of stem supporters obviates hindrance to seating and all objection to the external protrusion is overcome. The cups are usually selected by giving the full diameter across the top, thus for nullipara, 1¼ to 1⅝; Multipara, 1⅝ to 2, and procidentia. 1⅞ to 2¼ inches and over some times. Stems, longer or shorter than ordinary, are made to order and among the exchange privileges. Stem Globes are numbered—Stem Levers and oblong, are usually designated by small, medium and large.

Description of Cases.—Age of patient, state of catamenia; now and heretofore. If children, miscarriages, and how many? If urine trouble, helplessness in the spine, bed-ridden, &c., whether by accident or unknown cause. If a pessary already worn, its name, size, and result. How displaced; as the touch or speculum reveals.

Exchanges.—All the hard rubber parts in the catalogue are exchanged and interchanged without limit of time. Only needed repair and difference of higher price instruments charged when required for complicated cases.

Obtained through the Medical and Surgical Reporter Office.

MAILED ON RECEIPT OF QUOTATION PRICES. CATALOGUES ON APPLICATION.

NOTES ON THE USE OF PEPSINE IN MEDICINE,

WITH RECOMMENDATIONS REGARDING SACCHARATED AND PURE PEPSINE.

That many of the diseases from which mankind suffer during infant and adult life are caused by malnutrition, there can be no doubt; and the extent to which non-assimilation of the life-giving properties of food interferes with recovery from severe illness, baffling the best directed efforts of the physician, points the necessity for an agent sufficiently potent to replace the deficient principle and aid nature in renewing the degenerated tissues.

Realizing this need, the science of chemistry produced pepsine; and even if medical literature were silent as to testimony of the results obtained, the large amount manufactured and consumed would amply attest its usefulness. But such is not the case, for, after long and careful investigation on the part of practical therapeutists, it is accepted as the remedy *par excellence* in all cases where the gastric juice fails to afford a sufficient amount of ferment for the reduction of aliment to a condition suitable for healthy assimilation.

As the undoubted value of pepsine as a remedial agent became evident, competition in its manufacture was stimulated; and as a natural result, the supply was varied both in purity and strength, and the medical profession, while anxious to avail themselves of its usefulness, were nearly as often misled into erroneous conclusions regarding its efficacy, as satisfied with its results, solely in consequence of their misfortune in not using such qualities as were likely to produce the much-lauded effects. Under these circumstances, a definite understanding regarding reliable preparations is desirable, and of great importance. Pure pepsine, without acid, thoroughly triturated with finely powdered sugar of milk (saccharated pepsine*), will, without doubt, produce the perfect results in all cases where the remedy is exhibited.

Routh, in his "Infant Feeding," gives an account of a result obtained in the case of an infant. "Small, wrinkled, emaciated, four days old, yet presenting almost the appearance of decrepitude. The voice was weak but distinct, and respiration not obstructed. The mother was an excellent nurse, but, although the infant took the breast readily, it constantly threw up every meal. What passed through the bowels was unchanged, although slightly tinged with bile. Diarrhœa was also present." The usual external remedies were applied, but without avail. "Emaciation was on the increase; the child was, in fact, dying." At this stage saccharated pepsine was administered, fifteen grains divided into ten powders, mixed with a little of the mother's milk, and after he second day the diarrhœa ceased and the child appeared much stronger. Twenty days of this treatment and the child was quite well. The eminent author adds: "This is a case which speaks strongly to the convictions. If at so early a period of life, when vitality and digestion were so weak, the artificial pepsine effected a cure, *a fortiori* will it be likely to do so in the case of older children; and so I have found it in practice. The digestive powers are thus assisted, and the food, which before was useless because undigested, readily becomes assimilated."

When administering pepsine, the slight acidity of the natural fluid should be produced as nearly as possible, and, as the necessities differ with the circumstances, it is desirable that the preparation be quite free from acidulation, and the proper dose be given in combination with the requisite amount of dilute acid. Of Kidder & Laird's pure pepsine, five to ten grains for an adult can, if necessary, be taken in an ounce of water, with five drops of muriatic acid.

For infants, however, the saccharated pepsine will be found to yield the most satisfactory results, and the acid should be dispensed with. Quantitatively it represents one-tenth of the strength of pure pepsine; but it has been found to be but about one-fourth less in efficacy. The absence of acid, which would otherwise tend to produce harmful results, will be recognized when it is considered that even the slight acidity of most cow's milk, when used as food for infants, is sufficient to disagree with them.

With regard to the proper time for its administration, as before or after taking of food, opinions vary, but reason would suggest that about half an hour before eating will afford the ferment a sufficient time to combine with the existing condition of the stomach, and produce the most natural effect upon the food when it has been acted upon by the salivary fluids in its passage to the stomach.

When once the formation of peptone has been established in the stomach, and as strength is acquired, the system will soon respond toward resuming the natural production of its normal fluids. Thus it is that many of the disorders of digestion which accompany severe attacks of fever, phthisis, etc., and also the exceedingly sensitive condition of the stomach caused by vomiting in pregnancy and alcoholism, are controlled, and a natural condition resumed.

Having mentioned the necessity of great care in the selection of pepsine, with reference to its purity and strength, it is proper to say that, even with the superior article above recommended, negative results may be obtained, unless attention is given to the form of its administration. Combinations beyond those above mentioned are not advised, but rather discouraged, as many of the substances usually recommended as efficacious with it are incompatible and render the pepsine inert.

* Saccharated pepsine, free from acid, is prepared by Messrs. Kidder & Laird, No 83 John Street, New York, who generously furnish samples of both this and the pure pepsine, free of charge, upon application.

1264-1315

HORSFORD'S ACID PHOSPHATE

IN

IMPOTENCE,

Seminal Losses,

Impaired Vitality,

Spermatorrhœa.

We wish to call the attention of the profession to the action of Horsford's Acid Phosphate on the organs of generation, when their power has become impaired through sexual excess, or from senile impotence. It is at once rejuvenating and aphrodisiac in its effect. It appears to restore the secretory organs that have been deranged to their normal condition, giving vigor where there has been debility, and renewed strength where there has been exhaustion.

H. B. STORER, M.D., Boston, says: "I have found Horsford's Acid Phosphate serviceable, in a marked degree, in my treatment of spermatorrhœa."

E. W. JONES, M.D., Taunton, Mass., says: "Horsford's Acid Phosphate was prescribed in a case of nervous prostration from seminal losses, with decided beneficial effect."

C. S. ELLIS, M.D., Wabash, Ind., says: "I prescribed Horsford's Acid Phosphate in a case of nervous debility and weakness of the sexual organs; patient forty-eight years old; he was much benefited."

R. W. ERWIN, M.D., Bay City, Michigan, says: "In some cases of weakness following sexual indiscretions, attended with nervousness, it is useful."

Each case presents its own peculiarities for treatment, but, as a general rule, we would suggest a half teaspoonful of Horsford's Acid Phosphate, in half a tumbler of hot or cold water, or tea without milk, to be taken shortly after each meal, and upon retiring.

Pamphlet giving further details mailed free, on application to the manufacturers.

Physicians who have not had a bottle of the Horsford's Acid Phosphate, and who wish to test it, will be furnished with a sample without expense, except express charges.

RUMFORD CHEMICAL WORKS,

PROVIDENCE, R. I.

1297-1348

An experience of more than a quarter of a century convinces us that sugar, properly applied, is the only correct coating for a pill.

Physicians should be careful to specify Warner & Co., when prescribing or ordering.

Special attention is called to the following selected Recipes prepared for Physicians' Prescriptions.

PIL: PHOSPHORI COMP: (WARNER & CO.) ℞. Phosphori, - - 1-100 gr. Ext. Nuc. Vom. - ¼ gr.

THERAPEUTICS.—As a nerve tonic and stimulant, this form of pill is well adapted for such nervous disorders as are associated with impaired nutrition and spinal debility, increasing the appetite and stimulating digestion.

The practical value of Phosphorus as a therapeutic agent, and its applicability to the cure of disease, and especially in those varied disordered conditions consequent upon OVERWORK, which are characteristic of modern civilization.

Pil. Phosphori Comp. may be taken, one or two pills three times daily, after eating.

Price, per 100, $1.50.

PIL: IODOFORM ET FERRI. (WARNER & CO.) ℞. Iodoform, - - 1 gr. Ferri Redacti, - 1¼ gr.

THERAPEUTICS.—A powerful general tonic and alterative, valuable as a remedy in Anæmia, Scrofula, Neuralgia, Chlorosis, Rheumatism, etc.

Pil. Iodoform et Ferri may be given in doses of from one to two pills, as occasion may require.

Price, per 100, $2.00.

PIL: DIGESTIVA. (WARNER & CO.) ℞. Pepsin Conc't, 1 gr. Gingerine, 1-16 gr. Pv. Nuc. Vom., ¼ gr. Sulphur, ⅛ gr.

THERAPEUTICS.—Useful in relieving various forms of Dyspepsia and Indigestion, and of permanent benefit in cases of enfeebled digestion, where the gastric juices are not properly secreted. It is also a gentle laxative and excellent dinner pill, may be taken one after dinner, or one before each meal, three times daily.

Price, per 100, 75 cts.

PIL: CALCIUM SULPHIDE. (WARNER & CO.) 1-10, ¼, ½ & 1 gr. each.

THERAPEUTICS.—Extremely useful in the treatment of acne, scrofula and cutaneous diseases.

Sulphide of Calcium is usually administered in doses of from 1-10 to ¼ grain four times daily, gradually increasing the dose to one grain six times daily, or according to the progress or severity of the case.

Price, per 100, 1-10 gr. .50; 1-4 gr. .60; 1-2 gr. .75; 1 gr. $1.00.

WARNER & CO.'S PILLS MAY BE OBTAINED FROM ALL DRUGGISTS, OR BY MAIL, ON RECEIPT OF PRICE.

SAVORY & MOORE beg to call the attention of the Profession to some of their Special Preparations, the purity and uniform strength of which are Guaranteed.

PANCREATIC EMULSION,

Prepared in accordance with the direction of the Physician who introduced this purely

MEDICINAL FOOD FOR CONSUMPTION AND WASTING DISEASES.

Pancreatic Emulsion will always take precedence of Cod-Liver Oil, by reason of its introducing the STABLE SOLID FATS INTO THE SYSTEM, instead of the evanescent fluid fats or oils.

Neither Cod-Liver Oil nor EMULSIONS of COD-LIVER OIL can supply the kind of fat necessary for sound and vigorous human life. In addition to this, all the Oily Emulsions are liable to rancidity, and most of them are highly objectionable in consequence of the SAPONIFICATION and ULTIMATE PUTREFACTION, produced by the chemical agents used instead of Pancreatic Juice.

Pancreatic Emulsion (properly so-called), is THE NECESSARY FOOD OF THE CONSUMPTIVE, and the most reliable form of nutriment for counteracting the tendency to Phthisis and other wasting diseases. It presents to the lacteals fat, in essentially the same condition for assimilation and absorption as in a vigorous human frame, and THE AGENT of the important change is THE NATURAL SECRETION of the PANCREAS.

Pancreatic Emulsion may therefore be regarded as Chyle obtained by nature's own process. In certain cases both Cod-Liver Oil and Pancreatic Emulsion are required—one to supply the blood with oil or liquid fat, the other with the more stable solid fats; but it cannot be too strongly urged that both PANCREATIC EMULSION and Cod-Liver Oil are *not to be regarded as Medicines, but as articles of diet*, without which patients, with their defect of health, will as surely starve as healthy persons would if deprived of the most nutritive part of their food.

Pancreatized (Digestive) Cod-Liver Oil. By Pancreatized Cod-Liver Oil, the active digestive principle of the Pancreatic Juice is imparted to it, which renders it in a highly favorable condition for rapid and complete digestion and assimilation, preventing nausea, and largely increasing the beneficial properties of the Oil.

Pancreatine effects the digestion and assimilation of Cod-Liver Oil and Fat, as well as Food generally. This palatable and popular remedy is therefore invaluable to PATIENTS WHO ARE UNABLE TO DIGEST COD-LIVER OIL, and who are thus deprived of its nourishing and invigorating properties.

Pancreatine Wine. An excellent vehicle for taking Cod-Liver Oil and promoting the digestion of it.

Tins, 1*s*, 2*s*, 5*s*, 10*s*.

PNEUMATIC ASPIRATION,

AFTER THE MANNER OF DIEULAFOY.

"It is always possible, owing to Aspiration, to search for a fluid collection without any danger, whatever may be its seat or its nature."

"I have thrust these needles into almost every part of the body; into the Joints, the Liver, the Spleen, the Bladder, the Intestines, the Lungs and the Meninges; and I can affirm, and a great number of observers affirm with me, that we have never seen consecutive accidents."—*Dieulafoy on Pneumatic Aspiration*, pp. 21, 24.

We invite the attention of the Medical Profession to this New Apparatus for Aspiration, constructed upon the general plan of Potain's modification of Dieulafoy's Aspirator, but containing the following improvements and inventions of our own:—

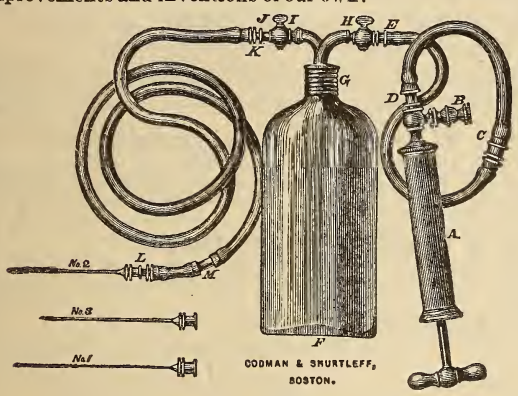

Fig. 68.

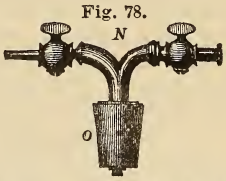
Fig. 78.



The Stopper and Cocks supplied with Apparatus No. 2.

Fig. 77.

1st. Means of changing the pump from an exhaust to a force-pump, and *vice versa*, thereby enabling the operator not only to draw an abnormal fluid, but to inject the cavity through the tubes and needle of the apparatus with one adapted to induce healthy action.—*See Dieulafoy on Aspiration*, pp. 276, 278.

2d. The employment, in our apparatus No. 1, of a metal Screw Cap, fitting the neck of the receiver supplied with this apparatus so securely that it cannot be forced from its place by condensed air while injecting, or accidentally removed while the receiver is in a state of vacuum for aspiration

3d. The substitution, for the ordinary oiled silk valves of other apparatus, of a kind indestructible, both in form and material.

4th. A simple and comparatively inexpensive attachment for evacuating the contents of the stomach, equal, if not superior, to any in use hitherto.

Commendations bestowed upon our Aspirators, by physicians familiar with the latest European and American ones, lead us to believe that, in some important particulars, at least, they are superior to any.

In his work on Pneumatic Aspiration, Dieulafoy shows the harmlessness of the Aspiratory puncture, and its great superiority to the Exploring Trocar as a means of accurate diagnosis in all collections of Pathological Fluids. It has been used with unprecedented success in the Retention of Urine, Reduction of Strangulated Hernia, in Ascites, Hydrothorax, Empyema, Pneumothorax, Effusions into the Pericardium, Serous, Purulent and Hematic Effusions of the Knee, Hydrocele, Hydatid Cysts, Abscesses of the Liver, and in various other Pathological Lesions.

PRICES OF APPARATUS.

No. 1. Air Pump—exhaust or condensing as described; 16 oz. receiver, of strong glass, with screw-cap; three steel, gold plated Aspiratory Needles, together with the necessary tubes, stop-cocks, etc., as shown in Fig. 77, fitted in a neat case, accompanied with printed directions $16.00. Postage 64 cents.

No. 2. The same, without receiver, and with rubber stopper (see Fig. 78) to fit almost any bottle of quart capacity, or less, instead of screw-cap arrangement, also with printed directions $14.00. Postage 32 cents.

No. 3. Dieulafoy's Notched Aspirator, Nickel-plated, with two Needles, Tubes, etc., in case $14 00

No. 4. Stomach Attachment, as described, adapted to pump accompanying Nos. 1 and 2, additional $6.00. Postage 22 cents.

The foregoing are the product of our own factory, and are warranted in every respect.

Also, **Dieulafoy on Pneumatic Aspiration,** post paid, by mail, on receipt of..... 3 40

☞ *Full description on application.*

☞ In corresponding with Advertisers please mention the MEDICAL AND SURGICAL REPORTER.

GRIMAULT & CO.'S PHARMACEUTICAL PRODUCTS.

Prepared with scrupulous care, under the immediate supervision of a practical chemist, at their model laboratory at Neuilly, near Paris.

OFFICES AND SALESROOMS, No. 8 RUE VIVIENNE, PARIS.

The attention of the medical profession is directed to a few leading products:

DUSART'S SYRUP AND WINE OF LACTO-PHOSPHATE OF LIME.

In these preparations phosphate of lime is presented in the combination in which it exists in the stomach, after it has been acted upon by the gastric fluid. They are especially adapted, and have been used with great success in *Rachitic* and *Scrofulous Affections* in children; the *Languor* caused by too rapid a growth and development in youth; the *Debility* attendant upon old age; *Weakness in Females*, caused by the nursing of children; *Slow Convalescence*; certain forms of dyspepsia, caused by the low vitality of the system. In cases of *Fractures*, their use has been found to cause a more *rapid formation of the Callus*, and in cases of wounds, the *cicatrization has been more prompt*, while its administration to children facilitates the general developement, and especially the *the process of Ossification and Dentition*.

Dusart's work on the "Physiological and Therapeutic Action of Phosphate of Lime" will be sent free, on application to Messrs. E. FOUGERA & Co.

LEBAIGUE'S DIALYSED IRON, or Pure Peroxide of Iron,

IN SOLUTION, WITHOUT THE AID OF ACIDS OR OTHER SOLVENTS.

It is nearly tasteless, does not blacken the teeth, is very readily absorbed, will not constipate or cause any disturbance of the digestive apparatus, and is tolerated by persons who could not support any other preparation of iron. It is offered in the form of a *solution*, which is generally preferred; or of an *elixir*, when a slight stimulant is desired.

DEFRESNE'S PILLS AND ELIXIR OF PANCREATINE.

Pancreatine is a very important remedy in a great many cases of *indigestion*, *atony* of the digestive organs, and *dyspepsia*, where pepsine and other remedies have failed. It is especially serviceable as a help for the digestion of fats. The preparations especially recommended are: *Defresne's Pills*—dose, two to four pills before each meal; the *Elixir* and *Wine*—dose, one or two tablespoonfuls after meals.

GRIMAULT & CO.'S MATICO CAPSULES.

A preparation of the leaves of Matico, of more certain effect than most of the medicines recommended for the same class of diseases. The capsules contain the essential oil of Matico, combined with the balsam of copaiba, and do not cause any unpleasant eructations.

JULIEN'S LAXATIVE FRUIT.

A pleasant confection for constipation, and all diseases resulting therefrom, as *headache*, *hemorrhoids*, *cerebral congestions*, *biliousness*.

The above and all other preparations of *Messrs. Grimault & Co.*, and information in regard to the same, may be obtained at all times from

1294-1319eow ***Messrs. E. FOUGERA & CO., Importing Pharmacists, New York.***

THE INVENTION OF AN EMINENT FRENCH CHEMIST.

The Salvator for Invalids and the Aged. An Incomparable Aliment for the Growth and Protection of Infants and Children. A Superior Nutritive in Continued Fevers, and a Reliable Remedial Agent in all Diseases of the Stomach and Intestines.

TO PHYSICIANS AND THE PUBLIC.

THIS preparation is, as advertised, principally the GLUTEN derived, by chemical process, from VERY SUPERIOR GROWTHS OF WHEAT, and should not be confounded with burnt or boiled Flour, in which the GLUTEN or sanative qualities are destroyed or made medicinally inert, nor with Crushed Wheat, or finely ground Wheaten Grits, styled "Medicinal Food," and sold under various names, in which the starch and impurities contained in wheat are retained in larger quantity.

By Dubisson's formula, the starch, impurities and soluble matter found in the Wheat Cereal are effectually excluded, the GLUTEN only retained, which is condensed, granulated and prepared to keep in all climates, and justly entitled

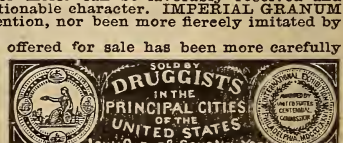
—⁂ IMPERIAL GRANUM ⁂—

It is well known, and should be fairly considered, that nothing of merit can be favorably received and commended by the public without being followed by imitations of a questionable character. IMPERIAL GRANUM is not the exception, for no preparation has attracted more attention, nor been more fiercely imitated by competition, even to wording and shipping order.

Whilst again it can be truly said that no preparation ever offered for sale has been more carefully prepared and thoroughly tested, nor has met with a more welcome reception and universal approval, or afforded more relief to invalids or to young and suffering children and aged persons. This has been confirmed by thousands of testimonials from Chemists, Physicians, Heads of Families and the Press.

Respectfully,

E. HEATON.



1262-1313eow

MURDOCK LIQUID FOOD CO., Boston,

THE ONLY MANUFACTURERS OF

RAW FOOD EXTRACTS IN THE WORLD.

It can be retained by the weakest stomach, when all other food extracts, and even water, is rejected.

Nutritious food, if raw, condensed, and free from insoluble matter, will cure chronic diseases, as it will make blood faster than all preparations or food, and new blood will cleanse the system.

MURDOCK'S LIQUID FOOD is made from Beef, Mutton and Fruits; contains corpuscles; is 12½ per cent. soluble albumen, and free from insoluble matter, drugs, minerals, salts and acids, and can be retained by the stomach when so weak as to refuse food.

Ask your Druggists, or send to us, for Essays read before the American Medical Association, at Richmond, Va., May 6, 1881, on the value of Raw Food Extracts, by Geo. R. Shepherd, of Hartford, Conn., and other Essays and Testimonials from Medical Journals and Physicians that have used Liquid Food, in cases of Consumption, Scrofula, Nervous and General Debility, Dyspepsia, acute and chronic, Constipation, Diphtheria, Intemperance, Cholera Infantum, Infantile Diarrhœa, Post partum Hemorrhage, Purpura Hemorrhagica with Waxy Liver, Pelvic Cellulitis, Malarial and other Fevers, Chronic Strumous Arthritis, Sclerosis of the Spinal Cord, Senile Gangrene, Perinephritic Abscess, and other diseases of malnutrition. No cases of Cholera Infantum have occurred where it has been used daily, and no lives have been lost from Cholera Infantum where it has been prescribed by a physician. Excellent for Eczema, Diabetes, Rheumatism and Neuralgia.

At the request of any physician who has not tried our Extracts, and would like to, we will deliver sample bottles to the Express in Boston. To any Medical Society wishing to investigate the value of our Extracts, through a committee, hospital, or individual members, we will furnish a supply of Liquid Food equal to a six-ounce bottle for every member present at the time of action. We are induced to do this knowing that our Extracts are saving life, and that an increased use of them, which will follow after a trial of them, will be the means of saving more lives daily. (*We ask no testimonials of results obtained.*) Raw Extracts are available where cooked ones are not, or if available, contain only one-third as much nourishment.

Liquid Food is in general use at all Hospitals, Infant and Insane Asylums, and Washingtonian Homes, U. S. Navy Hospitals, and by all physicians that have tried it.

If not kept by your Druggist, can be obtained in any of the commercial cities In Philadelphia, by Johnston, Holloway & Co., Boericke & Tafel; in Pittsburg, by A. Kelly & Co.; in Baltimore, by Thomsen & Wirth; or you can order direct and we will pay express. 1 oz, 15 cents; 6 oz., 55 cents; 12 oz., $1.00.

See Philadelphia MEDICAL AND SURGICAL REPORTER, *Boston Medical and Surgical Journal*, and *New York Medical Record*, for chronic cases that were at our quarterly reception to physicians, in Boston, December 30, 1881—cases of Eczema, Rheumatism, Neuralgia, Diabetes, Consumption, and other diseases. If all were not restored to perfect health, they were gaining daily, and able to enjoy life and attend to their business. 1297-1348

MURDOCK LIQUID FOOD CO., BOSTON.

It is the only food that will relieve the Consumptive from Hunger.

It will make Blood faster than all preparations known.

PARIS, 1867. 1868. 1872. 1873, VIENNA.

Prize Medal. **Silver Medal.** **Gold Medal.** **Medal of Merit.**

BOUDAULT'S PEPSINE

IN POWDER, also WINE, ELIXIR, SYRUP, PILLS, AND LOZENGES OF PEPSINE.

Since the introduction of Pepsine by Boudault in 1854, **BOUDAULT'S PEPSINE HAS BEEN, AND IS STILL CONSIDERED, THE MOST RELIABLE,** as is attested by the awards it has received at the Exhibitions of 1867, 1868, 1872, 1873, and in 1876 at the Centennial Exposition in Philadelphia.

IT IS THE ONLY PEPSINE USED IN THE PARIS HOSPITALS.

Careful tests will enable any one to satisfy himself that **BOUDAULT'S PEPSINE HAS A DIGESTIVE POWER AT LEAST DOUBLE** that of the best Pepsines in the market, and that it is really the cheapest.

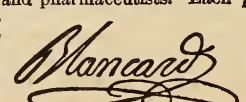
It is Sold in 1 ounce, 8 ounce, and 16 ounce Bottles.

Beware of so-called **French Pepsines** bearing fictitious names, and prescribe **Boudault's only.**

BLANCARD'S PILLS

OF UNCHANGEABLE IODIDE OF IRON.

Blancard's Pills of Iodide of Iron are so scrupulously prepared, and so well made, that none other have acquired a so well deserved favor among physicians and pharmaceutists. Each pill, containing one grain of proto-iodide of iron, is covered with finely pulverized iron, and covered with balsam of tolu. Dose, two to six pills a day. The genuine have a *reactive silver seal* attached to the lower part of the cork, and a green label on the wrapper, bearing the fac-simile of the signature of



Pharmacien, No. 40 Rue Bonaparte, Paris without which none are genuine.

BEWARE OF IMITATIONS.

E. FOUGERA & AGENTS, NEW YORK. 1297-tf

FELLOWS' HYPO-PHOS-PHITES

CONTAINS

THE ESSENTIAL ELEMENTS to the Animal Organization—Potash and Lime;

The **OXYDIZING AGENTS**—Iron and Manganese;

The **TONICS**— Quinine and Strychnine;

And the **VITALIZING CONSTITUENT**—Phosphorus,

Combined in the form of a Syrup, with *slight alkaline reaction.*

IT DIFFERS IN EFFECT FROM ALL OTHERS, being pleasant to taste, acceptable to the stomach, and harmless under prolonged use.

IT HAS SUSTAINED A HIGH REPUTATION, in America and England, for efficiency in the treatment of Pulmonary Tuberculosis, Chronic Bronchitis, and other affections of the respiratory organs, and is employed also in various nervous and debilitating diseases, with success.

ITS CURATIVE PROPERTIES are largely attributable to Stimulant, Tonic and Nutritive qualities, whereby the various organic functions are recruited.

IN CASES where innervating constitutional treatment is applied, and tonic treatment is desirable, this preparation will be found to act with safety and satisfaction.

ITS ACTION IS PROMPT, stimulating the appetite and the digestion; it promotes assimilation, and enters directly into the circulation with the food products.

THE PRESCRIBED DOSE produces a feeling of buoyancy, removing depression or melancholy, and hence is of great value in the treatment of **mental and nervous affections.**

From its exerting a double tonic effect, and influencing a healthy flow of the secretions, its use is indicated in a wide range of diseases.

Each Bottle of Fellows' Hypophosphites contains 128 Doses.

PREPARED BY

JAMES I. FELLOWS, Chemist,

48 VESEY STREET, NEW YORK.

Circulars and Samples sent to Physicians on application.

☞ **SPECIAL TO PHYSICIANS.—ONE** large bottle, containing fifteen ounces (which usually sells for $1.50) will be sent upon receipt of **Fifty Cents** with the application; this will be applied to the prepayment of Expressage, and will afford an opportunity for a thorough test in Chronic Cases of Debility and Nervousness. Express charges prepaid upon all samples.

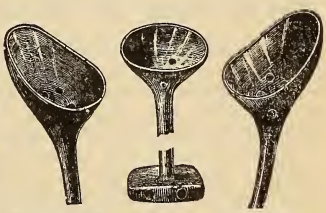
DR. McINTOSH'S
NATURAL UTERINE SUPPORTER.



No instrument has ever been placed before the medical profession which has given such universal satisfaction. The combination is such that the physician is able to meet every indication of Uterine Displacements. Falling Womb, Anteversion, Retroversion and Flexions are overcome by this instrument, where others fail. This is proven by the fact that, since its introduction to the profession it has come into more general use than all other instruments combined.

Among the many reasons which recommend this Supporter to the physician is its self-adjusting qualities. The physician, after applying it, need have no fear that he will be called in haste to remove or readjust it, as is often the case with rings and various pessaries held in position by pressure against the vaginal wall, as the patient can remove it at will, and replace it without assistance.

The Abdominal Supporter is a broad morocco leather belt, with elastic straps to buckle around the hips, with concave front, so shaped as to hold up the abdomen. The Uterine Support is a cup and stem, made of highly polished hard rubber, very light and durable, shaped to fit the neck of the womb, with openings for the secretions to pass out, as shown by the cuts. Cups are made with extended lips, to correct flexions and versions of the womb. The cup and stem is suspended to the belt by two soft elastic rubber tubes, which are fastened to the front of the belt by simple loops, pass down through the stem of the cup and up to the back of the belt. These soft rubber tubes being elastic, adapt themselves to all the varying positions of the body, and perform the service of the ligaments of the womb. The instrument is very comfortable to the patient, can be removed or replaced by her at will, can be worn at all times, will not interfere with nature's necessities, will not corrode, and is lighter than metal. It will answer for all cases of Anteversion, Retroversions, or any Flexions of the womb, and is used by the leading physicians with never-failing success, even in the most difficult cases.

Our Reduced Prices are to Physicians, $6.00; to Patients, $10.00.

Instruments sent by mail, at our risk, on receipt of price, or by Express, C. O. D., with the Express charges for returning the money added.

☞ CAUTION.—Owing to the great sale and popularity of our instrument various and base imitations are sold by unscrupulous parties. In order to get the genuine, it is best to order direct from us.

DR. McINTOSH'S NATURAL UTERINE SUPPORTER CO.,
192 Jackson Street, Chicago, Ill.

Our valuable pamphlet, "Some Practical Facts about Displacements of the Womb," will be sent you free on application. 1281-1332

In corresponding with Advertisers please mention THE MEDICAL AND SURGICAL REPORTER.

BEEF PEPTONE,

IN TRANSPARENT CLASSY SCALES,

Containing only the animal or azotized matter of the Beef. Each ounce is equal to 16 ounces of raw beef, easily soluble, and still faster in hot water.

This Beef Peptone is digested from tender, juicy Beef, by the aid of the *Crystal Pepsin*, of my manufacture (Jensen's Crystal Pepsin). Unlike the various BEEF EXTRACTS, this preparation contains all the nutritive constituents of the Beef, in a thoroughly digested state, ready for absorption into the system, while the Beef Extracts are entirely devoid of the chief elements of nutrition, such as the fibrinous, gelatinous and albuminous portions of the Beef, they only consisting of the concentrated saline constituents, with barely a trace of animal matter to keep its consistence. The difficulty so long experienced by the profession throughout the world, in preparing a PEPTONE entirely free from those chemical agents necessary for its manufacture, so as to render it fit for use, is hereby demonstrated to be successfully overcome, as it contains no foreign matter, and will stand the most severely scrutinizing test as to perfectness, also possessing flavor of the Beef, and so palatable as to render it highly agreeable.

Put up in bottles holding One ounce, Eight ounces, and one Pound.

Kept by the Wholesale and Dispensing Druggists in general.

DEPOT—L. WOLFF'S Pharmacy,

Northwest corner Twelfth and Chestnut Streets.

JENSEN'S CRYSTAL PEPSIN,

IN ARTIFICIAL CRYSTALS,

Strictly inodorous and tasteless, and perfectly soluble in water without acid.

THIS PEPSIN, now so popular with the profession, has created an impetus in the consumption of the same, and physicians of the highest standing, who before the introduction of this active PEPSIN, with good reason, entirely abandoned the use of PEPSIN, are now the most eager in prescribing JENSEN'S CRYSTAL PEPSIN, whenever it is indicated, and since the knowledge of its great solvent power (gr j. of it will dissolve the boiled whites from two to three eggs) has been established even among those susceptible to be great doubters, it has caused itself to be utilized in many novel ways, by the thinking profession; for instance, in substituting morphia, chloral, etc., as a hypnotic, relieving gastric troubles where the above remedies have been prescribed, creating morphine and chloral habits. In removing diphtheritic patches it is successfully used combined with water, glycerine, and muriatic acid, and the same composition, diluted with more water, as a spray in bronchial troubles, dissolving muco-purulent matter, as well as a spray for same in catarrhal affections.

THIS PEPSIN

Has also been used with success in dissolving and evacuating coagulated blood in the bladder, dispensing with surgical operations in such cases. Many other novel applications could be mentioned, if not in want of space. It is found to be FORTY times stronger than saccharated pepsin. One to three grains is an active dose.

KEPT BY ALL DRUGGISTS.

The above preparations are only manufactured and put up by

CARL L. JENSEN, M.D., PH.G.,

865 North 26th Street, Philadelphia, Pa.

No other Wholesale Agents for this Pepsin are longer engaged, than the Wholesale Druggists throughout the United States.

Instructor in Clinical Medicine.

A. S. PARKER, PH.G.,
Instructor in Pharmacy.

A. M. HAWES, M.D.,
Demonstrator of Anatomy.

This College has for its *collegiate year* two sessions.

Regular Session commences Wednesday, September 7th, 1881, and closes March 1st, 1882.

Recitation Term (optional) commences March 15th, 1882, and closes June 14th, 1882.

Graded Course of three terms, of six months each.

PLAN OF INSTRUCTION.

By *Lectures*, *Recitations* and *Clinics*, together with *practical work* in the Anatomical, Physiological, Chemical and Pharmaceutical Laboratories.

Clinics are held *daily*.

Clinical Work in Hospitals and Dispensaries is given to the Senior Class (see Clinics), in *small sections*, under the charge of a *Clinical Teacher*, in all the departments of Medicine and Surgery.

Three Large Hospitals and *two Dispensaries* afford unlimited material for instruction.

ADMISSION.—Candidates for admission are required to pass a preliminary examination, unless satisfactory documentary evidence can be presented, that is equivalent to the standard adopted. (See Catalogue.)

FEES.

Regular Session.—Matriculation, $5.00; Lecture Tickets, $50.00; Hospital Tickets, $10.00
Examination (final), $25.00.

Recitation Term.—$10.00 for those who have attended Regular Session; all others, $25.00, $15.00 of which will be applied on the next Regular Term.

Board and Rooms can be obtained for $3.00 to $5.00 per week, the average being $4.00.

For Catalogue and other particulars, address

177 Griswold Street, Detroit, Mich.

1274-tf

CRINON'S HÆMOGLOBIN,

The Albuminoid Ferruginous Principle of Blood.

HÆMOGLOBIN is the only physiological chalybeate. Associated as it is with the phosphates of the blood, it forms the most powerful of tonics, and at the same time a most nourishing food. It is especially useful in cases of *Anæmia, Chlorosis, Cachexias, Exhaustion* caused by excess of work, nervous debility, fatigue resulting from parturition and lactation. It replaces entirely liquid blood, which has been recommended and used with success in *Phthisis* and *wasting away.*

It is offered in two forms: In cachets (wafers), 60 of which are contained in a box; combined with chocolate in small squares, 30 of which are in a box; both forms can be sent by mail.

Prepared by C. CRINON, Paris, Pharmacist of the first class, Laureate of the Hospitals of Paris Samples may be obtained by application to

E. FOUGERA & CO., New York, Agents for the U. S.

DOCTOR RABUTEAU'S

(Laureate of the Institute of France.)

DRAGEES, ELIXIR & SYRUP OF IRON.

"The experiments made in the hospitals of Paris have demonstrated that *Dr. Rabuteau's Dragees, Elixir and Syrup* regenerate the red globules of the blood with a rapidity never observed with the use of the other ferruginous preparations. These results have been proved by the various *Compt-Globules.*

"The ferruginous preparations of *Dr. Rabuteau* do not cause any constipation, and are perfectly tolerated by the weakest persons."—*Gazette des Hospitaux.*

Dr. Rabuteau's Elixir is prescribed when some difficulty is experienced in swallowing the Dragees; it is especially adapted to weak persons, whose digestive functions need strengthening or stimulating.

Dr. Rabuteau's Syrup is especially prepared for children, who take it readily, because of its agreeable taste.

FOUGERA'S COMPOUND IODINISED

COD LIVER OIL.

Since the introduction of this oil in 1858, it has been found to be superior to all other kinds of Cod Liver Oil for the treatment of **General Debility, Consumption, Scrofula, Rickets, etc.**

It possesses not only all the **nourishing** qualities of the best Cod Liver Oil, but also the **tonic, stimulant** and **alterative** properties of **Iodine, Bromine** and **Phosphorus,** which are added in such proportions as to render it therapeutically five times as efficacious as pure Cod Liver Oil.

Through its **increased curative action, FOUGERA'S COD LIVER OIL** will be found to cure disease in a much shorter time than the pure oil; while favorable results will be obtained by its use in many advanced cases when the pure Cod Liver Oil would fail entirely.

FOUGERA'S READY-MADE MUSTARD PLASTERS.

A most useful, convenient, clean, and economical preparation. Not liable to change if kept in a dry place. Made of two strengths. Plasters No. 1, of pure mustard; Plasters No. 2, of one-half mustard. Price 40 cents, the tin box, or tin roll, of 10 plasters each. DIRECTIONS.—Dip the Plaster, or Plasters, a minute or two, in cold water; apply on the part, and cover with a band.

FOUGERA'S COMPOUND ICELAND MOSS PASTE.

(Iceland Moss, Lactucarium, Ipecac and Tolu.)

Used with great success against nervous and convulsive coughs, Whooping Cough, Acute Bronchitis, Chronic Catarrh, Influenza, etc.

Wakefulness, Cough, and other sufferings in Consumption, are greatly relieved by the soothing and expectorant properties of this Paste.

FOUGERA'S IODO-FERRO-PHOSPHATED ELIXIR OF HORSE-RADISH.

This Elixir contains Iodine, Pyrophosphate of Iron, the active principles of antiscorbutic and aromatic plants, and acts as a **tonic, stimulant, emmenagogue,** and a **powerful regenerator of the blood.** It is an invaluable remedy for all constitutional disorders due to the impurity and poverty of the blood. One of the advantages of this new preparation consists in combining the virtues of Iodine and Iron without the inky taste of Iodide of Iron.

E. FOUGERA, Pharmacist,
372 Seventh Street, Brooklyn, L. I.,
SOLE PROPRIETOR & MANUFACTURER OF THE ABOVE,
To whom all special communications should be addressed.

E. FOUGERA & CO.,
30 North William Street, New York.
SOLE GENERAL AGENTS for the ABOVE,
To whom all orders should be addressed.

SOLD BY DRUGGISTS GENERALLY.

JOHNSTONE'S IMPROVED

ADAPTABLE POROUS FELT SPLINTS.

AHL'S SPLINT MANUFACTURING COMPANY, LIMITED,

123 & 125 South Eleventh Street, PHILADELPHIA, PA.

THE ADAPTABLE POROUS SPLINTS, invented and improved by W. H. JOHNSTONE, have been tested extensively in both civil and military practice for a number of years, and have been endorsed and recommended in the most unqualified manner by the celebrated and distinguished Surgeons of America.

Their *porosity* is a peculiar and a valuable property. While the material is firm and insoluble, it permits readily the passage of air and fluids, so that, on one hand, the heat from the inflamed surface, the perspiration, and the morbid exhalations, are not confined, to the detriment of the patient, *as is the case in every other kind of splint*, but pass off freely; and on the other hand, lotions of cold or warm water, medicated or not with weak alcohol, carbolic acid, arnica, tincture, solutions of the sulphites, etc., can be constantly applied without disturbing the dressings. This, it will readily be seen, is a most invaluable property when the parts are bruised, lacerated, filled with extravasated blood, or erysipelatous, and give these splints a conspicuous advantage over all others.

From FRANK H. HAMILTON, M. D., Professor of Fractures and Dislocations in the Bellevue Hospital Medical College, author of "A Treatise on Fractures and Dislocations," etc.

Having examined carefully *JOHNSTONE'S IMPROVED ADAPTABLE POROUS FELT SPLINTS*, I feel warranted in recommending them to the Profession as superior to all other manufactured splints now in use. They possess all the essential qualities of a good splint, having firmness, pliability and lightness.

FRANK H. HAMILTON, M. D.,
Prof. Military Surgery and Fractures and Dislocations, Bellevue Hospital Col.

From PROF. D. HAYES AGNEW, Prof. Surgery, University of Penna.

1611 CHESTNUT STREET, PHILADELPHIA, *February 6th*, 1879.

The Adaptable Felt Splints, formerly known as those of Dr. Ahl, with the improvement now made by W. H. Johnstone, which renders them in every way superior to the former, I regard as very excellent appliances in the treatment of fractures.

D. HAYES AGNEW,
Prof. Surgery, University of Pennsylvania.

Cuts illustrating the different Splints constituting a Complete Set.

SPECIAL NOTICE TO THE PROFESSION AND TRADE.

Our *policy* heretofore in the introduction of JOHNSTONE'S IMPROVED ADAPTABLE POROUS FELT SPLINTS, has been to confine the sales and business negotiations directly to the Doctors themselves, declining in every case to sell our goods through Dealers; we having assured the Profession generally, both through our agents and catalogues, that *JOHNSTONE'S IMPROVED SPLINTS* could only be obtained by subscription.

We wish to announce, that owing to the large demand for our goods and the constant importunity on the part of *Surgeons* everywhere to place our Splints on sale with their Instrument Dealer or Druggist, to afford them greater convenience and facility in obtaining the pieces in duplicate, **we have at last acceded to that request, and hereafter *JOHNSTONE'S CELEBRATED FELT SPLINTS* can be obtained at most dealers in Instruments and Drugs throughout the United States, at the same price which they were heretofore sold, viz:**

A complete set, embracing fifty (50) pieces—twenty-five for adults and twenty-five for children—is thirty ($30) dollars. Extra or duplicate pieces can always be obtained from your DEALER, at one dollar each.

JOHNSTONE'S CELEBRATED SPINAL JACKET, for Curvatures and Deformities, have met with unparalleled success, and, from their merit, secured the unqualified endorsement and approbation of our celebrated orthopædic specialists, and particular expression of gratitude from the patients who are wearing them. For full information, send for Descriptive Circulars.

Should your Instrument dealer fail to have a supply of our Splints, and decline to carry them in stock, orders sent to us will receive prompt attention.

AHL'S SPLINT MANUFACTURING CO., Limit
W. H. JOHNSTONE, Manager.

JOHNSTONE'S MODIFICATION OF DR. R. J. LEVIS' SPLINT

For the FRACTURE OF THE LOWER END OF THE RADIUS.

We make a Palmar and Dorsal Splint for each arm, from Felt, beautifully moulded to adjust to any size arm.

1281–1332 **Price $2.00 per Pair.**

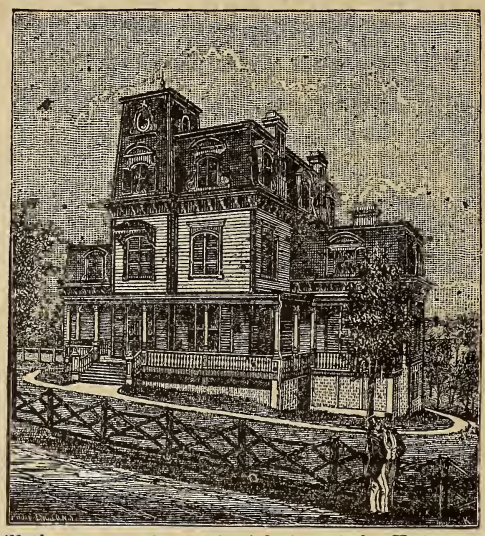
JOHNSTONE'S SPINAL FELT JACKET, any size, . . . $25.00
JOHNSTONE'S LACED SPLINT FOR THE LIMBS, any size, . . . 10.00

N. B.—If the Instrument Dealers of Philadelphia decline to supply its Physicians with our JOHNSTONE'S FELT SPLINTS on call, they will be furnished and delivered by us to any part of the city, at any time, on receipt of the price, viz. $1.00 each.

THE DE QUINCEY HOME,

Fort Washington, **New York City.**

A Private Asylum for the Treatment of the Opium, Morphine, Chloral, Chloroform and Hashisch Habits, Nervous Diseases and Inebriety.



Drs. H. H. Kane
and

Consulting Physicians.

Prof. Wm. A. Hammond,
Prof. T. Gaillard Thomas,
Dr. Edward C. Spitzka,
Dr. Daniel M. Stimson,
Dr. Edward T. Ely,
Dr. G. H. Wynkoop,
Dr. Andrew H. Smith.

Situated upon a high hill that commands a splendid view of the Hudson and Harlem rivers, Spuyten Duyvil Creek, and the beautiful country for miles around; surrounded by ample grounds and magnificent drives; in easy communication with the city by means of the Sixth and Ninth Avenue Elevated and the Hudson River Railroads; away from the dust, noise, crowding and malaria of the city; with hot and cold water in every room, furnace and grate-fire heating, croquet, horses and carriages, boats and fishing, an excellent *cuisine*, trained nurses and careful medical attendance, it possesses unequaled advantages for the treatment of cases of this kind.

The plan of treatment pursued in the cure of opium, morphine and chloral takers is that of *rapid reduction*, which possesses all the advantages, and none of the dangers of Levenstein's *sudden deprivation*, or the prolonged agony of *gradual reduction*. Each case is studied and treated in accordance with its peculiarities and the idiosyncrasies of the patient, no set plan of treatment being pursued, at the expense of the person's health or comfort.

Our Home, furthermore, offers special facilities for the treatment by *rest, diet, and massage*, according to the plan of Weir Mitchell, of that large class of nervous diseases so commonly met with in ladies suffering from uterine troubles. This plan of treatment has been specially studied, and nurses competent to carry out its provisions in every detail will be furnished. For further particulars, etc., address 1299-1350

McINTOSH'S COMBINED

Galvanic AND Faradic Battery.

THIS CELEBRATED BATTERY COMBINES BOTH THE GALVANIC AND FARADIC CURRENT,

Which can be used separately or combined. Any strength and intensity desired can be obtained for use in Electro-therapeutics. THIS BATTERY is constructed on an IMPROVED PLAN, as follows: The zinc and carbon plates are arranged in couples, securely clamped to hard rubber plates, with thumb screws. These screws are also used for binding posts. All the connections are positive. The cells are made in sections of six, of hard rubber, with hard rubber drip cup. The following points of excellence render our Batteries superior to others:

1. They combine the only Portable Galvanic and Faradic Battery in one case.

2. They weigh one-half less than other Batteries of the same number of cells.

3. The cells are made in sections of six, of one solid piece of hard, vulcanized rubber; by this arrangement they can be emptied, cleaned and filled as easily and quickly as one cell, and will not crack, break or leak.

4. A hard rubber drip cup is placed by the side of each section of cells, to receive the zinc and carbon plates when removed from them. By this arrangement we avoid the use of absorbent materials and soiling the Battery

5. The Hydrostat is perfect. The rubber plates which hold the elements project over on one side enough to cover the cells when the zinc and carbon plates are placed in the drip cups. The under side of this projection is covered with thick, soft rubber, which is securely clamped to the cells sections, and makes them water tight.

6. This is the only Battery in which the zinc and carbon plates can be kept clean by simply rinsing them.

7. A zinc or carbon plate can be removed by simply loosening a binding post; and all parts of the Battery can be duplicated, as like parts are made exactly alike. We will be pleased to send circulars and our illustrated catalogue, giving full information, price, etc., free, upon application.

McINTOSH GALVANIC BELT AND BATTERY CO.,

1281-1332 **Nos. 192 and 194 Jackson Street, CHICAGO, ILL.**

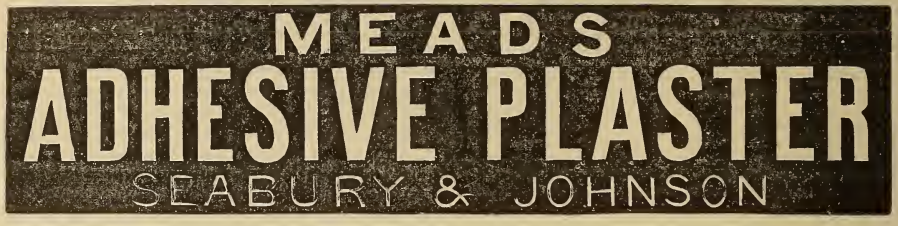
SEABURY & JOHNSON'S
PHARMACOPŒIA PLASTERS

IN RUBBER COMBINATION.

BELLADONNA, ADHESIVE, { Price, per mail, 1 yard roll, $1. *CANTHARIDAL,* Price, 1 yard, $1. *MUSTARD ON COTTON CLOTH, AND OTHER FORMULAS.*

ADVANTAGES OF THE RUBBER BASE:

A cold process through which volatilization by heat is avoided. Preservative character of the rubber combination, thus ensuring uniform reliability. Perfect pliability in any temperature; convenience of application, as the plaster adheres without heat or moisture; cleanliness.



This article is intended to take the place of the unreliable Emp. Adhesive, on account of its superior qualities and cheapness.

It is Pliable, Antiseptic, Waterproof, Non-Irritating, and Strong.

Does not become Dry.
Does not become Stiff.
Is not affected by Age.
Does not crack off the Muslin.
Is spread on honest Cotton Cloth.
Is not affected by Dampness.
Is not affected by Heat or Cold.
Will adhere firmer than Emp. Adhesive.
Will adhere longer than Emp. Adhesive.
Does not require heat or moisture to make it adhere.
Is an entirely new article, free from all irritating properties.
Is used by the New York, Bellevue, and other large Hospitals, and by many of our leading Surgeons.

FURNISHED { In Rolls 5 yards long by 14 inches wide. 1 yard x 7½ inches. In 10 yard lengths, on spools, ½, 1, 2, or 3 inches wide.

Supplied by Druggists. Physicians in remote sections can be supplied by mail, at following prices: 5 yard rolls, per yard, 40 cents; 1 yard rolls, per yard, 50 cents.

PREPARED ONLY BY

MEAT AND QUINIA.

AROUD'S WINE WITH QUINIA,

And all the Nutritive Principles of Meat.

Aroud's Preparations recommend themselves to the most serious attention par excellence:

1st.—Because they combine all the active principles of the richest barks of quinia carefully selected.

2d.—Because 30 grammes of them contain 3 grammes of quinia and all the nutritious principles of 27 grammes of meat, which are soluble in alcohol and water.

3d.—Because the combination of meat with the barks of quinia has not only the advantage of acting as a tonic, nutritive, and febrifuge, but also that of paralyzing and guarding against any local irritation caused by the prolonged use of quinia barks, and of preparing the stomach to endure the salutary influence of this friendly compound.

4th.—Because these preparations with meat as a basis, containing in their composition the entire nutritious elements of muscular fibre, blood and bone, answer alone to the immortal maxim of Hippocrates, fundamental basis of all good reparative medication, "*Ars imitatio natura.*"

5th.—Because, if meat occupies the first rank among the articles of food, if quinia is placed at the head of tonics, the combination of these highly reparative substances must necessarily be a reconstructor par excellence.

Finally, because the experiments with Aroud's Wine and Quinia prove, better than theory, that, to reconstruct the shattered and enfeebled forces, no other tonic can be compared to it.

MEAT, IRON AND QUINIA.

AROUD'S

FERRUGINOUS WINE WITH QUINIA,

And all the Nutritive Principles of Meat.

MEAT, IRON AND QUINIA, that is so say, the most reparative food combined with a reconstituent and a nerve tonic par excellence: such is the remarkable composition of this ferruginous preparation, which, in all respects, merits the preference of physicians. It prevents impoverishment of the blood, anæmia, chlorosis, etc.; presented in a form at once attractive to the eye and pleasant to the palate—an assimilable iron united with all the constitutive principles of bone and of muscle; it can, therefore, form and regenerate the forces, and this without causing nausea, constipation, or disturbing the digestive organs. By its generous alimentation it corrects and modifies the bad effect of the prolonged use of quinia.

The excellence of this preparation justifies that which Hippocrates proclaimed over 2000 years ago, and all clinics have confirmed: "That the soluble nutritive principles of meat is the food best adapted for the sick and convalescents; that these principles, being the integral parts of muscle, have the faculty of forming flesh rapidly, and of restoring muscle."

It is, therefore, a precious specific for all the maladies caused by impoverishment or deterioration of the blood, because meat, iron and quinia combined give nourishment, act as a tonic, regenerate, reconstitute, and regulate the entire system. 1261-1312-eow

PROCTER'S PEPSIN (SACCHARATED.

This standard article is prepared from *Pepsin*, carefully purified and freed from mucus, and is not a *dried Peptone*. It is inodorous and non deliquescent, and retains its digestive power indefinitely. It is so well known that extended comment is superfluous. We would, however, call attention to its uniform purity and solubility, which, with extraordinary *digestive power*, commend its use in preference to other less carefully *made* articles. It is tested to the solution of 250 grains of coagulated albumen by 10 grains of Pepsin.

PROCTER'S "PEPSIN FORTIOR," (Stronger or Concentrated Pepsin.) A powerful form of Pepsin, eligible when minimum dose is desirable. It is of the same exceptional purity with our *Procter's Pepsin*, while the strength is far greater. Dose one to three grains. 1275-1308, 1y.

Manufactured by **WM. PROCTER, Jr., CO.,** S. W. Cor. 9th and Lombard Sts., Phila.

HOLLOW SUPPOSITORIES.

WITH STOPPERS. ALL MADE FROM PURE BUTTER OF COCOA, ONLY.

Aural, Nasal, Rectal, Urethral, Cystic, Vaginal, Intra-Uterine, and Veterinary Suppositories.

The object of this invention is to supply Physicians, Druggists, Veterinary Surgeons, and others, with HOLLOW SUPPOSITORIES, into which they can put any kind of medicine or nutriment, thus producing firm, smooth, and evenly medicated Suppositories, that are cheaper and more reliable than those made by the old method.

RECTAL ABSORPTION.

"The mucous membrane of the rectum, like that of other portions of the alimentary canal, posseses all the requisites, more or less, for the exercise of absorption."

Liebig states that a strong solution of common salt disappeared so completely in the rectum, that an evacuation one hour afterward was found to contain no more than the usual portion of salt.

Many medicinal substances act more energetically when applied to the rectum than when received into the stomach.

Baron Dupuytren said: "The rectum *absorbs*, but does not *digest*. The medicinal agent," he says, "owing to the absence of digestion, passes more directly, more purely, and more surely to its destination, than the same medicine does when taken into the stomach."

M. Orfila asserts that those medical agents which operate through the medium of absorption, such as opium, tobacco, etc., are much more active by the rectum than by the stomach.

Dr. J. H. Scorff reports four cases where he was successful in removing the vomiting of pregnancy, by introducing 20 grains of chloral into the rectum, night and morning. He only found it necessary to use the remedy three or four times.

Chloral is the remedy *par excellence* in the ravings of delirium tremens, and in cases of delirium and insomnia combined; also in infantile convulsions and attacks of laryngysmus stridulus.

Dr. Hickman reports a case of typho-malarial fever, which chloral was found to control in a happy manner. The chloral was introduced per rectum.

"REST TO THE STOMACH,"

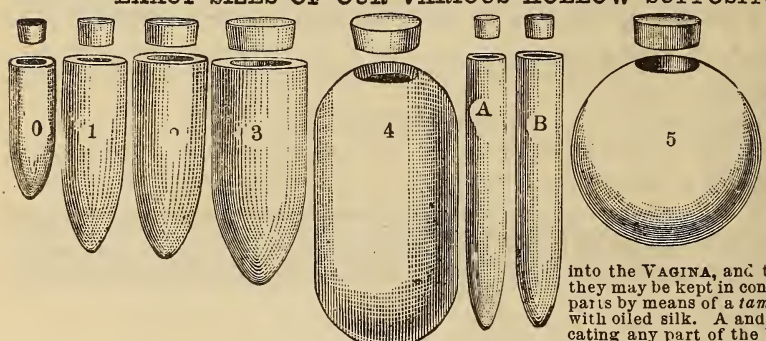
says Mr. Theodore Williams (in London *Lancet*, October 24th, 1874), is of the highest importance in some of the diseases of this organ. In such cases we possess in the rectum an effective second stomach, which, if it does not afford us the pleasure of digestion, spares us many of its pains."

Nutritious substances are taken up by the absorbents, and thus find their way into the economy, and produce their assimilative and nutritive effect. Haller demonstrated the fact that digestion can and does take place in the alimentary canal. He had the greatest confidence in the absorptive and digestive powers of the rectum to sustain life indefinitely.

HYPODERMIC MEDICATION.

Dr. William Bodenhamer says: "This now very common and often misused method is of great value in numerous cases, yet I am decidedly of the opinion that rectal medication is of greater importance; indeed, it is greatly preferable in many instances, being much less dangerous, much more convenient and simple; and the remedies, too, act through this medium with almost equal celerity. But very few remedies can be used hypodermically in comparison to those which can be used by the rectum."

EXACT SIZES OF OUR VARIOUS HOLLOW SUPPOSITORIES.



Size 0 is for children. It may also be used for the EAR and in the NASAL PASSAGES. Nos. 1, 2 and 3 are RECTAL SUPPOSITORIES. Nos. 3 and 4 may be used for introducing nutriment into the system, *via rectum*. No. 4 is also a VAGINAL SUPPOSITORY. No. 5 is a "SPHERICAL HOLLOW SUPPOSITORY," to introduce remedies into the VAGINA, and to the *os uteri*, where they may be kept in contact with the diseased parts by means of a *tampon* of cotton covered with oiled silk. A and B are used for medicating any part of the URETHRA or UTERINE CAVITY, or NASAL PASSAGES.

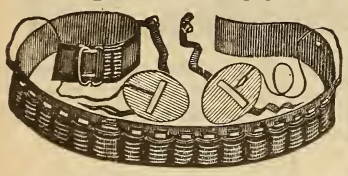
DR. McINTOSH'S ELECTRIC OR GALVANIC BELT.



This Belt is a perfect Galvanic Battery, composed of sixteen cells, placed in pockets on a belt. Each cell is made of hard vulcanized rubber, lined with copper, which constitutes the negative plate. The rubber coating perfectly insulates each cell. The positive plates are of zinc, wrapped in a porous material to absorb the exciting fluid, preventing contact with the copper, and permitting the current to pass from the copper to the zinc. The cells are charged without wetting the belt.

A current selector is so arranged that one or more cells can be used at pleasure. The electrodes are covered similar to ordinary battery electrodes, and connected with the cells by connecting cords. By this arrangement, a current from the belt can be applied to any part of the body. Physicians who have used this belt in their practice do not hesitate to recommend it to the profession.

Our pamphlet on "Medical Electricity," containing a full description of the belt and diseases, with manner of treatment, sent free on application. Address

Registered COSMOLINE Trade Mark.

Unguentum Petrolei

Prepared by E.F.Houghton & Co. Philadelphia, U.S.A.

Put up in 1, 5, 10, 25, 50, and 100-lb. cans. Samples furnished on application. The post-office laws forbid anything of an oleaginous nature being sent through the mail.

In chemical composition, Cosmoline [Unguentum Petrolei] is an oleaginous hydrocarbon, corresponding to the heavy petroleum oils, and containing a large amount of the paraffines and olefines of the formulæ $C_{16}H_{34}$ and $C_{16}H_{32}$. It contains but a small percentage of the paraffines and olefines, corresponding to the formulæ C_7H_{16} and C_7H_{14}, respectively, and the offensive and irritating properties of the crude oil have been carefully removed. In the process of purification, no acids, alkalies, or other chemicals are employed, and no injurious additions of any kind are made to the natural product. The result is a semi-solid, translucent substance, with a faint odor and unctuous feel.

Cosmoline [Unguentum Petrolei] melts at about 100° Fah, (38° Cent.); and boils at about 625° Fah. (329° Cent.); its specific gravity is about 0.875 at 60° Fah.

As it contains no oxydizable or organic matter capable of change by putrefaction or fermentation, and is absolutely without affinity for moisture, it offers to the profession an admirable unguent, which can never decompose, ferment, or become rancid in any climate or temperature.

291 MADISON AVENUE, NEW YORK, February 26th 1878.

I have examined the preparations of Cosmoline as manufactured by E. F. Houghton & Co., Philadelphia, and believe them well adapted to the purposes for which they are designed. As lubricants, and as the bases of simple or medicated ointments, they have a decided advantage over the fixed oils and fatty substances in ordinary use, in that they do not become rancid, and do not acquire irritating qualities from atmospheric exposure. ALFRED C. POST, M.D., LL.D.,
Emeritus Professor of Clinical Surgery in the University of New York, Visiting Surgeon to Presbyterian Hospital, etc.

PHILADELPHIA, July 10, 1880.

MESSRS. E. F. HOUGHTON & CO.:

I have for a number of years made extensive use of Cosmoline [Unguentum Petrolei] and consider it a most valuable article for surgical purposes. Either as a dressing by itself, or as a vehicle for the application of medicaments, it is greatly superior to lard or other fatty matters, especially by reason of its non-liability to change by time or temperature.

Yours truly,
JOHN H. PACKARD, M.D.
1031 WALNUT ST., PHILADELPHIA.

MESSRS. E. F. HOUGHTON & CO.:

I have used extensively Cosmoline [Unguentum Petrolei] both in Dispensary and private practice, with very great satisfaction. As a vehicle in making ointments it is invaluable, and far superior to lard, for the reason that it will not become rancid or undergo chemical change like the latter, when exposed to the atmosphere. I cannot too highly commend it as an application in various skin diseases.

Yours truly, JOHN V. SHOEMAKER, A.M., M.D.,
Physician to the Pennsylvania Free Dispensary for Skin Diseases.

208 WEST 34TH ST., NEW YORK.

MESSRS. E. F. HOUGHTON & CO.:

Gents:—I fully appreciate the value of your Cosmoline, or Unguentum Petrolei, and prescribe it frequently in ointments. Fluid Cosmoline I have used constantly for several years, as a lubricant of urethral sounds. It is the cleanest oil I know of for this purpose.

Yours truly, GEO. HENRY FOX.

TO THE MEDICAL PROFESSION.

LACTOPEPTINE.

We take pleasure in calling the attention of the Profession to LACTOPEPTINE. After a long series of careful experiments, we are able to produce its various components in an absolutely pure state, thus removing all unpleasant odor and taste (also slightly changing the color). We can confidently claim that its digestive properties are largely increased thereby, and can assert without hesitation that it is as perfect a digestive as can be produced.

LACTOPEPTINE is the most important remedial agent ever presented to the Profession for Indigestion, Dyspepsia, Vomiting in Pregnancy, Cholera Infantum, Constipation, and all diseases arising from imperfect nutrition. It contains the five active agents of digestion, viz: Pepsin, Pancreatine, Diastase, or Veg. Ptyalin, Lactic and Hydrochloric Acids, in combination with Sugar of Milk.

FORMULA OF LACTOPEPTINE.

Sugar of Milk	40 ounces.	Veg. Ptyalin or Diastase	4 drachms.
Pepsin	8 ounces.	Lactic Acid	5 fl. drachms.
Pancreatine	6 ounces.	Hydrochloric Acid	5 fl. drachms.

LACTOPEPTINE is sold entirely by Physicians' Prescriptions, and its almost universal adoption by physicians is the strongest guarantee we can give that its therapeutic value has been most thoroughly established.

The undersigned having tested LACTOPEPTINE, recommend it to the profession.

DOSE.—Two teaspoonfuls alone, or mixed with twice the quantity of soft water, to be taken thrice daily, with meals.

The principles upon which this discovery is based have been described in a treatise on "THE DIGESTION AND ASSIMILATION OF FATS IN THE HUMAN BODY," by H. C. BARTLETT, PH.D., F.C.S., and the experiments which were made, together with cases illustrating the effect of Hydrated Oil in practice, are concisely stated in a treatise on "CONSUMPTION AND WASTING DISEASES," by G. OVEREND DREWRY, M.D.

In these treatises the Chemistry and Physiology of the Digestion of the Fats and Oils is made clear, not only by the description of a large number of experiments scientifically conducted, but by cases in which the deductions are most fully borne out by the results.

☞ *Copies of these valuable works will be sent free, on application, to all who mention THE MEDICAL AND SURGICAL REPORTER.*

HYDRATED OIL,

HYDROLEINE,

WATER AND OIL,

May be described as partially digested oil, which will nourish and produce increase in weight in those cases where oils or fats not so treated are difficult or impossible to digest. In CONSUMPTION and other WASTING DISEASES the most prominent symptom is EMACIATION, of which the first is the starvation of the fatty tissues of the body, including the brain and nerves. This tendency to emaciation and loss of weight is arrested by the regular use of HYDROLEINE, which may be discontinued when the usual average weight has been permanently regained.

The ordinary so-called emulsions of Cod-liver oil and other fats, WHETHER PANCREATIZED OR NOT, merely remain in the form of a coarse mechanical mixture for a short time after agitation. The digestion of oil having in no sense been artificially produced, still devolves upon those functional powers the deficiency of which is the most prominent symptom in these cases.

HYDROLEINE is not a patent medicine or a secret preparation; the formula is on every bottle. Can be taken by the most delicate stomach; is immediately assimilated.

The permanence and perfection of the emulsion, and the extreme solubility of the HYDRATED OIL, solely prepared and sold by us under the name of HYDROLEINE, is shown by its retaining its cream-like condition as long as the purest Cod-liver Oil will retain its sweetness. Unlike the preparations mentioned, or simple Cod-liver Oil, it produces no unpleasant eructation or sense of nausea, and should be taken in such very much smaller doses, according to the directions, as will insure its complete assimilation; this, at the same time, renders its use economical in the highest degree.

To brain-workers of all classes, Hydrated Oil is invaluable, supplying as it does the true brain food.

Economical in use—certain in result. Tonic—Digestive and Highly Nutritive.

NEW PRINCIPLE FOR THE ASSIMILATION FAT.

NEW PHARMACEUTICALS

WORTHY OF THE

Attention of Physicians.

SOLUTION OF

Chloride of Bromine Compound.

The ingredients which enter into the formation of this compound are those which science has long recognized as the most effective destroyers of the products of decomposition. They are true disinfectants, entering into chemical union with noxious exhalations to form innocuous compounds.

Solution of Chloride of Bromine Compound is especially adapted to the purifying of cesspools, privy vaults, sewers, drains, etc., and to the disinfection of clothing and apartments after contagious diseases.

Ozonized Aromatic Liquid.

The disinfecting principle of this combination is ozone—nature's own disinfectant—possessing also antiseptic properties in a high degree. As active as bromine and chlorine, it possesses none of the irritant nature of these agents, but is of entirely unobjectionable odor, and a positively agreeable perfume in the sick chamber. Its method of employment is extremely simple, all that is required being to place a tablespoonful in a shallow dish or saucer, from which it readily evaporates with the aid of heat. The ozone thus given off may be inhaled without producing any sense of discomfort.

Empty Capsules.

The advantages accruing from the use of gelatine capsules in practice need not be enumerated.

The capsules of our manufacture are very readily soluble in the juices of the stomach. The facility with which they may be filled after a little practice makes them scarcely less desirable, on the score of convenience, than powders.

We put them up in boxes containing 100 each, which may be conveniently carried in a physician's pocket.

Our capsules do not absorb moisture, and thus become sticky, an objection very often attaching to capsules.

Gelatine-Coated Pills.

We solicit a critical comparison of our gelatine-coated pills with those of other manufacturers. We claim for them a regularity of shape and a degree of solubility not excelled. In their manufacture, also, a process peculiar to ourselves is employed, through which perfect continuity in the coating is secured. We employ no metallic points, in the use of which holes are apt to be left, through which volatile principles are liable to escape, and chemical changes take place from contact of the pill mass with the metallic substance.

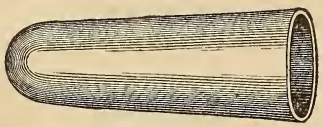
SOLUBLE MEDICATED

HOLLOW VAGINAL SUPPOSITORIES,

For the Treatment of LEUCORRHŒA, VAGINITIS, VAGINISMUS, etc.,

(See MEDICAL AND SURGICAL REPORTER, Jan. 7, 1882, p. 7.)



CLEAN. LIGHT. RELIABLE. EFFICIENT.

These Suppositories are made of medicated gelatin, moulded in a hollow form. The interior is to be filled with either absorbent, carbolized, or salicylized cotton, so as to act as a support, and keep the Suppository, while melting, in close contact with the vaginal walls. The following advantages are claimed for them:—

FIRST.—Being hollow, the use of a large quantity of inert material is avoided, and there is no soiling of the clothes or person.

SECOND.—The composition of which the suppository is made greatly assists the absorption of the remedy, instead of forming a greasy, slowly permeable medium, like that of a cacao butter suppository.

THIRD.—By the large amount of surface over which the medicating ingredient is distributed, absorption is greatly assisted, and the effect of the remedy very soon obtained.

FOURTH.—By their close contact and prolonged action on the mucous substance of the vagina, a much more powerful and lasting effect is obtained, than by any other similar method of local medication.

FIFTH.—Being light, the suppository remains in the upper part of the vagina, where it is most needed, and does not sink and slip out, as does the old-fashioned article made of cacao butter.

These Suppositories are neatly put up in boxes, *each box containing six of a kind only*, and are medicated as follows:—

1. Sulphate Zinc, – – 5 grs.
2. " " – – 10 "
3. Acetate " – – 10 "
4. Chloride " – – 2 "
5. Hydrastis Ext. Fld., – 10 "
6. Ext. Opium Aq., – – 1 gr.
7. " " " – – 2 grs.
8. Sulphate Morphia, – ½ gr.
9. " " – – 1 "
10. Ext. Belladonna Alc., – ½ "
11. " " " – 1 "
12. Ext. Krameria Fld, – 10 grs.
13. Catechu, Powd, – – 10 "
14. Ext. Krameria Fld., – 10 grs.
    Sulphate Morphia, – ¼ gr.
15. Ext. Hyoscyamus, – – 3 grs.
16. Ext. Hyoscyamus, – – 2 grs.
    Ext. Belladonna, – – ½ gr.
17. Ext. Aconite Rad., Fld., – 2 grs.
18. Carbolic Acid, – – 2 "
19. " " – – 4 "
19½. Iodoform, – – – 5 "
20. " – – – 10 "
21. Sulphate Zinc, – – 10 grs.
    Ext. Opium Aq., – – 2 "
22. Sulphate Zinc, – – 10 "
    Ext. Belladonna Alc., – 1 gr.
23. Sulphate Zinc, – – 10 grs.
    Sulphate Morphia, – – ½ gr.
24. Sulphate Zinc, – – 10 grs.
    Carbolic Acid, – – 1 gr.
25. Sulphate Zinc, – – 10 grs.
    Acet. Lead, – – – 8 "
    Tinct. Catechu, – – 5 "
    Ext. Opium Aq., – – 1 gr.
26. Sulphate Zinc. – – 10 grs.
    Hydrastis F. E., – – 10 "
    Carbolic Acid, – – 1 gr.
    Ext. Belladonna, – – ½ "
27. Formula of Dr. W. Thornton Parker, Plymouth, Mass.
    Sulph-carbolate Zinc, – 10 grs
    Sulphate Morphia, – – ½ gr.
28. Iodoform, – – – 5 grs.
    Ext. Belladonna, – – ½ gr.

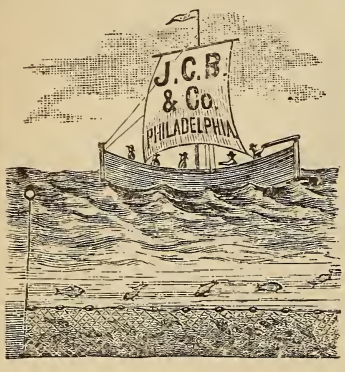
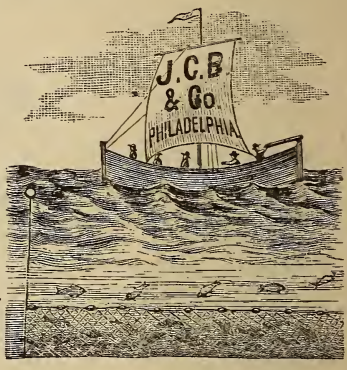
JOHN C. BAKER & CO.'S
PURE COD-LIVER OIL



RECEIVED
PER STEAMER MONTHLY,
In Sealed, Tin-Lined Barrels.

ABSOLUTE
Purity and Freshness
SECURED BY USING
Baker's Cod-Liver Oil.

Patients unable to take other oil find it not only not disagreeable, but positively palatable.



Prepared on the **Halten Islands, Norway,** with great care, from the finest selected livers of *Net-taken Cod Fish*, at a season of the year when in their highest condition.

BAKER'S COD-LIVER OIL

Has been before the Medical Profession since 1840, and is endorsed by the highest authority.

☞ Many Physicians say "Where a *Pure Oil* of such remarkable quality is attainable, a resort to the various preparations of Cod-Liver Oil is unnecessary."

To meet the demand for such, however, we offer

BAKER'S EMULSION

Finest Norwegian Oil as above, 50 per cent. = 12 grains Hypophosphites of Lime and Soda to each tablespoonful. The quality of the Oil used in this preparation renders it, beyond question, the *best Emulsion in the market.*

WE PREPARE, ALSO,

Baker's Cod-Liver Oil, with Extract of Malt.
Baker's Cod-Liver Oil, with Phos. Lime and Wild Cherry.
Baker's Extract of Malt, Plain.

☞ An extract from Trousseau and Pidoux, on Therapeutics, in pamphlet, will be mailed free to any Physician requesting it.

AGENTS FOR

BARLETT'S PILE SUPPOSITORIES

An Astringent and Balsam combined, in the most convenient form for application. Descriptive circular and endorsements mailed on application. Boxes of 14 Suppositories, 75 cents, by mail, to Physicians who mention this Journal.

NOTES ON THE USE OF PEPSINE IN MEDICINE,

WITH RECOMMENDATIONS REGARDING SACCHARATED AND PURE PEPSINE.

That many of the diseases from which mankind suffer during infant and adult life are caused by malnutrition, there can be no doubt; and the extent to which non-assimilation of the life-giving properties of food interferes with recovery from severe illness, baffling the best directed efforts of the physician, points the necessity for an agent sufficiently potent to replace the deficient principle and aid nature in renewing the degenerated tissues.

Realizing this need, the science of chemistry produced pepsine; and even if medical literature were silent as to testimony of the results obtained, the large amount manufactured and consumed would amply attest its usefulness. But such is not the case, for, after long and careful investigation on the part of practical therapeutists, it is accepted as the remedy *par excellence* in all cases where the gastric juice fails to afford a sufficient amount of ferment for the reduction of aliment to a condition suitable for healthy assimilation.

As the undoubted value of pepsine as a remedial agent became evident, competition in its manufacture was stimulated; and as a natural result, the supply was varied both in purity and strength, and the medical profession, while anxious to avail themselves of its usefulness, were nearly as often misled into erroneous conclusions regarding its efficacy, as satisfied with its results, solely in consequence of their misfortune in not using such qualities as were likely to produce the much-lauded effects. Under these circumstances, a definite understanding regarding reliable preparations is desirable, and of great importance. Pure pepsine, without acid, thoroughly triturated with finely powdered sugar of milk (saccharated pepsine*), will, without doubt, produce the perfect results in all cases where the remedy is exhibited.

Routh, in his "Infant Feeding," gives an account of a result obtained in the case of an infant. "Small, wrinkled, emaciated, four days old, yet presenting almost the appearance of decrepitude. The voice was weak but distinct, and respiration not obstructed. The mother was an excellent nurse, but, although the infant took the breast readily, it constantly threw up every meal. What passed through the bowels was unchanged, although slightly tinged with bile. Diarrhœa was also present." The usual external remedies were applied, but without avail. "Emaciation was on the increase; the child was, in fact, dying." At this stage saccharated pepsine was administered, fifteen grains divided into ten powders, mixed with a little of the mother's milk, and after he second day the diarrhœa ceased and the child appeared much stronger. Twenty days of this treatment and the child was quite well. The eminent author adds: "This is a case which speaks strongly to the convictions. If at so early a period of life, when vitality and digestion were so weak, the artificial pepsine effected a cure, *a fortiori* will it be likely to do so in the case of older children; and so I have found it in practice. The digestive powers are thus assisted, and the food, which before was useless because undigested, readily becomes assimilated."

When administering pepsine, the slight acidity of the natural fluid should be produced as nearly as possible, and, as the necessities differ with the circumstances, it is desirable that the preparation be quite free from acidulation, and the proper dose be given in combination with the requisite amount of dilute acid. Of Kidder & Laird's pure pepsine, five to ten grains for an adult can, if necessary, be taken in an ounce of water, with five drops of muriatic acid.

For infants, however, the saccharated pepsine will be found to yield the most satisfactory results, and the acid should be dispensed with. Quantitatively it represents one-tenth of the strength of pure pepsine; but it has been found to be but about one-fourth less in efficacy. The absence of acid, which would otherwise tend to produce harmful results, will be recognized when it is considered that even the slight acidity of most cow's milk, when used as food for infants, is sufficient to disagree with them.

With regard to the proper time for its administration, as before or after taking of food, opinions vary, but reason would suggest that about half an hour before eating will afford the ferment a sufficient time to combine with the existing condition of the stomach, and produce the most natural effect upon the food when it has been acted upon by the salivary fluids in its passage to the stomach.

When once the formation of peptone has been established in the stomach, and as strength is acquired, the system will soon respond toward resuming the natural production of its normal fluids. Thus it is that many of the disorders of digestion which accompany severe attacks of fever, phthisis, etc., and also the exceedingly sensitive condition of the stomach caused by vomiting in pregnancy and alcoholism, are controlled, and a natural condition resumed.

Having mentioned the necessity of great care in the selection of pepsine, with reference to its purity and strength, it is proper to say that, even with the superior article above recommended, negative results may be obtained, unless attention is given to the form of its administration. Combinations beyond those above mentioned are not advised, but rather discouraged, as many of the substances usually recommended as efficacious with it are incompatible and render the pepsine inert.

* Saccharated pepsine, free from acid, is prepared by Messrs. Kidder & Laird, No 83 John Street, New York, who generously furnish samples of both this and the pure pepsine, free of charge, upon application.

1264-1315

HORSFORD'S ACID PHOSPHATE

IN

IMPOTENCE,

Seminal Losses,

Impaired Vitality,

Spermatorrhœa.

We wish to call the attention of the profession to the action of Horsford's Acid Phosphate on the organs of generation, when their power has become impaired through sexual excess, or from senile impotence. It is at once rejuvenating and aphrodisiac in its effect. It appears to restore the secretory organs that have been deranged to their normal condition, giving vigor where there has been debility, and renewed strength where there has been exhaustion.

H. B. STORER, M.D., Boston, says: "I have found Horsford's Acid Phosphate serviceable, in a marked degree, in my treatment of spermatorrhœa."

E. W. JONES, M.D., Taunton, Mass., says: "Horsford's Acid Phosphate was prescribed in a case of nervous prostration from seminal losses, with decided beneficial effect."

C. S. ELLIS, M.D., Wabash, Ind., says: "I prescribed Horsford's Acid Phosphate in a case of nervous debility and weakness of the sexual organs; patient forty-eight years old; he was much benefited."

R. W. ERWIN, M.D., Bay City, Michigan, says: "In some cases of weakness following sexual indiscretions, attended with nervousness, it is useful."

Each case presents its own peculiarities for treatment, but, as a general rule, we would suggest a half teaspoonful of Horsford's Acid Phosphate, in half a tumbler of hot or cold water, or tea without milk, to be taken shortly after each meal, and upon retiring.

Pamphlet giving further details mailed free, on application to the manufacturers.

Physicians who have not had a bottle of the Horsford's Acid Phosphate, and who wish to test it, will be furnished with a sample without expense, except express charges.

RUMFORD CHEMICAL WORKS,

PROVIDENCE, R. I.

1297-1348

In corresponding with Advertisers, please mention THE MEDICAL AND SURGICAL REPORTER.

An experience of more than a quarter of a century convinces us that sugar, properly applied, is the only correct coating for a pill.

Physicians should be careful to specify Warner & Co., when prescribing or ordering.

Special attention is called to the following selected Recipes prepared for Physicians' Prescriptions.

PIL: PHOSPHORI COMP: (WARNER & CO.)

℞. Phosphori, - - 1-100 gr.
Ext. Nuc. Vom. - ¼ gr.

THERAPEUTICS.—As a nerve tonic and stimulant, this form of pill is well adapted for such nervous disorders as are associated with impaired nutrition and spinal debility, increasing the appetite and stimulating digestion.

The practical value of Phosphorus as a therapeutic agent, and its applicability to the cure of disease, and especially in those varied disordered conditions consequent upon OVERWORK, which are characteristic of modern civilization.

Pil. Phosphori Comp. may be taken, one or two pills three times daily, after eating.

Price, per 100, $1.50.

PIL: IODOFORM ET FERRI. (WARNER & CO.)

℞. Iodoform, - - 1 gr.
Ferri Redacti, - 1¼ gr.

THERAPEUTICS.—A powerful general tonic and alterative, valuable as a remedy in Anæmia, Scrofula, Neuralgia, Chlorosis, Rheumatism, etc.

Pil. Iodoform et Ferri may be given in doses of from one to two pills, as occasion may require.

Price, per 100, $2.00.

PIL: DIGESTIVA. (WARNER & CO.)

℞. Pepsin Conc't, 1 gr. Gingerine, 1-16 gr.
Pv. Nuc. Vom., ¼ gr. Sulphur, ⅛ gr.

THERAPEUTICS.—Useful in relieving various forms of Dyspepsia and Indigestion, and of permanent benefit in cases of enfeebled digestion, where the gastric juices are not properly secreted. It is also a gentle laxative and excellent dinner pill, may be taken one after dinner, or one before each meal, three times daily.

Price, per 100, 75 cts.

PIL: CALCIUM SULPHIDE. (WARNER & CO.) 1-10, ¼, ½ & 1 gr. each.

THERAPEUTICS.—Extremely useful in the treatment of acne, scrofula and cutaneous diseases.

Sulphide of Calcium is usually administered in doses of from 1-10 to ¼ grain four times daily, gradually increasing the dose to one grain six times daily, or according to the progress or severity of the case.

Price, per 100, 1-10 gr. .50; 1-4 gr. .60; 1-2 gr. .75; 1 gr. $1.00.

WARNER & CO.'S PILLS MAY BE OBTAINED FROM ALL DRUGGISTS, OR BY MAIL, ON RECEIPT OF PRICE.

In corresponding with Advertisers please mention THE MEDICAL AND SURGICAL REPOR

SAVORY & MOORE beg to call the attention of the Profession to some of their Special Preparations, the purity and uniform strength of which are Guaranteed.

PANCREATIC EMULSION,

Prepared in accordance with the direction of the Physician who introduced this purely

MEDICINAL FOOD FOR CONSUMPTION AND WASTING DISEASES.

Pancreatic Emulsion will always take precedence of Cod-Liver Oil, by reason of its introducing the STABLE SOLID FATS INTO THE SYSTEM, instead of the evanescent fluid fats or oils.

Neither Cod-Liver Oil nor EMULSIONS of COD-LIVER OIL can supply the kind of fat necessary for sound and vigorous human life. In addition to this, all the Oily Emulsions are liable to rancidity, and most of them are highly objectionable in consequence of the SAPONIFICATION and ULTIMATE PUTREFACTION, produced by the chemical agents used instead of Pancreatic Juice.

Pancreatic Emulsion (properly so-called), is THE NECESSARY FOOD OF THE CONSUMPTIVE, and the most reliable form of nutriment for counteracting the tendency to Phthisis and other wasting diseases. It presents to the lacteals fat, in essentially the same condition for assimilation and absorption as in a vigorous human frame, and THE AGENT of the important change is THE NATURAL SECRETION of the PANCREAS.

Pancreatic Emulsion may therefore be regarded as Chyle obtained by nature's own process. In certain cases both Cod-Liver Oil and Pancreatic Emulsion are required—one to supply the blood with oil or liquid fat, the other with the more stable solid fats; but it cannot be too strongly urged that both PANCREATIC EMULSION and Cod-Liver Oil are *not to be regarded as Medicines, but as articles of diet*, without which patients, with their defect of health, will as surely starve as healthy persons would if deprived of the most nutritive part of their food.

Pancreatized (Digestive) Cod-Liver Oil. By Pancreatized Cod-Liver Oil, the active digestive principle of the Pancreatic Juice is imparted to it, which renders it in a highly favorable condition for rapid and complete digestion and assimilation, preventing nausea, and largely increasing the beneficial properties of the Oil.

Pancreatine effects the digestion and assimilation of Cod-Liver Oil and Fat, as well as Food generally. This palatable and popular remedy is therefore invaluable to PATIENTS WHO ARE UNABLE TO DIGEST COD-LIVER OIL, and who are thus deprived of its nourishing and invigorating properties.

Pancreatine Wine. An excellent vehicle for taking Cod-Liver Oil and promoting the digestion of it.

NEW HYPODERMIC SYRINGES.

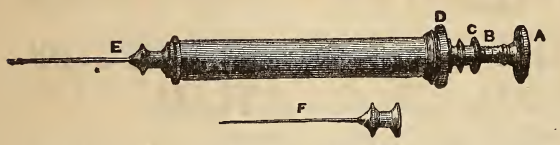

FIG. 48.—NO. 2.

These cuts (two-thirds the actual size) represent a New Hypodermic Syringe of our Manufacture. With the exception of the needles, it is of German Silver, a material chosen as possessing, next to steel, the greatest rigidity and durability, while free from liability to oxydation. The barrel is formed by a process peculiar to ourselves, securing uniformity of calibre without soldered joint or seam. It is plated inside and outside with nickel. The piston is packed in the double parachute form, with leather prepared expressly for the purpose. It will be found to retain its elasticity, to operate smoothly, to resist all tendency of fluid to pass above, as of air below it. A nicely-engraved scale upon the piston-rod indicates minims, thirty being the capacity of the syringe.

Syringes Nos. 2, 3, and 4 have also a screw thread upon the piston-rod, and a traverse nut, thereby favoring the utmost nicety in the graduation of doses.

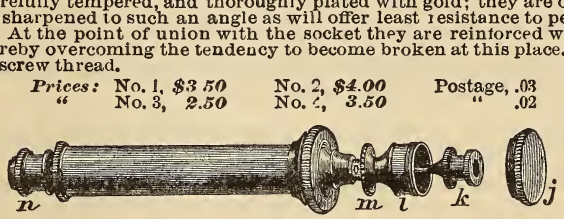
No. 3, Compact, has hollow piston-rod to receive one needle, also a protecting cover and fluid retainer; it may be carried in the Pocket Instrument or Vial Case, or without any case.

No. 4, Compact, is like No. 3, with the addition of a second needle, carried upon the syringe in the usual place, protected by a metal shield.

Nos. 1 and 2 are put up in neat morocco-covered case, with vial.

Two sizes of needles are furnished with each instrument, Nos. 1, 2, and 4; one only with No 3. They are of refined steel, carefully tempered, and thoroughly plated with gold; they are of small diameter and large relative calibre, sharpened to such an angle as will offer least resistance to penetration, and therefore cause least pain. At the point of union with the socket they are reinforced with an outer covering of German silver, thereby overcoming the tendency to become broken at this place. They are connected with the barrels by a screw thread.

Prices: No. 1, *$3.50* No. 2, *$4.00* Postage, .03
" No. 3, *2.50* No. 4, *3.50* " .02



No. 3.

These Syringes are so thoroughly and strongly made as to be free from the annoying accidents common to most Hypodermic Syringes; and we believe that, for convenience, durability, and nicety of construction, they have no superior.

OTHER HYPODERMIC SYRINGES.

		Postage.
No. 7, glass-barrel, graduation engraved on barrel, with screw nut on piston, nickel-plated mountings, two best steel gilt needles, in neat case	*$3.00*	.02
No. 9, glass, graduation engraved and numbered on piston-rod, with screw nut, best steel gilt needles, in neat case	*3.00*	.02
No. 7 or No. 9, with two steel unplated needles, either	*2.50*	.02
No. 10, glass, Luer's (French), graduation as No. 9, one gold needle and two steel needles, silver mountings, neat velvet-lined morocco case	*12.00*	.02

No. 11, glass cylinder, fenestrated, nickel plated metal mounting (see cut).

No. 11.

		Postage.
As represented in the cut, the glass cylinder is encased in a metal mounting, fenestrated to show the graduations for minims. The instrument may readily be taken apart for cleaning, and for those who prefer glass, is recommended for its non-liability to breakage. Price, with two best steel gilt needles, in a neat case	*$3.50*	.02

BUFFALO LITHIA WATER.

FOR

BRIGHT'S DISEASE OF THE KIDNEYS, THE GOUTY OR URIC ACID DIATHESIS, CHRONIC INFLAMMATIONS OF THE BLADDER, ETC.

Dr. Wm. A. Hammond, of New York, Surgeon General U. S. Army (retired), Professor of Diseases of the Mind and Nervous System in the University of New York, etc.

"I have for some time made use of the Buffalo Lithia Water in cases of affections of the Nervous System, complicated with Bright's Disease of the Kidneys, or with a Gouty Diathesis. The results have been eminently satisfactory. Lithia has for many years been a favorite remedy with me in like cases, but the Buffalo Water certainly acts better than any extemporaneous solution of the Lithia Salts, and is, moreover, better borne by the stomach. I also often prescribe it in those cases of Cerebral Hyperæmia, *resulting from mental overwork*—in which the condition called Nervous Dyspepsia exists—and generally with marked benefit."

Dr. J. Marion Sims, of New York, says of this water, in general terms:—

"I have used in my practice the Buffalo Lithia Water, Spring No. 2, for two years past, and have, in many cases, found it highly efficacious."

Dr. Alexander B. Mott, of New York, Professor Surgery, Bellevue Hospital Medical College, Surgeon Bellevue Hospital.

"I have made sufficient use of the Buffalo Lithia Water to be satisfied that it possesses very valuable therapeutic properties. In the Gouty Diathesis, Chronic Inflammation of the Bladder, and other diseases affecting the Urinary Organs, it may be relied on to give the most satisfactory results."

Dr. Hunter McGuire, Richmond, Virginia, late Professor Surgery Medical College of Virginia; Medical Director on the Staff of Gen. T. J. (Stonewall) Jackson; Vice-President of the International Medical Congress; Vice President American Medical Association.

"Buffalo Lithia Water as an Alkaline Diuretic is invaluable. In Uric Acid Gravel, and, indeed, in diseases generally of the Uric Acid Diathesis, it will be found a remedy of extraordinary potency. I have prescribed it in cases of Old Rheumatic Gout, which had resisted the ordinary remedies, with wonderfully good results. I have also used it in my own case, being a great sufferer from this malady, and have derived more benefit from it than from any other remedy. It has remarkable adaptation in diseases of the Digestive Organs. In that condition especially known as Nervous Dyspepsia, caused by over-mental taxation, where, too, there is an excess of acid in the process of digestion, the happiest results may be anticipated from it.

Dr. Robert Battey, of Georgia, Suggestor of Battey's Operation; Member of the American Medical Association, etc.

"I would state that I have been using the Buffalo Lithia Water No. 2, in my practice for three years past, in cases of Chronic Inflammation of the Bladder, whether induced by STONE, by ENLARGED PROSTATE in the aged, or by neglected GONORRHŒA, and have secured excellent results, which encourage me to prescribe it for the future."

This Water, in Cases of One Dozen Half-Gallon Bottles, $5.00 per Case, at the Springs.

On Sale in Philadelphia by JOHNSTON, HOLLOWAY & CO.; JOHN WYETH & BRO.; FRENCH, RICHARDS & CO.

Springs Pamphlet sent to any address. Springs open from 1st of June to 1st of October.

THOMAS F. GOODE, Proprietor,

Buffalo Lithia Springs, Virginia.

MURDOCK LIQUID FOOD CO., Boston,

THE ONLY MANUFACTURERS OF

RAW FOOD EXTRACTS IN THE WORLD.

It can be retained by the weakest stomach, when all other food extracts, and even water, is rejected.

It is the only food that will relieve the Consumptive from Hunger.

Nutritious food, if raw, condensed, and free from insoluble matter, will cure chronic diseases, as it will make blood faster than all preparations or food, and new blood will cleanse the system.

MURDOCK'S LIQUID FOOD is made from Beef, Mutton and Fruits; contains corpuscles; is 12½ per cent. soluble albumen, and free from insoluble matter, drugs, minerals, salts and acids, and can be retained by the stomach when so weak as to refuse food.

Ask your Druggists, or send to us, for Essays read before the American Medical Association, at Richmond, Va., May 6, 1881, on the value of Raw Food Extracts, by Geo. R. Shepherd, of Hartford, Conn., and other Essays and Testimonials from Medical Journals and Physicians that have used Liquid Food, in cases of Consumption, Scrofula, Nervous and General Debility, Dyspepsia, acute and chronic, Constipation, Diphtheria, Intemperance, Cholera Infantum, Infantile Diarrhœa, Post partum Hemorrhage, Purpura Hemorrhagica with Waxy Liver, Pelvic Cellulitis, Malarial and other Fevers, Chronic Strumous Arthritis, Sclerosis of the Spinal Cord, Senile Gangrene, Perinephritic Abscess, and other diseases of malnutrition. No cases of Cholera Infantum have occurred where it has been used daily, and no lives have been lost from Cholera Infantum where it has been prescribed by a physician. Excellent for Eczema, Diabetes, Rheumatism and Neuralgia.

At the request of any physician who has not tried our Extracts, and would like to, we will deliver sample bottles to the Express in Boston. To any Medical Society wishing to investigate the value of our Extracts, through a committee, hospital, or individual members, we will furnish a supply of Liquid Food equal to a six-ounce bottle for every member present at the time of action. We are induced to do this knowing that our Extracts are saving life, and that an increased use of them, which will follow after a trial of them, will be the means of saving more lives daily. (*We ask no testimonials of results obtained.*) Raw Extracts are available where cooked ones are not, or if available, contain only one-third as much nourishment.

Liquid Food is in general use at all Hospitals, Infant and Insane Asylums, and Washingtonian Homes, U. S. Navy Hospitals, and by all physicians that have tried it.

If not kept by your Druggist, can be obtained in any of the commercial cities In Philadelphia, by Johnston, Holloway & Co., Boericke & Tafel; in Pittsburg, by A. Kelly & Co.; in Baltimore, by Thomsen & Wirth; or you can order direct and we will pay express. 1 oz., 15 cents; 6 oz., 55 cents; 12 oz., $1.00.

See Philadelphia MEDICAL AND SURGICAL REPORTER, *Boston Medical and Surgical Journal*, and *New York Medical Record*, for chronic cases that were at our quarterly reception to physicians, in Boston, December 30, 1881—cases of Eczema, Rheumatism, Neuralgia, Diabetes, Consumption, and other diseases. If all were not restored to perfect health, they were gaining daily, and able to enjoy life and attend to their business. 1297-1348

1872. Gold Medal.

1873, VIENNA. Medal of Merit.

BOUDAULT'S PEPSINE

IN POWDER, also WINE, ELIXIR, SYRUP, PILLS, AND LOZENGES OF PEPSINE.

Since the introduction of Pepsine by Boudault in 1854, **BOUDAULT'S PEPSINE HAS BEEN, AND IS STILL CONSIDERED, THE MOST RELIABLE,** as is attested by the awards it has received at the Exhibitions of 1867, 1868, 1872, 1873, and in 1876 at the Centennial Exposition in Philadelphia.

IT IS THE ONLY PEPSINE USED IN THE PARIS HOSPITALS.

Careful tests will enable any one to satisfy himself that **BOUDAULT'S PEPSINE HAS A DIGESTIVE POWER AT LEAST DOUBLE** that of the best Pepsines in the market, and that it is really the cheapest.

It is Sold in 1 ounce, 8 ounce, and 16 ounce Bottles.

Beware of so-called French Pepsines bearing fictitious names, and prescribe Boudault's only.

BLANCARD'S PILLS

OF UNCHANGEABLE IODIDE OF IRON.

Blancard's Pills of Iodide of Iron are so scrupulously prepared, and so well made, that none other have acquired a so well deserved favor among physicians and pharmaceutists. Each pill, containing one grain of proto-iodide of iron, is covered with finely pulverized iron, and covered with balsam of tolu. Dose, two to six pills a day. The genuine have a *reactive silver seal* attached to the lower part of the cork, and a green label on the wrapper, bearing the fac-simile of the signature of

Blancard

Pharmacien, No. 40 Rue Bonaparte, Paris

without which none are genuine.

BEWARE OF IMITATIONS.

E. FOUGERA & AGENTS, NEW YORK. 1297 tf.

For Consumption and Wasting Diseases.

HYDROLEINE

Has been proved of the highest value in CONSUMPTION and all WASTING DISEASES, invariably producing IMMEDIATE INCREASE in FLESH and WEIGHT.

FORMULA OF HYDROLEINE.

Each dose of two teaspoonfuls, equal to 120 drops, contains:

Pure Oil,	**80 m. (drops.)**	**Soda,**	**1-3 grain.**
Distilled Water,	**35 m.**	**Boric Acid,**	**1-4 "**
Soluble Pancreatin,	**5 grains.**	**Hyocholic Acid,**	**1-20 "**

DOSE.—Two teaspoonfuls alone, or mixed with twice the quantity of soft water, to be taken thrice daily, with meals.

The principles upon which this discovery is based have been described in a treatise on "THE DIGESTION AND ASSIMILATION OF FATS IN THE HUMAN BODY," by H. C. BARTLETT, PH.D., F.C.S., and the experiments which were made, together with cases illustrating the effect of Hydrated Oil in practice, are concisely stated in a treatise on "CONSUMPTION AND WASTING DISEASES," by G. OVEREND DREWRY, M.D.

In these treatises the Chemistry and Physiology of the Digestion of the Fats and Oils is made clear, not only by the description of a large number of experiments scientifically conducted, but by cases in which the deductions are most fully borne out by the results.

☞ *Copies of these valuable works will be sent free, on application, to all who mention THE MEDICAL AND SURGICAL REPORTER.*

HYDRATED OIL,

HYDROLEINE,

WATER AND OIL,

May be described as partially digested oil, which will nourish and produce increase in weight in those cases where oils or fats not so treated are difficult or impossible to digest. In CONSUMPTION and other WASTING DISEASES the most prominent symptom is EMACIATION, of which the first is the starvation of the fatty tissues of the body, including the brain and nerves. This tendency to emaciation and loss of weight is arrested by the regular use of HYDROLEINE, which may be discontinued when the usual average weight has been permanently regained.

The ordinary so-called emulsions of Cod-liver oil and other fats, WHETHER PANCREATIZED OR NOT, merely remain in the form of a coarse mechanical mixture for a short time after agitation. The digestion of oil having in no sense been artificially produced, still devolves upon those functional powers the deficiency of which is the most prominent symptom in these cases.

HYDROLEINE is not a patent medicine or a secret preparation; the formula is on every bottle. Can be taken by the most delicate stomach; is immediately assimilated.

The permanence and perfection of the emulsion, and the extreme solubility of the HYDRATED OIL, solely prepared and sold by us under the name of HYDROLEINE, is shown by its retaining its cream-like condition as long as the purest Cod-liver Oil will retain its sweetness. Unlike the preparations mentioned, or simple Cod-liver Oil, it produces no unpleasant eructation or sense of nausea, and should be taken in such very much smaller doses, according to the directions, as will insure its complete assimilation; this, at the same time, renders its use economical in the highest degree.

To brain-workers of all classes Hydrated Oil is invaluable, supplying as it does the true brain food.
Economical in use—certain in result Tonic—Digestive and Highly Nutritive.

NEW PRINCIPLE FOR THE ASSIMILATION FAT.

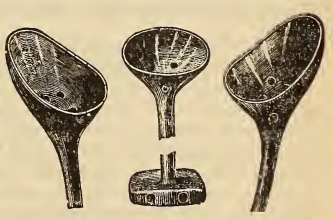
DR. McINTOSH'S
NATURAL UTERINE SUPPORTER.



No instrument has ever been placed before the medical profession which has given such universal satisfaction. The combination is such that the physician is able to meet every indication of Uterine Displacements. Falling Womb, Anteversion, Retroversion and Flexions are overcome by this instrument, where others fail. This is proven by the fact that, since its introduction to the profession it has come into more general use than all other instruments combined.

Among the many reasons which recommend this Supporter to the physician is its self-adjusting qualities. The physician, after applying it, need have no fear that he will be called in haste to remove or readjust it, as is often the case with rings and various pessaries held in position by pressure against the vaginal wall, as the patient can remove it at will, and replace it without assistance.

The Abdominal Supporter is a broad morocco leather belt, with elastic straps to buckle around the hips, with concave front, so shaped as to hold up the abdomen. The Uterine Support is a cup and stem, made of highly polished hard rubber, very light and durable, shaped to fit the neck of the womb, with openings for the secretions to pass out, as shown by the cuts. Cups are made with extended lips, to correct flexions and versions of the womb. The cup and stem is suspended to the belt by two soft elastic rubber tubes, which are fastened to the front of the belt by simple loops, pass down through the stem of the cup and up to the back of the belt. These soft rubber tubes being elastic, adapt themselves to all the varying positions of the body, and perform the service of the ligaments of the womb. The instrument is very comfortable to the patient, can be removed or replaced by her at will, can be worn at all times, will not interfere with nature's necessities, will not corrode, and is lighter than metal. It will answer for all cases of Anteversion, Retroversions, or any Flexions of the womb, and is used by the leading physicians with never-failing success, even in the most difficult cases.

Our Reduced Prices are to Physicians, $6.00; to Patients, $10.00.

Instruments sent by mail, at our risk, on receipt of price, or by Express, C. O. D., with the Express charges for returning the money added.

☞ CAUTION.—Owing to the great sale and popularity of our instrument various and base imitations are sold by unscrupulous parties. In order to get the genuine, it is best to order direct from us.

DR. McINTOSH'S NATURAL UTERINE SUPPORTER CO.,
192 Jackson Street, Chicago, Ill.

Our valuable pamphlet, "Some Practical Facts about Displacements of the Womb," will be sent you free on application. 1281-1332

In corresponding with Advertisers please mention THE MEDICAL AND SURGICAL REPORTER.

BEEF PEPTONE,

IN TRANSPARENT GLASSY SCALES,

Containing only the animal or azotized matter of the Beef. Each ounce is equal to 16 ounces of raw beef, easily soluble, and still faster in hot water.

This Beef Peptone is digested from tender, juicy Beef, by the aid of the *Crystal Pepsin*, of my manufacture (Jensen's Crystal Pepsin). Unlike the various BEEF EXTRACTS, this preparation contains all the nutritive constituents of the Beef, in a thoroughly digested state, ready for absorption into the system, while the Beef Extracts are entirely devoid of the chief elements of nutrition, such as the fibrinous, gelatinous and albuminous portions of the Beef, they only consisting of the concentrated saline constituents, with barely a trace of animal matter to keep its consistence. The difficulty so long experienced by the profession throughout the world, in preparing a PEPTONE entirely free from those chemical agents necessary for its manufacture, so as to render it fit for use, is hereby demonstrated to be successfully overcome, as it contains no foreign matter, and will stand the most severely scrutinizing test as to perfectness, also possessing flavor of the Beef, and so palatable as to render it highly agreeable.

Put up in bottles holding One ounce, Eight ounces, and one Pound.

Kept by the Wholesale and Dispensing Druggists in general.

DEPOT—L. WOLFF'S Pharmacy,

Northwest corner Twelfth and Chestnut Streets.

JENSEN'S CRYSTAL PEPSIN,

IN ARTIFICIAL CRYSTALS,

Strictly inodorous and tasteless, and perfectly soluble in water without acid.

THIS PEPSIN, now so popular with the profession, has created an impetus in the consumption of the same, and physicians of the highest standing, who before the introduction of this active PEPSIN, with good reason, entirely abandoned the use of PEPSIN, are now the most eager in prescribing JENSEN'S CRYSTAL PEPSIN, whenever it is indicated, and since the knowledge of its great solvent power (gr. j. of it will dissolve the boiled whites from two to three eggs) has been established even among those susceptible to be great doubters, it has caused itself to be utilized in many novel ways, by the thinking profession; for instance, in substituting morphia, chloral, etc., as a hypnotic, relieving gastric troubles where the above remedies have been prescribed, creating morphine and chloral habits. In removing diphtheritic patches it is successfully used combined with water, glycerine, and muriatic acid, and the same composition, diluted with more water, as a spray in bronchial troubles, dissolving muco-purulent matter, as well as a spray for same in catarrhal affections.

THIS PEPSIN

Has also been used with success in dissolving and evacuating coagulated blood in the bladder, dispensing with surgical operations in such cases. Many other novel applications could be mentioned, if not in want of space. It is found to be FORTY times stronger than saccharated pepsin. One to three grains is an active dose.

KEPT BY ALL DRUGGISTS.

The above preparations are only manufactured and put up by

CARL L. JENSEN, M.D., PH.G.,

865 North 26th Street, Philadelphia, Pa.

No other Wholesale Agents for this Pepsin are longer engaged, than the Wholesale Druggists throughout the United States.

This College has for its *collegiate year* two sessions.

Regular Session commences Wednesday, September 7th, 1881, and closes March 1st, 1882.

Recitation Term (optional) commences March 15th, 1882, and closes June 14th, 1882.

Graded Course of three terms, of six months each.

PLAN OF INSTRUCTION.

By *Lectures*, *Recitations* and *Clinics*, together with *practical work* in the Anatomical, Physiological, Chemical and Pharmaceutical Laboratories.

Clinics are held *daily*.

Clinical Work in Hospitals and Dispensaries is given to the Senior Class (see Clinics), in *small sections*, under the charge of a *Clinical Teacher*, in all the departments of Medicine and Surgery.

Three Large Hospitals and *two Dispensaries* afford unlimited material for instruction.

ADMISSION.—Candidates for admission are required to pass a preliminary examination, unless satisfactory documentary evidence can be presented, that is equivalent to the standard adopted. (See Catalogue.)

FEES.

Regular Session.—Matriculation, $5.00; Lecture Tickets, $50.00; Hospital Tickets, $10.00 Examination (final), $25.00.

Recitation Term.—$10.00 for those who have attended Regular Session; all others, $25.00, $15.00 of which will be applied on the next Regular Term.

Board and Rooms can be obtained for $3.00 to $5.00 per week, the average being $4.00.

For Catalogue and other particulars, address

H. O. WALKER, M.D., Secretary,
177 Griswold Street, Detroit, Mich.

1274-tf

CRINON'S HÆMOGLOBIN,

The Albuminoid Ferruginous Principle of Blood.

HÆMOGLOBIN is the only physiological chalybeate. Associated as it is with the phosphates of the blood, it forms the most powerful of tonics, and at the same time a most nourishing food. It is especially useful in cases of *Anæmia, Chlorosis, Cachexias, Exhaustion* caused by excess of work, nervous debility, fatigue resulting from parturition and lactation. It replaces entirely liquid blood, which has been recommended and used with success in *Phthisis* and *wasting away.*

It is offered in two forms: In cachets (wafers), 60 of which are contained in a box; combined with chocolate in small squares, 30 of which are in a box; both forms can be sent by mail.

Prepared by C. CRINON, Paris, Pharmacist of the first class, Laureate of the Hospitals of Paris Samples may be obtained by application to

E. FOUGERA & CO., New York, Agents for the U. S.

DOCTOR RABUTEAU'S

(Laureate of the Institute of France.)

DRAGEES, ELIXIR & SYRUP OF IRON.

"The experiments made in the hospitals of Paris have demonstrated that *Dr. Rabuteau's Dragees, Elixir and Syrup* regenerate the red globules of the blood with a rapidity never observed with the use of the other ferruginous preparations. These results have been proved by the various *Compt-Globules.*

"The ferruginous preparations of *Dr. Rabuteau* do not cause any constipation, and are perfectly tolerated by the weakest persons."—*Gazette des Hospitaux.*

Dr. Rabuteau's Elixir is prescribed when some difficulty is experienced in swallowing the Dragees; it is especially adapted to weak persons, whose digestive functions need strengthening or stimulating.

Dr. Rabuteau's Syrup is especially prepared for children, who take it readily, because of its agreeable taste.

FOUGERA'S COMPOUND IODINISED

COD LIVER OIL.

Since the introduction of this oil in 1858, it has been found to be superior to all other kinds of Cod Liver Oil for the treatment of **General Debility, Consumption, Scrofula, Rickets, etc.**

It possesses not only all the **nourishing** qualities of the best Cod Liver Oil, but also the **tonic, stimulant** and **alterative** properties of **Iodine, Bromine** and **Phosphorus,** which are added in such proportions as to render it therapeutically five times as efficacious as pure Cod Liver Oil.

Through its **increased curative action, FOUGERA'S COD LIVER OIL** will be found to cure disease in a much shorter time than the pure oil; while favorable results will be obtained by its use in many advanced cases when the pure Cod Liver Oil would fail entirely.

FOUGERA'S READY-MADE MUSTARD PLASTERS.

A most useful, convenient, clean, and economical preparation. Not liable to change if kept in a dry place. Made of two strengths. Plasters No. 1, of pure mustard; Plasters No. 2, of one-half mustard. Price 40 cents, the tin box, or tin roll, of 10 plasters each. DIRECTIONS.—Dip the Plaster, or Plasters, a minute or two, in cold water; apply on the part, and cover with a band.

FOUGERA'S COMPOUND ICELAND MOSS PASTE.

(Iceland Moss, Lactucarium, Ipecac and Tolu.)

Used with great success against nervous and convulsive coughs, Whooping Cough, Acute Bronchitis, Chronic Catarrh, Influenza, etc.

Wakefulness, Cough, and other sufferings in Consumption, are greatly relieved by the soothing and expectorant properties of this Paste.

FOUGERA'S IODO-FERRO-PHOSPHATED ELIXIR OF HORSE-RADISH.

This Elixir contains Iodine, Pyrophosphate of Iron, the active principles of antiscorbutic and aromatic plants, and acts as a **tonic, stimulant, emmenagogue,** and a **powerful regenerator of the blood.** It is an invaluable remedy for all constitutional disorders due to the impurity and poverty of the blood. One of the advantages of this new preparation consists in combining the virtues of Iodine and Iron without the inky taste of Iodide of Iron.

E. FOUGERA, Pharmacist,
372 Seventh Street, Brooklyn, L. I.,
SOLE PROPRIETOR & MANUFACTURER OF THE ABOVE,
To whom all special communications should be addressed.

E. FOUGERA & CO.,
30 North William Street, New York.

JOHNSTONE'S IMPROVED

ADAPTABLE POROUS FELT SPLINTS.

AHL'S SPLINT MANUFACTURING COMPANY, LIMITED,

123 & 125 South Eleventh Street, PHILADELPHIA, PA.

THE ADAPTABLE POROUS SPLINTS, invented and improved by W. H. JOHNSTONE, have been tested extensively in both civil and military practice for a number of years, and have been endorsed and recommended in the most unqualified manner by the celebrated and distinguished Surgeons of America.

Their *porosity* is a peculiar and a valuable property. While the material is firm and insoluble, it permits readily the passage of air and fluids, so that, on one hand, the heat from the inflamed surface, the perspiration, and the morbid exhalations, are not confined, to the detriment of the patient, *as is the case in every other kind of splint*, but pass off freely; and on the other hand, lotions of cold or warm water, medicated or not with weak alcohol, carbolic acid, arnica, tincture, solutions of the sulphites, etc., can be constantly applied without disturbing the dressings. This, it will readily be seen, is a most invaluable property when the parts are bruised, lacerated, filled with extravasated blood, or erysipelatous, and give these splints a conspicuous advantage over all others.

From FRANK H. HAMILTON, M. D., Professor of Fractures and Dislocations in the Bellevue Hospital Medical College, author of "A Treatise on Fractures and Dislocations," etc.

Having examined carefully *JOHNSTONE'S IMPROVED ADAPTABLE POROUS FELT SPLINTS*, I feel warranted in recommending them to the Profession as superior to all other manufactured splints now in use. They possess all the essential qualities of a good splint, having firmness, pliability and lightness.

FRANK H. HAMILTON, M. D.,
Prof. Military Surgery and Fractures and Dislocations, Bellevue Hospital Col.

From PROF. D. HAYES AGNEW, Prof. Surgery, University of Penna.

1611 CHESTNUT STREET, PHILADELPHIA, *February 6th*, 1879.

The Adaptable Felt Splints, formerly known as those of Dr. Ahl, with the improvement now made by W. H. Johnstone, which renders them in every way superior to the former, I regard as very excellent appliances in the treatment of fractures.

D. HAYES AGNEW,
Prof. Surgery, University of Pennsylvania.

Cuts illustrating the different Splints constituting a Complete Set.

SPECIAL NOTICE TO THE PROFESSION AND TRADE.

Our *policy* heretofore in the introduction of JOHNSTONE'S IMPROVED ADAPTABLE POROUS FELT SPLINTS, has been to confine the sales and business negotiations directly to the Doctors themselves, declining in every case to sell our goods through Dealers; we having assured the Profession generally, both through our agents and catalogues, that *JOHNSTONE'S IMPROVED SPLINTS* could only be obtained by subscription.

We wish to announce, that owing to the large demand for our goods and the constant importunity on the part of *Surgeons* everywhere to place our Splints on sale with their Instrument Dealer or Druggist, to afford them greater convenience and facility in obtaining the pieces in duplicate, **we have at last acceded to that request, and hereafter** *JOHNSTONE'S CELEBRATED FELT SPLINTS* **can be obtained at most dealers in Instruments and Drugs throughout the United States, at the same price which they were heretofore sold, viz:**

A complete set, embracing fifty (50) pieces—twenty-five for adults and twenty-five for children—is thirty ($30) dollars. Extra or duplicate pieces can always be obtained from your DEALER, at one dollar each.

JOHNSTONE'S CELEBRATED SPINAL JACKET, for Curvatures and Deformities, have met with unparalleled success, and, from their merit, secured the unqualified endorsement and approbation of our celebrated orthopædic specialists, and particular expression of gratitude from the patients who are wearing them. For full information, send for Descriptive Circulars.

Should your Instrument dealer fail to have a supply of our Splints, and decline to carry them in stock, orders sent to us will receive prompt attention.

AHL'S SPLINT MANUFACTURING CO., Limit.
W. H. JOHNSTONE, Manager.

N. B.—If the Instrument Dealers of Philadelphia decline to supply its Physicians with our JOHNSTONE'S FELT SPLINTS on call, they will be furnished and delivered by us to any part of the city, at any time, on receipt of the price, viz.

JOHNSTONE'S SPINAL FELT JACKET, any size, - - - - $25.00
JOHNSTONE'S LACED SPLINT FOR THE LIMBS, any size, - - - - 10.00
$1.00 each.

JOHNSTONE'S MODIFICATION OF DR. R. J. LEVIS' SPLINT

For the FRACTURE OF THE LOWER END OF THE RADIUS.

We make a Palmar and Dorsal Splint for each arm, from Felt, beautifully moulded to adjust to any size arm.

1281-1332 **Price $2.00 per Pair.**

THE DE QUINCEY HOME,

Consulting Physicians.

Prof. Wm. A. Hammond,
Prof. T. Gaillard Thomas,
Dr. Edward C. Spitzka,
Dr. Daniel M. Stimson,
Dr. Edward T. Ely,
Dr. G. H. Wynkoop,
Dr. Andrew H. Smith.

Situated upon a high hill that commands a splendid view of the Hudson and Harlem rivers, Spuyten Duyvil Creek, and the beautiful country for miles around; surrounded by ample grounds and magnificent drives; in easy communication with the city by means of the Sixth and Ninth Avenue Elevated and the Hudson River Railroads; away from the dust, noise, crowding and malaria of the city; with hot and cold water in every room, furnace and grate-fire heating, croquet, horses and carriages, boats and fishing, an excellent *cuisine*, trained nurses and careful medical attendance, it possesses unequaled advantages for the treatment of cases of this kind.

The plan of treatment pursued in the cure of opium, morphine and chloral takers is that of *rapid reduction*, which possesses all the advantages, and none of the dangers of Levenstein's *sudden deprivation*, or the prolonged agony of *gradual reduction*. Each case is studied and treated in accordance with its peculiarities and the idiosyncrasies of the patient, no set plan of treatment being pursued, at the expense of the person's health or comfort.

Our Home, furthermore, offers special facilities for the treatment by *rest, diet, and massage*, according to the plan of Weir Mitchell, of that large class of nervous diseases so commonly met with in ladies suffering from uterine troubles. This plan of treatment has been specially studied, and nurses competent to carry out its provisions in every detail will be furnished. For further particulars, etc., address 1299-1350

Drs. KANE and VITTUM, De Quincey Home, Fort Washington, New York City.

TANRET'S PELLETIERINE.

For the TREATMENT of TAPE-WORM (Tænia Solium).

This new Tænifuge, the Active Alkaloid of Pomegranate Bark, has of late come into extensive use in France, for the treatment of Tape-worm (Tænia Solium). The results of numerous experiments with it at the Marine Hospitals of Toulon, St. Mandrier, etc., and in the Hospitals of Paris, St. Antoine, La Charité, Neckar, Beaujon, etc., have all been most satisfactory. Doctor Dujardin Beaumetz, Member of the Academy of Medicine, and Prof. Laboulbene, in their report to the Society of Therapeutics, have given it their unqualified approval, after the most searching experiments. This preparation is pleasant to administer, and if certain preliminaries are observed success will be insured.

PELLETIERINE is prepared by Mr. CHAS. TANRET, Pharmacien de First Class, 64 Rue Basse du Rempart, Paris. 1242eow-tf

McINTOSH'S COMBINED

Galvanic AND Faradic Battery.

THIS CELEBRATED BATTERY COMBINES BOTH THE GALVANIC AND FARADIC CURRENT,

Which can be used separately or combined. Any strength and intensity desired can be obtained for use in Electro-therapeutics. THIS BATTERY is constructed on an IMPROVED PLAN, as follows: The zinc and carbon plates are arranged in couples, securely clamped to hard rubber plates, with thumb screws. These screws are also used for binding posts. All the connections are positive. The cells are made in sections of six, of hard rubber, with hard rubber drip cup. The following points of excellence render our Batteries superior to others:

1. They combine the only Portable Galvanic and Faradic Battery in one case.

2. They weigh one-half less than other Batteries of the same number of cells.

3. The cells are made in sections of six, of one solid piece of hard, vulcanized rubber; by this arrangement they can be emptied, cleaned and filled as easily and quickly as one cell, and will not crack, break or leak.

4. A hard rubber drip cup is placed by the side of each section of cells, to receive the zinc and carbon plates when removed from them. By this arrangement we avoid the use of absorbent materials and soiling the Battery

5. The Hydrostat is perfect. The rubber plates which hold the elements project over on one side enough to cover the cells when the zinc and carbon plates are placed in the drip cups. The under side of this projection is covered with thick, soft rubber, which is securely clamped to the cells sections, and makes them water tight.

6. This is the only Battery in which the zinc and carbon plates can be kept clean by simply rinsing them.

7. A zinc or carbon plate can be removed by simply loosening a binding post; and all parts of the Battery can be duplicated, as like parts are made exactly alike. We will be pleased to send circulars and our illustrated catalogue, giving full information, price, etc., free, upon application.

MATHEY-CAYLUS' GLUTEN

CAPSULES

OF

PURE COPAIBA AND OTHER MEDICINES.

Adapted and recommended for the cure of recent or chronic Gleets, Fluor Albus, etc., etc.

The MATHEY-CAYLUS' CAPSULES, *coated with gluten*, present the most perfect mode for administering Copaiba, Cubebs, Norway Tar, Turpentine, and other remedies, the disagreeable odor and taste of which are often a hindrance to their use. This mode of preparing capsules, which has been approved by the Academy of Medicine, has been recommended in their clinical lectures by eminent Professors in the hospitals of Paris, as well as in those of New York and London.

By the first physicians of the hospitals of Paris, London, and New York.

SPECIAL ADVANTAGES OF MATHEY-CAYLUS' GLUTEN CAPSULES.—Being formed of thin, transparent, and readily assimilated coating, they so cover and disguise the medicine to be given, that it can be taken without disgust, but with ease. In this respect, they differ widely from the gelatine capsules, which have a hard, thick coating, which swells beyond measure, in the stomach, are hard to be swallowed, and what is of great importance, they create disturbance in the digestive functions.

The special advantage of the coating of gluten consists in the fact that, notwithstanding its extra thinness, and although it softens under the action of the gastric juice, it can pass the stomach without breaking, and only in the intestines is the medicinal matter liberated; this accounts for the fact that Mathey-Caylus' Capsules never cause the nausea, eructations, and dyspeptic symptoms, which are complained of by many persons using other preparations.

Finally, their regular ovoid form, which is so favorable to swallowing, their pleasant appearance, which dispels all disgust, and the advantage of being entirely free from taste and smell, recommend the use of these capsules even to the most delicate persons.

Thankful to the Medical Profession for the liberal patronage heretofore bestowed upon us, we hope that they will continue their favors, and we are convinced that they will never have any reason to regret the generous welcome they have given to our preparations.

MATHEY-CAYLUS' CAPSULES are never sold, except in bottles having the following inscription printed in the glass: MATHEY-CAYLUS A PARIS. And each bottle contains 64 capsules, making them the cheapest capsules in the market.

The following different kinds of Mathey-Caylus' Gluten Capsules are now offered:

COPAIBA AND TANNIC ACID,
COPAIBA AND S. N. OF BISMUTH,
COPAIBA AND CATECHU,
COPAIBA AND MAGNESIA,
COPAIBA, CUBEBS AND ALUM,
COPAIBA, CUBEBS AND RHATANY,
COPAIBA AND RHATANY,
COPAIBA AND CITRATE OF IRON,
COPAIBA AND CUBEBS,
COPAIBA PURE,
COPAIBA, CUBEBS AND CARB. OF IRON,
VENICE TURPENTINE, NORWAY TAR, PURIFIED,
CUBEBS AND TURPENTINE,
CUBEBS AND TANNATE OF IRON,
CUBEBS AND ALUM,
CUBEBS PURE,
COPAIBA AND MATICO,
COPAIBA, IRON AND OIL OF SANDAL,
COPAIBA AND OIL OF SANDAL,
COPAIBA, PEPSIN AND BISMUTH,
COPAIBA AND TAR,
COPAIBA, CUBEBS AND OIL OF SANDAL.

HOLLOW SUPPOSITORIES.

WITH STOPPERS. ALL MADE FROM PURE BUTTER OF COCOA, ONLY.

Aural, Nasal, Rectal, Urethral, Cystic, Vaginal, Intra-Uterine, and Veterinary Suppositories.

The object of this invention is to supply Physicians, Druggists, Veterinary Surgeons, and others, with HOLLOW SUPPOSITORIES, into which they can put any kind of medicine or nutriment, thus producing firm, smooth, and evenly medicated Suppositories, that are cheaper and more reliable than those made by the old method.

RECTAL ABSORPTION.

"The mucous membrane of the rectum, like that of other portions of the alimentary canal, possesses all the requisites, more or less, for the exercise of absorption."

Liebig states that a strong solution of common salt disappeared so completely in the rectum, that an evacuation one hour afterward was found to contain no more than the usual portion of salt.

Many medicinal substances act more energetically when applied to the rectum than when received into the stomach.

Baron Dupuytren said: "The rectum *absorbs*, but does not *digest*. The medicinal agent," he says, "owing to the absence of digestion, passes more directly, more purely, and more surely to its destination, than the same medicine does when taken into the stomach."

M. Orfila asserts that these medical agents which operate through the medium of absorption, such as opium, tobacco, etc., are much more active by the rectum than by the stomach.

Dr. J. H. Scorff reports four cases where he was successful in removing the vomiting of pregnancy, by introducing 20 grains of chloral into the rectum, night and morning. He only found it necessary to use the remedy three or four times.

Chloral is the remedy *par excellence* in the ravings of delirium tremens, and in cases of delirium and insomnia combined; also in infantile convulsions and attacks of laryngysmus stridulus.

Dr. Hickman reports a case of typho-malarial fever, which chloral was found to control in a happy manner. The chloral was introduced per rectum.

"REST TO THE STOMACH,"

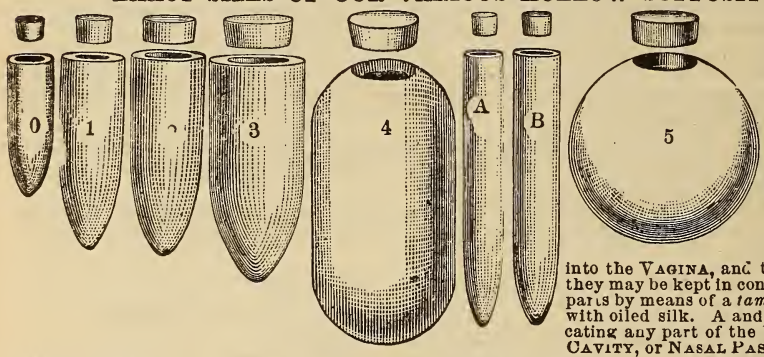
says Mr. Theodore Williams (in London *Lancet*, October 24th, 1874), is of the highest importance in some of the diseases of this organ. In such cases we possess in the rectum an effective second stomach, which, if it does not afford us the pleasure of digestion, spares us many of its pains."

Nutritious substances are taken up by the absorbents, and thus find their way into the economy, and produce their assimilative and nutritive effect. Haller demonstrated the fact that digestion can and does take place in the alimentary canal. He had the greatest confidence in the absorptive and digestive powers of the rectum to sustain life indefinitely.

HYPODERMIC MEDICATION.

Dr. William Bodenhamer says: "This now very common and often misused method is of great value in numerous cases, yet I am decidedly of the opinion that rectal medication is of greater importance; indeed, it is greatly preferable in many instances, being much less dangerous, much more convenient and simple; and the remedies, too, act through this medium with almost equal celerity. But very few remedies can be used hypodermically in comparison to those which can be used by the rectum."

EXACT SIZES OF OUR VARIOUS HOLLOW SUPPOSITORIES.



Size 0 is for children. It may also be used for the EAR and in the NASAL PASSAGES. Nos. 1, 2 and 3 are RECTAL SUPPOSITORIES. Nos. 3 and 4 may be used for introducing nutriment into the system, *via rectum*. No. 4 is also a VAGINAL SUPPOSITORY. No. 5 is a "SPHERIC HOLLOW SUPPOSITORY," to introduce remedies into the VAGINA, and to the *os uteri*, where they may be kept in contact with the diseased parts by means of a *tampon* of cotton covered with oiled silk. A and B are used for medicating any part of the URETHRA or UTERINE CAVITY, or NASAL PASSAGES.

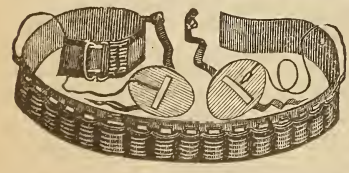
DR. McINTOSH'S ELECTRIC OR GALVANIC BELT.



This Belt is a perfect Galvanic Battery, composed of sixteen cells, placed in pockets on a belt. Each cell is made of hard vulcanized rubber, lined with copper, which constitutes the negative plate. The rubber coating perfectly insulates each cell. The positive plates are of zinc, wrapped in a porous material to absorb the exciting fluid, preventing contact with the copper, and permitting the current to pass from the copper to the zinc. The cells are charged without wetting the belt.

A current selector is so arranged that one or more cells can be used at pleasure. The electrodes are covered similar to ordinary battery electrodes, and connected with the cells by connecting cords. By this arrangement, a current from the belt can be applied to any part of the body. Physicians who have used this belt in their practice do not hesitate to recommend it to the profession.

☞ Our pamphlet on "Medical Electricity," containing a full description of the belt and diseases, with manner of treatment, sent free on application. Address

FOR

INFANTS AND INVALIDS

Is prepared upon the principles advanced by Liebig. *It is not farinaceous.* It is prepared for use by dissolving it in warm milk and water. It is recommended by the highest medical authorities in Europe and America. A sample bottle and a pamphlet contaiuing analysis and description sent free to any address on application.

For sale by all druggists.

Registered COSMOLINE Trade Mark.

Unguentum Petrolei

Prepared by E. F. Houghton & Co. Philadelphia, U.S.A.

Put up in 1, 5, 10, 25, 50, and 100-lb. cans. Samples furnished on application. The post-office laws forbid anything of an oleaginous nature being sent through the mail.

In chemical composition, Cosmoline [Unguentum Petrolei] is an oleaginous hydrocarbon, corresponding to the heavy petroleum oils, and containing a large amount of the paraffines and olefines of the formulæ $C_{16}H_{34}$ and $C_{16}H_{32}$. It contains but a small percentage of the paraffines and olefines, corresponding to the formulæ C_7H_{16} and C_7H_{14}, respectively, and the offensive and irritating properties of the crude oil have been carefully removed. In the process of purification, no acids, alkalies, or other chemicals are employed, and no injurious additions of any kind are made to the natural product. The result is a semi-solid, translucent substance, with a faint odor and unctuous feel.

Cosmoline [Unguentum Petrolei] melts at about 100° Fah, (38° Cent.); and boils at about 625° Fah. (329° Cent.); its specific gravity is about 0.875 at 60° Fah.

As it contains no oxydizable or organic matter capable of change by putrefaction or fermentation, and is absolutely without affinity for moisture, it offers to the profession an admirable unguent, which can never decompose, ferment, or become rancid in any climate or temperature.

291 MADISON AVENUE, NEW YORK, February 26th 1878.

I have examined the preparations of Cosmoline as manufactured by E. F. Houghton & Co., Philadelphia, and believe them well adapted to the purposes for which they are designed. As lubricants, and as the bases of simple or medicated ointments, they have a decided advantage over the fixed oils and fatty substances in ordinary use, in that they do not become rancid, and do not acquire irritating qualities from atmospheric exposure. ALFRED C. POST, M.D., LL.D.,
Emeritus Professor of Clinical Surgery in the University of New York, Visiting Surgeon to Presbyterian Hospital, etc.

PHILADELPHIA, July 10, 1880.

MESSRS. E. F. HOUGHTON & CO.:

I have for a number of years made extensive use of Cosmoline [Unguentum Petrolei] and consider it a most valuable article for surgical purposes. Either as a dressing by itself, or as a vehicle for the application of medicaments, it is greatly superior to lard or other fatty matters, especially by reason of its non-liability to change by time or temperature.

Yours truly,
JOHN H. PACKARD, M.D.
1031 WALNUT ST., PHILADELPHIA.

MESSRS. E. F. HOUGHTON & CO.:

I have used extensively Cosmoline [Unguentum Petrolei] both in Dispensary and private practice, with very great satisfaction. As a vehicle in making ointments it is invaluable, and far superior to lard, for the reason that it will not become rancid or undergo chemical change like the latter, when exposed to the atmosphere. I cannot too highly commend it as an application in various skin diseases.

Yours truly, JOHN V. SHOEMAKER, A.M., M.D.,
Physician to the Pennsylvania Free Dispensary for Skin Diseases

208 WEST 34TH ST., NEW YORK.

MESSRS. E. F. HOUGHTON & CO.:

Gents :—I fully appreciate the value of your Cosmoline, or Unguentum Petrolei, and prescribe it frequently in ointments. Fluid Cosmoline I have used constantly for several years, as a lubricant of urethral sounds. It is the cleanest oil I know of for this purpose.

Yours truly, GEO. HENRY FOX.

1297-1348

211 S. Front Street, Philadelphia.

MALTINE,

A CONCENTRATED EXTRACT OF

MALTED WHEAT, OATS, AND BARLEY.

In its preparation the temperature employed does not exceed 150 deg. Fahr., thereby retaining all the nutritive and digestive agents unimpaired. Extracts of Malt are made from Barley alone, by the German process, which directs that the mash be heated to 212 deg. Fahr., thereby coagulating the Albuminoids, and almost wholly destroying the starch digestive principle, Diastase.

LIST OF MALTINE PREPARATIONS.

MALTINE (Plain).
MALTINE with Hops.
MALTINE with Alteratives.
MALTINE with Beef and Iron.
MALTINE with Cod Liver Oil.
MALTINE with Cod Liver Oil and Pancreatine.
MALTINE with Hypophosphites.
MALTINE with Phosphorus Comp.

MALTINE WINE with Pepsin and Pancreatine.
MALTO-YERBINE.
MALTO-VIBURNIN.

MEDICAL ENDORSEMENTS.

We append, *by permission*, a few names of the many prominent Members of the Medical Profession who are prescribing our Maltine Preparations :

J. K. BAUDUY, M. D., St. Louis, Mo.,
Physician to St. Vincent's Insane Asylum, and Prof. Nervous Diseases and Clinical Medicine, Missouri Medical College.

WM. PORTER, A. M., M. D., St. Louis, Mo.

E. S. DUNSTER, M. D., Ann Harbor, Mich.,
Prof. Obs. and Dis. Women and Children University and in Dartmouth College.

THOMAS H. ANDREWS, M.D., Philadelphia, Pa.,
Demonstrator of Anatomy, Jefferson Medical College.

B. F. HAMMEL, M. D., Philadelphia, Pa.,
Supt. Hospital of the University of Penn.

F. R. PALMER, M. D., Louisville, Ky.,
Prof. of Physiology and Personal Diagnosis, University of Louisville.

HUNTER McGUIRE, M. D., Richmond, Va.,
Prof. of Surgery, Med. Col. of Virginia.

F. A. MARDEN, M. D., Milwaukee, Wis.,
Supt. and Physician, Milwaukee County Hospital.

L. P. YANDELL, M. D., Louisville, Ky.,
Prof. of Clinical Medicine and Diseases of Children, University, Louisville.

JOHN. A. LARRABEE, M. D., Louisville, Ky.,
Professor of Materia Medica and Therapeutics, and Clinical Lecturer on Diseases of Children in the Hospital College of Medicine.

R. OGDEN DOREMUS, M.D., LL.D., New York,
Professor of Chemistry and Toxicology, Bellevue Hospital Medical College; Professor of Chemistry and Physics, College of the City of New York.

WALTER S. HAINES, M. D., Chicago, Ill.,
Professor of Chemistry and Toxicology, Rush Medical College, Chicago.

E. F. INGALLS, A. M., M. D., Chicago, Ill.,
Clinical Professor of Diseases of Chest and Throat, Woman's Medical College.

H. F. BIGGAR, M. D.,
Prof. of Surgical and Medical Diseases of Women, Homœopathic Hospital College, Cleveland, Ohio.

DR. DOBELL, London, England,
Consulting Physician to Royal Hospital for Diseases of the Chest.

DR. T. F. GRIMSDALE, Liverpool, England,
Consulting Physician, Ladies' Charity and Lying-in Hospital.

WM. ROBERTS, M.D., F.R.C.P., F.R.S., Manchester, England,
Prof. of Clinical Medicine, Owens' College School of Medicine; Physician Manchester Royal Infirmary and Lunatic Hospital.

J. C. THOROWGOOD, M.D., F.R.C.P., London, England,
Physician City of London Hospital for Chest Diseases; Physician West London Hospital.

W. C. PLAYFAIR, M. D., F.R.C.P., London, England,
Prof. of Obstetric Medicine in King's College, and Physician for the Diseases of Women and Children to King's College Hospital.

W. H. WALSHE, M.D., F.R.C.P., Brompton, England,
Consulting Physician Consumption Hospital, Brompton, and to the University College Hospital.

A. WYNN WILLIAMS, M.D., M.R.C.S., London, England,
Physician Samaritan Free Hospital for Diseases of Women and Children.

A. C. MACRAE, M.D., Calcutta, Ind.,
Dep. Insp.-Gen. Hosp. Indian Service, late Prof. Surg., Calcutta.

EDWARD SHOPPEE, M. D., L. R. C. P., M.R.C.S., London, England

LENNOX BROWN, F.R.C.S., London, England,
Senior Surgeon, Central Throat and Ear Hospital.

J. CARRICK MURRAY, M. D., Newcastle-on-Tyne, England,
Physician to the N. C. H. for Diseases of Chest.

J. A. GRANT, M. D., F.R.C.S., Ottawa, Canada.

A. A. MEUNIER. M.D., Montreal, Canada,
Prof. Victoria University.

MALTINE is prescribed by the most eminent members of the Medical Profession in the United States, Great Britain, India, China and the English Colonies, and is largely used for patients at the principal Hospitals in preference to any of the Extracts of Malt.

We will furnish gratuitously a one pound bottle of any of the Maltine Preparations to Physicians who will pay the express charges. Send for our 28 page Pamphlet on Maltine for further particulars. Address,

NEW PHARMACEUTICALS

WORTHY OF THE

Attention of Physicians.

NITRO-GLYCERINE PILLS.

Nitro-glycerine is introduced on the authority of Dr. Murrell, of London, as a remedy in angina pectoris and in cases of chronic neuralgia in any part of the body. Cases of angina pectoris which had resisted all attempts at even alleviation, much less cure, have promptly yielded to nitro-glycerine, and a number of cases of actual cure are reported. This is more than can be said of any other known remedy. In neuralgia the effects of this drug have, in some instances, been scarcely less marked.

The pill form is very eligible, besides ensuring exactness of dose.

Liquor Ergotæ Purificatus.

This form of ergot is of constant strength. In its preparation only the active principles of the drug are retained, all inert and noxious ingredients being removed. As these active principles are assayed the l quor contains them in constant and definite proportions, and thus is obviated the uncertainty of strength due to variability in the quality of the sample of the drug employed. Liquor ergotæ purificatus is as constant in its strength as morphia, quinia, or any of the other alkaloids of vegetable drugs.

Sanguis Bovinus Exsiccatus.

In this preparation of blood we have a true food, the albumen being entirely retained. In this respect it differs from the various beef extracts, beef essences, etc., in the market. These preparations are, from the very methods of their manufacture, entirely deprived of albumen, the true nutritive principle of beef, and are thus not foods in any proper sense of the word.

Sanguis bovinus exsiccatus is blood deprived of nothing but its water and fibrin, which latter is naturally small in quantity and practically of no nutritive value.

CASCARA CORDIAL.

This laxative and alterative preparation stands unequaled among pharmaceutical preparations as a remedy in constipation. Its agreeable and efficient action has been abundantly attested by the medical profession of this country, and it stands now as a remedy of unquestionable efficacy in chronic constipation. Great care should be exercised in not prescribing too large a dose, inasmuch as cascara sagrada, its active ingredient, overcomes constipation by its tonic action on the bowel, rather than by direct laxative influence.

—FULL DESCRIPTIVE CIRCULARS OF THE ABOVE—

WILL BE SENT FREE, ON APPLICATION TO

PARKE, DAVIS & CO., DETROIT, MICHIGAN,

MANUFACTURING CHEMISTS AND SPECIAL DEALERS IN NEW AND RARE DRUGS.

McKESSON & ROBBINS'

BI-MURIATE QUINIA WITH UREA

(Quinia Bi-Muriatica Carbamidata),

THE MOST SOLUBLE SALT OF QUINIA.

Specially Adapted to Hypodermic Use.

Will completely dissolve in double its weight of cold water, or in its own weight of boiling distilled water, which is preferable.

This Salt may be procured through retail druggists, from McKesson & Robbins, in original vials of 1, 2 and 4 grammes, and their solution, containing 50 per cent. of the Salt, in $\frac{1}{8}$ oz. and one ounce vials.

ALOIN AND STRYCHNIA GRANULES

LAXATIVE AND TONIC.

INVALUABLE IN CHRONIC CONSTIPATION.

Prescribed with the most satisfactory results in cases in which, from infirmity or morbid condition, the tone of the system is impaired, and in which the administration of more violent purgatives might be attended with danger.

Write McKesson & Robbins on your Prescriptions and Orders.

McKESSON & ROBBINS, Manufacturing Chemists,

91 FULTON STREET, NEW YORK.

J297-134Seow.

SCOTT'S EMULSION

PURE COD LIVER OIL

WITH

HYPOPHOSPHITES OF LIME AND SODA

PERFECT, PERMANENT, PALATABLE.

The well-known virtues of this preparation, that has now been before the profession for a number of years, hardly requires comment from us. But we desire, for the information of those whose attention may not have been directed to it, to present the following facts:—

FIRST.—We use in the manufacture of our Emulsion, Cod-Liver Oil that is prepared expressly for us, and is strictly pure, which is the most important consideration to the Physician.

SECOND.—By our process of Emulsifying, we so thoroughly incorporate the Oil with the Hypophosphite Salts, that the mixture is perfectly homogeneous and remains in that condition, without the slightest separation or change, for years, unless exposed to the air or intense heat.

THIRD.—It is so palatable and easy of digestion that it can be administered to children and persons with most sensitive stomachs without the slightest repugnance, and we are confident, from the results that have been obtained in the use of this preparation, and the flattering testimonials we have received from prominent physicians, that the proper manner of administering Cod-Liver Oil, even to patients that can tolerate the crude oil, is in the form of a palatable and easily digested Emulsion. There are some in the profession who adhere to the use of the plain oil, but, with all due deference, if they will make a trial of our Emulsion, we believe their prejudices will be removed, and they will find it much more beneficial to their patients.

With all the numerous Foods, Cereals and so-called Constructive Agents of uncertain value that are being introduced the physician must sometimes be at a loss to know what to prescribe. But we are assured that the profession will bear us out in the statement that in all pulmonary troubles, especially where the lung tissue is involved, in Scrofulous children and in Anæmic women of consumptive tendencies, as well as in general nervous debility, our combination will produce results, if properly administered, unequaled by any other preparation, and most satisfactory to the physician and patient. We most respectfully ask those who have never prescribed or seen its results to give it a trial, and if you desire to make a personal inspection of it we will be pleased to send a sample by express, prepaid.

FORMULA.—50 per cent. of pure Cod-Liver Oil. 6 grains of the Hypophosphite of Lime, and 3 grains of the Hypophosphite of Soda to a fluid ounce. Emulsified with mucilage and glycerine.

BUCKTHORN CORDIAL

RHAMNUS FRANGULA.

We desire to call the attention of the profession to this preparation, and although they may be familiar with its name and general characteristics, yet, on account of there not being a preparation in the market of uniform strength and quality, may not have a proper appreciation of its value. As far as our experience goes in the various tests made by our medical friends, we can present the German bark, *Rhamnus Frangula*, in the form of our *Buckthorn Cordial*, with perfect confidence that we will secure the encouragement and assistance of the profession in promoting its growth and giving it the position it deserves as a medicine. It seems to be almost a specific for Habitual Constipation and Indigestion, acting mildly but efficiently, without causing the nausea that usually accompanies the use of a cathartic. At the same time producing a tonic effect upon the bowels, so that as the patient recovers, the dose may be gradually decreased until a normal condition takes place. We use great care in the selection of the Bark, as we find it necessary that it should be of the proper age and condition, and carefully exhausted, to secure its true active principle.

We combine it with aromatics in such a manner as to make a pleasant cordial, acceptable to the most sensitive stomach. We shall be very glad to furnish samples free to all physicians, upon application, giving instructions for its use, etc. Prepared by SCOTT & BOWNE

SCOTT & BOWNE'S PALATABLE CASTOR OIL

IN AN EMULSION.

We respectfully submit the above elegant preparation to the notice of the profession, and desire them to favor us with a trial. So far as it has been tested, it has met with their entire approval; and we believe it is not only destined to take the place of the crude oil, but to be used much more extensively. In our process of emulsifying, it is not only *permanent* and *palatable*, but is deprived entirely of its griping properties. The inestimable nature of Castor Oil as a laxative and cathartic, in the varied intestinal derangements of children, and in Diarrhœa, Colds, etc., is accepted by all, and in the available form in which we present it, in a perfectly palatable mixture, deprived entirely of its nauseous, sickening properties, and kindly received by the most sensitive stomach, it must occupy the exalted position it deserves as a medicine. In its administration, it requires very little more than the crude oil, but the experience of the physician will soon guide him in its use. It is put up in 4 oz. bottles, that sell for 25 cents; also in quarts for physicians to prescribe as desired. Samples will be furnished free on application. FORMULA:—*50 per cent. of Pure Cold Pressed Castor Oil*, 15 *per cent. of Chemically Pure Glycerine*. Prepared by

2205-1357eow

SCOTT & BOWNE, Manufacturing Chemists, 108 and 110 Wooster St., N. Y.

NOTES ON THE USE OF PEPSINE IN MEDICINE,

WITH RECOMMENDATIONS REGARDING SACCHARATED AND PURE PEPSINE.

That many of the diseases from which mankind suffer during infant and adult life are caused by malnutrition, there can be no doubt; and the extent to which non-assimilation of the life-giving properties of food interferes with recovery from severe illness, baffling the best directed efforts of the physician, points the necessity for an agent sufficiently potent to replace the deficient principle and aid nature in renewing the degenerated tissues.

Realizing this need, the science of chemistry produced pepsine; and even if medical literature were silent as to testimony of the results obtained, the large amount manufactured and consumed would amply attest its usefulness. But such is not the case, for, after long and careful investigation on the part of practical therapeutists, it is accepted as the remedy *par excellence* in all cases where the gastric juice fails to afford a sufficient amount of ferment for the reduction of aliment to a condition suitable for healthy assimilation.

As the undoubted value of pepsine as a remedial agent became evident, competition in its manufacture was stimulated; and as a natural result, the supply was varied both in purity and strength, and the medical profession, while anxious to avail themselves of its usefulness, were nearly as often misled into erroneous conclusions regarding its efficacy, as satisfied with its results, solely in consequence of their misfortune in not using such qualities as were likely to produce the much-lauded effects. Under these circumstances, a definite understanding regarding reliable preparations is desirable, and of great importance. Pure pepsine, without acid, thoroughly triturated with finely powdered sugar of milk (saccharated pepsine*), will, without doubt, produce the perfect results in all cases where the remedy is exhibited.

Routh, in his "Infant Feeding," gives an account of a result obtained in the case of an infant. "Small, wrinkled, emaciated, four days old, yet presenting almost the appearance of decrepitude. The voice was weak but distinct, and respiration not obstructed. The mother was an excellent nurse, but, although the infant took the breast readily, it constantly threw up every meal. What passed through the bowels was unchanged, although slightly tinged with bile. Diarrhœa was also present." The usual external remedies were applied, but without avail. "Emaciation was on the increase; the child was, in fact, dying." At this stage saccharated pepsine was administered, fifteen grains divided into ten powders, mixed with a little of the mother's milk, and after he second day the diarrhœa ceased and the child appeared much stronger. Twenty days of this treatment and the child was quite well. The eminent author adds: "This is a case which speaks strongly to the convictions. If at so early a period of life, when vitality and digestion were so weak, the artificial pepsine effected a cure, *a fortiori* will it be likely to do so in the case of older children; and so I have found it in practice. The digestive powers are thus assisted, and the food, which before was useless because undigested, readily becomes assimilated."

When administering pepsine, the slight acidity of the natural fluid should be produced as nearly as possible, and, as the necessities differ with the circumstances, it is desirable that the preparation be quite free from acidulation, and the proper dose be given in combination with the requisite amount of dilute acid. Of Kidder & Laird's pure pepsine, five to ten grains for an adult can, if necessary, be taken in an ounce of water, with five drops of muriatic acid.

For infants, however, the saccharated pepsine will be found to yield the most satisfactory results, and the acid should be dispensed with. Quantitatively it represents one-tenth of the strength of pure pepsine; but it has been found to be but about one-fourth less in efficacy. The absence of acid, which would otherwise tend to produce narmful results, will be recognized when it is considered that even the slight acidity of most cow's milk, when used as food for infants, is sufficient to disagree with them.

With regard to the proper time for its administration, as before or after taking of food, opinions vary, but reason would suggest that about half an hour before eating will afford the ferment a sufficient time to combine with the existing condition of the stomach, and produce the most natural effect upon the food when it has been acted upon by the salivary fluids in its passage to the stomach.

When once the formation of peptone has been established in the stomach, and as strength is acquired, the system will soon respond toward resuming the natural production of its normal fluids. Thus it is that many of the disorders of digestion which accompany severe attacks of fever, phthisis, etc., and also the exceedingly sensitive condition of the stomach caused by vomiting in pregnancy and alcoholism, are controlled, and a natural condition resumed.

Having mentioned the necessity of great care in the selection of pepsine, with reference to its purity and strength, it is proper to say that, even with the superior article above recommended, negative results may be obtained, unless attention is given to the form of its administration. Combinations beyond those above mentioned are not advised, but rather discouraged, as many of the substances usually recommended as efficacious with it are incompatible and render the pepsine inert.

* Saccharated pepsine, free from acid, is prepared by Messrs. Kidder & Laird, No 83 John Street, New York, who generously furnish samples of both this and the pure pepsine, free of charge, upon application.

1264-1315

HORSFORD'S ACID PHOSPHATE

IN

IMPOTENCE,

Seminal Losses,

Impaired Vitality,

Spermatorrhœa.

We wish to call the attention of the profession to the action of Horsford's Acid Phosphate on the organs of generation, when their power has become impaired through sexual excess, or from senile impotence. It is at once rejuvenating and aphrodisiac in its effect. It appears to restore the secretory organs that have been deranged to their normal condition, giving vigor where there has been debility, and renewed strength where there has been exhaustion.

H. B. STORER, M.D., Boston, says: "I have found Horsford's Acid Phosphate serviceable, in a marked degree, in my treatment of spermatorrhœa."

E. W. JONES, M.D., Taunton, Mass., says: "Horsford's Acid Phosphate was prescribed in a case of nervous prostration from seminal losses, with decided beneficial effect."

C. S. ELLIS, M.D., Wabash, Ind., says: "I prescribed Horsford's Acid Phosphate in a case of nervous debility and weakness of the sexual organs; patient forty-eight years old; he was much benefited."

R. W. ERWIN, M.D., Bay City, Michigan, says: "In some cases of weakness following sexual indiscretions, attended with nervousness, it is useful."

Each case presents its own peculiarities for treatment, but, as a general rule, we would suggest a half teaspoonful of Horsford's Acid Phosphate, in half a tumbler of hot or cold water, or tea without milk, to be taken shortly after each meal, and upon retiring.

Pamphlet giving further details mailed free, on application to the manufacturers.

Physicians who have not had a bottle of the Horsford's Acid Phosphate, and who wish to test it, will be furnished with a sample without expense, except express charges.

RUMFORD CHEMICAL WORKS,

PROVIDENCE, R. I.

1297-1348

An experience of more than a quarter of a century convinces us that sugar, properly applied, is the only correct coating for a pill.

Physicians should be careful to specify Warner & Co., when prescribing or ordering.

Special attention is called to the following selected Recipes prepared for Physicians' Prescriptions.

PIL: PHOSPHORI COMP: (WARNER & CO.)

℞. Phosphori, - - 1-100 gr.
Ext. Nuc. Vom. - ¼ gr.

THERAPEUTICS.—As a nerve tonic and stimulant, this form of pill is well adapted for such nervous disorders as are associated with impaired nutrition and spinal debility, increasing the appetite and stimulating digestion.

The practical value of Phosphorus as a therapeutic agent, and its applicability to the cure of disease, and especially in those varied disordered conditions consequent upon OVERWORK, which are characteristic of modern civilization.

Pil. Phosphori Comp. may be taken, one or two pills three times daily, after eating.

Price, per 100, $1.50.

PIL: IODOFORM ET FERRI. (WARNER & CO.)

℞. Iodoform, - - 1 gr.
Ferri Redacti, - 1¼ gr.

THERAPEUTICS.—A powerful general tonic and alterative, valuable as a remedy in Anæmia, Scrofula, Neuralgia, Chlorosis, Rheumatism, etc.

Pil. Iodoform et Ferri may be given in doses of from one to two pills, as occasion may require.

Price, per 100, $2.00.

PIL: DIGESTIVA. (WARNER & CO.)

℞. Pepsin Conc't, 1 gr. Gingerine, 1-16 gr.
Pv. Nuc. Vom., ¼ gr. Sulphur, ⅛ gr.

THERAPEUTICS.—Useful in relieving various forms of Dyspepsia and Indigestion, and of permanent benefit in cases of enfeebled digestion, where the gastric juices are not properly secreted. It is also a gentle laxative and excellent dinner pill, may be taken one after dinner, or one before each meal, three times daily.

Price, per 100, 75 cts.

PIL: CALCIUM SULPHIDE. (WARNER & CO.) 1-10, ¼, ½ & 1 gr. each.

THERAPEUTICS.—Extremely useful in the treatment of acne, scrofula and cutaneous diseases.

Sulphide of Calcium is usually administered in doses of from 1-10 to ¼ grain four times daily, gradually increasing the dose to one grain six times daily, or according to the progress or severity of the case.

Price, per 100, 1-10 gr. .50; 1-4 gr. .60; 1-2 gr. .75; 1 gr. $1.00.

WARNER & CO.'S PILLS MAY BE OBTAINED FROM ALL DRUGGISTS, OR BY MAIL, ON RECEIPT OF PRICE.

SAVORY & MOORE beg to call the attention of the Profession to some of their Special Preparations, the purity and uniform strength of which are Guaranteed.

PANCREATIC EMULSION,

Prepared in accordance with the direction of the Physician who introduced this purely

MEDICINAL FOOD FOR CONSUMPTION AND WASTING DISEASES.

Pancreatic Emulsion will always take precedence of Cod-Liver Oil, by reason of its introducing the STABLE SOLID FATS INTO THE SYSTEM, instead of the evanescent fluid fats or oils.

Neither Cod-Liver Oil nor EMULSIONS of COD-LIVER OIL can supply the kind of fat necessary for sound and vigorous human life. In addition to this, all the Oily Emulsions are liable to rancidity, and most of them are highly objectionable in consequence of the SAPONIFICATION and ULTIMATE PUTREFACTION, produced by the chemical agents used instead of Pancreatic Juice.

Pancreatic Emulsion (properly so-called), is THE NECESSARY FOOD OF THE CONSUMPTIVE, and the most reliable form of nutriment for counteracting the tendency to Phthisis and other wasting diseases. It presents to the lacteals fat, in essentially the same condition for assimilation and absorption as in a vigorous human frame, and THE AGENT of the important change is THE NATURAL SECRETION of the PANCREAS.

Pancreatic Emulsion may therefore be regarded as Chyle obtained by nature's own process. In certain cases both Cod-Liver Oil and Pancreatic Emulsion are required—one to supply the blood with oil or liquid fat, the other with the more stable solid fats; but it cannot be too strongly urged that both PANCREATIC EMULSION and Cod-Liver Oil are *not to be regarded as Medicines, but as articles of diet*, without which patients, with their defect of health, will as surely starve as healthy persons would if deprived of the most nutritive part of their food.

Pancreatized (Digestive) Cod-Liver Oil. By Pancreatized Cod-Liver Oil, the active digestive principle of the Pancreatic Juice is imparted to it, which renders it in a highly favorable condition for rapid and complete digestion and assimilation, preventing nausea, and largely increasing the beneficial properties of the Oil.

Pancreatine effects the digestion and assimilation of Cod-Liver Oil and Fat, as well as Food generally. This palatable and popular remedy is therefore invaluable to PATIENTS WHO ARE UNABLE TO DIGEST COD-LIVER OIL, and who are thus deprived of its nourishing and invigorating properties.

Pancreatine Wine. An excellent vehicle for taking Cod-Liver Oil and promoting the digestion of it.

Tins, 1*s*, 2*s*, 5*s*, 10*s*.

VACCINE VIRUS,

AND

PRICES REDUCED. VACCINATORS PRICES REDUCED.

We continue, as for several years, to supply **ANIMAL VIRUS** propagated at our own stables from lymph of the "Beaugency Stock," imported by ourselves expressly for this purpose. Results of experience enable us to recommend it as of unsurpassed excellence.

The establishment is under the care of a competent physician of long experience in this specialty, who will spare no pains to produce a perfectly *reliable* and *pure* article, which we are prepared at all times to furnish in *fresh* and *active* condition.

Our new method Kine Crusts will be found much superior to the ordinary form, though points are recommended as the most reliable form of virus attainable.

All our Virus is put up in strong, *air-tight*, *sealed packages*, for safe conveyance by mail or express, and will be sent (postpaid if by mail) upon the following terms:—

Fifteen large Ivory Points, well charged on both sides.....$2.00
Seven large Ivory Points, well charged on both sides..... 1.00
Large Ivory Points, less than seven, well charged on both sides, each..... .25
One Crust, new method, in air-tight Glass Capsule, prepared for immediate use..... 2.00

Also **Humanized Virus,** from HEALTHY CHILDREN, procured for us by physicians of undoubted reliability.

One Crust from Unruptured Vesicles (one remove from heifer if preferred).....$2.00

We will give a fresh supply, in case of failure reported within twenty days for Points, thirty days for Human, and ninety days for Kine Crusts.

Orders by mail or telegraph answered by return train.

Liberal discounts upon large supplies for Cities, Towns and Institutions.

Scarifying Vaccinator. Steel, Nickel Plated. (See Cut.) Each 25 cents.

New Illustrated Catalogue of Surgical Instruments, postpaid, on request.

CLINICAL THERMOMETERS.

Nos. 2 and 95. Selected from one of the best English makers, by one of our firm; made expressly for us; warranted accurate, thoroughly seasoned, and very superior. Straight; self-registering; contraction in stem, to prevent loss of index; graduated to one-fifth degree.

No. 95, in addition to the above, has patent lens front, causing the register to appear greatly magnified, so as to be easily read; having plano-convex cross section, it does not roll. Prices as follows:—

No. 2. In German Silver or in Ebony Case, 3, 3½, 4 and 5 inches long, each.....$3.00
No. 95. In German Silver or in Ebony Case, 3, 3½, 4 and 5 inches long, each..... 3.50

☞ **Also, a full assortment of Surgical Instruments. Illustrated Priced Catalogue on application.**

N. B.—ASPIRATORS AND ATOMIZERS.—Faulty and even dangerous imitations of our Aspirators and Atomizers having appeared, we suggest the need of special care in purchasing.

CHAPOTEAUT'S PEPSICAL PEPTONES.

These Peptones, prepared with great care, contain only Beef, digested and rendered assimilable by a pepsine, always titrated and regular, extracted from the stomach of the sheep, digesting 7 to 800 times its weight of fibrine, and which cannot be found in commerce. They possess a great alimentary power, and give to the digestive organs an intense nutritive action.

They must not be confounded with other Peptones, prepared either with rennet of sheep or with pancreas of pork, and containing a product coming more from the digestion of the stomach mucus than from the meat.

These Preparations come under three forms:

1st. CHAPOTEAUT'S PEPSICAL PEPTONE POWDER.

This has only the taste of Meat, and offers the advantage of being able to be taken with the first spoon of soup. It is soluble in water, bouillon, or wine. Each teaspoonful represents about 4 grams of Peptone, or 21 to 22 grams of Beef, entirely digested and assimilable. Each bottle contains 30 grams of **PEPTONE**, representing 160 to 165 grams of Beef, and sufficient for the nourishment of an adult.

2d. CHAPOTEAUT'S PEPSICAL PEPTONE CONSERVE.

This article is a liquid, neutral-aromatic, and keeps well. Each teapspoonful represents double its weight of Beef, and is taken either pure or in soup, wine, jellies, or syrup, and also in the form of alimentary injections.

3d. CHA OTEAUT'S PEPSICAL PEPTONE WINE.

Each small wine-glass contains the Pepsical Peptone of 10 grams of Beef. It has a very agreeable taste, and constitutes an excellent aliment, which the patient and children accept with pleasure. It is taken at the beginning of meals, in doses of one or two small wine-glasses. 1294-1319eow

THE INVENTION OF AN EMINENT FRENCH CHEMIST.

The Salvator for Invalids and the Aged. An Incomparable Ailment for the Growth and Protection of Infants and Children. A Superior Nutritive in Continued Fevers, and a Reliable Remedial Agent in all Diseases of the Stomach and Intestines.

TO PHYSICIANS AND THE PUBLIC.

THIS preparation is, as advertised, principally the GLUTEN derived, by chemical process, from VERY SUPERIOR GROWTHS OF WHEAT, and should not be confounded with burnt or boiled Flour, in which the GLUTEN or sanative qualities are destroyed or made medicinally inert, nor with Crushed Wheat, or finely ground Wheaten Grits, styled "Medicinal Food," and sold under various names, in which the starch and impurities contained in wheat are retained in larger quantity.

By Dubisson's formula, the starch, impurities and soluble matter found in the Wheat Cereal are effectually excluded, the GLUTEN only retained, which is condensed, granulated and prepared to keep in all climates, and justly entitled

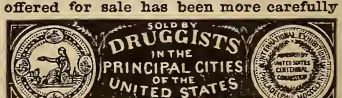
—IMPERIAL GRANUM—

It is well known, and should be fairly considered, that nothing of merit can be favorably received and commended by the public without being followed by imitations of a questionable character. IMPERIAL GRANUM is not the exception, for no preparation has attracted more attention, nor been more fiercely imitated by competition, even to wording and shipping order.

Whilst again it can be truly said that no preparation ever offered for sale has been more carefully prepared and thoroughly tested, nor has met with a more welcome reception and universal approval, or afforded more relief to invalids or to young and suffering children and aged persons. This has been confirmed by thousands of testimonials from Chemists, Physicians, Heads of Families and the Press.

Respectfully,

E. HEATON.



1262-1313eow

MURDOCK LIQUID FOOD CO., Boston,

THE ONLY MANUFACTURERS OF

RAW FOOD EXTRACTS IN THE WORLD.

It can be retained by the weakest stomach, when all other food extracts, and even water, is rejected.

Nutritious food, if raw, condensed, and free from insoluble matter, will cure chronic diseases, as it will make blood faster than all preparations or food, and new blood will cleanse the system.

MURDOCK'S LIQUID FOOD is made from Beef, Mutton and Fruits; contains corpuscles; is 12½ per cent. soluble albumen, and free from insoluble matter, drugs, minerals, salts and acids, and can be retained by the stomach when so weak as to refuse food.

Ask your Druggists, or send to us, for Essays read before the American Medical Association, at Richmond, Va., May 6, 1881, on the value of Raw Food Extracts; by Geo. R. Shepherd, of Hartford, Conn., and other Essays and Testimonials from Medical Journals and Physicians that have used Liquid Food, in cases of Consumption, Scrofula, Nervous and General Debility, Dyspepsia, acute and chronic, Constipation, Diphtheria, Intemperance, Cholera Infantum, Infantile Diarrhœa, Post partum Hemorrhage, Purpura Hemorrhagica with Waxy Liver, Pelvic Cellulitis, Malarial and other Fevers, Chronic Strumous Arthritis, Sclerosis of the Spinal Cord, Senile Gangrene, Perinephritic Abscess, and other diseases of malnutrition. No cases of Cholera Infantum have occurred where it has been used daily and no lives have been lost from Cholera Infantum where it has been prescribed by a physician. Excellent for Eczema, Diabetes, Rheumatism and Neuralgia.

At the request of any physician who has not tried our Extracts, and would like to, we will deliver sample bottles to the Express in Boston. To any Medical Society wishing to investigate the value of our Extracts, through a committee, hospital, or individual members, we will furnish a supply of Liquid Food equal to a six-ounce bottle for every member present at the time of action. We are induced to do this knowing that our Extracts are saving life, and that an increased use of them, which will follow after a trial of them, will be the means of saving more lives daily. (*We ask no testimonials of results obtained.*) Raw Extracts are available where cooked ones are not, or if available, contain only one-third as much nourishment.

Liquid Food is in general use at all Hospitals, Infant and Insane Asylums, and Washingtonian Homes, U. S. Navy Hospitals, and by all physicians that have tried it.

If not kept by your Druggist, can be obtained in any of the commercial cities In Philadelphia, by Johnston, Holloway & Co., Boericke & Tafel; in Pittsburg, by A. Kelly & Co.; in Baltimore, by Thomsen & Wirth; or you can order direct and we will pay express. 1 oz., 15 cents; 6 oz., 55 cents; 12 oz., $1.00.

See Philadelphia MEDICAL AND SURGICAL REPORTER, *Boston Medical and Surgical Journal*, and *New York Medical Record*, for chronic cases that were at our quarterly reception to physicians, in Boston, December 30, 1881—cases of Eczema, Rheumatism, Neuralgia, Diabetes, Consumption, and other diseases. If all were not restored to perfect health, they were gaining daily, and able to enjoy life and attend to their business. 1297-1348

MURDOCK LIQUID FOOD CO., BOSTON.

It is the only food that will relieve the Consumptive from Hunger.

It will make Blood faster than all preparations known.

Medal of Merit.

BOUDAULT'S PEPSINE

IN POWDER, also WINE, ELIXIR, SYRUP, PILLS, AND LOZENGES OF PEPSINE.

Since the introduction of Pepsine by Boudault in 1854, BOUDAULT'S PEPSINE HAS BEEN, AND IS STILL CONSIDERED, THE MOST RELIABLE, as is attested by the awards it has received at the Exhibitions of 1867, 1868, 1872, 1873, and in 1876 at the Centennial Exposition in Philadelphia.

IT IS THE ONLY PEPSINE USED IN THE PARIS HOSPITALS.

Careful tests will enable any one to satisfy himself that BOUDAULT'S PEPSINE HAS A DIGESTIVE POWER AT LEAST DOUBLE that of the best Pepsines in the market, and that it is really the cheapest.

It is Sold in 1 ounce, 8 ounce, and 16 ounce Bottles.

Beware of so-called French Pepsines bearing fictitious names, and prescribe Boudault's only.

BLANCARD'S PILLS

OF UNCHANGEABLE IODIDE OF IRON.

Blancard's Pills of Iodide of Iron are so scrupulously prepared, and so well made, that none other have acquired a so well deserved favor among physicians and pharmaceutists. Each pill, containing one grain of proto-iodide of iron, is covered with finely pulverized iron, and covered with balsam of tolu. Dose, two to six pills a day. The genuine have a *reactive silver seal* attached to the lower part of the cork, and a green label on the wrapper, bearing the fac-simile of the signature of

Blancard

Pharmacien, No. 40 Rue Bonaparte, Paris

without which none are genuine.

BEWARE OF IMITATIONS.

E. FOUGERA & AGENTS, NEW YORK. 1297 tf.

For Consumption and Wasting Diseases.

HYDROLEINE

Has been proved of the highest value in CONSUMPTION and all WASTING DISEASES, invariably producing IMMEDIATE INCREASE in FLESH and WEIGHT.

FORMULA OF HYDROLEINE.

Each dose of two teaspoonfuls, equal to 120 drops, contains:

Pure Oil,	**80 m. (drops.)**	**Soda,**	**1-3 grain.**
Distilled Water,	**35 m.**	**Boric Acid,**	**1-4 "**
Soluble Pancreatin,	**5 grains.**	**Hyocholic Acid,**	**1-20 "**

DOSE.—Two teaspoonfuls alone, or mixed with twice the quantity of soft water, to be taken thrice daily, with meals.

The principles upon which this discovery is based have been described in a treatise on "THE DIGESTION AND ASSIMILATION OF FATS IN THE HUMAN BODY," by H. C. BARTLETT, PH.D., F.C.S., and the experiments which were made, together with cases illustrating the effect of Hydrated Oil in practice, are concisely stated in a treatise on "CONSUMPTION AND WASTING DISEASES," by G. OVEREND DREWRY, M.D.

In these treatises the Chemistry and Physiology of the Digestion of the Fats and Oils is made clear, not only by the description of a large number of experiments scientifically conducted, but by cases in which the deductions are most fully borne out by the results.

☞ *Copies of these valuable works will be sent free, on application, to all who mention THE MEDICAL AND SURGICAL REPORTER.*

HYDRATED OIL,

HYDROLEINE,

WATER AND OIL,

May be described as partially digested oil, which will nourish and produce increase in weight in those cases where oils or fats not so treated are difficult or impossible to digest. In CONSUMPTION and other WASTING DISEASES the most prominent symptom is EMACIATION, of which the first is the starvation of the fatty tissues of the body, including the brain and nerves. This tendency to emaciation and loss of weight is arrested by the regular use of HYDROLEINE, which may be discontinued when the usual average weight has been permanently regained.

The ordinary so-called emulsions of Cod-liver oil and other fats, WHETHER PANCREATIZED OR NOT, merely remain in the form of a coarse mechanical mixture for a short time after agitation. The digestion of oil having in no sense been artificially produced, still devolves upon those functional powers the deficiency of which is the most prominent symptom in these cases.

HYDROLEINE is not a patent medicine or a secret preparation; the formula is on every bottle. Can be taken by the most delicate stomach; is immediately assimilated.

The permanence and perfection of the emulsion, and the extreme solubility of the HYDRATED OIL, solely prepared and sold by us under the name of HYDROLEINE, is shown by its retaining its cream-like condition as long as the purest Cod-liver Oil will retain its sweetness. Unlike the preparations mentioned, or simple Cod-liver Oil, it produces no unpleasant eructation or sense of nausea, and should be taken in such very much smaller doses, according to the directions, as will insure its complete assimilation; this, at the same time, renders its use economical in the highest degree.

To brain-workers of all classes Hydrated Oil is invaluable, supplying as it does the true brain food.

Economical in use—certain in result Tonic—Digestive and Highly Nutritive.

NEW PRINCIPLE FOR THE ASSIMILATION FAT.

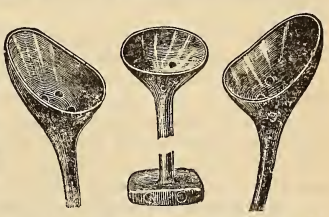
DR. McINTOSH'S
NATURAL UTERINE SUPPORTER.



No instrument has ever been placed before the medical profession which has given such universal satisfaction. The combination is such that the physician is able to meet every indication of Uterine Displacements. Falling Womb, Anteversion, Retroversion and Flexions are overcome by this instrument, where others fail. This is proven by the fact that, since its introduction to the profession it has come into more general use than all other instruments combined.

Among the many reasons which recommend this Supporter to the physician is its self-adjusting qualities. The physician, after applying it, need have no fear that he will be called in haste to remove or readjust it, as is often the case with rings and various pessaries held in position by pressure against the vaginal wall, as the patient can remove it at will, and replace it without assistance.

The Abdominal Supporter is a broad morocco leather belt, with elastic straps to buckle around the hips, with concave front, so shaped as to hold up the abdomen. The Uterine Support is a cup and stem, made of highly polished hard rubber, very light and durable, shaped to fit the neck of the womb, with openings for the secretions to pass out, as shown by the cuts. Cups are made with extended lips, to correct flexions and versions of the womb. The cup and stem is suspended to the belt by two soft elastic rubber tubes, which are fastened to the front of the belt by simple loops, pass down through the stem of the cup and up to the back of the belt. These soft rubber tubes being elastic, adapt themselves to all the varying positions of the body, and perform the service of the ligaments of the womb. The instrument is very comfortable to the patient, can be removed or replaced by her at will, can be worn at all times, will not interfere with nature's necessities, will not corrode, and is lighter than metal. It will answer for all cases of Anteversion, Retroversions, or any Flexions of the womb, and is used by the leading physicians with never-failing success, even in the most difficult cases.

Our Reduced Prices are to Physicians, $6.00; to Patients, $10.00.

Instruments sent by mail, at our risk, on receipt of price, or by Express, C. O. D., with the Express charges for returning the money added.

☞CAUTION.—Owing to the great sale and popularity of our instrument various and base imitations are sold by unscrupulous parties. In order to get the genuine, it is best to order direct from us.

DR. McINTOSH'S NATURAL UTERINE SUPPORTER CO.,
192 Jackson Street, Chicago, Ill.

Our valuable pamphlet, "Some Practical Facts about Displacements of the Womb," will be sent you free on application. 1281-1332

In corresponding with Advertisers please mention THE MEDICAL AND SURGICAL REPORTER.

BEEF PEPTONE,

IN TRANSPARENT GLASSY SCALES,

Containing only the animal or azotized matter of the Beef. Each ounce is equal to 16 ounces of raw beef, easily soluble, and still faster in hot water.

This Beef Peptone is digested from tender, juicy Beef, by the aid of the *Crystal Pepsin,* of my manufacture (Jensen's Crystal Pepsin). Unlike the various BEEF EXTRACTS, this preparation contains all the nutritive constituents of the Beef, in a thoroughly digested state, ready for absorption into the system, while the Beef Extracts are entirely devoid of the chief elements of nutrition, such as the fibrinous, gelatinous and albuminous portions of the Beef, they only consisting of the concentrated saline constituents, with barely a trace of animal matter to keep its consistence. The difficulty so long experienced by the profession throughout the world, in preparing a PEPTONE entirely free from those chemical agents necessary for its manufacture, so as to render it fit for use, is hereby demonstrated to be successfully overcome, as it contains no foreign matter, and will stand the most severely scrutinizing test as to perfectness, also possessing flavor of the Beef, and so palatable as to render it highly agreeable.

Put up in bottles holding One ounce, Eight ounces, and one Pound.

Kept by the Wholesale and Dispensing Druggists in general.

DEPOT—L. WOLFF'S Pharmacy,

Northwest corner Twelfth and Chestnut Streets.

JENSEN'S CRYSTAL PEPSIN,

IN ARTIFICIAL CRYSTALS,

Strictly inodorous and tasteless, and perfectly soluble in water without acid.

THIS PEPSIN, now so popular with the profession, has created an impetus in the consumption of the same and physicians of the highest standing, who before the introduction of this active PEPSIN, with good reason, entirely abandoned the use of PEPSIN, are now the most eager in prescribing JENSEN'S CRYSTAL PEPSIN, whenever it is indicated, and since the knowledge of its great solvent power (gr. j. of it will dissolve the boiled whites from two to three eggs) has been established even among those susceptible to be great doubters, it has caused itself to be utilized in many novel ways, by the thinking profession; for instance, in substituting morphia, chloral, etc., as a hypnotic, relieving gastric troubles where the above remedies have been prescribed, creating morphine and chloral habits. In removing diphtheritic patches it is successfully used combined with water, glycerine, and muriatic acid, and the same composition, diluted with more water, as a spray in bronchial troubles, dissolving muco-purulent matter, as well as a spray for same in catarrhal affections.

THIS PEPSIN.

Has also been used with success in dissolving and evacuating coagulated blood in the bladder, dispensing with surgical operations in such cases. Many other novel applications could be mentioned, if not in want of space. It is found to be FORTY times stronger than saccharated pepsin. One to three grains is an active dose.

KEPT BY ALL DRUGGISTS.

The above preparations are only manufactured and put up by

CARL L. JENSEN, M.D., PH.G.,

865 North 26th Street, Philadelphia, Pa.

No other Wholesale Agents for this Pepsin are longer engaged, than the Wholesale Druggists throughout the United States.

This College has for its *collegiate year* two sessions.

Regular Session commences Wednesday, September 7th, 1881, and closes March 1st, 1882.

Recitation Term (optional) commences March 15th, 1882, and closes June 14th, 1882.

Graded Course of three terms, of six months each.

PLAN OF INSTRUCTION.

By *Lectures*, *Recitations* and *Clinics*, together with *practical work* in the Anatomical, Physiological, Chemical and Pharmaceutical Laboratories.

Clinics are held *daily*.

Clinical Work in Hospitals and Dispensaries is given to the Senior Class (see Clinics), in *small sections*, under the charge of a *Clinical Teacher*, in all the departments of Medicine and Surgery.

Three Large Hospitals and *two Dispensaries* afford unlimited material for instruction.

ADMISSION.—Candidates for admission are required to pass a preliminary examination, unless satisfactory documentary evidence can be presented, that is equivalent to the standard adopted. (See Catalogue.)

FEES.

Regular Session.—Matriculation, $5.00; Lecture Tickets, $50.00; Hospital Tickets, $10.00 Examination (final), $25.00.

Recitation Term.—$10.00 for those who have attended Regular Session; all others, $25.00, $15.00 of which will be applied on the next Regular Term.

Board and Rooms can be obtained for $3.00 to $5.00 per week, the average being $4.00.

1274-tf

CRINON'S HÆMOGLOBIN,

The Albuminoid Ferruginous Principle of Blood.

HÆMOGLOBIN is the only physiological chalybeate. Associated as it is with the phosphates of the blood, it forms the most powerful of tonics, and at the same time a most nourishing food. It is especially useful in cases of *Anæmia, Chlorosis, Cachexias, Exhaustion* caused by excess of work, nervous debility, fatigue resulting from parturition and lactation. It replaces entirely liquid blood, which has been recommended and used with success in *Phthisis* and *wasting away.*

It is offered in two forms: In cachets (wafers), 60 of which are contained in a box; combined with chocolate in small squares, 30 of which are in a box; both forms can be sent by mail.

Prepared by C. CRINON, Paris, Pharmacist of the first class, Laureate of the Hospitals of Paris Samples may be obtained by application to

E. FOUGERA & CO., New York, Agents for the U. S

DOCTOR RABUTEAU'S

(Laureate of the Institute of France.)

DRAGEES, ELIXIR & SYRUP OF IRON.

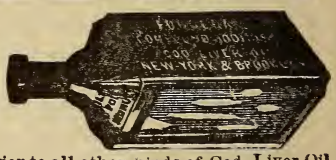
"The experiments made in the hospitals of Paris have demonstrated that *Dr. Rabuteau's Dragees, Elixir and Syrup* regenerate the red globules of the blood with a rapidity never observed with the use of the other ferruginous preparations. These results have been proved by the various *Compt-Globules.*

"The ferruginous preparations of *Dr. Rabuteau* do not cause any constipation, and are perfectly tolerated by the weakest persons."—*Gazette des Hospitaux.*

Dr. Rabuteau's Elixir is prescribed when some difficulty is experienced in swallowing the Dragees: it is especially adapted to weak persons, whose digestive functions need strengthening or stimulating.

Dr. Rabuteau's Syrup is especially prepared for children, who take it readily, because of its agreeable taste.

FOUGERA'S COMPOUND IODINISED COD LIVER OIL.



Since the introduction of this oil in 1858, it has been found to be superior to all other kinds of Cod Liver Oil for the treatment of **General Debility, Consumption, Scrofula, Rickets, etc.**

It possesses not only all the **nourishing** qualities of the best Cod Liver Oil, but also the **tonic, stimulant** and **alterative** properties of **Iodine, Bromine** and **Phosphorus,** which are added in such proportions as to render it therapeutically five times as efficacious as pure Cod Liver Oil.

Through its **increased curative action, FOUGERA'S COD LIVER OIL** will be found to cure disease in a much shorter time than the pure oil; while favorable results will be obtained by its use in many advanced cases when the pure Cod Liver Oil would fail entirely.

FOUGERA'S READY-MADE MUSTARD PLASTERS.

A most useful, convenient, clean, and economical preparation. Not liable to change if kept in a dry place. Made of two strengths. Plasters No. 1, of pure mustard; Plasters No. 2, of one-half mustard. Price 40 cents, the tin box, or tin roll, of 10 plasters each. DIRECTIONS.—Dip the Plaster, or Plasters, a minute or two, in cold water; apply on the part, and cover with a band.

FOUGERA'S COMPOUND ICELAND MOSS PASTE.

(Iceland Moss, Lactucarium, Ipecac and Tolu.)

Used with great success against nervous and convulsive coughs, Whooping Cough, Acute Bronchitis, Chronic Catarrh, Influenza, etc.

Wakefulness, Cough, and other sufferings in Consumption, are greatly relieved by the soothing and expectorant properties of this Paste.

FOUGERA'S IODO-FERRO-PHOSPHATED ELIXIR OF HORSE-RADISH.

This Elixir contains Iodine, Pyrophosphate of Iron, the active principles of antiscorbutic and aromatic plants, and acts as a **tonic, stimulant, emmenagogue,** and a **powerful regenerator of the blood.** It is an invaluable remedy for all constitutional disorders due to the impurity and poverty of the blood. One of the advantages of this new preparation consists in combining the virtues of Iodine and Iron without the inky taste of Iodide of Iron.

JOHNSTONE'S IMPROVED

ADAPTABLE POROUS FELT SPLINTS.

AHL'S SPLINT MANUFACTURING COMPANY, LIMITED,

123 & 125 South Eleventh Street, PHILADELPHIA, PA.

THE ADAPTABLE POROUS SPLINTS, invented and improved by W. H. JOHNSTONE, have been tested extensively in both civil and military practice for a number of years, and have been endorsed and recommended in the most unqualified manner by the celebrated and distinguished Surgeons of America.

Their *porosity* is a peculiar and a valuable property. While the material is firm and insoluble, it permits readily the passage of air and fluids, so that, on one hand, the heat from the inflamed surface, the perspiration, and the morbid exhalations, are not confined, to the detriment of the patient, *as is the case in every other kind of splint*, but pass off freely; and on the other hand, lotions of cold or warm water, medicated or not with weak alcohol, carbolic acid, arnica, tincture, solutions of the sulphites, etc., can be constantly applied without disturbing the dressings. This, it will readily be seen, is a most invaluable property when the parts are bruised, lacerated, filled with extravasated blood, or erysipelatous, and give these splints a conspicuous advantage over all others.

From FRANK H. HAMILTON, M. D., Professor of Fractures and Dislocations in the Bellevue Hospital Medical College, author of "A Treatise on Fractures and Dislocations," etc.

Having examined carefully *JOHNSTONE'S IMPROVED ADAPTABLE POROUS FELT SPLINTS*, I feel warranted in recommending them to the Profession as superior to all other manufactured splints now in use. They possess all the essential qualities of a good splint having firmness, pliability and lightness.

FRANK H. HAMILTON, M. D.,
Prof. Military Surgery and Fractures and Dislocations, Bellevue Hospital Col.

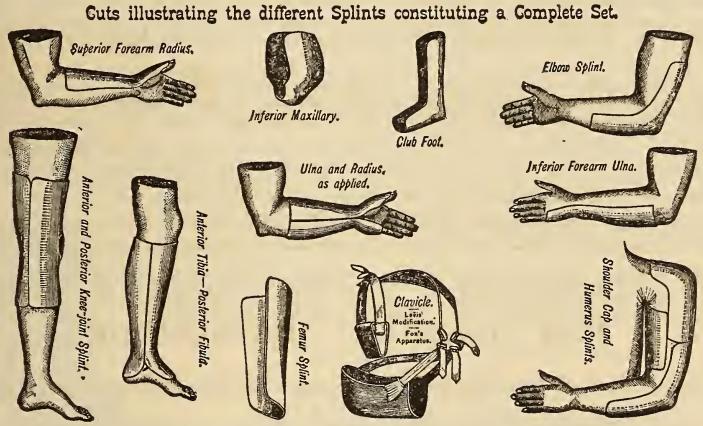
From PROF. D. HAYES AGNEW, Prof. Surgery, University of Penna.

1611 CHESTNUT STREET, PHILADELPHIA, *February 6th*, 1879.

The Adaptable Felt Splints, formerly known as those of Dr. Ahl, with the improvement now made by W. H. Johnstone, which renders them in every way superior to the former, I regard as very excellent appliances in the treatment of fractures.

D. HAYES AGNEW,
Prof. Surgery, University of Pennsylvania.

Cuts illustrating the different Splints constituting a Complete Set.



SPECIAL NOTICE TO THE PROFESSION AND TRADE.

Our *policy* heretofore in the introduction of JOHNSTONE'S IMPROVED ADAPTABLE POROUS FELT SPLINTS, has been to confine the sales and business negotiations directly to the Doctors themselves, declining in every case to sell our goods through Dealers; we having assured the Profession generally, both through our agents and catalogues, that *JOHNSTONE'S IMPROVED SPLINTS* could only be obtained by subscription.

We wish to announce, that owing to the large demand for our goods and the constant importunity on the part of *Surgeons* everywhere to place our Splints on sale with their Instrument Dealer or Druggist, to afford them greater convenience and facility in obtaining the pieces in duplicate, **we have at last acceded to that request, and hereafter** *JOHNSTONE'S CELEBRATED FELT SPLINTS* **can be obtained at most dealers in Instruments and Drugs throughout the United States, at the same price which they were heretofore sold, viz:**

A complete set, embracing fifty (50) pieces—twenty-five for adults and twenty-five for children—is thirty ($30) dollars. Extra or duplicate pieces can always be obtained from your DEALER, at one dollar each.

JOHNSTONE'S CELEBRATED SPINAL JACKET, for Curvatures and Deformities, have met with unparalleled success, and, from their merit, secured the unqualified endorsement and approbation of our celebrated orthopædic specialists, and particular expression of gratitude from the patients who are wearing them. For full information, send for Descriptive Circulars.

Should your Instrument dealer fail to have a supply of our Splints, and decline to carry them in stock, orders sent to us will receive prompt attention.

AHL'S SPLINT MANUFACTURING CO., Limited.
W. H. JOHNSTONE, Manager.

JOHNSTONE'S SPINAL FELT JACKET, any size, - - - - - $25.00
JOHNSTONE'S LACED SPLINT FOR THE LIMBS, any size, - - - - 10.00

N. B.—If the Instrument Dealers of Philadelphia decline to supply its Physicians with our JOHNSTONE'S FELT SPLINTS, on call, they will be furnished and delivered by us to any part of the city, at any time, on receipt of the price, viz., $1.00 each.

JOHNSTONE'S MODIFICATION OF DR. R. J. LEVIS' SPLINT

For the FRACTURE OF THE LOWER END OF THE RADIUS.

We make a Palmar and Dorsal Splint for each arm, from Felt, beautifully moulded to adjust to any size arm.

1281-1332 **Price $2.00 per Pair.**

THE DE QUINCEY HOME,

Fort Washington, **New York City.**

A Private Asylum for the Treatment of the Opium, Morphine, Chloral, Chloroform and Hashisch Habits, Nervous Diseases and Inebriety.

Drs. H. H. Kane
and
W. H. Vittum,
in charge.

Consulting Physicians.

Prof. Wm. A. Hammond,
Prof. T. Gaillard Thomas,
Dr. Edward C. Spitzka,
Dr. Daniel M. Stimson,
Dr. Edward T. Ely,
Dr. G. H. Wynkoop,
Dr. Andrew H. Smith.

Situated upon a high hill that commands a splendid view of the Hudson and Harlem rivers, Spuyten Duyvil Creek, and the beautiful country for miles around; surrounded by ample grounds and magnificent drives; in easy communication with the city by means of the Sixth and Ninth Avenue Elevated and the Hudson River Railroads; away from the dust, noise, crowding and malaria of the city; with hot and cold water in every room, furnace and grate-fire heating, croquet, horses and carriages, boats and fishing, an excellent *cuisine*, trained nurses and careful medical attendance, it possesses unequaled advantages for the treatment of cases of this kind.

The plan of treatment pursued in the cure of opium, morphine and chloral takers is that of *rapid reduction*, which possesses all the advantages, and none of the dangers of Levenstein's *sudden deprivation*, or the prolonged agony of *gradual reduction*. Each case is studied and treated in accordance with its peculiarities and the idiosyncrasies of the patient, no set plan of treatment being pursued, at the expense of the person's health or comfort.

Our Home, furthermore, offers special facilities for the treatment by *rest, diet, and massage*, according to the plan of Weir Mitchell, of that large class of nervous diseases so commonly met with in ladies suffering from uterine troubles. This plan of treatment has been specially studied, and nurses competent to carry out its provisions in every detail will be furnished. For further particulars, etc., address 1299-1350

Drs. KANE and VITTUM, De Quincey Home, Fort Washington, New York City.

UNIVERSITY OF PENNSYLVANIA.

POST-GRADUATE INSTRUCTION.

A Post-Graduate Course has been organized for Bedside and Dispensary Instruction in the following named branches:—

ON PHYSICAL DIAGNOSIS AND CLINICAL MEDICINE, Prof. WM. PEPPER and Dr. ED. T. BRUEN.
" NERVOUS DISEASES AND ELECTRO-THERAPEUTICS, - - - Prof. H. C. WOOD.
" DERMATOLOGY, - - - - - - - - - - - Prof. L. A. DUHRING.
" OTOLOGY, - - - - - - - - - - - Dr. GEO. STRAWBRIDGE.
" OPHTHALMOLOGY, - - - - - - - - - - Dr. S. D. RISLEY.
" GYNÆCOLOGY, - - - - - - - - - - - - Dr. B. F. BAER.
" LARYNGOSCOPY, - - - - - - - - - - - - Dr. C. SEILER.
" OPERATIVE SURGERY AND VENEREAL DISEASES, - - - - Dr. J. WM. WHITE.

Two courses will be given annually; beginning the first week in November and the first week in April; continuing three months, two lectures each week. A certificate will be given to each person having taken the full course. Fee $100, for seven branches—elective—or $25 for each branch taken separately, invariably in advance. For further information apply to the undersigned, or any of the Lecturers.

1291-1315 Dr. EDWARD T. BRUEN, Sec'y, 1531 Chestnut St.

PACKER'S

TAR

SOAP.

1297-1348eow

ABSOLUTELY PURE

AND NON-IRRITATING.

Made from Vegetable Oils, Refined Pine Tar, and Chemically Pure Glycerine. Extensively used in public and private practice in the treatment of ***Diseases of the Skin.*** Useful for cleansing sores, ulcers, etc.

Many Physicians recommend the exclusive use of this Soap for ***Washing Infants.*** It purifies, soothes, prevents chafing, and is tonic to the skin.

For the bath and toilet, only those who have used it can appreciate its refreshing and cleansing properties.

THE PACKER MANUFACTURING CO.,

P. O. Box 2985. **100 Fulton Street, New York.**

McINTOSH'S COMBINED

Galvanic AND Faradic Battery.

THIS CELEBRATED BATTERY COMBINES BOTH THE GALVANIC AND FARADIC CURRENT,

Which can be used separately or combined. Any strength and intensity desired can be obtained for use in Electro-therapeutics. THIS BATTERY is constructed on an IMPROVED PLAN, as follows: The zinc and carbon plates are arranged in couples, securely clamped to hard rubber plates, with thumb screws. These screws are also used for binding posts. All the connections are positive. The cells are made in sections of six, of hard rubber, with hard rubber drip cup. The following points of excellence render our Batteries superior to others:

1. They combine the only Portable Galvanic and Faradic Battery in one case.

2. They weigh one-half less than other Batteries of the same number of cells.

3. The cells are made in sections of six, of one solid piece of hard, vulcanized rubber; by this arrangement they can be emptied, cleaned and filled as easily and quickly as one cell, and will not crack, break or leak.

4. A hard rubber drip cup is placed by the side of each section of cells, to receive the zinc and carbon plates when removed from them. By this arrangement we avoid the use of absorbent materials and soiling the Battery

5. The Hydrostat is perfect. The rubber plates which hold the elements project over on one side enough to cover the cells when the zinc and carbon plates are placed in the drip cups. The under side of this projection is covered with thick, soft rubber, which is securely clamped to the cells sections, and makes them water tight.

6. This is the only Battery in which the zinc and carbon plates can be kept clean by simply rinsing them.

7. A zinc or carbon plate can be removed by simply loosening a binding post; and all parts of the Battery can be duplicated, as like parts are made exactly alike. We will be pleased to send circulars and our illustrated catalogue, giving full information, price, etc., free, upon application.

McINTOSH GALVANIC BELT AND BATTERY CO.,

1281-1332 **Nos. 192 and 194 Jackson Street, CHICAGO, ILL.**

SEABURY & JOHNSON'S

PHARMACOPŒIA PLASTERS

(IN RUBBER COMBINATION)

And Surgical Dressings.

ADVANTAGES OF THE RUBBER BASE FOR PLASTERS.

A cold process, through which volatilization by heat is avoided; preservative character of the rubber combination, thus insuring uniform reliability; pliability in any temperature; great convenience, as the plaster adheres without heat or moisture; cleanliness.

BELLADONNA PLASTER

SEABURY & JOHNSON.

IN RUBBER COMBINATION. Recent analytical tests conducted by Prof. R. O. Doremus, of Bellevue Hospital Med. College, and J. P. Battershall, Ph.D., analytical chemists, New York, to determine the comparative quantities of atropine in Belladonna Plaster prepared by the different American manufacturers, disclosed, in each case, that our article contains a greater proportion of the active principle of Belladonna than any other manufactured. Samples of the various manufactures, including our own, for this test, were procured in open market by the above-named chemists themselves. In the preparation of this article we incorporate the best alcoholic extract of Belladonna only, with the rubber base. It is packed in elegant tin cases (one yard in each case), which can be forwarded by mail to any part of the country.

Price, by mail, postpaid, $1.00.

BLISTERING PLASTER

SEABURY & JOHNSON

IN RUBBER COMBINATION. We incorporate, by a cold process, the whole fly (best selected Russian), with the rubber base, which constitutes, we believe, the most reliable cantharidal plaster known. It is superior to the cerate, and other cantharidal preparations, the value of which is frequently greatly impaired by the excessive heat used in preparing them, which volatilizes or drives off an active principle of the fly. By our peculiar process no heat is used. It remains serviceable almost any length of time.

Price, by mail, per yard, $1.00.

MUSTARD PLASTER

SEABURY & JOHNSON

(Spread on Cotton Cloth.)

Our Mustard Plaster is a decided improvement over the best French makes. The mustard is manipulated so as to exclude all the moisture, retaining unimpaired, by such treatment, its essential properties. They are always reliable, conform quickly to the part, and when thoroughly wet do not break into pieces, as is the case with all other mustard plasters. They do not crack or peel off, and can be removed without soiling the skin or linen. Being **manufactured only of pure mustard,** they are perfectly free from Croton Oil or other dangerous substitutes often employed to induce intense irritation.

Samples sent on application to

SEABURY & JOHNSON,

NO. 21 PLATT STREET, NEW YORK.

PLEASE SPECIFY SEABURY & JOHNSON'S PLASTERS.

MEAT AND QUINIA.

AROUD'S WINE WITH QUINIA,

And all the Nutritive Principles of Meat.

Aroud's Preparations recommend themselves to the most serious attention of Physicians, and deserve their preference:

1st.—Because they combine all the active principles of the richest barks of quinia carefully selected.

2d.—Because 30 grammes of them contain 3 grammes of quinia and all the nutritious principles of 27 grammes of meat, which are soluble in alcohol and water.

3d.—Because the combination of meat with the barks of quinia has not only the advantage of acting as a tonic, nutritive, and febrifuge, but also that of paralyzing and guarding against any local irritation caused by the prolonged use of quinia barks, and of preparing the stomach to endure the salutary influence of this friendly compound.

4th.—Because these preparations with meat as a basis, containing in their composition the entire nutritious elements of muscular fibre, blood and bone, answer alone to the immortal maxim of Hippocrates, fundamental basis of all good reparative medication, "*Ars imitatio natura.*"

5th.—Because, if meat occupies the first rank among the articles of food, if quinia is placed at the head of tonics, the combination of these highly reparative substances must necessarily be a reconstructor par excellence.

Finally, because the experiments with Aroud's Wine and Quinia prove, better than theory, that, to reconstruct the shattered and enfeebled forces, no other tonic can be compared to it.

MEAT, IRON AND QUINIA.

AROUD'S

FERRUGINOUS WINE WITH QUINIA,

And all the Nutritive Principles of Meat.

MEAT, IRON AND QUINIA, that is so say, the most reparative food combined with a reconstituent and a nerve tonic par excellence: such is the remarkable composition of this ferruginous preparation, which, in all respects, merits the preference of physicians. It prevents impoverishment of the blood, anæmia, chlorosis, etc.; presented in a form at once attractive to the eye and pleasant to the palate—an assimilable iron united with all the constitutive principles of bone and of muscle; it can, therefore, form and regenerate the forces, and this without causing nausea, constipation, or disturbing the digestive organs. By its generous alimentation it corrects and modifies the bad effect of the prolonged use of quinia.

The excellence of this preparation justifies that which Hippocrates proclaimed over 2000 years ago, and all clinics have confirmed: "That the soluble nutritive principles of meat is the food best adapted for the sick and convalescents; that these principles, being the integral parts of muscle, have the faculty of forming flesh rapidly, and of restoring muscle."

It is, therefore, a precious specific for all the maladies caused by impoverishment or deterioration of the blood, because meat, iron and quinia combined give nourishment, act as a tonic, regenerate, reconstitute, and regulate the entire system. 1261-1312-eow

J. FERRÉ, Pharmacien, 102 Rue de Richelieu, Successeur de Aroud.

Sole Manufacturers of the DR. BYRNE CELEBRATED GALVANO-CAUTERY BATTERY. Price, $50.00; with case of Electrodes $75.00.

Cabinet Batteries, from $100 to $400. Galvanic Batteries for $20, $25, $30, $40 and $50. Faradaic Batteries, for $5, $10, $15, $20 and $25. An excellent Family Battery (Faradic) with book of instructions for $10.00, and other prices to correspond.

We propose to furnish physicians with *first-class apparatus at reasonable prices.* Catalogues on application. Goods sent C. O. D. to any part of the country on receipt of $2, to insure express charges. Address

ELECTRO-MEDICAL MANUFACTURING CO.,

1281-m

38 Union Square, New York.

HOLLOW SUPPOSITORIES.

WITH STOPPERS. ALL MADE FROM PURE BUTTER OF COCOA, ONLY.

Aural, Nasal, Rectal, Urethral, Cystic, Vaginal, Intra-Uterine, and Veterinary Suppositories.

The object of this invention is to supply Physicians, Druggists, Veterinary Surgeons, and others, with HOLLOW SUPPOSITORIES, into which they can put any kind of medicine or nutriment, thus producing firm, smooth, and evenly medicated Suppositories, that are cheaper and more reliable than those made by the old method.

RECTAL ABSORPTION.

"The mucous membrane of the rectum, like that of other portions of the alimentary canal, possesses all the requisites, more or less, for the exercise of absorption."

Liebig states that a strong solution of common salt disappeared so completely in the rectum, that an evacuation one hour afterward was found to contain no more than the usual portion of salt.

Many medicinal substances act more energetically when applied to the rectum than when received into the stomach.

Baron Dupuytren said: "The rectum *absorbs*, but does not *digest*. The medicinal agent," he says, "owing to the absence of digestion, passes more directly, more purely, and more surely to its destination, than the same medicine does when taken into the stomach."

M. Orfila asserts that those medical agents which operate through the medium of absorption, such as opium, tobacco, etc., are much more active by the rectum than by the stomach.

Dr. J. H. Scorff reports four cases where he was successful in removing the vomiting of pregnancy, by introducing 20 grains of chloral into the rectum, night and morning. He only found it necessary to use the remedy three or four times.

Chloral is the remedy *par excellence* in the ravings of delirium tremens, and in cases of delirium and insomnia combined; also in infantile convulsions and attacks of laryngysmus stridulus.

Dr. Hickman reports a case of typho-malarial fever, which chloral was found to control in a happy manner. The chloral was introduced per rectum.

"REST TO THE STOMACH,"

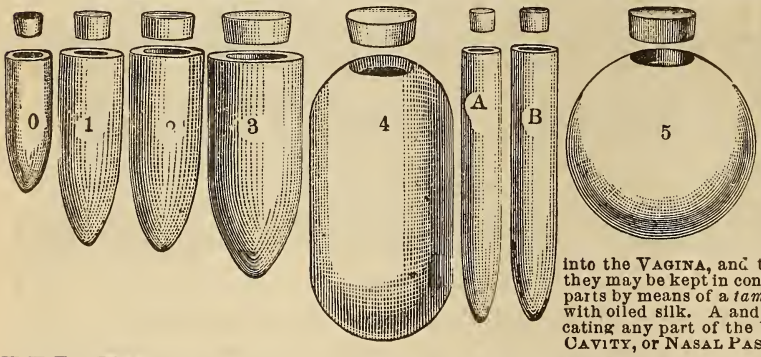
says Mr. Theodore Williams (in London *Lancet*, October 24th, 1874), is of the highest importance in some of the diseases of this organ. In such cases we possess in the rectum an effective second stomach, which, if it does not afford us the pleasure of digestion, spares us many of its pains."

Nutritious substances are taken up by the absorbents, and thus find their way into the economy, and produce their assimilative and nutritive effect. Haller demonstrated the fact that digestion can and does take place in the alimentary canal. He had the greatest confidence in the absorptive and digestive powers of the rectum to sustain life indefinitely.

HYPODERMIC MEDICATION.

Dr. William Bodenhamer says: "This now very common and often misused method is of great value in numerous cases, yet I am decidedly of the opinion that rectal medication is of greater importance; indeed, it is greatly preferable in many instances, being much less dangerous, much more convenient and simple; and the remedies, too, act through this medium with almost equal celerity. But very few remedies can be used hypodermically in comparison to those which can be used by the rectum."

EXACT SIZES OF OUR VARIOUS HOLLOW SUPPOSITORIES.



Size 0 is for children. It may also be used for the EAR and in the NASAL PASSAGES. Nos. 1, 2 and 3 are RECTAL SUPPOSITORIES. Nos. 3 and 4 may be used for introducing nutriment into the system, *via rectum*. No. 4 is also a VAGINAL SUPPOSITORY. No. 5 is a "SPHERICAL HOLLOW SUPPOSITORY," to introduce remedies into the VAGINA, and to the *os uteri*, where they may be kept in contact with the diseased parts by means of a *tampon* of cotton covered with oiled silk. A and B are used for medicating any part of the URETHRA or UTERINE CAVITY, or NASAL PASSAGES.

PRICES:

RICORD'S URETHRAL SUPPOSITORIES, for the cure of Acute and Chronic Gonorrhœa, Seminal Emissions, Impotency, and all affections depending upon an irritated condition of the Urethral Passage and Neck of the Bladder.

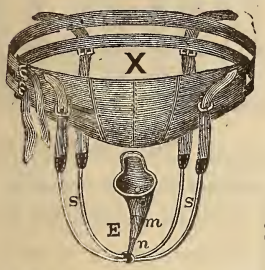
FORMULA.—Each Suppository contains: Sulph. Zinc, 1-8 gr.; Acet. Lead, 1-4 gr.; Sulph. Morphine, 1-16 gr; Ext. Belladonna, 1-16 gr.; Ext. Golden Seal, 1 gr.
Price, Half Gross, $2.00. 1300-1312

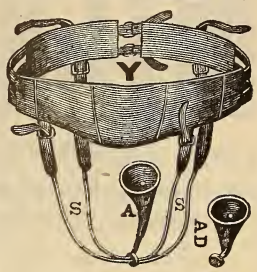
HALL & RUCKEL,

Wholesale Druggists, 218 & 220 Greenwich St., N. Y.

A Sample Box of Hollow Suppositories Mailed Free, on mentioning MED. AND SURG. REPORTER.

STAUFER'S
HARD RUBBER INSTRUMENTS AND PRICE LIST.



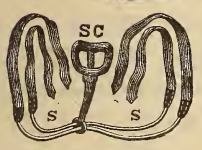


Prices.—Spring Stem Retroversion (E) on belt X, or Y, $8.00; or on Z, $7.00.

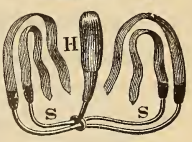
Intra-Uterine Stem Cup **(I U).**—Price on belt X, or Y, $7.00; on Z, $6 00. The intra-uterine stem cup may be first introduced and the cup turned. The stem has no spring, but joints the cup when in position by lodging in a socket.

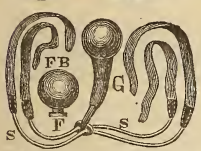
Spring Stem Prolapsus and Procidentia cup (A) on belt X, or Y, $7.00; on Z, $6.00.

Spring Stem Anteversion (S C) Spring Stem Globe Top (G). Spring Stem Oblong (H); and Spring Stem Lever (J). Each on X, or Y, $7.00, or on Z, $6.00.

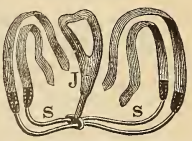


Springs.—The tops of all spring stems unscrew, and a non-corrosive coil spring is placed in tube *m*, Fig. X. The base stem *n*, slides against the spring and arrests any external touch. This together with the pure elastic gums S S, suspends the heretofore displaced uterus on a double elastic motion.



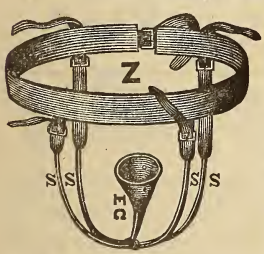


Transformation.—The self-sustaining cup A D, is formed by covering the screw when cup A, is unscrewed. So is also F B, with globe G. They are to be pressed in position at night, in sensitive cases, and stem and bandage laid aside. They have a similar use when contraction of the vagina takes place, before it is safe to suspend the support entirely.

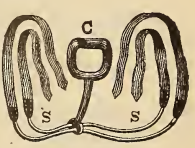


Curve.—All the stems are curved so as the base does not become struck from seating. And the cups even in the *Economy*, moulded oblique to set in the normal axis of the uterus and vagina, as plainly seen in E, Fig. X.

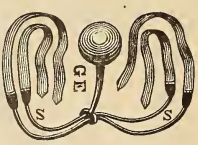
ECONOMY AND PERMANENT STEMS.



Prices.—E C, on elastic waist belt Z, is a permanent deep stem cup, no spring, but elastic gums S S, at only $4.50. On X, or Y, $5 50. Retroversion E, on Economy stem and belt Z, $6 00; X, or Y. $7.00. Permanent stems Anteversion C; Stem Globe G E; Oblong H E; and I, on Z, $4.50, and on X or Y, each $5.50. These deep leaning cups, if correct in size, correct all prolapsus uteri and procidentia, and also overcome by mere elevation partial anteversion and partial retroversion. Stem Globes and Stem Levers, by alternating the cups, assist the straightening up the uterus in difficult cases. ***Cystocele*** is drawn in by G, H, G E. or H E.

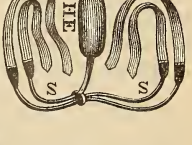


Belts.—X, and Y. have fine satteen, whale bone stay, fronts. X, two elastic back straps and closing on right hip. Y, closes on back and has elastic hip straps. Strict hip measure required. Waist measure for Z. Overlap is allowed here.

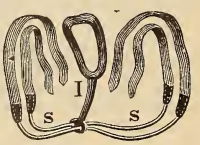


Self-Sustaining Globe B.—This is a mere hard rubber shell graded a little less than ⅛ inch from 1 to 2½ inches. It ascends in the vagina by its lightness. A cord attached to a non-corrosive staple for removal; and all the objectionable features of the glass balls are overcome. It is simple and entirely manageable by the patient at will. Harmless and still of more service, especially in the beginning of uterine troubles than any ring or lever. Actual wear does not depreciate them in value. They are always exchangeable at cost, for another style; when found not to answer, by reason of a too heavy uterus; collapsed vagina, or the case of too long standing. No. 10, 1⅞; 11, 2 inches, are the usual sizes used after having had several children. ***Price,*** $1.50 each.

Cup D.—This sustains itself by its brim and suction. Some physicians use it as a common supporter; but it is mostly used to alternate Cup E C; for which purpose it should be selected ⅛ to ¼ inch larger than the E C, in use. ***Price,*** $1.50 each.



Selection.—The correction of a displaced womb and its successful support, depends entirely on the instrument and its proper selection in size and style. Since the elastic support from outside and spring stem within for sensitive cases; this important department in gynecology is rendered simple and within the scope of every family physician. The construction of this series of stem supporters obviates hindrance to seating and all objection to the external protrusion is overcome. The cups are usually selected by giving the full diameter across the top, thus for nullipara, 1¼ to 1⅝; Multipara, 1⅝ to 2, and procidentia. 1⅞ to 2¼ inches and over some times. Stems, longer or shorter than ordinary, are made to order and among the exchange privileges. Stem Globes are numbered—Stem Levers and oblong, are usually designated by small, medium and large.



Description of Cases.—Age of patient, state of catamenia; now and heretofore. If children, miscarriages, and how many? If urine trouble, helplessness in the spine, bed-ridden, &c., whether by accident or unknown cause. If a pessary already worn, its name, size, and result. How displaced; as the touch or speculum reveals.

Exchanges.—All the hard rubber parts in the catalogue are exchanged and interchanged without limit of time. Only needed repair and difference of higher price instruments charged when required for complicated cases.

ANGLO-SWISS MILK FOOD

FOR INFANTS and INVALIDS.

RECOMMENDATIONS
OF THE STRONGEST KIND
FROM PROMINENT
PHYSICIANS.

CEREALS AND MILK
SCIENTIFICALLY PREPARED.
IN POUND CANS OF
FULL WEIGHT.

Closest Resemblance to Mothers' Milk.

See Analysis on Every Can.

THIS IS NOT A SHORT WEIGHT INFANTS' FOOD.

"The starchy constituents ordinarily objectionable in prepared Foods are, in the Anglo-Swiss Milk Food, in a great degree, converted into soluble and more easily digestible Dextrine and Sugar; effecting in the food itself changes which, in other foods, are left to the digestive organs to accomplish.

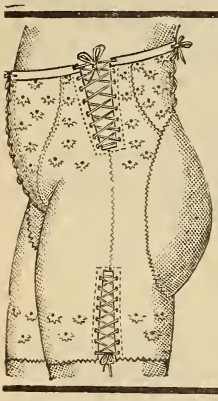
"*A simple test:* Mix one part Food to three parts cold water—a smaller proportion of water than for use—occupy five to eight minutes in bringing it slowly to boiling point; boil one minute; the result is not a pulp or pap, but a liquid resembling milk. Submit other prepared foods to same test, and you obtain a mucilaginous paste. A heavy, pasty appearance should not be accepted as evidence or measure of nutriment; it only betrays the raw or unconverted starch contained." ☞ *See pamphlet at Drug Stores.*

FOR SALE BY ALL WHOLESALE AND RETAIL DRUGGISTS.

Made at CHAM, SWITZERLAND, by the

ANGLO-SWISS CONDENSED MILK COMPANY,

1303-1354m The largest Manufacturers of Condensed Milk in the World.



Madame La Chapelle's "HEALTH PRESERVER."

A REVERSE CORSET for preventing and overcoming Uterine disease. Preëminently useful during Pregnancy. Especially adapted to treatment of Functional Derangement. It affords *immediate satisfaction.* Heat and Pain throughout the region of the back and pelvis, "fullness and dragging down," prolapsed bowels, ovarian weakness, troubles of the Bladder, and attendant reflex troubles of Heart, Brain, Stomach and Liver, are relieved by its *application.* Every one made to order, from White Kid, and are very elegant. In measuring give *exact* size (under all clothing) of Waist; Abdomen at Umbilicus; Hips, largest part; Thigh, and length from Waist to Pubis.

Send for circulars to hand to your patients, or directions for us to send them, with instructions to order from you, their physician. Retail price, $15; to Physicians, $10. 1305–1356

WHITE, WILLIAMS & CO.,

No. 257 Columbus Avenue, Boston, Mass.

☞ No Doctor will fail to recommend or furnish them after knowing their value.

PROCTER'S PEPSIN (SACCHARATED.

This standard article is prepared from *Pepsin*, carefully purified and freed from mucus, and is not a *dried Peptone.* It is inodorous and non-deliquescent, and retains its digestive power indefinitely. It is so well known that extended comment is superfluous. We would, however, call attention to its uniform purity and solubility, which, with extraordinary *digestive power*, commend its use in preference to other less carefully *made* articles. It is tested to the solution of 250 grains of coagulated albumen by 10 grains of Pepsin.

PROCTER'S "PEPSIN FORTIOR," (Stronger or Concentrated Pepsin.) A powerful form of Pepsin, eligible when minimum dose is desirable. It is of the same exceptional purity with our *Procter's Pepsin*, while the strength is far greater. Dose one to three grains. 1275–1308, 1y.

Manufactured by **WM. PROCTER, Jr., CO.,** S. W. Cor. 9th and Lombard Sts., Phila.

"The Most Popular and Practically Useful Medical Journals in the United States."

THE MEDICAL AND SURGICAL REPORTER,

PUBLISHED EVERY WEEK.

THE COMPENDIUM OF MEDICAL SCIENCE,

PUBLISHED HALF-YEARLY.

The REPORTER gives 1500 pages yearly, the COMPENDIUM 600 pages of the best quality of reading matter. No better and no cheaper medical journals are published in America or elsewhere.

The Medical and Surgical Reporter,

A WEEKLY JOURNAL.

Edited by D. G. BRINTON, M. D.

ISSUED EVERY SATURDAY.

Large Octavo, Double Columns, 26 to 28 Pages of Reading Matter in Each Number.

The REPORTER was established in 1848, and now has attained as large, if not the largest, circulation of any medical weekly in this country. It has achieved this through its independence of all cliques, its steady devotion to the highest interests of the regular profession, its energy in obtaining the most important scientific news, the value of its original articles, its broad national character, and its attention to the practical and clinical aspects of professional study.

FOR 1882.

Some important improvements will be added to the REPORTER in 1882, and we have arranged with several of the most distinguished American medical writers to contribute to its pages. We suggest to our subscribers to send in their renewals at an early date, and should be glad to have them bring the REPORTER to the notice of their friends. We can guarantee them a satisfactory periodical the coming year.

PRICES:

The regular price for the COMPENDIUM for one year (two numbers, 300 pages each, bound in paper,) is $2.50.

A discount is allowed on the REPORTER and COMPENDIUM when taken together, as follows:

JOHANN HOFF'S EXTRACT OF MALT

ESTABLISHED & MANUFACTURED IN BERLIN, GERMANY, SINCE 1847.

RECEIVED THE

CROSS of MERIT

FROM THE

EMPERORS OF AUSTRIA AND GERMANY,

And a great number of Prize Medals, and the Approval and Praise of all the Medical Faculties of Europe.

CIRCUIT COURT OF THE UNITED STATES FOR THE SOUTH. DISTRICT OF NEW YORK.

JOHANN HOFF AGAINST **TARRANT & CO.**

An Action has been commenced in above Court by

JOHANN HOFF,

Inventor, Sole Manufacturer and Owner of the Celebrated

JOHANN HOFF'S MALT EXTRACT,

AGAINST

TARRANT & CO., of New York,

Who are offering for sale an article purporting to be the genuine Johann Hoff's Malt Extract, **which is not put up by the above manufacturer, nor with his authority. The only genuine Johann Hoff's Malt Extract** is sold by

M. EISNER, 320 Race Street, Phila.,

and every bottle must bear the signature of said **Moritz Eisner, sole agent for the United States and Canada,** on the neck of every bottle, as well as the name of Johann Hoff. All other similar preparations are declared in the above Bill of Complaint as

"IMITATIONS,"

And the Profession, Public, and Dealers are hereby cautioned from buying, selling, or offering for sale, any Hoff's Malt Extract, which does not bear the above signatures; as similar action will be brought against any one offending.

M. EISNER,

NO. 320 RACE STREET,

PHILADELPHIA, PA.

Sole Agent for Johann Hoff's Malt Extract.

N. B.—PROF. COLEMAN's paper on Johann Hoff's Malt Extract will be mailed upon application.

DR. McINTOSH'S ELECTRIC OR GALVANIC BELT.

This Belt is a perfect Galvanic Battery, composed of sixteen cells, placed in pockets on a belt. Each cell is made of hard vulcanized rubber, lined with copper, which constitutes the negative plate. The rubber coating perfectly insulates each cell. The positive plates are of zinc, wrapped in a porous material to absorb the exciting fluid, preventing contact with the copper, and permitting the current to pass from the copper to the zinc. The cells are charged without wetting the belt.

A current selector is so arranged that one or more cells can be used at pleasure. The electrodes are covered similar to ordinary battery electrodes, and connected with the cells by connecting cords. By this arrangement, a current from the belt can be applied to any part of the body. Physicians who have used this belt in their practice do not hesitate to recommend it to the profession.

Our pamphlet on "Medical Electricity," containing a full description of the belt and diseases, with manner of treatment, sent free on application. Address

McINTOSH GALVANIC BATTERY CO.,

Registered COSMOLINE Trade Mark.

Unguentum Petrolei

Prepared by E.F.Houghton & Co. Philadelphia, U.S.A.

Put up in 1, 5, 10, 25, 50, and 100-lb. cans. Samples furnished on application. The post-office laws forbid anything of an oleaginous nature being sent through the mail.

In chemical composition, Cosmoline [Unguentum Petrolei] is an oleaginous hydrocarbon, corresponding to the heavy petroleum oils, and containing a large amount of the paraffines and olefines of the formulæ $C_{16}H_{34}$ and $C_{16}H_{32}$. It contains but a small percentage of the paraffines and olefines corresponding to the formulæ C_7H_{16} and C_7H_{14}, respectively, and the offensive and irritating properties of the crude oil have been carefully removed. In the process of purification, no acids, alkalies, or other chemicals are employed, and no injurious additions of any kind are made to the natural product. The result is a semi-solid, translucent substance, with a faint odor and unctuous feel.

Cosmoline [Unguentum Petrolei] melts at about 100° Fah. (38° Cent.); and boils at about 625° Fah. (329° Cent.); its specific gravity is about 0.875 at 60° Fah.

As it contains no oxydizable or organic matter capable of change by putrefaction or fermentation, and is absolutely without affinity for moisture, it offers to the profession an admirable unguent, which can never decompose, ferment, or become rancid in any climate or temperature.

291 MADISON AVENUE, NEW YORK, February 26th 1878.

I have examined the preparations of Cosmoline as manufactured by E. F. Houghton & Co., Philadelphia, and believe them well adapted to the purposes for which they are designed. As lubricants, and as the bases of simple or medicated ointments, they have a decided advantage over the fixed oils and fatty substances in ordinary use, in that they do not become rancid, and do not acquire irritating qualities from atmospheric exposure. ALFRED C. POST, M.D., LL.D.,
Emeritus Professor of Clinical Surgery in the University of New York, Visiting Surgeon to Presbyterian Hospital, etc.

PHILADELPHIA, July 10, 1880.

MESSRS. E. F. HOUGHTON & CO.:

I have for a number of years made extensive use of Cosmoline [Unguentum Petrolei] and consider it a most valuable article for surgical purposes. Either as a dressing by itself, or as a vehicle for the application of medicaments, it is greatly superior to lard or other fatty matters, especially by reason of its non-liability to change by time or temperature.

Yours truly,

JOHN H. PACKARD, M.D.
1031 WALNUT ST., PHILADELPHIA.

MESSRS. E. F. HOUGHTON & CO.:

I have used extensively Cosmoline [Unguentum Petrolei] both in Dispensary and private practice, with very great satisfaction. As a vehicle in making ointments it is invaluable, and far superior to lard, for the reason that it will not become rancid or undergo chemical change like the latter, when exposed to the atmosphere. I cannot too highly commend it as an application in various skin diseases.

Yours truly, JOHN V. SHOEMAKER, A.M., M.D.,
Physician to the Pennsylvania Free Dispensary for Skin Diseases

208 WEST 34TH ST., NEW YORK.

MESSRS. E. F. HOUGHTON & CO.:

Gents:—I fully appreciate the value of your Cosmoline, or Unguentum Petrolei, and prescribe it frequently in ointments. Fluid Cosmoline I have used constantly for several years, as a lubricant of urethral sounds. It is the cleanest oil I know of for this purpose.

Yours truly, GEO. HENRY FOX.

PREPARED BY

E. F. HOUGHTON & CO.,

TO THE MEDICAL PROFESSION.

LACTOPEPTINE.

We take pleasure in calling the attention of the Profession to LACTOPEPTINE. After a long series of careful experiments, we are able to produce its various components in an absolutely pure state, thus removing all unpleasant odor and taste (also slightly changing the color). We can confidently claim that its digestive properties are largely increased thereby, and can assert without hesitation that it is as perfect a digestive as can be produced.

LACTOPEPTINE is the most important remedial agent ever presented to the Profession for Indigestion, Dyspepsia, Vomiting in Pregnancy, Cholera Infantum, Constipation, and all diseases arising from imperfect nutrition. It contains the five active agents of digestion, viz: Pepsin, Pancreatine, Diastase, or Veg. Ptyalin, Lactic and Hydrochloric Acids, in combination with Sugar of Milk.

FORMULA OF LACTOPEPTINE.

Sugar of Milk.....40 ounces.	Veg. Ptyalin or Diastase... 4 drachms.
Pepsin..... 8 ounces.	Lactic Acid..... 5 fl. drachms.
Pancreatine..... 6 ounces.	Hydrochloric Acid..... 5 fl. drachms.

LACTOPEPTINE is sold entirely by Physicians' Prescriptions, and its almost universal adoption by physicians is the strongest guarantee we can give that its therapeutic value has been most thoroughly established.

The undersigned having tested LACTOPEPTINE, recommend it to the profession.

P. O. BOX 1574. 1244-1295eow

COMPRESSED SOLUBLE HYPODERMIC TABLETS.

We have recently given much attention to the preparation of Soluble Compressed Tablets to be used in hypodermic medication. This idea was brought to the notice of the medical profession by H. Augustus Wilson, M.D., of this city, in a paper read before the Philadelphia County Medical Society. His views were based upon carefully made experiments, and were received with much interest. At his instance we undertook to prepare in this manner a number of combinations, which have upon trial proved eminently satisfactory. We therefore feel warranted in offering these articles to the profession as superior in several respects to all other forms for hypodermic purposes.

They are convenient, both to carry and to use; they are accurate, enabling the physician to administer precisely the dose desired; and they are not liable to change by keeping. Solutions are bulky, the bottles are apt to break or to leak, and the liquid often becomes decomposed or deteriorated by time. Powders become inert, from atmospheric influences; the papers become torn and part of the medicament is often lost in the necessary handling. The patented gelatine discs are not quickly soluble, and are sometimes slow in taking effect. Their use is apt to be followed by abscesses, which is rarely the case with crystalloid substances.

An extensive experience of many years in the manufacture of compressed powders (or pills), and the precision and accuracy of our mechanical appliances, enable us to make these articles with a degree of perfection not attainable in any other way, or by any other process. The exact amount specified of each drug is thoroughly incorporated and distributed throughout every tablet. In water at ordinary temperatures a perfect solution may be made in from thirty to sixty seconds.

No extraneous material is employed, except the Sulphate of Sodium, and this only in such proportions as to facilitate solution.

CAUTION.—The dose of Morphia for hypodermic use varies from $\frac{1}{12}$ to $\frac{1}{2}$ of a grain. We would suggest to the profession the necessity for caution. The large doses sometimes recommended—$\frac{1}{3}$, $\frac{2}{3}$ and even 1 grain—are unsafe for the first trial, unless the conditions requiring the injection be exceptional. *In commencing, it should not exceed one-third of that ordinarily administered internally.*

DIRECTIONS.—The syringe is charged with about twenty minims of water, which is poured into a teaspoon or other convenient receptacle; the pellet being dropped in, is crushed with the end of the syringe, to which the needle fits, and after all the lumps are broken the solution is drawn up and forced out three or four times, when usually the whole mass will be entirely dissolved and ready for use.

If warm water is used or the spoon is heated over a lamp or gas jet, a perfect solution is effected in a moment. The tablets may be readily powdered with the blade of a knife, and a solution is even more speedily made in this way.

The following formulæ and combinations embrace all those in general request. Others will be added as the demands of the profession warrant their manufacture.

We claim for our Hypodermic Tablets: Absolute accuracy of dose. Ready and entire solubility. Perfect preservation of the drug.

Their convenience and utility will at once be apparent on examination.

We are under many obligations to Professor Roberts Bartholow, who, from his thorough scientific investigations and extensive experience in hypodermic medication, is recognized as the highest authority on the subcutaneous treatment of disease, for suggestions and advice in regard to the care required in preparing our Hypodermic Tablets, also for the kind interest in devising the above formulæ.

His book on "Hypodermic Medication" is well known as the standard work on that subject, and has reached a third edition.

The success of our efforts to furnish the medical profession a much needed improvement in hypodermic medication is due to the happy suggestion of Dr. H. Augustus Wilson and to the kind interest of other medical friends, who have advised us as to the absolute essentials in preparing so delicate and important a series of medicaments.

1286m **JOHN WYETH & BRO., 1412 & 1414 Walnut St., Philad'a.**

Recent Introductions to the Materia Medica,

BY

PARKE, DAVIS & CO.,

Manufacturing Chemists, DETROIT, MICH.

CHEKEN. (*Eugenia Cheken, Myrtus Chekan.*) This remedy, a native of Chili, is very popular in that country, where it is employed as an *inhalation* in diphtheria, laryngitis, bronchitis, bronchorrhœa, etc.; as an *injection* in gonorrhœa, leucorrhœa, cystitis, etc.; and *internally* as an aid to digestion, to allay cough, to facilitate expectoration and to stimulate the kidneys. It is also an astringent, and is said to be of great value in hæmoptysis.

Cheken (known also as Chekan and Chequen), was introduced to the profession of England, through a report of results following its use in chronic bronchitis or winter cough, by Wm. Murrell, M.D., M.R.C.P., Assistant Physician to the Royal Hospital for Diseases of the Chest, and Lecturer on Practical Physiology at the Westminster Hospital. Dr. Murrell's report is very favorable, and he has supplemented it by private advices to us, expressing great satisfaction with the drug in the affections in which he has employed it. He regards it as one of the most valuable introductions of late years, and pronounces it a drug of very superior properties in the treatment of **chronic bronchitis,** acting in this affection both as an anodyne and exerting a favorable influence over the organic changes in the mucous membrane. It is certainly a remedy which merits a thorough trial at the hands of the profession of this country.

SIERRA SALVIA. ("MOUNTAIN SAGE.") *Artemisia Frigida.* Fluid extract of the herb. Dose one to two fluidrachms. **Diaphoretic and diuretic.**

The success which has attended the administration of this drug in "Mountain fever" has suggested its employment in all febrile conditions attended with suppression of the secretions of the skin and kidneys. Its action in fever seems to be twofold, acting directly on the nervous centre, thus inducing a direct lowering of the temperature, and facilitating the radiation of the heat through diaphoresis, which it stimulates. Under its use the kidneys are also aroused to activity, and the solid constituents of the urine proportionately increased. Therapeutic tests have corroborated the opinion formed of it on theoretical grounds.

PERSEA. (ALLIGATOR PEAR.) Fluid extract of the seeds. Dose 30 to 60 minims. This remedy is now for the first time presented to the profession of this country. It is introduced on the recommendation of Dr. Henry Froehling, of Baltimore, Maryland, who, while acting in the capacity of botanist and scientist to an exploring expedition in Southern Mexico, became familiar with the drug, both from reports of the natives and personal experience, as a remedy in **intercostal neuralgia.** The following extract from Dr. Froehling's report will give some conception of the nature of this remedy:

"A common experience among physicians is, that some cases of intercostal neuralgia are very troublesome and obstinate, resisting almost every kind of treatment; particularly is this the case in malarial districts. In such cases I would recommend the fluid extract of Persea seed. In my own person and in every case in which I have employed it, I have been highly gratified with the result. Those of my medical friends to whom I have given samples of the preparation warmly endorse my opinion of it as above, and I cannot but believe that further trial of it will cause it to be regarded as a valuable addition to our list of medicines."

Dr. Froehling also mentions the fact that Persea has been employed with benefit in the expulsion of tapeworm.

COCA. (ERYTHROXYLON COCA.) The evidence in favor of Coca is to prove it a powerful nervous stimulant, through which property it retards waste of tissue, increases muscular strength and endurance, and removes fatigue and languor, due to prolonged physical or mental effort. While indicated in all conditions presenting these symptoms, it has an especial indication in the treatment of **the opium and alcohol habits.** In these deplorable conditions it has been found to possess extraordinary properties—relieving the sense of untold bodily and mental misery which follows the withdrawal of the accustomed stimulus, thus preventing a return to the narcotic, and affording an opportunity for building up the system by the administration of restorative tonics.

We prepare Fluid Extracts of all the above drugs.

PARKE, DAVIS & CO.,

Manufacturing Chemists, DETROIT, MICH.

SOLUBLE MEDICATED

HOLLOW VAGINAL SUPPOSITORIES,

For the Treatment of LEUCORRHŒA, VAGINITIS, VAGINISMUS, etc.,

(See MEDICAL AND SURGICAL REPORTER, Jan. 7, 1882, p. 7.)

CLEAN. LIGHT. RELIABLE. EFFICIENT.

These Suppositories are made of medicated gelatin, moulded in a hollow form. The interior is to be filled with either absorbent, carbolized, or salicylized cotton, so as to act as a support, and keep the Suppository, while melting, in close contact with the vaginal walls. The following advantages are claimed for them:—

FIRST.—Being hollow, the use of a large quantity of inert material is avoided, and there is no soiling of the clothes or person.

SECOND.—The composition of which the suppository is made greatly assists the absorption of the remedy, instead of forming a greasy, slowly permeable medium, like that of a cacao butter suppository.

THIRD.—By the large amount of surface over which the medicating ingredient is distributed, absorption is greatly assisted, and the effect of the remedy very soon obtained.

FOURTH.—By their close contact and prolonged action on the mucous substance of the vagina, a much more powerful and lasting effect is obtained, than by any other similar method of local medication.

FIFTH.—Being light, the suppository remains in the upper part of the vagina, where it is most needed, and does not sink and slip out, as does the old-fashioned article made of cacao butter.

These Suppositories are neatly put up in boxes, *each box containing six of a kind only*, and are medicated as follows:—

1. Sulphate Zinc, – – 5 grs.
2. " " – – 10 "
3. Acetate " – – 10 "

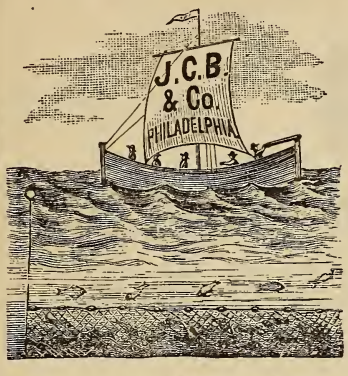
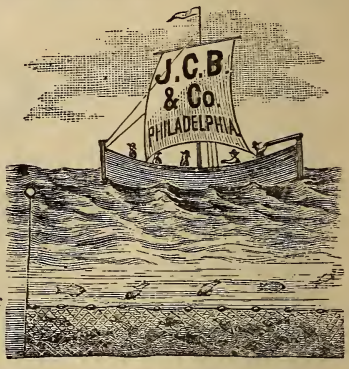
JOHN C. BAKER & CO.'S
PURE COD-LIVER OIL



RECEIVED
PER STEAMER MONTHLY,
In Sealed, Tin-Lined Barrels.

ABSOLUTE
Purity and Freshness
SECURED BY USING
Baker's Cod-Liver Oil.

Patients unable to take other oil find it not only not disagreeable, but positively palatable.



Prepared on the **Halten Islands, Norway,** with great care, from the finest selected livers of *Net-taken Cod Fish*, at a season of the year when in their highest condition.

BAKER'S COD-LIVER OIL

Has been before the Medical Profession since 1840, and is endorsed by the highest authority.

☞ Many Physicians say "Where a *Pure Oil* of such remarkable quality is attainable, a resort to the various preparations of Cod-Liver Oil is unnecessary."

To meet the demand for such, however, we offer

BAKER'S EMULSION

Finest Norwegian Oil as above, 50 per cent. = 12 grains Hypophosphites of Lime and Soda to each tablespoonful. The quality of the Oil used in this preparation renders it, beyond question, the *best Emulsion in the market.*

WE PREPARE, ALSO,

Baker's Cod-Liver Oil, with Extract of Malt.
Baker's Cod-Liver Oil, with Phos. Lime and Wild Cherry.
Baker's Extract of Malt, Plain.

☞ An extract from Trousseau and Pidoux, on Therapeutics, in pamphlet, will be mailed free to any Physician requesting it.

AGENTS FOR

BARLETT'S PILE SUPPOSITORIES

An Astringent and Balsam combined, in the convenient form for application. Descriptive circ and endorsements mailed on application. Boxes o Suppositories, 75 cents, by mail, to Physicians mention this Journal.

NOTES ON THE USE OF PEPSINE IN MEDICINE,

WITH RECOMMENDATIONS REGARDING SACCHARATED AND PURE PEPSINE.

That many of the diseases from which mankind suffer during infant and adult life are caused by malnutrition, there can be no doubt; and the extent to which non-assimilation of the life-giving properties of food interferes with recovery from severe illness, baffling the best directed efforts of the physician, points the necessity for an agent sufficiently potent to replace the deficient principle and aid nature in renewing the degenerated tissues.

Realizing this need, the science of chemistry produced pepsine; and even if medical literature were silent as to testimony of the results obtained, the large amount manufactured and consumed would amply attest its usefulness. But such is not the case, for, after long and careful investigation on the part of practical therapeutists, it is accepted as the remedy *par excellence* in all cases where the gastric juice fails to afford a sufficient amount of ferment for the reduction of aliment to a condition suitable for healthy assimilation.

As the undoubted value of pepsine as a remedial agent became evident, competition in its manufacture was stimulated; and as a natural result, the supply was varied both in purity and strength, and the medical profession, while anxious to avail themselves of its usefulness, were nearly as often misled into erroneous conclusions regarding its efficacy, as satisfied with its results, solely in consequence of their misfortune in not using such qualities as were likely to produce the much-lauded effects. Under these circumstances, a definite understanding regarding reliable preparations is desirable, and of great importance. Pure pepsine, without acid, thoroughly triturated with finely powdered sugar of milk (saccharated pepsine*), will, without doubt, produce the perfect results in all cases where the remedy is exhibited.

Routh, in his "Infant Feeding," gives an account of a result obtained in the case of an infant. "Small, wrinkled, emaciated, four days old, yet presenting almost the appearance of decrepitude. The voice was weak but distinct, and respiration not obstructed. The mother was an excellent nurse, but, although the infant took the breast readily, it constantly threw up every meal. What passed through the bowels was unchanged, although slightly tinged with bile. Diarrhœa was also present." The usual external remedies were applied, but without avail. "Emaciation was on the increase; the child was, in fact, dying." At this stage saccharated pepsine was administered, fifteen grains divided into ten powders, mixed with a little of the mother's milk, and after the second day the diarrhœa ceased and the child appeared much stronger. Twenty days of this treatment and the child was quite well. The eminent author adds: "This is a case which speaks strongly to the convictions. If at so early a period of life, when vitality and digestion were so weak, the artificial pepsine effected a cure, *a fortiori* will it be likely to do so in the case of older children; and so I have found it in practice. The digestive powers are thus assisted, and the food, which before was useless because undigested, readily becomes assimilated."

When administering pepsine, the slight acidity of the natural fluid should be produced as nearly as possible, and, as the necessities differ with the circumstances, it is desirable that the preparation be quite free from acidulation, and the proper dose be given in combination with the requisite amount of dilute acid. Of Kidder & Laird's pure pepsine, five to ten grains for an adult can, if necessary, be taken in an ounce of water, with five drops of muriatic acid.

For infants, however, the saccharated pepsine will be found to yield the most satisfactory results, and the acid should be dispensed with. Quantitatively it represents one-tenth of the strength of pure pepsine; but it has been found to be but about one-fourth less in efficacy. The absence of acid, which would otherwise tend to produce harmful results, will be recognized when it is considered that even the slight acidity of most cow's milk, when used as food for infants, is sufficient to disagree with them.

With regard to the proper time for its administration, as before or after taking of food, opinions vary, but reason would suggest that about half an hour before eating will afford the ferment a sufficient time to combine with the existing condition of the stomach, and produce the most natural effect upon the food when it has been acted upon by the salivary fluids in its passage to the stomach.

When once the formation of peptone has been established in the stomach, and as strength is acquired, the system will soon respond toward resuming the natural production of its normal fluids. Thus it is that many of the disorders of digestion which accompany severe attacks of fever, phthisis, etc., and also the exceedingly sensitive condition of the stomach caused by vomiting in pregnancy and alcoholism, are controlled, and a natural condition resumed.

Having mentioned the necessity of great care in the selection of pepsine, with reference to its purity and strength, it is proper to say that, even with the superior article above recommended, negative results may be obtained, unless attention is given to the form of its administration. Combinations beyond those above mentioned are not advised, but rather discouraged, as many of the substances usually recommended as efficacious with it are incompatible and render the pepsine inert.

* Saccharated pepsine, free from acid, is prepared by Messrs. Kidder & Laird, No 83 John Street, New York, who generously furnish samples of both this and the pure pepsine, free of charge, upon application.

1264-1315

HORSFORD'S ACID PHOSPHATE

IN

IMPOTENCE,

Seminal Losses,

Impaired Vitality,

Spermatorrhœa.

We wish to call the attention of the profession to the action of Horsford's Acid Phosphate on the organs of generation, when their power has become impaired through sexual excess, or from senile impotence. It is at once rejuvenating and aphrodisiac in its effect. It appears to restore the secretory organs that have been deranged to their normal condition, giving vigor where there has been debility, and renewed strength where there has been exhaustion.

H. B. STORER, M.D., Boston, says: "I have found Horsford's Acid Phosphate serviceable, in a marked degree, in my treatment of spermatorrhœa."

E. W. JONES, M.D., Taunton, Mass., says: "Horsford's Acid Phosphate was prescribed in a case of nervous prostration from seminal losses, with decided beneficial effect."

C. S. ELLIS, M.D., Wabash, Ind., says: "I prescribed Horsford's Acid Phosphate in a case of nervous debility and weakness of the sexual organs; patient forty-eight years old; he was much benefited."

R. W. ERWIN, M.D., Bay City, Michigan, says: "In some cases of weakness following sexual indiscretions, attended with nervousness, it is useful."

Each case presents its own peculiarities for treatment, but, as a general rule, we would suggest a half teaspoonful of Horsford's Acid Phosphate, in half a tumbler of hot or cold water, or tea without milk, to be taken shortly after each meal, and upon retiring.

Pamphlet giving further details mailed free, on application to the manufacturers.

Physicians who have not had a bottle of the Horsford's Acid Phosphate, and who wish to test it, will be furnished with a sample without expense, except express charges.

RUMFORD CHEMICAL WORKS,

PROVIDENCE, R. I.

1297-1348

An experience of more than a quarter of a century convinces us that sugar, properly applied, is the only correct coating for a pill.

Physicians should be careful to specify Warner & Co., when prescribing or ordering.

Special attention is called to the following selected Recipes prepared for Physicians' Prescriptions.

PIL: PHOSPHORI COMP: (WARNER & CO.) ℞. Phosphori, - - 1-100 gr. Ext. Nuc. Vom. - ¼ gr.

THERAPEUTICS.—As a nerve tonic and stimulant, this form of pil is well adapted for such nervous disorders as are associated with impaired nutrition and spinal debility, increasing the appetite and stimulating digestion.

The practical value of Phosphorus as a therapeutic agent, and its applicability to the cure of disease, and especially in those varied disordered conditions consequent upon OVERWORK, which are characteristic of modern civilization.

Pil. Phosphori Comp. may be taken, one or two pills three times daily, after eating.

Price, per 100, $1.50.

PIL: IODOFORM ET FERRI. (WARNER & CO.) ℞. Iodoform, - - 1 gr. Ferri Redacti, - 1¼ gr.

THERAPEUTICS.—A powerful general tonic and alterative, valuable as a remedy in Anæmia, Scrofula, Neuralgia, Chlorosis, Rheumatism, etc.

Pil. Iodoform et Ferri may be given in doses of from one to two pills, as occasion may require.

Price, per 100, $2.00.

PIL: DIGESTIVA. (WARNER & CO.) ℞. Pepsin Conc't, 1 gr. Gingerine, 1-16 gr. Pv. Nuc. Vom., ¼ gr. Sulphur, ⅛ gr.

THERAPEUTICS.—Useful in relieving various forms of Dyspepsia and Indigestion, and of permanent benefit in cases of enfeebled digestion, where the gastric juices are not properly secreted. It is also a gentle laxative and excellent dinner pill, may be taken one after dinner, or one before each meal, three times daily.

Price, per 100, 75 cts

PIL: CALCIUM SULPHIDE. (WARNER & CO.) 1-10, ¼, ½ & 1 gr. each.

THERAPEUTICS.—Extremely useful in the treatment of acne, scrofula and cutaneous diseases.

Sulphide of Calcium is usually administered in doses of from 1-10 to ¼ grain four times daily, gradually increasing the dose to one grain six times daily, or according to the progress or severity of the case.

Price, per 100, 1-10 gr. .50; 1-4 gr. .60; 1-2 gr. .75; 1 gr. $1.00.

WARNER & CO.'S PILLS MAY BE OBTAINED FROM ALL DRUGGISTS, OR BY MAIL, ON RECEIPT OF PRICE.

SAVORY & MOORE beg to call the attention of the Profession to some of their Special Preparations, the purity and uniform strength of which are Guaranteed.

PANCREATIC EMULSION,

Prepared in accordance with the direction of the Physician who introduced this purely

MEDICINAL FOOD FOR CONSUMPTION AND WASTING DISEASES.

Pancreatic Emulsion will always take precedence of Cod-Liver Oil, by reason of its introducing the STABLE SOLID FATS INTO THE SYSTEM, instead of the evanescent fluid fats or oils.

Neither Cod-Liver Oil nor EMULSIONS of COD-LIVER OIL can supply the kind of fat necessary for sound and vigorous human life. In addition to this, all the Oily Emulsions are liable to rancidity, and most of them are highly objectionable in consequence of the SAPONIFICATION and ULTIMATE PUTREFACTION, produced by the chemical agents used instead of Pancreatic Juice.

Pancreatic Emulsion (properly so-called), is THE NECESSARY FOOD OF THE CONSUMPTIVE, and the most reliable form of nutriment for counteracting the tendency to Phthisis and other wasting diseases. It presents to the lacteals fat, in essentially the same condition for assimilation and absorption as in a vigorous human frame, and THE AGENT of the important change is THE NATURAL SECRETION of the PANCREAS.

Pancreatic Emulsion may therefore be regarded as Chyle obtained by nature's own process. In certain cases both Cod-Liver Oil and Pancreatic Emulsion are required—one to supply the blood with oil or liquid fat, the other with the more stable solid fats; but it cannot be too strongly urged that both PANCREATIC EMULSION and Cod-Liver Oil are *not to be regarded as Medicines, but as articles of diet*, without which patients, with their defect of health, will as surely starve as healthy persons would if deprived of the most nutritive part of their food.

Pancreatized (Digestive) Cod-Liver Oil. By Pancreatized Cod-Liver Oil, the active digestive principle of the Pancreatic Juice is imparted to it, which renders it in a highly favorable condition for rapid and complete digestion and assimilation, preventing nausea, and largely increasing the beneficial properties of the Oil.

Pancreatine effects the digestion and assimilation of Cod-Liver Oil and Fat, as well as Food generally. This palatable and popular remedy is therefore invaluable to PATIENTS WHO ARE UNABLE TO DIGEST COD-LIVER OIL, and who are thus deprived of its nourishing and invigorating properties.

Pancreatine Wine. An excellent vehicle for taking Cod-Liver Oil and promoting the digestion of it.

Tins, 1*s*, 2*s*, 5*s*, 10*s*.

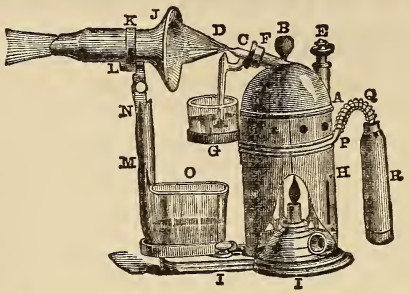
ATOMIZING APPARATUS.

PRICES REDUCED.



THE COMPLETE STEAM ATOMIZER (Patented March 24, 1868.)

All its joints are hard-soldered.

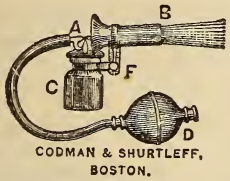
Every one is tested by hydrostatic pressure, to more than one hundred pounds to the square inch.

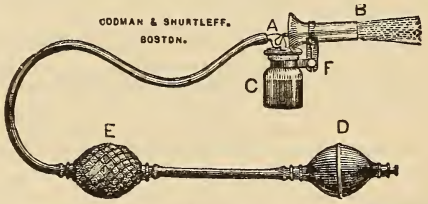
It cannot be injured by exhaustion of water, or any attainable pressure, and will last for many years.

It does not throw spirts of hot water, is convenient, durable, portable, compact, and cheap, in the best sense of the word. Price $5.00. Postage 59c.

Brass parts, nickel-plated, additional, $2.00.

Neatly made, strong Black Walnut Box, with convenient Handle, additional, $2.50. Postage 44c.





THE BOSTON ATOMIZER. (Patented.) *SHURTLEFF'S ATOMIZING APPARATUS. (Patented.)*

The most desirable Hand Apparatus. Rubber warranted of the very best quality. Valves imperishable, every one carefully fitted, and will work perfectly in all positions. Price $3.50.

The Bulbs are adapted to all the Atomizing Tubes made by us.

Each of the above Apparatus is supplied with two carefully-made annealed glass Atomizing Tubes, and accompanied with directions for use. Each Apparatus is carefully packed for transportation, and warranted perfect.

BUFFALO LITHIA WATER.

FOR

BRIGHT'S DISEASE OF THE KIDNEYS, THE GOUTY OR URIC ACID DIATHESIS, CHRONIC INFLAMMATIONS OF THE BLADDER, ETC.

Dr. Wm. A. Hammond, of New York, Surgeon General U. S. Army (retired), Professor of Diseases of the Mind and Nervous System in the University of New York, etc.

"I have for some time made use of the Buffalo Lithia Water in cases of affections of the Nervous System, complicated with Bright's Disease of the Kidneys, or with a Gouty Diathesis. The results have been eminently satisfactory. Lithia has for many years been a favorite remedy with me in like cases, but the Buffalo Water certainly acts better than any extemporaneous solution of the Lithia Salts, and is, moreover, better borne by the stomach. I also often prescribe it in those cases of Cerebral Hyperæmia, *resulting from mental overwork*—in which the condition called Nervous Dyspepsia exists—and generally with marked benefit."

Dr. J. Marion Sims, of New York, says of this water, in general terms:—

"I have used in my practice the Buffalo Lithia Water, Spring No. 2, for two years past, and have, in many cases, found it highly efficacious."

Dr. Alexander B. Mott, of New York, Professor Surgery, Bellevue Hospital Medical College, Surgeon Bellevue Hospital.

"I have made sufficient use of the Buffalo Lithia Water to be satisfied that it possesses very valuable therapeutic properties. In the Gouty Diathesis, Chronic Inflammation of the Bladder, and other diseases affecting the Urinary Organs, it may be relied on to give the most satisfactory results."

Dr. Hunter McGuire, Richmond, Virginia, late Professor Surgery Medical College of Virginia; Medical Director on the Staff of Gen. T. J. (Stonewall) Jackson; Vice-President of the International Medical Congress; Vice President American Medical Association.

"Buffalo Lithia Water as an Alkaline Diuretic is invaluable. In Uric Acid Gravel, and, indeed, in diseases generally of the Uric Acid Diathesis, it will be found a remedy of extraordinary potency. I have prescribed it in cases of Old Rheumatic Gout, which had resisted the ordinary remedies, with wonderfully good results. I have also used it in my own case, being a great sufferer from this malady, and have derived more benefit from it than from any other remedy. It has remarkable adaptation in diseases of the Digestive Organs. In that condition especially known as Nervous Dyspepsia, caused by over-mental taxation, where, too, there is an excess of acid in the process of digestion, the happiest results may be anticipated from it.

Dr. Robert Battey, of Georgia, Suggestor of Battey's Operation; Member of the American Medical Association, etc.

"I would state that I have been using the Buffalo Lithia Water No. 2, in my practice for three years past, in cases of Chronic Inflammation of the Bladder, whether induced by STONE, by ENLARGED PROSTATE in the aged, or by neglected GONORRHŒA, and have secured excellent results, which encourage me to prescribe it for the future."

This Water, in Cases of One Dozen Half-Gallon Bottles, $5.00 per Case, at the Springs.

On Sale in Philadelphia by JOHNSTON, HOLLOWAY & CO.; JOHN WYETH & BRO.; FRENCH, RICHARDS & CO.

Springs Pamphlet sent to any address. Springs open from 1st of June to 1st of October.

MURDOCK LIQUID FOOD CO., Boston,

THE ONLY MANUFACTURERS OF

RAW FOOD EXTRACTS IN THE WORLD.

It can be retained by the weakest stomach, when all other food extracts, and even water, is rejected.

It is the only food that will relieve the Consumptive from Hunger.

Nutritious food, if raw, condensed, and free from insoluble matter, will cure chronic diseases, as it will make blood faster than all preparations or food, and new blood will cleanse the system.

MURDOCK'S LIQUID FOOD is made from Beef, Mutton and Fruits; contains corpuscles; is 12½ per cent. soluble albumen, and free from insoluble matter, drugs, minerals, salts and acids, and can be retained by the stomach when so weak as to refuse food.

Ask your Druggists, or send to us, for Essays read before the American Medical Association, at Richmond, Va., May 6, 1881, on the value of Raw Food Extracts, by Geo. R. Shepherd, of Hartford, Conn., and other Essays and Testimonials from Medical Journals and Physicians that have used Liquid Food, in cases of Consumption, Scrofula, Nervous and General Debility, Dyspepsia, acute and chronic, Constipation, Diphtheria, Intemperance, Cholera Infantum, Infantile Diarrhœa, Post partum Hemorrhage, Purpura Hemorrhagica with Waxy Liver, Pelvic Cellulitis, Malarial and other Fevers, Chronic Strumous Arthritis, Sclerosis of the Spinal Cord, Senile Gangrene, Perinephritic Abscess, and other diseases of malnutrition. No cases of Cholera Infantum have occurred where it has been used daily and no lives have been lost from Cholera Infantum where it has been prescribed by a physician. Excellent for Eczema, Diabetes, Rheumatism and Neuralgia.

At the request of any physician who has not tried our Extracts, and would like to, we will deliver sample bottles to the Express in Boston. To any Medical Society wishing to investigate the value of our Extracts, through a committee, hospital, or individual members, we will furnish a supply of Liquid Food equal to a six-ounce bottle for every member present at the time of action. We are induced to do this, knowing that our Extracts are saving life, and that an increased use of them, which will follow after a trial of them, will be the means of saving more lives daily. (*We ask no testimonials of results obtained.*) Raw Extracts are available where cooked ones are not, or if available, contain only one-third as much nourishment.

Liquid Food is in general use at all Hospitals, Infant and Insane Asylums, and Washingtonian Homes, U. S. Navy Hospitals, and by all physicians that have tried it.

If not kept by your Druggist, can be obtained in any of the commercial cities In Philadelphia, by Johnston, Holloway & Co., Boericke & Tafel; in Pittsburg, by A. Kelly & Co.; in Baltimore, by Thomsen & Wirth; or you can order direct and we will pay express. 1 oz., 15 cents; 6 oz., 55 cents; 12 oz., $1.00.

See Philadelphia MEDICAL AND SURGICAL REPORTER, *Boston Medical and Surgical Journal*, and *New York Medical Record*, for chronic cases that were at our quarterly reception to physicians, in Boston, December 30, 1881—cases of Eczema, Rheumatism, Neuralgia, Diabetes, Consumption, and other diseases. If all were not restored to perfect health, they were gaining daily, and able to enjoy life and attend to their business. 1297-1348

MURDOCK LIQUID FOOD CO., BOSTON.

BOUDAULT'S PEPSINE

IN POWDER, also WINE, ELIXIR, SYRUP, PILLS, AND LOZENGES OF PEPSINE.

Since the introduction of Pepsine by Boudault in 1854, BOUDAULT'S PEPSINE HAS BEEN, AND IS STILL CONSIDERED, THE MOST RELIABLE, as is attested by the awards it has received at the Exhibitions of 1867, 1868, 1872, 1873, and in 1876 at the Centennial Exposition in Philadelphia.

IT IS THE ONLY PEPSINE USED IN THE PARIS HOSPITALS.

Careful tests will enable any one to satisfy himself that BOUDAULT'S PEPSINE HAS A DIGESTIVE POWER AT LEAST DOUBLE that of the best Pepsines in the market, and that it is really the cheapest.

It is Sold in 1 ounce, 8 ounce, and 16 ounce Bottles.

Beware of so-called French Pepsines bearing fictitious names, and prescribe Boudault's only.

BLANCARD'S PILLS

OF UNCHANGEABLE IODIDE OF IRON.

Blancard's Pills of Iodide of Iron are so scrupulously prepared, and so well made, that none other have acquired a so well deserved favor among physicians and pharmaceutists. Each pill, containing one grain of proto-iodide of iron, is covered with finely pulverized iron, and covered with balsam of tolu. Dose, two to six pills a day. The genuine have a *reactive silver seal* attached to the lower part of the cork, and a green label on the wrapper, bearing the fac-simile of the signature of

Pharmacien, No. 40 Rue Benaparte, Paris

without which none are genuine.

BEWARE OF IMITATIONS.

E. FOUGERA & AGENTS, NEW YORK. 1297 tf.

For Consumption and Wasting Diseases.

HYDROLEINE

Has been proved of the highest value in CONSUMPTION and all WASTING DISEASES, invariably producing IMMEDIATE INCREASE in FLESH and WEIGHT.

FORMULA OF HYDROLEINE.

Each dose of two teaspoonfuls, equal to 120 drops, contains:

Pure Oil,	**80 m. (drops.)**	**Soda,**	**1-3 grain.**
Distilled Water,	**35 m.**	**Boric Acid,**	**1-4 "**
Soluble Pancreatin,	**5 grains.**	**Hyocholic Acid,**	**1-20 "**

DOSE.—Two teaspoonfuls alone, or mixed with twice the quantity of soft water, to be taken thrice daily, with meals.

The principles upon which this discovery is based have been described in a treatise on "THE DIGESTION AND ASSIMILATION OF FATS IN THE HUMAN BODY," by H. C. BARTLETT, PH.D., F.C.S., and the experiments which were made, together with cases illustrating the effect of Hydrated Oil in practice, are concisely stated in a treatise on "CONSUMPTION AND WASTING DISEASES," by G. OVEREND DREWRY, M.D.

In these treatises the Chemistry and Physiology of the Digestion of the Fats and Oils is made clear, not only by the description of a large number of experiments scientifically conducted, but by cases in which the deductions are most fully borne out by the results.

☞ *Copies of these valuable works will be sent free, on application, to all who mention THE MEDICAL AND SURGICAL REPORTER.*

HYDRATED OIL,

HYDROLEINE,

WATER AND OIL,

May be described as partially digested oil, which will nourish and produce increase in weight in those cases where oils or fats not so treated are difficult or impossible to digest. In CONSUMPTION and other WASTING DISEASES the most prominent symptom is EMACIATION, of which the first is the starvation of the fatty tissues of the body, including the brain and nerves. This tendency to emaciation and loss of weight is arrested by the regular use of HYDROLEINE, which may be discontinued when the usual average weight has been permanently regained.

The ordinary so-called emulsions of Cod-liver oil and other fats, WHETHER PANCREATIZED OR NOT, merely remain in the form of a coarse mechanical mixture for a short time after agitation. The digestion of oil having in no sense been artificially produced, still devolves upon those functional powers the deficiency of which is the most prominent symptom in these cases.

HYDROLEINE is not a patent medicine or a secret preparation; the formula is on every bottle. Can be taken by the most delicate stomach; is immediately assimilated.

The permanence and perfection of the emulsion, and the extreme solubility of the HYDRATED OIL, solely prepared and sold by us under the name of HYDROLEINE, is shown by its retaining its cream-like condition as long as the purest Cod-liver Oil will retain its sweetness. Unlike the preparations mentioned, or simple Cod-liver Oil, it produces no unpleasant eructation or sense of nausea, and should be taken in such very much smaller doses, according to the directions, as will insure its complete assimilation; this, at the same time, renders its use economical in the highest degree.

To brain-workers of all classes Hydrated Oil is invaluable, supplying as it does the true brain food.
Economical in use—certain in result Tonic—Digestive and Highly Nutritive.

NEW PRINCIPLE FOR THE ASSIMILATION FAT.

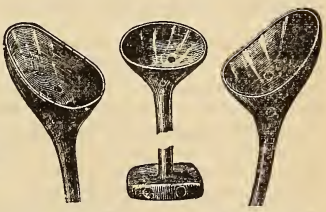
DR. McINTOSH'S
NATURAL UTERINE SUPPORTER.



No instrument has ever been placed before the medical profession which has given such universal satisfaction. The combination is such that the physician is able to meet every indication of Uterine Displacements. Falling Womb, Anteversion, Retroversion and Flexions are overcome by this instrument, where others fail. This is proven by the fact that, since its introduction to the profession it has come into more general use than all other instruments combined.

Among the many reasons which recommend this Supporter to the physician is its self-adjusting qualities. The physician, after applying it, need have no fear that he will be called in haste to remove or readjust it, as is often the case with rings and various pessaries held in position by pressure against the vaginal wall, as the patient can remove it at will, and replace it without assistance.

The Abdominal Supporter is a broad morocco leather belt, with elastic straps to buckle around the hips, with concave front, so shaped as to hold up the abdomen. The Uterine Support is a cup and stem, made of highly polished hard rubber, very light and durable, shaped to fit the neck of the womb, with openings for the secretions to pass out, as shown by the cuts. Cups are made with extended lips, to correct flexions and versions of the womb. The cup and stem is suspended to the belt by two soft elastic rubber tubes, which are fastened to the front of the belt by simple loops, pass down through the stem of the cup and up to the back of the belt. These soft rubber tubes being elastic, adapt themselves to all the varying positions of the body, and perform the service of the ligaments of the womb. The instrument is very comfortable to the patient, can be removed or replaced by her at will, can be worn at all times, will not interfere with nature's necessities, will not corrode, and is lighter than metal. It will answer for all cases of Anteversion, Retroversions, or any Flexions of the womb, and is used by the leading physicians with never-failing success, even in the most difficult cases.

Our Reduced Prices are to Physicians, $6.00; to Patients, $10.00.

Instruments sent by mail, at our risk, on receipt of price, or by Express, C. O. D., with the Express charges for returning the money added.

☞ CAUTION.—Owing to the great sale and popularity of our instrument various and base imitations are sold by unscrupulous parties. In order to get the genuine, it is best to order direct from us.

DR. McINTOSH'S NATURAL UTERINE SUPPORTER CO.,
192 Jackson Street, Chicago, Ill.

Our valuable pamphlet, "Some Practical Facts about Displacements of the Womb," will be sent you free on application. 1281-1332

In corresponding with Advertisers please mention THE MEDICAL AND SURGICAL REPORTER.

BEEF PEPTONE,

IN TRANSPARENT GLASSY SCALES,

Containing only the animal or azotized matter of the Beef. Each ounce is equal to 16 ounces of raw beef, easily soluble, and still faster in hot water.

This Beef Peptone is digested from tender, juicy Beef, by the aid of the *Crystal Pepsin,* of my manufacture (Jensen's Crystal Pepsin). Unlike the various BEEF EXTRACTS, this preparation contains all the nutritive constituents of the Beef, in a thoroughly digested state, ready for absorption into the system, while the Beef Extracts are entirely devoid of the chief elements of nutrition, such as the fibrinous, gelatinous and albuminous portions of the Beef, they only consisting of the concentrated saline constituents, with barely a trace of animal matter to keep its consistence. The difficulty so long experienced by the profession throughout the world, in preparing a PEPTONE entirely free from those chemical agents necessary for its manufacture, so as to render it fit for use, is hereby demonstrated to be successfully overcome, as it contains no foreign matter, and will stand the most severely scrutinizing test as to perfectness, also possessing flavor of the Beef, and so palatable as to render it highly agreeable.

Put up in bottles holding One ounce, Eight ounces, and one Pound.

Kept by the Wholesale and Dispensing Druggists in general.

DEPOT—L. WOLFF'S Pharmacy,

Northwest corner Twelfth and Chestnut Streets.

JENSEN'S CRYSTAL PEPSIN,

IN ARTIFICIAL CRYSTALS,

Strictly inodorous and tasteless, and perfectly soluble in water without acid.

THIS PEPSIN, now so popular with the profession, has created an impetus in the consumption of the same and physicians of the highest standing, who before the introduction of this active PEPSIN, with good reason, entirely abandoned the use of PEPSIN, are now the most eager in prescribing JENSEN'S CRYSTAL PEPSIN, whenever it is indicated, and since the knowledge of its great solvent power (gr. j. of it will dissolve the boiled whites from two to three eggs) has been established even among those susceptible to be great doubters it has caused itself to be utilized in many novel ways, by the thinking profession; for instance, in substituting morphia, chloral, etc., as a hypnotic, relieving gastric troubles where the above remedies have been prescribed, creating morphine and chloral habits In removing diphtheritic patches it is successfully used combined with water, glycerine, and muriatic acid, and the same composition, diluted with more water, as a spray in bronchial troubles, dissolving muco-purulent matter, as well as a spray for same in catarrhal affections.

THIS PEPSIN.

Has also been used with success in dissolving and evacuating coagulated blood in the bladder, dispensing with surgical operations in such cases. Many other novel applications could be mentioned, if not in want of space. It is found to be FORTY times stronger than saccharated pepsin. One to three grains is an active dose.

KEPT BY ALL DRUGGISTS.

The above preparations are only manufactured and put up by

CARL L. JENSEN, M.D., PH.G.,

865 North 26th Street, Philadelphia, Pa.

No other Wholesale Agents for this Pepsin are longer engaged, than the Wholesale Druggists throughout the United States.

Instructor in Clinical Medicine.

A. S. PARKER, PH.C.,
Instructor in Pharmacy.

A. M. HAWES, M.D.,
Demonstrator of Anatomy.

This College has for its *collegiate year* two sessions.

Regular Session commences Wednesday, September 7th, 1881, and closes March 1st, 1882.

Recitation Term (optional) commences March 15th, 1882, and closes June 14th, 1882.

Graded Course of three terms, of six months each.

PLAN OF INSTRUCTION.

By *Lectures*, *Recitations* and *Clinics*, together with *practical work* in the Anatomical, Physiological, Chemical and Pharmaceutical Laboratories.

Clinics are held *daily*.

Clinical Work in Hospitals and Dispensaries is given to the Senior Class (see Clinics), in *small sections*, under the charge of a *Clinical Teacher*, in all the departments of Medicine and Surgery.

Three Large Hospitals and *two Dispensaries* afford unlimited material for instruction.

ADMISSION.—Candidates for admission are required to pass a preliminary examination, unless satisfactory documentary evidence can be presented, that is equivalent to the standard adopted. (See Catalogue.)

FEES.

Regular Session.—Matriculation, $5.00; Lecture Tickets, $50.00; Hospital Tickets, $10.00 Examination (final), $25.00.

Recitation Term.—$10.00 for those who have attended Regular Session; all others, $25.00, $15.00 of which will be applied on the next Regular Term.

Board and Rooms can be obtained for $3.00 to $5.00 per week, the average being $4.00.

For Catalogue and other particulars, address

H. O. WALKER, M.D., Secretary,
177 Griswold Street, Detroit, Mich.

1274-tf

CRINON'S HÆMOGLOBIN,

The Albuminoid Ferruginous Principle of Blood.

HÆMOGLOBIN is the only physiological chalybeate. Associated as it is with the phosphates of the blood, it forms the most powerful of tonics, and at the same time a most nourishing food. It is especially useful in cases of *Anæmia, Chlorosis, Cachexias, Exhaustion* caused by excess of work, nervous debility, fatigue resulting from parturition and lactation. It replaces entirely liquid blood, which has been recommended and used with success in *Phthisis* and *wasting away.*

It is offered in two forms. In cachets (wafers), 60 of which are contained in a box; combined with chocolate in small squares, 30 of which are in a box; both forms can be sent by mail.

Prepared by C. CRINON, Paris, Pharmacist of the first class, Laureate of the Hospitals of Paris Samples may be obtained by application to

E. FOUGERA & CO., New York, Agents for the U. S.

DOCTOR RABUTEAU'S

(Laureate of the Institute of France.)

DRAGEES, ELIXIR & SYRUP OF IRON.

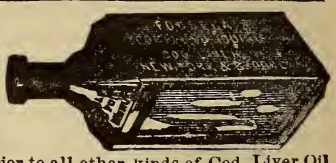
"The experiments made in the hospitals of Paris have demonstrated that *Dr. Rabuteau's Dragees, Elixir and Syrup* regenerate the red globules of the blood with a rapidity never observed with the use of the other ferruginous preparations. These results have been proved by the various *Compt-Globules.*

"The ferruginous preparations of *Dr. Rabuteau* do not cause any constipation, and are perfectly tolerated by the weakest persons."—*Gazette des Hospitaux.*

Dr. Rabuteau's Elixir is prescribed when some difficulty is experienced in swallowing the Dragees: it is especially adapted to weak persons, whose digestive functions need strengthening or stimulating.

Dr. Rabuteau's Syrup is especially prepared for children, who take it readily, because of its agreeable taste.

FOUGERA'S COMPOUND IODINISED COD LIVER OIL.



Since the introduction of this oil in 1858, it has been found to be superior to all other kinds of Cod Liver Oil for the treatment of **General Debility, Consumption, Scrofula, Rickets, etc.**

It possesses not only all the **nourishing** qualities of the best Cod Liver Oil, but also the **tonic, stimulant** and **alterative** properties of **Iodine, Bromine** and **Phosphorus,** which are added in such proportions as to render it therapeutically five times as efficacious as pure Cod Liver Oil.

Through its **increased curative action, FOUGERA'S COD LIVER OIL** will be found to cure disease in a much shorter time than the pure oil; while favorable results will be obtained by its use in many advanced cases when the pure Cod Liver Oil would fail entirely.

FOUGERA'S READY-MADE MUSTARD PLASTERS.

A most useful, convenient, clean, and economical preparation. Not liable to change if kept in a dry place. Made of two strengths. Plasters No. 1, of pure mustard; Plasters No. 2, of one-half mustard. Price 40 cents, the tin box, or tin roll, of 10 plasters each. DIRECTIONS.—Dip the Plaster, or Plasters, a minute or two, in cold water; apply on the part, and cover with a band.

FOUGERA'S COMPOUND ICELAND MOSS PASTE.

(Iceland Moss, Lactucarium, Ipecac and Tolu.)

Used with great success against nervous and convulsive coughs, Whooping Cough, Acute Bronchitis, Chronic Catarrh, Influenza, etc.

Wakefulness, Cough, and other sufferings in Consumption, are greatly relieved by the soothing and expectorant properties of this Paste.

FOUGERA'S IODO-FERRO-PHOSPHATED ELIXIR OF HORSE-RADISH.

This Elixir contains Iodine, Pyrophosphate of Iron, the active principles of antiscorbutic and aromatic plants, and acts as a **tonic, stimulant, emmenagogue,** and a **powerful regenerator of the blood.** It is an invaluable remedy for all constitutional disorders due to the impurity and poverty of the blood. One of the advantages of this new preparation consists in combining the virtues of Iodine and Iron without the inky taste of Iodide of Iron.

E. FOUGERA, Pharmacist,
372 Seventh Street, Brooklyn, L. I.,
SOLE PROPRIETOR & MANUFACTURER OF THE ABOVE,
To whom all special communications should be addressed.

E. FOUGERA & CO.,

JOHNSTONE'S IMPROVED

ADAPTABLE POROUS FELT SPLINTS.

AHL'S SPLINT MANUFACTURING COMPANY, LIMITED,

123 & 125 South Eleventh Street, PHILADELPHIA, PA.

THE ADAPTABLE POROUS SPLINTS, invented and improved by W. H. JOHNSTONE, have been tested extensively in both civil and military practice for a number of years, and have been endorsed and recommended in the most unqualified manner by the celebrated and distinguished Surgeons of America.

Their *porosity* is a peculiar and a valuable property. While the material is firm and insoluble, it permits readily the passage of air and fluids, so that, on one hand, the heat from the inflamed surface, the perspiration, and the morbid exhalations, are not confined, to the detriment of the patient, *as is the case in every other kind of splint*, but pass off freely; and on the other hand, lotions of cold or warm water, medicated or not with weak alcohol, carbolic acid, arnica, tincture, solutions of the sulphites, etc., can be constantly applied without disturbing the dressings. This, it will readily be seen, is a most invaluable property when the parts are bruised, lacerated, filled with extravasated blood, or erysipelatous, and give these splints a conspicuous advantage over all others.

From FRANK H. HAMILTON, M. D., Professor of Fractures and Dislocations in the Bellevue Hospital Medical College, author of "A Treatise on Fractures and Dislocations," etc.

Having examined carefully *JOHNSTONE'S IMPROVED ADAPTABLE POROUS FELT SPLINTS*, I feel warranted in recommending them to the Profession as superior to all other manufactured splints now in use. They possess all the essential qualities of a good splint, having firmness, pliability and lightness.

FRANK H. HAMILTON, M. D.,
Prof. Military Surgery and Fractures and Dislocations, Bellevue Hospital Col.

From PROF. D. HAYES AGNEW, Prof. Surgery, University of Penna.

1611 CHESTNUT STREET, PHILADELPHIA, *February 6th*, 1879.

The Adaptable Felt Splints, formerly known as those of Dr. Ahl, with the improvement now made by W. H. Johnstone, which renders them in every way superior to the former, I regard as very excellent appliances in the treatment of fractures.

D. HAYES AGNEW,
Prof. Surgery, University of Pennsylvania.

Cuts illustrating the different Splints constituting a Complete Set.

SPECIAL NOTICE TO THE PROFESSION AND TRADE.

Our *policy* heretofore in the introduction of JOHNSTONE'S IMPROVED ADAPTABLE POROUS FELT SPLINTS, has been to confine the sales and business negotiations directly to the Doctors themselves, declining in every case to sell our goods through Dealers; we having assured the Profession generally, both through our agents and catalogues, that *JOHNSTONE'S IMPROVED SPLINTS* could only be obtained by subscription.

We wish to announce, that owing to the large demand for our goods and the constant importunity on the part of *Surgeons* everywhere to place our Splints on sale with their Instrument Dealer or Druggist, to afford them greater convenience and facility in obtaining the pieces in duplicate, **we have at last acceded to that request, and hereafter *JOHNSTONE'S CELEBRATED FELT SPLINTS* can be obtained at most dealers in Instruments and Drugs throughout the United States, at the same price which they were heretofore sold, viz:**

A complete set, embracing fifty (50) pieces—twenty-five for adults and twenty-five for children—is thirty ($30) dollars. Extra or duplicate pieces can always be obtained from your DEALER, at one dollar each.

JOHNSTONE'S CELEBRATED SPINAL JACKET, for Curvatures and Deformities, have met with unparalleled success, and, from their merit, secured the unqualified endorsement and approbation of our celebrated orthopædic specialists, and particular expression of gratitude from the patients who are wearing them. For full information, send for Descriptive Circulars.

Should your Instrument dealer fail to have a supply of our Splints, and decline to carry them in stock, orders sent to us will receive prompt attention.

AHL'S SPLINT MANUFACTURING CO., Limit
W. H. JOHNSTONE, Manager.

JOHNSTONE'S MODIFICATION OF DR. R. J. LEVIS' SPLINT

For the FRACTURE OF THE LOWER END OF THE RADIUS.

We make a Palmar and Dorsal Splint for each arm, from Felt, beautifully moulded to adjust to any size arm.

1281-1332 **Price $2.00 per Pair.**

JOHNSTONE'S SPINAL FELT JACKET, any size, - - - - - $25.00
JOHNSTONE'S LACED SPLINT FOR TIE LIMBS, any size, - - - - 10.00

N. B.—If the Instrument Dealers of Philadelphia decline to supply its Physicians with our JOHNSTONE'S FELT SPLINTS on call, they will be furnished and delivered by us to any part of the city, at any time, on receipt of the price, viz.,

$1.00 each.

THE DE QUINCEY HOME,

Fort Washington,

A Private Asylum for the Treatment of the Opium, Morphine, Chloral, Chloroform and Hashisch Habits, Nervous Diseases and Inebriety.

Drs. H. H. Kane
and
W. H. Vittum,
in charge.

New York City.

Consulting Physicians.

Prof. Wm. A. Hammond,
Prof. T. Gaillard Thomas,
Dr. Edward C. Spitzka,
Dr. Daniel M. Stimson,
Dr. Edward T. Ely,
Dr. G. H. Wynkoop,
Dr. Andrew H. Smith.

Situated upon a high hill that commands a splendid view of the Hudson and Harlem rivers, Spuyten Duyvil Creek, and the beautiful country for miles around; surrounded by ample grounds and magnificent drives; in easy communication with the city by means of the Sixth and Ninth Avenue Elevated and the Hudson River Railroads; away from the dust, noise, crowding and malaria of the city; with hot and cold water in every room, furnace and grate-fire heating, croquet, horses and carriages, boats and fishing, an excellent *cuisine*, trained nurses and careful medical attendance, it possesses unequaled advantages for the treatment of cases of this kind.

The plan of treatment pursued in the cure of opium, morphine and chloral takers is that of *rapid reduction*, which possesses all the advantages, and none of the dangers of Levenstein's *sudden deprivation*, or the prolonged agony of *gradual reduction*. Each case is studied and treated in accordance with its peculiarities and the idiosyncrasies of the patient, no set plan of treatment being pursued, at the expense of the person's health or comfort.

Our Home, furthermore, offers special facilities for the treatment by *rest, diet, and massage*, according to the plan of Weir Mitchell of that large class of nervous diseases so commonly met with in ladies suffering from uterine troubles. This plan of treatment has been specially studied, and nurses competent to carry out its provisions in every detail will be furnished. For further particulars, etc., address 1299-1350

Drs. KANE and VITTUM, De Quincey Home, Fort Washington, New York City.

UNIVERSITY OF PENNSYLVANIA.

POST-GRADUATE INSTRUCTION.

A Post Graduate Course has been organized for Bedside and Dispensary Instruction in the following named branches:—

ON PHYSICAL DIAGNOSIS AND CLINICAL MEDICINE, Prof. WM. PEPPER and Dr. ED. T. BRUEN.
" NERVOUS DISEASES AND ELECTRO-THERAPEUTICS, - - - Prof. H. C. WOOD.
" DERMATOLOGY, - - - - - - - - - - Prof. L. A. DUHRING.
" OTOLOGY. - - - - - - - - - - Dr. GEO. STRAWBRIDGE.

Price, $3.00. Sent per mail on receipt of price. The Rubber Tubes are free from all woolen or silk coverings thus avoiding all friction sounds arising from this source. ☞ **A Descriptive Circular sent to any address.**

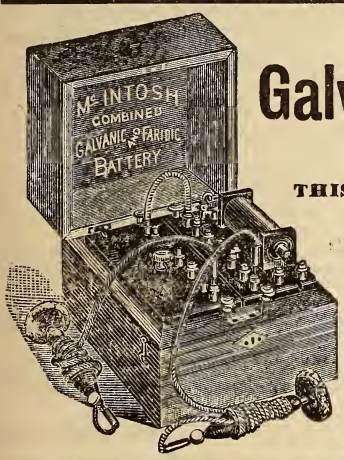
TANRET'S PELLETIERINE.

For the TREATMENT of TAPE-WORM (Tænia Solium).

This new Tænifuge, the Active Alkaloid of Pomegranate Bark, has of late come into extensive use in France, for the treatment of Tape-worm (Tænia Solium). The results of numerous experiments with it at the Marine Hospitals of Toulon, St. Mandrier, etc., and in the Hospitals of Paris, St. Antoine, La Charité, Neckar, Beaujon, etc., have all been most satisfactory. Doctor Dujardin Beaumetz, Member of the Academy of Medicine, and Prof. Laboulbene, in their report to the Society of Therapeutics, have given it their unqualified approval, after the most searching experiments. This preparation is pleasant to administer, and if certain preliminaries are observed success will be insured.

PELLETIERINE is prepared by Mr. CHAS. TANRET, Pharmacien de First Class, 64 Rue Basse du Rempart, Paris. 1242eow-tf

GENERAL AGENTS, E. FOUGERA & CO., 30 N. William St., N. Y.



McINTOSH'S COMBINED

Galvanic AND Faradic Battery.

THIS CELEBRATED BATTERY COMBINES BOTH THE GALVANIC AND FARADIC CURRENT,

Which can be used separately or combined. Any strength and intensity desired can be obtained for use in Electro-therapeutics. THIS BATTERY is constructed on an IMPROVED PLAN, as follows: The zinc and carbon plates are arranged in couples, securely clamped to hard rubber plates, with thumb screws. These screws are also used for binding posts. All the connections are positive. The cells are made in sections of six, of hard rubber, with hard rubber drip cup. The following points of excellence render our Batteries superior to others:

1. They combine the only Portable Galvanic and Faradic Battery in one case.

2. They weigh one-half less than other Batteries of the same number of cells.

3. The cells are made in sections of six, of one solid piece of hard, vulcanized rubber; by this arrangement they can be emptied, cleaned and filled as easily and quickly as one cell, and will not crack, break or leak.

4. A hard rubber drip cup is placed by the side of each section of cells, to receive the zinc and carbon plates when removed from them. By this arrangement we avoid the use of absorbent materials and soiling the Battery.

5. The Hydrostat is perfect. The rubber plates which hold the elements project over on one side enough to cover the cells when the zinc and carbon plates are placed in the drip cups. The under side of this projection is covered with thick, soft rubber, which is securely clamped to the cells sections, and makes them water tight.

6. This is the only Battery in which the zinc and carbon plates can be kept clean by simply rinsing them.

7. A zinc or carbon plate can be removed by simply loosening a binding post; and all parts of the Battery can be duplicated, as like parts are made exactly alike. We will be pleased to send circulars and our illustrated catalogue, giving full information, price, etc., free, upon application.

McINTOSH GALVANIC BELT AND BATTERY CO.,

1281-1332 **Nos. 192 and 194 Jackson Street, CHICAGO, ILL.**

TO PHYSICIANS.

IODIA.

FORMULA.—Iodia is a combination of Active Principles obtained from the Green Roots of STILLINGIA, HELONIAS, SAXIFRAGA, Menispermum, and Aromatics. Each *fluid* drachm also contains *five* grains IOD.-POTAS. and *three* grains PHOS.-IRON.

DOSE.—One or two *fluid* drachms (more or less, as indicated) *three* times a day, before meals.

IODIA is the *Ideal* Alterative. It has been LARGELY PRESCRIBED in Syphilitic, Scrofulous, Cutaneous, and Female Diseases, and has an Established Reputation as being the best Alterative ever introduced to the Profession.

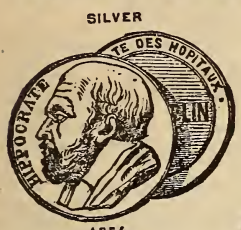
MATHEY-CAYLUS' GLUTEN



CAPSULES

OF

PURE COPAIBA AND OTHER MEDICINES.

Adapted and recommended for the cure of recent or chronic Gleets, Fluor Albus, etc., etc.

The MATHEY-CAYLUS' CAPSULES, *coated with gluten*, present the most perfect mode for administering Copaiba, Cubebs, Norway Tar, Turpentine, and other remedies, the disagreeable odor and taste of which are often a hindrance to their use. This mode of preparing capsules, which has been approved by the Academy of Medicine, has been recommended in their clinical lectures by eminent Professors in the hospitals of Paris, as well as in those of New York and London.

By the first physicians of the hospitals of Paris, London, and New York.

SPECIAL ADVANTAGES OF MATHEY-CAYLUS' GLUTEN CAPSULES.—Being formed of thin, transparent, and readily assimilated coating, they so cover and disguise the medicine to be given, that it can be taken without disgust, but with ease. In this respect, they differ widely from the gelatine capsules, which have a hard, thick coating, which swells beyond measure, in the stomach, are hard to be swallowed, and what is of great importance, they create disturbance in the digestive functions.

The special advantage of the coating of gluten consists in the fact that, notwithstanding its extra thinness, and although it softens under the action of the gastric juice, it can pass the stomach without breaking, and only in the intestines is the medicinal matter liberated; this accounts for the fact that Mathey-Caylus' Capsules never cause the nausea, eructations, and dyspeptic symptoms, which are complained of by many persons using other preparations.

Finally, their regular ovoid form, which is so favorable to swallowing, their pleasant appearance, which dispels all disgust, and the advantage of being entirely free from taste and smell, recommend the use of these capsules even to the most delicate persons.

Thankful to the Medical Profession for the liberal patronage heretofore bestowed upon us, we hope that they will continue their favors, and we are convinced that they will never have any reason to regret the generous welcome they have given to our preparations.

MATHEY-CAYLUS' CAPSULES are never sold, except in bottles having the following inscription printed in the glass: MATHEY-CAYLUS A PARIS. And each bottle contains 64 capsules, making them the cheapest capsules in the market.

The following different kinds of Mathey-Caylus' Gluten Capsules are now offered:

COPAIBA AND TANNIC ACID,
COPAIBA AND S. N. OF BISMUTH,
COPAIBA AND CATECHU,
COPAIBA AND MAGNESIA,
COPAIBA, CUBEBS AND ALUM,
COPAIBA, CUBEBS AND RHATANY,
COPAIBA AND RHATANY,
COPAIBA AND CITRATE OF IRON,
COPAIBA AND CUBEBS,
COPAIBA PURE,
COPAIBA, CUBEBS AND CARB. OF IRON,
VENICE TURPENTINE, NORWAY TAR, PURIFIED,
CUBEBS AND TURPENTINE,
CUBEBS AND TANNATE OF IRON,
CUBEBS AND ALUM,
CUBEBS PURE,
COPAIBA AND MATICO,
COPAIBA, IRON AND OIL OF SANDAL,
COPAIBA AND OIL OF SANDAL,
COPAIBA, PEPSIN AND BISMUTH,
COPAIBA AND TAR,
COPAIBA, CUBEBS AND OIL OF SANDAL.

HOLLOW SUPPOSITORIES.

WITH STOPPERS. ALL MADE FROM PURE BUTTER OF COCOA, ONLY.

Aural, Nasal, Rectal, Urethral, Cystic, Vaginal, Intra-Uterine, and Veterinary Suppositories.

The object of this invention is to supply Physicians, Druggists, Veterinary Surgeons, and others, with HOLLOW SUPPOSITORIES, into which they can put any kind of medicine or nutriment, thus producing firm, smooth, and evenly medicated Suppositories, that are cheaper and more reliable than those made by the old method.

RECTAL ABSORPTION.

"The mucous membrane of the rectum, like that of other portions of the alimentary canal, posseses all the requisites, more or less, for the exercise of absorption."

Liebig states that a strong solution of common salt disappeared so completely in the rectum, that an evacuation one hour afterward was found to contain no more than the usual portion of salt.

Many medicinal substances act more energetically when applied to the rectum than when received into the stomach.

Baron Dupuytren said: "The rectum *absorbs*, but does not *digest*. The medicinal agent," he says, "owing to the absence of digestion, passes more directly, more purely, and more surely to its destination, than the same medicine does when taken into the stomach."

M. Orfila asserts that those medical agents which operate through the medium of absorption, such as opium, tobacco, etc, are much more active by the rectum than by the stomach.

Dr. J. H. Scorff reports four cases where he was successful in removing the vomiting of pregnancy, by introducing 20 grains of chloral into the rectum, night and morning. He only found it necessary to use the remedy three or four times.

Chloral is the remedy *par excellence* in the ravings of delirium tremens, and in cases of delirium and insomnia combined; also in infantile convulsions and attacks of laryngysmus stridulus.

Dr. Hickman reports a case of typho-malarial fever, which chloral was found to control in a happy manner. The chloral was introduced per rectum.

"REST TO THE STOMACH,"

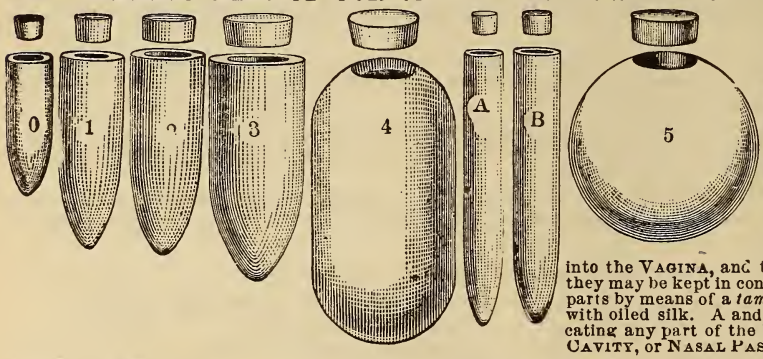
says Mr. Theodore Williams (in London *Lancet*, October 24th, 1874), is of the highest importance in some of the diseases of this organ. In such cases we possess in the rectum an effective second stomach, which, if it does not afford us the pleasure of digestion, spares us many of its pains."

Nutritious substances are taken up by the absorbents, and thus find their way into the economy, and produce their assimilative and nutritive effect. Haller demonstrated the fact that digestion can and does take place in the alimentary canal. He had the greatest confidence in the absorptive and digestive powers of the rectum to sustain life indefinitely.

HYPODERMIC MEDICATION.

Dr. William Bodenhamer says: "This now very common and often misused method is of great value in numerous cases, yet I am decidedly of the opinion that rectal medication is of greater importance; indeed, it is greatly preferable in many instances, being much less dangerous, much more convenient and simple; and the remedies, too, act through this medium with almost equal celerity. But very few remedies can be used hypodermically in comparison to those which can be used by the rectum."

EXACT SIZES OF OUR VARIOUS HOLLOW SUPPOSITORIES.



Size 0 is for children. It may also be used for the EAR and in the NASAL PASSAGES. Nos. 1, 2 and 3 are RECTAL SUPPOSITORIES. Nos. 3 and 4 may be used for introducing nutriment into the system, *via rectum*. No. 4 is also a VAGINAL SUPPOSITORY. No. 5 is a "SPHERICAL HOLLOW SUPPOSITORY," to introduce remedies into the VAGINA, and to the *os uteri*, where they may be kept in contact with the diseased parts by means of a *tampon* of cotton covered with oiled silk. A and B are used for medicating any part of the URETHRA or UTERINE CAVITY, or NASAL PASSAGES.

PRICES:

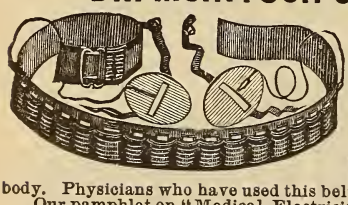
DR. McINTOSH'S ELECTRIC OR GALVANIC BELT.



This Belt is a perfect Galvanic Battery, composed of sixteen cells, placed in pockets on a belt. Each cell is made of hard vulcanized rubber, lined with copper, which constitutes the negative plate. The rubber coating perfectly insulates each cell. The positive plates are of zinc, wrapped in a porous material to absorb the exciting fluid, preventing contact with the copper, and permitting the current to pass from the copper to the zinc. The cells are charged without wetting the belt.

A current selector is so arranged that one or more cells can be used at pleasure. The electrodes are covered similar to ordinary battery electrodes, and connected with the cells by connecting cords. By this arrangement, a current from the belt can be applied to any part of the body. Physicians who have used this belt in their practice do not hesitate to recommend it to the profession.

Our pamphlet on "Medical Electricity," containing a full description of the belt and diseases, with manner of treatment, sent free on application. Address

McINTOSH GALVANIC BATTERY CO.,

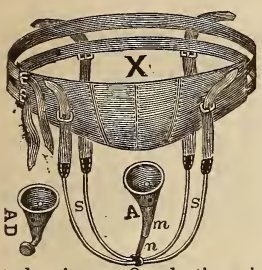
STAUFER'S

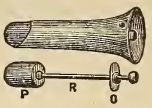
SERIES OF HARD RUBBER UTERINE INSTRUMENTS SIMPLIFIED.



Pessary and Abdominal Supporter combined. Fig. x represents a fine satteen belt, with whalebone stay, elastic back straps and spring stem Uterine Supporter. Shifting Cup A, to be transformed into self sustaining Cup A. D. Price, (A X) $7.00. Hip measure to be given. On elastic waist belt, (or A Z), $600, waist measure. Permanent Stem Cup (or *E. C. Economy*) on belt x, $5.50, or E C, on waist belt, Z, only $4.50. Belt (X), alone, $2.00.

The full catalogue and plate exhibit in addition, Retroversion Cups; Anteversion and posterior cul-de-sac levers; Globe Tops and Oblong Tops; all on spring or permanent stems, to be selected according to the requirements of cases; Also ultra-uterine stem cup. The cups are graded eve ⅛ inch, from 1¼ to 2½ inches. Globe Tops from 1 to 2¼ inches; thus, making about 125 in style and size Stem Uterine Supporters to meet the various displacements. The medium, 1⅜ inch cup meets over three-fourths of the cases presented.

Examining Instruments.—This series contains the much admired Examining Case of ten articulating pieces, probes, sounds, swab, movers, caustic, and brush-holders and cases; wt. 4 oz. Reflector, Fenestrated Vaginal, Anal and Hymen, together with the series of Vaginal Speculums, by which the examination is reduced to great simplicity, and the vaginal portion of the uterus to be seen without exposure; manipulated upon, and can be shown to husband or member of the family as clear as if locateed externally. The case Q, contains four graded Speculums, with shifting conductors; compact and weight but 12 oz. No. 2, or next to largest answers in over three fourths of cases called for treatment. Dental red enameled inside. Price, full case, $12.00; single, $2.50 each.



Exchanges.—All the hard rubber parts in the catalogue have the exchange and interchange privilege, at cost. Even single Speculums received back when a case becomes preferable. All without limit of time. Necessary repairs only to be paid for.

Staufer's Catalogue and Physician's Price List, with instructions to the use of these instruments, is mailed free, on application to this office.

Delivery—All the instruments on the catalogue are mailed all over the United States, on receipt of quotation prices, from this office.

MELLIN'S FOOD

FOR

INFANTS AND INVALIDS.

The reasons why farinaceous substances are not proper food for infants, and why MELLIN'S FOOD, which is *not farinaceous*, is the only proper artificial food for infants, are fully set forth in a work on Infants' Food, published by Theodore Metcalf & Co., Boston, Mass. It should be in the hands of every physician and every nurse who is interested in infants, or who knows of a sick infant or a hand-fed infant, or an insufficiently fed nursing infant. It will be sent with a sample of the Food, free, to any address.

Mellin's Food is for sale by all druggists.

THEODORE METCALF & CO.,

DUCRO'S ALIMENTARY ELIXIR,

A COMBINATION UNITING THE PROPERTIES OF

ALCOHOLIC STIMULANTS AND RAW MEAT.

This preparation, which has been used with great success in the hospitals of Paris, since 1868, is adapted to the treatment of all diseases requiring the administration, in a small volume, of a tonic able to stimulate and support the vital forces, as *Pulmonary Phthisis, Depression and Nervous Debility, Adynamia, Malarious Cachexia, etc.*

Prepared by EMILE DURIEZ & CO.,

Successors to DUCRO & CIE, Paris. 1278-eow-tf

E. FOUCERA & CO., Agents, New York.

Registered COSMOLINE Trade Mark.

Unguentum Petrolei

Prepared by E.F.Houghton & Co. Philadelphia, U.S.A.

Put up in 1, 5, 10, 25, 50, and 100-lb. cans. Samples furnished on application. The post-office laws forbid anything of an oleaginous nature being sent through the mail.

In chemical composition, Cosmoline [Unguentum Petrolei] is an oleaginous hydrocarbon, corresponding to the heavy petroleum oils, and containing a large amount of the paraffines and olefines of the formulæ $C_{16}H_{34}$ and $C_{16}H_{32}$. It contains but a small percentage of the paraffines and olefines, corresponding to the formulæ C_7H_{16} and C_7H_{14}, respectively, and the offensive and irritating properties of the crude oil have been carefully removed. In the process of purification, no acids, alkalies, or other chemicals are employed, and no injurious additions of any kind are made to the natural product. The result is a semi-solid, translucent substance, with a faint odor and unctuous feel.

Cosmoline [Unguentum Petrolei] melts at about 100° Fah, (38° Cent.); and boils at about 625° Fah. (329° Cent.); its specific gravity is about 0.875 at 60° Fah.

As it contains no oxydizable or organic matter capable of change by putrefaction or fermentation, and is absolutely without affinity for moisture, it offers to the profession an admirable unguent, which can never decompose, ferment, or become rancid in any climate or temperature.

291 MADISON AVENUE, NEW YORK, February 26th 1878.

I have examined the preparations of Cosmoline as manufactured by E. F. Houghton & Co., Philadelphia, and believe them well adapted to the purposes for which they are designed. As lubricants, and as the bases of simple or medicated ointments, they have a decided advantage over the fixed oils and fatty substances in ordinary use, in that they do not become rancid, and do not acquire irritating qualities from atmospheric exposure. ALFRED C. POST, M.D., LL.D.,
Emeritus Professor of Clinical Surgery in the University of New York, Visiting Surgeon to Presbyterian Hospital, etc.

PHILADELPHIA, July 10, 1880.

MESSRS. E. F. HOUGHTON & CO.:

I have for a number of years made extensive use of Cosmoline [Unguentum Petrolei] and consider it a most valuable article for surgical purposes. Either as a dressing by itself, or as a vehicle for the application of medicaments, it is greatly superior to lard or other fatty matters, especially by reason of its non-liability to change by time or temperature.

Yours truly,
JOHN H. PACKARD, M.D.
1031 WALNUT ST., PHILADELPHIA.

MESSRS. E. F. HOUGHTON & CO.:

I have used extensively Cosmoline [Unguentum Petrolei] both in Dispensary and private practice, with very great satisfaction. As a vehicle in making ointments it is invaluable, and far superior to lard, for the reason that it will not become rancid or undergo chemical change like the latter, when exposed to the atmosphere. I cannot too highly commend it as an application in various skin diseases.

Yours truly, JOHN V. SHOEMAKER, A.M., M.D.,
Physician to the Pennsylvania Free Dispensary for Skin Diseases

208 WEST 34TH ST., NEW YORK.

MESSRS. E. F. HOUGHTON & CO.:

Gents :—I fully appreciate the value of your Cosmoline, or Unguentum Petrolei, and prescribe it frequently in ointments. Fluid Cosmoline I have used constantly for several years, as a lubricant of urethral sounds. It is the cleanest oil I know of for this purpose.

Yours truly, GEO. HENRY FOX.

NEW MEDICINAL AGENTS

WORTHY OF THE

Attention of Therapeutists.

JAMAICA DOGWOOD.

[Piscidia Erythrina.]

This remedy, introduced by us to the profession of the United States, has already largely taken the place of opium, as an anodyne and narcotic. It obtunds sensibility, and allays nervous irritability, inducing sleep, without "locking up the secretions" or producing the constipation and gastric disturbance following the use of opium. It has been submitted to a sufficient physiological test, and accorded a sufficient therapeutic trial to test these claims, and it may now be regarded as a remedy of fixed and decided therapeutic properties.

QUEBRACHO.

[Aspidosperma Quebracho Blanco.]

The experiments of Penzoldt, of Germany, justified that observer in speaking of quebracho as an article supplying a place in medicine hitherto unoccupied, and making it, literally, a "long felt want." He found it to increase the depth of inspiration, and to facilitate oxygenation of the blood in dyspnœa from whatever cause. It is thus a desideratum in the treatment of emphysema, capillary bronchitis, pneumonia, asthma, etc. Its use in the hands of physicians in this country has corroborated this estimate of its properties.

EXTRACT OF DUBOISIA.

[Duboisia Myoporoides.]

Duboisia, the new mydriatic, has been found to be more prompt than atropia as a dilator of the pupil and as a paralyzer of the muscles of accommodation, while at the same time it is less prone to cause the conjunctivitis, cerebral disturbance, dryness of the throat, etc., so intimately connected with the use of the belladonna alkaloid. It is now largely employed by ophthalmologists, and bids fair to almost, if not entirely, supplant atropia in eye practice.

We are in receipt of a large direct importation of this rare drug.

MANACA.

[Franciscea Uniflora.]

This drug, although long officinal in the Brazilian Dispensatories, was unknown to the profession of this country until introduced by us, a little over a year ago. It is highly esteemed in Brazil as an alterative, and in the damp, shady forests of that country, where rheumatism is very prevalent, it is regarded as a valuable anti-rheumatic, particularly in the chronic and subacute varieties of the affection.

Believing it to be an article of much value in these forms of rheumatism, we ask for it a thorough trial.

TO THOSE DESIRING FULLER INFORMATION ON THE ABOVE DRUGS,

We will furnish Descriptive Circulars Free, on application.

PARKE, DAVIS & CO., Detroit, Mich.,

MANUFACTURING CHEMISTS.

1177 L

An experience of more than a quarter of a century convinces us that sugar, properly applied, is the only correct coating for a pill.

Physicians should be careful to specify Warner & Co., when prescribing or ordering.

Special attention is called to the following selected Recipes prepared for Physicians' Prescriptions.

PIL: PHOSPHORI COMP: (WARNER & CO.)

℞. Phosphori, - - 1-100 gr.
Ext. Nuc. Vom. - ¼ gr.

THERAPEUTICS.—As a nerve tonic and stimulant, this form of pil is well adapted for such nervous disorders as are associated with impaired nutrition and spinal debility, increasing the appetite and stimulating digestion.

The practical value of Phosphorus as a therapeutic agent, and its applicability to the cure of disease, and especially in those varied disordered conditions consequent upon OVERWORK, which are characteristic of modern civilization.

Pil. Phosphori Comp. may be taken, one or two pills three times daily, after eating.

Price, per 100, $1.50.

PIL: IODOFORM ET FERRI. (WARNER & CO.)

℞. Iodoform, - - 1 gr.
Ferri Redacti, - 1¼ gr.

THERAPEUTICS.—A powerful general tonic and alterative, valuable as a remedy in Anæmia, Scrofula, Neuralgia, Chlorosis, Rheumatism, etc.

Pil. Iodoform et Ferri may be given in doses of from one to two pills, as occasion may require.

Price, per 100, $2.00.

PIL: DIGESTIVA. (WARNER & CO.)

℞. Pepsin Conc't, 1 gr. Gingerine, 1-16 gr.
Pv. Nuc. Vom., ¼ gr. Sulphur, ⅛ gr.

THERAPEUTICS.—Useful in relieving various forms of Dyspepsia and Indigestion, and of permanent benefit in cases of enfeebled digestion, where the gastric juices are not properly secreted. It is also a gentle laxative and excellent dinner pill, may be taken one after dinner, or one before each meal, three times daily.

Price, per 100, 75 cts

PIL: CALCIUM SULPHIDE. (WARNER & CO.) 1-10, ¼, ½ & 1 gr. each.

THERAPEUTICS.—Extremely useful in the treatment of acne, scrofula and cutaneous diseases.

Sulphide of Calcium is usually administered in doses of from 1-10 to ¼ grain four times daily, gradually increasing the dose to one grain six times daily, or according to the progress or severity of the case.

Price, per 100, 1-10 gr. .50; 1-4 gr. .60; 1-2 gr. .75; 1 gr. $1.00.

WARNER & CO.'S PILLS MAY BE OBTAINED FROM ALL DRUGGISTS, OR BY MAIL, ON RECEIPT OF PRICE.

1273-1325eow

SAVORY & MOORE beg to call the attention of the Profession to some of their Special Preparations, the purity and uniform strength of which are Guaranteed.

PANCREATIC EMULSION,

Prepared in accordance with the direction of the Physician who introduced this purely

MEDICINAL FOOD FOR CONSUMPTION AND WASTING DISEASES.

Pancreatic Emulsion will always take precedence of Cod-Liver Oil, by reason of its introducing the STABLE SOLID FATS INTO THE SYSTEM, instead of the evanescent fluid fats or oils.

Neither Cod-Liver Oil nor EMULSIONS of COD-LIVER OIL can supply the kind of fat necessary for sound and vigorous human life. In addition to this, all the Oily Emulsions are liable to rancidity, and most of them are highly objectionable in consequence of the SAPONIFICATION and ULTIMATE PUTREFACTION, produced by the chemical agents used instead of Pancreatic Juice.

Pancreatic Emulsion (properly so-called), is THE NECESSARY FOOD OF THE CONSUMPTIVE, and the most reliable form of nutriment for counteracting the tendency to Phthisis and other wasting diseases. It presents to the lacteals fat, in essentially the same condition for assimilation and absorption as in a vigorous human frame, and THE AGENT of the important change is THE NATURAL SECRETION of the PANCREAS.

Pancreatic Emulsion may therefore be regarded as Chyle obtained by nature's own process. In certain cases both Cod-Liver Oil and Pancreatic Emulsion are required—one to supply the blood with oil or liquid fat, the other with the more stable solid fats; but it cannot be too strongly urged that both PANCREATIC EMULSION and Cod-Liver Oil are *not to be regarded as Medicines, but as articles of diet*, without which patients, with their defect of health, will as surely starve as healthy persons would if deprived of the most nutritive part of their food.

Pancreatized (Digestive) Cod-Liver Oil. By Pancreatized Cod-Liver Oil, the active digestive principle of the Pancreatic Juice is imparted to it, which renders it in a highly favorable condition for rapid and complete digestion and assimilation, preventing nausea, and largely increasing the beneficial properties of the Oil.

Pancreatine effects the digestion and assimilation of Cod-Liver Oil and Fat, as well as Food generally. This palatable and popular remedy is therefore invaluable to PATIENTS WHO ARE UNABLE TO DIGEST COD-LIVER OIL, and who are thus deprived of its nourishing and invigorating properties.

Pancreatine Wine. An excellent vehicle for taking Cod-Liver Oil and promoting the digestion of it.

Tins, 1*s*, 2*s*, 5*s*, 10*s*.

SAVORY & MOORE, 143 New Bond Street, London.

1244-1295 **Agents for America, E. FOUGERA & CO., NEW YORK.**

PNEUMATIC ASPIRATION,

AFTER THE MANNER OF DIEULAFOY.

"It is always possible, owing to Aspiration, to search for a fluid collection without any danger, whatever may be its seat or its nature."

"I have thrust these needles into almost every part of the body; into the Joints, the Liver, the Spleen, the Bladder, the Intestines, the Lungs and the Meninges; and I can affirm, and a great number of observers affirm with me, that we have never seen consecutive accidents."—*Dieulafoy on Pneumatic Aspiration*, pp. 21, 24.

We invite the attention of the Medical Profession to this New Apparatus for Aspiration, constructed upon the general plan of Potain's modification of Dieulafoy's Aspirator, but containing the following improvements and inventions of our own:—

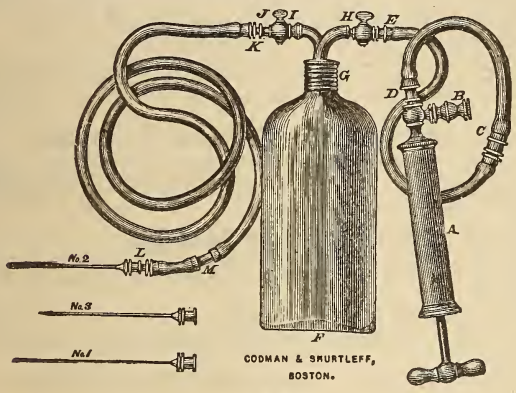

Fig. 77.

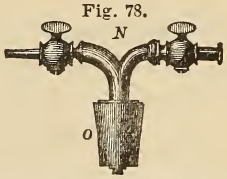
Fig. 68.

Fig. 78.



The Stopper and Cocks supplied with Apparatus No. 2.

1st. Means of changing the pump from an exhaust to a force-pump, and *vice versa*, thereby enabling the operator not only to draw an abnormal fluid, but to inject the cavity through the tubes and needle of the apparatus with one adapted to induce healthy action.—*See Dieulafoy on Aspiration*, pp. 276, 278.

2d. The employment, in our apparatus No. 1, of a metal Screw Cap, fitting the neck of the receiver supplied with this apparatus so securely that it cannot be forced from its place by condensed air while injecting, or accidentally removed while the receiver is in a state of vacuum for aspiration

3d. The substitution, for the ordinary oiled silk valves of other apparatus, of a kind indestructible, both in form and material.

4th. A simple and comparatively inexpensive attachment for evacuating the contents of the stomach, equal, if not superior, to any in use hitherto.

Commendations bestowed upon our Aspirators, by physicians familiar with the latest European and American ones, lead us to believe that, in some important particulars, at least, they are superior to any.

In his work on Pneumatic Aspiration, Dieulafoy shows the harmlessness of the Aspiratory puncture, and its great superiority to the Exploring Trocar as a means of accurate diagnosis in all collections of Pathological Fluids. It has been used with unprecedented success in the Retention of Urine, Reduction of Strangulated Hernia, in Ascites, Hydrothorax, Empyema, Pneumothorax, Effusions into the Pericardium, Serous, Purulent and Hematic Effusions of the Knee, Hydrocele, Hydatid Cysts, Abscesses of the Liver, and in various other Pathological Lesions.

PRICES OF APPARATUS.

No. 1. Air Pump—exhaust or condensing as described; 16 oz. receiver, of strong glass, with screw-cap; three steel, gold plated Aspiratory Needles, together with the necessary tubes, stop-cocks, etc., as shown in Fig. 77, fitted in a neat case, accompanied with printed directions $16.00. Postage 64 cents.

No. 2. The same, without receiver, and with rubber stopper (see Fig. 78) to fit almost any bottle of quart capacity, or less, instead of screw-cap arrangement, also with printed directions $14.00. Postage 32 cents.

No. 3. Dieulafoy's Notched Aspirator, Nickel-plated, with two Needles, Tubes, etc., in case $14 00

No. 4. Stomach Attachment, as described, adapted to pump accompanying Nos. 1 and 2, additional $6.00. Postage 22 cents.

The foregoing are the product of our own factory, and are warranted in every respect.

Also, **Dieulafoy on Pneumatic Aspiration,** post paid, by mail, on receipt of..... 3 40

☞ *Full description on application.*

An illustrated Catalogue of Surgical Instruments, also a New Pamphlet on Atomization of Liquids, with description of Improved Apparatus and Formulæ of Remedies successfully employed, will be forwarded, postpaid, on application.

GRIMAULT & CO.'S PHARMACEUTICAL PRODUCTS.

Prepared with scrupulous care, under the immediate supervision of a practical chemist, at their model laboratory at Neuilly, near Paris.

OFFICES AND SALESROOMS, No. 8 RUE VIVIENNE, PARIS.

The attention of the medical profession is directed to a few leading products:

DUSART'S SYRUP AND WINE OF LACTO-PHOSPHATE OF LIME.

In these preparations phosphate of lime is presented in the combination in which it exists in the stomach, after it has been acted upon by the gastric fluid. They are especially adapted, and have been used with great success in *Rachitic* and *Scrofulous Affections* in children; the *Languor* caused by too rapid a growth and development in youth; the *Debility* attendant upon old age; *Weakness in Females*, caused by the nursing of children; *Slow Convalescence*; certain forms of dyspepsia, caused by the low vitality of the system. In cases of *Fractures*, their use has been found to cause a more *rapid formation of the Callus*, and in cases of wounds, the *cicatrization has been more prompt*, while its administration to children facilitates the general developement, and especially the *the process of Ossification and Dentition.*

Dusart's work on the "Physiological and Therapeutic Action of Phosphate of Lime" will be sent free, on application to Messrs. E. FOUGERA & Co.

LEBAIGUE'S DIALYSED IRON, or Pure Peroxide of Iron,

IN SOLUTION, WITHOUT THE AID OF ACIDS OR OTHER SOLVENTS.

It is nearly tasteless, does not blacken the teeth, is very readily absorbed, will not constipate or cause any disturbance of the digestive apparatus, and is tolerated by persons who could not support any other preparation of iron. It is offered in the form of a *solution*, which is generally preferred; or of an *elixir*, when a slight stimulant is desired.

DEFRESNE'S PILLS AND ELIXIR OF PANCREATINE.

Pancreatine is a very important remedy in a great many cases of *indigestion*, *atony* of the digestive organs, and *dyspepsia*, where pepsine and other remedies have failed. It is especially serviceable as a help for the digestion of fats. The preparations especially recommended are: *Defresne's Pills*—dose, two to four pills before each meal; the *Elixir* and *Wine*—dose, one or two tablespoonfuls after meals.

GRIMAULT & CO.'S MATICO CAPSULES.

A preparation of the leaves of Matico, of more certain effect than most of the medicines recommended for the same class of diseases. The capsules contain the essential oil of Matico, combined with the balsam of copaiba, and do not cause any unpleasant eructations.

JULIEN'S LAXATIVE FRUIT.

A pleasant confection for constipation, and all diseases resulting therefrom, as *headache, hemorrhoids, cerebral congestions, biliousness.*

The above and all other preparations of *Messrs. Grimault & Co.*, and information in regard to the same, may be obtained at all times from

1294-1319eow ***Messrs. E. FOUGERA & CO., Importing Pharmacists, New York.***

THE INVENTION OF AN EMINENT FRENCH CHEMIST.

The Salvator for Invalids and the Aged. An Incomparable Ailment for the Growth and Protection of Infants and Children. A Superior Nutritive in Continued Fevers, and a Reliable Remedial Agent in all Diseases of the Stomach and Intestines.

TO PHYSICIANS AND THE PUBLIC.

THIS preparation is, as advertised, principally the GLUTEN derived, by chemical process, from VERY SUPERIOR GROWTHS OF WHEAT, and should not be confounded with burnt or boiled Flour, in which the GLUTEN or sanative qualities are destroyed or made medicinally inert, nor with Crushed Wheat, or finely ground Wheaten Grits, styled "Medicinal Food," and sold under various names, in which the starch and impurities contained in wheat are retained in larger quantity.

By Dubisson's formula, the starch, impurities and soluble matter found in the Wheat Cereal are effectually excluded, the GLUTEN only retained, which is condensed, granulated and prepared to keep in all climates, and justly entitled

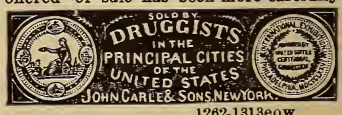
—IMPERIAL GRANUM—

It is well known, and should be fairly considered, that nothing of merit can be favorably received and commended by the public without being followed by imitations of a questionable character. IMPERIAL GRANUM is not the exception, for no preparation has attracted more attention, nor been more fiercely imitated by competition, even to wording and shipping order.

Whilst again it can be truly said that no preparation ever offered for sale has been more carefully prepared and thoroughly tested, nor has met with a more welcome reception and universal approval, or afforded more relief to invalids or to young and suffering children and aged persons. This has been confirmed by thousands of testimonials from Chemists, Physicians, Heads of Families and the Press.

Respectfully,

E. HEATON.



1262-1313eow

MURDOCK LIQUID FOOD CO., Boston,

THE ONLY MANUFACTURERS OF

RAW FOOD EXTRACTS IN THE WORLD.

It can be retained by the weakest stomach, when all other food extracts, and even water, is rejected.

Nutritious food, if raw, condensed, and free from insoluble matter, will cure chronic diseases, as it will make blood faster than all preparations or food, and new blood will cleanse the system.

MURDOCK'S LIQUID FOOD is made from Beef, Mutton and Fruits; contains corpuscles; is 12½ per cent. soluble albumen, and free from insoluble matter, drugs, minerals, salts and acids, and can be retained by the stomach when so weak as to refuse food.

Ask your Druggists, or send to us, for Essays read before the American Medical Association, at Richmond, Va., May 6, 1881, on the value of Raw Food Extracts, by Geo. R. Shepherd, of Hartford, Conn., and other Essays and Testimonials from Medical Journals and Physicians that have used Liquid Food, in cases of Consumption, Scrofula, Nervous and General Debility, Dyspepsia, acute and chronic, Constipation, Diphtheria, Intemperance, Cholera Infantum, Infantile Diarrhœa, Post partum Hemorrhage, Purpura Hemorrhagica with Waxy Liver, Pelvic Cellulitis, Malarial and other Fevers, Chronic Strumous Arthritis, Sclerosis of the Spinal Cord, Senile Gangrene, Perinephritic Abscess, and other diseases of malnutrition. No cases of Cholera Infantum have occurred where it has been used daily and no lives have been lost from Cholera Infantum where it has been prescribed by a physician. Excellent for Eczema, Diabetes, Rheumatism and Neuralgia.

At the request of any physician who has not tried our Extracts, and would like to, we will deliver sample bottles to the Express in Boston. To any Medical Society wishing to investigate the value of our Extracts, through a committee, hospital, or individual members, we will furnish a supply of Liquid Food equal to a six-ounce bottle for every member present at the time of action. We are induced to do this knowing that our Extracts are saving life, and that an increased use of them, which will follow after a trial of them, will be the means of saving more lives daily. (*We ask no testimonials of results obtained.*) Raw Extracts are available where cooked ones are not, or if available, contain only one-third as much nourishment.

Liquid Food is in general use at all Hospitals, Infant and Insane Asylums, and Washingtonian Homes, U. S. Navy Hospitals, and by all physicians that have tried it.

If not kept by your Druggist, can be obtained in any of the commercial cities In Philadelphia, by Johnston, Holloway & Co., Boericke & Tafel; in Pittsburg, by A. Kelly & Co.; in Baltimore, by Thomsen & Wirth; or you can order direct and we will pay express. 1 oz., 15 cents; 6 oz., 55 cents; 12 oz., $1.00.

See Philadelphia MEDICAL AND SURGICAL REPORTER, *Boston Medical and Surgical Journal*, and *New York Medical Record*, for chronic cases that were at our quarterly reception to physicians, in Boston, December 30, 1881—cases of Eczema, Rheumatism, Neuralgia, Diabetes, Consumption, and other diseases. If all were not restored to perfect health, they were gaining daily, and able to enjoy life and attend to their business. 1297-1348

MURDOCK LIQUID FOOD CO., BOSTON.

It is the only food that will relieve the Consumptive from Hunger.

It will make Blood faster than all preparations known.

PARIS, 1867. 1868. 1873, VIENNA.

Prize Medal.

Silver Medal.

Medal of Merit.

BOUDAULT'S PEPSINE

IN POWDER, also WINE, ELIXIR, SYRUP, PILLS, AND LOZENGES OF PEPSINE.

Since the introduction of Pepsine by Boudault in 1854, BOUDAULT'S PEPSINE HAS BEEN, AND IS STILL CONSIDERED, THE MOST RELIABLE, as is attested by the awards it has received at the Exhibitions of 1867, 1868, 1872, 1873, and in 1876 at the Centennial Exposition in Philadelphia.

IT IS THE ONLY PEPSINE USED IN THE PARIS HOSPITALS.

Careful tests will enable any one to satisfy himself that BOUDAULT'S PEPSINE HAS A DIGESTIVE POWER AT LEAST DOUBLE that of the best Pepsines in the market, and that it is really the cheapest.

It is Sold in 1 ounce, 8 ounce, and 16 ounce Bottles.

Beware of so-called French Pepsines bearing fictitious names, and prescribe Boudault's only.

BLANCARD'S PILLS

OF UNCHANGEABLE IODIDE OF IRON.

Blancard's Pills of Iodide of Iron are so scrupulously prepared, and so well made, that none other have acquired a so well deserved favor among physicians and pharmaceutists. Each pill, containing one grain of proto-iodide of iron, is covered with finely pulverized iron, and covered with balsam of tolu. Dose, two to six pills a day. The genuine have a *reactive silver seal* attached to the lower part of the cork, and a green label on the wrapper, bearing the fac-simile of the signature of

Blancard

Pharmacien, No. 40 Rue Bonaparte, Paris

without which none are genuine.

BEWARE OF IMITATIONS.

E. FOUGERA & AGENTS, NEW YORK. 1297 tf.

FELLOWS' HYPO-PHOS-PHITES

CONTAINS

THE ESSENTIAL ELEMENTS to the Animal Organization—Potash and Lime;

The **OXYDIZING AGENTS**—Iron and Manganese;

The **TONICS**— Quinine and Strychnine;

And the **VITALIZING CONSTITUENT**—Phosphorus,

Combined in the form of a Syrup, with *slight alkaline reaction.*

IT DIFFERS IN EFFECT FROM ALL OTHERS, being pleasant to taste, acceptable to the stomach, and harmless under prolonged use.

IT HAS SUSTAINED A HIGH REPUTATION, in America and England, for efficiency in the treatment of Pulmonary Tuberculosis, Chronic Bronchitis, and other affections of the respiratory organs, and is employed also in various nervous and debilitating diseases, with success.

ITS CURATIVE PROPERTIES are largely attributable to Stimulant, Tonic and Nutritive qualities, whereby the various organic functions are recruited.

IN CASES where innervating constitutional treatment is applied, and tonic treatment is desirable, this preparation will be found to act with safety and satisfaction.

ITS ACTION IS PROMPT, stimulating the appetite and the digestion; it promotes assimilation, and enters directly into the circulation with the food products.

THE PRESCRIBED DOSE produces a feeling of buoyancy, removing depression or melancholy, and hence is of great value in the treatment of **mental and nervous affections.**

From its exerting a double tonic effect, and influencing a healthy flow of the secretions, its use is indicated in a wide range of diseases.

Each Bottle of Fellows' Hypophosphites contains 128 Doses.

PREPARED BY

JAMES I. FELLOWS, Chemist,

48 VESEY STREET, NEW YORK.

Circulars and Samples sent to Physicians on application.

☞ SPECIAL TO PHYSICIANS.—ONE large bottle, containing fifteen ounces (which usually sells for $1.50) will be sent upon receipt of **Fifty Cents** with the application; this will be applied to the prepayment of Expressage, and will afford an opportunity for a thorough test in Chronic Cases of Debility and Nervousness. Express charges prepaid upon all samples.

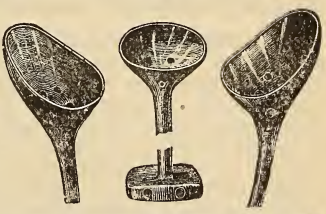
DR. McINTOSH'S
NATURAL UTERINE SUPPORTER.



No instrument has ever been placed before the medical profession which has given such universal satisfaction. The combination is such that the physician is able to meet every indication of Uterine Displacements. Falling Womb, Anteversion, Retroversion and Flexions are overcome by this instrument, where others fail. This is proven by the fact that, since its introduction to the profession it has come into more general use than all other instruments combined.

Among the many reasons which recommend this Supporter to the physician is its self-adjusting qualities. The physician, after applying it, need have no fear that he will be called in haste to remove or readjust it, as is often the case with rings and various pessaries held in position by pressure against the vaginal wall, as the patient can remove it at will, and replace it without assistance.

The Abdominal Supporter is a broad morocco leather belt, with elastic straps to buckle around the hips, with concave front, so shaped as to hold up the abdomen. The Uterine Support is a cup and stem, made of highly polished hard rubber, very light and durable, shaped to fit the neck of the womb, with openings for the secretions to pass out, as shown by the cuts. Cups are made with extended lips, to correct flexions and versions of the womb. The cup and stem is suspended to the belt by two soft elastic rubber tubes, which are fastened to the front of the belt by simple loops, pass down through the stem of the cup and up to the back of the belt. These soft rubber tubes being elastic, adapt themselves to all the varying positions of the body, and perform the service of the ligaments of the womb. The instrument is very comfortable to the patient, can be removed or replaced by her at will, can be worn at all times, will not interfere with nature's necessities, will not corrode, and is lighter than metal. It will answer for all cases of Anteversion, Retroversions, or any Flexions of the womb, and is used by the leading physicians with never-failing success, even in the most difficult cases.

Our Reduced Prices are to Physicians, $6.00; to Patients, $10.00.

Instruments sent by mail, at our risk, on receipt of price, or by Express, C. O. D., with the Express charges for returning the money added.

☞ CAUTION.—Owing to the great sale and popularity of our instrument various and base imitations are sold by unscrupulous parties. In order to get the genuine, it is best to order direct from us.

DR. McINTOSH'S NATURAL UTERINE SUPPORTER CO.,
192 Jackson Street, Chicago, Ill.

Our valuable pamphlet, "Some Practical Facts about Displacements of the Womb," will be sent you free on application. 1281-1332

In corresponding with Advertisers please mention THE MEDICAL AND SURGICAL REPORTER.

BEEF PEPTONE,

IN TRANSPARENT GLASSY SCALES,

Containing only the animal or azotized matter of the Beef. Each ounce is equal to 16 ounces of raw beef, easily soluble, and still faster in hot water.

This Beef Peptone is digested from tender, juicy Beef, by the aid of the *Crystal Pepsin,* of my manufacture (Jensen's Crystal Pepsin). Unlike the various BEEF EXTRACTS, this preparation contains all the nutritive constituents of the Beef, in a thoroughly digested state, ready for absorption into the system, while the Beef Extracts are entirely devoid of the chief elements of nutrition, such as the fibrinous, gelatinous and albuminous portions of the Beef, they only consisting of the concentrated saline constituents, with barely a trace of animal matter to keep its consistence. The difficulty so long experienced by the profession throughout the world, in preparing a PEPTONE entirely free from those chemical agents necessary for its manufacture, so as to render it fit for use, is hereby demonstrated to be successfully overcome, as it contains no foreign matter, and will stand the most severely scrutinizing test as to perfectness, also possessing flavor of the Beef, and so palatable as to render it highly agreeable.

Put up in bottles holding One ounce, Eight ounces, and one Pound.

Kept by the Wholesale and Dispensing Druggists in general.

DEPOT—L. WOLFF'S Pharmacy,

Northwest corner Twelfth and Chestnut Streets.

JENSEN'S CRYSTAL PEPSIN,

IN ARTIFICIAL CRYSTALS,

Strictly inodorous and tasteless, and perfectly soluble in water without acid.

THIS PEPSIN, now so popular with the profession, has created an impetus in the consumption of the same and physicians of the highest standing, who before the introduction of this active PEPSIN, with good reason, entirely abandoned the use of PEPSIN, are now the most eager in prescribing JENSEN'S CRYSTAL PEPSIN, whenever it is indicated, and since the knowledge of its great solvent power (gr. j. of it will dissolve the boiled whites from two to three eggs) has been established even among those susceptible to be great doubters it has caused itself to be utilized in many novel ways, by the thinking profession; for instance, in substituting morphia, chloral, etc., as a hypnotic, relieving gastric troubles where the above remedies have been prescribed, creating morphine and chloral habits. In removing diphtheritic patches it is successfully used combined with water, glycerine, and muriatic acid, and the same composition, diluted with more water, as a spray in bronchial troubles, dissolving muco-purulent matter, as well as a spray for same in catarrhal affections.

THIS PEPSIN

Has also been used with success in dissolving and evacuating coagulated blood in the bladder, dispensing with surgical operations in such cases. Many other novel applications could be mentioned, if not in want of space. It is found to be FORTY times stronger than saccharated pepsin. One to three grains is an active dose.

KEPT BY ALL DRUGGISTS.

The above preparations are only manufactured and put up by

CARL L. JENSEN, M.D., PH.G.,

865 North 26th Street, Philadelphia, Pa.

No other Wholesale Agents for this Pepsin are longer engaged, than the Wholesale Druggists throughout the United States.

DETROIT MEDICAL COLLEGE.

SESSIONS OF 1881-82.

FACULTY.

THEO. A. McGRAW, M.D., PRESIDENT,
Professor of Principles and Practice of Surgery, and Clinical Surgery.

N. W. WEBBER, M.D.,
Professor of Gynæcology and Obstetrics.

H. O. WALKER, M.D., SECRETARY,
Professor of Orthopædic Surgery, Genito-Urinary Diseases, and Clinical Surgery.

E. L. SHURLEY, M.D.,
Professor of Principles and Practice of Medicine and Laryngology.

J. H. CARSTENS, M.D.,
Professor of Materia Medica and Therapeutics, and Clinical Gynæcology.

J. S. JOHNSON, M.D.,
Professor of Diseases of the Mind and Nervous System.

F. A. SPALDING, M.D.,
Professor of Clinical Obstetrics.

A. E. CARRIER, M.D.,
Professor of Anatomy.

A. S. HEATON, M.D.,
Professor of Clinical Medicine,

EUGENE SMITH, M.D.,
Professor of Ophthalmology and Otology.

E. A. CHAPOTON, M.D.,
Adjunct Professor of Principles and Practice of Medicine.

DAVID INGLIS, M.D.,
Adjunct Professor of Principles and Practice of Medicine.

J. W. ROBERTSON, M.D.,
Lecturer on Laryngology and Physical Diagnosis.

J. E. BROWN, M.D.,
Lecturer on Physiology.

CHAS. S. JENNINGS, M.D.,
Lecturer on Chemistry.

A. F. HOKE, M.D.,
Instructor in Obstetrics.

T. N. REYNOLDS, M.D.,
Instructor in Materia Medica and Therapeutics.

JOHN BOICE, M.D.,
Instructor in Minor Surgery.

O. W. OWEN, M.D.,
Instructor in Experimental Physiology, Histology, and Curator of Museum.

F. W. BROWN, M.D.,
Instructor in Physiology and Morbid Histology.

R. A. JAMIESON, M.D.,
Instructor in Clinical Medicine.

A. S. PARKER, PH.C.,
Instructor in Pharmacy.

A. M. HAWES, M.D.,
Demonstrator of Anatomy.

This College has for its *collegiate year* two sessions.

Regular Session commences Wednesday, September 7th, 1881, and closes March 1st, 1882.

Recitation Term (optional) commences March 15th, 1882, and closes June 14th, 1882.

Graded Course of three terms, of six months each.

PLAN OF INSTRUCTION.

By *Lectures*, *Recitations* and *Clinics*, together with *practical work* in the Anatomical, Physiological, Chemical and Pharmaceutical Laboratories.

Clinics are held *daily*.

Clinical Work in Hospitals and Dispensaries is given to the Senior Class (see Clinics), in *small sections*, under the charge of a *Clinical Teacher*, in all the departments of Medicine and Surgery.

Three Large Hospitals and *two Dispensaries* afford unlimited material for instruction.

ADMISSION.—Candidates for admission are required to pass a preliminary examination, unless satisfactory documentary evidence can be presented, that is equivalent to the standard adopted. (See Catalogue.)

FEES.

Regular Session.—Matriculation, $5.00; Lecture Tickets, $50.00; Hospital Tickets, $10.00 Examination (final), $25.00.

Recitation Term.—$10.00 for those who have attended Regular Session; all others, $25.00, $15.00 of which will be applied on the next Regular Term.

Board and Rooms can be obtained for $3.00 to $5.00 per week, the average being $4.00.

For Catalogue and other particulars, address

H. O. WALKER, M.D., Secretary,
177 Griswold Street, Detroit, Mich.

1274-tf

CRINON'S HÆMOGLOBIN,

The Albuminoid Ferruginous Principle of Blood.

HÆMOGLOBIN is the only physiological chalybeate. Associated as it is with the phosphates of the blood, it forms the most powerful of tonics, and at the same time a most nourishing food. It is especially useful in cases of *Anœmia, Chlorosis, Cachexias, Exhaustion* caused by excess of work, nervous debility, fatigue resulting from parturition and lactation. It replaces entirely liquid blood, which has been recommended and used with success in *Phthisis* and *wasting away.*

It is offered in two forms: In cachets (wafers), 60 of which are contained in a box; combined with chocolate in small squares, 30 of which are in a box; both forms can be sent by mail.

Prepared by C. CRINON, Paris, Pharmacist of the first class, Laureate of the Hospitals of Paris Samples may be obtained by application to

E. FOUGERA & CO., New York, Agents for the U. S.

DOCTOR RABUTEAU'S

(Laureate of the Institute of France.)

DRAGEES, ELIXIR & SYRUP OF IRON.

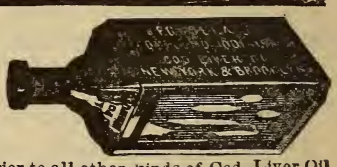
"The experiments made in the hospitals of Paris have demonstrated that *Dr. Rabuteau's Dragees, Elixir and Syrup* regenerate the red globules of the blood with a rapidity never observed with the use of the other ferruginous preparations. These results have been proved by the various *Compt-Globules.*

"The ferruginous preparations of *Dr. Rabuteau* do not cause any constipation, and are perfectly tolerated by the weakest persons."—*Gazette des Hospitaux.*

Dr. Rabuteau's Elixir is prescribed when some difficulty is experienced in swallowing the Dragees; it is especially adapted to weak persons, whose digestive functions need strengthening or stimulating.

Dr. Rabuteau's Syrup is especially prepared for children, who take it readily, because of its agreeable taste.

FOUGERA'S COMPOUND IODINISED COD LIVER OIL.



Since the introduction of this oil in 1858, it has been found to be superior to all other kinds of Cod Liver Oil for the treatment of **General Debility, Consumption, Scrofula, Rickets, etc.**

It possesses not only all the **nourishing** qualities of the best Cod Liver Oil, but also the **tonic, stimulant** and **alterative** properties of **Iodine, Bromine** and **Phosphorus,** which are added in such proportions as to render it therapeutically five times as efficacious as pure Cod Liver Oil.

Through its **increased curative action, FOUGERA'S COD LIVER OIL** will be found to cure disease in a much shorter time than the pure oil; while favorable results will be obtained by its use in many advanced cases when the pure Cod Liver Oil would fail entirely.

FOUGERA'S READY-MADE MUSTARD PLASTERS.

A most useful, convenient, clean, and economical preparation. Not liable to change if kept in a dry place. Made of two strengths. Plasters No. 1, of pure mustard; Plasters No. 2, of one-half mustard. Price 40 cents, the tin box, or tin roll, of 10 plasters each. DIRECTIONS.—Dip the Plaster, or Plasters, a minute or two, in cold water; apply on the part, and cover with a band.

FOUGERA'S COMPOUND ICELAND MOSS PASTE.

(Iceland Moss, Lactucarium, Ipecac and Tolu.)

Used with great success against nervous and convulsive coughs, Whooping Cough, Acute Bronchitis, Chronic Catarrh, Influenza, etc.

Wakefulness, Cough, and other sufferings in Consumption, are greatly relieved by the soothing and expectorant properties of this Paste.

FOUGERA'S IODO-FERRO-PHOSPHATED ELIXIR OF HORSE-RADISH.

This Elixir contains Iodine, Pyrophosphate of Iron, the active principles of antiscorbutic and aromatic plants, and acts as a **tonic, stimulant, emmenagogue,** and a **powerful regenerator of the blood.** It is an invaluable remedy for all constitutional disorders due to the impurity and poverty of the blood. One of the advantages of this new preparation consists in combining the virtues of Iodine and Iron without the inky taste of Iodide of Iron.

E. FOUGERA, Pharmacist,
372 Seventh Street, Brooklyn, L. I.,
SOLE PROPRIETOR & MANUFACTURER OF THE ABOVE,
To whom all special communications should be addressed.

E. FOUGERA & CO.,
30 North William Street, New York.
SOLE GENERAL AGENTS for the ABOVE,
To whom all orders should be addressed.

SOLD BY DRUGGISTS GENERALLY.

JOHNSTONE'S IMPROVED

ADAPTABLE POROUS FELT SPLINTS.

AHL'S SPLINT MANUFACTURING COMPANY, LIMITED,

123 & 125 South Eleventh Street, PHILADELPHIA, PA.

THE ADAPTABLE POROUS SPLINTS, invented and improved by W. H. JOHNSTONE, have been tested extensively in both civil and military practice for a number of years, and have been endorsed and recommended in the most unqualified manner by the celebrated and distinguished Surgeons of America.

Their *porosity* is a peculiar and a valuable property. While the material is firm and insoluble, it permits readily the passage of air and fluids, so that, on one hand, the heat from the inflamed surface, the perspiration, and the morbid exhalations, are not confined, to the detriment of the patient, *as is the case in every other kind of splint*, but pass off freely; and on the other hand, lotions of cold or warm water, medicated or not with weak alcohol, carbolic acid, arnica, tincture, solutions of the sulphites, etc., can be constantly applied without disturbing the dressings. This, it will readily be seen, is a most invaluable property when the parts are bruised, lacerated, filled with extravasated blood, or erysipelatous, and give these splints a conspicuous advantage over all others.

From FRANK H. HAMILTON, M. D., Professor of Fractures and Dislocations in the Bellevue Hospital Medical College, author of "A Treatise on Fractures and Dislocations," etc.

Having examined carefully *JOHNSTONE'S IMPROVED ADAPTABLE POROUS FELT SPLINTS*, I feel warranted in recommending them to the Profession as superior to all other manufactured splints now in use. They possess all the essential qualities of a good splint, having firmness, pliability and lightness.

FRANK H. HAMILTON, M. D.,
Prof. Military Surgery and Fractures and Dislocations, Bellevue Hospital Col.

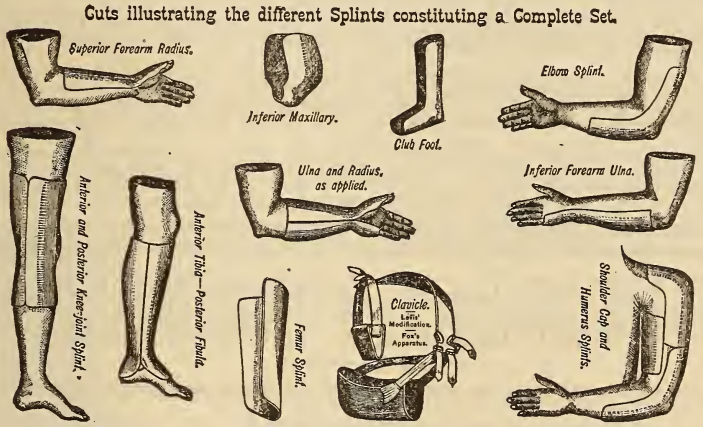
From PROF. D. HAYES AGNEW, Prof. Surgery, University of Penna.

1611 CHESTNUT STREET, PHILADELPHIA, *February 6th*, 1879.

The Adaptable Felt Splints, formerly known as those of Dr. Ahl, with the improvement now made by W. H. Johnstone, which renders them in every way superior to the former, I regard as very excellent appliances in the treatment of fractures.

D. HAYES AGNEW,
Prof. Surgery, University of Pennsylvania.

Cuts illustrating the different Splints constituting a Complete Set.



SPECIAL NOTICE TO THE PROFESSION AND TRADE.

Our *policy* heretofore in the introduction of JOHNSTONE'S IMPROVED ADAPTABLE POROUS FELT SPLINTS, has been to confine the sales and business negotiations directly to the Doctors themselves, declining in every case to sell our goods through Dealers; we having assured the Profession generally, both through our agents and catalogues, that *JOHNSTONE'S IMPROVED SPLINTS* could only be obtained by subscription.

We wish to announce, that owing to the large demand for our goods and the constant importunity on the part of *Surgeons* everywhere to place our Splints on sale with their Instrument Dealer or Druggist, to afford them greater convenience and facility in obtaining the pieces in duplicate, we have at last acceded to that request, and hereafter *JOHNSTONE'S CELEBRATED FELT SPLINTS* can be obtained at most dealers in Instruments and Drugs throughout the United States, at the same price which they were heretofore sold, viz:

A complete set, embracing fifty (50) pieces—twenty-five for adults and twenty-five for children—is thirty ($30) dollars. Extra or duplicate pieces can always be obtained from your DEALER, at one dollar each.

JOHNSTONE'S CELEBRATED SPINAL JACKET, for Curvatures and Deformities, have met with unparalleled success, and, from their merit, secured the unqualified endorsement and approbation of our celebrated orthopædic specialists, and particular expression of gratitude from the patients who are wearing them. For full information, send for Descriptive Circulars.

Should your Instrument dealer fail to have a supply of our Splints, and decline to carry them in stock, orders sent to us will receive prompt attention.

AHL'S SPLINT MANUFACTURING CO., Limited.
W. H. JOHNSTONE, Manager.

"N. B.—If the Instrument Dealers of Philadelphia decline to supply its Physicians with our JOHNSTONE'S FELT SPLINTS, on call, they will be furnished and delivered by us to any part of the city, at any time, on receipt of the price, viz.

$1.00 each.

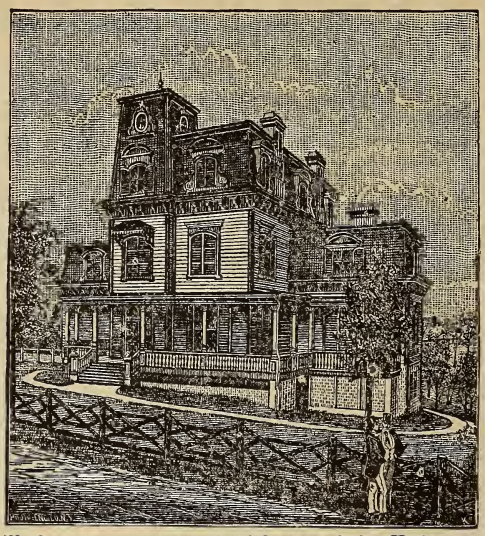
THE DE QUINCEY HOME,

Fort Washington, New York City.

A Private Asylum for the Treatment of the Opium, Morphine, Chloral, Chloroform and Hashisch Habits, Nervous Diseases and Inebriety.



Drs. H. H. Kane and W. H. Vittum, in charge.

Consulting Physicians.

Prof. Wm. A. Hammond,
Prof. T. Gaillard Thomas,
Dr. Edward C. Spitzka,
Dr. Daniel M. Stimson,
Dr. Edward T. Ely,
Dr. G. H. Wynkoop,
Dr. Andrew H. Smith.

Situated upon a high hill that commands a splendid view of the Hudson and Harlem rivers, Spuyten Duyvil Creek, and the beautiful country for miles around; surrounded by ample grounds and magnificent drives; in easy communication with the city by means of the Sixth and Ninth Avenue Elevated and the Hudson River Railroads; away from the dust, noise, crowding and malaria of the city; with hot and cold water in every room, furnace and grate-fire heating, croquet, horses and carriages, boats and fishing, an excellent *cuisine*, trained nurses and careful medical attendance, it possesses unequaled advantages for the treatment of cases of this kind.

The plan of treatment pursued in the cure of opium, morphine and chloral takers is that of *rapid reduction*, which possesses all the advantages, and none of the dangers of Levenstein's *sudden deprivation*, or the prolonged agony of *gradual reduction*. Each case is studied and treated in accordance with its peculiarities and the idiosyncrasies of the patient, no set plan of treatment being pursued, at the expense of the person's health or comfort.

Our Home, furthermore, offers special facilities for the treatment by *rest, diet, and massage*, according to the plan of Weir Mitchell, of that large class of nervous diseases so commonly met with in ladies suffering from uterine troubles. This plan of treatment has been specially studied, and nurses competent to carry out its provisions in every detail will be furnished. For further particulars, etc., address 1299-1350

Drs. KANE and VITTUM, De Quincey Home, Fort Washington, New York City.

PACKER'S

TAR

SOAP.

1297-1348eow

ABSOLUTELY PURE

AND NON-IRRITATING.

Made from Vegetable Oils, Refined Pine Tar, and Chemically Pure Glycerine. Extensively used in public and private practice in the treatment of ***Diseases of the Skin.*** Useful for cleansing sores, ulcers, etc.

Many Physicians recommend the exclusive use of this Soap for ***Washing Infants.*** It purifies, soothes, prevents chafing, and is tonic to the skin.

For the bath and toilet, only those who have used it can appreciate its refreshing and cleansing properties.

THE PACKER MANUFACTURING CO.,

P. O. Box 2985. 100 Fulton Street, New York.

McINTOSH'S COMBINED

Galvanic AND Faradic Battery.

THIS CELEBRATED BATTERY COMBINES BOTH THE GALVANIC AND FARADIC CURRENT,

Which can be used separately or combined. Any strength and intensity desired can be obtained for use in Electro-therapeutics. THIS BATTERY is constructed on an IMPROVED PLAN, as follows: The zinc and carbon plates are arranged in couples, securely clamped to hard rubber plates, with thumb screws. These screws are also used for binding posts. All the connections are positive. The cells are made in sections of six, of hard rubber, with hard rubber drip cup. The following points of excellence render our Batteries superior to others:

1. They combine the only Portable Galvanic and Faradic Battery in one case.

2. They weigh one-half less than other Batteries of the same number of cells.

3. The cells are made in sections of six, of one solid piece of hard, vulcanized rubber; by this arrangement they can be emptied, cleaned and filled as easily and quickly as one cell, and will not crack, break or leak.

4. A hard rubber drip cup is placed by the side of each section of cells, to receive the zinc and carbon plates when removed from them. By this arrangement we avoid the use of absorbent materials and soiling the Battery

5. The Hydrostat is perfect. The rubber plates which hold the elements project over on one side enough to cover the cells when the zinc and carbon plates are placed in the drip cups. The under side of this projection is covered with thick, soft rubber, which is securely clamped to the cells sections, and makes them water tight.

6. This is the only Battery in which the zinc and carbon plates can be kept clean by simply rinsing them.

7. A zinc or carbon plate can be removed by simply loosening a binding post; and all parts of the Battery can be duplicated, as like parts are made exactly alike. We will be pleased to send circulars and our illustrated catalogue, giving full information, price, etc., free, upon application.

McINTOSH GALVANIC BELT AND BATTERY CO.,

1281-1332 **Nos. 192 and 194 Jackson Street, CHICAGO, ILL.**

SEABURY & JOHNSON'S
PHARMACOPŒIA PLASTERS

IN RUBBER COMBINATION.

BELLADONNA, {Price, per mail, 1 yard roll, $1.
ADHESIVE,
CANTHARIDAL, Price, 1 yard, $1.
MUSTARD ON COTTON CLOTH,
AND OTHER FORMULAS.

ADVANTAGES OF THE RUBBER BASE:

A cold process through which volatilization by heat is avoided. Preservative character of the rubber combination, thus ensuring uniform reliability. Perfect pliability in any temperature; convenience of application, as the plaster adheres without heat or moisture; cleanliness.

This article is intended to take the place of the unreliable Emp. Adhesive, on account of its superior qualities and cheapness.

It is Pliable, Antiseptic, Waterproof, Non-Irritating, and Strong.

Does not become Dry.
Does not become Stiff.
Is not affected by Age.
Does not crack off the Muslin.
Is spread on honest Cotton Cloth.
Is not affected by Dampness.
Is not affected by Heat or Cold.

Will adhere firmer than Emp. Adhesive.
Will adhere longer than Emp. Adhesive.
Does not require heat or moisture to make it adhere.
Is an entirely new article, free from all irritating properties.
Is used by the New York, Bellevue, and other large Hospitals, and by many of our leading Surgeons.

FURNISHED { In Rolls 5 yards long by 14 inches wide. 1 yard x 7½ inches.
In 10 yard lengths, on spools, ½, 1, 2, or 3 inches wide.

Supplied by Druggists. Physicians in remote sections can be supplied by mail, at following prices: 5 yard rolls, per yard, 40 cents; 1 yard rolls, per yard, 50 cents.

PREPARED ONLY BY

SEABURY & JOHNSON,

21 PLATT STREET, NEW YORK.

Received Highest Award Over All Competitors, Philadelphia 1876, Paris 1878

MEAT AND QUINIA.

AROUD'S WINE WITH QUINIA,

And all the Nutritive Principles of Meat.

Aroud's Preparations recommend themselves to the most serious attention of Physicians, and deserve their preference:

1st.—Because they combine all the active principles of the richest barks of quinia carefully selected.

2d.—Because 30 grammes of them contain 3 grammes of quinia and all the nutritious principles of 27 grammes of meat, which are soluble in alcohol and water.

3d.—Because the combination of meat with the barks of quinia has not only the advantage of acting as a tonic, nutritive, and febrifuge, but also that of paralyzing and guarding against any local irritation caused by the prolonged use of quinia barks, and of preparing the stomach to endure the salutary influence of this friendly compound.

4th.—Because these preparations with meat as a basis, containing in their composition the entire nutritious elements of muscular fibre, blood and bone, answer alone to the immortal maxim of Hippocrates, fundamental basis of all good reparative medication, "*Ars imitatio natura.*"

5th.—Because, if meat occupies the first rank among the articles of food, if quinia is placed at the head of tonics, the combination of these highly reparative substances must necessarily be a reconstructor par excellence.

Finally, because the experiments with Aroud's Wine and Quinia prove, better than theory, that, to reconstruct the shattered and enfeebled forces, no other tonic can be compared to it.

MEAT, IRON AND QUINIA.

AROUD'S

FERRUGINOUS WINE WITH QUINIA,

And all the Nutritive Principles of Meat.

MEAT, IRON AND QUINIA, that is so say, the most reparative food combined with a reconstituent and a nerve tonic par excellence: such is the remarkable composition of this ferruginous preparation, which, in all respects, merits the preference of physicians. It prevents impoverishment of the blood, anæmia, chlorosis, etc.; presented in a form at once attractive to the eye and pleasant to the palate—an assimilable iron united with all the constitutive principles of bone and of muscle; it can, therefore, form and regenerate the forces, and this without causing nausea, constipation, or disturbing the digestive organs. By its generous alimentation it corrects and modifies the bad effect of the prolonged use of quinia.

The excellence of this preparation justifies that which Hippocrates proclaimed over 2000 years ago, and all clinics have confirmed: "That the soluble nutritive principles of meat is the food best adapted for the sick and convalescents; that these principles, being the integral parts of muscle, have the faculty of forming flesh rapidly, and of restoring muscle."

It is, therefore, a precious specific for all the maladies caused by impoverishment or deterioration of the blood, because meat, iron and quinia combined give nourishment, act as a tonic, regenerate, reconstitute, and regulate the entire system. 1261-1312-eow

PROCTER'S PEPSIN (SACCHARATED.

This standard article is prepared from *Pepsin*, carefully purified and freed from mucus, and is not a *dried Peptone*. It is inodorous and non-deliquescent, and retains its digestive power indefinitely. It is so well known that extended comment is superfluous. We would, however, call attention to its uniform purity and solubility, which, with extraordinary *digestive power*, commend its use in preference to other less carefully *made* articles. It is tested to the solution of 250 grains of coagulated albumen by 10 grains of Pepsin.

PROCTER'S "PEPSIN FORTIOR," (Stronger or Concentrated Pepsin.) A powerful form of Pepsin, eligible when minimum dose is desirable. It is of the same exceptional purity with our *Procter's Pepsin*, while the strength is far greater. Dose one to three grains. 1275-1308, 1y.

Manufactured by **WM. PROCTER, Jr., CO.,** S. W. Cor. 9th and Lombard Sts., Phila

HOLLOW SUPPOSITORIES.

WITH STOPPERS. ALL MADE FROM PURE BUTTER OF COCOA, ONLY.

Aural, Nasal, Rectal, Urethral, Cystic, Vaginal, Intra-Uterine, and Veterinary Suppositories.

The object of this invention is to supply Physicians, Druggists, Veterinary Surgeons, and others, with HOLLOW SUPPOSITORIES, into which they can put any kind of medicine or nutriment, thus producing firm, smooth, and evenly medicated Suppositories, that are cheaper and more reliable than those made by the old method.

RECTAL ABSORPTION.

"The mucous membrane of the rectum, like that of other portions of the alimentary canal, possesses all the requisites, more or less, for the exercise of absorption."

Liebig states that a strong solution of common salt disappeared so completely in the rectum, that an evacuation one hour afterward was found to contain no more than the usual portion of salt.

Many medicinal substances act more energetically when applied to the rectum than when received into the stomach.

Baron Dupuytren said: "The rectum *absorbs*, but does not *digest*. The medicinal agent," he says, "owing to the absence of digestion, passes more directly, more purely, and more surely to its destination, than the same medicine does when taken into the stomach."

M. Orfila asserts that these medical agents which operate through the medium of absorption, such as opium, tobacco, etc., are much more active by the rectum than by the stomach.

Dr. J. H. Scorff reports four cases where he was successful in removing the vomiting of pregnancy, by introducing 20 grains of chloral into the rectum, night and morning. He only found it necessary to use the remedy three or four times.

Chloral is the remedy *par excellence* in the ravings of delirium tremens, and in cases of delirium and insomnia combined; also in infantile convulsions and attacks of laryngysmus stridulus.

Dr. Hickman reports a case of typho-malarial fever, which chloral was found to control in a happy manner. The chloral was introduced per rectum.

"REST TO THE STOMACH,"

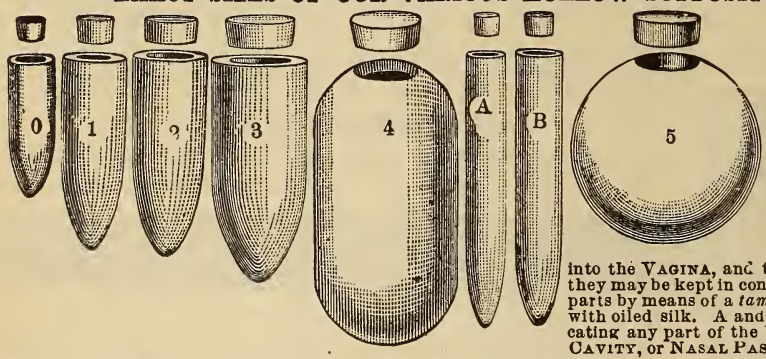
says Mr. Theodore Williams (in London *Lancet*, October 24th, 1874), is of the highest importance in some of the diseases of this organ. In such cases we possess in the rectum an effective second stomach, which, if it does not afford us the pleasure of digestion, spares us many of its pains."

Nutritious substances are taken up by the absorbents, and thus find their way into the economy, and produce their assimilative and nutritive effect. Haller demonstrated the fact that digestion can and does take place in the alimentary canal. He had the greatest confidence in the absorptive and digestive powers of the rectum to sustain life indefinitely.

HYPODERMIC MEDICATION.

Dr. William Bodenhamer says: "This now very common and often misused method is of great value in numerous cases, yet I am decidedly of the opinion that rectal medication is of greater importance; indeed, it is greatly preferable in many instances, being much less dangerous, much more convenient and simple; and the remedies, too, act through this medium with almost equal celerity. But very few remedies can be used hypodermically in comparison to those which can be used by the rectum."

EXACT SIZES OF OUR VARIOUS HOLLOW SUPPOSITORIES.



Size 0 is for children. It may also be used for the EAR and in the NASAL PASSAGES. Nos. 1, 2 and 3 are RECTAL SUPPOSITORIES. Nos. 3 and 4 may be used for introducing nutriment into the system, *via rectum*. No. 4 is also a VAGINAL SUPPOSITORY. No. 5 is a "SPHERIC L HOLLOW SUPPOSITORY," to introduce remedies into the VAGINA, and to the *os uteri*, where they may be kept in contact with the diseased parts by means of a *tampon* of cotton covered with oiled silk. A and B are used for medicating any part of the URETHRA or UTERINE CAVITY, or NASAL PASSAGES.

PRICES:

Half Gross, Size 0	$1 25
Half Gross, No. 1	1 50
Half Gross, No. 2	1 75
Half Gross, No. 3	2 00
Half Gross, A	$2 00
Half Gross, B	2 25

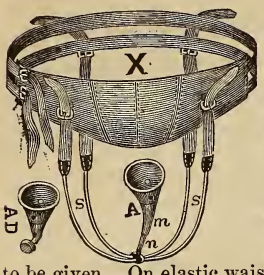
STAUFER'S

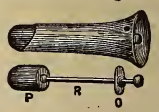
SERIES OF HARD RUBBER UTERINE INSTRUMENTS SIMPLIFIED.



Pessary and Abdominal Supporter combined. Fig. x represents a fine satteen belt, with whalebone stay, elastic back straps and spring stem Uterine Supporter. Shifting Cup A, to be transformed into self sustaining Cup A. D. Price, (A X) $7.00. Hip measure to be given. On elastic waist belt, (or A Z), $600, waist measure. Permanent Stem Cup (or *E. C. Economy*) on belt x, $5.50, or E C, on waist belt, Z, only $4.50. Belt (X), alone, $2.00.

The full catalogue and plate exhibit in addition, Retroversion Cups; Anteversion and posterior cul-de-sac levers; Globe Tops and Oblong Tops; all on spring or permanent stems, to be selected according to the requirements of cases; Also intra-uterine stem cup. The cups are graded even $\frac{1}{8}$ inch, from $1\frac{1}{4}$ to $2\frac{1}{2}$ inches. Globe Tops from 1 to $2\frac{1}{4}$ inches; thus, making about 125 in style and size Stem Uterine Supporters to meet the various displacements. The medium, $1\frac{3}{4}$ inch cup meets over three-fourths of the cases presented.

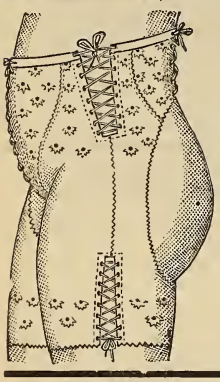
Examining Instruments.—This series contains the much admired Examining Case of ten articulating pieces, probes, sounds, swab, movers, caustic, and brush-holders and cases; wt. 4 oz. Reflector, Fenestrated Vaginal, Anal and Hymen, together with the series of Vaginal Speculums, by which the examination is reduced to great simplicity, and the vaginal portion of the uterus to be seen without exposure; manipulated upon, and can be shown to husband or member of the family as clear as if located externally. The case Q, contains four graded Speculums, with shifting conductors; compact and weight but 12 oz. No. 2, or next to largest answers in over three fourths of cases called for treatment. Dental red enameled inside. Price, full case, $12.00; single, $2.50 each.



Exchanges.—All the hard rubber parts in the catalogue have the exchange and interchange privilege, at cost. Even single Speculums received back when a case becomes preferable. All without limit of time. Necessary repairs only to be paid for.

Staufer's Catalogue and Physician's Price List, with instructions to the use of these instruments, is mailed free, on application to this office.

Delivery—All the instruments on the catalogue are mailed all over the United States, on receipt of quotation prices, from this office.



Madame La Chapelle's "HEALTH PRESERVER."

A REVERSE CORSET for preventing and overcoming Uterine disease. Preëminently useful during Pregnancy. Especially adapted to treatment of Functional Derangement. It affords *immediate satisfaction.* Heat and Pain throughout the region of the back and pelvis, "fullness and dragging down," prolapsed bowels, ovarian weakness, troubles of the Bladder, and attendant reflex troubles of Heart, Brain, Stomach and Liver, are relieved by its *application.* Every one made to order, from White Kid, and are very elegant. In measuring give *exact* size (under all clothing) of Waist; Abdomen at Umbilicus; Hips, largest part; Thigh, and length from Waist to Pubis.

Send for circulars to hand to your patients, or directions for us to send them, with instructions to order from you, their physician. Retail price, $15; to Physicians, $10. 1305–1356

WHITE, WILLIAMS & CO.,

☞ No Doctor will fail to recommend or furnish them after knowing their value.

DR. McINTOSH'S ELECTRIC OR GALVANIC BELT.

This Belt is a perfect Galvanic Battery, composed of sixteen cells, placed in pockets on a belt. Each cell is made of hard vulcanized rubber, lined with copper, which constitutes the negative plate. The rubber coating perfectly insulates each cell. The positive plates are of zinc, wrapped in a porous material to absorb the exciting fluid, preventing contact with the copper, and permitting the current to pass from the copper to the zinc. The cells are charged without wetting the belt.

A current selector is so arranged that one or more cells can be used at pleasure. The electrodes are covered similar to ordinary battery electrodes, and connected with the cells by connecting cords. By this arrangement, a current from the belt can be applied to any part of the body. Physicians who have used this belt in their practice do not hesitate to recommend it to the profession.

Our pamphlet on "Medical Electricity," containing a full description of the belt and diseases, with manner of treatment, sent free on application. Address

Registered COSMOLINE Trade Mark.

Unguentum Petrolei

Prepared by E.F.Houghton & Co. Philadelphia, U.S.A.

[Put up in 1, 5, 10, 25, 50, and 100-lb. cans. Samples furnished on application. The post-office laws forbid anything of an oleaginous nature being sent through the mail.

In chemical composition, Cosmoline [Unguentum Petrolei] is an oleaginous hydrocarbon, corresponding to the heavy petroleum oils, and containing a large amount of the paraffines and olefines of the formulæ $C_{16}H_{34}$ and $C_{16}H_{32}$. It contains but a small percentage of the paraffines and olefines, corresponding to the formulæ C_7H_{16} and C_7H_{14}, respectively, and the offensive and irritating properties of the crude oil have been carefully removed. In the process of purification, no acids, alkalies, or other chemicals are employed, and no injurious additions of any kind are made to the natural product. The result is a semi-solid, translucent substance, with a faint odor and unctuous feel.

Cosmoline [Unguentum Petrolei] melts at about 100° Fah. (38° Cent.); and boils at about 625° Fah. (329° Cent.); its specific gravity is about 0.875 at 60° Fah.

As it contains no oxydizable or organic matter capable of change by putrefaction or fermentation, and is absolutely without affinity for moisture, it offers to the profession an admirable unguent, which can never decompose, ferment, or become rancid in any climate or temperature.

291 MADISON AVENUE, NEW YORK, February 26th 1878.

I have examined the preparations of Cosmoline as manufactured by E. F. Houghton & Co., Philadelphia, and believe them well adapted to the purposes for which they are designed. As lubricants, and as the bases of simple or medicated ointments, they have a decided advantage over the fixed oils and fatty substances in ordinary use, in that they do not become rancid, and do not acquire irritating qualities from atmospheric exposure. ALFRED C. POST, M.D., LL.D.,
Emeritus Professor of Clinical Surgery in the University of New York, Visiting Surgeon to Presbyterian Hospital, etc.

PHILADELPHIA, July 10, 1880.

MESSRS. E. F. HOUGHTON & CO.:

I have for a number of years made extensive use of Cosmoline [Unguentum Petrolei] and consider it a most valuable article for surgical purposes. Either as a dressing by itself, or as a vehicle for the application of medicaments, it is greatly superior to lard or other fatty matters, especially by reason of its non-liability to change by time or temperature.

Yours truly,
JOHN H. PACKARD, M.D.
1031 WALNUT ST., PHILADELPHIA.

MESSRS. E. F. HOUGHTON & CO.:

I have used extensively Cosmoline [Unguentum Petrolei] both in Dispensary and private practice, with very great satisfaction. As a vehicle in making ointments it is invaluable, and far superior to lard, for the reason that it will not become rancid or undergo chemical change like the latter, when exposed to the atmosphere. I cannot too highly commend it as an application in various skin diseases.

Yours truly, JOHN V. SHOEMAKER, A.M., M.D.,
Physician to the Pennsylvania Free Dispensary for Skin Diseases

208 WEST 34TH ST., NEW YORK.

MESSRS. E. F. HOUGHTON & CO.:

Gents:—I fully appreciate the value of your Cosmoline, or Unguentum Petrolei, and prescribe it frequently in ointments. Fluid Cosmoline I have used constantly for several years, as a lubricant of urethral sounds. It is the cleanest oil I know of for this purpose.

Yours truly, GEO. HENRY FOX.

PREPARED BY

E. F. HOUGHTON & CO.,

TO THE MEDICAL PROFESSION.

LACTOPEPTINE.

We take pleasure in calling the attention of the Profession to LACTOPEPTINE. After a long series of careful experiments, we are able to produce its various components in an absolutely pure state, thus removing all unpleasant odor and taste (also slightly changing the color). We can confidently claim that its digestive properties are largely increased thereby, and can assert without hesitation that it is as perfect a digestive as can be produced.

LACTOPEPTINE is the most important remedial agent ever presented to the Profession for Indigestion, Dyspepsia, Vomiting in Pregnancy, Cholera Infantum, Constipation, and all diseases arising from imperfect nutrition. It contains the five active agents of digestion, viz: Pepsin, Pancreatine, Diastase, or Veg. Ptyalin, Lactic and Hydrochloric Acids, in combination with Sugar of Milk.

FORMULA OF LACTOPEPTINE.

Sugar of Milk.....40 ounces.	Veg. Ptyalin or Diastase... 4 drachms.
Pepsin..... 8 ounces.	Lactic Acid..... 5 fl.. drachms.
Pancreatine..... 6 ounces.	Hydrochloric Acid..... 5 fl. drachms.

LACTOPEPTINE is sold entirely by Physicians' Prescriptions, and its almost universal adoption by physicians is the strongest guarantee we can give that its therapeutic value has been most thoroughly established.

The undersigned having tested LACTOPEPTINE, recommend it to the profession.

For Consumption and Wasting Diseases.

HYDROLEINE

Has been proved of the highest value in CONSUMPTION and all WASTING DISEASES, invariably producing IMMEDIATE INCREASE in FLESH and WEIGHT.

FORMULA OF HYDROLEINE.

Each dose of two teaspoonfuls, equal to 120 drops, contains:

Pure Oil,	**80 m. (drops.)**	**Soda,**	**1-3 grain.**
Distilled Water,	**35 m.**	**Boric Acid,**	**1-4 "**
Soluble Pancreatin,	**5 grains.**	**Hyocholic Acid,**	**1-20 "**

DOSE.—Two teaspoonfuls alone, or mixed with twice the quantity of soft water, to be taken thrice daily, with meals.

The principles upon which this discovery is based have been described in a treatise on "THE DIGESTION AND ASSIMILATION OF FATS IN THE HUMAN BODY," by H. C. BARTLETT, PH.D., F.C.S., and the experiments which were made, together with cases illustrating the effect of Hydrated Oil in practice, are concisely stated in a treatise on "CONSUMPTION AND WASTING DISEASES," by G. OVEREND DREWRY, M.D.

In these treatises the Chemistry and Physiology of the Digestion of the Fats and Oils is made clear, not only by the description of a large number of experiments scientifically conducted, but by cases in which the deductions are most fully borne out by the results.

☞ *Copies of these valuable works will be sent free, on application, to all who mention THE MEDICAL AND SURGICAL REPORTER.*

HYDRATED OIL,

HYDROLEINE,

WATER AND OIL,

May be described as partially digested oil, which will nourish and produce increase in weight in those cases where oils or fats not so treated are difficult or impossible to digest. In CONSUMPTION and other WASTING DISEASES the most prominent symptom is EMACIATION, of which the first is the starvation of the fatty tissues of the body, including the brain and nerves. This tendency to emaciation and loss of weight is arrested by the regular use of HYDROLEINE, which may be discontinued when the usual average weight has been permanently regained.

The ordinary so-called emulsions of Cod-liver oil and other fats, WHETHER PANCREATIZED OR NOT, merely remain in the form of a coarse mechanical mixture for a short time after agitation. The digestion of oil having in no sense been artificially produced, still devolves upon those functional powers the deficiency of which is the most prominent symptom in these cases.

HYDROLEINE is not a patent medicine or a secret preparation; the formula is on every bottle. Can be taken by the most delicate stomach; is immediately assimilated.

The permanence and perfection of the emulsion, and the extreme solubility of the HYDRATED OIL, solely prepared and sold by us under the name of HYDROLEINE, is shown by its retaining its cream-like condition as long as the purest Cod-liver Oil will retain its sweetness. Unlike the preparations mentioned, or simple Cod-liver Oil, it produces no unpleasant eructation or sense of nausea, and should be taken in such very much smaller doses, according to the directions, as will insure its complete assimilation; this, at the same time, renders its use economical in the highest degree.

To brain-workers of all classes, Hydrated Oil is invaluable, supplying as it does the true brain food.

Economical in use—certain in result. Tonic—Digestive and Highly Nutritive.

NEW PRINCIPLE FOR THE ASSIMILATION FAT.

KIDDER & LAIRD,

AGENTS FOR THE UNITED STATES.

DEPOT, No. 83 JOHN STREET, NEW YORK.

NEW PHARMACEUTICALS

WORTHY OF THE

Attention of Physicians.

SOLUTION OF

Chloride of Bromine Compound.

The ingredients which enter into the formation of this compound are those which science has long recognized as the most effective destroyers of the products of decomposition. They are true disinfectants, entering into chemical union with noxious exhalations to form innocuous compounds.

Solution of Chloride of Bromine Compound is especially adapted to the purifying of cesspools, privy vaults, sewers, drains, etc., and to the disinfection of clothing and apartments after contagious diseases.

Ozonized Aromatic Liquid.

The disinfecting principle of this combination is ozone—nature's own disinfectant—possessing also antiseptic properties in a high degree. As active as bromine and chlorine, it possesses none of the irritant nature of these agents, but is of entirely unobjectionable odor, and a positively agreeable perfume in the sick chamber. Its method of employment is extremely simple, all that is required being to place a tablespoonful in a shallow dish or saucer, from which it readily evaporates with the aid of heat. The ozone thus given off may be inhaled without producing any sense of discomfort.

Empty Capsules.

The advantages accruing from the use of gelatine capsules in practice need not be enumerated.

The capsules of our manufacture are very readily soluble in the juices of the stomach. The facility with which they may be filled after a little practice makes them scarcely less desirable, on the score of convenience, than powders.

We put them up in boxes containing 100 each, which may be conveniently carried in a physician's pocket.

Our capsules do not absorb moisture, and thus become sticky, an objection very often attaching to capsules.

Gelatine-Coated Pills.

We solicit a critical comparison of our gelatine-coated pills with those of other manufacturers. We claim for them a regularity of shape and a degree of solubility not excelled. In their manufacture, also, a process peculiar to ourselves is employed, through which perfect continuity in the coating is secured. We employ no metallic points, in the use of which holes are apt to be left, through which volatile principles are liable to escape, and chemical changes take place from contact of the pill mass with the metallic substance.

DESCRIPTIVE CIRCULARS CONTAINING FULLER INFORMATION

ON THE ABOVE, AND PRICE LISTS, WILL BE SENT FREE, ON APPLICATION TO

PARKE, DAVIS & CO., DETROIT, MICHIGAN,

MANUFACTURING CHEMISTS AND SPECIAL DEALERS IN NEW AND RARE DRUGS.

An experience of more than a quarter of a century convinces us that sugar, properly applied, is the only correct coating for a pill.

Physicians should be careful to specify Warner & Co., when prescribing or ordering.

Special attention is called to the following selected Recipes prepared for Physicians' Prescriptions.

PIL: PHOSPHORI COMP: (WARNER & CO.) ℞. Phosphori, - - 1-100 gr. Ext. Nuc. Vom. - ¼ gr.

THERAPEUTICS.—As a nerve tonic and stimulant, this form of pill is well adapted for such nervous disorders as are associated with impaired nutrition and spinal debility, increasing the appetite and stimulating digestion.

The practical value of Phosphorus as a therapeutic agent, and its applicability to the cure of disease, and especially in those varied disordered conditions consequent upon OVERWORK, which are characteristic of modern civilization.

Pil. Phosphori Comp. may be taken, one or two pills three times daily, after eating.

Price, per 100, $1.50.

PIL: IODOFORM ET FERRI. (WARNER & CO.) ℞. Iodoform, - - 1 gr. Ferri Redacti, - 1¼ gr.

THERAPEUTICS.—A powerful general tonic and alterative, valuable as a remedy in Anæmia, Scrofula, Neuralgia, Chlorosis, Rheumatism, etc.

Pil. Iodoform et Ferri may be given in doses of from one to two pills, as occasion may require.

Price, per 100, $2.00.

PIL: DIGESTIVA. (WARNER & CO.) ℞. Pepsin Conc't, 1 gr. Gingerine, 1-16 gr. Pv. Nuc. Vom., ¼ gr. Sulphur, ⅛ gr.

THERAPEUTICS.—Useful in relieving various forms of Dyspepsia and Indigestion, and of permanent benefit in cases of enfeebled digestion, where the gastric juices are not properly secreted. It is also a gentle laxative and excellent dinner pill, may be taken one after dinner, or one before each meal, three times daily.

Price, per 100, 75 cts

PIL: CALCIUM SULPHIDE. (WARNER & CO.) 1-10, ¼, ½ & 1 gr. each.

THERAPEUTICS.—Extremely useful in the treatment of acne, scrofula and cutaneous diseases.

Sulphide of Calcium is usually administered in doses of from 1-10 to ¼ grain four times daily, gradually increasing the dose to one grain six times daily, or according to the progress or severity of the case.

Price, per 100, 1-10 gr. .50; 1-4 gr. .60; 1-2 gr. .75; 1 gr. $1.00.

WARNER & CO.'S PILLS MAY BE OBTAINED FROM ALL DRUGGISTS, OR BY MAIL, ON RECEIPT OF PRICE.

SAVORY & MOORE beg to call the attention of the Profession to some of their Special Preparations, the purity and uniform strength of which are Guaranteed.

PANCREATIC EMULSION,

Prepared in accordance with the direction of the Physician who introduced this purely

MEDICINAL FOOD FOR CONSUMPTION AND WASTING DISEASES.

Pancreatic Emulsion will always take precedence of Cod-Liver Oil, by reason of its introducing the STABLE SOLID FATS INTO THE SYSTEM, instead of the evanescent fluid fats or oils.

Neither Cod-Liver Oil nor EMULSIONS of COD-LIVER OIL can supply the kind of fat necessary for sound and vigorous human life. In addition to this, all the Oily Emulsions are liable to rancidity, and most of them are highly objectionable in consequence of the SAPONIFICATION and ULTIMATE PUTREFACTION, produced by the chemical agents used instead of Pancreatic Juice.

Pancreatic Emulsion (properly so-called), is THE NECESSARY FOOD OF THE CONSUMPTIVE, and the most reliable form of nutriment for counteracting the tendency to Phthisis and other wasting diseases. It presents to the lacteals fat, in essentially the same condition for assimilation and absorption as in a vigorous human frame, and THE AGENT of the important change is THE NATURAL SECRETION of the PANCREAS.

Pancreatic Emulsion may therefore be regarded as Chyle obtained by nature's own process. In certain cases both Cod-Liver Oil and Pancreatic Emulsion are required—one to supply the blood with oil or liquid fat, the other with the more stable solid fats; but it cannot be too strongly urged that both PANCREATIC EMULSION and Cod-Liver Oil are *not to be regarded as Medicines, but as articles of diet*, without which patients, with their defect of health, will as surely starve as healthy persons would if deprived of the most nutritive part of their food.

Pancreatized (Digestive) Cod-Liver Oil. By Pancreatized Cod-Liver Oil, the active digestive principle of the Pancreatic Juice is imparted to it, which renders it in a highly favorable condition for rapid and complete digestion and assimilation, preventing nausea, and largely increasing the beneficial properties of the Oil.

Pancreatine effects the digestion and assimilation of Cod-Liver Oil and Fat, as well as Food generally. This palatable and popular remedy is therefore invaluable to PATIENTS WHO ARE UNABLE TO DIGEST COD-LIVER OIL, and who are thus deprived of its nourishing and invigorating properties.

Pancreatine Wine. An excellent vehicle for taking Cod-Liver Oil and promoting the digestion of it.

NEW HYPODERMIC SYRINGES.

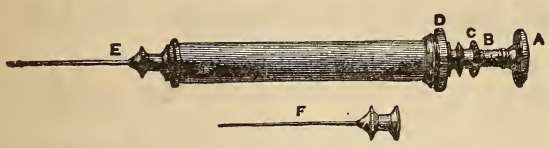

FIG. 48.—No. 2.

These cuts (two-thirds the actual size) represent a New Hypodermic Syringe of our Manufacture. With the exception of the needles, it is of German Silver, a material chosen as possessing, next to steel, the greatest rigidity and durability, while free from liability to oxydation. The barrel is formed by a process peculiar to ourselves, securing uniformity of calibre without soldered joint or seam. It is plated inside and outside with nickel. The piston is packed in the double parachute form, with leather prepared expressly for the purpose. It will be found to retain its elasticity, to operate smoothly, to resist all tendency of fluid to pass above, as of air below it. A nicely-engraved scale upon the piston-rod indicates minims, thirty being the capacity of the syringe.

Syringes Nos. 2, 3, and 4 have also a screw thread upon the piston-rod, and a traverse nut, thereby favoring the utmost nicety in the graduation of doses.

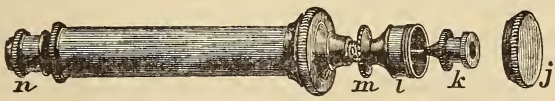
No. 3, Compact, has hollow piston-rod to receive one needle, also a protecting cover and fluid retainer; it may be carried in the Pocket Instrument or Vial Case, or without any case.

No. 4, Compact, is like No. 3, with the addition of a second needle, carried upon the syringe in the usual place, protected by a metal shield.

Nos. 1 and 2 are put up in neat morocco-covered case, with vial.

Two sizes of needles are furnished with each instrument, Nos. 1, 2, and 4; one only with No 3. They are of refined steel, carefully tempered, and thoroughly plated with gold; they are of small diameter and large relative calibre, sharpened to such an angle as will offer least resistance to penetration, and therefore cause least pain. At the point of union with the socket they are reinforced with an outer covering of German silver, thereby overcoming the tendency to become broken at this place. They are connected with the barrels by a screw thread.

Prices: No. 1, *$3.50* No. 2, *$4.00* Postage, .03
" No. 3, *2.50* No. 4, *3.50* " .02



No. 3.

These Syringes are so thoroughly and strongly made as to be free from the annoying accidents common to most Hypodermic Syringes; and we believe that, for convenience, durability, and nicety of construction, they have no superior.

OTHER HYPODERMIC SYRINGES.

		Postage.
No. 7, glass-barrel, graduation engraved on barrel, with screw nut on piston, nickel-plated mountings, two best steel gilt needles, in neat case	*$3.00*	.02
No. 9, glass, graduation engraved and numbered on piston-rod, with screw nut, best steel gilt needles, in neat case	*3.00*	.02
No. 7 or No. 9, with two steel unplated needles, either	*2.50*	.02
No. 10, glass, Luer's (French), graduation as No. 9, one gold needle and two steel needles, silver mountings, neat velvet-lined morocco case	*12.00*	.02

No. 11, glass cylinder, fenestrated, nickel plated metal mounting (see cut).

No. 11.

		Postage.
As represented in the cut, the glass cylinder is encased in a metal mounting, fenestrated to show the graduations for minims. The instrument may readily be taken apart for cleaning, and for those who prefer glass, is recommended for its non-liability to breakage. Price, with two best steel gilt needles, in a neat case	*$3.50*	.02

☞ *Any of the above will be sent by return mail on receipt of Price and Postage.* ☜

HYPODERMIC SYRINGES OF ALL KINDS PROMPTLY REPAIRED.

Buffalo Lithia Water.

FOR THE GOUTY OR URIC ACID DIATHESIS.

Dr. J. Marion Sims, of New York, says of this water, in general terms:

"I have used in my practice the Buffalo Lithia Water, Spring No. 2, for two years past, and have, in many cases, found it highly efficacious."

Dr. Wm. A. Hammond, of New York, Surgeon General U. S. Army (retired), Professor of Diseases of the Mind and Nervous System in the University of New York, etc.

"I have for some time made use of the Buffalo Lithia Water in cases of affections of the Nervous System, complicated with Bright's Disease of the Kidneys, or with a Gouty Diathesis. The results have been eminently satisfactory. Lithia has for many years been a favorite remedy with me in like cases, but the Buffalo Water certainly acts better than any extemporaneous solution of the lithia salts, and is, moreover, better borne by the stomach."

Dr. Hunter McGuire, Richmond, Va., late Prof. Surgery, Medical College of Virginia; Vice President of the International Med. Congress; Vice President American Med. Association.

"Buffalo Lithia Water, Spring No. 2, as an Alkaline Diuretic, is invaluable. In Gravel dependent upon the Uric Acid Diathesis, and, indeed, in diseases generally of that diathesis, it is a remedy of extraordinary potency. I have prescribed it in cases of Rheumatic Gout which had resisted the ordinary remedies, with wonderfully good results. I have also used it in my own case, being a great sufferer from this malady, and have derived more benefit from it than from any other remedy."

Dr. Alexander B. Mott, of New York, Professor Surgery, Bellevue Hospital Medical College; Surgeon, Bellevue Hospital.

"I have made sufficient use of the Buffalo Lithia Water to be satisfied that it posseses very valuable therapeutic properties. In the Gouty Diatheses, Chronic Inflammations of the Bladder, and other diseases affecting the Urinary Organs, it may be relied on to give the most satisfactory results."

Dr. Harvey L. Byrd, of Baltimore, President and Prof. of Obstetrics and Diseases of Women and Children, in the Baltimore Med. College; formerly Prof. of Practical Medicine, etc.

"I have witnessed the best results from the action of the Buffalo Lithia Water, Spring No. 2, in Chronic Gout, Rheumatic Gout, Rheumatism, Gravel and Stone in the Bladder, and I do not hesitate to express the opinion that in all diseases depending upon or having their origin in the Uric Acid Diathesis, it is unsurpassed, if indeed it is equaled by any water thus far known to the profession."

Dr. E. J. Doering, of Chicago, Ill., late Surgeon U. S. Marine Hospital Service.

"In my experience the Buffalo Lithia Water is an efficient remedy in the treatment of diseases depending on the Uric Acid Diathesis. I have prescribed it quite extensively in Catarrhal Affections of the Bladder, with excellent results."

Dr. William F. Carrington, of Virginia, Surgeon U. S. Navy (retired), Surgeon Confederate States Navy.

"The Buffalo Lithia Water, Spring No. 2, has signally demonstrated its remedial power in Gout, Rheumatism, Uric Acid Gravel, and other maladies dependent upon the Uric Acid Diathesis. It not only eliminates from the blood the deleterious agent before it crystallizes, but dissolves it in the form of calculi, at least to a size that renders its passage along the ureters and urethra comparatively easy."

Dr. J. S. Wellford, Prof. of Diseases of Women and Children, Medical College of Virginia.

"I have paid a great deal of attention to Urinary Troubles, and have frequently and freely prescribed the Lithia Water in their treatment, with the very best results. In all the various forms of the Uric Acid Diathesis, whether as well-formed Gravel or Gout, or in the milder forms of Gouty Dyspepsia or Nettlerash, in their varieties, I know of no mineral water which I consider at all equal to that of Spring No. 2. In many Skin Diseases of old age, dependent on the Uric Acid Diathesis, such as Eczema, etc., this water acts most beneficially."

1297-1348eow

Water in Cases of Six Gallons, at the Springs, $5.00

SPRINGS OPEN JUNE 1st. **Pamphlets sent to any address.**

THOMAS F. GOODE, Proprietor,

BUFFALO LITHIA SPRINGS, VIRGINIA.

MURDOCK LIQUID FOOD CO., Boston,

THE ONLY MANUFACTURERS OF

RAW FOOD EXTRACTS IN THE WORLD.

It can be retained by the weakest stomach, when all other food extracts, and even water, is rejected.

Nutritious food, if raw, condensed, and free from insoluble matter, will cure chronic diseases, as it will make blood faster than all preparations or food, and new blood will cleanse the system.

MURDOCK'S LIQUID FOOD is made from Beef, Mutton and Fruits; contains corpuscles; is 12½ per cent. soluble albumen, and free from insoluble matter, drugs, minerals, salts and acids, and can be retained by the stomach when so weak as to refuse food.

Ask your Druggists, or send to us, for Essays read before the American Medical Association, at Richmond, Va., May 6, 1881, on the value of Raw Food Extracts, by Geo. R. Shepherd, of Hartford, Conn., and other Essays and Testimonials from Medical Journals and Physicians that have used Liquid Food, in cases of Consumption, Scrofula, Nervous and General Debility, Dyspepsia, acute and chronic, Constipation, Diphtheria, Intemperance, Cholera Infantum, Infantile Diarrhœa, Post-partum Hemorrhage, Purpura Hemorrhagica with Waxy Liver, Pelvic Cellulitis, Malarial and other Fevers, Chronic Strumous Arthritis, Sclerosis of the Spinal Cord, Senile Gangrene, Perinephritic Abscess, and other diseases of malnutrition. No cases of Cholera Infantum have occurred where it has been used daily, and no lives have been lost from Cholera Infantum where it has been prescribed by a physician. Excellent for Eczema, Diabetes, Rheumatism and Neuralgia.

At the request of any physician who has not tried our Extracts, and would like to, we will deliver sample bottles to the Express in Boston. To any Medical Society wishing to investigate the value of our Extracts, through a committee, hospital, or individual members, we will furnish a supply of Liquid Food equal to a six-ounce bottle for every member present at the time of action. We are induced to do this knowing that our Extracts are saving life, and that an increased use of them, which will follow after a trial of them, will be the means of saving more lives daily. (*We ask no testimonials of results obtained.*) Raw Extracts are available where cooked ones are not, or if available, contain only one-third as much nourishment.

Liquid Food is in general use at all Hospitals, Infant and Insane Asylums, and Washingtonian Homes, U. S. Navy Hospitals, and by all physicians that have tried it.

If not kept by your Druggist, can be obtained in any of the commercial cities In Philadelphia, by Johnston, Holloway & Co., Boericke & Tafel; in Pittsburg, by A. Kelly & Co.; in Baltimore, by Thomsen & Wirth; or you can order direct and we will pay express. 1 oz, 15 cents; 6 oz., 55 cents; 12 oz., $1.00.

See Philadelphia MEDICAL AND SURGICAL REPORTER, *Boston Medical and Surgical Journal*, and *New York Medical Record*, for chronic cases that were at our quarterly reception to physicians, in Boston, December 30, 1881—cases of Eczema, Rheumatism, Neuralgia, Diabetes, Consumption, and other diseases. If all were not restored to perfect health, they were gaining daily, and able to enjoy life and attend to their business. 1297–1348

It is the only food that will relieve the Consumptive from Hunger.

MURDOCK LIQUID FOOD CO., BOSTON.

It will make Blood faster than all preparations known.

PARIS, 1867. 1868. 1873, VIENNA.

Prize Medal.

Medal of Merit.

BOUDAULT'S PEPSINE

IN POWDER, also WINE, ELIXIR, SYRUP, PILLS, AND LOZENGES OF PEPSINE.

Since the introduction of Pepsine by Boudault in 1854, **BOUDAULT'S PEPSINE HAS BEEN, AND IS STILL CONSIDERED, THE MOST RELIABLE,** as is attested by the awards it has received at the Exhibitions of 1867, 1868, 1872, 1873, and in 1876 at the Centennial Exposition in Philadelphia.

IT IS THE ONLY PEPSINE USED IN THE PARIS HOSPITALS.

Careful tests will enable any one to satisfy himself that **BOUDAULT'S PEPSINE HAS A DIGESTIVE POWER AT LEAST DOUBLE** that of the best Pepsines in the market, and that it is really the cheapest.

It is Sold in 1 ounce, 8 ounce, and 16 ounce Bottles.

Beware of **so-called French** Pepsines bearing fictitious names, and prescribe **Boudault's only.**

BLANCARD'S PILLS

OF UNCHANGEABLE IODIDE OF IRON.

Blancard's Pills of Iodide of Iron are so scrupulously prepared, and so well made, that none other have acquired a so well deserved favor among physicians and pharmaceutists. Each pill, containing one grain of proto-iodide of iron, is covered with finely pulverized iron, and covered with balsam of tolu. Dose, two to six pills a day. The genuine have a *reactive silver seal* attached to the lower part of the cork, and a green label on the wrapper, bearing the fac-simile of the signature of

Blancard

Pharmacien, No. 40 Rue Bonaparte, Paris

without which none are genuine.

BEWARE OF IMITATIONS.

E. FOUGERA & CO., AGENTS, NEW YORK. 1297 tf.

For Consumption and Wasting Diseases.

HYDROLEINE

Has been proved of the highest value in CONSUMPTION and all WASTING DISEASES, invariably producing IMMEDIATE INCREASE in FLESH and WEIGHT.

FORMULA OF HYDROLEINE.

Each dose of two teaspoonfuls, equal to 120 drops, contains:

Pure Oil,	**80 m. (drops.)**	**Soda,**	**1-3 grain.**
Distilled Water,	**35 m.**	**Boric Acid,**	**1-4 "**
Soluble Pancreatin,	**5 grains.**	**Hyocholic Acid,**	**1-20 "**

DOSE.—Two teaspoonfuls alone, or mixed with twice the quantity of soft water, to be taken thrice daily, with meals.

The principles upon which this discovery is based have been described in a treatise on "THE DIGESTION AND ASSIMILATION OF FATS IN THE HUMAN BODY," by H. C. BARTLETT, PH.D., F.C.S., and the experiments which were made, together with cases illustrating the effect of Hydrated Oil in practice, are concisely stated in a treatise on "CONSUMPTION AND WASTING DISEASES," by G. OVEREND DREWRY, M.D.

In these treatises the Chemistry and Physiology of the Digestion of the Fats and Oils is made clear, not only by the description of a large number of experiments scientifically conducted, but by cases in which the deductions are most fully borne out by the results.

☞ *Copies of these valuable works will be sent free, on application, to all who mention THE MEDICAL AND SURGICAL REPORTER.*

HYDRATED OIL,

HYDROLEINE,

WATER AND OIL,

May be described as partially digested oil, which will nourish and produce increase in weight in those cases where oils or fats not so treated are difficult or impossible to digest. In CONSUMPTION and other WASTING DISEASES the most prominent symptom is EMACIATION, of which the first is the starvation of the fatty tissues of the body, including the brain and nerves. This tendency to emaciation and loss of weight is arrested by the regular use of HYDROLEINE, which may be discontinued when the usual average weight has been permanently regained.

The ordinary so-called emulsions of Cod-liver oil and other fats, WHETHER PANCREATIZED OR NOT, merely remain in the form of a coarse mechanical mixture for a short time after agitation. The digestion of oil having in no sense been artificially produced, still devolves upon those functional powers the deficiency of which is the most prominent symptom in these cases.

HYDROLEINE is not a patent medicine or a secret preparation; the formula is on every bottle. Can be taken by the most delicate stomach; is immediately assimilated.

The permanence and perfection of the emulsion, and the extreme solubility of the HYDRATED OIL, solely prepared and sold by us under the name of HYDROLEINE, is shown by its retaining its cream-like condition as long as the purest Cod-liver Oil will retain its sweetness. Unlike the preparations mentioned, or simple Cod-liver Oil, it produces no unpleasant eructation or sense of nausea, and should be taken in such very much smaller doses, according to the directions, as will insure its complete assimilation; this, at the same time, renders its use economical in the highest degree.

To brain-workers of all classes, Hydrated Oil is invaluable, supplying as it does the true brain food.

Economical in use—certain in result Tonic—Digestive and Highly Nutritive.

NEW PRINCIPLE FOR THE ASSIMILATION FAT.

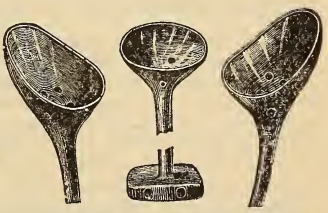
DR. McINTOSH'S
NATURAL UTERINE SUPPORTER.



No instrument has ever been placed before the medical profession which has given such universal satisfaction. The combination is such that the physician is able to meet every indication of Uterine Displacements. Falling Womb, Anteversion, Retroversion and Flexions are overcome by this instrument, where others fail. This is proven by the fact that, since its introduction to the profession it has come into more general use than all other instruments combined.

Among the many reasons which recommend this Supporter to the physician is its self-adjusting qualities. The physician, after applying it, need have no fear that he will be called in haste to remove or readjust it, as is often the case with rings and various pessaries held in position by pressure against the vaginal wall, as the patient can remove it at will, and replace it without assistance.

The Abdominal Supporter is a broad morocco leather belt, with elastic straps to buckle around the hips, with concave front, so shaped as to hold up the abdomen. The Uterine Support is a cup and stem, made of highly polished hard rubber, very light and durable, shaped to fit the neck of the womb, with openings for the secretions to pass out, as shown by the cuts. Cups are made with extended lips, to correct flexions and versions of the womb. The cup and stem is suspended to the belt by two soft elastic rubber tubes, which are fastened to the front of the belt by simple loops, pass down through the stem of the cup and up to the back of the belt. These soft rubber tubes being elastic, adapt themselves to all the varying positions of the body, and perform the service of the ligaments of the womb. The instrument is very comfortable to the patient, can be removed or replaced by her at will, can be worn at all times, will not interfere with nature's necessities, will not corrode, and is lighter than metal. It will answer for all cases of Anteversion, Retroversions, or any Flexions of the womb, and is used by the leading physicians with never-failing success, even in the most difficult cases.

Our Reduced Prices are to Physicians, $6.00; to Patients, $10.00.

Instruments sent by mail, at our risk, on receipt of price, or by Express, C. O. D., with the Express charges for returning the money added.

☞ CAUTION.—Owing to the great sale and popularity of our instrument various and base imitations are sold by unscrupulous parties. In order to get the genuine, it is best to order direct from us.

DR. McINTOSH'S NATURAL UTERINE SUPPORTER CO.,
192 Jackson Street, Chicago, Ill.

Our valuable pamphlet, "Some Practical Facts about Displacements of the Womb," will be sent you free on application. 1281-1332

In corresponding with Advertisers please mention THE MEDICAL AND SURGICAL REPORTER.

BEEF PEPTONE,

IN TRANSPARENT GLASSY SCALES,

Containing only the animal or azotized matter of the Beef. Each ounce is equal to 16 ounces of raw beef, easily soluble, and still faster in hot water.

This Beef Peptone is digested from tender, juicy Beef, by the aid of the *Crystal Pepsin,* of my manufacture (Jensen's Crystal Pepsin). Unlike the various BEEF EXTRACTS, this preparation contains all the nutritive constituents of the Beef, in a thoroughly digested state, ready for absorption into the system, while the Beef Extracts are entirely devoid of the chief elements of nutrition, such as the fibrinous, gelatinous and albuminous portions of the Beef, they only consisting of the concentrated saline constituents, with barely a trace of animal matter to keep its consistence. The difficulty so long experienced by the profession throughout the world, in preparing a PEPTONE entirely free from those chemical agents necessary for its manufacture, so as to render it fit for use, is hereby demonstrated to be successfully overcome, as it contains no foreign matter, and will stand the most severely scrutinizing test as to perfectness, also possessing flavor of the Beef, and so palatable as to render it highly agreeable.

Put up in bottles holding One ounce, Eight ounces, and one Pound.

Kept by the Wholesale and Dispensing Druggists in general.

DEPOT—L. WOLFF'S Pharmacy,

Northwest corner Twelfth and Chestnut Streets.

JENSEN'S CRYSTAL PEPSIN,

IN ARTIFICIAL CRYSTALS,

Strictly inodorous and tasteless, and perfectly soluble in water without acid.

THIS PEPSIN, now so popular with the profession, has created an impetus in the consumption of the same and physicians of the highest standing, who before the introduction of this active PEPSIN, with good reason, entirely abandoned the use of PEPSIN, are now the most eager in prescribing JENSEN'S CRYSTAL PEPSIN, whenever it is indicated, and since the knowledge of its great solvent power (gr. j. of it will dissolve the boiled whites from two to three eggs) has been established even among those susceptible to be great doubters it has caused itself to be utilized in many novel ways, by the thinking profession; for instance, in substituting morphia, chloral, etc., as a hypnotic, relieving gastric troubles where the above remedies have been prescribed, creating morphine and chloral habits In removing diphtheritic patches it is successfully used combined with water, glycerine, and muriatic acid, and the same composition, diluted with more water, as a spray in bronchial troubles, dissolving muco-purulent matter, as well as a spray for same in catarrhal affections.

THIS PEPSIN

Has also been used with success in dissolving and evacuating coagulated blood in the bladder, dispensing with surgical operations in such cases. Many other novel applications could be mentioned, if not in want of space. It is found to be FORTY times stronger than saccharated pepsin. One to three grains is an active dose.

KEPT BY ALL DRUGGISTS.

The above preparations are only manufactured and put up by

CARL L. JENSEN, M.D., PH.G.,

865 North 26th Street, Philadelphia, Pa.

No other Wholesale Agents for this Pepsin are longer engaged, than the Wholesale Druggists throughout the United States.

This College has for its *collegiate year* two sessions.

Regular Session commences Wednesday, September 7th, 1881, and closes March 1st, 1882.

Recitation Term (optional) commences March 15th, 1882, and closes June 14th, 1882.

Graded Course of three terms, of six months each.

PLAN OF INSTRUCTION.

By *Lectures*, *Recitations* and *Clinics*, together with *practical work* in the Anatomical, Physiological, Chemical and Pharmaceutical Laboratories.

Clinics are held *daily*.

Clinical Work in Hospitals and Dispensaries is given to the Senior Class (see Clinics), in *small sections*, under the charge of a *Clinical Teacher*, in all the departments of Medicine and Surgery.

Three Large Hospitals and *two Dispensaries* afford unlimited material for instruction.

ADMISSION.—Candidates for admission are required to pass a preliminary examination, unless satisfactory documentary evidence can be presented, that is equivalent to the standard adopted. (See Catalogue.)

FEES.

Regular Session.—Matriculation, $5.00; Lecture Tickets, $50.00; Hospital Tickets, $10.00 Examination (final), $25.00.

Recitation Term.—$10.00 for those who have attended Regular Session; all others, $25.00, $15.00 of which will be applied on the next Regular Term.

Board and Rooms can be obtained for $3.00 to $5.00 per week, the average being $4.00.

177 Griswold Street, Detroit, Mich.

1274-tf

CRINON'S HÆMOGLOBIN,

The Albuminoid Ferruginous Principle of Blood.

HÆMOGLOBIN is the only physiological chalybeate. Associated as it is with the phosphates of the blood, it forms the most powerful of tonics, and at the same time a most nourishing food. It is especially useful in cases of *Anæmia, Chlorosis, Cachexias, Exhaustion* caused by excess of work, nervous debility, fatigue resulting from parturition and lactation. It replaces entirely liquid blood, which has been recommended and used with success in *Phthisis* and *wasting away.*

It is offered in two forms: In cachets (wafers), 60 of which are contained in a box; combined with chocolate in small squares, 30 of which are in a box; both forms can be sent by mail.

Prepared by C. CRINON, Paris, Pharmacist of the first class, Laureate of the Hospitals of Paris Samples may be obtained by application to

E. FOUGERA & CO., New York, Agents for the U. S

DOCTOR RABUTEAU'S

(Laureate of the Institute of France.)

DRAGEES, ELIXIR & SYRUP OF IRON.

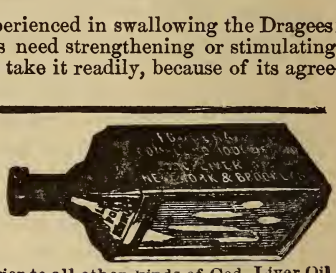
"The experiments made in the hospitals of Paris have demonstrated that *Dr. Rabuteau's Dragees, Elixir and Syrup* regenerate the red globules of the blood with a rapidity never observed with the use of the other ferruginous preparations. These results have been proved by the various *Compt-Globules.*

"The ferruginous preparations of *Dr. Rabuteau* do not cause any constipation, and are perfectly tolerated by the weakest persons."—*Gazette des Hospitaux.*

Dr. Rabuteau's Elixir is prescribed when some difficulty is experienced in swallowing the Dragees; it is especially adapted to weak persons, whose digestive functions need strengthening or stimulating.

Dr. Rabuteau's Syrup is especially prepared for children, who take it readily, because of its agreeable taste.

FOUGERA'S COMPOUND IODINISED COD LIVER OIL.



Since the introduction of this oil in 1858, it has been found to be superior to all other kinds of Cod Liver Oil for the treatment of **General Debility, Consumption, Scrofula, Rickets, etc.**

It possesses not only all the **nourishing** qualities of the best Cod Liver Oil, but also the **tonic, stimulant** and **alterative** properties of **Iodine, Bromine** and **Phosphorus,** which are added in such proportions as to render it therapeutically five times as efficacious as pure Cod Liver Oil.

Through its **increased curative action, FOUGERA'S COD LIVER OIL** will be found to cure disease in a much shorter time than the pure oil; while favorable results will be obtained by its use in many advanced cases when the pure Cod Liver Oil would fail entirely.

FOUGERA'S READY-MADE MUSTARD PLASTERS.

A most useful, convenient, clean, and economical preparation. Not liable to change if kept in a dry place. Made of two strengths. Plasters No. 1, of pure mustard; Plasters No. 2, of one-half mustard. Price 40 cents, the tin box, or tin roll, of 10 plasters each. DIRECTIONS.—Dip the Plaster, or Plasters, a minute or two, in cold water; apply on the part, and cover with a band.

FOUGERA'S COMPOUND ICELAND MOSS PASTE.

(Iceland Moss, Lactucarium, Ipecac and Tolu.)

Used with great success against nervous and convulsive coughs, Whooping Cough, Acute Bronchitis, Chronic Catarrh, Influenza, etc.

Wakefulness, Cough, and other sufferings in Consumption, are greatly relieved by the soothing and expectorant properties of this Paste.

FOUGERA'S IODO-FERRO-PHOSPHATED ELIXIR OF HORSE-RADISH.

This Elixir contains Iodine, Pyrophosphate of Iron, the active principles of antiscorbutic and aromatic plants, and acts as a **tonic, stimulant, emmenagogue,** and a **powerful regenerator of the blood.** It is an invaluable remedy for all constitutional disorders due to the impurity and poverty of the blood. One of the advantages of this new preparation consists in combining the virtues of Iodine and Iron without the inky taste of Iodide of Iron.

JOHNSTONE'S IMPROVED

ADAPTABLE POROUS FELT SPLINTS.

AHL'S SPLINT MANUFACTURING COMPANY, LIMITED,

123 & 125 South Eleventh Street, PHILADELPHIA, PA.

THE ADAPTABLE POROUS SPLINTS, invented and improved by W. H. JOHNSTONE, have been tested extensively in both civil and military practice for a number of years, and have been endorsed and recommended in the most unqualified manner by the celebrated and distinguished Surgeons of America.

Their *porosity* is a peculiar and a valuable property. While the material is firm and insoluble, it permits readily the passage of air and fluids, so that, on one hand, the heat from the inflamed surface, the perspiration, and the morbid exhalations, are not confined, to the detriment of the patient, *as is the case in every other kind of splint*, but pass off freely; and on the other hand, lotions of cold or warm water, medicated or not with weak alcohol, carbolic acid, arnica, tincture, solutions of the sulphites, etc., can be constantly applied without disturbing the dressings. This, it will readily be seen, is a most invaluable property when the parts are bruised, lacerated, filled with extravasated blood, or erysipelatous, and give these splints a conspicuous advantage over all others.

From FRANK H. HAMILTON, M. D., Professor of Fractures and Dislocations in the Bellevue Hospital Medical College, author of "A Treatise on Fractures and Dislocations," etc.

Having examined carefully *JOHNSTONE'S IMPROVED ADAPTABLE POROUS FELT SPLINTS*, I feel warranted in recommending them to the Profession as superior to all other manufactured splints now in use. They possess all the essential qualities of a good splint, having firmness, pliability and lightness.

FRANK H. HAMILTON, M. D.,
Prof. Military Surgery and Fractures and Dislocations, Bellevue Hospital Col.

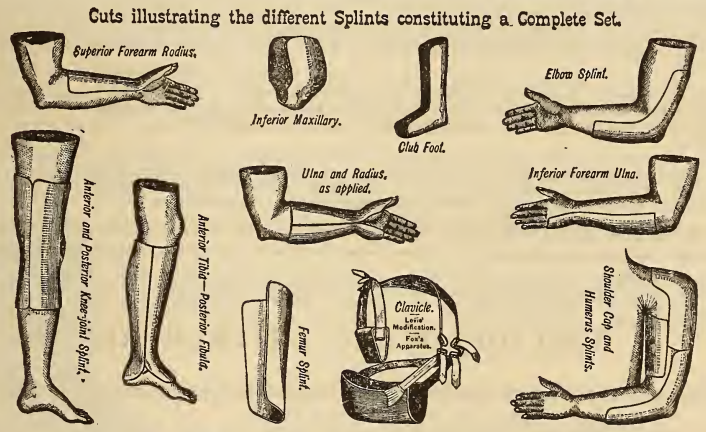
From PROF. D. HAYES AGNEW, Prof. Surgery, University of Penna.

1611 CHESTNUT STREET, PHILADELPHIA, *February 6th*, 1879.

The Adaptable Felt Splints, formerly known as those of Dr. Ahl, with the improvement now made by W. H. Johnstone, which renders them in every way superior to the former, I regard as very excellent appliances in the treatment of fractures.

D. HAYES AGNEW,
Prof. Surgery, University of Pennsylvania.

Cuts illustrating the different Splints constituting a Complete Set.



SPECIAL NOTICE TO THE PROFESSION AND TRADE.

Our *policy* heretofore in the introduction of JOHNSTONE'S IMPROVED ADAPTABLE POROUS FELT SPLINTS, has been to confine the sales and business negotiations directly to the Doctors themselves, declining in every case to sell our goods through Dealers; we having assured the Profession generally, both through our agents and catalogues, that *JOHNSTONE'S IMPROVED SPLINTS* could only be obtained by subscription.

We wish to announce, that owing to the large demand for our goods and the constant importunity on the part of *Surgeons* everywhere to place our Splints on sale with their Instrument Dealer or Druggist, to afford them greater convenience and facility in obtaining the pieces in duplicate, we have at last acceded to that request, and hereafter *JOHNSTONE'S CELEBRATED FELT SPLINTS* can be obtained at most dealers in Instruments and Drugs throughout the United States, at the same price which they were heretofore sold, viz:

A complete set, embracing fifty (50) pieces—twenty-five for adults and twenty-five for children—is thirty ($30) dollars. Extra or duplicate pieces can always be obtained from your DEALER, at one dollar each.

JOHNSTONE'S CELEBRATED SPINAL JACKET, for Curvatures and Deformities, have met with unparalleled success, and, from their merit, secured the unqualified endorsement and approbation of our celebrated orthopædic specialists, and particular expression of gratitude from the patients who are wearing them. For full information, send for Descriptive Circulars.

Should your Instrument dealer fail to have a supply of our Splints, and decline to carry them in stock, orders sent to us will receive prompt attention.

AHL'S SPLINT MANUFACTURING CO., Limited.
W. H. JOHNSTONE, Manager.

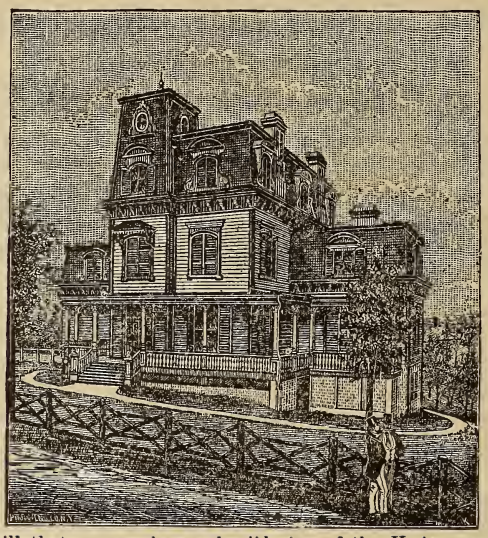
THE DE QUINCEY HOME,

Fort Washington, **New York City.**

A Private Asylum for the Treatment of the Opium, Morphine, Chloral, Chloroform and Hashisch Habits, Nervous Diseases and Inebriety.

Drs. H. H. Kane
and
W. H. Vittum,
in charge.



Consulting Physicians.

Prof. Wm. A. Hammond,
Prof. T. Gaillard Thomas,
Dr. Edward C. Spitzka,
Dr. Daniel M. Stimson,
Dr. Edward T. Ely,
Dr. G. H. Wynkoop,
Dr. Andrew H. Smith.

Situated upon a high hill that commands a splendid view of the Hudson and Harlem rivers, Spuyten Duyvil Creek, and the beautiful country for miles around; surrounded by ample grounds and magnificent drives; in easy communication with the city by means of the Sixth and Ninth Avenue Elevated and the Hudson River Railroads; away from the dust, noise, crowding and malaria of the city; with hot and cold water in every room, furnace and grate-fire heating, croquet, horses and carriages, boats and fishing, an excellent *cuisine*, trained nurses and careful medical attendance, it possesses unequaled advantages for the treatment of cases of this kind.

The plan of treatment pursued in the cure of opium, morphine and chloral takers is that of *rapid reduction*, which possesses all the advantages, and none of the dangers of Levenstein's *sudden deprivation*, or the prolonged agony of *gradual reduction*. Each case is studied and treated in accordance with its peculiarities and the idiosyncrasies of the patient, no set plan of treatment being pursued, at the expense of the person's health or comfort.

Our Home, furthermore, offers special facilities for the treatment by *rest, diet, and massage*, according to the plan of Weir Mitchell, of that large class of nervous diseases so commonly met with in ladies suffering from uterine troubles. This plan of treatment has been specially studied, and nurses competent to carry out its provisions in every detail will be furnished. For further particulars, etc., address 1299-1350

TANRET'S PELLETIERINE.

For the TREATMENT of TAPE-WORM (Tænia Solium).

This new Tænifuge, the Active Alkaloid of Pomegranate Bark, has of late come into extensive use in France, for the treatment of Tape-worm (Tænia Solium). The results of numerous experiments with it at the Marine Hospitals of Toulon, St. Mandrier, etc., and in the Hospitals of Paris, St. Antoine, La Charité, Neckar, Beaujon, etc., have all been most satisfactory. Doctor Dujardin Beaumetz, Member of the Academy of Medicine, and Prof. Laboulbene, in their report to the Society of Therapeutics, have given it their unqualified approval, after the most searching experiments. This preparation is pleasant to administer, and if certain preliminaries are observed success will be insured.

PELLETIERINE is prepared by Mr. CHAS. TANRET, Pharmacien de First Class, 64 Rue Basse du Rempart, Paris. 1242eow-tf

McINTOSH'S COMBINED

Galvanic AND Faradic Battery.

THIS CELEBRATED BATTERY COMBINES BOTH THE GALVANIC AND FARADIC CURRENT,

Which can be used separately or combined. Any strength and intensity desired can be obtained for use in Electro-therapeutics. THIS BATTERY is constructed on an IMPROVED PLAN, as follows: The zinc and carbon plates are arranged in couples, securely clamped to hard rubber plates, with thumb screws. These screws are also used for binding posts. All the connections are positive. The cells are made in sections of six, of hard rubber, with hard rubber drip cup. The following points of excellence render our Batteries superior to others:

1. They combine the only Portable Galvanic and Faradic Battery in one case.

2. They weigh one-half less than other Batteries of the same number of cells.

3. The cells are made in sections of six, of one solid piece of hard, vulcanized rubber; by this arrangement they can be emptied, cleaned and filled as easily and quickly as one cell, and will not crack, break or leak.
4. A hard rubber drip cup is placed by the side of each section of cells, to receive the zinc and carbon plates when removed from them. By this arrangement we avoid the use of absorbent materials and soiling the Battery
5. The Hydrostat is perfect. The rubber plates which hold the elements project over on one side enough to cover the cells when the zinc and carbon plates are placed in the drip cups. The under side of this projection is covered with thick, soft rubber, which is securely clamped to the cells sections, and makes them water tight.
6. This is the only Battery in which the zinc and carbon plates can be kept clean by simply rinsing them.
7. A zinc or carbon plate can be removed by simply loosening a binding post; and all parts of the Battery can be duplicated, as like parts are made exactly alike. We will be pleased to send circulars and our illustrated catalogue, giving full information, price, etc., free, upon application.

McINTOSH GALVANIC BELT AND BATTERY CO.,

MATHEY-CAYLUS' GLUTEN

SILVER

1854

CAPSULES

OF

PURE COPAIBA AND OTHER MEDICINES.

SILVER

1854

Adapted and recommended for the cure of recent or chronic Gleets, Fluor Albus, etc., etc.

The MATHEY-CAYLUS' CAPSULES, *coated with gluten*, present the most perfect mode for administering Copaiba, Cubebs, Norway Tar, Turpentine, and other remedies, the disagreeable odor and taste of which are often a hindrance to their use. This mode of preparing capsules, which has been approved by the Academy of Medicine, has been recommended in their clinical lectures by eminent Professors in the hospitals of Paris, as well as in those of New York and London.

By the first physicians of the hospitals of Paris, London, and New York.

SPECIAL ADVANTAGES OF MATHEY-CAYLUS' GLUTEN CAPSULES.—Being formed of thin, transparent, and readily assimilated coating, they so cover and disguise the medicine to be given, that it can be taken without disgust, but with ease. In this respect, they differ widely from the gelatine capsules, which have a hard, thick coating, which swells beyond measure, in the stomach, are hard to be swallowed, and what is of great importance, they create disturbance in the digestive functions.

The special advantage of the coating of gluten consists in the fact that, notwithstanding its extra thinness, and although it softens under the action of the gastric juice, it can pass the stomach without breaking, and only in the intestines is the medicinal matter liberated; this accounts for the fact that Mathey-Caylus' Capsules never cause the nausea, eructations, and dyspeptic symptoms, which are complained of by many persons using other preparations.

Finally, their regular ovoid form, which is so favorable to swallowing, their pleasant appearance, which dispels all disgust, and the advantage of being entirely free from taste and smell, recommend the use of these capsules even to the most delicate persons.

Thankful to the Medical Profession for the liberal patronage heretofore bestowed upon us, we hope that they will continue their favors, and we are convinced that they will never have any reason to regret the generous welcome they have given to our preparations.

MATHEY-CAYLUS' CAPSULES are never sold, except in bottles having the following inscription printed in the glass: MATHEY-CAYLUS A PARIS. And each bottle contains 64 capsules, making them the cheapest capsules in the market.

The following different kinds of Mathey-Caylus' Gluten Capsules are now offered:

COPAIBA AND TANNIC ACID,
COPAIBA AND S. N. OF BISMUTH,
COPAIBA AND CATECHU,
COPAIBA AND MAGNESIA,
COPAIBA, CUBEBS AND ALUM,
COPAIBA, CUBEBS AND RHATANY,
COPAIBA AND RHATANY,
COPAIBA AND CITRATE OF IRON,
COPAIBA AND CUBEBS,
COPAIBA PURE,
COPAIBA, CUBEBS AND CARB. OF IRON,
VENICE TURPENTINE, NORWAY TAR, PURIFIED,
CUBEBS AND TURPENTINE,
CUBEBS AND TANNATE OF IRON,
CUBEBS AND ALUM,
CUBEBS PURE,
COPAIBA AND MATICO,
COPAIBA, IRON AND OIL OF SANDAL,
COPAIBA AND OIL OF SANDAL,
COPAIBA, PEPSIN AND BISMUTH,
COPAIBA AND TAR,
COPAIBA, CUBEBS AND OIL OF SANDAL.

HOLLOW SUPPOSITORIES.

WITH STOPPERS. ALL MADE FROM PURE BUTTER OF COCOA, ONLY.

Aural, Nasal, Rectal, Urethral, Cystic, Vaginal, Intra-Uterine, and Veterinary Suppositories.

The object of this invention is to supply Physicians, Druggists, Veterinary Surgeons, and others, with HOLLOW SUPPOSITORIES, into which they can put any kind of medicine or nutriment, thus producing firm, smooth, and evenly medicated Suppositories, that are cheaper and more reliable than those made by the old method.

RECTAL ABSORPTION.

"The mucous membrane of the rectum, like that of other portions of the alimentary canal, posseses all the requisites, more or less, for the exercise of absorption."

Liebig states that a strong solution of common salt disappeared so completely in the rectum, that an evacuation one hour afterward was found to contain no more than the usual portion of salt.

Many medicinal substances act more energetically when applied to the rectum than when received into the stomach.

Baron Dupuytren said: "The rectum *absorbs*, but does not *digest*. The medicinal agent," he says, "owing to the absence of digestion, passes more directly, more purely, and more surely to its destination, than the same medicine does when taken into the stomach."

M. Orfila asserts that those medical agents which operate through the medium of absorption, such as opium, tobacco, etc., are much more active by the rectum than by the stomach.

Dr. J. H. Scorff reports four cases where he was successful in removing the vomiting of pregnancy, by introducing 20 grains of chloral into the rectum, night and morning. He only found it necessary to use the remedy three or four times.

Chloral is the remedy *par excellence* in the ravings of delirium tremens, and in cases of delirium and insomnia combined; also in infantile convulsions and attacks of laryngysmus stridulus.

Dr. Hickman reports a case of typho-malarial fever, which chloral was found to control in a happy manner. The chloral was introduced per rectum.

"REST TO THE STOMACH,"

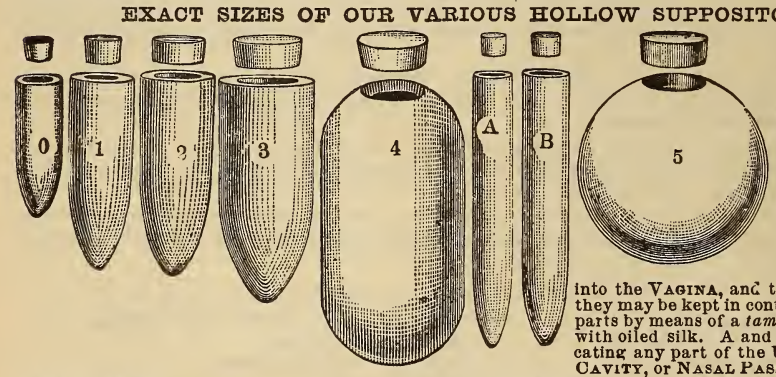
says Mr. Theodore Williams (in London *Lancet*, October 24th, 1874), is of the highest importance in some of the diseases of this organ. In such cases we possess in the rectum an effective second stomach, which, if it does not afford us the pleasure of digestion, spares us many of its pains."

Nutritious substances are taken up by the absorbents, and thus find their way into the economy, and produce their assimilative and nutritive effect. Haller demonstrated the fact that digestion can and does take place in the alimentary canal. He had the greatest confidence in the absorptive and digestive powers of the rectum to sustain life indefinitely.

HYPODERMIC MEDICATION.

Dr. William Bodenhamer says: "This now very common and often misused method is of great value in numerous cases, yet I am decidedly of the opinion that rectal medication is of greater importance; indeed, it is greatly preferable in many instances, being much less dangerous, much more convenient and simple; and the remedies, too, act through this medium with almost equal celerity. But very few remedies can be used hypodermically in comparison to those which can be used by the rectum."

EXACT SIZES OF OUR VARIOUS HOLLOW SUPPOSITORIES.



Size 0 is for children. It may also be used for the EAR and in the NASAL PASSAGES. Nos. 1, 2 and 3 are RECTAL SUPPOSITORIES. Nos. 3 and 4 may be used for introducing nutriment into the system, *via rectum*. No. 4 is also a VAGINAL SUPPOSITORY. No. 5 is a "SPHERIC HOLLOW SUPPOSITORY," to introduce remedies into the VAGINA, and to the *os uteri*, where they may be kept in contact with the diseased parts by means of a *tampon* of cotton covered with oiled silk. A and B are used for medicating any part of the URETHRA or UTERINE CAVITY, or NASAL PASSAGES.

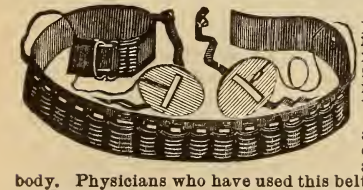
DR. McINTOSH'S ELECTRIC OR GALVANIC BELT.



This Belt is a perfect Galvanic Battery, composed of sixteen cells, placed in pockets on a belt. Each cell is made of hard vulcanized rubber, lined with copper, which constitutes the negative plate. The rubber coating perfectly insulates each cell. The positive plates are of zinc, wrapped in a porous material to absorb the exciting fluid, preventing contact with the copper, and permitting the current to pass from the copper to the zinc. The cells are charged without wetting the belt.

A current selector is so arranged that one or more cells can be used at pleasure. The electrodes are covered similar to ordinary battery electrodes, and connected with the cells by connecting cords. By this arrangement, a current from the belt can be applied to any part of the body. Physicians who have used this belt in their practice do not hesitate to recommend it to the profession.

Our pamphlet on "Medical Electricity," containing a full description of the belt and diseases, with manner of treatment, sent free on application. Address

McINTOSH GALVANIC BATTERY CO.,
1281-1332 **192 AND 194 JACKSON STREET, CHICAGO, ILL.**

HERCULES MALT WINE,

MANUFACTURED BY

CHAS. WOLTERS,

PROSPECT BREWERY, PHILADELPHIA.

This new and extremely palatable *Extract of Malt* is designed as an *invigorating Health and Table Beverage.* It is an agreeable and reliable remedy for *Indigestion, Debility, Anæmia* and *Malnutrition*, and is peculiarly adapted to *Enfeebled Persons, Convalescents* and *Nursing Mothers.*

The perfection of this excellent article has been reached after a long series of careful experiments, and it surpasses other Malt Extracts in flavor, efficacy, cheapness, and in the quality and combination of its constituents, as it essentially contains a large proportion of *Peptones*, which act as Digestors, a rich quantity of *Phosphates*, which are valuable Nutrients, and a medium proportion of *Hops*, serving as a general Stomachic and Nervine. 1301-1352m

Sold in Drug Stores, at 25 cents per Pint Bottle.

DUCRO'S ALIMENTARY ELIXIR,

A COMBINATION UNITING THE PROPERTIES OF

ALCOHOLIC STIMULANTS AND RAW MEAT.

This preparation, which has been used with great success in the hospitals of Paris, since 1868, is adapted to the treatment of all diseases requiring the administration, in a small volume, of a tonic able to stimulate and support the vital forces, as *Pulmonary Phthisis, Depression and Nervous Debility, Adynamia, Malarious Cachexia, etc.*

Registered COSMOLINE Trade Mark.

Unguentum Petrolei

Prepared by E.F.Houghton & Co. Philadelphia, U.S.A.

Put up in 1, 5, 10, 25, 50, and 100-lb. cans. Samples furnished on application. The post-office laws forbid anything of an oleaginous nature being sent through the mail.

In chemical composition, Cosmoline [Unguentum Petrolei] is an oleaginous hydrocarbon, corresponding to the heavy petroleum oils, and containing a large amount of the paraffines and olefines of the formulæ $C_{16}H_{34}$ and $C_{16}H_{32}$. It contains but a small percentage of the paraffines and olefines, corresponding to the formulæ C_7H_{16} and C_7H_{14}, respectively, and the offensive and irritating properties of the crude oil have been carefully removed. In the process of purification, no acids, alkalies, or other chemicals are employed, and no injurious additions of any kind are made to the natural product. The result is a semi-solid, translucent substance, with a faint odor and unctuous feel.

Cosmoline [Unguentum Petrolei] melts at about 100° Fah, (38° Cent.); and boils at about 625° Fah. (329° Cent.); its specific gravity is about 0.875 at 60° Fah.

As it contains no oxydizable or organic matter capable of change by putrefaction or fermentation, and is absolutely without affinity for moisture, it offers to the profession an admirable unguent, which can never decompose, ferment, or become rancid in any climate or temperature.

291 MADISON AVENUE, NEW YORK, February 26th 1878.

I have examined the preparations of Cosmoline as manufactured by E. F. Houghton & Co., Philadelphia, and believe them well adapted to the purposes for which they are designed. As lubricants, and as the bases of simple or medicated ointments, they have a decided advantage over the fixed oils and fatty substances in ordinary use, in that they do not become rancid, and do not acquire irritating qualities from atmospheric exposure. ALFRED C. POST, M.D., LL.D.,
Emeritus Professor of Clinical Surgery in the University of New York, Visiting Surgeon to Presbyterian Hospital, etc.

PHILADELPHIA, July 10, 1880.

MESSRS. E. F. HOUGHTON & CO.:

I have for a number of years made extensive use of Cosmoline [Unguentum Petrolei] and consider it a most valuable article for surgical purposes. Either as a dressing by itself, or as a vehicle for the application of medicaments, it is greatly superior to lard or other fatty matters, especially by reason of its non-liability to change by time or temperature.

Yours truly,
JOHN H. PACKARD, M.D.
1031 WALNUT ST., PHILADELPHIA.

MESSRS. E. F. HOUGHTON & CO.:

I have used extensively Cosmoline [Unguentum Petrolei] both in Dispensary and private practice, with very great satisfaction. As a vehicle in making ointments it is invaluable, and far superior to lard, for the reason that it will not become rancid or undergo chemical change like the latter, when exposed to the atmosphere. I cannot too highly commend it as an application in various skin diseases.

Yours truly, JOHN V. SHOEMAKER, A.M., M.D.,
Physician to the Pennsylvania Free Dispensary for Skin Diseases

208 WEST 34TH ST., NEW YORK.

MESSRS. E. F. HOUGHTON & CO.:

Gents:—I fully appreciate the value of your Cosmoline, or Unguentum Petrolei, and prescribe it frequently in ointments. Fluid Cosmoline I have used constantly for several years, as a lubricant of urethral sounds. It is the cleanest oil I know of for this purpose.

Yours truly, GEO. HENRY FOX.

NEW PHARMACEUTICALS

WORTHY OF THE

Attention of Physicians.

NITRO-GLYCERINE PILLS.

Nitro-glycerine is introduced on the authority of Dr. Murrell, of London, as a remedy in angina pectoris and in cases of chronic neuralgia in any part of the body. Cases of angina pectoris which had resisted all attempts at even alleviation, much less cure, have promptly yielded to nitro-glycerine, and a number of cases of actual cure are reported. This is more than can be said of any other known remedy. In neuralgia the effects of this drug have, in some instances, been scarcely less marked.

The pill form is very eligible, besides ensuring exactness of dose.

Liquor Ergotæ Purificatus.

This form of ergot is of constant strength. In its preparation only the active principles of the drug are retained, all inert and noxious ingredients being removed. As these active principles are assayed the liquor contains them in constant and definite proportions, and thus is obviated the uncertainty of strength due to variability in the quality of the sample of the drug employed. Liquor ergotæ purificatus is as constant in its strength as morphia, quinia, or any of the other alkaloids of vegetable drugs.

Sanguis Bovinus Exsiccatus.

In this preparation of blood we have a true food, the albumen being entirely retained. In this respect it differs from the various beef extracts, beef essences, etc., in the market. These preparations are, from the very methods of their manufacture, entirely deprived of albumen, the true nutritive principle of beef, and are thus not foods in any proper sense of the word.

Sanguis bovinus exsiccatus is blood deprived of nothing but its water and fibrin, which latter is naturally small in quantity and practically of no nutritive value.

CASCARA CORDIAL.

This laxative and alterative preparation stands unequaled among pharmaceutical preparations as a remedy in constipation. Its agreeable and efficient action has been abundantly attested by the medical profession of this country, and it stands now as a remedy of unquestionable efficacy in chronic constipation. Great care should be exercised in not prescribing too large a dose, inasmuch as cascara sagrada, its active ingredient, overcomes constipation by its tonic action on the bowel, rather than by direct laxative influence.

—FULL DESCRIPTIVE CIRCULARS OF THE ABOVE—

WILL BE SENT FREE, ON APPLICATION TO

PARKE, DAVIS & CO., DETROIT, MICHIGAN,

MANUFACTURING CHEMISTS AND SPECIAL DEALERS IN NEW AND RARE DRUGS.

McKESSON & ROBBINS'

BI-MURIATE QUINIA WITH UREA

(Quinia Bi-Muriatica Carbamidata),

THE MOST SOLUBLE SALT OF QUINIA.

Specially Adapted to Hypodermic Use.

Will completely dissolve in double its weight of cold water, or in its own weight of boiling distilled water, which is preferable.

This Salt may be procured through retail druggists, from McKesson & Robbins, in original vials of 1, 2 and 4 grammes, and their solution, containing 50 per cent. of the Salt, in $\frac{1}{8}$ oz. and one ounce vials.

ALOIN AND STRYCHNIA GRANULES

LAXATIVE AND TONIC.

INVALUABLE IN CHRONIC CONSTIPATION.

Prescribed with the most satisfactory results in cases in which, from infirmity or morbid condition, the tone of the system is impaired, and in which the administration of more violent purgatives might be attended with danger.

Write McKesson & Robbins on your Prescriptions and Orders.

McKESSON & ROBBINS, Manufacturing Chemists,

91 FULTON STREET, NEW YORK.

1297-1348eow.

SCOTT'S EMULSION

PURE COD LIVER OIL

WITH

HYPOPHOSPHITES OF LIME AND SODA

PERFECT, PERMANENT, PALATABLE.

The well-known virtues of this preparation, that has now been before the profession for a number of years, hardly requires comment from us. But we desire, for the information of those whose attention may not have been directed to it, to present the following facts:—

FIRST.—We use in the manufacture of our Emulsion, Cod-Liver Oil that is prepared expressly for us, and is strictly pure, which is the most important consideration to the Physician.

SECOND.—By our process of Emulsifying, we so thoroughly incorporate the Oil with the Hypophosphite Salts, that the mixture is perfectly homogeneous and remains in that condition, without the slightest separation or change, for years, unless exposed to the air or intense heat.

THIRD.—It is so palatable and easy of digestion that it can be administered to children and persons with most sensitive stomachs without the slightest repugnance, and we are confident, from the results that have been obtained in the use of this preparation, and the flattering testimonials we have received from prominent physicians, that the proper manner of administering Cod-Liver Oil, even to patients that can tolerate the crude oil, is in the form of a palatable and easily digested Emulsion. There are some in the profession who adhere to the use of the plain oil, but, with all due deference, if they will make a trial of our Emulsion, we believe their prejudices will be removed, and they will find it much more beneficial to their patients.

With all the numerous Foods, Cereals and so-called Constructive Agents of uncertain value that are being introduced the physician must sometimes be at a loss to know what to prescribe. But we are assured that the profession will bear us out in the statement that in all pulmonary troubles, especially where the lung tissue is involved, in Scrofulous children and in Anæmic women of consumptive tendencies, as well as in general nervous debility, our combination will produce results, if properly administered, unequaled by any other preparation, and most satisfactory to the physician and patient. We most respectfully ask those who have never prescribed or seen its results to give it a trial, and if you desire to make a personal inspection of it we will be pleased to send a sample by express, prepaid.

FORMULA.—50 per cent. of pure Cod-Liver Oil. 6 grains of the Hypophosphite of Lime, and 3 grains of the Hypophosphite of Soda to a fluid ounce. Emulsified with mucilage and glycerine.

BUCKTHORN CORDIAL

RHAMNUS FRANGULA.

We desire to call the attention of the profession to this preparation, and although they may be familiar with its name and general characteristics, yet, on account of there not being a preparation in the market of uniform strength and quality, may not have a proper appreciation of its value. As far as our experience goes in the various tests made by our medical friends, we can present the German bark, *Rhamnus Frangula*, in the form of our *Buckthorn Cordial*, with perfect confidence that we will secure the encouragement and assistance of the profession in promoting its growth and giving it the position it deserves as a medicine. It seems to be almost a specific for Habitual Constipation and Indigestion, acting mildly but efficiently, without causing the nausea that usually accompanies the use of a cathartic. At the same time producing a tonic effect upon the bowels, so that as the patient recovers, the dose may be gradually decreased until a normal condition takes place. We use great care in the selection of the Bark, as we find it necessary that it should be of the proper age and condition, and carefully exhausted, to secure its true active principle.

We combine it with aromatics in such a manner as to make a pleasant cordial, acceptable to the most sensitive stomach. We shall be very glad to furnish samples free to all physicians, upon application, giving instructions for its use, etc. Prepared by SCOTT & BOWNE

SCOTT & BOWNE'S PALATABLE CASTOR OIL

IN AN EMULSION.

We respectfully submit the above elegant preparation to the notice of the profession, and desire them to favor us with a trial. So far as it has been tested, it has met with their entire approval; and we believe it is not only destined to take the place of the crude oil, but to be used much more extensively. In our process of emulsifying, it is not only *permanent* and *palatable*, but is deprived entirely of its griping properties. The inestimable nature of Castor Oil as a laxative and cathartic, in the varied intestinal derangements of children, and in Diarrhœa, Colds, etc., is accepted by all, and in the available form in which we present it, in a perfectly palatable mixture, deprived entirely of its nauseous, sickening properties, and kindly received by the most sensitive stomach, it must occupy the exalted position it deserves as a medicine. In its administration, it requires very little more than the crude oil, but the experience of the physician will soon guide him in its use. It is put up in 4 oz. bottles, that sell for 25 cents; also in quarts for physicians to prescribe as desired. Samples will be furnished free on application. FORMULA:—50 *per cent. of Pure Cold Pressed Castor Oil*, 15 *per cent. of Chemically Pure Glycerine.* Prepared by

1306-1357eow

FOR PHYSICIANS' USE ONLY.

SVAPNIA

OR

PURIFIED OPIUM.

CONTAINS THE

ANODYNE AND SOPORIFIC

ALKALOIDS

CODEIA,

NARCEIA

AND

MORPHIA.

EXCLUDES THE

POISONOUS & CONVULSIVE

ALKALOIDS

THEBAINE,

NARCOTINE

AND

PAPAVERINE.

DOSE, THE SAME AS OPIUM.

This article is not intended for popular use, but only on prescription of the profession. It is to take the place of Opium in cases where that drug acts injuriously.

Dr. John Harley, of London, in his "Old Vegetable Neurotics," details a large number of experiments upon the human and animal system, with six of what he considers the narcotic alkaloids. He concludes that although all six possess both narcotic and hypnotic properties, yet these are so varied in degree and force as to make their effects, when exhibited singly, very distinct from those following their exhibition in combination.

Taking the experience of practical physicians with Dr. Harley's results, as a basis, we would group them in the following order:

First Group.	Second Group.
Anodyne and Hypnotic Elements.	Narcotic and Convulsive Elements.
1. Morphia.	1. Thebain.
2. Narceia.	2. Cryptopin.
3. Codeia.	3. Papaverin.

Now SVAPNIA *is a distinctive name* given *to the first group, representing* the ANODYNE and HYPNOTIC ELEMENTS; *the second group, or the narcotic and convulsive* elements *of Opium being eliminated;* and is *not*, therefore, a simple principle, or a single constituent of Opium.

The relative values of each being known, we can select and utilize those that are valuable, and reject those known to be deleterious and inert.

This is what we claim, and all we claim for SVAPNIA. *It can be relied upon and given in all cases where Opium or Morphia is indicated, with equally good effects;* and in addition to this, there will be found in the practice of every physician cases occurring almost every day, in which idiosyncrasy and peculiar states and diseases of the brain debar us from the use of Opium and Morphia, but where Svapnia can be exhibited with the happiest results.

In SVAPNIA there is retained all the Morphia and the greater part of the Codeia and Narceia, but combined with the native acids of Opium, meconic and thebolactic, in such a manner as to render those constituents soluble and active.

SVAPNIA IS UNIFORM IN ITS PROPORTIONS, and is prepared to conform to a standard of Opium representing ten per cent. of Morphia. This is done by a simple proportion of the neutral excipient, after determining the actual amount of the alkaloids obtained from the Opium used.

We may safely affirm that the danger of bad results is much diminished by a resort to that preparation of Opium in which the poisonous elements are eliminated, and the anodyne elements in such a state of combination as to reduce their toxic and enhance their hygienic effects, such as has been PROVED TO BE THE CASE WITH SVAPNIA.

Impaired Vitality,

Spermatorrhœa.

We wish to call the attention of the profession to the action of Horsford's Acid Phosphate on the organs of generation, when their power has become impaired through sexual excess, or from senile impotence. It is at once rejuvenating and aphrodisiac in its effect. It appears to restore the secretory organs that have been deranged to their normal condition, giving vigor where there has been debility, and renewed strength where there has been exhaustion.

H. B. STORER, M.D., Boston, says: "I have found Horsford's Acid Phosphate serviceable, in a marked degree, in my treatment of spermatorrhœa."

E. W. JONES, M.D., Taunton, Mass., says: "Horsford's Acid Phosphate was prescribed in a case of nervous prostration from seminal losses, with decided beneficial effect."

C. S. ELLIS, M.D., Wabash, Ind., says: "I prescribed Horsford's Acid Phosphate in a case of nervous debility and weakness of the sexual organs; patient forty-eight years old; he was much benefited."

R. W. ERWIN, M.D., Bay City, Michigan, says: "In some cases of weakness following sexual indiscretions, attended with nervousness, it is useful."

Each case presents its own peculiarities for treatment, but, as a general rule, we would suggest a half teaspoonful of Horsford's Acid Phosphate, in half a tumbler of hot or cold water, or tea without milk, to be taken shortly after each meal, and upon retiring.

Pamphlet giving further details mailed free, on application to the manufacturers.

Physicians who have not had a bottle of the Horsford's Acid Phosphate, and who wish to test it, will be furnished with a sample without expense, except express charges.

RUMFORD CHEMICAL WORKS,

PROVIDENCE, R. I.

1297-1348

An experience of more than a quarter of a century convinces us that sugar, properly applied, is the only correct coating for a pill.

Physicians should be careful to specify Warner & Co., when prescribing or ordering.

Special attention is called to the following selected Recipes prepared for Physicians' Prescriptions.

PIL: PHOSPHORI COMP: (WARNER & CO.) ℞. Phosphori, - - 1-100 gr. Ext. Nuc. Vom. - ¼ gr.

THERAPEUTICS.—As a nerve tonic and stimulant, this form of pil is well adapted for such nervous disorders as are associated with impaired nutrition and spinal debility, increasing the appetite and stimulating digestion.

The practical value of Phosphorus as a therapeutic agent, and its applicability to the cure of disease, and especially in those varied disordered conditions consequent upon OVERWORK, which are characteristic of modern civilization.

Pil. Phosphori Comp. may be taken, one or two pills three times daily, after eating.

Price, per 100, $1.50.

PIL: IODOFORM ET FERRI. (WARNER & CO.) ℞. Iodoform, - - 1 gr. Ferri Redacti, - 1¼ gr.

THERAPEUTICS.—A powerful general tonic and alterative, valuable as a remedy in Anæmia, Scrofula, Neuralgia, Chlorosis, Rheumatism, etc.

Pil. Iodoform et Ferri may be given in doses of from one to two pills, as occasion may require.

Price, per 100, $2.00.

PIL: DIGESTIVA. (WARNER & CO.) ℞. Pepsin Conc't, 1 gr. Gingerine, 1-16 gr. Pv. Nuc. Vom., ¼ gr. Sulphur, ⅛ gr.

THERAPEUTICS.—Useful in relieving various forms of Dyspepsia and Indigestion, and of permanent benefit in cases of enfeebled digestion, where the gastric juices are not properly secreted. It is also a gentle laxative and excellent dinner pill, may be taken one after dinner, or one before each meal, three times daily.

Price, per 100, 75 cts.

PIL: CALCIUM SULPHIDE. (WARNER & CO.) 1-10, ¼, ½ & 1 gr. each.

THERAPEUTICS.—Extremely useful in the treatment of acne, scrofula and cutaneous diseases.

Sulphide of Calcium is usually administered in doses of from 1-10 to ¼ grain four times daily, gradually increasing the dose to one grain six times daily, or according to the progress or severity of the case.

Price, per 100, 1-10 gr. .50; 1-4 gr. .60; 1-2 gr. .75; 1 gr. $1.00.

WARNER & CO.'S PILLS MAY BE OBTAINED FROM ALL DRUGGISTS, OR BY MAIL, ON RECEIPT OF PRICE.

SAVORY & MOORE beg to call the attention of the Profession to some of their Special Preparations, the purity and uniform strength of which are Guaranteed.

PANCREATIC EMULSION,

Prepared in accordance with the direction of the Physician who introduced this purely

MEDICINAL FOOD FOR CONSUMPTION AND WASTING DISEASES.

Pancreatic Emulsion will always take precedence of Cod-Liver Oil, by reason of its introducing the STABLE SOLID FATS INTO THE SYSTEM, instead of the evanescent fluid fats or oils.

Neither Cod-Liver Oil nor EMULSIONS of COD-LIVER OIL can supply the kind of fat necessary for sound and vigorous human life. In addition to this, all the Oily Emulsions are liable to rancidity, and most of them are highly objectionable in consequence of the SAPONIFICATION and ULTIMATE PUTREFACTION, produced by the chemical agents used instead of Pancreatic Juice.

Pancreatic Emulsion (properly so-called), is THE NECESSARY FOOD OF THE CONSUMPTIVE, and the most reliable form of nutriment for counteracting the tendency to Phthisis and other wasting diseases. It presents to the lacteals fat, in essentially the same condition for assimilation and absorption as in a vigorous human frame, and THE AGENT of the important change is THE NATURAL SECRETION of the PANCREAS.

Pancreatic Emulsion may therefore be regarded as Chyle obtained by nature's own process. In certain cases both Cod-Liver Oil and Pancreatic Emulsion are required—one to supply the blood with oil or liquid fat, the other with the more stable solid fats; but it cannot be too strongly urged that both PANCREATIC EMULSION and Cod-Liver Oil are *not to be regarded as Medicines, but as articles of diet*, without which patients, with their defect of health, will as surely starve as healthy persons would if deprived of the most nutritive part of their food

Pancreatized (Digestive) Cod-Liver Oil. By Pancreatized Cod-Liver Oil, the active digestive principle of the Pancreatic Juice is imparted to it, which renders it in a highly favorable condition for rapid and complete digestion and assimilation, preventing nausea, and largely increasing the beneficial properties of the Oil.

Pancreatine effects the digestion and assimilation of Cod-Liver Oil and Fat, as well as Food generally. This palatable and popular remedy is therefore invaluable to PATIENTS WHO ARE UNABLE TO DIGEST COD-LIVER OIL, and who are thus deprived of its nourishing and invigorating properties.

Pancreatine Wine. An excellent vehicle for taking Cod-Liver Oil and promoting the digestion of it.

VACCINE VIRUS,

AND

PRICES REDUCED. VACCINATORS PRICES REDUCED.

We continue, as for several years, to supply **ANIMAL VIRUS** propagated at our own stables from lymph of the "Beaugency Stock," imported by ourselves expressly for this purpose. Results of experience enable us to recommend it as of unsurpassed excellence.

The establishment is under the care of a competent physician of long experience in this specialty, who will spare no pains to produce a perfectly *reliable* and *pure* article, which we are prepared at all times to furnish in *fresh* and *active* condition.

Our new method Kine Crusts will be found much superior to the ordinary form, though points are recommended as the most reliable form of virus attainable.

All our Virus is put up in strong, *air-tight*, *sealed packages*, for safe conveyance by mail or express, and will be sent (postpaid if by mail) upon the following terms: -

Fifteen large Ivory Points, well charged on both sides.....$2.00
Seven large Ivory Points, well charged on both sides. 1.00
Large Ivory Points, less than seven, well charged on both sides, each..... .25
One Crust, new method, in air-tight Glass Capsule, prepared for immediate use..... 2.00

Also **Humanized Virus,** from HEALTHY CHILDREN, procured for us by physicians of undoubted reliability.

One Crust from Unruptured Vesicles (one remove from heifer if preferred).....$2.00

We will give a fresh supply, in case of failure reported within twenty days for Points, thirty days for Human, and ninety days for Kine Crusts.

Orders by mail or telegraph answered by return train.

Liberal discounts upon large supplies for Cities, Towns and Institutions.

Scarifying Vaccinator. Steel, Nickel Plated. (See Cut.) Each 25 cents.

CHAPOTEAUT'S PEPSICAL PEPTONES.

These Peptones, prepared with great care, contain only Beef, digested and rendered assimilable by a pepsine, always titrated and regular, extracted from the stomach of the sheep, digesting 7 to 800 times its weight of fibrine, and which cannot be found in commerce. They possess a great alimentary power, and give to the digestive organs an intense nutritive action.

They must not be confounded with other Peptones, prepared either with rennet of sheep or with pancreas of pork, and containing a product coming more from the digestion of the stomach mucus than from the meat.

These Preparations come under three forms:

1st. CHAPOTEAUT'S PEPSICAL PEPTONE POWDER.

This has only the taste of Meat, and offers the advantage of being able to be taken with the first spoon of soup. It is soluble in water, bouillon, or wine. Each teaspoonful represents about 4 grams of Peptone, or 21 to 22 grams of Beef, entirely digested and assimilable. Each bottle contains 30 grams of **PEPTONE,** representing 160 to 165 grams of Beef, and sufficient for the nourishment of an adult.

2d. CHAPOTEAUT'S PEPSICAL PEPTONE CONSERVE.

This article is a liquid, neutral-aromatic, and keeps well. Each teaspoonful represents double its weight of Beef, and is taken either pure or in soup, wine, jellies, or syrup, and also in the form of alimentary injections.

3d. CHAPOTEAUT'S PEPSICAL PEPTONE WINE.

Each small wine-glass contains the Pepsical Peptone of 10 grams of Beef. It has a very agreeable taste and constitutes an excellent aliment, which the patient and children accept with pleasure. It is taken at the beginning of meals, in doses of one or two small wine-glasses.

THE INVENTION OF AN EMINENT FRENCH CHEMIST.

The Salvator for Invalids and the Aged. An Incomparable Ailment for the Growth and Protection of Infants and Children. A Superior Nutritive in Continued Fevers, and a Reliable Remedial Agent in all Diseases of the Stomach and Intestines.

TO PHYSICIANS AND THE PUBLIC.

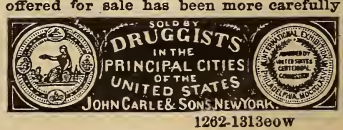
THIS preparation is, as advertised, principally the GLUTEN derived, by chemical process, from VERY SUPERIOR GROWTHS OF WHEAT, and should not be confounded with burnt or boiled Flour, in which the GLUTEN or sanative qualities are destroyed or made medicinally inert, nor with Crushed Wheat, or finely ground Wheaten Grits, styled "Medicinal Food," and sold under various names, in which the starch and impurities contained in wheat are retained in larger quantity.

By Dubisson's formula, the starch, impurities and soluble matter found in the Wheat Cereal are effectually excluded, the GLUTEN only retained, which is condensed, granulated and prepared to keep in all climates, and justly entitled

IMPERIAL GRANUM

It is well known, and should be fairly considered, that nothing of merit can be favorably received and commended by the public without being followed by imitations of a questionable character. IMPERIAL GRANUM is not the exception, for no preparation has attracted more attention, nor been more fiercely imitated by competition, even to wording and shipping order.

Whilst again it can be truly said that no preparation ever offered for sale has been more carefully prepared and thoroughly tested, nor has met with a more welcome reception and universal approval, or afforded more relief to invalids or to young and suffering children and aged persons. This has been confirmed by thousands of testimonials from Chemists, Physicians, Heads of Families and the Press.



Respectfully,

E. HEATON.

1262-1313eow

MURDOCK LIQUID FOOD CO., Boston,

THE ONLY MANUFACTURERS OF

RAW FOOD EXTRACTS IN THE WORLD.

It can be retained by the weakest stomach, when all other food extracts, and even water, is rejected.

Nutritious food, if raw, condensed, and free from insoluble matter, will cure chronic diseases, as it will make blood faster than all preparations or food, and new blood will cleanse the system.

MURDOCK'S LIQUID FOOD is made from Beef, Mutton and Fruits; contains corpuscles; is 12½ per cent. soluble albumen, and free from insoluble matter, drugs, minerals, salts and acids, and can be retained by the stomach when so weak as to refuse food.

Ask your Druggists, or send to us, for Essays read before the American Medical Association, at Richmond, Va., May 6, 1881, on the value of Raw Food Extracts, by Geo. R. Shepherd, of Hartford, Conn., and other Essays and Testimonials from Medical Journals and Physicians that have used Liquid Food, in cases of Consumption, Scrofula, Nervous and General Debility, Dyspepsia, acute and chronic, Constipation, Diphtheria, Intemperance, Cholera Infantum, Infantile Diarrhœa, Post-partum Hemorrhage, Purpura Hemorrhagica with Waxy Liver, Pelvic Cellulitis, Malarial and other Fevers, Chronic Strumous Arthritis, Sclerosis of the Spinal Cord, Senile Gangrene, Perinephritic Abscess, and other diseases of malnutrition. No cases of Cholera Infantum have occurred where it has been used daily, and no lives have been lost from Cholera Infantum where it has been prescribed by a physician. Excellent for Eczema, Diabetes, Rheumatism and Neuralgia.

At the request of any physician who has not tried our Extracts, and would like to, we will deliver sample bottles to the Express in Boston. To any Medical Society wishing to investigate the value of our Extracts, through a committee, hospital, or individual members, we will furnish a supply of Liquid Food equal to a six-ounce bottle for every member present at the time of action. We are induced to do this, knowing that our Extracts are saving life, and that an increased use of them, which will follow after a trial of them, will be the means of saving more lives daily. (*We ask no testimonials of results obtained.*) Raw Extracts are available where cooked ones are not, or if available, contain only one-third as much nourishment.

Liquid Food is in general use at all Hospitals, Infant and Insane Asylums, and Washingtonian Homes, U. S. Navy Hospitals, and by all physicians that have tried it.

If not kept by your Druggist, can be obtained in any of the commercial cities In Philadelphia, by Johnston, Holloway & Co., Boericke & Tafel; in Pittsburg, by A. Kelly & Co.; in Baltimore, by Thomsen & Wirth; or you can order direct and we will pay express. 1 oz., 15 cents; 6 oz., 55 cents; 12 oz., $1.00.

See Philadelphia MEDICAL AND SURGICAL REPORTER, *Boston Medical and Surgical Journal*, and *New York Medical Record*, for chronic cases that were at our quarterly reception to physicians, in Boston, December 30, 1881—cases of Eczema, Rheumatism, Neuralgia, Diabetes, Consumption, and other diseases. If all were not restored to perfect health, they were gaining daily, and able to enjoy life and attend to their business. 1297-1348

MURDOCK LIQUID FOOD CO., BOSTON.

It is the only food that will relieve the Consumptive from hunger.

It will make Blood faster than all preparations known.

BOUDAULT'S PEPSINE

IN POWDER, also WINE, ELIXIR, SYRUP, PILLS, AND LOZENGES OF PEPSINE.

Since the introduction of Pepsine by Boudault in 1854, BOUDAULT'S PEPSINE HAS BEEN, AND IS STILL CONSIDERED, THE MOST RELIABLE, as is attested by the awards it has received at the Exhibitions of 1867, 1868, 1872, 1873, and in 1876 at the Centennial Exposition in Philadelphia.

IT IS THE ONLY PEPSINE USED IN THE PARIS HOSPITALS.

Careful tests will enable any one to satisfy himself that BOUDAULT'S PEPSINE HAS A DIGESTIVE POWER AT LEAST DOUBLE that of the best Pepsines in the market, and that it is really the cheapest.

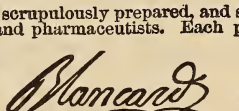
It is Sold in 1 ounce, 8 ounce, and 16 ounce Bottles.

Beware of so-called French Pepsines bearing fictitious names, and prescribe Boudault's only.

BLANCARD'S PILLS

OF UNCHANGEABLE IODIDE OF IRON.

Blancard's Pills of Iodide of Iron are so scrupulously prepared, and so well made, that none other have acquired a so well deserved favor among physicians and pharmaceutists. Each pill, containing one grain of proto-iodide of iron, is covered with finely pulverized iron, and covered with balsam of tolu. Dose, two to six pills a day. The genuine have a *reactive silver seal* attached to the lower part of the cork, and a green label on the wrapper, bearing the fac-simile of the signature of



Pharmacien, No. 40 Rue Bonaparte, Paris.

without which none are genuine.

BEWARE OF IMITATIONS.

E. FOUGERA & CO., AGENTS, NEW YORK. 1297 tf.

For Consumption and Wasting Diseases.

HYDROLEINE

Has been proved of the highest value in CONSUMPTION and all WASTING DISEASES, invariably producing IMMEDIATE INCREASE in FLESH and WEIGHT.

FORMULA OF HYDROLEINE.

Each dose of two teaspoonfuls, equal to 120 drops, contains:

Pure Oil,	**80 m. (drops.)**	**Soda,**	**1-3 grain.**
Distilled Water,	**35 m.**	**Boric Acid,**	**1-4 "**
Soluble Pancreatin,	**5 grains.**	**Hyocholic Acid,**	**1-20 "**

DOSE.—Two teaspoonfuls alone, or mixed with twice the quantity of soft water, to be taken thrice daily, with meals.

The principles upon which this discovery is based have been described in a treatise on "THE DIGESTION AND ASSIMILATION OF FATS IN THE HUMAN BODY," by H. C. BARTLETT, PH.D., F.C.S., and the experiments which were made, together with cases illustrating the effect of Hydrated Oil in practice, are concisely stated in a treatise on "CONSUMPTION AND WASTING DISEASES," by G. OVEREND DREWRY, M.D.

In these treatises the Chemistry and Physiology of the Digestion of the Fats and Oils is made clear, not only by the description of a large number of experiments scientifically conducted, but by cases in which the deductions are most fully borne out by the results.

☞ *Copies of these valuable works will be sent free, on application, to all who mention THE MEDICAL AND SURGICAL REPORTER.*

HYDRATED OIL,

HYDROLEINE,

WATER AND OIL,

May be described as partially digested oil, which will nourish and produce increase in weight in those cases where oils or fats not so treated are difficult or impossible to digest. In CONSUMPTION and other WASTING DISEASES the most prominent symptom is EMACIATION, of which the first is the starvation of the fatty tissues of the body, including the brain and nerves. This tendency to emaciation and loss of weight is arrested by the regular use of HYDROLEINE, which may be discontinued when the usual average weight has been permanently regained.

The ordinary so-called emulsions of Cod-liver oil and other fats, WHETHER PANCREATIZED OR NOT, merely remain in the form of a coarse mechanical mixture for a short time after agitation. The digestion of oil having in no sense been artificially produced, still devolves upon those functional powers the deficiency of which is the most prominent symptom in these cases.

HYDROLEINE is not a patent medicine or a secret preparation; the formula is on every bottle. Can be taken by the most delicate stomach; is immediately assimilated.

The permanence and perfection of the emulsion, and the extreme solubility of the HYDRATED OIL, solely prepared and sold by us under the name of HYDROLEINE, is shown by its retaining its cream-like condition as long as the purest Cod-liver Oil will retain its sweetness. Unlike the preparations mentioned, or simple Cod-liver Oil, it produces no unpleasant eructation or sense of nausea, and should be taken in such very much smaller doses, according to the directions, as will insure its complete assimilation; this, at the same time, renders its use economical in the highest degree.

To brain-workers of all classes Hydrated Oil is invaluable, supplying as it does the true brain food.

Economical in use—certain in result Tonic—Digestive and Highly Nutritive.

NEW PRINCIPLE FOR THE ASSIMILATION FAT.

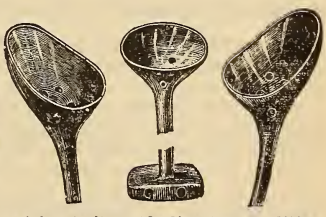
DR. McINTOSH'S
NATURAL UTERINE SUPPORTER.



No instrument has ever been placed before the medical profession which has given such universal satisfaction. The combination is such that the physician is able to meet every indication of Uterine Displacements. Falling Womb, Anteversion, Retroversion and Flexions are overcome by this instrument, where others fail. This is proven by the fact that, since its introduction to the profession it has come into more general use than all other instruments combined.

Among the many reasons which recommend this Supporter to the physician is its self-adjusting qualities. The physician, after applying it, need have no fear that he will be called in haste to remove or readjust it, as is often the case with rings and various pessaries held in position by pressure against the vaginal wall, as the patient can remove it at will, and replace it without assistance.

The Abdominal Supporter is a broad morocco leather belt, with elastic straps to buckle around the hips, with concave front, so shaped as to hold up the abdomen. The Uterine Support is a cup and stem, made of highly polished hard rubber, very light and durable, shaped to fit the neck of the womb, with openings for the secretions to pass out, as shown by the cuts. Cups are made with extended lips, to correct flexions and versions of the womb. The cup and stem is suspended to the belt by two soft elastic rubber tubes, which are fastened to the front of the belt by simple loops, pass down through the stem of the cup and up to the back of the belt. These soft rubber tubes being elastic, adapt themselves to all the varying positions of the body, and perform the service of the ligaments of the womb. The instrument is very comfortable to the patient, can be removed or replaced by her at will, can be worn at all times, will not interfere with nature's necessities, will not corrode, and is lighter than metal. It will answer for all cases of Anteversion, Retroversions, or any Flexions of the womb, and is used by the leading physicians with never-failing success, even in the most difficult cases.

Our Reduced Prices are to Physicians, $6.00; to Patients, $10.00.

Instruments sent by mail, at our risk, on receipt of price, or by Express, C. O. D., with the Express charges for returning the money added.

☞ CAUTION.—Owing to the great sale and popularity of our instrument various and base imitations are sold by unscrupulous parties. In order to get the genuine, it is best to order direct from us.

DR. McINTOSH'S NATURAL UTERINE SUPPORTER CO.,
192 Jackson Street, Chicago, Ill.

Our valuable pamphlet, "Some Practical Facts about Displacements of the Womb," will be sent you free on application. 1281-13 2

In corresponding with Advertisers please mention THE MEDICAL AND SURGICAL REPORTER.

BEEF PEPTONE,

IN TRANSPARENT GLASSY SCALES,

Containing only the animal or azotized matter of the Beef. Each ounce is equal to 16 ounces of raw beef, easily soluble, and still faster in hot water.

This Beef Peptone is digested from tender, juicy Beef, by the aid of the *Crystal Pepsin,* of my manufacture (Jensen's Crystal Pepsin). Unlike the various BEEF EXTRACTS, this preparation contains all the nutritive constituents of the Beef, in a thoroughly digested state, ready for absorption into the system, while the Beef Extracts are entirely devoid of the chief elements of nutrition, such as the fibrinous, gelatinous and albuminous portions of the Beef, they only consisting of the concentrated saline constituents, with barely a trace of animal matter to keep its consistence. The difficulty so long experienced by the profession throughout the world, in preparing a PEPTONE entirely free from those chemical agents necessary for its manufacture, so as to render it fit for use, is hereby demonstrated to be successfully overcome, as it contains no foreign matter, and will stand the most severely scrutinizing test as to perfectness, also possessing flavor of the Beef, and so palatable as to render it highly agreeable.

Put up in bottles holding One ounce, Eight ounces, and one Pound.

Kept by the Wholesale and Dispensing Druggists in general.

DEPOT—L. WOLFF'S Pharmacy,

Northwest corner Twelfth and Chestnut Streets.

JENSEN'S CRYSTAL PEPSIN,

IN ARTIFICIAL CRYSTALS,

Strictly inodorous and tasteless, and perfectly soluble in water without acid.

THIS PEPSIN, now so popular with the profession, has created an impetus in the consumption of the same and physicians of the highest standing, who before the introduction of this active PEPSIN, with good reason, entirely abandoned the use of PEPSIN, are now the most eager in prescribing JENSEN'S CRYSTAL PEPSIN, whenever it is indicated, and since the knowledge of its great solvent power (gr. j. of it will dissolve the boiled whites from two to three eggs) has been established even among those susceptible to be great doubters it has caused itself to be utilized in many novel ways, by the thinking profession; for instance, in substituting morphia, chloral, etc., as a hypnotic, relieving gastric troubles where the above remedies have been prescribed, creating morphine and chloral habits In removing diphtheritic patches it is successfully used combined with water, glycerine, and muriatic acid, and the same composition, diluted with more water, as a spray in bronchial troubles, dissolving muco-purulent matter, as well as a spray for same in catarrhal affections.

THIS PEPSIN

Has also been used with success in dissolving and evacuating coagulated blood in the bladder, dispensing with surgical operations in such cases. Many other novel applications could be mentioned, if not in want of space. It is found to be FORTY times stronger than saccharated pepsin. One to three grains is an active dose.

KEPT BY ALL DRUGGISTS.

The above preparations are only manufactured and put up by

CARL L. JENSEN, M.D., PH.G.,

865 North 26th Street, Philadelphia, Pa.

No other Wholesale Agents for this Pepsin are longer engaged, than the Wholesale Druggists throughout the United States.

J. E. BROWN, M.D.,
Lecturer on Physiology.

CHAS. S. JENNINGS, M.D.,
Lecturer on Chemistry.

A. F. HOKE, M.D.,
Instructor in Obstetrics.

T. N. REYNOLDS, M.D.,
Instructor in Materia Medica and Therapeutics.

JOHN BOICE, M.D.,
Instructor in Minor Surgery.

O. W. OWEN, M.D.,
Instructor in Experimental Physiology, Histology, and Curator of Museum.

F. W. BROWN, M.D.,
Instructor in Physiology and Morbid Histology.

R. A. JAMIESON, M.D.,
Instructor in Clinical Medicine.

A. S. PARKER, PH.C.,
Instructor in Pharmacy.

A. M. HAWES, M.D.,
Demonstrator of Anatomy.

This College has for its *collegiate year* two sessions.

Regular Session commences Wednesday, September 7th, 1881, and closes March 1st, 1882.

Recitation Term (optional) commences March 15th, 1882, and closes June 14th, 1882.

Graded Course of three terms, of six months each.

PLAN OF INSTRUCTION.

By *Lectures*, *Recitations* and *Clinics*, together with *practical work* in the Anatomical, Physiological, Chemical and Pharmaceutical Laboratories.

Clinics are held *daily*.

Clinical Work in Hospitals and Dispensaries is given to the Senior Class (see Clinics), in *small sections*, under the charge of a *Clinical Teacher*, in all the departments of Medicine and Surgery.

Three Large Hospitals and *two Dispensaries* afford unlimited material for instruction.

ADMISSION.—Candidates for admission are required to pass a preliminary examination, unless satisfactory documentary evidence can be presented, that is equivalent to the standard adopted. (See Catalogue.)

FEES.

Regular Session.—Matriculation, $5.00; Lecture Tickets, $50.00; Hospital Tickets, $10.00
Examination (final), $25.00.

Recitation Term.—$10.00 for those who have attended Regular Session; all others, $25.00, $15.00 of which will be applied on the next Regular Term.

Board and Rooms can be obtained for $3.00 to $5.00 per week, the average being $4.00.

For Catalogue and other particulars, address

H. O. WALKER, M.D., Secretary,
177 Griswold Street, Detroit, Mich.

1274-tf

CRINON'S HÆMOGLOBIN,

The Albuminoid Ferruginous Principle of Blood.

HÆMOGLOBIN is the only physiological chalybeate. Associated as it is with the phosphates of the blood, it forms the most powerful of tonics, and at the same time a most nourishing food. It is especially useful in cases of *Anæmia, Chlorosis, Cachexias, Exhaustion* caused by excess of work, nervous debility, fatigue resulting from parturition and lactation. It replaces entirely liquid blood, which has been recommended and used with success in *Phthisis* and *wasting away.*

It is offered in two forms: In cachets (waters), 60 of which are contained in a box; combined with chocolate in small squares, 30 of which are in a box; both forms can be sent by mail.

Prepared by C. CRINON, Paris, Pharmacist of the first class, Laureate of the Hospitals of Paris Samples may be obtained by application to

E. FOUGERA & CO., New York, Agents for the U. S.

DOCTOR RABUTEAU'S

(Laureate of the Institute of France.)

DRAGEES, ELIXIR & SYRUP OF IRON.

"The experiments made in the hospitals of Paris have demonstrated that *Dr. Rabuteau's Dragees, Elixir and Syrup* regenerate the red globules of the blood with a rapidity never observed with the use of the other ferruginous preparations. These results have been proved by the various *Compt-Globules.*

"The ferruginous preparations of *Dr. Rabuteau* do not cause any constipation, and are perfectly tolerated by the weakest persons."—*Gazette des Hospitaux.*

Dr. Rabuteau's Elixir is prescribed when some difficulty is experienced in swallowing the Dragees; it is especially adapted to weak persons, whose digestive functions need strengthening or stimulating.

Dr. Rabuteau's Syrup is especially prepared for children, who take it readily, because of its agreeable taste.

FOUGERA'S COMPOUND IODINISED COD LIVER OIL.

Since the introduction of this oil in 1858, it has been found to be superior to all other kinds of Cod Liver Oil for the treatment of **General Debility, Consumption, Scrofula, Rickets, etc.**

It possesses not only all the **nourishing** qualities of the best Cod Liver Oil, but also the **tonic, stimulant** and **alterative** properties of **Iodine, Bromine** and **Phosphorus,** which are added in such proportions as to render it therapeutically five times as efficacious as pure Cod Liver Oil.

Through its **increased curative action, FOUGERA'S COD LIVER OIL** will be found to cure disease in a much shorter time than the pure oil; while favorable results will be obtained by its use in many advanced cases when the pure Cod Liver Oil would fail entirely.

FOUGERA'S READY-MADE MUSTARD PLASTERS.

A most useful, convenient, clean, and economical preparation. Not liable to change if kept in a dry place. Made of two strengths. Plasters No. 1, of pure mustard; Plasters No. 2, of one-half mustard. Price 40 cents, the tin box, or tin roll, of 10 plasters each. DIRECTIONS.—Dip the Plaster, or Plasters, a minute or two, in cold water; apply on the part, and cover with a band.

FOUGERA'S COMPOUND ICELAND MOSS PASTE.

(Iceland Moss, Lactucarium, Ipecac and Tolu.)

Used with great success against nervous and convulsive coughs, Whooping Cough, Acute Bronchitis, Chronic Catarrh, Influenza, etc.

Wakefulness, Cough, and other sufferings in Consumption, are greatly relieved by the soothing and expectorant properties of this Paste.

FOUGERA'S IODO-FERRO-PHOSPHATED ELIXIR OF HORSE-RADISH.

This Elixir contains Iodine, Pyrophosphate of Iron, the active principles of antiscorbutic and aromatic plants, and acts as a **tonic, stimulant, emmenagogue,** and a **powerful regenerator of the blood.** It is an invaluable remedy for all constitutional disorders due to the impurity and poverty of the blood. One of the advantages of this new preparation consists in combining the virtues of Iodine and Iron without the inky taste of Iodide of Iron.

JOHNSTONE'S IMPROVED

ADAPTABLE POROUS FELT SPLINTS.

AHL'S SPLINT MANUFACTURING COMPANY, LIMITED,

123 & 125 South Eleventh Street, PHILADELPHIA, PA.

THE ADAPTABLE POROUS SPLINTS, invented and improved by W. H. JOHNSTONE, have been tested extensively in both civil and military practice for a number of years, and have been endorsed and recommended in the most unqualified manner by the celebrated and distinguished Surgeons of America.

Their *porosity* is a peculiar and a valuable property. While the material is firm and insoluble, it permits readily the passage of air and fluids, so that, on one hand, the heat from the inflamed surface, the perspiration, and the morbid exhalations, are not confined, to the detriment of the patient, *as is the case in every other kind of splint*, but pass off freely; and on the other hand, lotions of cold or warm water, medicated or not with weak alcohol, carbolic acid, arnica, tincture, solutions of the sulphites, etc., can be constantly applied without disturbing the dressings. This, it will readily be seen, is a most invaluable property when the parts are bruised, lacerated, filled with extravasated blood, or erysipelatous, and give these splints a conspicuous advantage over all others.

From FRANK H. HAMILTON, M. D., Professor of Fractures and Dislocations in the Bellevue Hospital Medical College, author of "A Treatise on Fractures and Dislocations," etc.

Having examined carefully *JOHNSTONE'S IMPROVED ADAPTABLE POROUS FELT SPLINTS*, I feel warranted in recommending them to the Profession as superior to all other manufactured splints now in use. They possess all the essential qualities of a good splint, having firmness, pliability and lightness.

FRANK H. HAMILTON, M. D.,
Prof. Military Surgery and Fractures and Dislocations, Bellevue Hospital Col.

From PROF. D. HAYES AGNEW, Prof. Surgery, University of Penna.

1611 CHESTNUT STREET, PHILADELPHIA, *February 6th*, 1879.

The Adaptable Felt Splints, formerly known as those of Dr. Ahl, with the improvement now made by W. H. Johnstone, which renders them in every way superior to the former, I regard as very excellent appliances in the treatment of fractures.

D. HAYES AGNEW,
Prof. Surgery, University of Pennsylvania.

Cuts illustrating the different Splints constituting a Complete Set.

SPECIAL NOTICE TO THE PROFESSION AND TRADE.

Our *policy* heretofore in the introduction of JOHNSTONE'S IMPROVED ADAPTABLE POROUS FELT SPLINTS, has been to confine the sales and business negotiations directly to the Doctors themselves, declining in every case to sell our goods through Dealers; we having assured the Profession generally, both through our agents and catalogues, that *JOHNSTONE'S IMPROVED SPLINTS* could only be obtained by subscription.

We wish to announce, that owing to the large demand for our goods and the constant importunity on the part of *Surgeons* everywhere to place our Splints on sale with their Instrument Dealer or Druggist, to afford them greater convenience and facility in obtaining the pieces in duplicate, **we have at last acceded to that request, and hereafter *JOHNSTONE'S CELEBRATED FELT SPLINTS* can be obtained at most dealers in Instruments and Drugs throughout the United States, at the same price which they were heretofore sold, viz:**

A complete set, embracing fifty (50) pieces—twenty-five for adults and twenty-five for children—is thirty ($30) dollars. Extra or duplicate pieces can always be obtained from your DEALER, at one dollar each.

JOHNSTONE'S CELEBRATED SPINAL JACKET, for Curvatures and Deformities, have met with unparalleled success, and, from their merit, secured the unqualified endorsement and approbation of our celebrated orthopædic specialists, and particular expression of gratitude from the patients who are wearing them. For full information, send for Descriptive Circulars.

Should your Instrument dealer fail to have a supply of our Splints, and decline to carry them in stock, orders sent to us will receive prompt attention.

AHL'S SPLINT MANUFACTURING CO., Limited
W. H. JOHNSTONE, Manager.

"N. B.—If the Instrument Dealers of Philadelphia decline to supply its Physicians with our JOHNSTONE'S FELT SPLINTS on call, they will be furnished and delivered by us to any part of the city, at any time, on receipt of the price, viz.,
$1.00 each.

THE DE QUINCEY HOME,

Fort Washington, **New York City.**

A Private Asylum for the Treatment of the Opium, Morphine, Chloral, Chloroform and Hashisch Habits, Nervous Diseases and Inebriety.

Drs. H. H. Kane
and
W. H. Vittum,
in charge.

Consulting Physicians.

Prof. Wm. A. Hammond,
Prof. T. Gaillard Thomas,
Dr. Edward C. Spitzka,
Dr. Daniel M. Stimson,
Dr. Edward T. Ely,
Dr. G. H. Wynkoop,
Dr. Andrew H. Smith.

Situated upon a high hill that commands a splendid view of the Hudson and Harlem rivers, Spuyten Duyvil Creek, and the beautiful country for miles around; surrounded by ample grounds and magnificent drives; in easy communication with the city by means of the Sixth and Ninth Avenue Elevated and the Hudson River Railroads; away from the dust, noise, crowding and malaria of the city; with hot and cold water in every room, furnace and grate-fire heating, croquet, horses and carriages, boats and fishing, an excellent *cuisine*, trained nurses and careful medical attendance, it possesses unequaled advantages for the treatment of cases of this kind.

The plan of treatment pursued in the cure of opium, morphine and chloral takers is that of *rapid reduction*, which possesses all the advantages, and none of the dangers of Levenstein's *sudden deprivation*, or the prolonged agony of *gradual reduction*. Each case is studied and treated in accordance with its peculiarities and the idiosyncrasies of the patient, no set plan of treatment being pursued, at the expense of the person's health or comfort.

Our Home, furthermore, offers special facilities for the treatment by *rest, diet, and massage*, according to the plan of Weir Mitchell, of that large class of nervous diseases so commonly met with in ladies suffering from uterine troubles. This plan of treatment has been specially studied, and nurses competent to carry out its provisions in every detail will be furnished. For further particulars, etc., address 1299-1350

Price, $3.00. Sent per mail on receipt of price. The Rubber Tubes are free from all woolen or silk coverings thus avoiding all friction sounds arising from this source. ☞ A Descriptive Circular sent to any address.

PACKER'S TAR SOAP.

ABSOLUTELY PURE AND NON-IRRITATING.

MADE FROM VEGETABLE OILS, PINE TAR AND GLYCERINE.

Extensively used in public and private practice in the treatment of **Diseases of the Skin,** and as a disinfectant cleanser for Sores, Ulcers, Leucorrhœa etc.

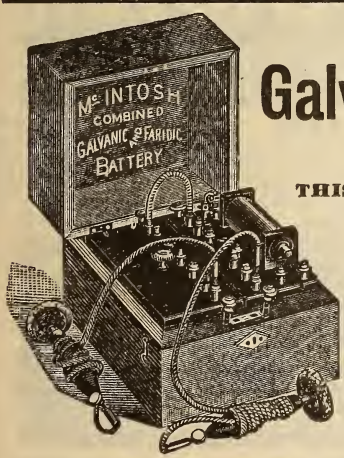
Its antiseptic properties make it especially valuable as a preventive of infection and of contagion, and it thoroughly cleanses the body during and after an attack.

For **washing infants,** the use of PACKER'S SOAP prevails with several Asylums. For the bath, toilet and shampoo it is unrivaled. 25 cents per cake, from Druggists.

It is supplied to Hospitals, Asylums and Physicians, in one pound bars, at reasonable prices.

P. O. Box 2985. **THE PACKER MFG. CO., 100 Fulton St., New York.**

1297-1348 eow



McINTOSH'S COMBINED

Galvanic AND Faradic Battery.

THIS CELEBRATED BATTERY COMBINES BOTH THE GALVANIC AND FARADIC CURRENT,

Which can be used separately or combined. Any strength and intensity desired can be obtained for use in Electro-therapeutics. THIS BATTERY is constructed on an IMPROVED PLAN, as follows: The zinc and carbon plates are arranged in couples, securely clamped to hard rubber plates, with thumb screws. These screws are also used for binding posts. All the connections are positive. The cells are made in sections of six, of hard rubber, with hard rubber drip cup. The following points of excellence render our Batteries superior to others:

1. They combine the only Portable Galvanic and Faradic Battery in one case.

2. They weigh one-half less than other Batteries of the same number of cells.

3. The cells are made in sections of six, of one solid piece of hard, vulcanized rubber; by this arrangement they can be emptied, cleaned and filled as easily and quickly as one cell, and will not crack, break or leak.

4. A hard rubber drip cup is placed by the side of each section of cells, to receive the zinc and carbon plates when removed from them. By this arrangement we avoid the use of absorbent materials and soiling the Battery

5. The Hydrostat is perfect. The rubber plates which hold the elements project over on one side enough to cover the cells when the zinc and carbon plates are placed in the drip cups. The under side of this projection is covered with thick, soft rubber, which is securely clamped to the cells sections, and makes them water tight.

6. This is the only Battery in which the zinc and carbon plates can be kept clean by simply rinsing them.

7. A zinc or carbon plate can be removed by simply loosening a binding post; and all parts of the Battery can be duplicated, as like parts are made exactly alike. We will be pleased to send circulars and our illustrated catalogue, giving full information, price, etc., free, upon application.

McINTOSH GALVANIC BELT AND BATTERY CO.,

1281-1332 **Nos. 192 and 194 Jackson Street, CHICAGO, ILL.**

SEABURY & JOHNSON'S

PHARMACOPŒIA PLASTERS

(IN RUBBER COMBINATION)

And Surgical Dressings.

ADVANTAGES OF THE RUBBER BASE FOR PLASTERS.

A cold process, through which volatilization by heat is avoided; preservative character of the rubber combination, thus insuring uniform reliability; pliability in any temperature; great convenience, as the plaster adheres without heat or moisture; cleanliness.

BELLADONNA PLASTER

SEABURY & JOHNSON.

IN RUBBER COMBINATION. Recent analytical tests conducted by Prof. R. O. Doremus, of Bellevue Hospital Med. College, and J. P. Battershall, Ph.D., analytical chemists, New York, to determine the comparative quantities of atropine in Belladonna Plaster prepared by the different American manufacturers, disclosed, in each case, that our article contains a greater proportion of the active principle of Belladonna than any other manufactured. Samples of the various manufactures, including our own, for this test, were procured in open market by the above-named chemists themselves. In the preparation of this article we incorporate the best alcoholic extract of Belladonna only, with the rubber base. It is packed in elegant tin cases (one yard in each case), which can be forwarded by mail to any part of the country.

Price, by mail, postpaid, $1.00.

BLISTERING PLASTER

SEABURY & JOHNSON

IN RUBBER COMBINATION. We incorporate, by a cold process, the whole fly (best selected Russian), with the rubber base, which constitutes, we believe, the most reliable cantharidal plaster known. It is superior to the cerate, and other cantharidal preparations, the value of which is frequently greatly impaired by the excessive heat used in preparing them, which volatilizes or drives off an active principle of the fly. By our peculiar process no heat is used. It remains serviceable almost any length of time.

Price, by mail, per yard, $1.00.

MUSTARD PLASTER

SEABURY & JOHNSON

(Spread on Cotton Cloth.)

Our Mustard Plaster is a decided improvement over the best French makes. The mustard is manipulated so as to exclude all the moisture, retaining unimpaired, by such treatment, its essential properties. They are always reliable, conform quickly to the part, and when thoroughly wet do not break into pieces, as is the case with all other mustard plasters. They do not crack or peel off, and can be removed without soiling the skin or linen. Being **manufactured only of pure mustard,** they are perfectly free from Croton Oil or other dangerous substitutes often employed to induce intense irritation.

Samples sent on application to

SEABURY & JOHNSON,

NO. 21 PLATT STREET, NEW YORK.

PLEASE SPECIFY SEABURY & JOHNSON'S PLASTERS.

Medical Practitioners who have not yet received our special Physician's and Surgeon's Catalogue, will be furnished same promptly on application.—SEABURY & JOHNSON, 21 Platt St., N.Y. 1271-1311eow

MEAT AND QUINIA.

AROUD'S WINE WITH QUINIA,

And all the Nutritive Principles of Meat.

Aroud's Preparations recommend themselves to the most serious attention of Physicians, and deserve their preference:

1st.—Because they combine all the active principles of the richest barks of quinia carefully selected.

2d.—Because 30 grammes of them contain 3 grammes of quinia and all the nutritious principles of 27 grammes of meat, which are soluble in alcohol and water.

3d.—Because the combination of meat with the barks of quinia has not only the advantage of acting as a tonic, nutritive, and febrifuge, but also that of paralyzing and guarding against any local irritation caused by the prolonged use of quinia barks, and of preparing the stomach to endure the salutary influence of this friendly compound.

4th.—Because these preparations with meat as a basis, containing in their composition the entire nutritious elements of muscular fibre, blood and bone, answer alone to the immortal maxim of Hippocrates, fundamental basis of all good reparative medication, "*Ars imitatio natura.*"

5th.—Because, if meat occupies the first rank among the articles of food, if quinia is placed at the head of tonics, the combination of these highly reparative substances must necessarily be a reconstructor par excellence.

Finally, because the experiments with Aroud's Wine and Quinia prove, better than theory, that, to reconstruct the shattered and enfeebled forces, no other tonic can be compared to it.

MEAT, IRON AND QUINIA.

AROUD'S

FERRUGINOUS WINE WITH QUINIA,

And all the Nutritive Principles of Meat.

MEAT, IRON AND QUINIA, that is so say, the most reparative food combined with a reconstituent and a nerve tonic par excellence: such is the remarkable composition of this ferruginous preparation, which, in all respects, merits the preference of physicians. It prevents impoverishment of the blood, anæmia, chlorosis, etc.; presented in a form at once attractive to the eye and pleasant to the palate—an assimilable iron united with all the constitutive principles of bone and of muscle; it can, therefore, form and regenerate the forces, and this without causing nausea, constipation, or disturbing the digestive organs. By its generous alimentation it corrects and modifies the bad effect of the prolonged use of quinia.

The excellence of this preparation justifies that which Hippocrates proclaimed over 2000 years ago, and all clinics have confirmed: "That the soluble nutritive principles of meat is the food best adapted for the sick and convalescents; that these principles, being the integral parts of muscle, have the faculty of forming flesh rapidly, and of restoring muscle."

It is, therefore, a precious specific for all the maladies caused by impoverishment or deterioration of the blood, because meat, iron and quinia combined give nourishment, act as a tonic, regenerate, reconstitute, and regulate the entire system. 1261-1312-eow

FOR MEDICAL AND SURGICAL PURPOSES.

Sole Manufacturers of the DR. BYRNE CELEBRATED GALVANO-CAUTERY BATTERY. Price, $50.00; with case of Electrodes $75.00.

Cabinet Batteries, from $100 to $400. Galvanic Batteries for $20, $25, $30, $40 and $50. Faradaic Batteries, for $5, $10, $15, $20 and $25. An excellent Family Battery (Faradaic), with book of instructions, for $10.00, and other prices to correspond.

We propose to furnish physicians with *first-class apparatus at reasonable prices.* Catalogues on application. Goods sent C. O. D. to any part of the country on receipt of $2, to insure express charges. Address

ELECTRO-MEDICAL MANUFACTURING CO.,

1281-m 38 Union Square, New York.

HOLLOW SUPPOSITORIES.

WITH STOPPERS. ALL MADE FROM PURE BUTTER OF COCOA, ONLY.

Aural, Nasal, Rectal, Urethral, Cystic, Vaginal, Intra-Uterine, and Veterinary Suppositories.

The object of this invention is to supply Physicians, Druggists, Veterinary Surgeons, and others, with HOLLOW SUPPOSITORIES, into which they can put any kind of medicine or nutriment, thus producing firm, smooth, and evenly medicated Suppositories, that are cheaper and more reliable than those made by the old method.

RECTAL ABSORPTION.

"The mucous membrane of the rectum, like that of other portions of the alimentary canal, possesses all the requisites, more or less, for the exercise of absorption."

Liebig states that a strong solution of common salt disappeared so completely in the rectum, that an evacuation one hour afterward was found to contain no more than the usual portion of salt.

Many medicinal substances act more energetically when applied to the rectum than when received into the stomach.

Baron Dupuytren said: "The rectum *absorbs*, but does not *digest*. The medicinal agent," he says, "owing to the absence of digestion, passes more directly, more purely, and more surely to its destination, than the same medicine does when taken into the stomach."

M. Orfila asserts that those medical agents which operate through the medium of absorption, such as opium, tobacco, etc., are much more active by the rectum than by the stomach.

Dr. J. H. Scorff reports four cases where he was successful in removing the vomiting of pregnancy, by introducing 20 grains of chloral into the rectum, night and morning. He only found it necessary to use the remedy three or four times.

Chloral is the remedy *par excellence* in the ravings of delirium tremens, and in cases of delirium and insomnia combined; also in infantile convulsions and attacks of laryngysmus stridulus.

Dr. Hickman reports a case of typho-malarial fever, which chloral was found to control in a happy manner. The chloral was introduced per rectum.

"REST TO THE STOMACH,"

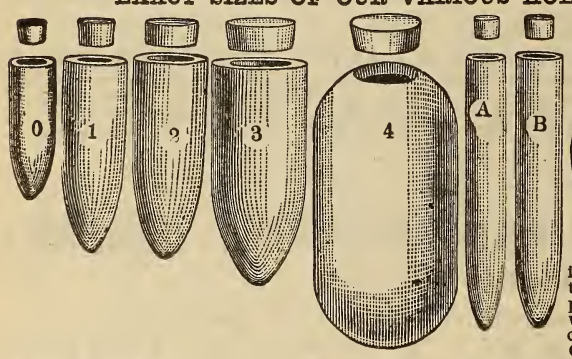
says Mr. Theodore Williams (in London *Lancet*, October 24th, 1874), is of the highest importance in some of the diseases of this organ. In such cases we possess in the rectum an effective second stomach, which, if it does not afford us the pleasure of digestion, spares us many of its pains."

Nutritious substances are taken up by the absorbents, and thus find their way into the economy, and produce their assimilative and nutritive effect. Haller demonstrated the fact that digestion can and does take place in the alimentary canal. He had the greatest confidence in the absorptive and digestive powers of the rectum to sustain life indefinitely.

HYPODERMIC MEDICATION.

Dr. William Bodenhamer says: "This now very common and often misused method is of great value in numerous cases, yet I am decidedly of the opinion that rectal medication is of greater importance; indeed, it is greatly preferable in many instances, being much less dangerous, much more convenient and simple; and the remedies, too, act through this medium with almost equal celerity. But very few remedies can be used hypodermically in comparison to those which can be used by the rectum."

EXACT SIZES OF OUR VARIOUS HOLLOW SUPPOSITORIES.



Size 0 is for children. It may also be used for the EAR and in the NASAL PASSAGES. Nos. 1, 2 and 3 are RECTAL SUPPOSITORIES. Nos. 3 and 4 may be used for introducing nutriment into the system, *via rectum*. No. 4 is also a VAGINAL SUPPOSITORY. No. 5 is a "SPHERIC L HOLLOW SUPPOSITORY," to introduce remedies into the VAGINA, and to the *os uteri*, where they may be kept in contact with the diseased parts by means of a *tampon* of cotton covered with oiled silk. A and B are used for medicating any part of the URETHRA or UTERINE CAVITY, or NASAL PASSAGES.

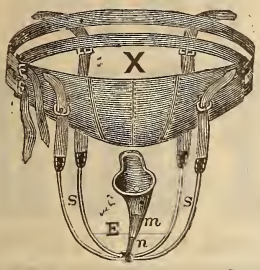
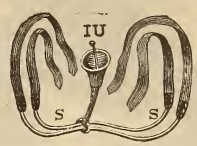
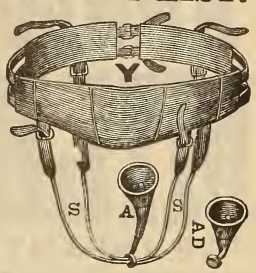
STAUFFER'S
HARD RUBBER INSTRUMENTS AND PRICE LIST.

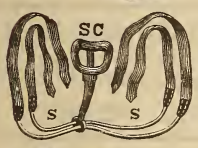






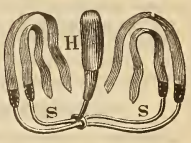
Prices.—Spring Stem Retroversion (E) on belt X, or Y, $8.00; or on Z, $7.00.

Intra-Uterine Stem Cup (I U).—Price on belt X, or Y, $7 00; on Z, $6 00. The intra-uterine stem cup may be first introduced and the cup turned. The stem has no spring, but joints the cup when in position by lodging in a socket.

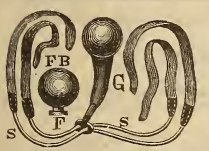


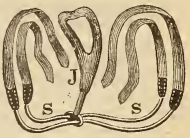
Spring Stem Prolapsus and Procidentia cup (A) on belt X, or Y, $7.00; on Z, $6.00.

Spring Stem Anteversion (S C) Spring Stem Globe Top (G). Spring Stem Oblong (H); and Spring Stem Lever (J). Each on X, or Y, $7.00, or on Z, $6.00.



Springs.—The tops of all spring stems unscrew, and a non-corrosive coil spring is placed in tube *m*, Fig. X. The base stem *n*, slides against the spring and arrests any external touch. This together with the pure elastic gums S S, suspends the heretofore displaced uterus on a double elastic motion.

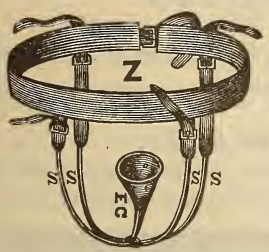




Transformation.—The self-sustaining cup A D, is formed by covering the screw when cup A, is unscrewed. So is also F B, with globe G. They are to be pressed in position at night, in sensitive cases, and stem and bandage laid aside. They have a similar use when contraction of the vagina takes place, before it is safe to suspend the support entirely.

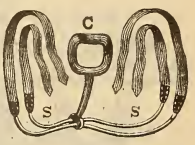
Curve.—All the stems are curved so as the base does not become struck from seating. And the cups even in the *Economy*, moulded oblique to set in the normal axis of the uterus and vagina, as plainly seen in E, Fig. X.

ECONOMY AND PERMANENT STEMS.

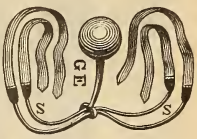


Prices.—E C, on elastic waist belt Z, is a permanent deep stem cup, no spring, but elastic gums S S, at only $4.50. On X, or Y, $5 50. Retroversion E, on Economy stem and belt Z, $6 00; X, or Y, $7.00. Permanent stems Anteversion C; Stem Globe G E; Oblong H E; and I, on Z, $4.50, and on X or Y, each $5.50. These deep leaning cups, if correct in size, correct all prolapsus uteri and procidentia, and also overcome by mere elevation partial anteversion and partial retroversion. Stem Globes and Stem Levers, by alternating the cups, assist the straightening up the uterus in difficult cases. ***Cystocele*** is drawn in by G, H, G E, or H E.

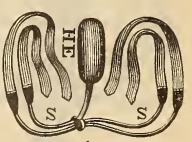
Belts.—X, and Y. have fine satteen, whale bone stay, fronts. X, two elastic back straps and closing on right hip. Y, closes on back and has elastic hip straps. Strict hip measure required. Waist measure for Z. Overlap is allowed here.



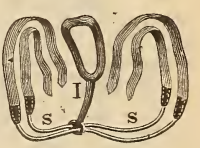
Self-Sustaining Globe B.—This is a mere hard rubber shell graded a little less than ⅛ inch from 1 to 2½ inches. It ascends in the vagina by its lightness. A cord attached to a non-corrosive staple for removal; and all the objectionable features of the glass balls are overcome. It is simple and entirely manageable by the patient at will. Harmless and still of more service, especially in the beginning of uterine troubles than any ring or lever. Actual wear does not depreciate them in value. They are always exchangeable at cost, for another style; when found not to answer, by reason of a too heavy uterns; collapsed vagina, or the case of too long standing. No. 10, 1⅞; 11, 2 inches, are the usual sizes used after having had several children. ***Price***, $1.50 each.



Cup D.—This sustains itself by its brim and suction. Some physicians use it as a common supporter; but it is mostly used to alternate Cup E C; for which purpose it should be selected ⅛ to ¼ inch larger than the E C, in use. ***Price***, $1.50 each.



Selection—The correction of a displaced womb and its successful support, depends entirely on the instrument and its proper selection in size and style. Since the elastic support from outside and spring stem within for sensitive cases; this important department in gynecology is rendered simple and within the scope of every family physician. The construction of this series of stem supporters obviates hindrance to seating and all objection to the external protrusion is overcome. The cups are usually selected by giving the full diameter across the top, thus for nullipara, 1¼ to 1⅝; Multipara, 1⅝ to 2, and procidentia, 1⅞ to 2¼ inches and over some times. Stems, longer or shorter than ordinary, are made to order and among the exchange privileges. Stem Globes are numbered—Stem Levers and oblong, are usually designated by small, medium and large.



Description of Cases.—Age of patient, state of catamenia; now and heretofore. If children, miscarriages, and how many? If urine trouble, helplessness in the spine, bed-ridden, &c., whether by accident or unknown cause. If a pessary already worn, its name, size, and result. How displaced; as the touch or speculum reveals.

Exchanges.—All the hard rubber parts in the catalogue are exchanged and interchanged without limit of time. Only needed repair and difference of higher price instruments charged when required for complicated cases.

ANGLO MILK FOR INFANTS

(The Best.)

SWISS FOOD and INVALIDS.

RECOMMENDATIONS
OF THE STRONGEST KIND
FROM PROMINENT
PHYSICIANS.

CEREALS AND MILK
SCIENTIFICALLY PREPARED.
IN POUND CANS OF
FULL WEIGHT.

CLOSEST RESEMBLANCE TO MOTHER'S MILK.

SEE ANALYSIS ON EVERY CAN.

THIS IS NOT A SHORT WEIGHT INFANTS' FOOD.

"The starchy constituents ordinarily objectionable in prepared Foods are, in the Anglo-Swiss Milk Food, in a great degree, converted into soluble and more easily digestible Dextrine and Sugar; effecting in the food itself changes which, in other foods, are left to the digestive organs to accomplish.

"*A simple test:* Mix one part Food to three parts cold water—a smaller proportion of water than for use—occupy five to eight minutes in bringing it slowly to boiling point; boil one minute; the result is not a pulp or pap, but a liquid resembling milk. Submit other prepared foods to same test, and you obtain a mucilaginous paste. A heavy, pasty appearance should not be accepted as evidence or measure of nutriment; it only betrays the raw or unconverted starch contained." ☞ *See pamphlet at Drug Stores.*

FOR SALE BY ALL WHOLESALE AND RETAIL DRUGGISTS.

PROCTER'S PEPSIN (SACCHARATED.

This standard article is prepared from *Pepsin*, carefully purified and freed from mucus, and is not a *dried Peptone*. It is inodorous and non-deliquescent, and retains its digestive power indefinitely. It is so well known that extended comment is superfluous. We would, however, call attention to its uniform purity and solubility, which, with extraordinary *digestive power*, commend its use in preference to other less carefully *made* articles. It is tested to the solution of 250 grains of coagulated albumen by 10 grains of Pepsin.

PROCTER'S "PEPSIN FORTIOR," (Stronger or Concentrated Pepsin.) A powerful form of Pepsin, eligible when minimum dose is desirable. It is of the same exceptional purity with our *Procter's Pepsin*, while the strength is far greater. Dose one to three grains. 1275-1308, 1y.

Manufactured by **WM. PROCTER, Jr., CO.,** S. W. Cor. 9th and Lombard Sts., Phila.

"The Most Popular and Practically Useful Medical Journals in the United States."

THE MEDICAL AND SURGICAL REPORTER,

PUBLISHED EVERY WEEK.

THE COMPENDIUM OF MEDICAL SCIENCE,

PUBLISHED HALF-YEARLY.

The REPORTER gives 1500 pages yearly, the COMPENDIUM 600 pages of the best quality of reading matter. No better and no cheaper medical journals are published in America or elsewhere.

The Medical and Surgical Reporter,

A WEEKLY JOURNAL.

Edited by D. G. BRINTON, M. D

ISSUED EVERY SATURDAY.

Large Octavo, Double Columns, 26 to 28 Pages of Reading Matter in Each Number.

The REPORTER was established in 1848, and now has attained as large, if not the largest, circulation of any medical weekly in this country. It has achieved this through its independence of all cliques, its steady devotion to the highest interests of the regular profession, its energy in obtaining the most important scientific news, the value of its original articles, its broad national character, and its attention to the practical and clinical aspects of professional study.

FOR 1882.

Some important improvements will be added to the REPORTER in 1882, and we have arranged with several of the most distinguished American medical writers to contribute to its pages. We suggest to our subscribers to send in their renewals at an early date, and should be glad to have them bring the REPORTER to the notice of their friends. We can guarantee them a satisfactory periodical the coming year.

PRICES:

The regular price for the COMPENDIUM for one year (two numbers, 300 pages each, bound in paper,) is $2.50.

A discount is allowed on the REPORTER and COMPENDIUM when taken together, as follows:

The Weekly Medical and Surgical Reporter, - -	$5 00
The Half-Yearly Compendium of Medical Science, - -	2.50
The Reporter and Compendium, taken together, - -	7 00

☞Payable in advance, direct to the publisher.

A *Table of Contents* of a number of Half-Yearly Compendium will be sent on application to the publisher.

A single copy will be sent for examination for One Dollar.

Specimen copy of the REPORTER free on application.

☞ **Catalogue of Publications from this office mailed on application.**

THE MODERN THERAPEUTICS SERIES.

I Modern Medical Therapeutics.

A Compendium of Recent Formulæ and Specific Therapeutical Directions from the practice of eminent contemporary physicians, American and foreign. By Geo. H. NAPHEYS, A.M., M.D. *Seventh Edition.* One volume, 8vo. pp. 607. Price, cloth, $4.00; sheep, $5.00.

II Modern Surgical Therapeutics.

A Compendium of Current Formulæ, Approved Dressings and Specific Methods for the Treatment of Surgical Diseases and Injuries. By GEO. H. NAPHEYS, A.M., M.D. *Seventh Edition* (1881). One volume, 8vo, pp. 608. Price, cloth, $4.00; sheep, $5.00.

III The Therapeutics of Gynecology and Obstetrics.

Edited by WILLIAM B. ATKINSON, M.D., etc. *Second Edition, Greatly Enlarged* (1881). One vol., 8vo. Price, cloth, $4.00; sheep, $5.00.

DR. McINTOSH'S ELECTRIC OR GALVANIC BELT.

This Belt is a perfect Galvanic Battery, composed of sixteen cells, placed in pockets on a belt. Each cell is made of hard vulcanized rubber, lined with copper, which constitutes the negative plate. The rubber coating perfectly insulates each cell. The positive plates are of zinc, wrapped in a porous material to absorb the exciting fluid, preventing contact with the copper, and permitting the current to pass from the copper to the zinc. The cells are charged without wetting the belt.

A current selector is so arranged that one or more cells can be used at pleasure. The electrodes are covered similar to ordinary battery electrodes, and connected with the cells by connecting cords. By this arrangement, a current from the belt can be applied to any part of the body. Physicians who have used this belt in their practice do not hesitate to recommend it to the profession.

Our pamphlet on "Medical Electricity," containing a full description of the belt and diseases, with manner of treatment, sent free on application. Address

Registered COSMOLINE Trade Mark.

Unguentum Petrolei

Prepared by E.F.Houghton & Co. Philadelphia, U.S.A.

Put up in 1, 5, 10, 25, 50, and 100-lb. cans. Samples furnished on application. The post-office laws forbid anything of an oleaginous nature being sent through the mail.

In chemical composition, Cosmoline [Unguentum Petrolei] is an oleaginous hydrocarbon, corresponding to the heavy petroleum oils, and containing a large amount of the paraffines and olefines of the formulæ $C_{16}H_{34}$ and $C_{16}H_{32}$. It contains but a small percentage of the paraffines and olefines, corresponding to the formulæ C_7H_{16} and C_7H_{14}, respectively, and the offensive and irritating properties of the crude oil have been carefully removed. In the process of purification, no acids, alkalies, or other chemicals are employed, and no injurious additions of any kind are made to the natural product. The result is a semi-solid, translucent substance, with a faint odor and unctuous feel.

Cosmoline [Unguentum Petrolei] melts at about 100° Fah. (38° Cent.); and boils at about 625° Fah. (329° Cent.); its specific gravity is about 0.875 at 60° Fah.

As it contains no oxydizable or organic matter capable of change by putrefaction or fermentation, and is absolutely without affinity for moisture, it offers to the profession an admirable unguent, which can never decompose, ferment, or become rancid in any climate or temperature.

291 MADISON AVENUE, NEW YORK, February 26th 1878.

I have examined the preparations of Cosmoline as manufactured by E. F. Houghton & Co., Philadelphia, and believe them well adapted to the purposes for which they are designed. As lubricants, and as the bases of simple or medicated ointments, they have a decided advantage over the fixed oils and fatty substances in ordinary use, in that they do not become rancid, and do not acquire irritating qualities from atmospheric exposure. ALFRED C. POST, M.D., LL.D.,
Emeritus Professor of Clinical Surgery in the University of New York, Visiting Surgeon to Presbyterian Hospital, etc.

PHILADELPHIA, July 10, 1880.

MESSRS. E. F. HOUGHTON & CO.:

I have for a number of years made extensive use of Cosmoline [Unguentum Petrolei] and consider it a most valuable article for surgical purposes. Either as a dressing by itself, or as a vehicle for the application of medicaments, it is greatly superior to lard or other fatty matters, especially by reason of its non-liability to change by time or temperature.

Yours truly,
JOHN H. PACKARD, M.D.
1031 WALNUT ST., PHILADELPHIA.

MESSRS. E. F. HOUGHTON & CO.:

I have used extensively Cosmoline [Unguentum Petrolei] both in Dispensary and private practice, with very great satisfaction. As a vehicle in making ointments it is invaluable, and far superior to lard, for the reason that it will not become rancid or undergo chemical change like the latter, when exposed to the atmosphere. I cannot too highly commend it as an application in various skin diseases.

Yours truly, JOHN V. SHOEMAKER, A.M., M.D.,
Physician to the Pennsylvania Free Dispensary for Skin Diseases

208 WEST 34TH ST., NEW YORK.

MESSRS. E. F. HOUGHTON & CO.:

Gents:—I fully appreciate the value of your Cosmoline, or Unguentum Petrolei, and prescribe it frequently in ointments. Fluid Cosmoline I have used constantly for several years, as a lubricant of urethral sounds. It is the cleanest oil I know of for this purpose.

Yours truly, GEO. HENRY FOX.

TO THE MEDICAL PROFESSION.

LACTOPEPTINE.

We take pleasure in calling the attention of the Profession to LACTOPEPTINE. After a long series of careful experiments, we are able to produce its various components in an absolutely pure state, thus removing all unpleasant odor and taste (also slightly changing the color). We can confidently claim that its digestive properties are largely increased thereby, and can assert without hesitation that it is as perfect a digestive as can be produced.

LACTOPEPTINE is the most important remedial agent ever presented to the Profession for Indigestion, Dyspepsia, Vomiting in Pregnancy, Cholera Infantum, Constipation, and all diseases arising from imperfect nutrition. It contains the five active agents of digestion, viz: Pepsin, Pancreatine, Diastase, or Veg. Ptyalin, Lactic and Hydrochloric Acids, in combination with Sugar of Milk.

FORMULA OF LACTOPEPTINE.

Sugar of Milk.....40 ounces.	Veg. Ptyalin or Diastase... 4 drachms.
Pepsin..... 8 ounces.	Lactic Acid..... 5 fl. drachms.
Pancreatine..... 6 ounces.	Hydrochloric Acid..... 5 fl. drachms.

LACTOPEPTINE is sold entirely by Physicians' Prescriptions, and its almost universal adoption by physicians is the strongest guarantee we can give that its therapeutic value has been most thoroughly established.

The undersigned having tested LACTOPEPTINE, recommend it to the profession.

COMPRESSED SOLUBLE HYPODERMIC TABLETS.

We have recently given much attention to the preparation of Soluble Compressed Tablets to be used in hypodermic medication. This idea was brought to the notice of the medical profession by H. Augustus Wilson, M.D., of this city, in a paper read before the Philadelphia County Medical Society. His views were based upon carefully made experiments, and were received with much interest. At his instance we undertook to prepare in this manner a number of combinations, which have upon trial proved eminently satisfactory. We therefore feel warranted in offering these articles to the profession as superior in several respects to all other forms for hypodermic purposes.

They are convenient, both to carry and to use; they are accurate, enabling the physician to administer precisely the dose desired; and they are not liable to change by keeping. Solutions are bulky, the bottles are apt to break or to leak, and the liquid often becomes decomposed or deteriorated by time. Powders become inert, from atmospheric influences; the papers become torn and part of the medicament is often lost in the necessary handling. The patented gelatine discs are not quickly soluble, and are sometimes slow in taking effect. Their use is apt to be followed by abscesses, which is rarely the case with crystalloid substances.

An extensive experience of many years in the manufacture of compressed powders (or pills), and the precision and accuracy of our mechanical appliances, enable us to make these articles with a degree of perfection not attainable in any other way, or by any other process. The exact amount specified of each drug is thoroughly incorporated and distributed throughout every tablet. In water at ordinary temperatures a perfect solution may be made in from thirty to sixty seconds.

No extraneous material is employed, except the Sulphate of Sodium, and this only in such proportions as to facilitate solution.

CAUTION.—The dose of Morphia for hypodermic use varies from $\frac{1}{12}$ to $\frac{1}{2}$ of a grain. We would suggest to the profession the necessity for caution. The large doses sometimes recommended—$\frac{1}{2}$, $\frac{3}{4}$ and even 1 grain—are unsafe for the first trial, unless the conditions requiring the injection be exceptional. *In commencing, it should not exceed one-third of that ordinarily administered internally.*

DIRECTIONS.—The syringe is charged with about twenty minims of water, which is poured into a teaspoon or other convenient receptacle; the pellet being dropped in, is crushed with the end of the syringe, to which the needle fits, and after all the lumps are broken the solution is drawn up and forced out three or four times, when usually the whole mass will be entirely dissolved and ready for use.

If warm water is used or the spoon is heated over a lamp or gas jet, a perfect solution is effected in a moment. The tablets may be readily powdered with the blade of a knife, and a solution is even more speedily made in this way.

The following formulæ and combinations embrace all those in general request. Others will be added as the demands of the profession warrant their manufacture.

We claim for our Hypodermic Tablets: Absolute accuracy of dose. Ready and entire solubility. Perfect preservation of the drug.

Their convenience and utility will at once be apparent on examination.

Morphiæ Sulphas 1-2 grain.

Strychniæ Sulphas 1-100 grain.
Sodæ Sulphas 1-4 grain.

Strychniæ Sulphas 1-150 grain.
Sodæ Sulphas 1-4 grain.

We are under many obligations to Professor Roberts Bartholow, who, from his thorough scientific investigations and extensive experience in hypodermic medication, is recognized as the highest authority on the subcutaneous treatment of disease, for suggestions and advice in regard to the care required in preparing our Hypodermic Tablets, also for the kind interest in devising the above formulæ.

His book on "Hypodermic Medication" is well known as the standard work on that subject, and has reached a third edition.

The success of our efforts to furnish the medical profession a much needed improvement in hypodermic medication is due to the happy suggestion of Dr. H. Augustus Wilson and to the kind interest of other medical friends, who have advised us as to the absolute essentials in preparing so delicate and important a series of medicaments.

Recent Introductions to the Materia Medica,

BY

PARKE, DAVIS & CO.,

Manufacturing Chemists, DETROIT, MICH.

CHEKEN.

(*Eugenia Cheken, Myrtus Chekan.*) This remedy, a native of Chili, is very popular in that country, where it is employed as an *inhalation* in diphtheria, laryngitis, bronchitis, bronchorrhœa, etc.; as an *injection* in gonorrhœa, leucorrhœa, cystitis, etc.; and *internally* as an aid to digestion, to allay cough, to facilitate expectoration and to stimulate the kidneys. It is also an astringent, and is said to be of great value in hæmoptysis.

Cheken (known also as Chekan and Chequen), was introduced to the profession of England, through a report of results following its use in chronic bronchitis or winter cough, by Wm. Murrell, M.D., M.R.C.P., Assistant Physician to the Royal Hospital for Diseases of the Chest, and Lecturer on Practical Physiology at the Westminster Hospital. Dr. Murrell's report is very favorable, and he has supplemented it by private advices to us, expressing great satisfaction with the drug in the affections in which he has employed it. He regards it as one of the most valuable introductions of late years, and pronounces it a drug of very superior properties in the treatment of **chronic bronchitis,** acting in this affection both as an anodyne and exerting a favorable influence over the organic changes in the mucous membrane. It is certainly a remedy which merits a thorough trial at the hands of the profession of this country.

SIERRA SALVIA.

("MOUNTAIN SAGE.") *Artemisia Frigida.* Fluid extract of the herb. Dose one to two fluidrachms. **Diaphoretic and diuretic.**

The success which has attended the administration of this drug in "Mountain fever" has suggested its employment in all febrile conditions attended with suppression of the secretions of the skin and kidneys. Its action in fever seems to be twofold, acting directly on the nervous centre, thus inducing a direct lowering of the temperature, and facilitating the radiation of the heat through diaphoresis, which it stimulates. Under its use the kidneys are also aroused to activity, and the solid constituents of the urine proportionately increased. Therapeutic tests have corroborated the opinion formed of it on theoretical grounds.

PERSEA.

(ALLIGATOR PEAR.) Fluid extract of the seeds. Dose 30 to 60 minims. This remedy is now for the first time presented to the profession of this country. It is introduced on the recommendation of Dr. Henry Froehling, of Baltimore, Maryland, who, while acting in the capacity of botanist and scientist to an exploring expedition in Southern Mexico, became familiar with the drug, both from reports of the natives and personal experience, as a remedy in **intercostal neuralgia.** The following extract from Dr. Froehling's report will give some conception of the nature of this remedy:

"A common experience among physicians is, that some cases of intercostal neuralgia are very troublesome and obstinate, resisting almost every kind of treatment; particularly is this the case in malarial districts. In such cases I would recommend the fluid extract of Persea seed. In my own person and in every case in which I have employed it, I have been highly gratified with the result. Those of my medical friends to whom I have given samples of the preparation warmly endorse my opinion of it as above, and I cannot but believe that further trial of it will cause it to be regarded as a valuable addition to our list of medicines."

Dr. Froehling also mentions the fact that Persea has been employed with benefit in the expulsion of tapeworm.

COCA.

(ERYTHROXYLON COCA.) The evidence in favor of Coca is to prove it a powerful nervous stimulant, through which property it retards waste of tissue, increases muscular strength and endurance, and removes fatigue and languor, due to prolonged physical or mental effort. While indicated in all conditions presenting these symptoms, it has an especial indication in the treatment of **the opium and alcohol habits.** In these deplorable conditions it has been found to possess extraordinary properties—relieving the sense of untold bodily and mental misery which follows the withdrawal of the accustomed stimulus, thus preventing a return to the narcotic, and affording an opportunity for building up the system by the administration of restorative tonics.

We prepare Fluid Extracts of all the above drugs.

PARKE, DAVIS & CO.,

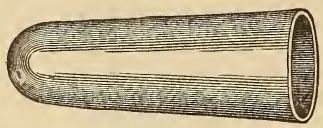
Manufacturing Chemists, DETROIT, MICH.

SOLUBLE MEDICATED

HOLLOW VAGINAL SUPPOSITORIES,

For the Treatment of LEUCORRHŒA, VAGINITIS, VAGINISMUS, etc.,

(See MEDICAL AND SURGICAL REPORTER, Jan. 7, 1882, p. 7.)



CLEAN. LIGHT. RELIABLE. EFFICIENT.

These Suppositories are made of medicated gelatin, moulded in a hollow form. The interior is to be filled with either absorbent, carbolized, or salicylized cotton, so as to act as a support, and keep the Suppository, while melting, in close contact with the vaginal walls. The following advantages are claimed for them:—

FIRST.—Being hollow, the use of a large quantity of inert material is avoided, and there is no soiling of the clothes or person.

SECOND.—The composition of which the suppository is made greatly assists the absorption of the remedy, instead of forming a greasy, slowly permeable medium, like that of a cacao butter suppository.

THIRD.—By the large amount of surface over which the medicating ingredient is distributed, absorption is greatly assisted, and the effect of the remedy very soon obtained.

FOURTH.—By their close contact and prolonged action on the mucous substance of the vagina, a much more powerful and lasting effect is obtained, than by any other similar method of local medication.

FIFTH.—Being light, the suppository remains in the upper part of the vagina, where it is most needed, and does not sink and slip out, as does the old-fashioned article made of cacao butter.

These Suppositories are neatly put up in boxes, *each box containing six of a kind only*, and are medicated as follows:—

1. Sulphate Zinc, – – 5 grs.
2. " " – – 10 "
3. Acetate " – – 10 "
4. Chloride " – – 2 "
5. Hydrastis Ext. Fld., – 10 "
6. Ext. Opium Aq., – – 1 gr.
7. " " " – – 2 grs.
8. Sulphate Morphia, – ½ gr.
9. " " – – 1 "
10. Ext. Belladonna Alc., – ½ "
11. " " " – 1 "
12. Ext. Krameria Fld, – 10 grs.
13. Catechu, Powd, – – 10 "
14. Ext. Krameria Fld., – 10 grs.
    Sulphate Morphia, – ¼ gr.
15. Ext. Hyoscyamus, – – 3 grs.
16. Ext. Hyoscyamus, – – 2 grs.
    Ext. Belladonna, – – ½ gr.
17. Ext. Aconite Rad., Fld., – 2 grs.
18. Carbolic Acid, – – 2 "
19. " " – – 4 "
19½. Iodoform, – – – 5 "
20. " – – – 10 "
21. Sulphate Zinc, – – 10 grs.
    Ext. Opium Aq., – – 2 "
22. Sulphate Zinc, – – 10 "
    Ext. Belladonna Alc., – 1 gr.
23. Sulphate Zinc, – – 10 grs.
    Sulphate Morphia, – – ½ gr.
24. Sulphate Zinc, – – 10 grs.
    Carbolic Acid, – – 1 gr.
25. Sulphate Zinc, – – 10 grs.
    Acet. Lead, – – 8 "
    Tinct. Catechu, – – 5 "
    Ext. Opium Aq., – – 1 gr.
26. Sulphate Zinc. – – 10 grs.
    Hydrastis F. E., – – 10 "
    Carbolic Acid, – – 1 gr.
    Ext. Belladonna, – – ½ "
27. Formula of Dr. W. Thornton Parker, Plymouth, Mass.
    Sulph-carbolate Zinc, – 10 grs
    Sulphate Morphia, – – ½ gr.
28. Iodoform, – – – 5 grs.
    Ext. Belladonna, – – ½ gr.

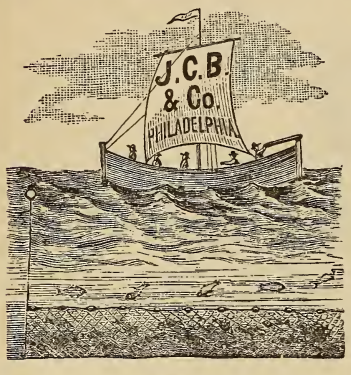
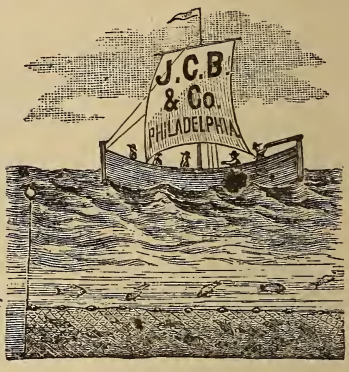
JOHN C. BAKER & CO.'S
PURE COD-LIVER OIL



RECEIVED
PER STEAMER MONTHLY,
In Sealed, Tin-Lined Barrels.

ABSOLUTE
Purity and Freshness
SECURED BY USING
Baker's Cod-Liver Oil.

Patients unable to take other oil find it not only not disagreeable, but positively palatable.



Prepared on the **Halten Islands, Norway,** with great care, from the finest selected livers of *Net-taken Cod Fish*, at a season of the year when in their highest condition.

BAKER'S COD-LIVER OIL

Has been before the Medical Profession since 1840, and is endorsed by the highest authority.

☞ Many Physicians say "Where a *Pure Oil* of such remarkable quality is attainable, a resort to the various preparations of Cod-Liver Oil is unnecessary."

To meet the demand for such, however, we offer

BAKER'S EMULSION

Finest Norwegian Oil as above, 50 per cent. = 12 grains Hypophosphites of Lime and Soda to each tablespoonful. The quality of the Oil used in this preparation renders it, beyond question, the *best Emulsion in the market.*

WE PREPARE, ALSO,

Baker's Cod-Liver Oil, with Extract of Malt.
Baker's Cod-Liver Oil, with Phos. Lime and Wild Cherry.
Baker's Extract of Malt, Plain.

☞ An extract from Trousseau and Pidoux, on Therapeutics, in pamphlet, will be mailed free to any Physician requesting it.

AGENTS FOR

BARLETT'S PILE SUPPOSITORIES

An Astringent and Balsam combined, in the most convenient form for application. Descriptive circular and endorsements mailed on application. Boxes of 14 Suppositories, 75 cents, by mail, to Physicians who mention this Journal.

FOR PHYSICIANS' USE ONLY.

SVAPNIA

OR

PURIFIED OPIUM.

CONTAINS THE

ANODYNE AND SOPORIFIC

ALKALOIDS

CODEIA,

NARCEIA

AND

MORPHIA.

EXCLUDES THE

POISONOUS & CONVULSIVE

ALKALOIDS

THEBAINE,

NARCOTINE

AND

PAPAVERINE.

DOSE, THE SAME AS OPIUM.

This article is not intended for popular use, but only on prescription of the profession. It is to take the place of Opium in cases where that drug acts injuriously.

Dr. John Harley, of London, in his "Old Vegetable Neurotics," details a large number of experiments upon the human and animal system, with six of what he considers the narcotic alkaloids. He concludes that although all six possess both narcotic and hypnotic properties, yet these are so varied in degree and force as to make their effects, when exhibited singly, very distinct from those following their exhibition in combination.

Taking the experience of practical physicians with Dr. Harley's results, as a basis, we would group them in the following order:

First Group.	Second Group.
Anodyne and Hypnotic Elements.	Narcotic and Convulsive Elements.
1. Morphia.	1. Thebain.
2. Narceia.	2. Cryptopin.
3. Codeia.	3. Papaverin.

Now SVAPNIA *is a distinctive name* given *to the first group, representing* the ANODYNE and HYPNOTIC ELEMENTS; *the second group, or the narcotic and convulsive* elements *of Opium being eliminated;* and is *not*, therefore, a simple principle, or a single constituent of Opium.

The relative values of each being known, we can select and utilize those that are valuable, and reject those known to be deleterious and inert.

This is what we claim, and all we claim for SVAPNIA. *It can be relied upon and given in all cases where Opium or Morphia is indicated, with equally good effects;* and in addition to this, there will be found in the practice of every physician cases occurring almost every day, in which idiosyncrasy and peculiar states and diseases of the brain debar us from the use of Opium and Morphia, but where Svapnia can be exhibited with the happiest results.

In SVAPNIA there is retained all the Morphia and the greater part of the Codeia and Narceia, but combined with the native acids of Opium, meconic and thebolactic, in such a manner as to render those constituents soluble and active.

SVAPNIA IS UNIFORM IN ITS PROPORTIONS, and is prepared to conform to a standard of Opium representing ten per cent. of Morphia. This is done by a simple proportion of the neutral excipient, after determining the actual amount of the alkaloids obtained from the Opium used.

We may safely affirm that the danger of bad results is much diminished by a resort to that preparation of Opium in which the poisonous elements are eliminated, and the anodyne elements in such a state of combination as to reduce their toxic and enhance their hygienic effects, such as has been PROVED TO BE THE CASE WITH SVAPNIA.

HORSFORD'S ACID PHOSPHATE

IN

IMPOTENCE,

Seminal Losses,

Impaired Vitality,

Spermatorrhœa.

We wish to call the attention of the profession to the action of Horsford's Acid Phosphate on the organs of generation, when their power has become impaired through sexual excess, or from senile impotence. It is at once rejuvenating and aphrodisiac in its effect. It appears to restore the secretory organs that have been deranged to their normal condition, giving vigor where there has been debility, and renewed strength where there has been exhaustion.

H. B. STORER, M.D., Boston, says: "I have found Horsford's Acid Phosphate serviceable, in a marked degree, in my treatment of spermatorrhœa."

E. W. JONES, M.D., Taunton, Mass., says: "Horsford's Acid Phosphate was prescribed in a case of nervous prostration from seminal losses, with decided beneficial effect."

C. S. ELLIS, M.D., Wabash, Ind., says: "I prescribed Horsford's Acid Phosphate in a case of nervous debility and weakness of the sexual organs; patient forty-eight years old; he was much benefited."

R. W. ERWIN, M.D., Bay City, Michigan, says: "In some cases of weakness following sexual indiscretions, attended with nervousness, it is useful."

Each case presents its own peculiarities for treatment, but, as a general rule, we would suggest a half teaspoonful of Horsford's Acid Phosphate, in half a tumbler of hot or cold water, or tea without milk, to be taken shortly after each meal, and upon retiring.

Pamphlet giving further details mailed free, on application to the manufacturers.

Physicians who have not had a bottle of the Horsford's Acid Phosphate, and who wish to test it, will be furnished with a sample without expense, except express charges.

RUMFORD CHEMICAL WORKS,

PROVIDENCE, R. I.

1297-1348

An experience of more than a quarter of a century convinces us that sugar, properly applied, is the only correct coating for a pill.

Physicians should be careful to specify Warner & Co., when prescribing or ordering.

Special attention is called to the following selected Recipes prepared for Physicians' Prescriptions.

PIL: PHOSPHORI COMP: (WARNER & CO.) ℞. Phosphori, - - 1-100 gr. Ext. Nuc. Vom. - ¼ gr.

THERAPEUTICS.—As a nerve tonic and stimulant, this form of pill is well adapted for such nervous disorders as are associated with impaired nutrition and spinal debility, increasing the appetite and stimulating digestion.

The practical value of Phosphorus as a therapeutic agent, and its applicability to the cure of disease, and especially in those varied disordered conditions consequent upon OVERWORK, which are characteristic of modern civilization.

Pil. Phosphori Comp. may be taken, one or two pills three times daily, after eating.

Price, per 100, $1.50.

PIL: IODOFORM ET FERRI. (WARNER & CO.) ℞. Iodoform, - - 1 gr. Ferri Redacti, - 1¼ gr.

THERAPEUTICS.—A powerful general tonic and alterative, valuable as a remedy in Anæmia, Scrofula, Neuralgia, Chlorosis, Rheumatism, etc.

Pil. Iodoform et Ferri may be given in doses of from one to two pills, as occasion may require.

Price, per 100, $2.00.

PIL: DIGESTIVA. (WARNER & CO.) ℞. Pepsin Conc't, 1 gr. Gingerine, 1-16 gr. Pv. Nuc. Vom., ¼ gr. Sulphur, ⅛ gr.

THERAPEUTICS.—Useful in relieving various forms of Dyspepsia and Indigestion, and of permanent benefit in cases of enfeebled digestion, where the gastric juices are not properly secreted. It is also a gentle laxative and excellent dinner pill, may be taken one after dinner, or one before each meal, three times daily.

Price, per 100, 75 cts

PIL: CALCIUM SULPHIDE. (WARNER & CO.) 1-10, ¼, ½ & 1 gr. each.

THERAPEUTICS.—Extremely useful in the treatment of acne, scrofula and cutaneous diseases.

Sulphide of Calcium is usually administered in doses of from 1-10 to ¼ grain four times daily, gradually increasing the dose to one grain six times daily, or according to the progress or severity of the case.

Price, per 100, 1-10 gr. .50; 1-4 gr. .60; 1-2 gr. .75; 1 gr. $1.00.

WARNER & CO.'S PILLS MAY BE OBTAINED FROM ALL DRUGGISTS, OR BY MAIL, ON RECEIPT OF PRICE.

SAVORY & MOORE beg to call the attention of the Profession to some of their Special Preparations, the purity and uniform strength of which are Guaranteed.

PANCREATIC EMULSION,

Prepared in accordance with the direction of the Physician who introduced this purely

MEDICINAL FOOD FOR CONSUMPTION AND WASTING DISEASES.

Pancreatic Emulsion will always take precedence of Cod-Liver Oil, by reason of its introducing the STABLE SOLID FATS INTO THE SYSTEM, instead of the evanescent fluid fats or oils.

Neither Cod-Liver Oil nor EMULSIONS of COD-LIVER OIL can supply the kind of fat necessary for sound and vigorous human life. In addition to this, all the Oily Emulsions are liable to rancidity, and most of them are highly objectionable in consequence of the SAPONIFICATION and ULTIMATE PUTREFACTION, produced by the chemical agents used instead of Pancreatic Juice.

Pancreatic Emulsion (properly so-called), is THE NECESSARY FOOD OF THE CONSUMPTIVE, and the most reliable form of nutriment for counteracting the tendency to Phthisis and other wasting diseases. It presents to the lacteals fat, in essentially the same condition for assimilation and absorption as in a vigorous human frame, and THE AGENT of the important change is THE NATURAL SECRETION of the PANCREAS.

Pancreatic Emulsion may therefore be regarded as Chyle obtained by nature's own process. In certain cases both Cod-Liver Oil and Pancreatic Emulsion are required—one to supply the blood with oil or liquid fat, the other with the more stable solid fats; but it cannot be too strongly urged that both PANCREATIC EMULSION and Cod-Liver Oil are *not to be regarded as Medicines, but as articles of diet*, without which patients, with their defect of health, will as surely starve as healthy persons would if deprived of the most nutritive part of their food

Pancreatized (Digestive) Cod-Liver Oil. By Pancreatized Cod-Liver Oil, the active digestive principle of the Pancreatic Juice is imparted to it, which renders it in a highly favorable condition for rapid and complete digestion and assimilation, preventing nausea, and largely increasing the beneficial properties of the Oil.

Pancreatine effects the digestion and assimilation of Cod-Liver Oil and Fat, as well as Food generally. This palatable and popular remedy is therefore invaluable to PATIENTS WHO ARE UNABLE TO DIGEST COD-LIVER OIL, and who are thus deprived of its nourishing and invigorating properties.

Pancreatine Wine. An excellent vehicle for taking Cod-Liver Oil and promoting the digestion of it.

Buffalo Lithia Water.

FOR THE GOUTY OR URIC ACID DIATHESIS.

Dr. J. Marion Sims, of New York, says of this water, in general terms:

"I have used in my practice the Buffalo Lithia Water, Spring No. 2, for two years past, and have, in many cases, found it highly efficacious."

Dr. Wm. A. Hammond, of New York, Surgeon General U. S. Army (retired), Professor of Diseases of the Mind and Nervous System in the University of New York, etc.

"I have for some time made use of the Buffalo Lithia Water in cases of affections of the Nervous System, complicated with Bright's Disease of the Kidneys, or with a Gouty Diathesis. The results have been eminently satisfactory. Lithia has for many years been a favorite remedy with me in like cases, but the Buffalo Water certainly acts better than any extemporaneous solution of the lithia salts, and is, moreover, better borne by the stomach."

Dr. Hunter McGuire, Richmond, Va., late Prof. Surgery, Medical College of Virginia; Vice President of the International Med. Congress; Vice President American Med. Association.

"Buffalo Lithia Water, Spring No. 2, as an Alkaline Diuretic, is invaluable. In Gravel dependent upon the Uric Acid Diathesis, and, indeed, in diseases generally of that diathesis, it is a remedy of extraordinary potency. I have prescribed it in cases of Rheumatic Gout which had resisted the ordinary remedies, with wonderfully good results. I have also used it in my own case, being a great sufferer from this malady, and have derived more benefit from it than from any other remedy."

Dr. Alexander B. Mott, of New York, Professor Surgery, Bellevue Hospital Medical College; Surgeon, Bellevue Hospital.

"I have made sufficient use of the Buffalo Lithia Water to be satisfied that it posseses very valuable therapeutic properties. In the Gouty Diatheses, Chronic Inflammations of the Bladder, and other diseases affecting the Urinary Organs, it may be relied on to give the most satisfactory results."

Dr. Harvey L. Byrd, of Baltimore, President and Prof. of Obstetrics and Diseases of Women and Children, in the Baltimore Med. College; formerly Prof. of Practical Medicine, etc.

"I have witnessed the best results from the action of the Buffalo Lithia Water, Spring No. 2, in Chronic Gout, Rheumatic Gout, Rheumatism, Gravel and Stone in the Bladder, and I do not hesitate to express the opinion that in all diseases depending upon or having their origin in the Uric Acid Diathesis, it is unsurpassed, if indeed it is equaled by any water thus far known to the profession."

Dr. E. J. Doering, of Chicago, Ill., late Surgeon U. S. Marine Hospital Service.

"In my experience the Buffalo Lithia Water is an efficient remedy in the treatment of diseases depending on the Uric Acid Diathesis. I have prescribed it quite extensively in Catarrhal Affections of the Bladder, with excellent results."

Dr. William F. Carrington, of Virginia, Surgeon U. S. Navy (retired), Surgeon Confederate States Navy.

"The Buffalo Lithia Water, Spring No. 2, has signally demonstrated its remedial power in Gout, Rheumatism, Uric Acid Gravel, and other maladies dependent upon the Uric Acid Diathesis. It not only eliminates from the blood the deleterious agent before it crystallizes, but dissolves it in the form of calculi, at least to a size that renders its passage along the ureters and urethra comparatively easy."

Dr. J. S. Wellford, Prof. of Diseases of Women and Children, Medical College of Virginia.

"I have paid a great deal of attention to Urinary Troubles, and have frequently and freely prescribed the Lithia Water in their treatment, with the very best results. In all the various forms of the Uric Acid Diathesis, whether as well-formed Gravel or Gout, or in the milder forms of Gouty Dyspepsia or Nettlerash, in their varieties, I know of no mineral water which I consider at all equal to that of Spring No. 2 In many Skin Diseases of old age, dependent on the Uric Acid Diathesis, such as Eczema, etc., this water acts most beneficially."

Water in Cases of Six Gallons, at the Springs, $5.00

SPRINGS OPEN JUNE 1st. **Pamphlets sent to any address.**

THOMAS F. GOODE, Proprietor,

BUFFALO LITHIA SPRINGS, VIRGINIA.

MURDOCK LIQUID FOOD CO., Boston,

THE ONLY MANUFACTURERS OF

RAW FOOD EXTRACTS IN THE WORLD.

It can be retained by the weakest stomach, when all other food extracts, and even water, is rejected.

It is the only food that will relieve the Consumptive from Hunger.

Nutritious food, if raw, condensed, and free from insoluble matter, will cure chronic diseases, as it will make blood faster than all preparations or food, and new blood will cleanse the system.

MURDOCK'S LIQUID FOOD is made from Beef, Mutton and Fruits; contains corpuscles; is 12½ per cent. soluble albumen, and free from insoluble matter, drugs, minerals, salts and acids, and can be retained by the stomach when so weak as to refuse food.

Ask your Druggists, or send to us, for Essays read before the American Medical Association, at Richmond, Va., May 6, 1881, on the value of Raw Food Extracts, by Geo. R. Shepherd, of Hartford, Conn., and other Essays and Testimonials from Medical Journals and Physicians that have used Liquid Food, in cases of Consumption, Scrofula, Nervous and General Debility, Dyspepsia, acute and chronic, Constipation, Diphtheria, Intemperance, Cholera Infantum, Infantile Diarrhœa, Post-partum Hemorrhage, Purpura Hemorrhagica with Waxy Liver, Pelvic Cellulitis, Malarial and other Fevers, Chronic Strumous Arthritis, Sclerosis of the Spinal Cord, Senile Gangrene, Perinephritic Abscess, and other diseases of malnutrition. No cases of Cholera Infantum have occurred where it has been used daily and no lives have been lost from Cholera Infantum where it has been prescribed by a physician. Excellent for Eczema, Diabetes, Rheumatism and Neuralgia.

At the request of any physician who has not tried our Extracts, and would like to, we will deliver sample bottles to the Express in Boston. To any Medical Society wishing to investigate the value of our Extracts, through a committee, hospital, or individual members, we will furnish a supply of Liquid Food equal to a six-ounce bottle for every member present at the time of action. We are induced to do this, knowing that our Extracts are saving life, and that an increased use of them, which will follow after a trial of them, will be the means of saving more lives daily. (*We ask no testimonials of results obtained.*) Raw Extracts are available where cooked ones are not, or if available, contain only one-third as much nourishment.

Liquid Food is in general use at all Hospitals, Infant and Insane Asylums, and Washingtonian Homes, U. S. Navy Hospitals, and by all physicians that have tried it.

If not kept by your Druggist, can be obtained in any of the commercial cities In Philadelphia, by Johnston, Holloway & Co., Boericke & Tafel; in Pittsburg, by A. Kelly & Co.; in Baltimore, by Thomsen & Wirth; or you can order direct and we will pay express. 1 oz , 15 cents; 6 oz., 55 cents; 12 oz., $1.00.

See Philadelphia MEDICAL AND SURGICAL REPORTER, *Boston Medical and Surgical Journal*, and *New York Medical Record*, for chronic cases that were at our quarterly reception to physicians, in Boston, December 30, 1881—cases of Eczema, Rheumatism, Neuralgia, Diabetes, Consumption, and other diseases. If all were not restored to perfect health, they were gaining daily, and able to enjoy life and attend to their business. 1297-1348

Prize Medal.

Silver Medal.

Medal of Merit.

BOUDAULT'S PEPSINE

IN POWDER, also WINE, ELIXIR, SYRUP, PILLS, AND LOZENGES OF PEPSINE.

Since the introduction of Pepsine by Boudault in 1854, **BOUDAULT'S PEPSINE HAS BEEN, AND IS STILL CONSIDERED, THE MOST RELIABLE,** as is attested by the awards it has received at the Exhibitions of 1867, 1868, 1872, 1873, and in 1876 at the Centennial Exposition in Philadelphia.

IT IS THE ONLY PEPSINE USED IN THE PARIS HOSPITALS.

Careful tests will enable any one to satisfy himself that **BOUDAULT'S PEPSINE HAS A DIGESTIVE POWER AT LEAST DOUBLE** that of the best Pepsines in the market, and that it is really the cheapest.

It is Sold in 1 ounce, 8 ounce, and 16 ounce Bottles.

Beware of so-called French Pepsines bearing fictitious names, and prescribe Boudault's only.

BLANCARD'S PILLS

OF UNCHANGEABLE IODIDE OF IRON.

Blancard's Pills of Iodide of Iron are so scrupulously prepared, and so well made, that none other have acquired a so well deserved favor among physicians and pharmaceutists. Each pill, containing one grain of proto-iodide of iron, is covered with finely pulverized iron, and covered with balsam of tolu. Dose, two to six pills a day. The genuine have a *reactive silver seal* attached to the lower part of the cork, and a green label on the wrapper, bearing the fac-simile of the signature of

Blancard

Pharmacien, No. 40 Rue Bonaparte, Paris

without which none are genuine.

BEWARE OF IMITATIONS.

E. FOUGERA & CO., AGENTS, NEW YORK. 1297 tf.

For Consumption and Wasting Diseases.

HYDROLEINE

Has been proved of the highest value in CONSUMPTION and all WASTING DISEASES, invariably producing IMMEDIATE INCREASE in FLESH and WEIGHT.

FORMULA OF HYDROLEINE.

Each dose of two teaspoonfuls, equal to 120 drops, contains:

Pure Oil,	**80 m. (drops.)**	**Soda,**	**1-3 grain.**
Distilled Water,	**35 m.**	**Boric Acid,**	**1-4 "**
Soluble Pancreatin,	**5 grains.**	**Hyocholic Acid,**	**1-20 "**

DOSE.—Two teaspoonfuls alone, or mixed with twice the quantity of soft water, to be taken thrice daily, with meals.

The principles upon which this discovery is based have been described in a treatise on "THE DIGESTION AND ASSIMILATION OF FATS IN THE HUMAN BODY," by H. C. BARTLETT, PH.D., F.C.S., and the experiments which were made, together with cases illustrating the effect of Hydrated Oil in practice, are concisely stated in a treatise on "CONSUMPTION AND WASTING DISEASES," by G. OVEREND DREWRY, M.D.

In these treatises the Chemistry and Physiology of the Digestion of the Fats and Oils is made clear, not only by the description of a large number of experiments scientifically conducted, but by cases in which the deductions are most fully borne out by the results.

☞ *Copies of these valuable works will be sent free, on application, to all who mention THE MEDICAL AND SURGICAL REPORTER.*

HYDRATED OIL,

HYDROLEINE,

WATER AND OIL,

May be described as partially digested oil, which will nourish and produce increase in weight in those cases where oils or fats not so treated are difficult or impossible to digest. In CONSUMPTION and other WASTING DISEASES the most prominent symptom is EMACIATION, of which the first is the starvation of the fatty tissues of the body, including the brain and nerves. This tendency to emaciation and loss of weight is arrested by the regular use of HYDROLEINE, which may be discontinued when the usual average weight has been permanently regained.

The ordinary so-called emulsions of Cod-liver oil and other fats, WHETHER PANCREATIZED OR NOT, merely remain in the form of a coarse mechanical mixture for a short time after agitation. The digestion of oil having in no sense been artificially produced, still devolves upon those functional powers the deficiency of which is the most prominent symptom in these cases.

HYDROLEINE is not a patent medicine or a secret preparation; the formula is on every bottle. Can be taken by the most delicate stomach; is immediately assimilated.

The permanence and perfection of the emulsion, and the extreme solubility of the HYDRATED OIL, solely prepared and sold by us under the name of HYDROLEINE, is shown by its retaining its cream-like condition as long as the purest Cod-liver Oil will retain its sweetness. Unlike the preparations mentioned, or simple Cod-liver Oil, it produces no unpleasant eructation or sense of nausea, and should be taken in such very much smaller doses, according to the directions, as will insure its complete assimilation; this, at the same time, renders its use economical in the highest degree.

To brain-workers of all classes Hydrated Oil is invaluable, supplying as it does the true brain food.

Economical in use—certain in result Tonic—Digestive and Highly Nutritive.

NEW PRINCIPLE FOR THE ASSIMILATION FAT.

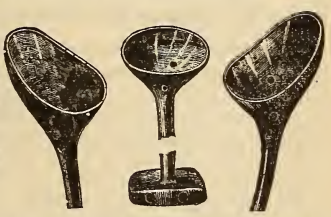
DR. McINTOSH'S
NATURAL UTERINE SUPPORTER.



No instrument has ever been placed before the medical profession which has given such universal satisfaction. The combination is such that the physician is able to meet every indication of Uterine Displacements. Falling Womb, Anteversion, Retroversion and Flexions are overcome by this instrument, where others fail. This is proven by the fact that, since its introduction to the profession it has come into more general use than all other instruments combined.

Among the many reasons which recommend this Supporter to the physician is its self-adjusting qualities. The physician, after applying it, need have no fear that he will be called in haste to remove or readjust it, as is often the case with rings and various pessaries held in position by pressure against the vaginal wall, as the patient can remove it at will, and replace it without assistance.

The Abdominal Supporter is a broad morocco leather belt, with elastic straps to buckle around the hips, with concave front, so shaped as to hold up the abdomen. The Uterine Support is a cup and stem, made of highly polished hard rubber, very light and durable, shaped to fit the neck of the womb, with openings for the secretions to pass out, as shown by the cuts. Cups are made with extended lips, to correct flexions and versions of the womb. The cup and stem is suspended to the belt by two soft elastic rubber tubes, which are fastened to the front of the belt by simple loops, pass down through the stem of the cup and up to the back of the belt. These soft rubber tubes being elastic, adapt themselves to all the varying positions of the body, and perform the service of the ligaments of the womb. The instrument is very comfortable to the patient, can be removed or replaced by her at will, can be worn at all times, will not interfere with nature's necessities, will not corrode, and is lighter than metal. It will answer for all cases of Anteversion, Retroversions, or any Flexions of the womb, and is used by the leading physicians with never-failing success, even in the most difficult cases.

Our Reduced Prices are to Physicians, $6.00; to Patients, $10.00.

Instruments sent by mail, at our risk, on receipt of price, or by Express, C. O. D., with the Express charges for returning the money added.

☞ CAUTION.—Owing to the great sale and popularity of our instrument various and base imitations are sold by unscrupulous parties. In order to get the genuine, it is best to order direct from us.

DR. McINTOSH'S NATURAL UTERINE SUPPORTER CO.,
192 Jackson Street, Chicago, Ill.

Our valuable pamphlet, "Some Practical Facts about Displacements of the Womb," will be sent you free on application. 1281-1332

BEEF PEPTONE,

IN TRANSPARENT CLASSY SCALES,

Containing only the animal or azotized matter of the Beef. Each ounce is equal to 16 ounces of raw beef, easily soluble, and still faster in hot water.

This Beef Peptone is digested from tender, juicy Beef, by the aid of the *Crystal Pepsin,* of my manufacture (Jensen's Crystal Pepsin). Unlike the various BEEF EXTRACTS, this preparation contains all the nutritive constituents of the Beef, in a thoroughly digested state, ready for absorption into the system, while the Beef Extracts are entirely devoid of the chief elements of nutrition, such as the fibrinous, gelatinous and albuminous portions of the Beef, they only consisting of the concentrated saline constituents, with barely a trace of animal matter to keep its consistence. The difficulty so long experienced by the profession throughout the world, in preparing a PEPTONE entirely free from those chemical agents necessary for its manufacture, so as to render it fit for use, is hereby demonstrated to be successfully overcome, as it contains no foreign matter, and will stand the most severely scrutinizing test as to perfectness, also possessing flavor of the Beef, and so palatable as to render it highly agreeable.

Put up in bottles holding One ounce, Eight ounces, and one Pound.

Kept by the Wholesale and Dispensing Druggists in general.

DEPOT—L. WOLFF'S Pharmacy,

Northwest corner Twelfth and Chestnut Streets.

JENSEN'S CRYSTAL PEPSIN,

IN ARTIFICIAL CRYSTALS,

Strictly inodorous and tasteless, and perfectly soluble in water without acid.

THIS PEPSIN, now so popular with the profession, has created an impetus in the consumption of the same and physicians of the highest standing, who before the introduction of this active PEPSIN, with good reason, entirely abandoned the use of PEPSIN, are now the most eager in prescribing JENSEN'S CRYSTAL PEPSIN, whenever it is indicated, and since the knowledge of its great solvent power (gr. j. of it will dissolve the boiled whites from two to three eggs) has been established even among those susceptible to be great doubters it has caused itself to be utilized in many novel ways, by the thinking profession; for instance, in substituting morphia, chloral, etc., as a hypnotic, relieving gastric troubles where the above remedies have been prescribed, creating morphine and chloral habits In removing diphtheritic patches it is successfully used combined with water, glycerine, and muriatic acid, and the same composition, diluted with more water, as a spray in bronchial troubles, dissolving muco-purulent matter, as well as a spray for same in catarrhal affections.

THIS PEPSIN.

Has also been used with success in dissolving and evacuating coagulated blood in the bladder, dispensing with surgical operations in such cases. Many other novel applications could be mentioned, if not in want of space. It is found to be FORTY times stronger than saccharated pepsin. One to three grains is an active dose.

KEPT BY ALL DRUGGISTS.

The above preparations are only manufactured and put up by

CARL L. JENSEN, M.D., PH.G.,

865 North 26th Street, Philadelphia, Pa.

No other Wholesale Agents for this Pepsin are longer engaged, than the Wholesale Druggists throughout the United States.

Demonstrator of Anatomy.

This College has for its *collegiate year* two sessions.

Regular Session commences Wednesday, September 7th, 1881, and closes March 1st, 1882.

Recitation Term (optional) commences March 15th, 1882, and closes June 14th, 1882.

Graded Course of three terms, of six months each.

PLAN OF INSTRUCTION.

By *Lectures*, *Recitations* and *Clinics*, together with *practical work* in the Anatomical, Physiological, Chemical and Pharmaceutical Laboratories.

Clinics are held *daily*.

Clinical Work in Hospitals and Dispensaries is given to the Senior Class (see Clinics), in *small sections*, under the charge of a *Clinical Teacher*, in all the departments of Medicine and Surgery.

Three Large Hospitals and *two Dispensaries* afford unlimited material for instruction.

ADMISSION.—Candidates for admission are required to pass a preliminary examination, unless satisfactory documentary evidence can be presented, that is equivalent to the standard adopted. (See Catalogue.)

FEES.

Regular Session.—Matriculation, $5.00; Lecture Tickets, $50.00; Hospital Tickets, $10.00
Examination (final), $25.00.

Recitation Term.—$10.00 for those who have attended Regular Session; all others, $25.00, $15.00 of which will be applied on the next Regular Term.

Board and Rooms can be obtained for $3.00 to $5.00 per week, the average being $4.00.

For Catalogue and other particulars, address

177 Griswold Street, Detroit, Mich.

1274-tf

CRINON'S HÆMOGLOBIN,

The Albuminoid Ferruginous Principle of Blood.

HÆMOGLOBIN is the only physiological chalybeate. Associated as it is with the phosphates of the blood, it forms the most powerful of tonics, and at the same time a most nourishing food. It is especially useful in cases of *Anæmia, Chlorosis, Cachexias, Exhaustion* caused by excess of work, nervous debility, fatigue resulting from parturition and lactation. It replaces entirely liquid blood, which has been recommended and used with success in *Phthisis* and *wasting away.*

It is offered in two forms. In cachets (wafers), 60 of which are contained in a box; combined with chocolate in small squares, 30 of which are in a box; both forms can be sent by mail.

Prepared by C. CRINON, Paris, Pharmacist of the first class, Laureate of the Hospitals of Paris Samples may be obtained by application to

E. FOUGERA & CO., New York, Agents for the U. S

DOCTOR RABUTEAU'S

(Laureate of the Institute of France.)

DRAGEES, ELIXIR & SYRUP

OF IRON.

"The experiments made in the hospitals of Paris have demonstrated that *Dr. Rabuteau's Dragees, Elixir and Syrup* regenerate the red globules of the blood with a rapidity never observed with the use of the other ferruginous preparations. These results have been proved by the various *Compt-Globules.*

"The ferruginous preparations of *Dr. Rabuteau* do not cause any constipation, and are perfectly tolerated by the weakest persons."—*Gazette des Hospitaux.*

Dr. Rabuteau's Elixir is prescribed when some difficulty is experienced in swallowing the Dragees: it is especially adapted to weak persons, whose digestive functions need strengthening or stimulating.

Dr. Rabuteau's Syrup is especially prepared for children, who take it readily, because of its agreeable taste.

FOUGERA'S COMPOUND IODINISED

COD LIVER OIL.

Since the introduction of this oil in 1858, it has been found to be superior to all other kinds of Cod Liver Oil for the treatment of **General Debility, Consumption, Scrofula, Rickets, etc.**

It possesses not only all the **nourishing** qualities of the best Cod Liver Oil, but also the **tonic, stimulant** and **alterative** properties of **Iodine, Bromine** and **Phosphorus,** which are added in such proportions as to render it therapeutically five times as efficacious as pure Cod Liver Oil.

Through its **increased curative action, FOUGERA'S COD LIVER OIL** will be found to cure disease in a much shorter time than the pure oil; while favorable results will be obtained by its use in many advanced cases when the pure Cod Liver Oil would fail entirely.

FOUGERA'S READY-MADE MUSTARD PLASTERS.

A most useful, convenient, clean, and economical preparation. Not liable to change if kept in a dry place. Made of two strengths. Plasters No. 1, of pure mustard; Plasters No. 2, of one-half mustard. Price 40 cents, the tin box, or tin roll, of 10 plasters each. DIRECTIONS.—Dip the Plaster, or Plasters, a minute or two, in cold water; apply on the part, and cover with a band.

FOUGERA'S COMPOUND ICELAND MOSS PASTE.

(Iceland Moss, Lactucarium, Ipecac and Tolu.)

Used with great success against nervous and convulsive coughs, Whooping Cough, Acute Bronchitis, Chronic Catarrh, Influenza, etc.

Wakefulness, Cough, and other sufferings in Consumption, are greatly relieved by the soothing and expectorant properties of this Paste.

FOUGERA'S IODO-FERRO-PHOSPHATED ELIXIR OF HORSE-RADISH.

This Elixir contains Iodine, Pyrophosphate of Iron, the active principles of antiscorbutic and aromatic plants, and acts as a **tonic, stimulant, emmenagogue,** and a **powerful regenerator of the blood.** It is an invaluable remedy for all constitutional disorders due to the impurity and poverty of the blood. One of the advantages of this new preparation consists in combining the virtues of Iodine and Iron without the inky taste of Iodide of Iron.

JOHNSTONE'S IMPROVED

ADAPTABLE POROUS FELT SPLINTS.

AHL'S SPLINT MANUFACTURING COMPANY, LIMITED,

123 & 125 South Eleventh Street, PHILADELPHIA, PA.

THE ADAPTABLE POROUS SPLINTS, invented and improved by W. H. JOHNSTONE, have been tested extensively in both civil and military practice for a number of years, and have been endorsed and recommended in the most unqualified manner by the celebrated and distinguished Surgeons of America.

Their *porosity* is a peculiar and a valuable property. While the material is firm and insoluble, it permits readily the passage of air and fluids, so that, on one hand, the heat from the inflamed surface, the perspiration, and the morbid exhalations, are not confined, to the detriment of the patient, *as is the case in every other kind of splint*, but pass off freely; and on the other hand, lotions of cold or warm water, medicated or not with weak alcohol, carbolic acid, arnica, tincture, solutions of the sulphites, etc., can be constantly applied without disturbing the dressings. This, it will readily be seen, is a most invaluable property when the parts are bruised, lacerated, filled with extravasated blood, or erysipelatous, and give these splints a conspicuous advantage over all others.

From FRANK H. HAMILTON, M. D., Professor of Fractures and Dislocations in the Bellevue Hospital Medical College, author of "A Treatise on Fractures and Dislocations," etc.

Having examined carefully *JOHNSTONE'S IMPROVED ADAPTABLE POROUS FELT SPLINTS*, I feel warranted in recommending them to the Profession as superior to all other manufactured splints now in use. They possess all the essential qualities of a good splint, having firmness, pliability and lightness.

FRANK H. HAMILTON, M. D.,
Prof. Military Surgery and Fractures and Dislocations, Bellevue Hospital Col.

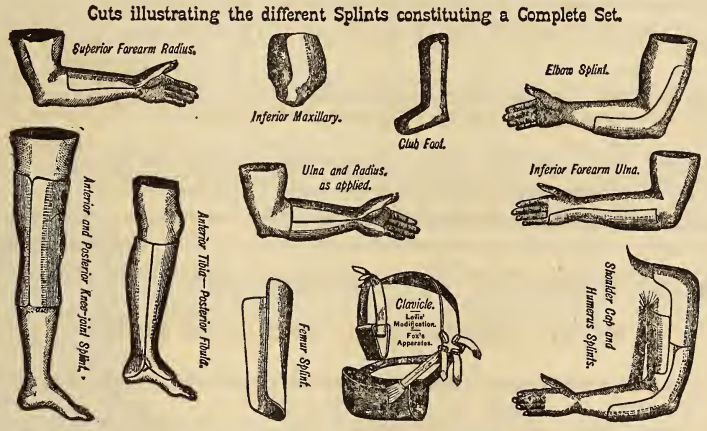
From PROF. D. HAYES AGNEW, Prof. Surgery, University of Penna.

1611 CHESTNUT STREET, PHILADELPHIA, *February 6th*, 1879.

The Adaptable Felt Splints, formerly known as those of Dr. Ahl, with the improvement now made by W. H. Johnstone, which renders them in every way superior to the former, I regard as very excellent appliances in the treatment of fractures.

D. HAYES AGNEW,
Prof. Surgery, University of Pennsylvania.

Cuts illustrating the different Splints constituting a Complete Set.



SPECIAL NOTICE TO THE PROFESSION AND TRADE.

Our *policy* heretofore in the introduction of JOHNSTONE'S IMPROVED ADAPTABLE POROUS FELT SPLINTS, has been to confine the sales and business negotiations directly to the Doctors themselves, declining in every case to sell our goods through Dealers; we having assured the Profession generally, both through our agents and catalogues, that *JOHNSTONE'S IMPROVED SPLINTS* could only be obtained by subscription.

We wish to announce, that owing to the large demand for our goods and the constant importunity on the part of *Surgeons* everywhere to place our Splints on sale with their Instrument Dealer or Druggist, to afford them greater convenience and facility in obtaining the pieces in duplicate, we have at last acceded to that request, and hereafter *JOHNSTONE'S CELEBRATED FELT SPLINTS* can be obtained at most dealers in Instruments and Drugs throughout the United States, at the same price which they were heretofore sold, viz:

A complete set, embracing fifty (50) pieces—twenty-five for adults and twenty-five for children—is thirty ($30) dollars. Extra or duplicate pieces can always be obtained from your DEALER, at one dollar each.

JOHNSTONE'S CELEBRATED SPINAL JACKET, for Curvatures and Deformities, have met with unparalleled success, and, from their merit, secured the unqualified endorsement and approbation of our celebrated orthopædic specialists, and particular expression of gratitude from the patients who are wearing them. For full information, send for Descriptive Circulars.

Should your Instrument dealer fail to have a supply of our Splints, and decline to carry them in stock, orders sent to us will receive prompt attention.

AHL'S SPLINT MANUFACTURING CO., Limit
W. H. JOHNSTONE, Manager.

"N. B.—If the Instrument Dealers of Philadelphia decline to supply its Physicians with our JOHNSTONE'S FELT SPLINTS on call, they will be furnished and delivered by us to any part of the city, at any time, on receipt of the price, viz.,

$1.00 each.

Dr. Edward C. Spitzka,
Dr. Daniel M. Stimson,
Dr. Edward T. Ely,
Dr. G. H. Wynkoop,
Dr. Andrew H. Smith.

Situated upon a high hill that commands a splendid view of the Hudson and Harlem rivers, Spuyten Duyvil Creek, and the beautiful country for miles around; surrounded by ample grounds and magnificent drives; in easy communication with the city by means of the Sixth and Ninth Avenue Elevated and the Hudson River Railroads; away from the dust, noise, crowding and malaria of the city; with hot and cold water in every room, furnace and grate-fire heating, croquet, horses and carriages, boats and fishing, an excellent *cuisine*, trained nurses and careful medical attendance, it possesses unequaled advantages for the treatment of cases of this kind.

The plan of treatment pursued in the cure of opium, morphine and chloral takers is that of *rapid reduction*, which possesses all the advantages, and none of the dangers of Levenstein's *sudden deprivation*, or the prolonged agony of *gradual reduction*. Each case is studied and treated in accordance with its peculiarities and the idiosyncrasies of the patient, no set plan of treatment being pursued, at the expense of the person's health or comfort.

Our Home, furthermore, offers special facilities for the treatment by *rest, diet, and massage*, according to the plan of Weir Mitchell, of that large class of nervous diseases so commonly met with in ladies suffering from uterine troubles. This plan of treatment has been specially studied, and nurses competent to carry out its provisions in every detail will be furnished. For further particulars, etc., address 1299-1350

Drs. KANE and VITTUM, De Quincey Home, Fort Washington, New York City.

UNIVERSITY OF PENNSYLVANIA.

POST-GRADUATE INSTRUCTION.

A Post Graduate Course has been organized for Bedside and Dispensary Instruction in the following named branches:—

ON PHYSICAL DIAGNOSIS AND CLINICAL MEDICINE, Prof. WM. PEPPER and Dr. ED. T. BRUEN.
" NERVOUS DISEASES AND ELECTRO-THERAPEUTICS, - - - Prof. H. C. WOOD.
" DERMATOLOGY, - - - - - - - - - - Prof. L. A. DUHRING.
" OTOLOGY, - - - - - - - - - - Dr. GEO. STRAWBRIDGE.
" OPHTHALMOLOGY, - - - - - - - - - - Dr. S. D. RISLEY.
" GYNÆCOLOGY, - - - - - - - - - - - - Dr. B. F. BAER.
" LARYNGOSCOPY, - - - - - - - - - - - - Dr. C. SEILER.
" OPERATIVE SURGERY AND VENEREAL DISEASES, - - - - Dr. J. WM. WHITE.

Two courses will be given annually; beginning the first week in November and the first week in April; continuing three months, two lectures each week. A certificate will be given to each person having taken the full course. Fee $100, for seven branches—elective—or $25 for each branch taken separately, invariably in advance. For further information apply to the undersigned, or any of the Lecturers.

1291-1315 Dr. EDWARD T. BRUEN, Sec'y, 1531 Chestnut St.

COMPOUND PETROLEUM PILLS.

The attention of the *Profession* is called to my new *Combination* for the alleviation of **BRONCHIAL** and **PULMONARY TROUBLES—CONSUMPTION, CHRONIC BRONCHITIS, CATARRH** and **ASTHMA.** Sample Boxes with Formula furnished *Physicians.*

Price Fifty Cents and One Dollar per Box. Sent on receipt of price by Registered Letter.

TANRET'S PELLETIERINE.

For the TREATMENT of TAPE-WORM (Tænia Solium).

This new Tænifuge, the Active Alkaloid of Pomegranate Bark, has of late come into extensive use in France, for the treatment of Tape-worm (Tænia Solium). The results of numerous experiments with it at the Marine Hospitals of Toulon, St. Mandrier, etc., and in the Hospitals of Paris, St. Antoine, La Charité, Neckar, Beaujon, etc., have all been most satisfactory. Doctor Dujardin Beaumetz, Member of the Academy of Medicine, and Prof. Laboulbene, in their report to the Society of Therapeutics, have given it their unqualified approval, after the most searching experiments. This preparation is pleasant to administer, and if certain preliminaries are observed success will be insured.

PELLETIERINE is prepared by Mr. CHAS. TANRET, Pharmacien de First Class, 64 Rue Basse du Rempart, Paris. 1242eow-tf

McINTOSH'S COMBINED

Galvanic AND Faradic Battery.

THIS CELEBRATED BATTERY COMBINES BOTH THE GALVANIC AND FARADIC CURRENT,

Which can be used separately or combined. Any strength and intensity desired can be obtained for use in Electro-therapeutics. THIS BATTERY is constructed on an IMPROVED PLAN, as follows: The zinc and carbon plates are arranged in couples, securely clamped to hard rubber plates, with thumb screws. These screws are also used for binding posts. All the connections are positive. The cells are made in sections of six, of hard rubber, with hard rubber drip cup. The following points of excellence render our Batteries superior to others:

1. They combine the only Portable Galvanic and Faradic Battery in one case.

2. They weigh one-half less than other Batteries of the same number of cells.

3. The cells are made in sections of six, of one solid piece of hard, vulcanized rubber; by this arrangement they can be emptied, cleaned and filled as easily and quickly as one cell, and will not crack, break or leak.
4. A hard rubber drip cup is placed by the side of each section of cells, to receive the zinc and carbon plates when removed from them. By this arrangement we avoid the use of absorbent materials and soiling the Battery
5. The Hydrostat is perfect. The rubber plates which hold the elements project over on one side enough to cover the cells when the zinc and carbon plates are placed in the drip cups. The under side of this projection is covered with thick, soft rubber, which is securely clamped to the cells sections, and makes them water tight.
6. This is the only Battery in which the zinc and carbon plates can be kept clean by simply rinsing them.
7. A zinc or carbon plate can be removed by simply loosening a binding post; and all parts of the Battery can be duplicated, as like parts are made exactly alike. We will be pleased to send circulars and our illustrated catalogue, giving full information, price, etc., free, upon application.

McINTOSH GALVANIC BELT AND BATTERY CO.,

1281-1332 **Nos. 192 and 194 Jackson Street, CHICAGO, ILL.**

TO PHYSICIANS.

IODIA.

FORMULA.—Iodia is a combination of Active Principles obtained from the Green Roots of STILLINGIA, HELONIAS, SAXIFRAGA, Menispermum, and Aromatics. Each *fluid* drachm also contains *five* grains IOD.-POTAS. and *three* grains PHOS.-IRON.

DOSE.—One or two *fluid* drachms (more or less, as indicated) *three* times a day, before meals.

IODIA is the *Ideal* Alterative. It has been LARGELY PRESCRIBED in Syphilitic, Scrofulous, Cutaneous, and Female Diseases, and has an Established Reputation as being the best Alterative ever introduced to the Profession.

MATHEY-CAYLUS' GLUTEN

CAPSULES

OF

PURE COPAIBA AND OTHER MEDICINES.

Adapted and recommended for the cure of recent or chronic Gleets, Fluor Albus, etc., etc.

The MATHEY-CAYLUS' CAPSULES, *coated with gluten*, present the most perfect mode for administering Copaiba, Cubebs, Norway Tar, Turpentine, and other remedies, the disagreeable odor and taste of which are often a hindrance to their use. This mode of preparing capsules, which has been approved by the Academy of Medicine, has been recommended in their clinical lectures by eminent Professors in the hospitals of Paris, as well as in those of New York and London.

By the first physicians of the hospitals of Paris, London, and New York.

SPECIAL ADVANTAGES OF MATHEY-CAYLUS' GLUTEN CAPSULES.—Being formed of thin, transparent, and readily assimilated coating, they so cover and disguise the medicine to be given, that it can be taken without disgust, but with ease. In this respect, they differ widely from the gelatine capsules, which have a hard, thick coating, which swells beyond measure, in the stomach, are hard to be swallowed, and what is of great importance, they create disturbance in the digestive functions.

The special advantage of the coating of gluten consists in the fact that, notwithstanding its extra thinness, and although it softens under the action of the gastric juice, it can pass the stomach without breaking, and only in the intestines is the medicinal matter liberated; this accounts for the fact that Mathey-Caylus' Capsules never cause the nausea, eructations, and dyspeptic symptoms, which are complained of by many persons using other preparations.

Finally, their regular ovoid form, which is so favorable to swallowing, their pleasant appearance, which dispels all disgust, and the advantage of being entirely free from taste and smell, recommend the use of these capsules even to the most delicate persons.

Thankful to the Medical Profession for the liberal patronage heretofore bestowed upon us, we hope that they will continue their favors, and we are convinced that they will never have any reason to regret the generous welcome they have given to our preparations.

MATHEY-CAYLUS' CAPSULES are never sold, except in bottles having the following inscription printed in the glass: MATHEY-CAYLUS A PARIS. And each bottle contains 64 capsules, making them the cheapest capsules in the market.

The following different kinds of Mathey-Caylus' Gluten Capsules are now offered:

COPAIBA AND TANNIC ACID,
COPAIBA AND S. N. OF BISMUTH,
COPAIBA AND CATECHU,
COPAIBA AND MAGNESIA,
COPAIBA, CUBEBS AND ALUM,
COPAIBA, CUBEBS AND RHATANY,
COPAIBA AND RHATANY,
COPAIBA AND CITRATE OF IRON,
COPAIBA AND CUBEBS,
COPAIBA PURE,
COPAIBA, CUBEBS AND CARB. OF IRON,
VENICE TURPENTINE, NORWAY TAR, PURIFIED,
CUBEBS AND TURPENTINE,
CUBEBS AND TANNATE OF IRON,
CUBEBS AND ALUM,
CUBEBS PURE,
COPAIBA AND MATICO,
COPAIBA, IRON AND OIL OF SANDAL,
COPAIBA AND OIL OF SANDAL,
COPAIBA, PEPSIN AND BISMUTH,
COPAIBA AND TAR,
COPAIBA, CUBEBS AND OIL OF SANDAL.

HOLLOW SUPPOSITORIES.

WITH STOPPERS. ALL MADE FROM PURE BUTTER OF COCOA, ONLY.

Aural, Nasal, Rectal, Urethral, Cystic, Vaginal, Intra-Uterine, and Veterinary Suppositories.

The object of this invention is to supply Physicians, Druggists, Veterinary Surgeons, and others, with HOLLOW SUPPOSITORIES, into which they can put any kind of medicine or nutriment, thus producing firm, smooth, and evenly medicated Suppositories, that are cheaper and more reliable than those made by the old method.

RECTAL ABSORPTION.

"The mucous membrane of the rectum, like that of other portions of the alimentary canal, possesses all the requisites, more or less, for the exercise of absorption."

Liebig states that a strong solution of common salt disappeared so completely in the rectum, that an evacuation one hour afterward was found to contain no more than the usual portion of salt.

Many medicinal substances act more energetically when applied to the rectum than when received into the stomach.

Baron Dupuytren said: "The rectum *absorbs*, but does not *digest*. The medicinal agent," he says, "owing to the absence of digestion, passes more directly, more purely, and more surely to its destination, than the same medicine does when taken into the stomach."

M. Orfila asserts that these medical agents which operate through the medium of absorption, such as opium, tobacco, etc., are much more active by the rectum than by the stomach.

Dr. J. H. Scorff reports four cases where he was successful in removing the vomiting of pregnancy, by introducing 20 grains of chloral into the rectum, night and morning. He only found it necessary to use the remedy three or four times.

Chloral is the remedy *par excellence* in the ravings of delirium tremens, and in cases of delirium and insomnia combined; also in infantile convulsions and attacks of laryngysmus stridulus.

Dr. Hickman reports a case of typho-malarial fever, which chloral was found to control in a happy manner. The chloral was introduced per rectum.

"REST TO THE STOMACH,"

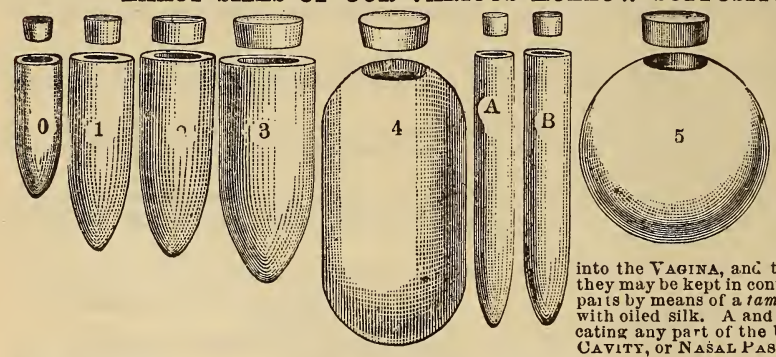
says Mr. Theodore Williams (in London *Lancet*, October 24th, 1874), is of the highest importance in some of the diseases of this organ. In such cases we possess in the rectum an effective second stomach, which, if it does not afford us the pleasure of digestion, spares us many of its pains."

Nutritious substances are taken up by the absorbents, and thus find their way into the economy, and produce their assimilative and nutritive effect. Haller demonstrated the fact that digestion can and does take place in the alimentary canal. He had the greatest confidence in the absorptive and digestive powers of the rectum to sustain life indefinitely.

HYPODERMIC MEDICATION.

Dr. William Bodenhamer says: "This now very common and often misused method is of great value in numerous cases, yet I am decidedly of the opinion that rectal medication is of greater importance; indeed, it is greatly preferable in many instances, being much less dangerous, much more convenient and simple; and the remedies, too, act through this medium with almost equal celerity. But very few remedies can be used hypodermically in comparison to those which can be used by the rectum."

EXACT SIZES OF OUR VARIOUS HOLLOW SUPPOSITORIES.



Size 0 is for children. It may also be used for the EAR and in the NASAL PASSAGES. Nos. 1, 2 and 3 are RECTAL SUPPOSITORIES. Nos. 3 and 4 may be used for introducing nutriment into the system, *via rectum*. No. 4 is also a VAGINAL SUPPOSITORY. No. 5 is a "SPHERICAL HOLLOW SUPPOSITORY," to introduce remedies into the VAGINA, and to the *os uteri*, where they may be kept in contact with the diseased parts by means of a *tampon* of cotton covered with oiled silk. A and B are used for medicating any part of the URETHRA or UTERINE CAVITY, or NASAL PASSAGES.

PRICES:

DR. McINTOSH'S ELECTRIC OR GALVANIC BELT.

This Belt is a perfect Galvanic Battery, composed of sixteen cells, placed in pockets on a belt. Each cell is made of hard vulcanized rubber, lined with copper, which constitutes the negative plate. The rubber coating perfectly insulates each cell. The positive plates are of zinc, wrapped in a porous material to absorb the exciting fluid, preventing contact with the copper, and permitting the current to pass from the copper to the zinc. The cells are charged without wetting the belt.

A current selector is so arranged that one or more cells can be used at pleasure. The electrodes are covered similar to ordinary battery electrodes, and connected with the cells by connecting cords. By this arrangement, a current from the belt can be applied to any part of the body. Physicians who have used this belt in their practice do not hesitate to recommend it to the profession.

Our pamphlet on "Medical Electricity," containing a full description of the belt and diseases, with manner of treatment, sent free on application. Address

MELLIN'S FOOD

FOR

INFANTS AND INVALIDS

PHYSICIANS who make a specialty of infantile diseases say that the great desideratum in *cholera infantum* is *food*—PROPER FOOD. Secure that, and the medical treatment becomes an easy matter. Mellin's Food is the best food for infants, sick or well. It is not *farinaceous;* it is entirely *soluble;* and when dissolved in warm milk and water it forms the most perfect substitute for mother's milk that has ever been produced. The philosophy of its action is fully explained in the pamphlet which, with a sample of the Food, will be sent free to any address.

For sale by all druggists.

1258-1309eow THEODORE METCALF & CO., Boston, Mass.

DUCRO'S ALIMENTARY ELIXIR,

A COMBINATION UNITING THE PROPERTIES OF

ALCOHOLIC STIMULANTS AND RAW MEAT.

This preparation, which has been used with great success in the hospitals of Paris, since 1868, is adapted to the treatment of all diseases requiring the administration, in a small volume, of a tonic able to stimulate and support the vital forces, as *Pulmonary Phthisis, Depression and Nervous Debility, Adynamia, Malarious Cachexia, etc.*

Prepared by EMILE DURIEZ & CO.,

Successors to DUCRO & CIE, Paris. 1278-eow-tf

E. FOUGERA & CO., Agents, New York.

VINUM DIGESTIVUM (PROCTER.)

DIGESTIVE WINE, used with unvarying success by so many of our prominent physicians for the last three years, is offered with increased confidence to the profession as a sure and rapid means for the exhibition of the artificial digestive function. The nausea of pregnancy and sea sickness are greatly alleviated or entirely relieved by its use. One fluid-ounce dissolves 500 grains of coagulated albumen. One or two teaspoonfuls may be given, or varied as desired. We would suggest that the above title be used in prescribing. 1257-1308, 1y.

Manufactured by **WM. PROCTER, Jr., CO.,** S. W. Cor. 9th and Lombard Sts., Phila.

Registered COSMOLINE Trade Mark.

Unguentum Petrolei

Prepared by E.F.Houghton & Co. Philadelphia, U.S.A.

Put up in 1, 5, 10, 25, 50, and 100-lb. cans. Samples furnished on application. The post-office laws forbid anything of an oleaginous nature being sent through the mail.

In chemical composition, Cosmoline [Unguentum Petrolei] is an oleaginous hydrocarbon, corresponding to the heavy petroleum oils, and containing a large amount of the paraffines and olefines of the formulæ $C_{16}H_{34}$ and $C_{16}H_{32}$. It contains but a small percentage of the paraffines and olefines, corresponding to the formulæ C_7H_{16} and C_7H_{14}, respectively, and the offensive and irritating properties of the crude oil have been carefully removed. In the process of purification, no acids, alkalies, or other chemicals are employed, and no injurious additions of any kind are made to the natural product. The result is a semi-solid, translucent substance, with a faint odor and unctuous feel.

Cosmoline [Unguentum Petrolei] melts at about 100° Fah. (38° Cent.); and boils at about 625° Fah. (329° Cent.); its specific gravity is about 0.875 at 60° Fah.

As it contains no oxydizable or organic matter capable of change by putrefaction or fermentation, and is absolutely without affinity for moisture, it offers to the profession an admirable unguent, which can never decompose, ferment, or become rancid in any climate or temperature.

291 MADISON AVENUE, NEW YORK, February 26th 1878.

I have examined the preparations of Cosmoline as manufactured by E. F. Houghton & Co., Philadelphia, and believe them well adapted to the purposes for which they are designed. As lubricants, and as the bases of simple or medicated ointments, they have a decided advantage over the fixed oils and fatty substances in ordinary use, in that they do not become rancid, and do not acquire irritating qualities from atmospheric exposure. ALFRED C. POST, M.D., LL.D.,
Emeritus Professor of Clinical Surgery in the University of New York, Visiting Surgeon to Presbyterian Hospital, etc.

PHILADELPHIA, July 10, 1880.

MESSRS. E. F. HOUGHTON & CO.:

I have for a number of years made extensive use of Cosmoline [Unguentum Petrolei] and consider it a most valuable article for surgical purposes. Either as a dressing by itself, or as a vehicle for the application of medicaments, it is greatly superior to lard or other fatty matters, especially by reason of its non-liability to change by time or temperature.

Yours truly,
JOHN H. PACKARD, M.D.
1031 WALNUT ST., PHILADELPHIA.

MESSRS. E. F. HOUGHTON & CO.:

I have used extensively Cosmoline [Unguentum Petrolei] both in Dispensary and private practice, with very great satisfaction. As a vehicle in making ointments it is invaluable, and far superior to lard, for the reason that it will not become rancid or undergo chemical change like the latter, when exposed to the atmosphere. I cannot too highly commend it as an application in various skin diseases.

Yours truly, JOHN V. SHOEMAKER, A.M., M.D.,
Physician to the Pennsylvania Free Dispensary for Skin Diseases

208 WEST 34TH ST., NEW YORK.

MESSRS. E. F. HOUGHTON & CO.:

Gents:—I fully appreciate the value of your Cosmoline, or Unguentum Petrolei, and prescribe it frequently in ointments. Fluid Cosmoline I have used constantly for several years, as a lubricant of urethral sounds. It is the cleanest oil I know of for this purpose.

Yours truly, GEO. HENRY FOX.

MEDICAL ENDORSEMENTS.

We append, *by permission*, a few names of the many prominent Members of the Medical Profession who are prescribing our Maltine Preparations :

J. K. BAUDUY, M. D., St. Louis, Mo.,
Physician to St. Vincent's Insane Asylum, and Prof. Nervous Diseases and Clinical Medicine, Missouri Medical College.

WM. PORTER, A. M., M. D., St. Louis, Mo.

E. S. DUNSTER, M. D., Ann Harbor, Mich.,
Prof. Obs. and Dis. Women and Children University and in Dartmouth College.

THOMAS H. ANDREWS, M.D., Philadelphia, Pa.,
Demonstrator of Anatomy, Jefferson Medical College.

S. F. HAMMEL, M. D., Philadelphia, Pa.,
Supt. Hospital of the University of Penn.

F. R. PALMER, M. D., Louisville, Ky.,
Prof. of Physiology and Personal Diagnosis, University of Louisville.

HUNTER McGUIRE, M. D., Richmond, Va.,
Prof. of Surgery, Med. Col. of Virginia.

F. A. MARDEN, M. D., Milwaukee, Wis.,
Supt. and Physician, Milwaukee County Hospital.

L. P. YANDELL, M. D., Louisville, Ky.,
Prof. of Clinical Medicine and Diseases of Children, University, Louisville.

JOHN A. LARRABEE, M. D., Louisville, Ky.,
Professor of Materia Medica and Therapeutics, and Clinical Lecturer on Diseases of Children in the Hospital College of Medicine.

R. OGDEN DOREMUS, M.D., LL.D., New York,
Professor of Chemistry and Toxicology, Bellevue Hospital Medical College ; Professor of Chemistry and Physics, College of the City of New York.

WALTER S. HAINES, M. D., Chicago, Ill.,
Professor of Chemistry and Toxicology, Rush Medical College, Chicago.

E. F. INGALLS, A. M., M. D., Chicago, Ill.,
Clinical Professor of Diseases of Chest and Throat, Woman's Medical College.

H. F. BIGGAR, M. D.,
Prof. of Surgical and Medical Diseases of Women, Homœopathic Hospital College, Cleveland, Ohio.

DR. DOBELL, London, England,
Consulting Physician to Royal Hospital for Diseases of the Chest.

DR. T. F. GRIMSDALE, Liverpool, England,
Consulting Physician, Ladies' Charity and Lying-in-Hospital.

WM. ROBERTS, M.D., F.R.C.P., F.R.S., Manchester, England,
Prof. of Clinical Medicine, Owens' College School of Medicine; Physician Manchester Royal Infirmary and Lunatic Hospital.

J. C. THOROWGOOD, M.D., F.R.C.P., London, England,
Physician City of London Hospital for Chest Diseases ; Physician West London Hospital.

W. C. PLAYFAIR, M. D., F.R.C.P., London, England,
Prof. of Obstetric Medicine in King's College, and Physician for the Diseases of Women and Children to King's College Hospital.

W. H. WALSHE, M.D., F.R.C.P., Brompton, England,
Consulting Physician Consumption Hospital, Brompton, and to the University College Hospital.

A. WYNN WILLIAMS, M.D., M.R.C.S., London, England,
Physician Samaritan Free Hospital for Diseases of Women and Children.

A. C. MACRAE, M.D., Calcutta, Ind.,
Dep. Insp.-Gen. Hosp. Indian Service, late Pres. Surg., Calcutta.

EDWARD SHOPPEE, M. D., L. R. C. P., M.R.C.S., London, England.

LENNOX BROWN, F.R.C.S., London, England,
Senior Surgeon, Central Throat and Ear Hospital.

J. CARRICK MURRAY, M. D., Newcastle-on-Tyne, England,
Physician to the N. C. H. for Diseases of Chest.

J. A. GRANT, M. D., F.R.C.S., Ottawa, Canada.

A. A. MEUNIER, M.D., Montreal, Canada,
Prof. Victoria University.

MALTINE is prescribed by the most eminent members of the Medical Profession in the United States, Great Britain, India, China and the English Colonies, and is largely used for patients at the principal Hospitals in preference to any of the Extracts of Malt.

We will furnish gratuitously a one pound bottle of any of the Maltine Preparations to Physicians who will pay the express charges. Send for our 28 page Pamphlet on Maltine for further particulars. Address,

NEW MEDICINAL AGENTS

WORTHY OF THE

Attention of Therapeutists.

JAMAICA DOGWOOD.

[Piscidia Erythrina.]

This remedy, introduced by us to the profession of the United States, has already largely taken the place of opium, as an anodyne and narcotic. It obtunds sensibility, and allays nervous irritability, inducing sleep, without "locking up the secretions" or producing the constipation and gastric disturbance following the use of opium. It has been submitted to a sufficient physiological test, and accorded a sufficient therapeutic trial to test these claims, and it may now be regarded as a remedy of fixed and decided therapeutic properties.

QUEBRACHO.

[Aspidosperma Quebracho Blanco.]

The experiments of Penzoldt, of Germany, justified that observer in speaking of quebracho as an article supplying a place in medicine hitherto unoccupied, and making it, literally, a "long felt want." He found it to increase the depth of inspiration, and to facilitate oxygenation of the blood in dyspnœa from whatever cause. It is thus a desideratum in the treatment of emphysema, capillary bronchitis, pneumonia, asthma, etc. Its use in the hands of physicians in this country has corroborated this estimate of its properties.

EXTRACT OF DUBOISIA.

[Duboisia Myoporoides.]

Duboisia, the new mydriatic, has been found to be more prompt than atropia as a dilator of the pupil and as a paralyzer of the muscles of accommodation, while at the same time it is less prone to cause the conjunctivitis, cerebral disturbance, dryness of the throat, etc., so intimately connected with the use of the belladonna alkaloid. It is now largely employed by ophthalmologists, and bids fair to almost, if not entirely, supplant atropia in eye practice.

We are in receipt of a large direct importation of this rare drug.

MANACA.

[Franciscea Uniflora.]

This drug, although long officinal in the Brazilian Dispensatories, was unknown to the profession of this country until introduced by us, a little over a year ago. It is highly esteemed in Brazil as an alterative, and in the damp, shady forests of that country, where rheumatism is very prevalent, it is regarded as a valuable anti-rheumatic, particularly in the chronic and subacute varieties of the affection.

Believing it to be an article of much value in these forms of rheumatism, we ask for it a thorough trial.

TO THOSE DESIRING FULLER INFORMATION ON THE ABOVE DRUGS,

We will furnish Descriptive Circulars Free, on application.

PARKE, DAVIS & CO., Detroit, Mich.,

MANUFACTURING CHEMISTS.

IMPORTANT ADDITIONS TO

McKESSON & ROBBINS' PILLS AND GRANULES.

McK. & R. ACONITIA CRYSTALS (Duquesnel's), 1-200 gr., per 100, 60c.
The most uniform and reliable preparation of Aconitia, but very powerful, and should be prescribed with caution as regards amount and frequency of dose.

McK. & R. ALOIN AND STRYCHNINE {Aloin, 1-5 gr. / Strychnine, 1-60 gr.} . . . per 100, 60c.
A tonic laxative granule, prescribed for chronic constipation where a painless peristaltic action is desired. Especially useful in the treatment of the aged. Since introducing this formula to the profession and adding the granules to our list our sales have been exceedingly large. We have received numerous letters and reports from physicians speaking in the highest terms of the results of their administration, and thanking us for introducing this granule to their notice. It is necessary to specify "McK. & R."

McK. & R. ALOIN, STRYCHNINE AND BELLADONNA, ... per 100, 60c.
The same formula as the preceding, with the addition of 1-8 gr. Ext. Belladonna to each granule.

McK. & R. ATROPIA AND MORPHIA, No. 1. {Atropia 1-300 gr. / Morphia, 1-24 gr.} . . per 100, 75c.

McK. & R. ATROPIA AND MORPHIA, No. 2. {Atropia, 1-60 gr. / Morphia, 1-8 gr.} . . per 100, $1.00.

McK. & R. CINCHONIDIA AND CAPSICUM. {Cinchonidiæ Sulph., 2 grs. / Pulv. Capsici, 1-2 gr.} . . per 100, 1.50.

McK. & R. DIURETIC. {Saponis Pulv., 1 1-2 grs. / Sodii Carb. Exsic., 1 1-2 grs. / Ol. Juniperi Bacc., 1-16 gr.} . . . . per 100, 60c.

McK. & R. ERGOTIN PURIF., 1 gr. (each pill = 10 grs. Ergot of Rye), 90c.
" " " 3 grs. (" " " = 30 grs. " "), . $1.60.
" " " 5 grs. (" " " = 50 grs. " "), . 2.40.
We manufacture our Purif. Ergotin with great care, from the best quality of fresh, selected Ergot, and it contains in the most potent form all the active constituents of Ergot of Rye, each grain representing 10 grs. Ergot, and each 3 gr. pill being equal to half a teaspoonful of officinal fluid extract. The value of Ergotin, in the place of the crude drug and the Fluid Preparations, is conceded, and it is being largely administered both in this country and in Europe. It has taken a prominent place in the treatment of Neurotic diseases. Many of our most reliable practitioners, and particularly those of extended experience in Gynæcology, assert that they have never found a preparation of Ergot in which, by experience, they felt as much confidence as in McKesson & Robbins' Ergotin Pills. The advantages of prescribing it in this form are obvious. (Dose, 2 to 9 grs.)
WE OFFER OUR ERGOTIN, PREPARED SPECIALLY FOR HYPODERMIC USE, IN ONE OUNCE BOTTLES. SPECIFY McK. & R.'S FOR HYPODERMIC USE, AS WE ALSO MANUFACTURE AN ERGOTIN AFTER BONJEAN'S FORMULA.

McK. & R. ERGOTIN AND ALOIN. {Ergotin Purif., 1 gr. / Aloin, 1-2 gr.} . . . per 100, $1.25.
The use of Ergotin is rapidly increasing in scope. This pill is recommended for its peristaltic action on the mucous membrane.

McK. & R. ERGOTIN AND CANNABIS INDICA. {Ergotin Purif., 1 gr. / Ext. Cannab. Indic, 1-2 gr.} . per 100, $1.25.
Where a continued treatment with Ergot is necessary, the addition of Cannab. Indica is frequently preferred, and many physicians who have employed this combination for sleepless cases of mania, hemicrania, and congestive nervous conditions that follow uterine disorders of women, give the quality of these Extracts a very satisfactory mention. Dose, 1 to 3.

McK. & R. EXTRACT CASCARA SAGRADA, 2 grs. . . . . per 100, 40c.
Recommended in bilious affections.

McK. & R. GLONOINUM (Nitro-Glycerin) 1-100 gr., ... per 100, 60c.
Pronounced beneficial in Neuralgic Headaches.

McK. & R. HELONIAS COMPOUND, 2 grs. {Helonin, Viburnin, āā, 1-8 gr. / Caulophyllin, 1-4 gr. / Mitchella, rep., 1 1-2 grs.} . . per 100, 80c.

McK. & R. IODOFORM AND OPIUM, {Iodoformum, 1 gr. / Pulv. Opii, 1 gr.} . . . . per 100, $1.50.
Useful in chronic diarrhœa.

McK. & R. LAXATIVE, SPECIAL (See Dr. Fordyce Barker's work on Puerperal Diseases.) . per 100, 50c.

{Ext. Coloc. Comp. pulv., 1 2-3 grs. / Ext. Hyoscyami, 1 1-4 grs. / Aloes Socotrin, pulv., 5-6 gr. / Ext. Nucis Vomicæ, 5-1 2 gr. / Res. Podophylli, Ipecac., pulv., āā, 1-12 gr.}

McK. & R. MERCURY PROTOIODIDE, 1-8, 1-5, 1-4, 1-3 and 1-2 gr., . . per 100, 40c.
The Protoiodide Mercury used in our granules is freshly made in our own laboratory, and is guaranteed to be reliable. Our immense demand proves that the profession have found them as represented. We have added the 1-8 gr. size, as we have received many inquiries for it, approximating as it does more closely to the size of the sugar-coated pills of foreign manufacture.

McK. & R. MORPHINE, SULPHATE, 1-20, 1-16, 1-10, 1-8, 1-6, and 1-4 gr.
We have increased the list of sizes of these reliable granules.

McK. & R. NITRO-GLYCERIN. (See GLONOINUM.)

McK. & R. PETROLEUM CRUDE, ... per 100, 60c.
Each pill contains 2 minims of the Crude Oil of Petroleum. Our pills furnish the best form for administering this remedy.

McK. & R. PICROTOXIN, 1-80 gr., ... per 100, 60c.
A prominent physician, in referring to this alkaloid, says that his success with Picrotoxine in the treatment of night sweating in Phthisis and other diseases has been decidedly superior to any attained by the use of the mineral acids, belladonna and ergot, singly or combined. He writes: "I have not employed this drug in the night sweats of phthisis solely. I recall a case of chronic pleurisy in which, the effusion having been absorbed, convalescence was unaccountably retarded and prostration was so extreme that a latent, incipient phthisis was suspected. The skin was bathed in perspiration during the greater portion of the twenty-four hours, and this being the only discoverable morbid condition, I resolved to treat it with picrotoxine. It was promptly checked, and convalescence set in immediately. I have employed the drug in nearly one hundred cases." "My custom has been to give a pill containing gr. 1-80 at bedtime, which dose may be repeated once or twice during the day in obstinate cases, and, at my suggestion, the firm of McKesson & Robbins, of New York, have added such a pill to their list."

McK. & R. QUININE AND CAPSICUM, No. 1. {Quiniæ Sulph., 1 gr. / Pulv. Capsici, 1-4 gr.} . . per 100, $1.50.

McK. & R. QUININE AND CAPSICUM, No. 2. {Quiniæ Sulph., 1 gr. / Pulv. Capsici, 1-2 gr.} . . per 100, $2.50.

Send for Seventh Edition of our Formula Book.

Specify McK. & R., to avoid substitution and consequent disappointment. Request the druggists to stock McK. & R.'s.

1297-1348-eow

SCOTT'S EMULSION

PURE COD LIVER OIL

WITH

HYPOPHOSPHITES OF LIME AND SODA

PERFECT, PERMANENT, PALATABLE.

The well-known virtues of this preparation, that has now been before the profession for a number of years hardly requires comment from us. But we desire, for the information of those whose attention may not have been directed to it, to present the following facts:—

FIRST.—We use in the manufacture of our Emulsion. Cod-Liver Oil that is prepared expressly for us, and is strictly pure, which is the most important consideration to the Physician.

SECOND.—By our process of Emulsifying, we so thoroughly incorporate the Oil with the Hypophosphite Salts, that the mixture is perfectly homogeneous and remains in that condition, without the slightest separation or change, for years, unless exposed to the air or intense heat.

THIRD —It is so palatable and easy of digestion that it can be administered to children and persons with most sensitive stomachs without the slightest repugnance, and we are confident, from the results that have been obtained in the use of this preparation, and the flattering testimonials we have received from prominent physicians, that the proper manner of administering Cod-Liver Oil, even to patients that can tolerate the crude oil, is in the form of a palatable and easily digested Emulsion. There are some in the profession who adhere to the use of the plain oil, but, with all due deference, if they will make a trial of our Emulsion, we believe their prejudices will be removed, and they will find it much more beneficial to their patients.

With all the numerous Foods, Cereals and so-called Constructive Agents of uncertain value that are being introduced the physician must sometimes be at a loss to know what to prescribe. But we are assured that the profession will bear us out in the statement that in all pulmonary troubles, especially where the lung tissue is involved, in Scrofulous children and in Anæmic women of consumptive tendencies, as well as in general nervous debility, our combination will produce results, if properly administered, unequaled by any other preparation, and most satisfactory to the physician and patient. We most respectfully ask those who have never prescribed or seen its results to give it a trial, and if you desire to make a personal inspection of it we will be pleased to send a sample by express, prepaid.

FORMULA.—50 per cent. of pure Cod-Liver Oil. 6 grains of the Hypophosphite of Lime, and 3 grains of the Hypophosphite of Soda to a fluid ounce. Emulsified with mucilage and glycerine.

BUCKTHORN CORDIAL

RHAMNUS FRANGULA.

We desire to call the attention of the profession to this preparation, and although they may be familiar with its name and general characteristics, yet, on account of there not being a preparation in the market of uniform strength and quality, may not have a proper appreciation of its value. As far as our experience goes in the various tests made by our medical friends, we can present the German bark, *Rhamnus Frangula* in the form of our *Buckthorn Cordial*, with perfect confidence that we will secure the encouragement and assistance of the profession in promoting its growth and giving it the position it deserves as a medicine. It seems to be almost a specific for Habitual Constipation and Indigestion, acting mildly but efficiently, without causing the nausea that usually accompanies the use of a cathartic. At the same time producing a tonic effect upon the bowels, so that as the patient recovers, the dose may be gradually decreased until a normal condition takes place. We use great care in the selection of the Bark, as we find it necessary that it should be of the proper age and condition, and carefully exhausted, to secure its true active principle.

We combine it with aromatics in such a manner as to make a pleasant cordial, acceptable to the most sensitive stomach. We shall be very glad to furnish samples free to all physicians, upon application, giving instructions for its use, etc. Prepared by SCOTT & BOWNE

SCOTT & BOWNE'S PALATABLE CASTOR OIL

IN AN EMULSION.

We respectfully submit the above elegant preparation to the notice of the profession, and desire them to favor us with a trial. So far as it has been tested, it has met with their entire approval; and we believe it is not only destined to take the place of the crude oil, but to be used much more extensively. In our process of emulsifying, it is not only *permanent* and *palatable*, but is deprived entirely of its griping properties. The inestimable nature of Castor Oil as a laxative and cathartic, in the varied intestinal derangements of children, and in Diarrhœa, Colds, etc., is accepted by all, and in the available form in which we present it, in a perfectly palatable mixture, deprived entirely of its nauseous, sickening properties, and kindly received by the most sensitive stomach, it must occupy the exalted position it deserves as a medicine. In its administration, it requires very little more than the crude oil, but the experience of the physician will soon guide him in its use. It is put up in 4 oz. bottles. that sell for 25 cents; also in quarts for physicians to prescribe as desired. Samples will be furnished free on application. FORMULA:—50 *per cent. of Pure Cold Pressed Castor Oil*, 15 *per cent. of Chemically Pure Glycerine.* Prepared by

1306-1357eow

SCOTT & BOWNE, Manufacturing Chemists, 108 and 110 Wooster St., N. Y.

FOR PHYSICIANS' USE ONLY.

SVAPNIA

OR

PURIFIED OPIUM.

CONTAINS THE

ANODYNE AND SOPORIFIC

ALKALOIDS

CODEIA,

NARCEIA

AND

MORPHIA.

EXCLUDES THE

POISONOUS & CONVULSIVE

ALKALOIDS

THEBAINE,

NARCOTINE

AND

PAPAVERINE.

DOSE, THE SAME AS OPIUM.

This article is not intended for popular use, but only on prescription of the profession. It is to take the place of Opium in cases where that drug acts injuriously.

Dr. John Harley, of London, in his "Old Vegetable Neurotics," details a large number of experiments upon the human and animal system, with six of what he considers the narcotic alkaloids. He concludes that although all six possess both narcotic and hypnotic properties, yet these are so varied in degree and force as to make their effects, when exhibited singly, very distinct from those following their exhibition in combination.

Taking the experience of practical physicians with Dr. Harley's results, as a basis, we would group them in the following order:

First Group.	Second Group.
Anodyne and Hypnotic Elements.	Narcotic and Convulsive Elements.
1. Morphia.	1. Thebain.
2. Narceia.	2. Cryptopin.
3. Codeia.	3. Papaverin.

Now SVAPNIA *is a distinctive name* given *to the first group, representing* the ANODYNE and HYPNOTIC ELEMENTS; *the second group, or the narcotic and convulsive* elements *of Opium being eliminated;* and is *not*, therefore, a simple principle, or a single constituent of Opium.

The relative values of each being known, we can select and utilize those that are valuable, and reject those known to be deleterious and inert.

This is what we claim, and all we claim for SVAPNIA. *It can be relied upon and given in all cases where Opium or Morphia is indicated, with equally good effects;* and in addition to this, there will be found in the practice of every physician cases occurring almost every day, in which idiosyncrasy and peculiar states and diseases of the brain debar us from the use of Opium and Morphia, but where Svapnia can be exhibited with the happiest results.

In SVAPNIA there is retained all the Morphia and the greater part of the Codeia and Narceia, but combined with the native acids of Opium, meconic and thebolactic, in such a manner as to render those constituents soluble and active.

SVAPNIA IS UNIFORM IN ITS PROPORTIONS, and is prepared to conform to a standard of Opium representing ten per cent. of Morphia. This is done by a simple proportion of the neutral excipient, after determining the actual amount of the alkaloids obtained from the Opium used.

We may safely affirm that the danger of bad results is much diminished by a resort to that preparation of Opium in which the poisonous elements are eliminated, and the anodyne elements in such a state of combination as to reduce their toxic and enhance their hygienic effects, such as has been PROVED TO BE THE CASE WITH SVAPNIA.

Seminal Losses,

Impaired Vitality,

Spermatorrhœa.

We wish to call the attention of the profession to the action of Horsford's Acid Phosphate on the organs of generation, when their power has become impaired through sexual excess, or from senile impotence. It is at once rejuvenating and aphrodisiac in its effect. It appears to restore the secretory organs that have been deranged to their normal condition, giving vigor where there has been debility, and renewed strength where there has been exhaustion.

H. B. STORER, M.D., Boston, says: "I have found Horsford's Acid Phosphate serviceable, in a marked degree, in my treatment of spermatorrhœa."

E. W. JONES, M.D., Taunton, Mass., says: "Horsford's Acid Phosphate was prescribed in a case of nervous prostration from seminal losses, with decided beneficial effect."

C. S. ELLIS, M.D., Wabash, Ind., says: "I prescribed Horsford's Acid Phosphate in a case of nervous debility and weakness of the sexual organs; patient forty-eight years old; he was much benefited."

R. W. ERWIN, M.D., Bay City, Michigan, says: "In some cases of weakness following sexual indiscretions, attended with nervousness, it is useful."

Each case presents its own peculiarities for treatment, but, as a general rule, we would suggest a half teaspoonful of Horsford's Acid Phosphate, in half a tumbler of hot or cold water, or tea without milk, to be taken shortly after each meal, and upon retiring.

Pamphlet giving further details mailed free, on application to the manufacturers.

Physicians who have not had a bottle of the Horsford's Acid Phosphate, and who wish to test it, will be furnished with a sample without expense, except express charges.

RUMFORD CHEMICAL WORKS,

PROVIDENCE, R. I.

1297-1348

In corresponding with Advertisers, please mention THE MEDICAL AND SURGICAL REPORTER.

An experience of more than a quarter of a century convinces us that sugar, properly applied, is the only correct coating for a pill.

Physicians should be careful to specify Warner & Co., when prescribing or ordering.

Special attention is called to the following selected Recipes prepared for Physicians' Prescriptions.

PIL: PHOSPHORI COMP: (WARNER & CO.) ℞. Phosphori, - - 1-100 gr.
Ext. Nuc. Vom. - ¼ gr.

THERAPEUTICS.—As a nerve tonic and stimulant, this form of pil is well adapted for such nervous disorders as are associated with impaired nutrition and spinal debility, increasing the appetite and stimulating digestion.

The practical value of Phosphorus as a therapeutic agent, and its applicability to the cure of disease, and especially in those varied disordered conditions consequent upon OVERWORK, which are characteristic of modern civilization.

Pil. Phosphori Comp. may be taken, one or two pills three times daily, after eating.

Price, per 100, $1.50.

PIL: IODOFORM ET FERRI. (WARNER & CO.) ℞. Iodoform, - - 1 gr.
Ferri Redacti, - 1¼ gr.

THERAPEUTICS.—A powerful general tonic and alterative, valuable as a remedy in Anæmia, Scrofula, Neuralgia, Chlorosis, Rheumatism, etc.

Pil. Iodoform et Ferri may be given in doses of from one to two pills, as occasion may require.

Price, per 100, $2.00.

PIL: DIGESTIVA. (WARNER & CO.) ℞. Pepsin Conc't, 1 gr. Gingerine, 1-16 gr.
Pv. Nuc. Vom., ¼ gr. Sulphur, ⅛ gr.

THERAPEUTICS.—Useful in relieving various forms of Dyspepsia and Indigestion, and of permanent benefit in cases of enfeebled digestion, where the gastric juices are not properly secreted. It is also a gentle laxative and excellent dinner pill, may be taken one after dinner, or one before each meal, three times daily.

Price, per 100, 75 cts.

PIL: CALCIUM SULPHIDE. (WARNER & CO.) 1-10, ¼, ½ & 1 gr. each.

THERAPEUTICS.—Extremely useful in the treatment of acne, scrofula and cutaneous diseases.

Sulphide of Calcium is usually administered in doses of from 1-10 to ¼ grain four times daily, gradually increasing the dose to one grain six times daily, or according to the progress or severity of the case.

Price, per 100, 1-10 gr. .50; 1-4 gr. .60; 1-2 gr. .75; 1 gr. $1.00.

WARNER & CO.'S PILLS MAY BE OBTAINED FROM ALL DRUGGISTS, OR BY MAIL, ON RECEIPT OF PRICE.

1273-1325eow

SAVORY & MOORE beg to call the attention of the Profession to some of their Special Preparations, the purity and uniform strength of which are Guaranteed.

PANCREATIC EMULSION,

Prepared in accordance with the direction of the Physician who introduced this purely

MEDICINAL FOOD FOR CONSUMPTION AND WASTING DISEASES.

Pancreatic Emulsion will always take precedence of Cod-Liver Oil, by reason of its introducing the STABLE SOLID FATS INTO THE SYSTEM, instead of the evanescent fluid fats or oils.

Neither Cod-Liver Oil nor EMULSIONS of COD-LIVER OIL can supply the kind of fat necessary for sound and vigorous human life. In addition to this, all the Oily Emulsions are liable to rancidity, and most of them are highly objectionable in consequence of the SAPONIFICATION and ULTIMATE PUTREFACTION, produced by the chemical agents used instead of Pancreatic Juice.

Pancreatic Emulsion (properly so-called), is THE NECESSARY FOOD OF THE CONSUMPTIVE, and the most reliable form of nutriment for counteracting the tendency to Phthisis and other wasting diseases. It presents to the lacteals fat, in essentially the same condition for assimilation and absorption as in a vigorous human frame, and THE AGENT of the important change is THE NATURAL SECRETION of the PANCREAS.

Pancreatic Emulsion may therefore be regarded as Chyle obtained by nature's own process. In certain cases both Cod-Liver Oil and Pancreatic Emulsion are required—one to supply the blood with oil or liquid fat, the other with the more stable solid fats; but it cannot be too strongly urged that both PANCREATIC EMULSION and Cod-Liver Oil are *not to be regarded as Medicines, but as articles of diet*, without which patients, with their defect of health, will as surely starve as healthy persons would if deprived of the most nutritive part of their food

Pancreatized (Digestive) Cod-Liver Oil. By Pancreatized Cod-Liver Oil, the active digestive principle of the Pancreatic Juice is imparted to it, which renders it in a highly favorable condition for rapid and complete digestion and assimilation, preventing nausea, and largely increasing the beneficial properties of the Oil.

Pancreatine effects the digestion and assimilation of Cod-Liver Oil and Fat, as well as Food generally. This palatable and popular remedy is therefore invaluable to PATIENTS WHO ARE UNABLE TO DIGEST COD-LIVER OIL, and who are thus deprived of its nourishing and invigorating properties.

Pancreatine Wine. An excellent vehicle for taking Cod-Liver Oil and promoting the digestion of it.

Tins, 1*s*, 2*s*, 5*s*, 10*s*.

SAVORY & MOORE, 143 New Bond Street, London.

1297-1348 **Agents for America, E. FOUGERA & CO., NEW YORK.**

PNEUMATIC ASPIRATION,

AFTER THE MANNER OF DIEULAFOY.

"It is always possible, owing to Aspiration, to search for a fluid collection without any danger, whatever may be its seat or its nature."

"I have thrust these needles into almost every part of the body; into the Joints the Liver, the Spleen the Bladder, the Intestines, the Lungs and the Meninges; and I can affirm, and a great number of observers affirm with me, that we have never seen consecutive accidents."—*Dieulafoy on Pneumatic Aspiration*, pp. 21, 24.

We invite the attention of the Medical Profession to this New Apparatus for Aspiration, constructed upon the general plan of Potain's modification of Dieulafoy's Aspirator, but containing the following improvements and inventions of our own:—

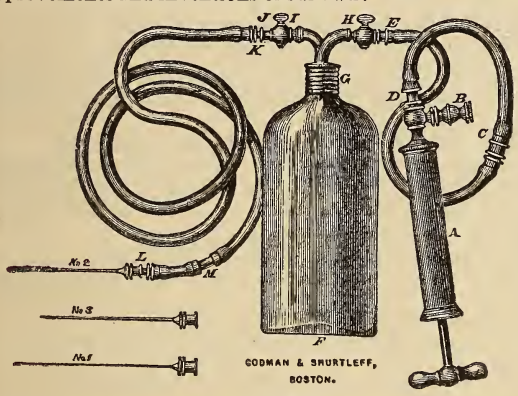

Fig. 68.

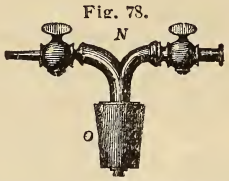
Fig. 78.



The Stopper and Cocks supplied with Apparatus No. 2.

Fig. 77.

1st. Means of changing the pump from an exhaust to a force-pump, and *vice versa*, thereby enabling the operator not only to draw an abnormal fluid, but to inject the cavity through the tubes and needle of the apparatus with one adapted to induce healthy action.—*See Dieulafoy on Aspiration*, pp. 276, 278.

2d. The employment, in our apparatus No. 1, of a metal Screw Cap, fitting the neck of the receiver supplied with this apparatus so securely that it cannot be forced from its place by condensed air while injecting, or accidentally removed while the receiver is in a state of vacuum for aspiration

3d. The substitution, for the ordinary oiled silk valves of other apparatus, of a kind indestructible, both in form and material.

4th. A simple and comparatively inexpensive attachment for evacuating the contents of the stomach, equal, if not superior, to any in use hitherto.

Commendations bestowed upon our Aspirators, by physicians familiar with the latest European and American ones, lead us to believe that, in some important particulars, at least, they are superior to any.

In his work on Pneumatic Aspiration, Dieulafoy shows the harmlessness of the Aspiratory puncture, and its great superiority to the Exploring Trocar as a means of accurate diagnosis in all collections of Pathological Fluids. It has been used with unprecedented success in the Retention of Urine, Reduction of Strangulated Hernia, in Ascites, Hydrothorax, Empyema, Pneumothorax, Effusions into the Pericardium, Serous, Purulent and Hematic Effusions of the Knee, Hydrocele, Hydatid Cysts, Abscesses of the Liver, and in various other Pathological Lesions.

PRICES OF APPARATUS.

No. 1. Air Pump—exhaustor condensing as described; 16 oz. receiver, of strong glass, with screw-cap; three steel, gold plated Aspiratory Needles, together with the necessary tubes, stop-cocks, etc., as shown in Fig. 77, fitted in a neat case, accompanied with printed directions $16.00. Postage 64 cents.

No. 2. The same, without receiver, and with rubber stopper (see Fig. 78) to fit almost any bottle of quart capacity, or less, instead of screw-cap arrangement, also with printed directions $14.00. Postage 32 cents.

No. 3. Dieulafoy's Notched Aspirator. Nickel-plated, with two Needles, Tubes, etc., in case $14 60

No. 4. Stomach Attachment, as described, adapted to pump accompanying Nos. 1 and 2, additional $6.00. Postage 22 cents.

The foregoing are the product of our own factory, and are warranted in every respect.

Also, **Dieulafoy on Pneumatic Aspiration,** post-paid, by mail, on receipt of..... 3 40

☞ *Full description on application.*

☞ In corresponding with Advertisers please mention the MEDICAL AND SURGICAL REPORTER.

GRIMAULT & CO.'S PHARMACEUTICAL PRODUCTS.

Prepared with scrupulous care, under the immediate supervision of a practical chemist, at their model laboratory at Neuilly, near Paris.

OFFICES AND SALESROOMS, No. 8 RUE VIVIENNE, PARIS.

The attention of the medical profession is directed to a few leading products:

DUSART'S SYRUP AND WINE OF LACTO-PHOSPHATE OF LIME.

In these preparations phosphate of lime is presented in the combination in which it exists in the stomach, after it has been acted upon by the gastric fluid. They are especially adapted, and have been used with great success in *Rachitic* and *Scrofulous Affections* in children; the *Languor* caused by too rapid a growth and development in youth; the *Debility* attendant upon old age; *Weakness in Females*, caused by the nursing of children; *Slow Convalescence*; certain forms of dyspepsia, caused by the low vitality of the system. In cases of *Fractures*, their use has been found to cause a more *rapid formation of the Callus*, and in cases of wounds, the *cicatrization has been more prompt*, while its administration to children facilitates the general developement, and especially the *the process of Ossification and Dentition.*

Dusart's work on the "Physiological and Therapeutic Action of Phosphate of Lime" will be sent free, on application to Messrs. E. FOUGERA & Co.

LEBAIGUE'S DIALYSED IRON, or Pure Peroxide of Iron,

IN SOLUTION, WITHOUT THE AID OF ACIDS OR OTHER SOLVENTS.

It is nearly tasteless, does not blacken the teeth, is very readily absorbed, will not constipate or cause any disturbance of the digestive apparatus, and is tolerated by persons who could not support any other preparation of iron. It is offered in the form of a *solution*, which is generally preferred; or of an *elixir*, when a slight stimulant is desired.

DEFRESNE'S PILLS AND ELIXIR OF PANCREATINE.

Pancreatine is a very important remedy in a great many cases of *indigestion*, *atony* of the digestive organs, and *dyspepsia*, where pepsine and other remedies have failed. It is especially serviceable as a help for the digestion of fats. The preparations especially recommended are: *Defresne's Pills*—dose, two to four pills before each meal; the *Elixir* and *Wine*—dose, one or two tablespoonfuls after meals.

GRIMAULT & CO.'S MATICO CAPSULES.

A preparation of the leaves of Matico, of more certain effect than most of the medicines recommended for the same class of diseases. The capsules contain the essential oil of Matico, combined with the balsam of copaiba, and do not cause any unpleasant eructations.

JULIEN'S LAXATIVE FRUIT.

A pleasant confection for constipation, and all diseases resulting therefrom, as *headache*, *hemorrhoids*, *cerebral congestions*, *biliousness*.

The above and all other preparations of *Messrs. Grimault & Co.*, and information in regard to the same, may be obtained at all times from

1294-1319eow ***Messrs. E. FOUGERA & CO., Importing Pharmacists, New York.***

THE INVENTION OF AN EMINENT FRENCH CHEMIST.

The Salvator for Invalids and the Aged. An Incomparable Aliment for the Growth and Protection of Infants and Children. A Superior Nutritive in Continued Fevers, and a Reliable Remedial Agent in all Diseases of the Stomach and Intestines.

TO PHYSICIANS AND THE PUBLIC.

THIS preparation is, as advertised, principally the GLUTEN derived, by chemical process, from VERY SUPERIOR GROWTHS OF WHEAT, and should not be confounded with burnt or boiled Flour, in which the GLUTEN or sanative qualities are destroyed or made medicinally inert, nor with Crushed Wheat, or finely ground Wheaten Grits, styled "Medicinal Food," and sold under various names, in which the starch and impurities contained in wheat are retained in larger quantity.

By Dubisson's formula, the starch, impurities and soluble matter found in the Wheat Cereal are effectually excluded, the GLUTEN only retained, which is condensed, granulated and prepared to keep in all climates, and justly entitled

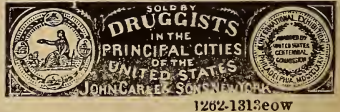
—IMPERIAL GRANUM—

It is well known, and should be fairly considered, that nothing of merit can be favorably received and commended by the public without being followed by imitations of a questionable character. IMPERIAL GRANUM is not the exception, for no preparation has attracted more attention, nor been more fiercely imitated by competition, even to wording and shipping order.

Whilst again it can be truly said that no preparation ever offered for sale has been more carefully prepared and thoroughly tested, nor has met with a more welcome reception and universal approval, or afforded more relief to invalids or to young and suffering children and aged persons. This has been confirmed by thousands of testimonials from Chemists, Physicians, Heads of Families and the Press.

Respectfully,

E. HUATON.



1262-1313eow

MURDOCK LIQUID FOOD CO., Boston,

THE ONLY MANUFACTURERS OF

RAW FOOD EXTRACTS IN THE WORLD.

It can be retained by the weakest stomach, when all other food extracts, and even water, is rejected.

It is the only food that will relieve the Consumptive from Hunger.

Nutritious food, if raw, condensed, and free from insoluble matter, will cure chronic diseases, as it will make blood faster than all preparations or food, and new blood will cleanse the system.

MURDOCK'S LIQUID FOOD is made from Beef, Mutton and Fruits; contains corpuscles; is 12½ per cent. soluble albumen, and free from insoluble matter, drugs, minerals, salts and acids, and can be retained by the stomach when so weak as to refuse food.

Ask your Druggists, or send to us, for Essays read before the American Medical Association, at Richmond, Va., May 6, 1881, on the value of Raw Food Extracts, by Geo. R. Shepherd, of Hartford, Conn., and other Essays and Testimonials from Medical Journals and Physicians that have used Liquid Food, in cases of Consumption, Scrofula, Nervous and General Debility, Dyspepsia, acute and chronic, Constipation, Diphtheria, Intemperance, Cholera Infantum, Infantile Diarrhœa, Post partum Hemorrhage, Purpura Hemorrhagica with Waxy Liver, Pelvic Cellulitis, Malarial and other Fevers, Chronic Strumous Arthritis, Sclerosis of the Spinal Cord, Senile Gangrene, Perinephritic Abscess, and other diseases of malnutrition. No cases of Cholera Infantum have occurred where it has been used daily, and no lives have been lost from Cholera Infantum where it has been prescribed by a physician. Excellent for Eczema, Diabetes, Rheumatism and Neuralgia.

At the request of any physician who has not tried our Extracts, and would like to, we will deliver sample bottles to the Express in Boston. To any Medical Society wishing to investigate the value of our Extracts, through a committee, hospital, or individual members, we will furnish a supply of Liquid Food equal to a six-ounce bottle for every member present at the time of action. We are induced to do this, knowing that our Extracts are saving life, and that an increased use of them, which will follow after a trial of them, will be the means of saving more lives daily. (*We ask no testimonials of results obtained.*) Raw Extracts are available where cooked ones are not, or if available, contain only one-third as much nourishment.

Liquid Food is in general use at all Hospitals, Infant and Insane Asylums, and Washingtonian Homes, U. S. Navy Hospitals, and by all physicians that have tried it.

If not kept by your Druggist, can be obtained in any of the commercial cities In Philadelphia, by Johnston, Holloway & Co., Boericke & Tafel; in Pittsburg, by A. Kelly & Co.; in Baltimore, by Thomsen & Wirth; or you can order direct and we will pay express. 1 oz, 15 cents; 6 oz., 55 cents; 12 oz., $1.00.

See Philadelphia MEDICAL AND SURGICAL REPORTER, *Boston Medical and Surgical Journal*, and *New York Medical Record*, for chronic cases that were at our quarterly reception to physicians, in Boston, December 30, 1881—cases of Eczema, Rheumatism, Neuralgia, Diabetes, Consumption, and other diseases. If all were not restored to perfect health, they were gaining daily, and able to enjoy life and attend to their business. 1297-1348

MURDOCK LIQUID FOOD CO., BOSTON.

PARIS, 1868. 1873, VIENNA.

Prize Medal.

Silver Medal.

Medal of Merit.

BOUDAULT'S PEPSINE

IN POWDER, also WINE, ELIXIR, SYRUP, PILLS, AND LOZENGES OF PEPSINE.

Since the introduction of Pepsine by Boudault in 1854, **BOUDAULT'S PEPSINE HAS BEEN, AND IS STILL CONSIDERED, THE MOST RELIABLE,** as is attested by the awards it has received at the Exhibitions of 1867, 1868, 1872, 1873, and in 1876 at the Centennial Exposition in Philadelphia.

IT IS THE ONLY PEPSINE USED IN THE PARIS HOSPITALS.

Careful tests will enable any one to satisfy himself that **BOUDAULT'S PEPSINE HAS A DIGESTIVE POWER AT LEAST DOUBLE** that of the best Pepsines in the market, and that it is really the cheapest.

It is Sold in 1 ounce, 8 ounce, and 16 ounce Bottles.

Beware of **so-called French Pepsines** bearing fictitious names, and prescribe **Boudault's only.**

BLANCARD'S PILLS

OF UNCHANGEABLE IODIDE OF IRON.

Blancard's Pills of Iodide of Iron are so scrupulously prepared, and so well made, that none other have acquired a so well deserved favor among physicians and pharmaceutists. Each pill, containing one grain of proto-iodide of iron, is covered with finely pulverized iron, and covered with balsam of tolu. Dose, two to six pills a day. The genuine have a *reactive silver seal* attached to the lower part of the cork, and a green label on the wrapper, bearing the fac-simile of the signature of

Blancard

Pharmacien, No. 40 Rue Bonaparte, Paris.

without which none are genuine.

BEWARE OF IMITATIONS.

E. FOUGERA & CO., AGENTS, NEW YORK. 1297 tf.

FELLOWS' HYPO-PHOS-PHITES

CONTAINS

THE ESSENTIAL ELEMENTS to the Animal Organization—Potash and Lime;

The **OXYDIZING AGENTS**—Iron and Manganese;

The **TONICS**— Quinine and Strychnine;

And the **VITALIZING CONSTITUENT**—Phosphorus,

Combined in the form of a Syrup, with *slight alkaline reaction.*

IT DIFFERS IN EFFECT FROM ALL OTHERS, being pleasant to taste, acceptable to the stomach, and harmless under prolonged use.

IT HAS SUSTAINED A HIGH REPUTATION, in America and England, for efficiency in the treatment of Pulmonary Tuberculosis, Chronic Bronchitis, and other affections of the respiratory organs, and is employed also in various nervous and debilitating diseases, with success.

ITS CURATIVE PROPERTIES are largely attributable to Stimulant, Tonic and Nutritive qualities, whereby the various organic functions are recruited.

IN CASES where innervating constitutional treatment is applied, and tonic treatment is desirable, this preparation will be found to act with safety and satisfaction.

ITS ACTION IS PROMPT, stimulating the appetite and the digestion; it promotes assimilation, and enters directly into the circulation with the food products.

THE PRESCRIBED DOSE produces a feeling of buoyancy, removing depression or melancholy, and hence is of great value in the treatment of **mental and nervous affections.**

From its exerting a double tonic effect, and influencing a healthy flow of the secretions, its use is indicated in a wide range of diseases.

Each Bottle of Fellows' Hypophosphites contains 128 Doses.

PREPARED BY

JAMES I. FELLOWS, Chemist,

48 VESEY STREET, NEW YORK.

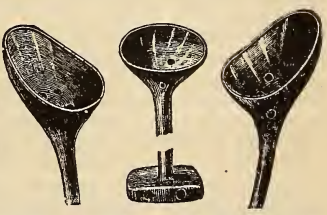
DR. McINTOSH'S
NATURAL UTERINE SUPPORTER.



No instrument has ever been placed before the medical profession which has given such universal satisfaction. The combination is such that the physician is able to meet every indication of Uterine Displacements. Falling Womb, Anteversion, Retroversion and Flexions are overcome by this instrument, where others fail. This is proven by the fact that, since its introduction to the profession it has come into more general use than all other instruments combined.

Among the many reasons which recommend this Supporter to the physician is its self-adjusting qualities. The physician, after applying it, need have no fear that he will be called in haste to remove or readjust it, as is often the case with rings and various pessaries held in position by pressure against the vaginal wall, as the patient can remove it at will, and replace it without assistance.

The Abdominal Supporter is a broad morocco leather belt, with elastic straps to buckle around the hips, with concave front, so shaped as to hold up the abdomen. The Uterine Support is a cup and stem, made of highly polished hard rubber, very light and durable, shaped to fit the neck of the womb, with openings for the secretions to pass out, as shown by the cuts. Cups are made with extended lips, to correct flexions and versions of the womb. The cup and stem is suspended to the belt by two soft elastic rubber tubes, which are fastened to the front of the belt by simple loops, pass down through the stem of the cup and up to the back of the belt. These soft rubber tubes being elastic, adapt themselves to all the varying positions of the body, and perform the service of the ligaments of the womb. The instrument is very comfortable to the patient, can be removed or replaced by her at will, can be worn at all times, will not interfere with nature's necessities, will not corrode, and is lighter than metal. It will answer for all cases of Anteversion, Retroversions, or any Flexions of the womb, and is used by the leading physicians with never-failing success, even in the most difficult cases.

Our Reduced Prices are to Physicians, $6.00; to Patients, $10.00.

Instruments sent by mail, at our risk, on receipt of price, or by Express, C. O. D., with the Express charges for returning the money added.

☞ CAUTION.—Owing to the great sale and popularity of our instrument various and base imitations are sold by unscrupulous parties. In order to get the genuine, it is best to order direct from us.

DR. McINTOSH'S NATURAL UTERINE SUPPORTER CO.,
192 Jackson Street, Chicago, Ill.

Our valuable pamphlet, "Some Practical Facts about Displacements of the Womb," will be sent you free on application. 1281-1332

In corresponding with Advertisers please mention THE MEDICAL AND SURGICAL REPORTER.

BEEF PEPTONE,

IN TRANSPARENT GLASSY SCALES,

Containing only the animal or azotized matter of the Beef. Each ounce is equal to 16 ounces of raw beef, easily soluble, and still faster in hot water.

This Beef Peptone is digested from tender, juicy Beef, by the aid of the *Crystal Pepsin,* of my manufacture (Jensen's Crystal Pepsin). Unlike the various BEEF EXTRACTS, this preparation contains all the nutritive constituents of the Beef, in a thoroughly digested state, ready for absorption into the system, while the Beef Extracts are entirely devoid of the chief elements of nutrition, such as the fibrinous, gelatinous and albuminous portions of the Beef, they only consisting of the concentrated saline constituents, with barely a trace of animal matter to keep its consistence. The difficulty so long experienced by the profession throughout the world, in preparing a PEPTONE entirely free from those chemical agents necessary for its manufacture, so as to render it fit for use, is hereby demonstrated to be successfully overcome, as it contains no foreign matter, and will stand the most severely scrutinizing test as to perfectness, also possessing flavor of the Beef, and so palatable as to render it highly agreeable.

Put up in bottles holding One ounce, Eight ounces, and one Pound.

Kept by the Wholesale and Dispensing Druggists in general.

DEPOT—L. WOLFF'S Pharmacy,

Northwest corner Twelfth and Chestnut Streets.

JENSEN'S CRYSTAL PEPSIN,

IN ARTIFICIAL CRYSTALS,

Strictly inodorous and tasteless, and perfectly soluble in water without acid.

THIS PEPSIN, now so popular with the profession, has created an impetus in the consumption of the same and physicians of the highest standing, who before the introduction of this active PEPSIN, with good reason, entirely abandoned the use of PEPSIN, are now the most eager in prescribing JENSEN'S CRYSTAL PEPSIN, whenever it is indicated, and since the knowledge of its great solvent power (gr. j. of it will dissolve the boiled whites from two to three eggs) has been established even among those susceptible to be great doubters it has caused itself to be utilized in many novel ways, by the thinking profession; for instance, in substituting morphia, chloral, etc., as a hypnotic, relieving gastric troubles where the above remedies have been prescribed, creating morphine and chloral habits. In removing diphtheritic patches it is successfully used combined with water, glycerine, and muriatic acid, and the same composition, diluted with more water, as a spray in bronchial troubles, dissolving muco-purulent matter, as well as a spray for same in catarrhal affections.

THIS PEPSIN.

Has also been used with success in dissolving and evacuating coagulated blood in the bladder, dispensing with surgical operations in such cases. Many other novel applications could be mentioned, if not in want of space. It is found to be FORTY times stronger than saccharated pepsin. One to three grains is an active dose.

KEPT BY ALL DRUGGISTS.

The above preparations are only manufactured and put up by

CARL L. JENSEN, M.D., PH.G.,

865 North 26th Street, Philadelphia, Pa.

No other Wholesale Agents for this Pepsin are longer engaged, than the Wholesale Druggists throughout the United States.

A. M. HAWES, M.D.,
Demonstrator of Anatomy.

This College has for its *collegiate year* two sessions.

Regular Session commences Wednesday, September 7th, 1881, and closes March 1st, 1882.

Recitation Term (optional) commences March 15th, 1882, and closes June 14th, 1882.

Graded Course of three terms, of six months each.

PLAN OF INSTRUCTION.

By *Lectures*, *Recitations* and *Clinics*, together with *practical work* in the Anatomical, Physiological, Chemical and Pharmaceutical Laboratories.

Clinics are held *daily*.

Clinical Work in Hospitals and Dispensaries is given to the Senior Class (see Clinics), in *small sections*, under the charge of a *Clinical Teacher*, in all the departments of Medicine and Surgery.

Three Large Hospitals and *two Dispensaries* afford unlimited material for instruction.

ADMISSION.—Candidates for admission are required to pass a preliminary examination, unless satisfactory documentary evidence can be presented, that is equivalent to the standard adopted. (See Catalogue.)

FEES.

Regular Session.—Matriculation, $5.00; Lecture Tickets, $50.00; Hospital Tickets, $10.00
Examination (final), $25.00.

Recitation Term.—$10.00 for those who have attended Regular Session; all others, $25.00, $15.00 of which will be applied on the next Regular Term.

Board and Rooms can be obtained for $3.00 to $5.00 per week, the average being $4.00.

For Catalogue and other particulars, address

H. O. WALKER, M.D., Secretary,
177 Griswold Street, Detroit, Mich.

1274-tf

CRINON'S HÆMOGLOBIN,

The Albuminoid Ferruginous Principle of Blood.

HÆMOGLOBIN is the only physiological chalybeate. Associated as it is with the phosphates of the blood, it forms the most powerful of tonics, and at the same time a most nourishing food. It is especially useful in cases of *Anæmia, Chlorosis, Cachexias, Exhaustum* caused by excess of work, nervous debility, fatigue resulting from parturition and lactation. It replaces entirely liquid blood, which has been recommended and used with success in *Phthisis* and *wasting away.*

It is offered in two forms. In cachets (wafers), 60 of which are contained in a box; combined with chocolate in small squares, 30 of which are in a box; both forms can be sent by mail.

Prepared by C. CRINON, Paris, Pharmacist of the first class, Laureate of the Hospitals of Paris Samples may be obtained by application to

E. FOUGERA & CO., New York, Agents for the U. S

DOCTOR RABUTEAU'S

(Laureate of the Institute of France.)

DRAGEES, ELIXIR & SYRUP

OF IRON.

"The experiments made in the hospitals of Paris have demonstrated that *Dr. Rabuteau's Dragees, Elixir and Syrup* regenerate the red globules of the blood with a rapidity never observed with the use of the other ferruginous preparations. These results have been proved by the various *Compt-Globules.*

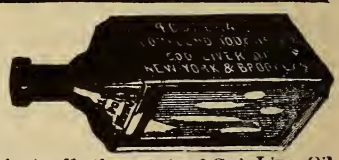
"The ferruginous preparations of *Dr. Rabuteau* do not cause any constipation, and are perfectly tolerated by the weakest persons."—*Gazette des Hospitaux.*

Dr. Rabuteau's Elixir is prescribed when some difficulty is experienced in swallowing the Dragees; it is especially adapted to weak persons, whose digestive functions need strengthening or stimulating.

Dr. Rabuteau's Syrup is especially prepared for children, who take it readily, because of its agreeable taste.

FOUGERA'S COMPOUND IODINISED

COD LIVER OIL.



Since the introduction of this oil in 1858, it has been found to be superior to all other kinds of Cod Liver Oil for the treatment of **General Debility, Consumption, Scrofula, Rickets, etc.**

It possesses not only all the **nourishing** qualities of the best Cod Liver Oil, but also the **tonic, stimulant** and **alterative** properties of **Iodine, Bromine** and **Phosphorus,** which are added in such proportions as to render it therapeutically five times as efficacious as pure Cod Liver Oil.

Through its **increased curative action, FOUGERA'S COD LIVER OIL** will be found to cure disease in a much shorter time than the pure oil; while favorable results will be obtained by its use in many advanced cases when the pure Cod Liver Oil would fail entirely.

FOUGERA'S READY-MADE MUSTARD PLASTERS.

A most useful, convenient, clean, and economical preparation. Not liable to change if kept in a dry place. Made of two strengths. Plasters No. 1, of pure mustard; Plasters No. 2, of one-half mustard. Price 40 cents, the tin box, or tin roll, of 10 plasters each. DIRECTIONS.—Dip the Plaster, or Plasters, a minute or two, in cold water; apply on the part, and cover with a band.

FOUGERA'S COMPOUND ICELAND MOSS PASTE.

(Iceland Moss, Lactucarium, Ipecac and Tolu.)

Used with great success against nervous and convulsive coughs, Whooping Cough, Acute Bronchitis, Chronic Catarrh, Influenza, etc.

Wakefulness, Cough, and other sufferings in Consumption, are greatly relieved by the soothing and expectorant properties of this Paste.

FOUGERA'S IODO-FERRO-PHOSPHATED ELIXIR OF HORSE-RADISH.

This Elixir contains Iodine, Pyrophosphate of Iron, the active principles of antiscorbutic and aromatic plants, and acts as a **tonic, stimulant, emmenagogue,** and a **powerful regenerator of the blood.** It is an invaluable remedy for all constitutional disorders due to the impurity and poverty of the blood. One of the advantages of this new preparation consists in combining the virtues of Iodine and Iron without the inky taste of Iodide of Iron.

JOHNSTONE'S IMPROVED

ADAPTABLE POROUS FELT SPLINTS.

AHL'S SPLINT MANUFACTURING COMPANY, LIMITED,

123 & 125 South Eleventh Street, PHILADELPHIA, PA.

THE ADAPTABLE POROUS SPLINTS, invented and improved by W. H. JOHNSTONE, have been tested extensively in both civil and military practice for a number of years, and have been endorsed and recommended in the most unqualified manner by the celebrated and distinguished Surgeons of America.

Their *porosity* is a peculiar and a valuable property. While the material is firm and insoluble, it permits readily the passage of air and fluids, so that, on one hand, the heat from the inflamed surface, the perspiration, and the morbid exhalations, are not confined, to the detriment of the patient, *as is the case in every other kind of splint*, but pass off freely; and on the other hand, lotions of cold or warm water, medicated or not with weak alcohol, carbolic acid, arnica, tincture, solutions of the sulphites, etc., can be constantly applied without disturbing the dressings. This, it will readily be seen, is a most invaluable property when the parts are bruised, lacerated, filled with extravasated blood, or erysipelatous, and give these splints a conspicuous advantage over all others.

From FRANK H. HAMILTON, M. D., Professor of Fractures and Dislocations in the Bellevue Hospital Medical College, author of "A Treatise on Fractures and Dislocations," etc.

Having examined carefully *JOHNSTONE'S IMPROVED ADAPTABLE POROUS FELT SPLINTS*, I feel warranted in recommending them to the Profession as superior to all other manufactured splints now in use. They possess all the essential qualities of a good splint, having firmness, pliability and lightness.

FRANK H. HAMILTON, M. D.,
Prof. Military Surgery and Fractures and Dislocations, Bellevue Hospital Col.

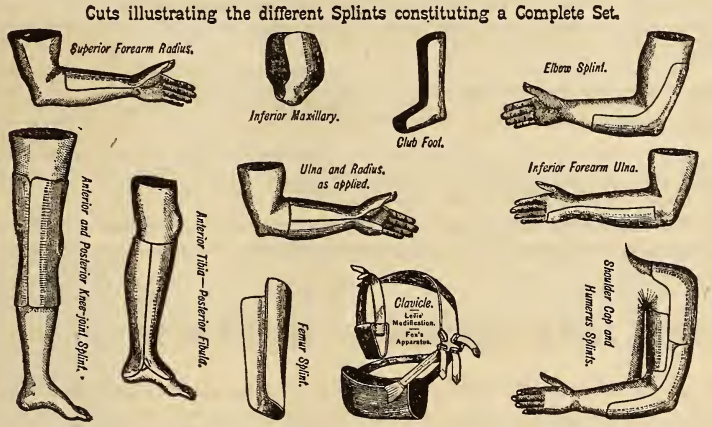
From PROF. D. HAYES AGNEW, Prof. Surgery, University of Penna.

1611 CHESTNUT STREET, PHILADELPHIA, *February 6th*, 1879.

The Adaptable Felt Splints, formerly known as those of Dr. Ahl, with the improvement now made by W. H. Johnstone, which renders them in every way superior to the former, I regard as very excellent appliances in the treatment of fractures.

D. HAYES AGNEW,
Prof. Surgery, University of Pennsylvania.

Cuts illustrating the different Splints constituting a Complete Set.



SPECIAL NOTICE TO THE PROFESSION AND TRADE.

Our *policy* heretofore in the introduction of JOHNSTONE'S IMPROVED ADAPTABLE POROUS FELT SPLINTS, has been to confine the sales and business negotiations directly to the Doctors themselves, declining in every case to sell our goods through Dealers; we having assured the Profession generally, both through our agents and catalogues, that *JOHNSTONE'S IMPROVED SPLINTS* could only be obtained by subscription.

We wish to announce, that owing to the large demand for our goods and the constant importunity on the part of *Surgeons* everywhere to place our Splints on sale with their Instrument Dealer or Druggist, to afford them greater convenience and facility in obtaining the pieces in duplicate, **we have at last acceded to that request, and hereafter *JOHNSTONE'S CELEBRATED FELT SPLINTS* can be obtained at most dealers in Instruments and Drugs throughout the United States, at the same price which they were heretofore sold, viz:**

A complete set, embracing fifty (50) pieces—twenty-five for adults and twenty-five for children—is thirty ($30) dollars. Extra or duplicate pieces can always be obtained from your DEALER, at one dollar each.

JOHNSTONE'S CELEBRATED SPINAL JACKET, for Curvatures and Deformities, have met with unparalleled success, and, from their merit, secured the unqualified endorsement and approbation of our celebrated orthopædic specialists, and particular expression of gratitude from the patients who are wearing them. For full information, send for Descriptive Circulars.

Should your Instrument dealer fail to have a supply of our Splints, and decline to carry them in stock, orders sent to us will receive prompt attention.

AHL'S SPLINT MANUFACTURING CO., Limit
W. H. JOHNSTONE, Manager.

N. B.—If the Instrument Dealers of Philadelphia decline to supply its Physicians with our JOHNSTONE'S FELT SPLINTS on call, they will be furnished and delivered by us to any part of the city, at any time, on receipt of the price, viz.

$1.00 each.

THE DE QUINCEY HOME,

Fort Washington, **New York City.**

A Private Asylum for the Treatment of the Opium, Morphine, Chloral, Chloroform and Hashisch Habits, Nervous Diseases and Inebriety.

Drs. H. H. Kane
and
W. H. Vittum,
in charge.

Consulting Physicians.

Prof. Wm. A. Hammond,
Prof. T. Gaillard Thomas,
Dr. Edward C. Spitzka,
Dr. Daniel M. Stimson,
Dr. Edward T. Ely,
Dr. G. H. Wynkoop,
Dr. Andrew H. Smith.

Situated upon a high hill that commands a splendid view of the Hudson and Harlem rivers, Spuyten Duyvil Creek, and the beautiful country for miles around; surrounded by ample grounds and magnificent drives; in easy communication with the city by means of the Sixth and Ninth Avenue Elevated and the Hudson River Railroads; away from the dust, noise, crowding and malaria of the city; with hot and cold water in every room, furnace and grate-fire heating, croquet, horses and carriages, boats and fishing, an excellent *cuisine*, trained nurses and careful medical attendance, it possesses unequaled advantages for the treatment of cases of this kind.

The plan of treatment pursued in the cure of opium, morphine and chloral takers is that of *rapid reduction*, which possesses all the advantages, and none of the dangers of Levenstein's *sudden deprivation*, or the prolonged agony of *gradual reduction*. Each case is studied and treated in accordance with its peculiarities and the idiosyncrasies of the patient, no set plan of treatment being pursued, at the expense of the person's health or comfort.

Our Home, furthermore, offers special facilities for the treatment by *rest, diet, and massage*, according to the plan of Weir Mitchell, of that large class of nervous diseases so commonly met with in ladies suffering from uterine troubles. This plan of treatment has been specially studied, and nurses competent to carry out its provisions in every detail will be furnished. For further particulars, etc., address 1299-1350

Drs. KANE and VITTUM, De Quincey Home, Fort Washington, New York City.

McINTOSH'S COMBINED

Galvanic AND Faradic Battery.

THIS CELEBRATED BATTERY COMBINES BOTH THE GALVANIC AND FARADIC CURRENT,

Which can be used separately or combined. Any strength and intensity desired can be obtained for use in Electro-therapeutics. THIS BATTERY is constructed on an IMPROVED PLAN, as follows: The zinc and carbon plates are arranged in couples, securely clamped to hard rubber plates, with thumb screws. These screws are also used for binding posts. All the connections are positive. The cells are made in sections of six, of hard rubber, with hard rubber drip cup. The following points of excellence render our Batteries superior to others:

1. They combine the only Portable Galvanic and Faradic Battery in one case.

2. They weigh one-half less than other Batteries of the same number of cells.

3. The cells are made in sections of six, of one solid piece of hard, vulcanized rubber; by this arrangement they can be emptied, cleaned and filled as easily and quickly as one cell, and will not crack, break or leak.

4. A hard rubber drip cup is placed by the side of each section of cells, to receive the zinc and carbon plates when removed from them. By this arrangement we avoid the use of absorbent materials and soiling the Battery

5. The Hydrostat is perfect. The rubber plates which hold the elements project over on one side enough to cover the cells when the zinc and carbon plates are placed in the drip cups. The under side of this projection is covered with thick, soft rubber, which is securely clamped to the cells sections, and makes them water tight.

6. This is the only Battery in which the zinc and carbon plates can be kept clean by simply rinsing them.

7. A zinc or carbon plate can be removed by simply loosening a binding post; and all parts of the Battery can be duplicated, as like parts are made exactly alike. We will be pleased to send circulars and our illustrated catalogue, giving full information, price, etc., free, upon application.

McINTOSH GALVANIC BELT AND BATTERY CO.,

1281-1332 **Nos. 192 and 194 Jackson Street, CHICAGO, ILL.**

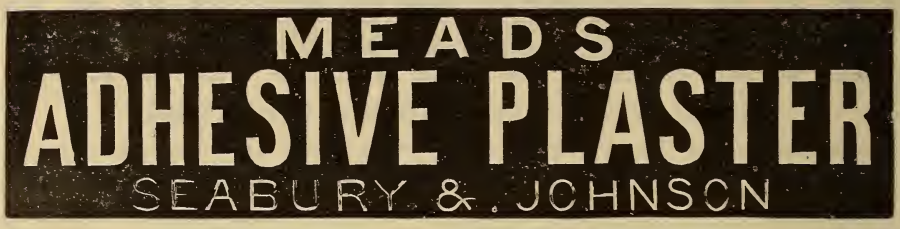
SEABURY & JOHNSON'S
PHARMACOPŒIA PLASTERS

IN RUBBER COMBINATION.

BELLADONNA, {Price, per mail, 1 yard roll, $1. *CANTHARIDAL,* Price, 1 yard, $1.
ADHESIVE, *MUSTARD ON COTTON CLOTH,*
AND OTHER FORMULAS.

ADVANTAGES OF THE RUBBER BASE:

A cold process through which volatilization by heat is avoided. Preservative character of the rubber combination, thus ensuring uniform reliability. Perfect pliability in any temperature; convenience of application, as the plaster adheres without heat or moisture; cleanliness.



This article is intended to take the place of the unreliable Emp. Adhesive, on account of its superior qualities and cheapness.

It is Pliable, Antiseptic, Waterproof, Non-Irritating, and Strong.

Does not become Dry.
Does not become Stiff.
Is not affected by Age.
Does not crack off the Muslin.
Is spread on honest Cotton Cloth.
Is not affected by Dampness.
Is not affected by Heat or Cold.
Will adhere firmer than Emp. Adhesive.
Will adhere longer than Emp. Adhesive.
Does not require heat or moisture to make it adhere.
Is an entirely new article, free from all irritating properties.
Is used by the New York, Bellevue, and other large Hospitals, and by many of our leading Surgeons.

FURNISHED { In Rolls 5 yards long by 14 inches wide. 1 yard x 7½ inches.
In 10 yard lengths, on spools, ½, 1, 2, or 3 inches wide.

Supplied by Druggists. Physicians in remote sections can be supplied by mail, at following prices: 5 yard rolls, per yard, 40 cents; 1 yard rolls, per yard, 50 cents.

PREPARED ONLY BY

SEABURY & JOHNSON,

21 PLATT STREET, NEW YORK.

Received Highest Award Over All Competitors, Philadelphia 1876, Paris 1878

Medical Practitioners who have not yet received our special Physician's and Surgeon's Catalogue, will be furnished same promptly on application.—SEABURY & JOHNSON, 21 Platt St., N.Y. 1271-1311eow

MEAT AND QUINIA.

AROUD'S WINE WITH QUINIA,

And all the Nutritive Principles of Meat.

Aroud's Preparations recommend themselves to the most serious attention of Physicians, and deserve their preference:

1st.—Because they combine all the active principles of the richest barks of quinia carefully selected.

2d.—Because 30 grammes of them contain 3 grammes of quinia and all the nutritious principles of 27 grammes of meat, which are soluble in alcohol and water.

3d.—Because the combination of meat with the barks of quinia has not only the advantage of acting as a tonic, nutritive, and febrifuge, but also that of paralyzing and guarding against any local irritation caused by the prolonged use of quinia barks, and of preparing the stomach to endure the salutary influence of this friendly compound.

4th.—Because these preparations with meat as a basis, containing in their composition the entire nutritious elements of muscular fibre, blood and bone, answer alone to the immortal maxim of Hippocrates, fundamental basis of all good reparative medication, "*Ars imitatio natura.*"

5th.—Because, if meat occupies the first rank among the articles of food, if quinia is placed at the head of tonics, the combination of these highly reparative substances must necessarily be a reconstructor par excellence.

Finally, because the experiments with Aroud's Wine and Quinia prove, better than theory, that, to reconstruct the shattered and enfeebled forces, no other tonic can be compared to it.

MEAT, IRON AND QUINIA.

AROUD'S

FERRUGINOUS WINE WITH QUINIA,

And all the Nutritive Principles of Meat.

MEAT, IRON AND QUINIA, that is so say, the most reparative food combined with a reconstituent and a nerve tonic par excellence: such is the remarkable composition of this ferruginous preparation, which, in all respects, merits the preference of physicians. It prevents impoverishment of the blood, anæmia, chlorosis, etc.; presented in a form at once attractive to the eye and pleasant to the palate—an assimilable iron united with all the constitutive principles of bone and of muscle; it can, therefore, form and regenerate the forces, and this without causing nausea, constipation, or disturbing the digestive organs. By its generous alimentation it corrects and modifies the bad effect of the prolonged use of quinia.

The excellence of this preparation justifies that which Hippocrates proclaimed over 2000 years ago, and all clinics have confirmed: "That the soluble nutritive principles of meat is the food best adapted for the sick and convalescents; that these principles, being the integral parts of muscle, have the faculty of forming flesh rapidly, and of restoring muscle."

It is, therefore, a precious specific for all the maladies caused by impoverishment or deterioration of the blood, because meat, iron and quinia combined give nourishment, act as a tonic, regenerate, reconstitute, and regulate the entire system. 1261-1312-eow

PROCTER'S PEPSIN (SACCHARATED.

This standard article is prepared from *Pepsin*, carefully purified and freed from mucus, and is not a *dried Peptone*. It is inodorous and non deliquescent, and retains its digestive power indefinitely. It is so well known that extended comment is superfluous. We would, however, call attention to its uniform purity and solubility, which, with extraordinary *digestive power*, commend its use in preference to other less carefully *made* articles. It is tested to the solution of 250 grains of coagulated albumen by 10 grains of Pepsin.

PROCTER'S "PEPSIN FORTIOR," (Stronger or Concentrated Pepsin.) A powerful form of Pepsin, eligible when minimum dose is desirable. It is of the same exceptional purity with our *Procter's Pepsin*, while the strength is far greater. Dose one to three grains. 1275-1308, 1y.

Manufactured by WM. PROCTER, Jr., CO., S. W. Cor. 9th and Lombard Sts., Phila.

In corresponding with Advertisers please mention THE MEDICAL AND SURGICAL REPORTER.

HOLLOW SUPPOSITORIES.

WITH STOPPERS. ALL MADE FROM PURE BUTTER OF COCOA, ONLY.

Aural, Nasal, Rectal, Urethral, Cystic, Vaginal, Intra-Uterine, and Veterinary Suppositories.

The object of this invention is to supply Physicians, Druggists, Veterinary Surgeons, and others, with HOLLOW SUPPOSITORIES, into which they can put any kind of medicine or nutriment, thus producing firm, smooth, and evenly medicated Suppositories, that are cheaper and more reliable than those made by the old method.

RECTAL ABSORPTION.

"The mucous membrane of the rectum, like that of other portions of the alimentary canal, possesses all the requisites, more or less, for the exercise of absorption."

Liebig states that a strong solution of common salt disappeared so completely in the rectum, that an evacuation one hour afterward was found to contain no more than the usual portion of salt.

Many medicinal substances act more energetically when applied to the rectum than when received into the stomach.

Baron Dupuytren said: "The rectum *absorbs*, but does not *digest*. The medicinal agent," he says, "owing to the absence of digestion, passes more directly, more purely, and more surely to its destination, than the same medicine does when taken into the stomach."

M. Orfila asserts that those medical agents which operate through the medium of absorption, such as opium, tobacco, etc., are much more active by the rectum than by the stomach.

Dr. J. H. Scorff reports four cases where he was successful in removing the vomiting of pregnancy, by introducing 20 grains of chloral into the rectum, night and morning. He only found it necessary to use the remedy three or four times.

Chloral is the remedy *par excellence* in the ravings of delirium tremens, and in cases of delirium and insomnia combined; also in infantile convulsions and attacks of laryngysmus stridulus.

Dr. Hickman reports a case of typho-malarial fever, which chloral was found to control in a happy manner. The chloral was introduced per rectum.

"REST TO THE STOMACH,"

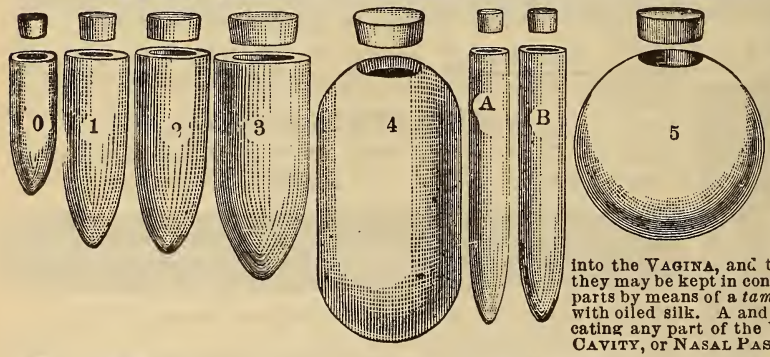
says Mr. Theodore Williams (in London *Lancet*, October 24th, 1874), is of the highest importance in some of the diseases of this organ. In such cases we possess in the rectum an effective second stomach, which, if it does not afford us the pleasure of digestion, spares us many of its pains."

Nutritious substances are taken up by the absorbents, and thus find their way into the economy, and produce their assimilative and nutritive effect. Haller demonstrated the fact that digestion can and does take place in the alimentary canal. He had the greatest confidence in the absorptive and digestive powers of the rectum to sustain life indefinitely.

HYPODERMIC MEDICATION.

Dr. William Bodenhamer says: "This now very common and often misused method is of great value in numerous cases, yet I am decidedly of the opinion that rectal medication is of greater importance; indeed, it is greatly preferable in many instances, being much less dangerous, much more convenient and simple; and the remedies, too, act through this medium with almost equal celerity. But very few remedies can be used hypodermically in comparison to those which can be used by the rectum."

EXACT SIZES OF OUR VARIOUS HOLLOW SUPPOSITORIES.



Size 0 is for children. It may also be used for the EAR and in the NASAL PASSAGES. Nos. 1, 2 and 3 are RECTAL SUPPOSITORIES. Nos. 3 and 4 may be used for introducing nutriment into the system, *via rectum*. No. 4 is also a VAGINAL SUPPOSITORY. No. 5 is a "SPHERICAL HOLLOW SUPPOSITORY," to introduce remedies into the VAGINA, and to the *os uteri*, where they may be kept in contact with the diseased parts by means of a *tampon* of cotton covered with oiled silk. A and B are used for medicating any part of the URETHRA or UTERINE CAVITY, or NASAL PASSAGES.

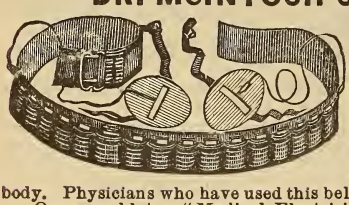
DR. McINTOSH'S ELECTRIC OR GALVANIC BELT.



This Belt is a perfect Galvanic Battery, composed of sixteen cells, placed in pockets on a belt. Each cell is made of hard vulcanized rubber, lined with copper, which constitutes the negative plate. The rubber coating perfectly insulates each cell. The positive plates are of zinc, wrapped in a porous material to absorb the exciting fluid, preventing contact with the copper, and permitting the current to pass from the copper to the zinc. The cells are charged without wetting the belt.

A current selector is so arranged that one or more cells can be used at pleasure. The electrodes are covered similar to ordinary battery electrodes, and connected with the cells by connecting cords. By this arrangement, a current from the belt can be applied to any part of the body. Physicians who have used this belt in their practice do not hesitate to recommend it to the profession.

Our pamphlet on "Medical Electricity," containing a full description of the belt and diseases, with manner of treatment, sent free on application. Address

Registered COSMOLINE Trade Mark.

Unguentum Petrolei

Prepared by E.F.Houghton & Co. Philadelphia, U.S.A.

Put up in 1, 5, 10, 25, 50, and 100-lb. cans. Samples furnished on application. The post-office laws forbid anything of an oleaginous nature being sent through the mail.

In chemical composition, Cosmoline [Unguentum Petrolei] is an oleaginous hydrocarbon, corresponding to the heavy petroleum oils, and containing a large amount of the paraffines and olefines of the formulæ $C_{16}H_{34}$ and $C_{16}H_{32}$. It contains but a small percentage of the paraffines and olefines, corresponding to the formulæ C_7H_{16} and C_7H_{14}, respectively, and the offensive and irritating properties of the crude oil have been carefully removed. In the process of purification, no acids, alkalies, or other chemicals are employed, and no injurious additions of any kind are made to the natural product. The result is a semi-solid, translucent substance, with a faint odor and unctuous feel.

Cosmoline [Unguentum Petrolei] melts at about 100° Fah, (38° Cent.); and boils at about 625° Fah. (329° Cent.); its specific gravity is about 0.875 at 60° Fah.

As it contains no oxydizable or organic matter capable of change by putrefaction or fermentation, and is absolutely without affinity for moisture, it offers to the profession an admirable unguent, which can never decompose, ferment, or become rancid in any climate or temperature.

291 MADISON AVENUE, NEW YORK, February 26th 1878.

I have examined the preparations of Cosmoline as manufactured by E. F. Houghton & Co., Philadelphia, and believe them well adapted to the purposes for which they are designed. As lubricants, and as the bases of simple or medicated ointments, they have a decided advantage over the fixed oils and fatty substances in ordinary use, in that they do not become rancid, and do not acquire irritating qualities from atmospheric exposure. ALFRED C. POST, M.D., LL.D.,
Emeritus Professor of Clinical Surgery in the University of New York, Visiting Surgeon to Presbyterian Hospital, etc.

PHILADELPHIA, July 10, 1880.

MESSRS. E. F. HOUGHTON & CO.:

I have for a number of years made extensive use of Cosmoline [Unguentum Petrolei] and consider it a most valuable article for surgical purposes. Either as a dressing by itself, or as a vehicle for the application of medicaments, it is greatly superior to lard or other fatty matters, especially by reason of its non-liability to change by time or temperature.

Yours truly,
JOHN H. PACKARD, M.D.
1031 WALNUT ST., PHILADELPHIA.

MESSRS. E. F. HOUGHTON & CO.:

I have used extensively Cosmoline [Unguentum Petrolei] both in Dispensary and private practice, with very great satisfaction. As a vehicle in making ointments it is invaluable, and far superior to lard, for the reason that it will not become rancid or undergo chemical change like the latter, when exposed to the atmosphere. I cannot too highly commend it as an application in various skin diseases.

Yours truly, JOHN V. SHOEMAKER, A.M., M.D.,
Physician to the Pennsylvania Free Dispensary for Skin Diseases

208 WEST 34TH ST., NEW YORK.

MESSRS. E. F. HOUGHTON & CO.:

Gents:—I fully appreciate the value of your Cosmoline, or Unguentum Petrolei, and prescribe it frequently in ointments. Fluid Cosmoline I have used constantly for several years, as a lubricant of urethral sounds. It is the clearest oil I know of for this purpose.

Yours truly, GEO. HENRY FOX.

TO THE MEDICAL PROFESSION.

LACTOPEPTINE.

We take pleasure in calling the attention of the Profession to LACTOPEPTINE. After a long series of careful experiments, we are able to produce its various components in an absolutely pure state, thus removing all unpleasant odor and taste (also slightly changing the color). We can confidently claim that its digestive properties are largely increased thereby, and can assert without hesitation that it is as perfect a digestive as can be produced.

LACTOPEPTINE is the most important remedial agent ever presented to the Profession for Indigestion, Dyspepsia, Vomiting in Pregnancy, Cholera Infantum, Constipation, and all diseases arising from imperfect nutrition. It contains the five active agents of digestion, viz: Pepsin, Pancreatine, Diastase, or Veg. Ptyalin, Lactic and Hydrochloric Acids, in combination with Sugar of Milk.

FORMULA OF LACTOPEPTINE.

Sugar of Milk	40 ounces.	Veg. Ptyalin or Diastase	4 drachms.
Pepsin	8 ounces.	Lactic Acid	5 fl. drachms.
Pancreatine	6 ounces.	Hydrochloric Acid	5 fl. drachms.

LACTOPEPTINE is sold entirely by Physicians' Prescriptions, and its almost universal adoption by physicians is the strongest guarantee we can give that its therapeutic value has been most thoroughly established.

The undersigned having tested LACTOPEPTINE, recommend it to the profession.

P. O. BOX 1574. 1244-1295eow

For Consumption and Wasting Diseases.

HYDROLEINE

Has been proved of the highest value in CONSUMPTION and all WASTING DISEASES, invariably producing IMMEDIATE INCREASE in FLESH and WEIGHT.

FORMULA OF HYDROLEINE.

Each dose of two teaspoonfuls, equal to 120 drops, contains:

Pure Oil,	**80 m. (drops.)**	**Soda,**	**1-3 grain.**
Distilled Water,	**35 m.**	**Boric Acid,**	**1-4 "**
Soluble Pancreatin,	**5 grains.**	**Hyocholic Acid,**	**1-20 "**

DOSE.—Two teaspoonfuls alone, or mixed with twice the quantity of soft water, to be taken thrice daily, with meals.

The principles upon which this discovery is based have been described in a treatise on "THE DIGESTION AND ASSIMILATION OF FATS IN THE HUMAN BODY," by H. C. BARTLETT, PH.D., F.C.S., and the experiments which were made, together with cases illustrating the effect of Hydrated Oil in practice, are concisely stated in a treatise on "CONSUMPTION AND WASTING DISEASES," by G. OVEREND DREWRY, M.D.

In these treatises the Chemistry and Physiology of the Digestion of the Fats and Oils is made clear, not only by the description of a large number of experiments scientifically conducted, but by cases in which the deductions are most fully borne out by the results.

☞ *Copies of these valuable works will be sent free, on application, to all who mention THE MEDICAL AND SURGICAL REPORTER.*

HYDRATED OIL,

HYDROLEINE,

WATER AND OIL,

May be described as partially digested oil, which will nourish and produce increase in weight in those cases where oils or fats not so treated are difficult or impossible to digest. In CONSUMPTION and other WASTING DISEASES the most prominent symptom is EMACIATION, of which the first is the starvation of the fatty tissues of the body, including the brain and nerves. This tendency to emaciation and loss of weight is arrested by the regular use of HYDROLEINE, which may be discontinued when the usual average weight has been permanently regained.

The ordinary so-called emulsions of Cod-liver oil and other fats, WHETHER PANCREATIZED OR NOT, merely remain in the form of a coarse mechanical mixture for a short time after agitation. The digestion of oil having in no sense been artificially produced, still devolves upon those functional powers the deficiency of which is the most prominent symptom in these cases.

HYDROLEINE is not a patent medicine or a secret preparation; the formula is on every bottle. Can be taken by the most delicate stomach; is immediately assimilated.

The permanence and perfection of the emulsion, and the extreme solubility of the HYDRATED OIL, solely prepared and sold by us under the name of HYDROLEINE, is shown by its retaining its cream-like condition as long as the purest Cod-liver Oil will retain its sweetness. Unlike the preparations mentioned, or simple Cod-liver Oil, it produces no unpleasant eructation or sense of nausea, and should be taken in such very much smaller doses, according to the directions, as will insure its complete assimilation; this, at the same time, renders its use economical in the highest degree.

To brain-workers of all classes, Hydrated Oil is invaluable, supplying as it does the true brain food.

Economical in use—certain in result Tonic—Digestive and Highly Nutritive.

NEW PRINCIPLE FOR THE ASSIMILATION FAT.

NEW PHARMACEUTICALS

WORTHY OF THE

Attention of Physicians.

SOLUTION OF

Chloride of Bromine Compound.

The ingredients which enter into the formation of this compound are those which science has long recognized as the most effective destroyers of the products of decomposition. They are true disinfectants, entering into chemical union with noxious exhalations to form innocuous compounds.

Solution of Chloride of Bromine Compound is especially adapted to the purifying of cesspools, privy vaults, sewers, drains, etc., and to the disinfection of clothing and apartments after contagious diseases.

Ozonized Aromatic Liquid.

The disinfecting principle of this combination is ozone—nature's own disinfectant—possessing also antiseptic properties in a high degree. As active as bromine and chlorine, it possesses none of the irritant nature of these agents, but is of entirely unobjectionable odor, and a positively agreeable perfume in the sick chamber. Its method of employment is extremely simple, all that is required being to place a tablespoonful in a shallow dish or saucer, from which it readily evaporates with the aid of heat. The ozone thus given off may be inhaled without producing any sense of discomfort.

Empty Capsules.

The advantages accruing from the use of gelatine capsules in practice need not be enumerated.

The capsules of our manufacture are very readily soluble in the juices of the stomach. The facility with which they may be filled after a little practice makes them scarcely less desirable, on the score of convenience, than powders.

We put them up in boxes containing 100 each, which may be conveniently carried in a physician's pocket.

Our capsules do not absorb moisture, and thus become sticky, an objection very often attaching to capsules.

Gelatine-Coated Pills.

We solicit a critical comparison of our gelatine-coated pills with those of other manufacturers. We claim for them a regularity of shape and a degree of solubility not excelled. In their manufacture, also, a process peculiar to ourselves is employed, through which perfect continuity in the coating is secured. We employ no metallic points, in the use of which holes are apt to be left, through which volatile principles are liable to escape, and chemical changes take place from contact of the pill mass with the metallic substance.

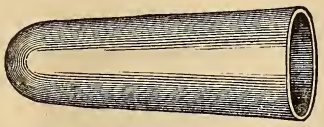
SOLUBLE MEDICATED

HOLLOW VAGINAL SUPPOSITORIES,

For the Treatment of LEUCORRHŒA, VAGINITIS, VAGINISMUS, etc.,

(See MEDICAL AND SURGICAL REPORTER, Jan. 7, 1882, p. 7.)



CLEAN. LIGHT. RELIABLE. EFFICIENT.

These Suppositories are made of medicated gelatin, moulded in a hollow form. The interior is to be filled with either absorbent, carbolized, or salicylized cotton, so as to act as a support, and keep the Suppository, while melting, in close contact with the vaginal walls. The following advantages are claimed for them:—

FIRST.—Being hollow, the use of a large quantity of inert material is avoided, and there is no soiling of the clothes or person.

SECOND.—The composition of which the suppository is made greatly assists the absorption of the remedy, instead of forming a greasy, slowly permeable medium, like that of a cacao butter suppository.

THIRD.—By the large amount of surface over which the medicating ingredient is distributed, absorption is greatly assisted, and the effect of the remedy very soon obtained.

FOURTH.—By their close contact and prolonged action on the mucous substance of the vagina, a much more powerful and lasting effect is obtained, than by any other similar method of local medication.

FIFTH.—Being light, the suppository remains in the upper part of the vagina, where it is most needed, and does not sink and slip out, as does the old-fashioned article made of cacao butter.

These Suppositories are neatly put up in boxes, *each box containing six of a kind only*, and are medicated as follows:—

1. Sulphate Zinc, – – 5 grs.
2. " " – – 10 "
3. Acetate " – – 10 "
4. Chloride " – – 2 "
5. Hydrastis Ext. Fld., – 10 "
6. Ext. Opium Aq., – – 1 gr.

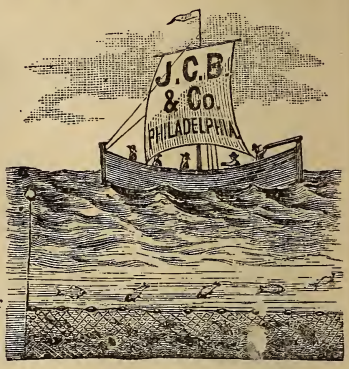
RECEIVED
PER STEAMER MONTHLY,
In Sealed, Tin-Lined Barrels.

ABSOLUTE
Purity and Freshness
SECURED BY USING
Baker's Cod-Liver Oil.

Patients unable to take other oil find it not only not disagreeable, but positively palatable.



Prepared on the **Halten Islands, Norway,** with great care, from the finest selected livers of *Net-taken Cod Fish*, at a season of the year when in their highest condition.

BAKER'S COD-LIVER OIL

Has been before the Medical Profession since 1840, and is endorsed by the highest authority.

☞ Many Physicians say "Where a *Pure Oil* of such remarkable quality is attainable, a resort to the various preparations of Cod-Liver Oil is unnecessary."

To meet the demand for such, however, we offer

BAKER'S EMULSION

Finest Norwegian Oil as above, 50 per cent. = 12 grains Hypophosphites of Lime and Soda to each tablespoonful. The quality of the Oil used in this preparation renders it, beyond question, the *best Emulsion in the market.*

WE PREPARE, ALSO,

Baker's Cod-Liver Oil, with Extract of Malt.
Baker's Cod-Liver Oil, with Phos. Lime and Wild Cherry.
Baker's Extract of Malt, Plain.

☞ An extract from Trousseau and Pidoux, on Therapeutics, in pamphlet, will be mailed free to any Physician requesting it.

DOSE, THE SAME AS OPIUM.

This article is not intended for popular use, but only on prescription of the profession. It is to take the place of Opium in cases where that drug acts injuriously.

Dr. John Harley, of London, in his "Old Vegetable Neurotics," details a large number of experiments upon the human and animal system, with six of what he considers the narcotic alkaloids. He concludes that although all six possess both narcotic and hypnotic properties, yet these are so varied in degree and force as to make their effects, when exhibited singly, very distinct from those following their exhibition in combination.

Taking the experience of practical physicians with Dr. Harley's results, as a basis, we would group them in the following order:

First Group.	Second Group.
Anodyne and Hypnotic Elements.	Narcotic and Convulsive Elements.
1. Morphia.	1. Thebain.
2. Narceia.	2. Cryptopin.
3. Codeia.	3. Papaverin.

Now SVAPNIA *is a distinctive name* given *to the first group, representing* the ANODYNE and HYPNOTIC ELEMENTS; *the second group, or the narcotic and convulsive* elements *of Opium being eliminated;* and is *not*, therefore, a simple principle, or a single constituent of Opium.

The relative values of each being known, we can select and utilize those that are valuable, and reject those known to be deleterious and inert.

This is what we claim, and all we claim for SVAPNIA. *It can be relied upon and given in all cases where Opium or Morphia is indicated, with equally good effects;* and in addition to this, there will be found in the practice of every physician cases occurring almost every day, in which idiosyncrasy and peculiar states and diseases of the brain debar us from the use of Opium and Morphia, but where Svapnia can be exhibited with the happiest results.

In SVAPNIA there is retained all the Morphia and the greater part of the Codeia and Narceia, but combined with the native acids of Opium, meconic and thebolactic, in such a manner as to render those constituents soluble and active.

SVAPNIA IS UNIFORM IN ITS PROPORTIONS, and is prepared to conform to a standard of Opium representing ten per cent. of Morphia. This is done by a simple proportion of the neutral excipient, after determining the actual amount of the alkaloids obtained from the Opium used.

We may safely affirm that the danger of bad results is much diminished by a resort to that preparation of Opium in which the poisonous elements are eliminated, and the anodyne elements in such a state of combination as to reduce their toxic and enhance their hygienic effects, such as has been PROVED TO BE THE CASE WITH SVAPNIA.

HORSFORD'S ACID PHOSPHATE

IN

IMPOTENCE,

Seminal Losses,

Impaired Vitality,

Spermatorrhœa.

We wish to call the attention of the profession to the action of Horsford's Acid Phosphate on the organs of generation, when their power has become impaired through sexual excess, or from senile impotence. It is at once rejuvenating and aphrodisiac in its effect. It appears to restore the secretory organs that have been deranged to their normal condition, giving vigor where there has been debility, and renewed strength where there has been exhaustion.

H. B. STORER, M.D., Boston, says: "I have found Horsford's Acid Phosphate serviceable, in a marked degree, in my treatment of spermatorrhœa."

E. W. JONES, M.D., Taunton, Mass., says: "Horsford's Acid Phosphate was prescribed in a case of nervous prostration from seminal losses, with decided beneficial effect."

C. S. ELLIS, M.D., Wabash, Ind., says: "I prescribed Horsford's Acid Phosphate in a case of nervous debility and weakness of the sexual organs; patient forty-eight years old; he was much benefited."

R. W. ERWIN, M.D., Bay City, Michigan, says: "In some cases of weakness following sexual indiscretions, attended with nervousness, it is useful."

Each case presents its own peculiarities for treatment, but, as a general rule, we would suggest a half teaspoonful of Horsford's Acid Phosphate, in half a tumbler of hot or cold water, or tea without milk, to be taken shortly after each meal, and upon retiring.

Pamphlet giving further details mailed free, on application to the manufacturers.

Physicians who have not had a bottle of the Horsford's Acid Phosphate, and who wish to test it, will be furnished with a sample without expense, except express charges.

RUMFORD CHEMICAL WORKS,

PROVIDENCE, R. I.

1297-1348

An experience of more than a quarter of a century convinces us that sugar, properly applied, is the only correct coating for a pill.

Physicians should be careful to specify Warner & Co., when prescribing or ordering.

Special attention is called to the following selected Recipes prepared for Physicians' Prescriptions.

PIL: PHOSPHORI COMP: (WARNER & CO.) ℞ Phosphori, - - 1-100 gr. Ext. Nuc. Vom. - ¼ gr.

THERAPEUTICS.—As a nerve tonic and stimulant, this form of pill is well adapted for such nervous disorders as are associated with impaired nutrition and spinal debility, increasing the appetite and stimulating digestion

The practical value of Phosphorus as a therapeutic agent, and its applicability to the cure of disease, and especially in those varied disordered conditions consequent upon OVERWORK, which are characteristic of modern civilization.

Pil. Phosphori Comp. may be taken, one or two pills three times daily, after eating.

Price, per 100, $1.50.

PIL: IODOFORM ET FERRI. (WARNER & CO.) ℞ Iodoform, - - 1 gr. Ferri Redacti, - 1¼ gr.

THERAPEUTICS.—A powerful general tonic and alterative, valuable as a remedy in Anæmia, Scrofula, Neuralgia, Chlorosis, Rheumatism, etc.

Pil. Iodoform et Ferri may be given in doses of from one to two pills, as occasion may require.

Price, per 100, $2.00.

PIL: DIGESTIVA. (WARNER & CO.) ℞ Pepsin Conc't, 1 gr. Gingerine, 1-16 gr. Pv. Nuc. Vom., ¼ gr. Sulphur, ⅛ gr.

THERAPEUTICS.—Useful in relieving various forms of Dyspepsia and Indigestion, and of permanent benefit in cases of enfeebled digestion, where the gastric juices are not properly secreted. It is also a gentle laxative and excellent dinner pill, may be taken one after dinner, or one before each meal, three times daily.

Price, per 100, 75 cts

PIL: CALCIUM SULPHIDE. (WARNER & CO.) 1-10, ¼, ½ & 1 gr. each.

THERAPEUTICS.—Extremely useful in the treatment of acne, scrofula and cutaneous diseases.

Sulphide of Calcium is usually administered in doses of from 1-10 to ¼ grain four times daily, gradually increasing the dose to one grain six times daily, or according to the progress or severity of the case.

Price, per 100, 1-10 gr. .50; 1-4 gr. .60; 1-2 gr. .75; 1 gr. $1.00.

WARNER & CO.'S PILLS MAY BE OBTAINED FROM ALL DRUGGISTS, OR BY MAIL, ON RECEIPT OF PRICE.

SAVORY & MOORE beg to call the attention of the Profession to some of their Special Preparations, the purity and uniform strength of which are Guaranteed.

PANCREATIC EMULSION,

Prepared in accordance with the direction of the Physician who introduced this purely

MEDICINAL FOOD FOR CONSUMPTION AND WASTING DISEASES.

Pancreatic Emulsion will always take precedence of Cod-Liver Oil, by reason of its introducing the STABLE SOLID FATS INTO THE SYSTEM, instead of the evanescent fluid fats or oils.

Neither Cod-Liver Oil nor EMULSIONS of COD-LIVER OIL can supply the kind of fat necessary for sound and vigorous human life. In addition to this, all the Oily Emulsions are liable to rancidity, and most of them are highly objectionable in consequence of the SAPONIFICATION and ULTIMATE PUTREFACTION, produced by the chemical agents used instead of Pancreatic Juice.

Pancreatic Emulsion (properly so-called), is THE NECESSARY FOOD OF THE CONSUMPTIVE, and the most reliable form of nutriment for counteracting the tendency to Phthisis and other wasting diseases. It presents to the lacteals fat, in essentially the same condition for assimilation and absorption as in a vigorous human frame, and THE AGENT of the important change is THE NATURAL SECRETION of the PANCREAS.

Pancreatic Emulsion may therefore be regarded as Chyle obtained by nature's own process. In certain cases both Cod-Liver Oil and Pancreatic Emulsion are required—one to supply the blood with oil or liquid fat, the other with the more stable solid fats; but it cannot be too strongly urged that both PANCREATIC EMULSION and Cod-Liver Oil are *not to be regarded as Medicines, but as articles of diet*, without which patients, with their defect of health, will as surely starve as healthy persons would if deprived of the most nutritive part of their food

Pancreatized (Digestive) Cod-Liver Oil. By Pancreatized Cod-Liver Oil, the active digestive principle of the Pancreatic Juice is imparted to it, which renders it in a highly favorable condition for rapid and complete digestion and assimilation, preventing nausea, and largely increasing the beneficial properties of the Oil.

Pancreatine effects the digestion and assimilation of Cod-Liver Oil and Fat, as well as Food generally. This palatable and popular remedy is therefore invaluable to PATIENTS WHO ARE UNABLE TO DIGEST COD-LIVER OIL, and who are thus deprived of its nourishing and invigorating properties.

Pancreatine Wine. An excellent vehicle for taking Cod-Liver Oil and promoting the digestion of it.

NEW HYPODERMIC SYRINGES.

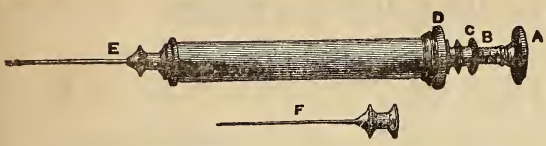

FIG. 48.—No. 2.

These cuts (two-thirds the actual size) represent a New Hypodermic Syringe of our Manufacture. With the exception of the needles, it is of German Silver, a material chosen as possessing, next to steel, the greatest rigidity and durability, while free from liability to oxydation. The barrel is formed by a process peculiar to ourselves, securing uniformity of calibre without soldered joint or seam. It is plated inside and outside with nickel. The piston is packed in the double parachute form, with leather prepared expressly for the purpose. It will be found to retain its elasticity, to operate smoothly, to resist all tendency of fluid to pass above, as of air below it. A nicely-engraved scale upon the piston-rod indicates minims, thirty being the capacity of the syringe.

Syringes Nos. 2, 3, and 4 have also a screw thread upon the piston-rod, and a traverse nut, thereby favoring the utmost nicety in the graduation of doses.

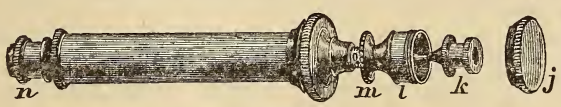
No. 3, Compact, has hollow piston-rod to receive one needle, also a protecting cover and fluid retainer; it may be carried in the Pocket Instrument or Vial Case, or without any case.

No. 4, Compact, is like No. 3, with the addition of a second needle, carried upon the syringe in the usual place, protected by a metal shield.

Nos. 1 and 2 are put up in neat morocco-covered case, with vial.

Two sizes of needles are furnished with each instrument, Nos. 1, 2, and 4; one only with No 3. They are of refined steel, carefully tempered, and thoroughly plated with gold; they are of small diameter and large relative calibre, sharpened to such an angle as will offer least resistance to penetration, and therefore cause least pain. At the point of union with the socket they are reinforced with an outer covering of German silver, thereby overcoming the tendency to become broken at this place. They are connected with the barrels by a screw thread.

Prices: No. 1, *$3 50* No. 2, *$4.00* Postage, .03
" No. 3, *2.50* No. 4, *3.50* " .02



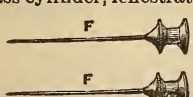
No. 3.

These Syringes are so thoroughly and strongly made as to be free from the annoying accidents common to most Hypodermic Syringes; and we believe that, for convenience, durability, and nicety of construction, they have no superior.

OTHER HYPODERMIC SYRINGES.

		Postage.
No. 7, glass-barrel, graduation engraved on barrel, with screw nut on piston, nickel-plated mountings, two best steel gilt needles, in neat case	*$3.00*	.02
No. 9, glass, graduation engraved and numbered on piston-rod, with screw nut, best steel gilt needles, in neat case	*3.00*	.02
No. 7 or No. 9, with two steel unplated needles either	*2.50*	.02
No. 10, glass, Luer's (French), graduation as No. 9, one gold needle and two steel needles, silver mountings, neat velvet-lined morocco case	*12.00*	.02

No. 11, glass cylinder, fenestrated, nickel plated metal mounting (see cut).



No. 11.

		Postage.
As represented in the cut, the glass cylinder is encased in a metal mounting, fenestrated to show the graduations for minims. The instrument may readily be taken apart for cleaning, and for those who prefer glass, is recommended for its non-liability to breakage. Price, with two best steel gilt needles, in a neat case	*$3.50*	.02

Buffalo Lithia Water.

FOR THE GOUTY OR URIC ACID DIATHESIS.

Dr. J. Marion Sims, of New York, says of this water, in general terms:

"I have used in my practice the Buffalo Lithia Water, Spring No. 2, for two years past, and have, in many cases, found it highly efficacious."

Dr. Wm. A. Hammond, of New York, Surgeon General U. S. Army (retired), Professor of Diseases of the Mind and Nervous System in the University of New York, etc.

"I have for some time made use of the Buffalo Lithia Water in cases of affections of the Nervous System, complicated with Bright's Disease of the Kidneys, or with a Gouty Diathesis. The results have been eminently satisfactory. Lithia has for many years been a favorite remedy with me in like cases, but the Buffalo Water certainly acts better than any extemporaneous solution of the lithia salts, and is, moreover, better borne by the stomach."

Dr. Hunter McGuire, Richmond, Va., late Prof. Surgery, Medical College of Virginia; Vice President of the International Med. Congress; Vice President American Med. Association.

"Buffalo Lithia Water, Spring No. 2, as an Alkaline Diuretic, is invaluable. In Gravel dependent upon the Uric Acid Diathesis, and, indeed, in diseases generally of that diathesis, it is a remedy of extraordinary potency. I have prescribed it in cases of Rheumatic Gout which had resisted the ordinary remedies, with wonderfully good results. I have also used it in my own case, being a great sufferer from this malady, and have derived more benefit from it than from any other remedy."

Dr. Alexander B. Mott, of New York, Professor Surgery, Bellevue Hospital Medical College; Surgeon, Bellevue Hospital.

"I have made sufficient use of the Buffalo Lithia Water to be satisfied that it posseses very valuable therapeutic properties. In the Gouty Diatheses, Chronic Inflammations of the Bladder, and other diseases affecting the Urinary Organs, it may be relied on to give the most satisfactory results."

Dr. Harvey L. Byrd, of Baltimore, President and Prof. of Obstetrics and Diseases of Women and Children, in the Baltimore Med. Colleye; formerly Prof. of Practical Medicine, etc.

"I have witnessed the best results from the action of the Buffalo Lithia Water, Spring No. 2, in Chronic Gout, Rheumatic Gout, Rheumatism, Gravel and Stone in the Bladder, and I do not hesitate to express the opinion that in all diseases depending upon or having their origin in the Uric Acid Diathesis, it is unsurpassed, if indeed it is equaled by any water thus far known to the profession."

Dr. E. J. Doering, of Chicago, Ill., late Surgeon U. S. Marine Hospital Service.

"In my experience the Buffalo Lithia Water is an efficient remedy in the treatment of diseases depending on the Uric Acid Diathesis. I have prescribed it quite extensively in Catarrhal Affections of the Bladder, with excellent results."

Dr. William F. Carrington, of Virginia, Surgeon U. S. Navy (retired), Surgeon Confederate States Navy.

"The Buffalo Lithia Water. Spring No. 2, has signally demonstrated its remedial power in Gout, Rheumatism, Uric Acid Gravel, and other maladies dependent upon the Uric Acid Diathesis. It not only eliminates from the blood the deleterious agent before it crystallizes, but dissolves it in the form of calculi, at least to a size that renders its passage along the ureters and urethra comparatively easy."

Dr. J. S. Wellford, Prof. of Diseases of Women and Children, Medical College of Virginia.

"I have paid a great deal of attention to Urinary Troubles, and have frequently and freely prescribed the Lithia Water in their treatment, with the very best results. In all the various forms of the Uric Acid Diathesis, whether as well-formed Gravel or Gout, or in the milder forms of Gouty Dyspepsia or Nettle-rash, in their varieties, I know of no mineral water which I consider at all equal to that of Spring No. 2. In many Skin Diseases of old age, dependent on the Uric Acid Diathesis, such as Eczema, etc., this water acts most beneficially."

1297-1348eow

Water in Cases of Six Gallons, at the Springs, $5.00

SPRINGS OPEN JUNE 1st. **Pamphlets sent to any address.**

THOMAS F. GOODE, Proprietor,

BUFFALO LITHIA SPRINGS, VIRGINIA.

MURDOCK LIQUID FOOD CO., Boston,

THE ONLY MANUFACTURERS OF

RAW FOOD EXTRACTS IN THE WORLD.

It can be retained by the weakest stomach, when all other food extracts, and even water, is rejected.

It is the only food that will relieve the Consumptive from Hunger.

Nutritious food, if raw, condensed, and free from insoluble matter, will cure chronic diseases, as it will make blood faster than all preparations or food, and new blood will cleanse the system.

MURDOCK'S LIQUID FOOD is made from Beef, Mutton and Fruits; contains corpuscles; is 12½ per cent. soluble albumen, and free from insoluble matter, drugs, minerals, salts and acids, and can be retained by the stomach when so weak as to refuse food.

Ask your Druggists, or send to us, for Essays read before the American Medical Association, at Richmond, Va., May 6, 1881, on the value of Raw Food Extracts, by Geo. R. Shepherd, of Hartford, Conn., and other Essays and Testimonials from Medical Journals and Physicians that have used Liquid Food, in cases of Consumption, Scrofula, Nervous and General Debility, Dyspepsia, acute and chronic, Constipation, Diphtheria, Intemperance, Cholera Infantum, Infantile Diarrhœa, Post partum Hemorrhage, Purpura Hemorrhagica with Waxy Liver, Pelvic Cellulitis, Malarial and other Fevers, Chronic Strumous Arthritis, Sclerosis of the Spinal Cord, Senile Gangrene, Perinephritic Abscess, and other diseases of malnutrition. No cases of Cholera Infantum have occurred where it has been used daily, and no lives have been lost from Cholera Infantum where it has been prescribed by a physician. Excellent for Eczema, Diabetes, Rheumatism and Neuralgia.

At the request of any physician who has not tried our Extracts, and would like to, we will deliver sample bottles to the Express in Boston. To any Medical Society wishing to investigate the value of our Extracts, through a committee, hospital, or individual members, we will furnish a supply of Liquid Food equal to a six-ounce bottle for every member present at the time of action. We are induced to do this, knowing that our Extracts are saving life, and that an increased use of them, which will follow after a trial of them, will be the means of saving more lives daily. (*We ask no testimonials of results obtained.*) Raw Extracts are available where cooked ones are not, or if available, contain only one-third as much nourishment.

Liquid Food is in general use at all Hospitals, Infant and Insane Asylums, and Washingtonian Homes, U. S. Navy Hospitals, and by all physicians that have tried it.

If not kept by your Druggist, can be obtained in any of the commercial cities In Philadelphia, by Johnston, Holloway & Co., Boericke & Tafel; in Pittsburg, by A. Kelly & Co.; in Baltimore, by Thomsen & Wirth; or you can order direct and we will pay express. 1 oz, 15 cents; 6 oz., 55 cents; 12 oz., $1.00.

See Philadelphia MEDICAL AND SURGICAL REPORTER, *Boston Medical and Surgical Journal*, and *New York Medical Record*, for chronic cases that were at our quarterly reception to physicians, in Boston, December 30, 1881—cases of Eczema, Rheumatism, Neuralgia, Diabetes, Consumption, and other diseases. If all were not restored to perfect health, they were gaining daily, and able to enjoy life and attend to their business. 1297-1348

BOUDAULT'S PEPSINE

IN POWDER, also WINE, ELIXIR, SYRUP, PILLS, AND LOZENGES OF PEPSINE.

Since the introduction of Pepsine by Boudault in 1854, **BOUDAULT'S PEPSINE HAS BEEN, AND IS STILL CONSIDERED, THE MOST RELIABLE,** as is attested by the awards it has received at the Exhibitions of 1867, 1868, 1872, 1873, and in 1876 at the Centennial Exposition in Philadelphia.

IT IS THE ONLY PEPSINE USED IN THE PARIS HOSPITALS.

Careful tests will enable any one to satisfy himself that **BOUDAULT'S PEPSINE HAS A DIGESTIVE POWER AT LEAST DOUBLE** that of the best Pepsines in the market, and that it is really the cheapest.

It is Sold in 1 ounce, 8 ounce, and 16 ounce Bottles.

Beware of so-called French Pepsines bearing fictitious names, and prescribe Boudault's only.

BLANCARD'S PILLS

OF UNCHANGEABLE IODIDE OF IRON.

Blancard's Pills of Iodide of Iron are so scrupulously prepared, and so well made, that none other have acquired a so well deserved favor among physicians and pharmaceutists. Each pill, containing one grain of protoiodide of iron, is covered with finely pulverized iron, and covered with balsam of tolu. Dose, two to six pills a day. The genuine have a *reactive silver seal* attached to the lower part of the cork, and a green label on the wrapper, bearing the fac-simile of the signature of

Blancard

Pharmacien, No 40 Rue Bonaparte, Paris.

without which none are genuine.

BEWARE OF IMITATIONS.

E. FOUGERA & CO., AGENTS, NEW YORK. 1297 tf.

For Consumption and Wasting Diseases.

HYDROLEINE

Has been proved of the highest value in CONSUMPTION and all WASTING DISEASES, invariably producing IMMEDIATE INCREASE in FLESH and WEIGHT.

FORMULA OF HYDROLEINE.

Each dose of two teaspoonfuls, equal to 120 drops, contains:

Pure Oil,	**80 m. (drops.)**	**Soda,**	**1-3 grain.**
Distilled Water,	**35 m.**	**Boric Acid,**	**1-4 "**
Soluble Pancreatin,	**5 grains.**	**Hyocholic Acid,**	**1-20 "**

DOSE.—Two teaspoonfuls alone, or mixed with twice the quantity of soft water, to be taken thrice daily, with meals.

The principles upon which this discovery is based have been described in a treatise on "THE DIGESTION AND ASSIMILATION OF FATS IN THE HUMAN BODY," by H. C. BARTLETT, PH.D., F.C.S., and the experiments which were made, together with cases illustrating the effect of Hydrated Oil in practice, are concisely stated in a treatise on "CONSUMPTION AND WASTING DISEASES," by G. OVEREND DREWRY, M.D.

In these treatises the Chemistry and Physiology of the Digestion of the Fats and Oils is made clear, not only by the description of a large number of experiments scientifically conducted, but by cases in which the deductions are most fully borne out by the results.

☞ *Copies of these valuable works will be sent free, on application, to all who mention THE MEDICAL AND SURGICAL REPORTER.*

HYDRATED OIL,

HYDROLEINE,

WATER AND OIL,

May be described as partially digested oil, which will nourish and produce increase in weight in those cases where oils or fats not so treated are difficult or impossible to digest. In CONSUMPTION and other WASTING DISEASES the most prominent symptom is EMACIATION, of which the first is the starvation of the fatty tissues of the body, including the brain and nerves. This tendency to emaciation and loss of weight is arrested by the regular use of HYDROLEINE, which may be discontinued when the usual average weight has been permanently regained.

The ordinary so-called emulsions of Cod-liver oil and other fats, WHETHER PANCREATIZED OR NOT, merely remain in the form of a coarse mechanical mixture for a short time after agitation. The digestion of oil having in no sense been artificially produced, still devolves upon those functional powers the deficiency of which is the most prominent symptom in these cases.

HYDROLEINE is not a patent medicine or a secret preparation; the formula is on every bottle. Can be taken by the most delicate stomach; is immediately assimilated.

The permanence and perfection of the emulsion, and the extreme solubility of the HYDRATED OIL, solely prepared and sold by us under the name of HYDROLEINE, is shown by its retaining its cream-like condition as long as the purest Cod-liver Oil will retain its sweetness. Unlike the preparations mentioned, or simple Cod-liver Oil, it produces no unpleasant eructation or sense of nausea, and should be taken in such very much smaller doses, according to the directions, as will insure its complete assimilation; this, at the same time, renders its use economical in the highest degree.

To brain-workers of all classes Hydrated Oil is invaluable, supplying as it does the true brain food.

Economical in use—certain in result Tonic—Digestive and Highly Nutritive.

NEW PRINCIPLE FOR THE ASSIMILATION FAT.

DR. McINTOSH'S
NATURAL UTERINE SUPPORTER.

No instrument has ever been placed before the medical profession which has given such universal satisfaction. The combination is such that the physician is able to meet every indication of Uterine Displacements. Falling Womb, Anteversion, Retroversion and Flexions are overcome by this instrument, where others fail. This is proven by the fact that, since its introduction to the profession it has come into more general use than all other instruments combined.

Among the many reasons which recommend this Supporter to the physician is its self-adjusting qualities. The physician, after applying it, need have no fear that he will be called in haste to remove or readjust it, as is often the case with rings and various pessaries held in position by pressure against the vaginal wall, as the patient can remove it at will, and replace it without assistance.

The Abdominal Supporter is a broad morocco leather belt, with elastic straps to buckle around the hips, with concave front, so shaped as to hold up the abdomen. The Uterine Support is a cup and stem, made of highly polished hard rubber, very light and durable, shaped to fit the neck of the womb, with openings for the secretions to pass out, as shown by the cuts. Cups are made with extended lips, to correct flexions and versions of the womb. The cup and stem is suspended to the belt by two soft elastic rubber tubes, which are fastened to the front of the belt by simple loops, pass down through the stem of the cup and up to the back of the belt. These soft rubber tubes being elastic, adapt themselves to all the varying positions of the body, and perform the service of the ligaments of the womb. The instrument is very comfortable to the patient, can be removed or replaced by her at will, can be worn at all times, will not interfere with nature's necessities, will not corrode, and is lighter than metal. It will answer for all cases of Anteversion, Retroversions, or any Flexions of the womb, and is used by the leading physicians with never-failing success, even in the most difficult cases.

Our Reduced Prices are to Physicians, $6.00; to Patients, $10.00.

Instruments sent by mail, at our risk, on receipt of price, or by Express, C. O. D., with the Express charges for returning the money added.

☞ CAUTION.—Owing to the great sale and popularity of our instrument various and base imitations are sold by unscrupulous parties. In order to get the genuine, it is best to order direct from us.

BEEF PEPTONE,

IN TRANSPARENT GLASSY SCALES,

Containing only the animal or azotized matter of the Beef. Each ounce is equal to 16 ounces of raw beef, easily soluble, and still faster in hot water.

This Beef Peptone is digested from tender, juicy Beef, by the aid of the *Crystal Pepsin,* of my manufacture (Jensen's Crystal Pepsin). Unlike the various BEEF EXTRACTS, this preparation contains all the nutritive constituents of the Beef, in a thoroughly digested state, ready for absorption into the system, while the Beef Extracts are entirely devoid of the chief elements of nutrition, such as the fibrinous, gelatinous and albuminous portions of the Beef, they only consisting of the concentrated saline constituents, with barely a trace of animal matter to keep its consistence. The difficulty so long experienced by the profession throughout the world, in preparing a PEPTONE entirely free from those chemical agents necessary for its manufacture, so as to render it fit for use, is hereby demonstrated to be successfully overcome, as it contains no foreign matter, and will stand the most severely scrutinizing test as to perfectness, also possessing flavor of the Beef, and so palatable as to render it highly agreeable.

Put up in bottles holding One ounce, Eight ounces, and one Pound.

Kept by the Wholesale and Dispensing Druggists in general.

DEPOT—L. WOLFF'S Pharmacy,

Northwest corner Twelfth and Chestnut Streets.

JENSEN'S CRYSTAL PEPSIN,

IN ARTIFICIAL CRYSTALS,

Strictly inodorous and tasteless, and perfectly soluble in water without acid.

THIS PEPSIN, now so popular with the profession, has created an impetus in the consumption of the same and physicians of the highest standing, who before the introduction of this active PEPSIN, with good reason, entirely abandoned the use of PEPSIN, are now the most eager in prescribing JENSEN'S CRYSTAL PEPSIN, whenever it is indicated, and since the knowledge of its great solvent power (gr. j. of it will dissolve the boiled whites from two to three eggs) has been established even among those susceptible to be great doubters it has caused itself to be utilized in many novel ways, by the thinking profession; for instance, in substituting morphia, chloral, etc., as a hypnotic, relieving gastric troubles where the above remedies have been prescribed, creating morphine and chloral habits. In removing diphtheritic patches it is successfully used combined with water, glycerine, and muriatic acid, and the same composition, diluted with more water, as a spray in bronchial troubles, dissolving muco-purulent matter, as well as a spray for same in catarrhal affections.

THIS PEPSIN

Has also been used with success in dissolving and evacuating coagulated blood in the bladder, dispensing with surgical operations in such cases. Many other novel applications could be mentioned, if not in want of space. It is found to be FORTY times stronger than saccharated pepsin. One to three grains is an active dose.

KEPT BY ALL DRUGGISTS.

The above preparations are only manufactured and put up by

CARL L. JENSEN, M.D., PH.G.,

865 North 26th Street, Philadelphia, Pa.

No other Wholesale Agents for this Pepsin are longer engaged, than the Wholesale Druggists throughout the United States.

DETROIT MEDICAL COLLEGE.

SESSIONS OF 1881-82.

FACULTY.

THEO. A. McGRAW, M.D., PRESIDENT,
Professor of Principles and Practice of Surgery, and Clinical Surgery.

N. W. WEBBER, M.D.,
Professor of Gynæcology and Obstetrics.

H. O. WALKER, M.D., SECRETARY,
Professor of Orthopædic Surgery, Genito-Urinary Diseases, and Clinical Surgery.

E. L. SHURLEY, M.D.,
Professor of Principles and Practice of Medicine and Laryngology.

J. H. CARSTENS, M.D.,
Professor of Materia Medica and Therapeutics, and Clinical Gynæcology.

J. S. JOHNSON, M.D.,
Professor of Diseases of the Mind and Nervous System.

F. A. SPALDING, M.D.,
Professor of Clinical Obstetrics.

A. E. CARRIER, M.D.,
Professor of Anatomy.

A. S. HEATON, M.D.,
Professor of Clinical Medicine,

EUGENE SMITH, M.D.,
Professor of Ophthalmology and Otology.

E. A. CHAPOTON, M.D.,
Adjunct Professor of Principles and Practice of Medicine.

DAVID INGLIS, M.D.,
Adjunct Professor of Principles and Practice of Medicine.

J. W. ROBERTSON, M.D.,
Lecturer on Laryngology and Physical Diagnosis.

J. E. BROWN, M.D.,
Lecturer on Physiology.

CHAS. S. JENNINGS, M.D.,
Lecturer on Chemistry.

A. F. HOKE, M.D.,
Instructor in Obstetrics.

T. N. REYNOLDS, M.D.,
Instructor in Materia Medica and Therapeutics.

JOHN BOICE, M.D.,
Instructor in Minor Surgery.

O. W. OWEN, M.D.,
Instructor in Experimental Physiology, Histology, and Curator of Museum.

F. W. BROWN, M.D.,
Instructor in Physiology and Morbid Histology.

R. A. JAMIESON, M.D.,
Instructor in Clinical Medicine.

A. S. PARKER, PH.C.,
Instructor in Pharmacy.

A. M. HAWES, M.D.,
Demonstrator of Anatomy.

This College has for its *collegiate year* two sessions.

Regular Session commences Wednesday, September 7th, 1881, and closes March 1st, 1882.

Recitation Term (optional) commences March 15th, 1882, and closes June 14th, 1882.

Graded Course of three terms, of six months each.

PLAN OF INSTRUCTION.

By *Lectures*, *Recitations* and *Clinics*, together with *practical work* in the Anatomical, Physiological, Chemical and Pharmaceutical Laboratories.

Clinics are held *daily*.

Clinical Work in Hospitals and Dispensaries is given to the Senior Class (see Clinics), in *small sections*, under the charge of a *Clinical Teacher*, in all the departments of Medicine and Surgery.

Three Large Hospitals and *two Dispensaries* afford unlimited material for instruction.

ADMISSION.—Candidates for admission are required to pass a preliminary examination, unless satisfactory documentary evidence can be presented, that is equivalent to the standard adopted. (See Catalogue.)

FEES.

Regular Session.—Matriculation, $5.00; Lecture Tickets, $50.00; Hospital Tickets, $10.00 Examination (final), $25.00.

Recitation Term.—$10.00 for those who have attended Regular Session; all others, $25.00, $15.00 of which will be applied on the next Regular Term.

Board and Rooms can be obtained for $3.00 to $5.00 per week, the average being $4.00.

For Catalogue and other particulars, address

H. O. WALKER, M.D., Secretary,
177 Griswold Street, Detroit, Mich.

1274-tf

CRINON'S HÆMOGLOBIN.

The Albuminoid Ferruginous Principle of Blood.

HÆMOGLOBIN is the only physiological chalybeate. Associated as it is with the phosphates of the blood, it forms the most powerful of tonics, and at the same time a most nourishing food. It is especially useful in cases of *Anæmia, Chlorosis, Cachexias, Exhaustion* caused by excess of work, nervous debility, fatigue resulting from parturition and lactation. It replaces entirely liquid blood, which has been recommended and used with success in *Phthisis* and *wasting away.*

It is offered in two forms: In cachets (wafers), 60 of which are contained in a box; combined with chocolate in small squares, 30 of which are in a box; both forms can be sent by mail.

Prepared by C. CRINON, Paris, Pharmacist of the first class, Laureate of the Hospitals of Paris Samples may be obtained by application to

E. FOUGERA & CO., New York, Agents for the U. S

DOCTOR RABUTEAU'S

(Laureate of the Institute of France.)

DRAGEES, ELIXIR & SYRUP OF IRON.

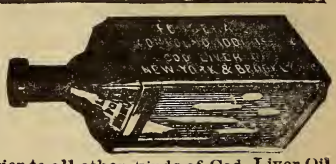
"The experiments made in the hospitals of Paris have demonstrated that *Dr. Rabuteau's Dragees, Elixir and Syrup* regenerate the red globules of the blood with a rapidity never observed with the use of the other ferruginous preparations. These results have been proved by the various *Compt-Globules.*

"The ferruginous preparations of *Dr. Rabuteau* do not cause any constipation, and are perfectly tolerated by the weakest persons."—*Gazette des Hospitaux.*

Dr. Rabuteau's Elixir is prescribed when some difficulty is experienced in swallowing the Dragees; it is especially adapted to weak persons, whose digestive functions need strengthening or stimulating.

Dr. Rabuteau's Syrup is especially prepared for children, who take it readily, because of its agreeable taste.

FOUGERA'S COMPOUND IODINISED COD LIVER OIL.



Since the introduction of this oil in 1858, it has been found to be superior to all other kinds of Cod Liver Oil for the treatment of **General Debility, Consumption, Scrofula, Rickets, etc.**

It possesses not only all the **nourishing** qualities of the best Cod Liver Oil, but also the **tonic, stimulant** and **alterative** properties of **Iodine, Bromine** and **Phosphorus,** which are added in such proportions as to render it therapeutically five times as efficacious as pure Cod Liver Oil.

Through its **increased curative action, FOUGERA'S COD LIVER OIL** will be found to cure disease in a much shorter time than the pure oil; while favorable results will be obtained by its use in many advanced cases when the pure Cod Liver Oil would fail entirely.

FOUGERA'S READY-MADE MUSTARD PLASTERS.

A most useful, convenient, clean, and economical preparation. Not liable to change if kept in a dry place. Made of two strengths. Plasters No. 1, of pure mustard; Plasters No. 2, of one-half mustard. Price 40 cents, the tin box, or tin roll, of 10 plasters each. DIRECTIONS.—Dip the Plaster, or Plasters, a minute or two, in cold water; apply on the part, and cover with a band.

FOUGERA'S COMPOUND ICELAND MOSS PASTE.

(Iceland Moss, Lactucarium, Ipecac and Tolu.)

Used with great success against nervous and convulsive coughs, Whooping Cough, Acute Bronchitis, Chronic Catarrh, Influenza, etc.

Wakefulness, Cough, and other sufferings in Consumption, are greatly relieved by the soothing and expectorant properties of this Paste.

FOUGERA'S IODO-FERRO-PHOSPHATED ELIXIR OF HORSE-RADISH.

This Elixir contains Iodine, Pyrophosphate of Iron, the active principles of antiscorbutic and aromatic plants, and acts as a **tonic, stimulant, emmenagogue,** and a **powerful regenerator of the blood.** It is an invaluable remedy for all constitutional disorders due to the impurity and poverty of the blood. One of the advantages of this new preparation consists in combining the virtues of Iodine and Iron without the inky taste of Iodide of Iron.

E. FOUGERA, Pharmacist,
372 Seventh Street, Brooklyn, L. I.,
SOLE PROPRIETOR & MANUFACTURER OF THE ABOVE,
To whom all special communications should be addressed.

E. FOUGERA & CO.,
30 North William Street, New York.
SOLE GENERAL AGENTS for the ABOVE,
To whom all orders should be addressed.

SOLD BY DRUGGISTS GENERALLY.

JOHNSTONE'S IMPROVED

ADAPTABLE POROUS FELT SPLINTS.

AHL'S SPLINT MANUFACTURING COMPANY, LIMITED,

123 & 125 South Eleventh Street, PHILADELPHIA, PA.

THE ADAPTABLE POROUS SPLINTS, invented and improved by W. H. JOHNSTONE, have been tested extensively in both civil and military practice for a number of years, and have been endorsed and recommended in the most unqualified manner by the celebrated and distinguished Surgeons of America.

Their *porosity* is a peculiar and a valuable property. While the material is firm and insoluble, it permits readily the passage of air and fluids, so that, on one hand, the heat from the inflamed surface, the perspiration, and the morbid exhalations, are not confined, to the detriment of the patient, *as is the case in every other kind of splint*, but pass off freely; and on the other hand, lotions of cold or warm water, medicated or not with weak alcohol, carbolic acid, arnica, tincture, solutions of the sulphites, etc., can be constantly applied without disturbing the dressings. This, it will readily be seen, is a most invaluable property when the parts are bruised, lacerated, filled with extravasated blood, or erysipelatous, and give these splints a conspicuous advantage over all others.

From FRANK H. HAMILTON, M. D., Professor of Fractures and Dislocations in the Bellevue Hospital Medical College, author of "A Treatise on Fractures and Dislocations," etc.

Having examined carefully *JOHNSTONE'S IMPROVED ADAPTABLE POROUS FELT SPLINTS*, I feel warranted in recommending them to the Profession as superior to all other manufactured splints now in use. They possess all the essential qualities of a good splint, having firmness, pliability and lightness.

FRANK H. HAMILTON, M. D.,
Prof. Military Surgery and Fractures and Dislocations, Bellevue Hospital Col.

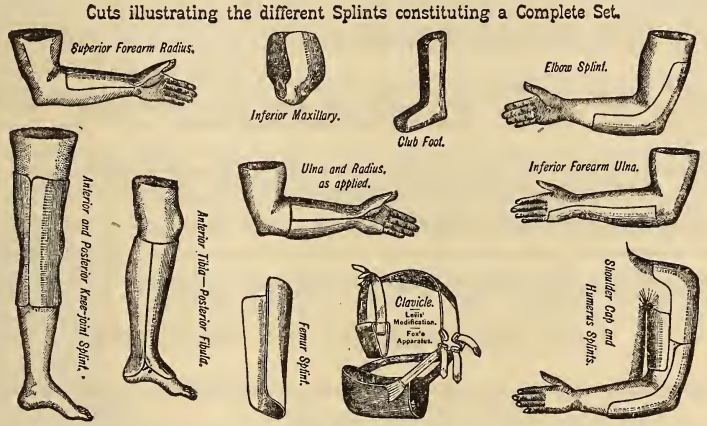
From PROF. D. HAYES AGNEW, Prof. Surgery, University of Penna.

1611 CHESTNUT STREET, PHILADELPHIA, *February 6th*, 1879.

The Adaptable Felt Splints, formerly known as those of Dr. Ahl, with the improvement now made by W. H. Johnstone, which renders them in every way superior to the former, I regard as very excellent appliances in the treatment of fractures.

D. HAYES AGNEW,
Prof. Surgery, University of Pennsylvania.

Cuts illustrating the different Splints constituting a Complete Set.



SPECIAL NOTICE TO THE PROFESSION AND TRADE.

Our *policy* heretofore in the introduction of JOHNSTONE'S IMPROVED ADAPTABLE POROUS FELT SPLINTS, has been to confine the sales and business negotiations directly to the Doctors themselves, declining in every case to sell our goods through Dealers; we having assured the Profession generally, both through our agents and catalogues, that *JOHNSTONE'S IMPROVED SPLINTS* could only be obtained by subscription.

We wish to announce, that owing to the large demand for our goods and the constant importunity on the part of *Surgeons* everywhere to place our Splints on sale with their Instrument Dealer or Druggist, to afford them greater convenience and facility in obtaining the pieces in duplicate, **we have at last acceded to that request, and hereafter *JOHNSTONE'S CELEBRATED FELT SPLINTS* can be obtained at most dealers in Instruments and Drugs throughout the United States, at the same price which they were heretofore sold, viz:**

A complete set, embracing fifty (50) pieces—twenty-five for adults and twenty-five for children—is thirty ($30) dollars.
Extra or duplicate pieces can always be obtained from your DEALER, at one dollar each.

JOHNSTONE'S CELEBRATED SPINAL JACKET, for Curvatures and Deformities, have met with unparalleled success, and, from their merit, secured the unqualified endorsement and approbation of our celebrated orthopædic specialists, and particular expression of gratitude from the patients who are wearing them. For full information, send for Descriptive Circulars.

Should your Instrument dealer fail to have a supply of our Splints, and decline to carry them in stock, orders sent to us will receive prompt attention.

AHL'S SPLINT MANUFACTURING CO., Limited.
W. H. JOHNSTONE, Manager.

N. B.—If the Instrument Dealers of Philadelphia decline to supply its Physicians with our JOHNSTONE'S FELT SPLINTS on call, they will be furnished and delivered by us to any part of the city, at any time, on receipt of the price, viz.

$1.00 each.

Consulting Physicians.

Prof. Wm. A. Hammond,

Prof. T. Gaillard Thomas,

Dr. Edward C. Spitzka,

Dr. Daniel M. Stimson,

Dr. Edward T. Ely,

Dr. G. H. Wynkoop,

Dr. Andrew H. Smith.

Situated upon a high hill that commands a splendid view of the Hudson and Harlem rivers, Spuyten Duyvil Creek, and the beautiful country for miles around; surrounded by ample grounds and magnificent drives; in easy communication with the city by means of the Sixth and Ninth Avenue Elevated and the Hudson River Railroads; away from the dust, noise, crowding and malaria of the city; with hot and cold water in every room, furnace and grate-fire heating, croquet, horses and carriages, boats and fishing, an excellent *cuisine*, trained nurses and careful medical attendance, it possesses unequaled advantages for the treatment of cases of this kind.

The plan of treatment pursued in the cure of opium, morphine and chloral takers is that of *rapid reduction*, which possesses all the advantages, and none of the dangers of Levenstein's *sudden deprivation*, or the prolonged agony of *gradual reduction*. Each case is studied and treated in accordance with its peculiarities and the idiosyncrasies of the patient, no set plan of treatment being pursued, at the expense of the person's health or comfort.

Our Home, furthermore, offers special facilities for the treatment by *rest, diet, and massage*, according to the plan of Weir Mitchell, of that large class of nervous diseases so commonly met with in ladies suffering from uterine troubles. This plan of treatment has been specially studied, and nurses competent to carry out its provisions in every detail will be furnished. For further particulars, etc., address 1299-1350

TANRET'S PELLETIERINE.

For the TREATMENT of TAPE-WORM (Tænia Solium).

This new Tænifuge, the Active Alkaloid of Pomegranate Bark, has of late come into extensive use in France, for the treatment of Tape-worm (Tænia Solium). The results of numerous experiments with it at the Marine Hospitals of Toulon, St. Mandrier, etc., and in the Hospitals of Paris, St. Antoine, La Charité, Neckar, Beaujon, etc., have all been most satisfactory. Doctor Dujardin Beaumetz, Member of the Academy of Medicine, and Prof Laboulbene, in their report to the Society of Therapeutics, have given it their unqualified approval, after the most searching experiments. This preparation is pleasant to administer, and if certain preliminaries are observed success will be insured.

PELLETIERINE is prepared by Mr. CHAS. TANRET, Pharmacien de First Class, 64 Rue Basse du Rempart, Paris. 1242eow-tf

McINTOSH'S COMBINED

Galvanic AND Faradic Battery.

THIS CELEBRATED BATTERY COMBINES BOTH THE GALVANIC AND FARADIC CURRENT,

Which can be used separately or combined. Any strength and intensity desired can be obtained for use in Electro-therapeutics. THIS BATTERY is constructed on an IMPROVED PLAN, as follows: The zinc and carbon plates are arranged in couples, securely clamped to hard rubber plates, with thumb screws. These screws are also used for binding posts. All the connections are positive. The cells are made in sections of six, of hard rubber, with hard rubber drip cup. The following points of excellence render our Batteries superior to others:

1. They combine the only Portable Galvanic and Faradic Battery in one case.

2. They weigh one-half less than other Batteries of the same number of cells.

3. The cells are made in sections of six, of one solid piece of hard, vulcanized rubber; by this arrangement they can be emptied, cleaned and filled as easily and quickly as one cell, and will not crack, break or leak.
4. A hard rubber drip cup is placed by the side of each section of cells, to receive the zinc and carbon plates when removed from them. By this arrangement we avoid the use of absorbent materials and soiling the Battery
5. The Hydrostat is perfect. The rubber plates which hold the elements project over on one side enough to cover the cells when the zinc and carbon plates are placed in the drip cups. The under side of this projection is covered with thick, soft rubber, which is securely clamped to the cells sections, and makes them water tight.
6. This is the only Battery in which the zinc and carbon plates can be kept clean by simply rinsing them.
7. A zinc or carbon plate can be removed by simply loosening a binding post; and all parts of the Battery can be duplicated, as like parts are made exactly alike. We will be pleased to send circulars and our illustrated catalogue, giving full information, price, etc., free, upon application.

MATHEY-CAYLUS' GLUTEN

SILVER

1854

CAPSULES

OF

PURE COPAIBA AND OTHER MEDICINES.

SILVER

1854

Adapted and recommended for the cure of recent or chronic Gleets, Fluor Albus, etc., etc.

The MATHEY-CAYLUS' CAPSULES, *coated with gluten*, present the most perfect mode for administering Copaiba, Cubebs, Norway Tar, Turpentine, and other remedies, the disagreeable odor and taste of which are often a hindrance to their use. This mode of preparing capsules, which has been approved by the Academy of Medicine, has been recommended in their clinical lectures by eminent Professors in the hospitals of Paris, as well as in those of New York and London.

By the first physicians of the hospitals of Paris, London, and New York.

SPECIAL ADVANTAGES OF MATHEY-CAYLUS' GLUTEN CAPSULES.—Being formed of thin, transparent, and readily assimilated coating, they so cover and disguise the medicine to be given, that it can be taken without disgust, but with ease. In this respect, they differ widely from the gelatine capsules, which have a hard, thick coating, which swells beyond measure, in the stomach, are hard to be swallowed, and what is of great importance, they create disturbance in the digestive functions.

The special advantage of the coating of gluten consists in the fact that, notwithstanding its extra thinness, and although it softens under the action of the gastric juice, it can pass the stomach without breaking, and only in the intestines is the medicinal matter liberated; this accounts for the fact that Mathey-Caylus' Capsules never cause the nausea, eructations, and dyspeptic symptoms, which are complained of by many persons using other preparations.

Finally, their regular ovoid form, which is so favorable to swallowing, their pleasant appearance, which dispels all disgust, and the advantage of being entirely free from taste and smell, recommend the use of these capsules even to the most delicate persons.

Thankful to the Medical Profession for the liberal patronage heretofore bestowed upon us, we hope that they will continue their favors, and we are convinced that they will never have any reason to regret the generous welcome they have given to our preparations.

MATHEY-CAYLUS' CAPSULES are never sold, except in bottles having the following inscription printed in the glass: MATHEY-CAYLUS A PARIS. And each bottle contains 64 capsules, making them the cheapest capsules in the market.

The following different kinds of Mathey-Caylus' Gluten Capsules are now offered:

COPAIBA AND TANNIC ACID,
COPAIBA AND S. N. OF BISMUTH,
COPAIBA AND CATECHU,
COPAIBA AND MAGNESIA,
COPAIBA, CUBEBS AND ALUM,
COPAIBA, CUBEBS AND RHATANY,
COPAIBA AND RHATANY,
COPAIBA AND CITRATE OF IRON,
COPAIBA AND CUBEBS,
COPAIBA PURE,
COPAIBA, CUBEBS AND CARB. OF IRON,
VENICE TURPENTINE, NORWAY TAR, PURIFIED,
CUBEBS AND TURPENTINE,
CUBEBS AND TANNATE OF IRON,
CUBEBS AND ALUM,
CUBEBS PURE,
COPAIBA AND MATICO,
COPAIBA, IRON AND OIL OF SANDAL,
COPAIBA AND OIL OF SANDAL,

HOLLOW SUPPOSITORIES.

WITH STOPPERS. ALL MADE FROM PURE BUTTER OF COCOA, ONLY.

Aural, Nasal, Rectal, Urethral, Cystic, Vaginal, Intra-Uterine, and Veterinary Suppositories.

The object of this invention is to supply Physicians, Druggists, Veterinary Surgeons, and others, with HOLLOW SUPPOSITORIES, into which they can put any kind of medicine or nutriment, thus producing firm, smooth, and evenly medicated Suppositories, that are cheaper and more reliable than those made by the old method.

RECTAL ABSORPTION.

"The mucous membrane of the rectum, like that of other portions of the alimentary canal, possesses all the requisites, more or less, for the exercise of absorption."

Liebig states that a strong solution of common salt disappeared so completely in the rectum, that an evacuation one hour afterward was found to contain no more than the usual portion of salt.

Many medicinal substances act more energetically when applied to the rectum than when received into the stomach.

Baron Dupuytren said: "The rectum *absorbs*, but does not *digest*. The medicinal agent," he says, "owing to the absence of digestion, passes more directly, more purely, and more surely to its destination, than the same medicine does when taken into the stomach."

M. Orfila asserts that those medical agents which operate through the medium of absorption, such as opium, tobacco, etc., are much more active by the rectum than by the stomach.

Dr. J. H. Scorff reports four cases where he was successful in removing the vomiting of pregnancy, by introducing 20 grains of chloral into the rectum, night and morning. He only found it necessary to use the remedy three or four times.

Chloral is the remedy *par excellence* in the ravings of delirium tremens, and in cases of delirium and insomnia combined; also in infantile convulsions and attacks of laryngysmus stridulus.

Dr. Hickman reports a case of typho-malarial fever, which chloral was found to control in a happy manner. The chloral was introduced per rectum.

"REST TO THE STOMACH,"

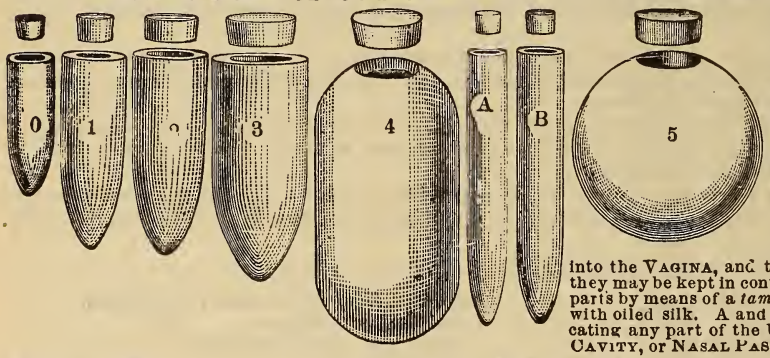
says Mr. Theodore Williams (in London *Lancet*, October 24th, 1874), is of the highest importance in some of the diseases of this organ. In such cases we possess in the rectum an effective second stomach, which, if it does not afford us the pleasure of digestion, spares us many of its pains."

Nutritious substances are taken up by the absorbents, and thus find their way into the economy, and produce their assimilative and nutritive effect. Haller demonstrated the fact that digestion can and does take place in the alimentary canal. He had the greatest confidence in the absorptive and digestive powers of the rectum to sustain life indefinitely.

HYPODERMIC MEDICATION.

Dr. William Bodenhamer says: "This now very common and often misused method is of great value in numerous cases, yet I am decidedly of the opinion that rectal medication is of greater importance; indeed, it is greatly preferable in many instances, being much less dangerous, much more convenient and simple; and the remedies, too, act through this medium with almost equal celerity. But very few remedies can be used hypodermically in comparison to those which can be used by the rectum."

EXACT SIZES OF OUR VARIOUS HOLLOW SUPPOSITORIES.



Size 0 is for children. It may also be used for the EAR and in the NASAL PASSAGES. Nos. 1, 2 and 3 are RECTAL SUPPOSITORIES. Nos. 3 and 4 may be used for introducing nutriment into the system, *via rectum*. No. 4 is also a VAGINAL SUPPOSITORY. No. 5 is a "SPHERICAL HOLLOW SUPPOSITORY," to introduce remedies into the VAGINA, and to the *os uteri*, where they may be kept in contact with the diseased parts by means of a *tampon* of cotton covered with oiled silk. A and B are used for medicating any part of the URETHRA or UTERINE CAVITY, or NASAL PASSAGES.

DR. McINTOSH'S ELECTRIC OR GALVANIC BELT.

This Belt is a perfect Galvanic Battery, composed of sixteen cells, placed in pockets on a belt. Each cell is made of hard vulcanized rubber, lined with copper, which constitutes the negative plate. The rubber coating perfectly insulates each cell. The positive plates are of zinc, wrapped in a porous material to absorb the exciting fluid, preventing contact with the copper, and permitting the current to pass from the copper to the zinc. The cells are charged without wetting the belt.

A current selector is so arranged that one or more cells can be used at pleasure. The electrodes are covered similar to ordinary battery electrodes, and connected with the cells by connecting cords. By this arrangement, a current from the belt can be applied to any part of the body. Physicians who have used this belt in their practice do not hesitate to recommend it to the profession.

Our pamphlet on "Medical Electricity," containing a full description of the belt and diseases, with manner of treatment, sent free on application. Address

A MANUAL OF OPHTHALMIC PRACTICE,

BY HENRY S. SCHELL, M. D.,

Surgeon to the Wills Eye Hospital, Ophthalmic and Aural Surgeon to the Children's Hospital, etc.

With 53 Illustrations, Test Types, etc. Price, Cloth, $2.00.

This is a new and valuable work on ophthalmic practice, especially designed for the use of the general practitioner who desires a clear and compact manual of instruction in the management of diseases of the eye.

EXTRACT FROM THE PREFACE.

The object of the writer, in the following pages, has been to state briefly the generally accepted principles of Ophthalmology, and to describe those methods of treatment which he has become accustomed to rely upon from personal experience of their value.

CONTENTS.

CHAPTER I.—Anatomy and Physiology of the Eye. CHAPTER II.—Affections of the Eyelids. CHAPTER III.—Disorders of the Lachrymal Apparatus. CHAPTER IV.—Disorders of the Conjunctiva. CHAPTER V.—The Ophthalmoscope. CHAPTER VI.—Refraction and Accommodation and their Anomalies. CHAPTER VII.—Disorders of the Ocular Nerves and Muscles. CHAPTER VIII.—Diseases of the Cornea and Sclerotic. CHAPTER IX.—Diseases of the Iris, Choroid and Ciliary Body. CHAPTER X.—Diseases of the Crystalline Lens. CHAPTER XI.—Diseases of the Vitreous. CHAPTER XII.—Diseases of the Retina and Optic Nerve. CHAPTER XIII.—Disorders of the Eyeball. CHAPTER XIV.—Diseases of the Orbit.

Registered COSMOLINE Trade Mark.

Unguentum Petrolei

Prepared by E.F.Houghton & Co. Philadelphia, U.S.A.

Put up in 1, 5, 10, 25, 50, and 100-lb. cans. Samples furnished on application. The post-office laws forbid anything of an oleaginous nature being sent through the mail.

In chemical composition, Cosmoline [Unguentum Petrolei] is an oleaginous hydrocarbon, corresponding to the heavy petroleum oils, and containing a large amount of the paraffines and olefines of the formulæ $C_{16}H_{34}$ and $C_{16}H_{32}$. It contains but a small percentage of the paraffines and olefines, corresponding to the formulæ C_7H_{16} and C_7H_{14}, respectively, and the offensive and irritating properties of the crude oil have been carefully removed. In the process of purification, no acids, alkalies, or other chemicals are employed, and no injurious additions of any kind are made to the natural product. The result is a semi-solid, translucent substance, with a faint odor and unctuous feel.

Cosmoline [Unguentum Petrolei] melts at about 100° Fah. (38° Cent.); and boils at about 625° Fah. (329° Cent.); its specific gravity is about 0.875 at 60° Fah.

As it contains no oxydizable or organic matter capable of change by putrefaction or fermentation, and is absolutely without affinity for moisture, it offers to the profession an admirable unguent, which can never decompose, ferment, or become rancid in any climate or temperature.

291 MADISON AVENUE, NEW YORK, February 26th 1878.

I have examined the preparations of Cosmoline as manufactured by E. F. Houghton & Co., Philadelphia, and believe them well adapted to the purposes for which they are designed. As lubricants, and as the bases of simple or medicated ointments, they have a decided advantage over the fixed oils and fatty substances in ordinary use, in that they do not become rancid, and do not acquire irritating qualities from atmospheric exposure. ALFRED C. POST, M.D., LL.D.,
Emeritus Professor of Clinical Surgery in the University of New York, Visiting Surgeon to Presbyterian Hospital, etc.

PHILADELPHIA, July 10, 1880.

MESSRS. E. F. HOUGHTON & CO.:

I have for a number of years made extensive use of Cosmoline [Unguentum Petrolei] and consider it a most valuable article for surgical purposes. Either as a dressing by itself, or as a vehicle for the application of medicaments, it is greatly superior to lard or other fatty matters, especially by reason of its non-liability to change by time or temperature.

Yours truly,
JOHN H. PACKARD, M.D.
1031 WALNUT ST., PHILADELPHIA.

MESSRS. E. F. HOUGHTON & CO.:

I have used extensively Cosmoline [Unguentum Petrolei] both in Dispensary and private practice, with very great satisfaction. As a vehicle in making ointments it is invaluable, and far superior to lard, for the reason that it will not become rancid or undergo chemical change like the latter, when exposed to the atmosphere. I cannot too highly commend it as an application in various skin diseases.

Yours truly, JOHN V. SHOEMAKER, A.M., M.D.,
Physician to the Pennsylvania Free Dispensary for Skin Diseases

208 WEST 34TH ST., NEW YORK.

MESSRS. E. F. HOUGHTON & CO.:

Gents :—I fully appreciate the value of your Cosmoline, or Unguentum Petrolei, and prescribe it frequently in ointments. Fluid Cosmoline I have used constantly for several years, as a lubricant of urethral sounds. It is the cleanest oil I know of for this purpose.

Yours truly, GEO. HENRY FOX.

NEW PHARMACEUTICALS

WORTHY OF THE

Attention of Physicians.

NITRO-GLYCERINE PILLS.

Nitro-glycerine is introduced on the authority of Dr. Murrell, of London, as a remedy in angina pectoris and in cases of chronic neuralgia in any part of the body. Cases of angina pectoris which had resisted all attempts at even alleviation, much less cure, have promptly yielded to nitro-glycerine, and a number of cases of actual cure are reported. This is more than can be said of any other known remedy. In neuralgia the effects of this drug have, in some instances, been scarcely less marked.

The pill form is very eligible, besides ensuring exactness of dose.

Liquor Ergotæ Purificatus.

This form of ergot is of constant strength. In its preparation only the active principles of the drug are retained, all inert and noxious ingredients being removed. As these active principles are assayed the l quor contains them in constant and definite proportions, and thus is obviated the uncertainty of strength due to variability in the quality of the sample of the drug employed. Liquor ergotæ purificatus is as constant in its strength as morphia, quinia, or any of the other alkaloids of vegetable drugs.

Sanguis Bovinus Exsiccatus.

In this preparation of blood we have a true food, the albumen being entirely retained. In this respect it differs from the various beef extracts, beef essences, etc., in the market. These preparations are, from the very methods of their manufacture, entirely deprived of albumen, the true nutritive principle of beef, and are thus not foods in any proper sense of the word.

Sanguis bovinus exsiccatus is blood deprived of nothing but its water and fibrin, which latter is naturally small in quantity and practically of no nutritive value.

CASCARA CORDIAL.

This laxative and alterative preparation stands unequaled among pharmaceutical preparations as a remedy in constipation. Its agreeable and efficient action has been abundantly attested by the medical profession of this country, and it stands now as a remedy of unquestionable efficacy in chronic constipation. Great care should be exercised in not prescribing too large a dose, inasmuch as cascara sagrada, its active ingredient, overcomes constipation by its tonic action on the bowel, rather than by direct laxative influence.

—FULL DESCRIPTIVE CIRCULARS OF THE ABOVE—

WILL BE SENT FREE, ON APPLICATION TO

PARKE, DAVIS & CO., DETROIT, MICHIGAN,

MANUFACTURING CHEMISTS AND SPECIAL DEALERS IN NEW AND RARE DRUGS.

1297-1348

McKESSON & ROBBINS'

BI-MURIATE QUINIA WITH UREA

(Quinia Bi-Muriatica Carbamidata),

THE MOST SOLUBLE SALT OF QUINIA.

Specially Adapted to Hypodermic Use.

Will completely dissolve in double its weight of cold water, or in its own weight of boiling distilled water, which is preferable.

This Salt may be procured through retail druggists, from McKesson & Robbins, in original vials of 1, 2 and 4 grammes, and their solution, containing 50 per cent. of the Salt, in $\frac{1}{8}$ oz. and one ounce vials.

ALOIN AND STRYCHNIA GRANULES

LAXATIVE AND TONIC.

INVALUABLE IN CHRONIC CONSTIPATION.

Prescribed with the most satisfactory results in cases in which, from infirmity or morbid condition, the tone of the system is impaired, and in which the administration of more violent purgatives might be attended with danger.

Write McKesson & Robbins on your Prescriptions and Orders.

SCOTT'S EMULSION

PURE COD LIVER OIL

WITH

HYPOPHOSPHITES OF LIME AND SODA

PERFECT, PERMANENT, PALATABLE.

The well-known virtues of this preparation, that has now been before the profession for a number of years, hardly requires comment from us. But we desire, for the information of those whose attention may not have been directed to it, to present the following facts:—

FIRST.—We use in the manufacture of our Emulsion, Cod-Liver Oil that is prepared expressly for us, and is strictly pure, which is the most important consideration to the Physician.

SECOND.—By our process of Emulsifying, we so thoroughly incorporate the Oil with the Hypophosphite Salts, that the mixture is perfectly homogeneous and remains in that condition, without the slightest separation or change, for years, unless exposed to the air or intense heat.

THIRD —It is so palatable and easy of digestion that it can be administered to children and persons with most sensitive stomachs without the slightest repugnance, and we are confident, from the results that have been obtained in the use of this preparation, and the flattering testimonials we have received from prominent physicians, that the proper manner of administering Cod-Liver Oil, even to patients that can tolerate the crude oil, is in the form of a palatable and easily digested Emulsion. There are some in the profession who adhere to the use of the plain oil, but, with all due deference, if they will make a trial of our Emulsion, we believe their prejudices will be removed, and they will find it much more beneficial to their patients.

With all the numerous Foods, Cereals and so-called Constructive Agents of uncertain value that are being introduced the physician must sometimes be at a loss to know what to prescribe. But we are assured that the profession will bear us out in the statement that in all pulmonary troubles, especially where the lung tissue is involved, in Scrofulous children and in Anæmic women of consumptive tendencies, as well as in general nervous debilty, our combination will produce results, if properly administered, unequaled by any other preparation, and most satisfactory to the physician and patient. We most respectfully ask those who have never prescribed or seen its results to give it a trial, and if you desire to make a personal inspection of it we will be pleased to send a sample by express, prepaid.

FORMULA.—50 per cent. of pure Cod-Liver Oil. 6 grains of the Hypophosphite of Lime, and 3 grains of the Hypophosphite of Soda to a fluid ounce. Emulsified with mucilage and glycerine.

BUCKTHORN CORDIAL

RHAMNUS FRANGULA.

We desire to call the attention of the profession to this preparation, and although they may be familiar with its name and general characteristics, yet, on account of there not being a preparation in the market of uniform strength and quality, may not have a proper appreciation of its value. As far as our experience goes in the various tests made by our medical friends, we can present the German bark, *Rhamnus Frangula*, in the form of our *Buckthorn Cordial*, with perfect confidence that we will secure the encouragement and assistance of the profession in promoting its growth and giving it the position it deserves as a medicine. It seems to be almost a specific for Habitual Constipation and Indigestion, acting mildly but efficiently, without causing the nausea that usually accompanies the use of a cathartic. At the same time producing a tonic effect upon the bowels, so that as the patient recovers, the dose may be gradually decreased until a normal condition takes place. We use great care in the selection of the Bark, as we find it necessary that it should be of the proper age and condition, and carefully exhausted, to secure its true active principle

We combine it with aromatics in such a manner as to make a pleasant cordial, acceptable to the most sensitive stomach. We shall be very glad to furnish samples free to all physicians, upon application, giving instructions for its use, etc. Prepared by SCOTT & BOWNE

SCOTT & BOWNE'S PALATABLE CASTOR OIL

IN AN EMULSION.

We respectfully submit the above elegant preparation to the notice of the profession, and desire them to favor us with a trial. So far as it has been tested, it has met with their entire approval; and we believe it is not only destined to take the place of the crude oil, but to be used much more extensively. In our process of emulsifying, it is not only *permanent* and *palatable*, but is deprived entirely of its griping properties. The inestimable nature of Castor Oil as a laxative and cathartic, in the varied intestinal derangements of children, and in Diarrhœa, Colds, etc., is accepted by all, and in the available form in which we present it, in a perfectly palatable mixture, deprived entirely of its nauseous, sickening properties, and kindly received by the most sensitive stomach, it must occupy the exalted position it deserves as a medicine. In its administration, it requires very little more than the crude oil, but the experience of the physician will soon guide him in its use. It is put up in 4 oz. bottles, that sell for 25 cents; also in quarts for physicians to prescribe as desired. Samples will be furnished free on application. FORMULA:—*50 per cent. of Pure Cold Pressed Castor Oil, 15 per cent. of Chemically Pure Glycerine.* Prepared by

1306-1357eow **SCOTT & BOWNE, Manufacturing Chemists, 108 and 110 Wooster St., N. Y.**

FOR PHYSICIANS' USE ONLY.

SVAPNIA

OR

PURIFIED OPIUM.

CONTAINS THE

ANODYNE AND SOPORIFIC

ALKALOIDS

CODEIA,

NARCEIA

AND

MORPHIA.

EXCLUDES THE

POISONOUS & CONVULSIVE

ALKALOIDS

THEBAINE,

NARCOTINE

AND

PAPAVERINE.

DOSE, THE SAME AS OPIUM.

This article is not intended for popular use, but only on prescription of the profession. It is to take the place of Opium in cases where that drug acts injuriously.

Dr. John Harley, of London, in his "Old Vegetable Neurotics," details a large number of experiments upon the human and animal system, with six of what he considers the narcotic alkaloids. He concludes that although all six possess both narcotic and hypnotic properties, yet these are so varied in degree and force as to make their effects, when exhibited singly, very distinct from those following their exhibition in combination.

Taking the experience of practical physicians with Dr. Harley's results, as a basis, we would group them in the following order:

First Group.	Second Group.
Anodyne and Hypnotic Elements.	Narcotic and Convulsive Elements.
1. Morphia.	1. Thebain.
2. Narceia.	2. Cryptopin.
3. Codeia.	3. Papaverin.

Now SVAPNIA *is a distinctive name* given *to the first group, representing* the ANODYNE and HYPNOTIC ELEMENTS; *the second group, or the narcotic and convulsive* elements *of Opium being eliminated;* and is *not*, therefore, a simple principle, or a single constituent of Opium.

The relative values of each being known, we can select and utilize those that are valuable, and reject those known to be deleterious and inert.

This is what we claim, and all we claim for SVAPNIA. *It can be relied upon and given in all cases where Opium or Morphia is indicated, with equally good effects;* and in addition to this, there will be found in the practice of every physician cases occurring almost every day, in which idiosyncrasy and peculiar states and diseases of the brain debar us from the use of Opium and Morphia, but where Svapnia can be exhibited with the happiest results.

In SVAPNIA there is retained all the Morphia and the greater part of the Codeia and Narceia, but combined with the native acids of Opium, meconic and thebolactic, in such a manner as to render those constituents soluble and active.

SVAPNIA IS UNIFORM IN ITS PROPORTIONS, and is prepared to conform to a standard of Opium representing ten per cent. of Morphia. This is done by a simple proportion of the neutral excipient, after determining the actual amount of the alkaloids obtained from the Opium used.

We may safely affirm that the danger of bad results is much diminished by a resort to that preparation of Opium in which the poisonous elements are eliminated, and the anodyne elements in such a state of combination as to reduce their toxic and enhance their hygienic effects, such as has been PROVED TO BE THE CASE WITH SVAPNIA.

HORSFORD'S ACID PHOSPHATE

IN

IMPOTENCE,

Seminal Losses,

Impaired Vitality,

Spermatorrhœa.

We wish to call the attention of the profession to the action of Horsford's Acid Phosphate on the organs of generation, when their power has become impaired through sexual excess, or from senile impotence. It is at once rejuvenating and aphrodisiac in its effect. It appears to restore the secretory organs that have been deranged to their normal condition, giving vigor where there has been debility, and renewed strength where there has been exhaustion.

H. B. STORER, M.D., Boston, says: "I have found Horsford's Acid Phosphate serviceable, in a marked degree, in my treatment of spermatorrhœa."

E. W. JONES, M.D., Taunton, Mass., says: "Horsford's Acid Phosphate was prescribed in a case of nervous prostration from seminal losses, with decided beneficial effect."

C. S. ELLIS, M.D., Wabash, Ind., says: "I prescribed Horsford's Acid Phosphate in a case of nervous debility and weakness of the sexual organs; patient forty-eight years old; he was much benefited."

R. W. ERWIN, M.D., Bay City, Michigan, says: "In some cases of weakness following sexual indiscretions, attended with nervousness, it is useful."

Each case presents its own peculiarities for treatment, but, as a general rule, we would suggest a half teaspoonful of Horsford's Acid Phosphate, in half a tumbler of hot or cold water, or tea without milk, to be taken shortly after each meal, and upon retiring.

Pamphlet giving further details mailed free, on application to the manufacturers.

Physicians who have not had a bottle of the Horsford's Acid Phosphate, and who wish to test it, will be furnished with a sample without expense, except express charges.

RUMFORD CHEMICAL WORKS,

PROVIDENCE, R. I.

1297-1348

An experience of more than a quarter of a century convinces us that sugar, properly applied, is the only correct coating for a pill.

Physicians should be careful to specify Warner & Co., when prescribing or ordering.

Special attention is called to the following selected Recipes prepared for Physicians' Prescriptions.

PIL: PHOSPHORI COMP: (WARNER & CO.) ℞. Phosphori, - - 1-100 gr. Ext. Nuc. Vom. - ¼ gr.

THERAPEUTICS.—As a nerve tonic and stimulant, this form of pil is well adapted for such nervous disorders as are associated with impaired nutrition and spinal debility, increasing the appetite and stimulating digestion.

The practical value of Phosphorus as a therapeutic agent, and its applicability to the cure of disease, and especially in those varied disordered conditions consequent upon OVERWORK, which are characteristic of modern civilization.

Pil. Phosphori Comp. may be taken, one or two pills three times daily, after eating.

Price, per 100, $1.50.

PIL: IODOFORM ET FERRI. (WARNER & CO.) ℞. Iodoform, - - 1 gr. Ferri Redacti, - 1¼ gr.

THERAPEUTICS.—A powerful general tonic and alterative, valuable as a remedy in Anæmia, Scrofula, Neuralgia, Chlorosis, Rheumatism, etc.

Pil. Iodoform et Ferri may be given in doses of from one to two pills, as occasion may require.

Price, per 100, $2.00.

PIL: DIGESTIVA. (WARNER & CO.) ℞. Pepsin Conc't, 1 gr. Gingerine, 1-16 gr. Pv. Nuc. Vom., ¼ gr. Sulphur, ⅛ gr.

THERAPEUTICS.—Useful in relieving various forms of Dyspepsia and Indigestion, and of permanent benefit in cases of enfeebled digestion, where the gastric juices are not properly secreted. It is also a gentle laxative and excellent dinner pill, may be taken one after dinner, or one before each meal, three times daily.

Price, per 100, 75 cts

PIL: CALCIUM SULPHIDE. (WARNER & CO.) 1-10, ¼, ½ & 1 gr. each.

THERAPEUTICS.—Extremely useful in the treatment of acne, scrofula and cutaneous diseases.

Sulphide of Calcium is usually administered in doses of from 1-10 to ¼ grain four times daily, gradually increasing the dose to one grain six times daily, or according to the progress or severity of the case.

Price, per 100, 1-10 gr. .50; 1-4 gr. .60; 1-2 gr. .75; 1 gr. $1.00.

WARNER & CO.'S PILLS MAY BE OBTAINED FROM ALL DRUGGISTS, OR BY MAIL, ON RECEIPT OF PRICE.

PANCREATIC EMULSION,

Prepared in accordance with the direction of the Physician who introduced this purely

MEDICINAL FOOD FOR CONSUMPTION AND WASTING DISEASES.

Pancreatic Emulsion will always take precedence of Cod-Liver Oil, by reason of its introducing the STABLE SOLID FATS INTO THE SYSTEM, instead of the evanescent fluid fats or oils.

Neither Cod-Liver Oil nor EMULSIONS of COD-LIVER OIL can supply the kind of fat necessary for sound and vigorous human life. In addition to this, all the Oily Emulsions are liable to rancidity, and most of them are highly objectionable in consequence of the SAPONIFICATION and ULTIMATE PUTREFACTION, produced by the chemical agents used instead of Pancreatic Juice.

Pancreatic Emulsion (properly so-called), is THE NECESSARY FOOD OF THE CONSUMPTIVE, and the most reliable form of nutriment for counteracting the tendency to Phthisis and other wasting diseases. It presents to the lacteals fat, in essentially the same condition for assimilation and absorption as in a vigorous human frame, and THE AGENT of the important change is THE NATURAL SECRETION of the PANCREAS.

Pancreatic Emulsion may therefore be regarded as Chyle obtained by nature's own process. In certain cases both Cod-Liver Oil and Pancreatic Emulsion are required—one to supply the blood with oil or liquid fat, the other with the more stable solid fats; but it cannot be too strongly urged that both PANCREATIC EMULSION and Cod-Liver Oil are *not to be regarded as Medicines, but as articles of diet*, without which patients, with their defect of health, will as surely starve as healthy persons would if deprived of the most nutritive part of their food.

Pancreatized (Digestive) Cod-Liver Oil. By Pancreatized Cod-Liver Oil, the active digestive principle of the Pancreatic Juice is imparted to it, which renders it in a highly favorable condition for rapid and complete digestion and assimilation, preventing nausea, and largely increasing the beneficial properties of the Oil.

Pancreatine effects the digestion and assimilation of Cod-Liver Oil and Fat, as well as Food generally. This palatable and popular remedy is therefore invaluable to PATIENTS WHO ARE UNABLE TO DIGEST COD-LIVER OIL, and who are thus deprived of its nourishing and invigorating properties.

Pancreatine Wine. An excellent vehicle for taking Cod-Liver Oil and promoting the digestion of it.

VACCINE VIRUS,

AND

PRICES REDUCED. VACCINATORS PRICES REDUCED.

We continue, as for several years, to supply **ANIMAL VIRUS** propagated at our own stables from lymph of the "Beaugency Stock," imported by ourselves expressly for this purpose. Results of experience enable us to recommend it as of unsurpassed excellence.

The establishment is under the care of a competent physician of long experience in this specialty, who will spare no pains to produce a perfectly *reliable* and *pure* article, which we are prepared at all times to furnish in *fresh* and *active* condition.

Our new method Kine Crusts will be found much superior to the ordinary form, though points are recommended as the most reliable form of virus attainable.

All our Virus is put up in strong, *air-tight*, *sealed packages*, for safe conveyance by mail or express, and will be sent (postpaid if by mail) upon the following terms: –

Fifteen large Ivory Points, well charged on both sides.....$2.00
Seven large Ivory Points, well charged on both sides. 1.00
Large Ivory Points, less than seven, well charged on both sides, each..... .25
One Crust, new method, in air-tight Glass Capsule, prepared for immediate use..... 2.00

Also **Humanized Virus,** from HEALTHY CHILDREN, procured for us by physicians of undoubted reliability.

One Crust from Unruptured Vesicles (one remove from heifer if preferred).....$5.00

We will give a fresh supply, in case of failure reported within twenty days for Points, thirty days for Human, and ninety days for Kine Crusts.

Orders by mail or telegraph answered by return train.

Liberal discounts upon large supplies for Cities, Towns and Institutions.

Scarifying Vaccinator. Steel, Nickel Plated. (See Cut.) Each 25 cents.

CHAPOTEAUT'S PEPSICAL PEPTONES.

These Peptones, prepared with great care, contain only Beef, digested and rendered assimilable by a pepsine, always titrated and regular, extracted from the stomach of the sheep, digesting 7 to 800 times its weight of fibrine, and which cannot be found in commerce. They possess a great alimentary power, and give to the digestive organs an intense nutritive action.

They must not be confounded with other Peptones, prepared either with rennet of sheep or with pancreas of pork, and containing a product coming more from the digestion of the stomach mucus than from the meat.

These Preparations come under three forms:

1st. CHAPOTEAUT'S PEPSICAL PEPTONE POWDER.

This has only the taste of Meat, and offers the advantage of being able to be taken with the first spoon of soup. It is soluble in water, bouillon, or wine. Each teaspoonful represents about 4 grams of Peptone, or 21 to 22 grams of Beef, entirely digested and assimilable. Each bottle contains 30 grams of **PEPTONE**, representing 160 to 165 grams of Beef, and sufficient for the nourishment of an adult.

2d. CHAPOTEAUT'S PEPSICAL PEPTONE CONSERVE.

This article is a liquid, neutral-aromatic, and keeps well. Each teaspoonful represents double its weight of Beef, and is taken either pure or in soup, wine, jellies, or syrup, and also in the form of alimentary injections.

3d. CHAPOTEAUT'S PEPSICAL PEPTONE WINE.

Each small wineglass contains the Pepsical Peptone of 10 grams of Beef. It has a very agreeable taste, and constitutes an excellent aliment, which the patient and children accept with pleasure. It is taken at the beginning of meals, in doses of one or two small wineglasses. 1294-1319eow

Paris: GRIMAULT & CO., 8 Rue Vivienne.

New York: E. FOUGERA & CO., 30 North William Street.

THE INVENTION OF AN EMINENT FRENCH CHEMIST.

The Salvator for Invalids and the Aged. An Incomparable Aliment for the Growth and Protection of Infants and Children. A Superior Nutritive in Continued Fevers, and a Reliable Remedial Agent in all Diseases of the Stomach and Intestines.

TO PHYSICIANS AND THE PUBLIC.

THIS preparation is, as advertised, principally the GLUTEN derived, by chemical process, from VERY SUPERIOR GROWTHS OF WHEAT, and should not be confounded with burnt or boiled Flour, in which the GLUTEN or sanative qualities are destroyed or made medicinally inert, nor with Crushed Wheat, or finely ground Wheaten Grits, styled "Medicinal Food," and sold under various names, in which the starch and impurities contained in wheat are retained in larger quantity.

By Dubisson's formula, the starch, impurities and soluble matter found in the Wheat Cereal are effectually excluded, the GLUTEN only retained, which is condensed, granulated and prepared to keep in all climates, and justly entitled

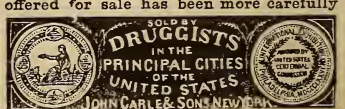
—IMPERIAL GRANUM—

It is well known, and should be fairly considered, that nothing of merit can be favorably received and commended by the public without being followed by imitations of a questionable character. IMPERIAL GRANUM is not the exception, for no preparation has attracted more attention, nor been more fiercely imitated by competition, even to wording and shipping order.

Whilst again it can be truly said that no preparation ever offered for sale has been more carefully prepared and thoroughly tested, nor has met with a more welcome reception and universal approval, or afforded more relief to invalids or to young and suffering children and aged persons. This has been confirmed by thousands of testimonials from Chemists, Physicians, Heads of Families and the Press.

Respectfully,

E. HEATON.



1262-1313eow

MURDOCK LIQUID FOOD CO., Boston,

THE ONLY MANUFACTURERS OF

RAW FOOD EXTRACTS IN THE WORLD.

It can be retained by the weakest stomach, when all other food extracts, and even water, is rejected.

Nutritious food, if raw, condensed, and free from insoluble matter, will cure chronic diseases, as it will make blood faster than all preparations or food, and new blood will cleanse the system.

MURDOCK'S LIQUID FOOD is made from Beef, Mutton and Fruits; contains corpuscles; is 12½ per cent. soluble albumen, and free from insoluble matter, drugs, minerals, salts and acids, and can be retained by the stomach when so weak as to refuse food.

Ask your Druggists, or send to us, for Essays read before the American Medical Association, at Richmond, Va., May 6, 1881, on the value of Raw Food Extracts, by Geo. R. Shepherd, of Hartford, Conn., and other Essays and Testimonials from Medical Journals and Physicians that have used Liquid Food, in cases of Consumption, Scrofula, Nervous and General Debility, Dyspepsia, acute and chronic, Constipation, Diphtheria, Intemperance, Cholera Infantum, Infantile Diarrhœa, Post partum Hemorrhage, Purpura Hemorrhagica with Waxy Liver, Pelvic Cellulitis, Malarial and other Fevers, Chronic Strumous Arthritis, Sclerosis of the Spinal Cord, Senile Gangrene, Perinephritic Abscess, and other diseases of malnutrition. No cases of Cholera Infantum have occurred where it has been used daily and no lives have been lost from Cholera Infantum where it has been prescribed by a physician. Excellent for Eczema, Diabetes, Rheumatism and Neuralgia.

At the request of any physician who has not tried our Extracts, and would like to, we will deliver sample bottles to the Express in Boston. To any Medical Society wishing to investigate the value of our Extracts, through a committee, hospital, or individual members, we will furnish a supply of Liquid Food equal to a six-ounce bottle for every member present at the time of action. We are induced to do this, knowing that our Extracts are saving life, and that an increased use of them, which will follow after a trial of them, will be the means of saving more lives daily. (*We ask no testimonials of results obtained.*) Raw Extracts are available where cooked ones are not, or if available, contain only one-third as much nourishment.

Liquid Food is in general use at all Hospitals, Infant and Insane Asylums, and Washingtonian Homes, U. S. Navy Hospitals, and by all physicians that have tried it.

If not kept by your Druggist, can be obtained in any of the commercial cities In Philadelphia, by Johnston, Holloway & Co., Boericke & Tafel; in Pittsburg, by A. Kelly & Co.; in Baltimore, by Thomsen & Wirth; or you can order direct and we will pay express. 1 oz., 15 cents; 6 oz., 55 cents; 12 oz., $1.00.

See Philadelphia MEDICAL AND SURGICAL REPORTER, *Boston Medical and Surgical Journal*, and *New York Medical Record*, for chronic cases that were at our quarterly reception to physicians, in Boston, December 30, 1881—cases of Eczema, Rheumatism, Neuralgia, Diabetes, Consumption, and other diseases. If all were not restored to perfect health, they were gaining daily, and able to enjoy life and attend to their business. 1297-1348

MURDOCK LIQUID FOOD CO., BOSTON.

It is the only food that will relieve the Consumptive from Hunger.

It will make Blood faster than all preparations known.

BOUDAULT'S PEPSINE

IN POWDER, also WINE, ELIXIR, SYRUP, PILLS, AND LOZENGES OF PEPSINE.

Since the introduction of Pepsine by Boudault in 1854, BOUDAULT'S PEPSINE HAS BEEN, AND IS STILL CONSIDERED, THE MOST RELIABLE, as is attested by the awards it has received at the Exhibitions of 1867, 1868, 1872, 1873, and in 1876 at the Centennial Exposition in Philadelphia.

IT IS THE ONLY PEPSINE USED IN THE PARIS HOSPITALS.

Careful tests will enable any one to satisfy himself that BOUDAULT'S PEPSINE HAS A DIGESTIVE POWER AT LEAST DOUBLE that of the best Pepsines in the market, and that it is really the cheapest.

It is Sold in 1 ounce, 8 ounce, and 16 ounce Bottles.

Beware of so-called French Pepsines bearing fictitious names, and prescribe Boudault's only.

BLANCARD'S PILLS

OF UNCHANGEABLE IODIDE OF IRON.

Blancard's Pills of Iodide of Iron are so scrupulously prepared, and so well made, that none other have acquired a so well deserved favor among physicians and pharmaceutists. Each pill, containing one grain of proto-iodide of iron, is covered with finely pulverized iron, and covered with balsam of tolu. Dose, two to six pills a day. The genuine have a *reactive silver seal* attached to the lower part of the cork, and a green label on the wrapper, bearing the fac-simile of the signature of

Blancard

Pharmacien, No. 40 Rue Bonaparte, Paris.

without which none are genuine.

BEWARE OF IMITATIONS.

E. FOUGERA & CO., AGENTS, NEW YORK. 1297 tf.

For Consumption and Wasting Diseases.

HYDROLEINE

Has been proved of the highest value in CONSUMPTION and all WASTING DISEASES, invariably producing IMMEDIATE INCREASE in FLESH and WEIGHT.

FORMULA OF HYDROLEINE.

Each dose of two teaspoonfuls, equal to 120 drops, contains:

Pure Oil,	**80 m. (drops.)**	**Soda,**	**1-3 grain.**
Distilled Water,	**35 m.**	**Boric Acid,**	**1-4 "**
Soluble Pancreatin,	**5 grains.**	**Hyocholic Acid,**	**1-20 "**

DOSE.—Two teaspoonfuls alone, or mixed with twice the quantity of soft water, to be taken thrice daily, with meals.

The principles upon which this discovery is based have been described in a treatise on "THE DIGESTION AND ASSIMILATION OF FATS IN THE HUMAN BODY," by H. C. BARTLETT, PH.D., F.C.S., and the experiments which were made, together with cases illustrating the effect of Hydrated Oil in practice, are concisely stated in a treatise on "CONSUMPTION AND WASTING DISEASES," by G. OVEREND DREWRY, M.D.

In these treatises the Chemistry and Physiology of the Digestion of the Fats and Oils is made clear, not only by the description of a large number of experiments scientifically conducted, but by cases in which the deductions are most fully borne out by the results.

☞ *Copies of these valuable works will be sent free, on application, to all who mention THE MEDICAL AND SURGICAL REPORTER.*

HYDRATED OIL,

HYDROLEINE,

WATER AND OIL,

May be described as partially digested oil, which will nourish and produce increase in weight in those cases where oils or fats not so treated are difficult or impossible to digest. In CONSUMPTION and other WASTING DISEASES the most prominent symptom is EMACIATION, of which the first is the starvation of the fatty tissues of the body, including the brain and nerves. This tendency to emaciation and loss of weight is arrested by the regular use of HYDROLEINE, which may be discontinued when the usual average weight has been permanently regained.

The ordinary so-called emulsions of Cod-liver oil and other fats, WHETHER PANCREATIZED OR NOT, merely remain in the form of a coarse mechanical mixture for a short time after agitation. The digestion of oil having in no sense been artificially produced, still devolves upon those functional powers the deficiency of which is the most prominent symptom in these cases.

HYDROLEINE is not a patent medicine or a secret preparation; the formula is on every bottle. Can be taken by the most delicate stomach; is immediately assimilated.

The permanence and perfection of the emulsion, and the extreme solubility of the HYDRATED OIL, solely prepared and sold by us under the name of HYDROLEINE, is shown by its retaining its cream-like condition as long as the purest Cod-liver Oil will retain its sweetness. Unlike the preparations mentioned, or simple Cod-liver Oil, it produces no unpleasant eructation or sense of nausea, and should be taken in such very much smaller doses, according to the directions, as will insure its complete assimilation; this, at the same time, renders its use economical in the highest degree.

To brain-workers of all classes Hydrated Oil is invaluable, supplying as it does the true brain food.

Economical in use—certain in result Tonic—Digestive and Highly Nutritive.

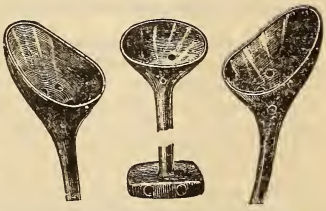
DR. McINTOSH'S
NATURAL UTERINE SUPPORTER.



No instrument has ever been placed before the medical profession which has given such universal satisfaction. The combination is such that the physician is able to meet every indication of Uterine Displacements. Falling Womb, Anteversion, Retroversion and Flexions are overcome by this instrument, where others fail. This is proven by the fact that, since its introduction to the profession it has come into more general use than all other instruments combined.

Among the many reasons which recommend this Supporter to the physician is its self-adjusting qualities. The physician, after applying it, need have no fear that he will be called in haste to remove or readjust it, as is often the case with rings and various pessaries held in position by pressure against the vaginal wall, as the patient can remove it at will, and replace it without assistance.

The Abdominal Supporter is a broad morocco leather belt, with elastic straps to buckle around the hips, with concave front, so shaped as to hold up the abdomen. The Uterine Support is a cup and stem, made of highly polished hard rubber, very light and durable, shaped to fit the neck of the womb, with openings for the secretions to pass out, as shown by the cuts. Cups are made with extended lips, to correct flexions and versions of the womb. The cup and stem is suspended to the belt by two soft elastic rubber tubes, which are fastened to the front of the belt by simple loops, pass down through the stem of the cup and up to the back of the belt. These soft rubber tubes being elastic, adapt themselves to all the varying positions of the body, and perform the service of the ligaments of the womb. The instrument is very comfortable to the patient, can be removed or replaced by her at will, can be worn at all times, will not interfere with nature's necessities, will not corrode, and is lighter than metal. It will answer for all cases of Anteversion, Retroversions, or any Flexions of the womb, and is used by the leading physicians with never-failing success, even in the most difficult cases.

Our Reduced Prices are to Physicians, $6.00; to Patients, $10.00.

Instruments sent by mail, at our risk, on receipt of price, or by Express, C. O. D., with the Express charges for returning the money added.

☞ CAUTION.—Owing to the great sale and popularity of our instrument various and base imitations are sold by unscrupulous parties. In order to get the genuine, it is best to order direct from us.

DR. McINTOSH'S NATURAL UTERINE SUPPORTER CO.,
192 Jackson Street, Chicago, Ill.

Our valuable pamphlet, "Some Practical Facts about Displacements of the Womb," will be sent you free on application. 1281-1332

In corresponding with Advertisers please mention THE MEDICAL AND SURGICAL REPORTER.

BEEF PEPTONE;

IN TRANSPARENT GLASSY SCALES,

Containing only the animal or azotized matter of the Beef. Each ounce is equal to 16 ounces of raw beef, easily soluble, and still faster in hot water.

This Beef Peptone is digested from tender, juicy Beef, by the aid of the *Crystal Pepsin,* of my manufacture (Jensen's Crystal Pepsin). Unlike the various BEEF EXTRACTS, this preparation contains all the nutritive constituents of the Beef, in a thoroughly digested state, ready for absorption into the system, while the Beef Extracts are entirely devoid of the chief elements of nutrition, such as the fibrinous, gelatinous and albuminous portions of the Beef, they only consisting of the concentrated saline constituents, with barely a trace of animal matter to keep its consistence. The difficulty so long experienced by the profession throughout the world, in preparing a PEPTONE entirely free from those chemical agents necessary for its manufacture, so as to render it fit for use, is hereby demonstrated to be successfully overcome, as it contains no foreign matter, and will stand the most severely scrutinizing test as to perfectness, also possessing flavor of the Beef, and so palatable as to render it highly agreeable.

Put up in bottles holding One ounce, Eight ounces, and one Pound.

Kept by the Wholesale and Dispensing Druggists in general.

DEPOT—L. WOLFF'S Pharmacy,

Northwest corner Twelfth and Chestnut Streets.

JENSEN'S CRYSTAL PEPSIN,

IN ARTIFICIAL CRYSTALS,

Strictly inodorous and tasteless, and perfectly soluble in water without acid.

THIS PEPSIN, now so popular with the profession, has created an impetus in the consumption of the same and physicians of the highest standing, who before the introduction of this active PEPSIN, with good reason, entirely abandoned the use of PEPSIN, are now the most eager in prescribing JENSEN'S CRYSTAL PEPSIN, whenever it is indicated, and since the knowledge of its great solvent power (gr. j. of it will dissolve the boiled whites from two to three eggs) has been established even among those susceptible to be great doubters it has caused itself to be utilized in many novel ways, by the thinking profession: for instance, in substituting morphia, chloral, etc., as a hypnotic, relieving gastric troubles where the above remedies have been prescribed, creating morphine and chloral habits In removing diphtheritic patches it is successfully used combined with water, glycerine, and muriatic acid, and the same composition, diluted with more water, as a spray in bronchial troubles, dissolving muco-purulent matter, as well as a spray for same in catarrhal affections.

THIS PEPSIN

Has also been used with success in dissolving and evacuating coagulated blood in the bladder, dispensing with surgical operations in such cases. Many other novel applications could be mentioned, if not in want of space. It is found to be FORTY times stronger than saccharated pepsin. One to three grains is an active dose.

KEPT BY ALL DRUGGISTS.

The above preparations are only manufactured and put up by

CARL L. JENSEN, M.D., PH.G.,

865 North 26th Street, Philadelphia, Pa.

No other Wholesale Agents for this Pepsin are longer engaged, than the Wholesale Druggists throughout the United States.

Instructor in Pharmacy.

A. M. HAWES, M.D.,
Demonstrator of Anatomy.

This College has for its *collegiate year* two sessions.

Regular Session commences Wednesday, September 7th, 1881, and closes March 1st, 1882.

Recitation Term (optional) commences March 15th, 1882, and closes June 14th, 1882.

Graded Course of three terms, of six months each.

PLAN OF INSTRUCTION.

By *Lectures*, *Recitations* and *Clinics*, together with *practical work* in the Anatomical, Physiological, Chemical and Pharmaceutical Laboratories.

Clinics are held *daily*.

Clinical Work in Hospitals and Dispensaries is given to the Senior Class (see Clinics), in *small sections*, under the charge of a *Clinical Teacher*, in all the departments of Medicine and Surgery.

Three Large Hospitals and *two Dispensaries* afford unlimited material for instruction.

ADMISSION.—Candidates for admission are required to pass a preliminary examination, unless satisfactory documentary evidence can be presented, that is equivalent to the standard adopted. (See Catalogue.)

FEES.

Regular Session.—Matriculation, $5.00; Lecture Tickets, $50.00; Hospital Tickets, $10.00 Examination (final), $25.00.

Recitation Term.—$10.00 for those who have attended Regular Session; all others, $25.00, $15.00 of which will be applied on the next Regular Term.

Board and Rooms can be obtained for $3.00 to $5.00 per week, the average being $4.00.

For Catalogue and other particulars, address

H. O. WALKER, M.D., Secretary,
177 Griswold Street, Detroit, Mich.

CRINON'S HÆMOGLOBIN,

The Albuminoid Ferruginous Principle of Blood.

HÆMOGLOBIN is the only physiological chalybeate. Associated as it is with the phosphates of the blood, it forms the most powerful of tonics, and at the same time a most nourishing food. It is especially useful in cases of *Anæmia, Chlorosis, Cachexias, Exhaustion* caused by excess of work, nervous debility, fatigue resulting from parturition and lactation. It replaces entirely liquid blood, which has been recommended and used with success in *Phthisis* and *wasting away.*

It is offered in two forms. In cachets (wafers), 60 of which are contained in a box; combined with chocolate in small squares, 30 of which are in a box; both forms can be sent by mail.

Prepared by C. CRINON, Paris, Pharmacist of the first class, Laureate of the Hospitals of Paris Samples may be obtained by application to

E. FOUGERA & CO., New York, Agents for the U. S

DOCTOR RABUTEAU'S

(Laureate of the Institute of France.)

DRAGEES, ELIXIR & SYRUP OF IRON.

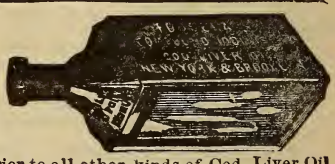
"The experiments made in the hospitals of Paris have demonstrated that *Dr. Rabuteau's Dragees, Elixir and Syrup* regenerate the red globules of the blood with a rapidity never observed with the use of the other ferruginous preparations. These results have been proved by the various *Compt-Globules.*

"The ferruginous preparations of *Dr. Rabuteau* do not cause any constipation, and are perfectly tolerated by the weakest persons."—*Gazette des Hospitaux.*

Dr. Rabuteau's Elixir is prescribed when some difficulty is experienced in swallowing the Dragees; it is especially adapted to weak persons, whose digestive functions need strengthening or stimulating.

Dr. Rabuteau's Syrup is especially prepared for children, who take it readily, because of its agreeable taste.

FOUGERA'S COMPOUND IODINISED COD LIVER OIL.



Since the introduction of this oil in 1858, it has been found to be superior to all other kinds of Cod Liver Oil for the treatment of **General Debility, Consumption, Scrofula, Rickets, etc.**

It possesses not only all the **nourishing** qualities of the best Cod Liver Oil, but also the **tonic, stimulant** and **alterative** properties of **Iodine, Bromine** and **Phosphorus,** which are added in such proportions as to render it therapeutically five times as efficacious as pure Cod Liver Oil.

Through its **increased curative action, FOUGERA'S COD LIVER OIL** will be found to cure disease in a much shorter time than the pure oil; while favorable results will be obtained by its use in many advanced cases when the pure Cod Liver Oil would fail entirely.

FOUGERA'S READY-MADE MUSTARD PLASTERS.

A most useful, convenient, clean, and economical preparation. Not liable to change if kept in a dry place. Made of two strengths. Plasters No. 1, of pure mustard; Plasters No. 2, of one-half mustard. Price 40 cents, the tin box, or tin roll, of 10 plasters each. DIRECTIONS.—Dip the Plaster, or Plasters, a minute or two, in cold water; apply on the part, and cover with a band.

FOUGERA'S COMPOUND ICELAND MOSS PASTE.

(Iceland Moss, Lactucarium, Ipecac and Tolu.)

Used with great success against nervous and convulsive coughs, Whooping Cough, Acute Bronchitis, Chronic Catarrh, Influenza, etc.

Wakefulness, Cough, and other sufferings in Consumption, are greatly relieved by the soothing and expectorant properties of this Paste.

FOUGERA'S IODO-FERRO-PHOSPHATED ELIXIR OF HORSE-RADISH.

This Elixir contains Iodine, Pyrophosphate of Iron, the active principles of antiscorbutic and aromatic plants, and acts as a **tonic, stimulant, emmenagogue,** and a **powerful regenerator of the blood.** It is an invaluable remedy for all constitutional disorders due to the impurity and poverty of the blood. One of the advantages of this new preparation consists in combining the virtues of Iodine and Iron without the inky taste of Iodide of Iron.

E. FOUGERA, Pharmacist,
372 Seventh Street, Brooklyn, L. I.,
SOLE PROPRIETOR & MANUFACTURER OF THE ABOVE,
To whom all special communications should be addressed.

E. FOUGERA & CO.,
30 North William Street, New York.
SOLE GENERAL AGENTS for the ABOVE,
To whom all orders should be addressed.

SOLD BY DRUGGISTS GENERALLY.

JOHNSTONE'S IMPROVED

ADAPTABLE POROUS FELT SPLINTS.

AHL'S SPLINT MANUFACTURING COMPANY, LIMITED,

123 & 125 South Eleventh Street, PHILADELPHIA, PA.

THE ADAPTABLE POROUS SPLINTS, invented and improved by W. H. JOHNSTONE, have been tested extensively in both civil and military practice for a number of years, and have been endorsed and recommended in the most unqualified manner by the celebrated and distinguished Surgeons of America.

Their *porosity* is a peculiar and a valuable property. While the material is firm and insoluble, it permits readily the passage of air and fluids, so that, on one hand, the heat from the inflamed surface, the perspiration, and the morbid exhalations, are not confined, to the detriment of the patient, *as is the case in every other kind of splint*, but pass off freely; and on the other hand, lotions of cold or warm water, medicated or not with weak alcohol, carbolic acid, arnica, tincture, solutions of the sulphites, etc., can be constantly applied without disturbing the dressings. This, it will readily be seen, is a most invaluable property when the parts are bruised, lacerated, filled with extravasated blood, or erysipelatous, and give these splints a conspicuous advantage over all others.

From FRANK H. HAMILTON, M. D., Professor of Fractures and Dislocations in the Bellevue Hospital Medical College, author of "A Treatise on Fractures and Dislocations," etc.

Having examined carefully *JOHNSTONE'S IMPROVED ADAPTABLE POROUS FELT SPLINTS*, I feel warranted in recommending them to the Profession as superior to all other manufactured splints now in use. They possess all the essential qualities of a good splint, having firmness, pliability and lightness.

FRANK H. HAMILTON, M. D.,
Prof. Military Surgery and Fractures and Dislocations, Bellevue Hospital Col.

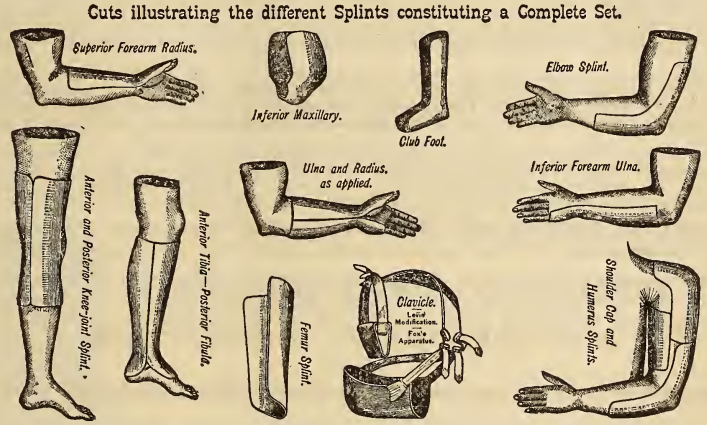
From PROF. D. HAYES AGNEW, Prof. Surgery, University of Penna.

1611 CHESTNUT STREET, PHILADELPHIA, *February 6th*, 1879.

The Adaptable Felt Splints, formerly known as those of Dr. Ahl, with the improvement now made by W. H. Johnstone, which renders them in every way superior to the former, I regard as very excellent appliances in the treatment of fractures.

D. HAYES AGNEW,
Prof. Surgery, University of Pennsylvania.

Cuts illustrating the different Splints constituting a Complete Set.



SPECIAL NOTICE TO THE PROFESSION AND TRADE.

Our *policy* heretofore in the introduction of **JOHNSTONE'S IMPROVED ADAPTABLE POROUS FELT SPLINTS**, has been to confine the sales and business negotiations directly to the Doctors themselves, declining in every case to sell our goods through Dealers; we having assured the Profession generally, both through our agents and catalogues, that *JOHNSTONE'S IMPROVED SPLINTS* could only be obtained by subscription.

We wish to announce, that owing to the large demand for our goods and the constant importunity on the part of *Surgeons* everywhere to place our Splints on sale with their Instrument Dealer or Druggist, to afford them greater convenience and facility in obtaining the pieces in duplicate, **we have at last acceded to that request, and hereafter** *JOHNSTONE'S CELEBRATED FELT SPLINTS* **can be obtained at most dealers in Instruments and Drugs throughout the United States, at the same price which they were heretofore sold, viz:**

A complete set, embracing fifty (50) pieces—twenty-five for adults and twenty-five for children—is thirty ($30) dollars. Extra or duplicate pieces can always be obtained from your DEALER, at one dollar each.

JOHNSTONE'S CELEBRATED SPINAL JACKET, for Curvatures and Deformities, have met with unparalleled success, and, from their merit, secured the unqualified endorsement and approbation of our celebrated orthopædic specialists, and particular expression of gratitude from the patients who are wearing them. For full information, send for Descriptive Circulars.

Should your Instrument dealer fail to have a supply of our Splints, and decline to carry them in stock, orders sent to us will receive prompt attention.

AHL'S SPLINT MANUFACTURING CO., Limit
W. H. JOHNSTONE, Manager.

N. B.—If the Instrument Dealers of Philadelphia decline to supply its Physicians with our JOHNSTONE'S FELT SPLINTS on call, they will be furnished and delivered by us to any part of the city, at any time, on receipt of the price, viz.

$1.00 each.

JOHNSTONE'S SPINAL FELT JACKET, any size, - - - - $25.00
JOHNSTONE'S LACED SPLINT FOR THE LIMBS, any size, - - - 10.00

JOHNSTONE'S MODIFICATION OF DR. R. J. LEVIS' SPLINT

For the FRACTURE OF THE LOWER END OF THE RADIUS.

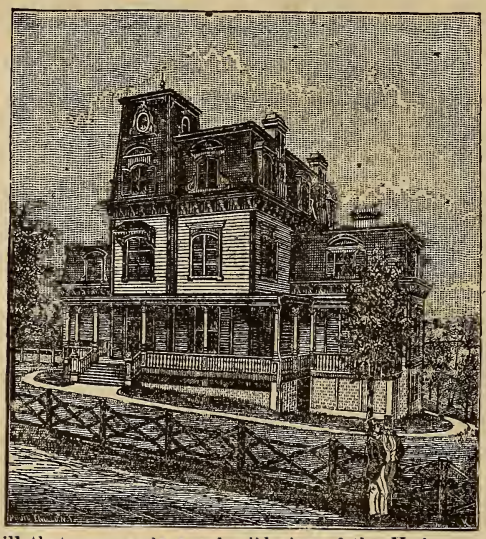
THE DE QUINCEY HOME,

Fort Washington,

A Private Asylum for the Treatment of the Opium, Morphine, Chloral, Chloroform and Hashisch Habits, Nervous Diseases and Inebriety.

Drs. H. H. Kane
and
W. H. Vittum,
in charge.



New York City.

Consulting Physicians.

Prof. Wm. A. Hammond,

Prof. T. Gaillard Thomas,

Dr. Edward C. Spitzka,

Dr. Daniel M. Stimson,

Dr. Edward T. Ely,

Dr. G. H. Wynkoop,

Dr. Andrew H. Smith.

Situated upon a high hill that commands a splendid view of the Hudson and Harlem rivers, Spuyten Duyvil Creek, and the beautiful country for miles around; surrounded by ample grounds and magnificent drives; in easy communication with the city by means of the Sixth and Ninth Avenue Elevated and the Hudson River Railroads; away from the dust, noise, crowding and malaria of the city; with hot and cold water in every room, furnace and grate-fire heating, croquet, horses and carriages, boats and fishing, an excellent *cuisine*, trained nurses and careful medical attendance, it possesses unequaled advantages for the treatment of cases of this kind.

The plan of treatment pursued in the cure of opium, morphine and chloral takers is that of *rapid reduction*, which possesses all the advantages, and none of the dangers of Levenstein's *sudden deprivation*, or the prolonged agony of *gradual reduction*. Each case is studied and treated in accordance with its peculiarities and the idiosyncrasies of the patient, no set plan of treatment being pursued, at the expense of the person's health or comfort.

Our Home, furthermore, offers special facilities for the treatment by *rest, diet, and massage*, according to the plan of Weir Mitchell, of that large class of nervous diseases so commonly met with in ladies suffering from uterine troubles. This plan of treatment has been specially studied, and nurses competent to carry out its provisions in every detail will be furnished. For further particulars, etc., address 1299-1350

Drs. KANE and VITTUM, De Quincey Home, Fort Washington, New York City.

PACKER'S TAR SOAP.

ABSOLUTELY PURE AND NON-IRRITATING.

MADE FROM VEGETABLE OILS, PINE TAR AND GLYCERINE.

Extensively used in public and private practice in the treatment of **Diseases of the Skin,** and as a disinfectant cleanser for Sores, Ulcers, Leucorrhœa etc.

Its antiseptic properties make it especially valuable as a preventive of infection and of contagion, and it thoroughly cleanses the body during and after an attack.

For **washing infants,** the use of PACKER'S SOAP prevails with several Asylums. For the bath, toilet and shampoo it is unrivaled. 25 cents per cake, from Druggists.

It is supplied to Hospitals, Asylums and Physicians, in one pound bars, at reasonable prices.

P. O. Box 2985. **THE PACKER MFG. CO., 100 Fulton St., New York.**

1297-1348-eow

McINTOSH'S COMBINED

Galvanic AND Faradic Battery.

THIS CELEBRATED BATTERY COMBINES BOTH THE GALVANIC AND FARADIC CURRENT,

Which can be used separately or combined. Any strength and intensity desired can be obtained for use in Electro-therapeutics. THIS BATTERY is constructed on an IMPROVED PLAN, as follows: The zinc and carbon plates are arranged in couples, securely clamped to hard rubber plates, with thumb screws. These screws are also used for binding posts. All the connections are positive. The cells are made in sections of six, of hard rubber, with hard rubber drip cup. The following points of excellence render our Batteries superior to others:

1. They combine the only Portable Galvanic and Faradic Battery in one case.

2. They weigh one-half less than other Batteries of the same number of cells.

3. The cells are made in sections of six, of one solid piece of hard, vulcanized rubber; by this arrangement they can be emptied, cleaned and filled as easily and quickly as one cell, and will not crack, break or leak.

4. A hard rubber drip cup is placed by the side of each section of cells, to receive the zinc and carbon plates when removed from them. By this arrangement we avoid the use of absorbent materials and soiling the Battery.

5. The Hydrostat is perfect. The rubber plates which hold the elements project over on one side enough to cover the cells when the zinc and carbon plates are placed in the drip cups. The under side of this projection is covered with thick, soft rubber, which is securely clamped to the cells sections, and makes them water tight.

6. This is the only Battery in which the zinc and carbon plates can be kept clean by simply rinsing them.

7. A zinc or carbon plate can be removed by simply loosening a binding post; and all parts of the Battery can be duplicated, as like parts are made exactly alike. We will be pleased to send circulars and our illustrated catalogue, giving full information, price, etc., free, upon application.

1281-1332 **Nos. 192 and 194 Jackson Street, CHICAGO, ILL.**

ANGLO MILK FOOD

(The Best.)

SWISS

FOR INFANTS and INVALIDS.

RECOMMENDATIONS OF THE STRONGEST KIND FROM PROMINENT **PHYSICIANS.**

CEREALS AND MILK SCIENTIFICALLY PREPARED. IN POUND CANS OF **FULL WEIGHT.**

CLOSEST RESEMBLANCE TO MOTHER'S MILK.

SEE ANALYSIS ON EVERY CAN.

THIS IS NOT A SHORT WEIGHT INFANTS' FOOD.

"The starchy constituents ordinarily objectionable in prepared Foods are, in the Anglo-Swiss Milk Food, in a great degree, converted into soluble and more easily digestible Dextrine and Sugar; effecting in the food itself changes which, in other foods, are left to the digestive organs to accomplish.

"*A simple test:* Mix one part Food to three parts cold water—a smaller proportion of water than for use—occupy five to eight minutes in bringing it slowly to boiling point; boil one minute; the result is not a pulp or pap, but a liquid resembling milk. Submit other prepared foods to same test, and you obtain a mucilaginous paste. A heavy, pasty appearance should not be accepted as evidence or measure of nutriment; it only betrays the raw or unconverted starch contained." ☞ *See pamphlet at Drug Stores.*

PROCTER'S PEPSIN (SACCHARATED.

This standard article is prepared from *Pepsin*, carefully purified and freed from mucus, and is not a *dried Peptone*. It is inodorous and non-deliquescent, and retains its digestive power indefinitely. It is so well known that extended comment is superfluous. We would, however, call attention to its uniform purity and solubility, which, with extraordinary *digestive power*, commend its use in preference to other less carefully *made* articles. It is tested to the solution of 250 grains of coagulated albumen by 10 grains of Pepsin.

PROCTER'S "PEPSIN FORTIOR," (Stronger or Concentrated Pepsin.) A powerful form of Pepsin, eligible when minimum dose is desirable. It is of the same exceptional purity with our *Procter's Pepsin*, while the strength is far greater. Dose one to three grains. 1275-1308, 1y.

Manufactured by **WM. PROCTER, Jr., CO.,** S. W. Cor. 9th and Lombard Sts., Phila.

MEAT AND QUINIA.

And all the Nutritive Principles of Meat.

Aroud's Preparations recommend themselves to the most serious attention of Physicians, and deserve their preference:

1st.—Because they combine all the active principles of the richest barks of quinia carefully selected.

2d.—Because 30 grammes of them contain 3 grammes of quinia and all the nutritious principles of 27 grammes of meat, which are soluble in alcohol and water.

3d.—Because the combination of meat with the barks of quinia has not only the advantage of acting as a tonic, nutritive, and febrifuge, but also that of paralyzing and guarding against any local irritation caused by the prolonged use of quinia barks, and of preparing the stomach to endure the salutary influence of this friendly compound.

4th.—Because these preparations with meat as a basis, containing in their composition the entire nutritious elements of muscular fibre, blood and bone, answer alone to the immortal maxim of Hippocrates, fundamental basis of all good reparative medication, "*Ars imitatio natura.*"

5th.—Because, if meat occupies the first rank among the articles of food, if quinia is placed at the head of tonics, the combination of these highly reparative substances must necessarily be a reconstructor par excellence.

Finally, because the experiments with Aroud's Wine and Quinia prove, better than theory, that, to reconstruct the shattered and enfeebled forces, no other tonic can be compared to it.

MEAT, IRON AND QUINIA.

AROUD'S

FERRUGINOUS WINE WITH QUINIA,

And all the Nutritive Principles of Meat.

MEAT, IRON AND QUINIA, that is so say, the most reparative food combined with a reconstituent and a nerve tonic par excellence: such is the remarkable composition of this ferruginous preparation, which, in all respects, merits the preference of physicians. It prevents impoverishment of the blood, anæmia, chlorosis, etc.; presented in a form at once attractive to the eye and pleasant to the palate—an assimilable iron united with all the constitutive principles of bone and of muscle; it can, therefore, form and regenerate the forces, and this without causing nausea, constipation, or disturbing the digestive organs. By its generous alimentation it corrects and modifies the bad effect of the prolonged use of quinia.

The excellence of this preparation justifies that which Hippocrates proclaimed over 2000 years ago, and all clinics have confirmed: "That the soluble nutritive principles of meat is the food best adapted for the sick and convalescents; that these principles, being the integral parts of muscle, have the faculty of forming flesh rapidly, and of restoring muscle."

It is, therefore, a precious specific for all the maladies caused by impoverishment or deterioration of the blood, because meat, iron and quinia combined give nourishment, act as a tonic, regenerate, reconstitute, and regulate the entire system. 1261-1312-eow

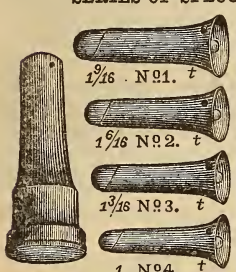
STAUFER'S

HARD RUBBER UTERINE EXAMINING INSTRUMENTS.

SERIES OF SPECULUMS ENCASED.



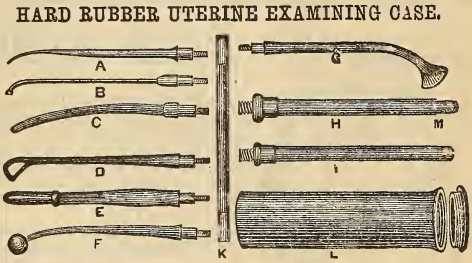
Prices.—The series of four speculums and conductors, encased, $12 00. Weight, about 12 oz., made so compact as to carry in an inside coat pocket. Single with conductor, $2.50. Taken back at cost when a case is desired.

This screw top hard rubber case contains four graduated, hard rubber speculums, Dental red enamelled inside. By trial it was found that this color attracts the light to greater advantage than any other, and the admission of a converging column by their being slightly taper; together with the admission of a size by the conductor that takes in the entire cervix, and thus reveals it as plainly as if located externally. This clear view is seen by holding the hand against the bevel, while the funnel points towards a window even at a distance.

Position.—The dorsal (fully explained in full catalogue) admits the shading of the lower part of a window and draws the light from the upper; when sight from opposite is to be excluded. The slight taper of three-eights inch from mouth to (t) displays room to work within, and admits a second person to see as plainly as the operator. The rounded conductor enters easily, and the speculum with its slight taper moves freely after.

Obviating Exposure.—A thin sheet thrown over the patient and the edge surrounding the funnel end of the speculum, completely prevents exposure, and yet does not interfere with the rotation of the speculum, nor its manipulation. Full direction and exchange privilege accompanies each purchase of a speculum.

HARD RUBBER UTERINE EXAMINING CASE.



Prices.—Full case, $8.00; Quill Canstic Holder H, or Camel's Hair Brush Holder and case I, each $1.00. Any two of the first seven, with centre piece K, $2 50.

This case contains 10 articulating instruments, all of hard rubber except the screw joints at each end of K, and M, on caustic holder H. Also flexible sound B, is of metal. The series and hard rubber case weighs but four ounces. Lengths of parts when screwed together is 11 to 12 inches.

A, is a thin, cervix probe without bulb end, as rubber is not cutting like metal.

C, a strong sound also without bulb end to straighten up a retroverted uterus.

D, a fenestrated mover of cervix, and scraper of ropy mucus when suspended from the os. As a mover or shifter, it is required in almost every case, and when used as a mucus scraper swab E, should be screwed on the opposite end of K.

F, and G, are used to straighten up the anteverted and retroverted uterus before introducing the speculum.

Any of this series of instruments delivered free by the Medical and Surgical Reporter Office, on receipt of quotation prices. The Catalogue, illustrating and describing over 150 in size and style uterine examining and supporting instruments, also obtained through this Office.

Matriculates who do not furnish evidence of sufficient preliminary education are required to pass an examination in English and Physics, and to attend three graded winter courses of instruction of six months each, consisting of didactic lectures, clinical lectures, and practical work in laboratories and hospitals.

A VOLUNTARY FOURTH YEAR, OR POST-GRADUATE COURSE, purely practical, has been established, for particulars of which see Catalogue.

The Lectures of the Winter Session of 1882-83 *will begin on Monday, October 2, and end on the last day of March.*

The Preliminary Course will begin on the second Monday in September.

In the *Spring Months* the laboratories of Chemistry, Pharmacy, Histology, Physiology, and Pathology are open, and the post-graduate clinical course is continued.

FEES IN ADVANCE.—Matriculation $5. For each session, including dissection, operating, and bandaging, $150. No graduation fee.

For Catalogue giving full particulars, address

JAMES TYSON, M.D., Secretary,
1310-1361eow P. O. Box 2838, Philadelphia, Pa.

IMPROVED ARTIFICIAL LIMBS.

Legs with sub-astragalus joint, for lateral ankle movement. Arms with finger, wrist and elbow movement.

Also extension apparatus for shortened and deformed limbs. These limbs are undoubtedly the most perfect in use.

DR. McINTOSH'S ELECTRIC OR GALVANIC BELT.

This Belt is a perfect Galvanic Battery, composed of sixteen cells, placed in pockets on a belt. Each cell is made of hard vulcanized rubber, lined with copper, which constitutes the negative plate. The rubber coating perfectly insulates each cell. The positive plates are of zinc, wrapped in a porous material to absorb the exciting fluid, preventing contact with the copper, and permitting the current to pass from the copper to the zinc. The cells are charged without wetting the belt.

A current selector is so arranged that one or more cells can be used at pleasure. The electrodes are covered similar to ordinary battery electrodes, and connected with the cells by connecting cords. By this arrangement, a current from the belt can be applied to any part of the body. Physicians who have used this belt in their practice do not hesitate to recommend it to the profession.

Our pamphlet on "Medical Electricity," containing a full description of the belt and diseases, with manner of treatment, sent free on application. Address

SEABURY & JOHNSON'S

PHARMACOPŒIA PLASTERS

(IN RUBBER COMBINATION)

And Surgical Dressings.

ADVANTAGES OF THE RUBBER BASE FOR PLASTERS.

A cold process, through which volatilization by heat is avoided; preservative character of the rubber combination, thus insuring uniform reliability; pliability in any temperature; great convenience, as the plaster adheres without heat or moisture; cleanliness.

BELLADONNA PLASTER

SEABURY & JOHNSON.

IN RUBBER COMBINATION. Recent analytical tests conducted by Prof. R. O. Doremus, of Bellevue Hospital Med. College, and J. P. Battershall, Ph.D., analytical chemists, New York, to determine the comparative quantities of atropine in Belladonna Plaster prepared by the different American manufacturers, disclosed, in each case, that our article contains a greater proportion of the active principle of Belladonna than any other manufactured. Samples of the various manufactures, including our own, for this test, were procured in open market by the above-named chemists themselves. In the preparation of this article we incorporate the best alcoholic extract of Belladonna only, with the rubber base. It is packed in elegant tin cases (one yard in each case), which can be forwarded by mail to any part of the country.

Price, by mail, postpaid, $1.00.

BLISTERING PLASTER

SEABURY & JOHNSON

IN RUBBER COMBINATION. We incorporate, by a cold process, the whole fly (best selected Russian), with the rubber base, which constitutes, we believe, the most reliable cantharidal plaster known. It is superior to the cerate, and other cantharidal preparations, the value of which is frequently greatly impaired by the excessive heat used in preparing them, which volatilizes or drives off an active principle of the fly. By our peculiar process no heat is used. It remains serviceable almost any length of time.

Price, by mail, per yard, $1.00.

MUSTARD PLASTER

SEABURY & JOHNSON

(Spread on Cotton Cloth.)

Our Mustard Plaster is a decided improvement over the best French makes. The mustard is manipulated so as to exclude all the moisture, retaining unimpaired, by such treatment, its essential properties. They are always reliable, conform quickly to the part, and when thoroughly wet do not break into pieces, as is the case with all other mustard plasters. They do not crack or peel off, and can be removed without soiling the skin or linen. Being **manufactured only of pure mustard,** they are perfectly free from Croton Oil or other dangerous substitutes often employed to induce intense irritation.

Samples sent on application to

SEABURY & JOHNSON,

NO. 21 PLATT STREET, NEW YORK.

PLEASE SPECIFY SEABURY & JOHNSON'S PLASTERS.

Medical Practitioners who have not yet received our special Physician's and Surgeon's Catalogue, will be furnished same promptly on application.—SEABURY & JOHNSON, 21 Platt St., N.Y. 1271-1311eow

Registered COSMOLINE Trade Mark.

Unguentum Petrolei

Prepared by E.F.Houghton & Co. Philadelphia, U.S.A.

Put up in 1, 5, 10, 25, 50, and 100-lb. cans. Samples furnished on application. The post-office laws forbid anything of an oleaginous nature being sent through the mail.

In chemical composition, Cosmoline [Unguentum Petrolei] is an oleaginous hydrocarbon, corresponding to the heavy petroleum oils, and containing a large amount of the paraffines and olefines of the formulæ $C_{16}H_{34}$ and $C_{16}H_{32}$. It contains but a small percentage of the paraffines and olefines, corresponding to the formulæ C_7H_{16} and C_7H_{14}, respectively, and the offensive and irritating properties of the crude oil have been carefully removed. In the process of purification, no acids, alkalies, or other chemicals are employed, and no injurious additions of any kind are made to the natural product. The result is a semi-solid, translucent substance, with a faint odor and unctuous feel.

Cosmoline [Unguentum Petrolei] melts at about 100° Fah, (38° Cent.); and boils at about 625° Fah. (329° Cent.); its specific gravity is about 0.875 at 60° Fah.

As it contains no oxydizable or organic matter capable of change by putrefaction or fermentation, and is absolutely without affinity for moisture, it offers to the profession an admirable unguent, which can never decompose, ferment, or become rancid in any climate or temperature.

291 MADISON AVENUE, NEW YORK, February 26th 1878.

I have examined the preparations of Cosmoline as manufactured by E. F. Houghton & Co., Philadelphia, and believe them well adapted to the purposes for which they are designed. As lubricants, and as the bases of simple or medicated ointments, they have a decided advantage over the fixed oils and fatty substances in ordinary use, in that they do not become rancid, and do not acquire irritating qualities from atmospheric exposure. ALFRED C. POST, M.D., LL.D.,
Emeritus Professor of Clinical Surgery in the University of New York, Visiting Surgeon to Presbyterian Hospital, etc.

PHILADELPHIA, July 10, 1880.

MESSRS. E. F. HOUGHTON & CO.:

I have for a number of years made extensive use of Cosmoline [Unguentum Petrolei] and consider it a most valuable article for surgical purposes. Either as a dressing by itself, or as a vehicle for the application of medicaments, it is greatly superior to lard or other fatty matters, especially by reason of its non-liability to change by time or temperature.

Yours truly,
JOHN H. PACKARD, M.D.
1031 WALNUT ST., PHILADELPHIA.

MESSRS. E. F. HOUGHTON & CO.:

I have used extensively Cosmoline [Unguentum Petrolei] both in Dispensary and private practice, with very great satisfaction. As a vehicle in making ointments it is invaluable, and far superior to lard, for the reason that it will not become rancid or undergo chemical change like the latter, when exposed to the atmosphere. I cannot too highly commend it as an application in various skin diseases.

Yours truly, JOHN V. SHOEMAKER, A.M., M.D.,
Physician to the Pennsylvania Free Dispensary for Skin Diseases

208 WEST 34TH ST., NEW YORK.

MESSRS. E. F. HOUGHTON & CO.:

Gents:—I fully appreciate the value of your Cosmoline, or Unguentum Petrolei, and prescribe it frequently in ointments. Fluid Cosmoline I have used constantly for several years, as a lubricant of urethral sounds. It is the clearest oil I know of for this purpose.

Yours truly, GEO. HENRY FOX.

PREPARED BY

E. F. HOUGHTON & CO.,

1297-1348 211 S. Front Street, Philadelphia.

TO THE MEDICAL PROFESSION.

LACTOPEPTINE.

We take pleasure in calling the attention of the Profession to LACTOPEPTINE. After a long series of careful experiments, we are able to produce its various components in an absolutely pure state, thus removing all unpleasant odor and taste (also slightly changing the color). We can confidently claim that its digestive properties are largely increased thereby, and can assert without hesitation that it is as perfect a digestive as can be produced.

LACTOPEPTINE is the most important remedial agent ever presented to the Profession for Indigestion, Dyspepsia, Vomiting in Pregnancy, Cholera Infantum, Constipation, and all diseases arising from imperfect nutrition. It contains the five active agents of digestion, viz: Pepsin, Pancreatine, Diastase, or Veg. Ptyalin, Lactic and Hydrochloric Acids, in combination with Sugar of Milk.

FORMULA OF LACTOPEPTINE.

Sugar of Milk	40 ounces.	Veg. Ptyalin or Diastase	4 drachms.
Pepsin	8 ounces.	Lactic Acid	5 fl. drachms.
Pancreatine	6 ounces.	Hydrochloric Acid	5 fl. drachms.

LACTOPEPTINE is sold entirely by Physicians' Prescriptions, and its almost universal adoption by physicians is the strongest guarantee we can give that its therapeutic value has been most thoroughly established.

The undersigned having tested LACTOPEPTINE, recommend it to the profession.

P. O. BOX 1574. 1244-1295eow

COMPRESSED SOLUBLE HYPODERMIC TABLETS.

We have recently given much attention to the preparation of Soluble Compressed Tablets to be used in hypodermic medication. This idea was brought to the notice of the medical profession by H. Augustus Wilson, M.D., of this city, in a paper read before the Philadelphia County Medical Society. His views were based upon carefully made experiments, and were received with much interest. At his instance we undertook to prepare in this manner a number of combinations, which have upon trial proved eminently satisfactory. We therefore feel warranted in offering these articles to the profession as superior in several respects to all other forms for hypodermic purposes.

They are convenient, both to carry and to use; they are accurate, enabling the physician to administer precisely the dose desired; and they are not liable to change by keeping. Solutions are bulky, the bottles are apt to break or to leak, and the liquid often becomes decomposed or deteriorated by time. Powders become inert, from atmospheric influences; the papers become torn and part of the medicament is often lost in the necessary handling. The patented gelatine discs are not quickly soluble, and are sometimes slow in taking effect. Their use is apt to be followed by abscesses, which is rarely the case with crystalloid substances.

An extensive experience of many years in the manufacture of compressed powders (or pills), and the precision and accuracy of our mechanical appliances, enable us to make these articles with a degree of perfection not attainable in any other way, or by any other process. The exact amount specified of each drug is thoroughly incorporated and distributed throughout every tablet. In water at ordinary temperatures a perfect solution may be made in from thirty to sixty seconds.

No extraneous material is employed, except the Sulphate of Sodium, and this only in such proportions as to facilitate solution.

CAUTION.—The dose of Morphia for hypodermic use varies from $\frac{1}{12}$ to $\frac{1}{2}$ of a grain. We would suggest to the profession the necessity for caution. The large doses sometimes recommended—$\frac{1}{2}$, $\frac{3}{4}$ and even 1 grain—are unsafe for the first trial, unless the conditions requiring the injection be exceptional. *In commencing, it should not exceed one-third of that ordinarily administered internally.*

DIRECTIONS.—The syringe is charged with about twenty minims of water, which is poured into a teaspoon or other convenient receptacle; the pellet being dropped in, is crushed with the end of the syringe, to which the needle fits, and after all the lumps are broken the solution is drawn up and forced out three or four times, when usually the whole mass will be entirely dissolved and ready for use.

If warm water is used or the spoon is heated over a lamp or gas jet, a perfect solution is effected in a moment. The tablets may be readily powdered with the blade of a knife, and a solution is even more speedily made in this way.

The following formulæ and combinations embrace all those in general request. Others will be added as the demands of the profession warrant their manufacture.

We claim for our Hypodermic Tablets: Absolute accuracy of dose. Ready and entire solubility. Perfect preservation of the drug.

Their convenience and utility will at once be apparent on examination.

We are under many obligations to Professor Roberts Bartholow, who, from his thorough scientific investigations and extensive experience in hypodermic medication, is recognized as the highest authority on the subcutaneous treatment of disease, for suggestions and advice in regard to the care required in preparing our Hypodermic Tablets, also for the kind interest in devising the above formulæ.

His book on "Hypodermic Medication" is well known as the standard work on that subject, and has reached a third edition.

The success of our efforts to furnish the medical profession a much needed improvement in hypodermic medication is due to the happy suggestion of Dr. H. Augustus Wilson and to the kind interest of other medical friends, who have advised us as to the absolute essentials in preparing so delicate and important a series of medicaments.

CHEKEN. (*Eugenia Cheken, Myrtus Chekan.*) This remedy, a native of Chili, is very popular in that country, where it is employed as an *inhalation* in diphtheria, laryngitis, bronchitis, bronchorrhœa, etc.; as an *injection* in gonorrhœa, leucorrhœa, cystitis, etc.; and *internally* as an aid to digestion, to allay cough, to facilitate expectoration and to stimulate the kidneys. It is also an astringent, and is said to be of great value in hæmoptysis.

Cheken (known also as Chekan and Chequen), was introduced to the profession of England, through a report of results following its use in chronic bronchitis or winter cough, by Wm Murrell, M D., M.R.C.P., Assistant Physician to the Royal Hospital for Diseases of the Chest, and Lecturer on Practical Physiology at the Westminster Hospital. Dr. Murrell's report is very favorable, and he has supplemented it by private advices to us, expressing great satisfaction with the drug in the affections in which he has employed it. He regards it as one of the most valuable introductions of late years, and pronounces it a drug of very superior properties in the treatment of **chronic bronchitis,** acting in this affection both as an anodyne and exerting a favorable influence over the organic changes in the mucous membrane. It is certainly a remedy which merits a thorough trial at the hands of the profession of this country.

SIERRA SALVIA. ("MOUNTAIN SAGE.") *Artemisia Frigida.* Fluid extract of the herb. Dose one to two fluidrachms. **Diaphoretic and diuretic.**

The success which has attended the administration of this drug in "Mountain fever" has suggested its employment in all febrile conditions attended with suppression of the secretions of the skin and kidneys. Its action in fever seems to be twofold, acting directly on the nervous centre, thus inducing a direct lowering of the temperature, and facilitating the radiation of the heat through diaphoresis, which it stimulates. Under its use the kidneys are also aroused to activity, and the solid constituents of the urine proportionately increased. Therapeutic tests have corroborated the opinion formed of it on theoretical grounds.

PERSEA. (ALLIGATOR PEAR.) Fluid extract of the seeds. Dose 30 to 60 minims. This remedy is now for the first time presented to the profession of this country. It is introduced on the recommendation of Dr. Henry Froehling, of Baltimore, Maryland, who, while acting in the capacity of botanist and scientist to an exploring expedition in Southern Mexico, became familiar with the drug, both from reports of the natives and personal experience, as a remedy in **intercostal neuralgia.** The following extract from Dr. Froehling's report will give some conception of the nature of this remedy:

"A common experience among physicians is, that some cases of intercostal neuralgia are very troublesome and obstinate, resisting almost every kind of treatment; particularly is this the case in malarial districts. In such cases I would recommend the fluid extract of Persea seed. In my own person and in every case in which I have employed it, I have been highly gratified with the result. Those of my medical friends to whom I have given samples of the preparation warmly endorse my opinion of it as above, and I cannot but believe that further trial of it will cause it to be regarded as a valuable addition to our list of medicines."

Dr. Froehling also mentions the fact that Persea has been employed with benefit in the expulsion of tapeworm.

COCA. (ERYTHROXYLON COCA.) The evidence in favor of Coca is to prove it a powerful nervous stimulant, through which property it retards waste of tissue, increases muscular strength and endurance, and removes fatigue and languor, due to prolonged physical or mental effort. While indicated in all conditions presenting these symptoms, it has an especial indication in the treatment of **the opium and alcohol habits.** In these deplorable conditions it has been found to possess extraordinary properties—relieving the sense of untold bodily and mental misery which follows the withdrawal of the accustomed stimulus, thus preventing a return to the narcotic, and affording an opportunity for building up the system by the administration of restorative tonics.

We prepare Fluid Extracts of all the above drugs.

MITCHELL'S SOLUBLE MEDICATED GELATIN PREPARATIONS.

URETHRAL BOUGIES. Long size, six and one-half inches.

URETHRAL BOUGIES. Short size, three inches.

NASAL BOUGIES.

15 grain size.

30 grain size.

RECTAL SUPPOSITORIES.

The use of Gelatin as a basis for preparations designed for local medication is fast superseding all other forms, as it offers the advantages of cleanliness, great flexibility and elasticity, rapid solubility, and prompt and thorough action of the remedial agent.

The remedies can be readily carried on the person of the patient or the physician, and can be freely handled without danger of melting or breaking.

These preparations are made of a soluble compound of Gelatin and Glycerin, easily liquefied by the heat and secretions of the body. The medicating ingredient is incorporated with this compound, and by its solution is brought into gradual and prolonged contact with the diseased surfaces of the part to which the remedy is applied.

Samples and full descriptive circulars of these articles will be furnished to the medical profession by enclosing stamp to

HOLLOW VAGINAL SUPPOSITORIES.

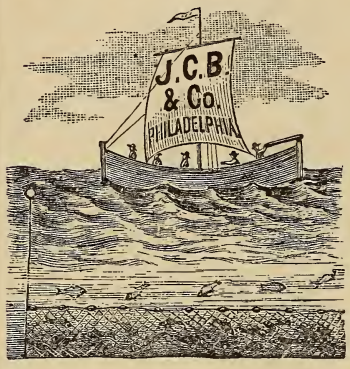
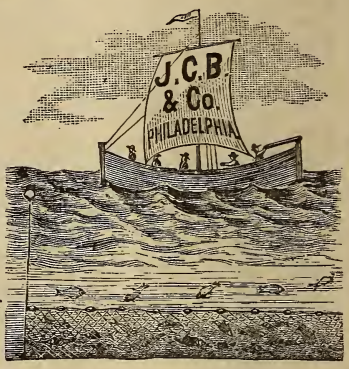
PURE COD-LIVER OIL



RECEIVED
PER STEAMER MONTHLY,
In Sealed, Tin-Lined Barrels.

ABSOLUTE
Purity and Freshness
SECURED BY USING
Baker's Cod-Liver Oil.

Patients unable to take other oil find it not only not disagreeable, but positively palatable.



Prepared on the **Halten Islands, Norway,** with great care, from the finest selected livers of *Net-taken Cod Fish*, at a season of the year when in their highest condition.

BAKER'S COD-LIVER OIL

Has been before the Medical Profession since 1840, and is endorsed by the highest authority.

☞ Many Physicians say "Where a *Pure Oil* of such remarkable quality is attainable, a resort to the various preparations of Cod-Liver Oil is unnecessary."

To meet the demand for such, however, we offer

BAKER'S EMULSION

Finest Norwegian Oil as above, 50 per cent. = 12 grains Hypophosphites of Lime and Soda to each tablespoonful. The quality of the Oil used in this preparation renders it, beyond question, the *best Emulsion in the market.*

WE PREPARE, ALSO,

Baker's Cod-Liver Oil, with Extract of Malt.
Baker's Cod-Liver Oil, with Phos. Lime and Wild Cherry.
Baker's Extract of Malt, Plain.

☞ An extract from Trousseau and Pidoux, on Therapeutics, in pamphlet, will be mailed free to any Physician requesting it.

FOR PHYSICIANS' USE ONLY.

SVAPNIA

OR

PURIFIED OPIUM.

CONTAINS THE

ANODYNE AND SOPORIFIC

ALKALOIDS

CODEIA,

NARCEIA

AND

MORPHIA.

EXCLUDES THE

POISONOUS & CONVULSIVE

ALKALOIDS

THEBAINE,

NARCOTINE

AND

PAPAVERINE.

DOSE, THE SAME AS OPIUM.

This article is not intended for popular use, but only on prescription of the profession. It is to take the place of Opium in cases where that drug acts injuriously.

Dr. John Harley, of London, in his "Old Vegetable Neurotics," details a large number of experiments upon the human and animal system, with six of what he considers the narcotic alkaloids. He concludes that although all six possess both narcotic and hypnotic properties, yet these are so varied in degree and force as to make their effects, when exhibited singly, very distinct from those following their exhibition in combination.

Taking the experience of practical physicians with Dr. Harley's results, as a basis, we would group them in the following order:

First Group.	Second Group.
Anodyne and Hypnotic Elements.	Narcotic and Convulsive Elements.
1. Morphia.	1. Thebain.
2. Narceia.	2. Cryptopin.
3. Codeia.	3. Papaverin.

Now SVAPNIA *is a distinctive name* given *to the first group, representing* the ANODYNE and HYPNOTIC ELEMENTS; *the second group, or the narcotic and convulsive* elements *of Opium being eliminated;* and is *not*, therefore, a simple principle, or a single constituent of Opium.

The relative values of each being known, we can select and utilize those that are valuable, and reject those known to be deleterious and inert.

This is what we claim, and all we claim for SVAPNIA. *It can be relied upon and given in all cases where Opium or Morphia is indicated, with equally good effects;* and in addition to this, there will be found in the practice of every physician cases occurring almost every day, in which idiosyncrasy and peculiar states and diseases of the brain debar us from the use of Opium and Morphia, but where Svapnia can be exhibited with the happiest results.

In SVAPNIA there is retained all the Morphia and the greater part of the Codeia and Narceia, but combined with the native acids of Opium, meconic and thebolactic, in such a manner as to render those constituents soluble and active.

SVAPNIA IS UNIFORM IN ITS PROPORTIONS, and is prepared to conform to a standard of Opium representing ten per cent. of Morphia. This is done by a simple proportion of the neutral excipient, after determining the actual amount of the alkaloids obtained from the Opium used.

We may safely affirm that the danger of bad results is much diminished by a resort to that preparation of Opium in which the poisonous elements are eliminated, and the anodyne elements in such a state of combination as to reduce their toxic and enhance their hygienic effects, such as has been PROVED TO BE THE CASE WITH SVAPNIA.

HORSFORD'S ACID PHOSPHATE

IN

IMPOTENCE,

Seminal Losses,

Impaired Vitality,

Spermatorrhœa.

We wish to call the attention of the profession to the action of Horsford's Acid Phosphate on the organs of generation, when their power has become impaired through sexual excess, or from senile impotence. It is at once rejuvenating and aphrodisiac in its effect. It appears to restore the secretory organs that have been deranged to their normal condition, giving vigor where there has been debility, and renewed strength where there has been exhaustion.

H. B. STORER, M.D., Boston, says: "I have found Horsford's Acid Phosphate serviceable, in a marked degree, in my treatment of spermatorrhœa."

E. W. JONES, M.D., Taunton, Mass., says: "Horsford's Acid Phosphate was prescribed in a case of nervous prostration from seminal losses, with decided beneficial effect."

C. S. ELLIS, M.D., Wabash, Ind., says: "I prescribed Horsford's Acid Phosphate in a case of nervous debility and weakness of the sexual organs; patient forty-eight years old; he was much benefited."

R. W. ERWIN, M.D., Bay City, Michigan, says: "In some cases of weakness following sexual indiscretions, attended with nervousness, it is useful."

Each case presents its own peculiarities for treatment, but, as a general rule, we would suggest a half teaspoonful of Horsford's Acid Phosphate, in half a tumbler of hot or cold water, or tea without milk, to be taken shortly after each meal, and upon retiring.

Pamphlet giving further details mailed free, on application to the manufacturers.

Physicians who have not had a bottle of the Horsford's Acid Phosphate, and who wish to test it, will be furnished with a sample without expense, except express charges.

RUMFORD CHEMICAL WORKS,

PROVIDENCE, R. I.

1297-1348

An experience of more than a quarter of a century convinces us that sugar, properly applied, is the only correct coating for a pill.

Physicians should be careful to specify Warner & Co., when prescribing or ordering.

Special attention is called to the following selected Recipes prepared for Physicians' Prescriptions.

PIL: PHOSPHORI COMP: (WARNER & CO.) ℞. Phosphori, - - 1-100 gr. Ext. Nuc. Vom. - ¼ gr.

THERAPEUTICS.—As a nerve tonic and stimulant, this form of pil. is well adapted for such nervous disorders as are associated with impaired nutrition and spinal debility, increasing the appetite and stimulating digestion.

The practical value of Phosphorus as a therapeutic agent, and its applicability to the cure of disease, and especially in those varied disordered conditions consequent upon OVERWORK, which are characteristic of modern civilization.

Pil. Phosphori Comp. may be taken, one or two pills three times daily, after eating.

Price, per 100, $1.50.

PIL: IODOFORM ET FERRI. (WARNER & CO.) ℞. Iodoform, - - 1 gr. Ferri Redacti, - 1¼ gr.

THERAPEUTICS.—A powerful general tonic and alterative, valuable as a remedy in Anæmia, Scrofula, Neuralgia, Chlorosis, Rheumatism, etc.

Pil. Iodoform et Ferri may be given in doses of from one to two pills, as occasion may require.

Price, per 100, $2.00.

PIL: DIGESTIVA. (WARNER & CO.) ℞. Pepsin Conc't, 1 gr. Gingerine, 1-16 gr. Pv. Nuc. Vom., ¼ gr. Sulphur, ⅛ gr.

THERAPEUTICS.—Useful in relieving various forms of Dyspepsia and Indigestion, and of permanent benefit in cases of enfeebled digestion, where the gastric juices are not properly secreted. It is also a gentle laxative and excellent dinner pill, may be taken one after dinner, or one before each meal, three times daily.

Price, per 100, 75 cts.

PIL: CALCIUM SULPHIDE. (WARNER & CO.) 1-10, ¼, ½ & 1 gr. each.

THERAPEUTICS.—Extremely useful in the treatment of acne, scrofula and cutaneous diseases.

Sulphide of Calcium is usually administered in doses of from 1-10 to ¼ grain four times daily, gradually increasing the dose to one grain six times daily, or according to the progress or severity of the case.

Price, per 100, 1-10 gr. .50; 1-4 gr. .60; 1-2 gr. .75; 1 gr. $1.00.

WARNER & CO.'S PILLS MAY BE OBTAINED FROM ALL DRUGGISTS, OR BY MAIL, ON RECEIPT OF PRICE.

SAVORY & MOORE beg to call the attention of the Profession to some of their Special Preparations, the purity and uniform strength of which are Guaranteed.

PANCREATIC EMULSION,

Prepared in accordance with the direction of the Physician who introduced this purely

MEDICINAL FOOD FOR CONSUMPTION AND WASTING DISEASES.

Pancreatic Emulsion will always take precedence of Cod-Liver Oil, by reason of its introducing the STABLE SOLID FATS INTO THE SYSTEM, instead of the evanescent fluid fats or oils.

Neither Cod-Liver Oil nor EMULSIONS of COD-LIVER OIL can supply the kind of fat necessary for sound and vigorous human life. In addition to this, all the Oily Emulsions are liable to rancidity, and most of them are highly objectionable in consequence of the SAPONIFICATION and ULTIMATE PUTREFACTION, produced by the chemical agents used instead of Pancreatic Juice.

Pancreatic Emulsion (properly so-called), is THE NECESSARY FOOD OF THE CONSUMPTIVE, and the most reliable form of nutriment for counteracting the tendency to Phthisis and other wasting diseases. It presents to the lacteals fat, in essentially the same condition for assimilation and absorption as in a vigorous human frame, and THE AGENT of the important change is THE NATURAL SECRETION of the PANCREAS.

Pancreatic Emulsion may therefore be regarded as Chyle obtained by nature's own process. In certain cases both Cod-Liver Oil and Pancreatic Emulsion are required—one to supply the blood with oil or liquid fat, the other with the more stable solid fats; but it cannot be too strongly urged that both PANCREATIC EMULSION and Cod-Liver Oil are *not to be regarded as Medicines, but as articles of diet*, without which patients, with their defect of health, will as surely starve as healthy persons would if deprived of the most nutritive part of their food.

Pancreatized (Digestive) Cod-Liver Oil. By Pancreatized Cod-Liver Oil, the active digestive principle of the Pancreatic Juice is imparted to it, which renders it in a highly favorable condition for rapid and complete digestion and assimilation, preventing nausea, and largely increasing the beneficial properties of the Oil.

Pancreatine effects the digestion and assimilation of Cod-Liver Oil and Fat, as well as Food generally. This palatable and popular remedy is therefore invaluable to PATIENTS WHO ARE UNABLE TO DIGEST COD-LIVER OIL, and who are thus deprived of its nourishing and invigorating properties.

Pancreatine Wine. An excellent vehicle for taking Cod-Liver Oil and promoting the digestion of it.

Buffalo Lithia Water.

FOR THE GOUTY OR URIC ACID DIATHESIS.

Dr. J. Marion Sims, of New York, says of this water, in general terms:

"I have used in my practice the Buffalo Lithia Water, Spring No. 2, for two years past, and have, in many cases, found it highly efficacious."

Dr. Wm. A. Hammond, of New York, Surgeon General U. S. Army (retired), Professor of Diseases of the Mind and Nervous System in the University of New York, etc.

"I have for some time made use of the Buffalo Lithia Water in cases of affections of the Nervous System, complicated with Bright's Disease of the Kidneys, or with a Gouty Diathesis. The results have been eminently satisfactory. Lithia has for many years been a favorite remedy with me in like cases, but the Buffalo Water certainly acts better than any extemporaneous solution of the lithia salts, and is, moreover, better borne by the stomach."

Dr. Hunter McGuire, Richmond, Va., late Prof. Surgery, Medical College of Virginia; Vice President of the International Med. Congress; Vice President American Med. Association.

"Buffalo Lithia Water, Spring No. 2, as an Alkaline Diuretic, is invaluable. In Gravel dependent upon the Uric Acid Diathesis, and, indeed, in diseases generally of that diathesis, it is a remedy of extraordinary potency. I have prescribed it in cases of Rheumatic Gout which had resisted the ordinary remedies, with wonderfully good results. I have also used it in my own case, being a great sufferer from this malady, and have derived more benefit from it than from any other remedy."

Dr. Alexander B. Mott, of New York, Professor Surgery, Bellevue Hospital Medical College; Surgeon, Bellevue Hospital.

"I have made sufficient use of the Buffalo Lithia Water to be satisfied that it posseses very valuable therapeutic properties. In the Gouty Diatheses, Chronic Inflammations of the Bladder, and other diseases affecting the Urinary Organs, it may be relied on to give the most satisfactory results."

Dr. Harvey L. Byrd, of Baltimore, President and Prof. of Obstetrics and Diseases of Women and Children, in the Baltimore Med. College; formerly Prof. of Practical Medicine, etc.

"I have witnessed the best results from the action of the Buffalo Lithia Water, Spring No. 2, in Chronic Gout, Rheumatic Gout, Rheumatism, Gravel and Stone in the Bladder, and I do not hesitate to express the opinion that 'in all diseases depending upon or having their origin in the Uric Acid Diathesis, it is unsurpassed, if indeed it is equaled by any water thus far known to the profession."

Dr. E. J. Doering, of Chicago, Ill., late Surgeon U. S. Marine Hospital Service.

"In my experience the Buffalo Lithia Water is an efficient remedy in the treatment of diseases depending on the Uric Acid Diathesis. I have prescribed it quite extensively in Catarrhal Affections of the Bladder, with excellent results."

Dr. William F. Carrington, of Virginia, Surgeon U. S. Navy (retired), Surgeon Confederate States Navy.

"The Buffalo Lithia Water, Spring No. 2, has signally demonstrated its remedial power in Gout, Rheumatism, Uric Acid Gravel, and other maladies dependent upon the Uric Acid Diathesis. It not only eliminates from the blood the deleterious agent before it crystallizes, but dissolves it in the form of calculi, at least to a size that renders its passage along the ureters and urethra comparatively easy."

Dr. J. S. Wellford, Prof. of Diseases of Women and Children, Medical College of Virginia.

"I have paid a great deal of attention to Urinary Troubles, and have frequently and freely prescribed the Lithia Water in their treatment, with the very best results. In all the various forms of the Uric Acid Diathesis, whether as well-formed Gravel or Gout, or in the milder forms of Gouty Dyspepsia or Nettle-rash, in their varieties, I know of no mineral water which I consider at all equal to that of Spring No. 2. In many Skin Diseases of old age, dependent on the Uric Acid Diathesis, such as Eczema, etc., this water acts most beneficially."

1297-1348eow

Water in Cases of Six Gallons, at the Springs, $5.00

SPRINGS OPEN JUNE 1st. **Pamphlets sent to any address.**

THOMAS F. GOODE, Proprietor,

BUFFALO LITHIA SPRINGS, VIRGINIA.

MURDOCK LIQUID FOOD CO., Boston,

THE ONLY MANUFACTURERS OF

RAW FOOD EXTRACTS IN THE WORLD.

It can be retained by the weakest stomach, when all other food extracts, and even water, is rejected.

Nutritious food, if raw, condensed, and free from insoluble matter, will cure chronic diseases, as it will make blood faster than all preparations or food, and new blood will cleanse the system.

MURDOCK'S LIQUID FOOD is made from Beef, Mutton and Fruits; contains corpuscles; is 12½ per cent. soluble albumen, and free from insoluble matter, drugs, minerals, salts and acids, and can be retained by the stomach when so weak as to refuse food.

Ask your Druggists, or send to us, for Essays read before the American Medical Association, at Richmond, Va., May 6, 1881, on the value of Raw Food Extracts, by Geo. R. Shepherd, of Hartford, Conn., and other Essays and Testimonials from Medical Journals and Physicians that have used Liquid Food, in cases of Consumption, Scrofula, Nervous and General Debility, Dyspepsia, acute and chronic, Constipation, Diphtheria, Intemperance, Cholera Infantum, Infantile Diarrhœa, Post-partum Hemorrhage, Purpura Hemorrhagica with Waxy Liver, Pelvic Cellulitis, Malarial and other Fevers, Chronic Strumous Arthritis, Sclerosis of the Spinal Cord, Senile Gangrene, Perinephritic Abscess, and other diseases of malnutrition. No cases of Cholera Infantum have occurred where it has been used daily, and no lives have been lost from Cholera Infantum where it has been prescribed by a physician. Excellent for Eczema, Diabetes, Rheumatism and Neuralgia.

At the request of any physician who has not tried our Extracts, and would like to, we will deliver sample bottles to the Express in Boston. To any Medical Society wishing to investigate the value of our Extracts, through a committee, hospital, or individual members, we will furnish a supply of Liquid Food equal to a six-ounce bottle for every member present at the time of action. We are induced to do this, knowing that our Extracts are saving life, and that an increased use of them, which will follow after a trial of them, will be the means of saving more lives daily. (*We ask no testimonials of results obtained.*) Raw Extracts are available where cooked ones are not, or if available, contain only one-third as much nourishment.

Liquid Food is in general use at all Hospitals, Infant and Insane Asylums, and Washingtonian Homes, U. S. Navy Hospitals, and by all physicians that have tried it.

If not kept by your Druggist, can be obtained in any of the commercial cities. In Philadelphia, by Johnston, Holloway & Co., Boericke & Tafel; in Pittsburg, by A. Kelly & Co.; in Baltimore, by Thomsen & Wirth; or you can order direct and we will pay express. 1 oz., 15 cents; 6 oz., 55 cents; 12 oz., $1.00.

See Philadelphia MEDICAL AND SURGICAL REPORTER, *Boston Medical and Surgical Journal*, and *New York Medical Record*, for chronic cases that were at our quarterly reception to physicians, in Boston, December 30, 1881—cases of Eczema, Rheumatism, Neuralgia, Diabetes, Consumption, and other diseases. If all were not restored to perfect health, they were gaining daily, and able to enjoy life and attend to their business. 1297-1348

MURDOCK LIQUID FOOD CO., BOSTON.

It is the only food that will relieve the Consumptive from Hunger.

It will make Blood faster than all preparations known.

Has been proved of the highest value in CONSUMPTION and all WASTING DISEASES, invariably producing IMMEDIATE INCREASE in FLESH and WEIGHT.

FORMULA OF HYDROLEINE.

Each dose of two teaspoonfuls, equal to 120 drops, contains:

Pure Oil,	**80 m. (drops.)**	**Soda,**	**1-3 grain.**
Distilled Water,	**35 m.**	**Boric Acid,**	**1-4 "**
Soluble Pancreatin,	**5 grains.**	**Hyocholic Acid,**	**1-20 "**

DOSE.—Two teaspoonfuls alone, or mixed with twice the quantity of soft water, to be taken thrice daily, with meals.

The principles upon which this discovery is based have been described in a treatise on "THE DIGESTION AND ASSIMILATION OF FATS IN THE HUMAN BODY," by H. C. BARTLETT, PH.D., F.C.S., and the experiments which were made, together with cases illustrating the effect of Hydrated Oil in practice, are concisely stated in a treatise on "CONSUMPTION AND WASTING DISEASES," by G. OVEREND DREWRY, M.D.

In these treatises the Chemistry and Physiology of the Digestion of the Fats and Oils is made clear, not only by the description of a large number of experiments scientifically conducted, but by cases in which the deductions are most fully borne out by the results.

☞ *Copies of these valuable works will be sent free, on application, to all who mention THE MEDICAL AND SURGICAL REPORTER.*

HYDRATED OIL,

HYDROLEINE,

WATER AND OIL,

May be described as partially digested oil, which will nourish and produce increase in weight in those cases where oils or fats not so treated are difficult or impossible to digest. In CONSUMPTION and other WASTING DISEASES the most prominent symptom is EMACIATION, of which the first is the starvation of the fatty tissues of the body, including the brain and nerves. This tendency to emaciation and loss of weight is arrested by the regular use of HYDROLEINE, which may be discontinued when the usual average weight has been permanently regained.

The ordinary so-called emulsions of Cod-liver oil and other fats, WHETHER PANCREATIZED OR NOT, merely remain in the form of a coarse mechanical mixture for a short time after agitation. The digestion of oil having in no sense been artificially produced, still devolves upon those functional powers the deficiency of which is the most prominent symptom in these cases.

HYDROLEINE is not a patent medicine or a secret preparation; the formula is on every bottle. Can be taken by the most delicate stomach; is immediately assimilated.

The permanence and perfection of the emulsion, and the extreme solubility of the HYDRATED OIL, solely prepared and sold by us under the name of HYDROLEINE, is shown by its retaining its cream-like condition as long as the purest Cod-liver Oil will retain its sweetness. Unlike the preparations mentioned, or simple Cod-liver Oil, it produces no unpleasant eructation or sense of nausea, and should be taken in such very much smaller doses, according to the directions, as will insure its complete assimilation; this, at the same time, renders its use economical in the highest degree.

To brain-workers of all classes Hydrated Oil is invaluable, supplying as it does the true brain food.

Economical in use—certain in result Tonic—Digestive and Highly Nutritive.

NEW PRINCIPLE FOR THE ASSIMILATION FAT.

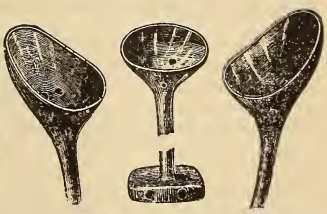
DR. McINTOSH'S
NATURAL UTERINE SUPPORTER.



No instrument has ever been placed before the medical profession which has given such universal satisfaction. The combination is such that the physician is able to meet every indication of Uterine Displacements. Falling Womb, Anteversion, Retroversion and Flexions are overcome by this instrument, where others fail. This is proven by the fact that, since its introduction to the profession it has come into more general use than all other instruments combined.

Among the many reasons which recommend this Supporter to the physician is its self-adjusting qualities. The physician, after applying it, need have no fear that he will be called in haste to remove or readjust it, as is often the case with rings and various pessaries held in position by pressure against the vaginal wall, as the patient can remove it at will, and replace it without assistance.

The Abdominal Supporter is a broad morocco leather belt, with elastic straps to buckle around the hips, with concave front, so shaped as to hold up the abdomen. The Uterine Support is a cup and stem, made of highly polished hard rubber, very light and durable, shaped to fit the neck of the womb, with openings for the secretions to pass out, as shown by the cuts. Cups are made with extended lips, to correct flexions and versions of the womb. The cup and stem is suspended to the belt by two soft elastic rubber tubes, which are fastened to the front of the belt by simple loops, pass down through the stem of the cup and up to the back of the belt. These soft rubber tubes being elastic, adapt themselves to all the varying positions of the body, and perform the service of the ligaments of the womb. The instrument is very comfortable to the patient, can be removed or replaced by her at will, can be worn at all times, will not interfere with nature's necessities, will not corrode, and is lighter than metal. It will answer for all cases of Anteversion, Retroversions, or any Flexions of the womb, and is used by the leading physicians with never-failing success, even in the most difficult cases.

Our Reduced Prices are to Physicians, $6.00; to Patients, $10.00.

Instruments sent by mail, at our risk, on receipt of price, or by Express, C. O. D., with the Express charges for returning the money added.

☞ CAUTION.—Owing to the great sale and popularity of our instrument various and base imitations are sold by unscrupulous parties. In order to get the genuine, it is best to order direct from us.

DR. McINTOSH'S NATURAL UTERINE SUPPORTER CO.,
192 Jackson Street, Chicago, Ill.

Our valuable pamphlet, "Some Practical Facts about Displacements of the Womb," will be sent you free on application. 1281-1332

In corresponding with Advertisers please mention THE MEDICAL AND SURGICAL REPORTER.

BEEF PEPTONE,

IN TRANSPARENT GLASSY SCALES,

Containing only the animal or azotized matter of the Beef. Each ounce is equal to 16 ounces of raw beef, easily soluble, and still faster in hot water.

This Beef Peptone is digested from tender, juicy Beef, by the aid of the *Crystal Pepsin,* of my manufacture (Jensen's Crystal Pepsin). Unlike the various BEEF EXTRACTS, this preparation contains all the nutritive constituents of the Beef, in a thoroughly digested state, ready for absorption into the system, while the Beef Extracts are entirely devoid of the chief elements of nutrition, such as the fibrinous, gelatinous and albuminous portions of the Beef, they only consisting of the concentrated saline constituents, with barely a trace of animal matter to keep its consistence. The difficulty so long experienced by the profession throughout the world, in preparing a PEPTONE entirely free from those chemical agents necessary for its manufacture, so as to render it fit for use, is hereby demonstrated to be successfully overcome, as it contains no foreign matter, and will stand the most severely scrutinizing test as to perfectness, also possessing flavor of the Beef, and so palatable as to render it highly agreeable.

Put up in bottles holding One ounce, Eight ounces, and one Pound.

Kept by the Wholesale and Dispensing Druggists in general.

DEPOT—L. WOLFF'S Pharmacy,

Northwest corner Twelfth and Chestnut Streets.

JENSEN'S CRYSTAL PEPSIN,

IN ARTIFICIAL CRYSTALS,

Strictly inodorous and tasteless, and perfectly soluble in water without acid.

THIS PEPSIN, now so popular with the profession, has created an impetus in the consumption of the same and physicians of the highest standing, who before the introduction of this active PEPSIN, with good reason, entirely abandoned the use of PEPSIN, are now the most eager in prescribing JENSEN'S CRYSTAL PEPSIN, whenever it is indicated, and since the knowledge of its great solvent power (gr. j. of it will dissolve the boiled whites from two to three eggs) has been established even among those susceptible to be great doubters it has caused itself to be utilized in many novel ways, by the thinking profession; for instance, in substituting morphia, chloral, etc., as a hypnotic, relieving gastric troubles where the above remedies have been prescribed, creating morphine and chloral habits In removing diphtheritic patches it is successfully used combined with water, glycerine, and muriatic acid, and the same composition, diluted with more water, as a spray in bronchial troubles, dissolving muco-purulent matter, as well as a spray for same in catarrhal affections.

THIS PEPSIN

Has also been used with success in dissolving and evacuating coagulated blood in the bladder, dispensing with surgical operations in such cases. Many other novel applications could be mentioned, if not in want of space. It is found to be FORTY times stronger than saccharated pepsin. One to three grains is an active dose.

KEPT BY ALL DRUGGISTS.

The above preparations are only manufactured and put up by

CARL L. JENSEN, M.D., PH.G.,

865 North 26th Street, Philadelphia, Pa.

No other Wholesale Agents for this Pepsin are longer engaged, than the Wholesale Druggists throughout the United States.

Instructor in Pharmacy.

A. M. HAWES, M.D.,
Demonstrator of Anatomy.

This College has for its *collegiate year* two sessions.

Regular Session commences Wednesday, September 7th, 1881, and closes March 1st, 1882.

Recitation Term (optional) commences March 15th, 1882, and closes June 14th, 1882.

Graded Course of three terms, of six months each.

PLAN OF INSTRUCTION.

By *Lectures*, *Recitations* and *Clinics*, together with *practical work* in the Anatomical, Physiological, Chemical and Pharmaceutical Laboratories.

Clinics are held *daily*.

Clinical Work in Hospitals and Dispensaries is given to the Senior Class (see Clinics), in *small sections*, under the charge of a *Clinical Teacher*, in all the departments of Medicine and Surgery.

Three Large Hospitals and *two Dispensaries* afford unlimited material for instruction.

ADMISSION.—Candidates for admission are required to pass a preliminary examination, unless satisfactory documentary evidence can be presented, that is equivalent to the standard adopted. (See Catalogue.)

FEES.

Regular Session.—Matriculation, $5.00; Lecture Tickets, $50.00; Hospital Tickets, $10.00
Examination (final), $25.00.

Recitation Term.—$10.00 for those who have attended Regular Session; all others, $25.00, $15.00 of which will be applied on the next Regular Term.

Board and Rooms can be obtained for $3.00 to $5.00 per week, the average being $4.00.

For Catalogue and other particulars, address

H. O. WALKER, M.D., Secretary,
177 Griswold Street, Detroit, Mich.

1274-tf

CRINON'S HÆMOGLOBIN,

The Albuminoid Ferruginous Principle of Blood.

HÆMOGLOBIN is the only physiological chalybeate. Associated as it is with the phosphates of the blood, it forms the most powerful of tonics, and at the same time a most nourishing food. It is especially useful in cases of *Anæmia, Chlorosis, Cachexias, Exhaustion* caused by excess of work, nervous debility, fatigue resulting from parturition and lactation. It replaces entirely liquid blood, which has been recommended and used with success in *Phthisis* and *wasting away.*

It is offered in two forms: In cachets (wafers), 60 of which are contained in a box; combined with chocolate in small squares, 30 of which are in a box; both forms can be sent by mail.

Prepared by C. CRINON, Paris, Pharmacist of the first class, Laureate of the Hospitals of Paris Samples may be obtained by application to

E. FOUGERA & CO., New York, Agents for the U. S

DOCTOR RABUTEAU'S

(Laureate of the Institute of France.)

DRAGEES, ELIXIR & SYRUP OF IRON.

"The experiments made in the hospitals of Paris have demonstrated that *Dr. Rabuteau's Dragees, Elixir and Syrup* regenerate the red globules of the blood with a rapidity never observed with the use of the other ferruginous preparations. These results have been proved by the various *Compt-Globules.*

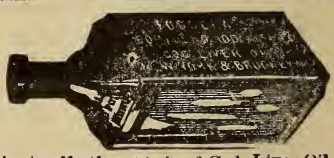
"The ferruginous preparations of *Dr. Rabuteau* do not cause any constipation, and are perfectly tolerated by the weakest persons."—*Gazette des Hospitaux.*

Dr. Rabuteau's Elixir is prescribed when some difficulty is experienced in swallowing the Dragees; it is especially adapted to weak persons, whose digestive functions need strengthening or stimulating.

Dr. Rabuteau's Syrup is especially prepared for children, who take it readily, because of its agreeable taste.

FOUGERA'S COMPOUND IODINISED

COD LIVER OIL.



Since the introduction of this oil in 1858, it has been found to be superior to all other kinds of Cod Liver Oil for the treatment of **General Debility, Consumption, Scrofula, Rickets, etc.**

It possesses not only all the **nourishing** qualities of the best Cod Liver Oil, but also the **tonic, stimulant** and **alterative** properties of **Iodine, Bromine** and **Phosphorus,** which are added in such proportions as to render it therapeutically five times as efficacious as pure Cod Liver Oil.

Through its **increased curative action, FOUGERA'S COD LIVER OIL** will be found to cure disease in a much shorter time than the pure oil; while favorable results will be obtained by its use in many advanced cases when the pure Cod Liver Oil would fail entirely.

FOUGERA'S READY-MADE MUSTARD PLASTERS.

A most useful, convenient, clean, and economical preparation. Not liable to change if kept in a dry place. Made of two strengths. Plasters No. 1, of pure mustard; Plasters No. 2, of one-half mustard. Price 40 cents, the tin box, or tin roll, of 10 plasters each. DIRECTIONS.—Dip the Plaster, or Plasters, a minute or two, in cold water; apply on the part, and cover with a band.

FOUGERA'S COMPOUND ICELAND MOSS PASTE.

(Iceland Moss, Lactucarium, Ipecac and Tolu.)

Used with great success against nervous and convulsive coughs, Whooping Cough, Acute Bronchitis, Chronic Catarrh, Influenza, etc.

Wakefulness, Cough, and other sufferings in Consumption, are greatly relieved by the soothing and expectorant properties of this Paste.

FOUGERA'S IODO-FERRO-PHOSPHATED ELIXIR OF HORSE-RADISH.

This Elixir contains Iodine, Pyrophosphate of Iron, the active principles of antiscorbutic and aromatic plants, and acts as a **tonic, stimulant, emmenagogue,** and a **powerful regenerator of the blood.** It is an invaluable remedy for all constitutional disorders due to the impurity and poverty of the blood. One of the advantages of this new preparation consists in combining the virtues of Iodine and Iron without the inky taste of Iodide of Iron.

E. FOUGERA, Pharmacist,
372 Seventh Street, Brooklyn, L. I.,
SOLE PROPRIETOR & MANUFACTURER OF THE ABOVE,
To whom all special communications should be addressed.

E. FOUGERA & CO.,
30 North William Street, New York.
SOLE GENERAL AGENTS for the ABOVE,
To whom all orders should be addressed.

SOLD BY DRUGGISTS GENERALLY.

JOHNSTONE'S IMPROVED

ADAPTABLE POROUS FELT SPLINTS.

AHL'S SPLINT MANUFACTURING COMPANY, LIMITED,

123 & 125 South Eleventh Street, PHILADELPHIA, PA.

THE ADAPTABLE POROUS SPLINTS, invented and improved by W. H. JOHNSTONE, have been tested extensively in both civil and military practice for a number of years, and have been endorsed and recommended in the most unqualified manner by the celebrated and distinguished Surgeons of America.

Their *porosity* is a peculiar and a valuable property. While the material is firm and insoluble, it permits readily the passage of air and fluids, so that, on one hand, the heat from the inflamed surface, the perspiration, and the morbid exhalations, are not confined, to the detriment of the patient, *as is the case in every other kind of splint*, but pass off freely; and on the other hand, lotions of cold or warm water, medicated or not with weak alcohol, carbolic acid, arnica, tincture, solutions of the sulphites, etc., can be constantly applied without disturbing the dressings. This, it will readily be seen, is a most invaluable property when the parts are bruised, lacerated, filled with extravasated blood, or erysipelatous, and give these splints a conspicuous advantage over all others.

From FRANK H. HAMILTON, M. D., Professor of Fractures and Dislocations in the Bellevue Hospital Medical College, author of "A Treatise on Fractures and Dislocations," etc.

Having examined carefully *JOHNSTONE'S IMPROVED ADAPTABLE POROUS FELT SPLINTS*, I feel warranted in recommending them to the Profession as superior to all other manufactured splints now in use. They possess all the essential qualities of a good splint, having firmness, pliability and lightness.

FRANK H. HAMILTON, M. D.,
Prof. Military Surgery and Fractures and Dislocations, Bellevue Hospital Col.

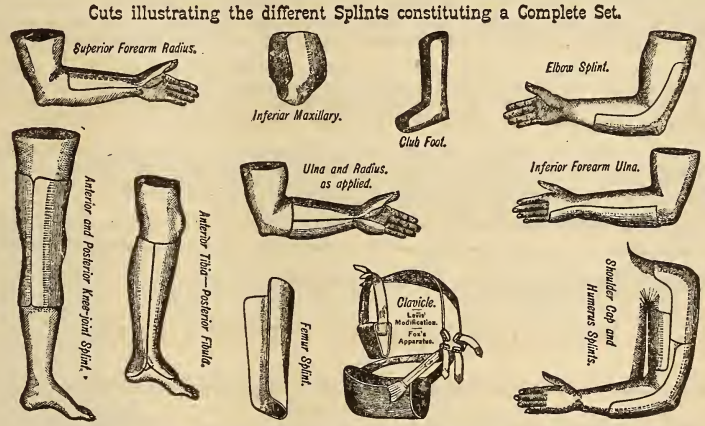
From PROF. D. HAYES AGNEW, Prof. Surgery, University of Penna.

1611 CHESTNUT STREET, PHILADELPHIA, *February 6th*, 1879.

The Adaptable Felt Splints, formerly known as those of Dr. Ahl, with the improvement now made by W. H. Johnstone, which renders them in every way superior to the former, I regard as very excellent appliances in the treatment of fractures.

D. HAYES AGNEW,
Prof. Surgery, University of Pennsylvania.

Cuts illustrating the different Splints constituting a Complete Set.



SPECIAL NOTICE TO THE PROFESSION AND TRADE.

Our *policy* heretofore in the introduction of JOHNSTONE'S IMPROVED ADAPTABLE POROUS FELT SPLINTS, has been to confine the sales and business negotiations directly to the Doctors themselves, declining in every case to sell our goods through Dealers; we having assured the Profession generally, both through our agents and catalogues, that *JOHNSTONE'S IMPROVED SPLINTS* could only be obtained by subscription.

We wish to announce, that owing to the large demand for our goods and the constant importunity on the part of *Surgeons* everywhere to place our Splints on sale with their Instrument Dealer or Druggist, to afford them greater convenience and facility in obtaining the pieces in duplicate, **we have at last acceded to that request, and hereafter *JOHNSTONE'S CELEBRATED FELT SPLINTS* can be obtained at most dealers in Instruments and Drugs throughout the United States, at the same price which they were heretofore sold, viz:**

A complete set, embracing fifty (50) pieces—twenty-five for adults and twenty-five for children—is thirty ($30) dollars. Extra or duplicate pieces can always be obtained from your DEALER, at one dollar each.

JOHNSTONE'S CELEBRATED SPINAL JACKET, for Curvatures and Deformities, have met with unparalleled success, and, from their merit, secured the unqualified endorsement and approbation of our celebrated orthopædic specialists, and particular expression of gratitude from the patients who are wearing them. For full information, send for Descriptive Circulars.

Should your Instrument dealer fail to have a supply of our Splints, and decline to carry them in stock, orders sent to us will receive prompt attention.

AHL'S SPLINT MANUFACTURING CO., Limit
W. H. JOHNSTONE, Manager.

N. B.—If the Instrument Dealers of Philadelphia decline to supply its Physicians with our JOHNSTONE'S FELT SPLINTS on call, they will be furnished and delivered by us to any part of the city, at any time, on receipt of the price, viz.

$1.00 each.

JOHNSTONE'S SPINAL FELT JACKET, any size, - - - - - - $25.00

JOHNSTONE'S MODIFICATION OF DR. R. J. LEVIS' SPLINT

For the FRACTURE OF THE LOWER END OF THE RADIUS.

We make a Palmar and Dorsal Splint for each arm, from Felt, beautifully moulded to adjust to any size arm.

1281-1332 **Price $2.00 per Pair.**

THE DE QUINCEY HOME,

Fort Washington,

New York City.

A Private Asylum for the Treatment of the Opium, Morphine, Chloral, Chloroform and Hashisch Habits, Nervous Diseases and Inebriety.

Drs. H. H. Kane
and
W. H. Vittum,
in charge.

Consulting Physicians.

Prof. Wm. A. Hammond,
Prof. T. Gaillard Thomas,
Dr. Edward C. Spitzka,
Dr. Daniel M. Stimson,
Dr. Edward T. Ely,
Dr. G. H. Wynkoop,
Dr. Andrew H. Smith.

Situated upon a high hill that commands a splendid view of the Hudson and Harlem rivers, Spuyten Duyvil Creek, and the beautiful country for miles around; surrounded by ample grounds and magnificent drives; in easy communication with the city by means of the Sixth and Ninth Avenue Elevated and the Hudson River Railroads; away from the dust, noise, crowding and malaria of the city; with hot and cold water in every room, furnace and grate-fire heating, croquet, horses and carriages, boats and fishing, an excellent *cuisine*, trained nurses and careful medical attendance, it possesses unequaled advantages for the treatment of cases of this kind.

The plan of treatment pursued in the cure of opium, morphine and chloral takers is that of *rapid reduction*, which possesses all the advantages, and none of the dangers of Levenstein's *sudden deprivation*, or the prolonged agony of *gradual reduction*. Each case is studied and treated in accordance with its peculiarities and the idiosyncrasies of the patient, no set plan of treatment being pursued, at the expense of the person's health or comfort.

Our Home, furthermore, offers special facilities for the treatment by *rest, diet, and massage*, according to the plan of Weir Mitchell, of that large class of nervous diseases so commonly met with in ladies suffering from uterine troubles. This plan of treatment has been specially studied, and nurses competent to carry out its provisions in every detail will be furnished. For further particulars, etc., address 1299-1350

Drs. KANE and VITTUM, De Quincey Home, Fort Washington, New York City.

UNIVERSITY OF PENNSYLVANIA

POST-GRADUATE INSTRUCTION.

A Post Graduate Course has been organized for Bedside and Dispensary Instruction in the following named branches:—

ON PHYSICAL DIAGNOSIS AND CLINICAL MEDICINE, Prof. WM. PEPPER and Dr. ED. T. BRUEN.
" NERVOUS DISEASES AND ELECTRO-THERAPEUTICS, - - - Prof. H. C. WOOD.
" DERMATOLOGY, - - - - - - - - - - - Prof. L. A. DUHRING.
" OTOLOGY, - - - - - - - - - - - Dr. GEO. STRAWBRIDGE.

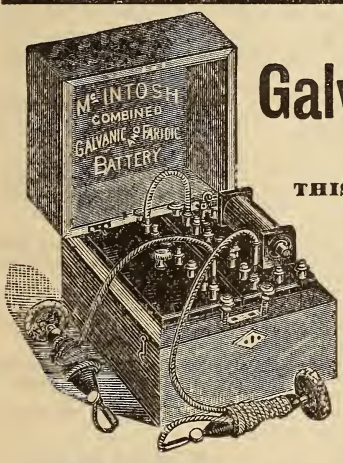
TANRET'S PELLETIERINE.

For the TREATMENT of TAPE-WORM (Tænia Solium).

This new Tænifuge, the Active Alkaloid of Pomegranate Bark, has of late come into extensive use in France, for the treatment of Tape-worm (Tænia Solium). The results of numerous experiments with it at the Marine Hospitals of Toulon, St. Mandrier, etc., and in the Hospitals of Paris, St. Antoine, La Charité, Neckar, Beaujon, etc., have all been most satisfactory. Doctor Dujardin Beaumetz, Member of the Academy of Medicine, and Prof. Laboulbene, in their report to the Society of Therapeutics, have given it their unqualified approval, after the most searching experiments. This preparation is pleasant to administer, and if certain preliminaries are observed success will be insured.

PELLETIERINE is prepared by Mr. CHAS. TANRET, Pharmacien de First Class, 64 Rue Basse du Rempart, Paris. 1242eow-tf

GENERAL AGENTS. E. FOUGERA & CO., 30 N. William St., N. Y.



McINTOSH'S COMBINED

Galvanic AND Faradic Battery.

THIS CELEBRATED BATTERY COMBINES BOTH THE GALVANIC AND FARADIC CURRENT,

Which can be used separately or combined. Any strength and intensity desired can be obtained for use in Electro-therapeutics. THIS BATTERY is constructed on an IMPROVED PLAN, as follows: The zinc and carbon plates are arranged in couples, securely clamped to hard rubber plates, with thumb screws. These screws are also used for binding posts. All the connections are positive. The cells are made in sections of six, of hard rubber, with hard rubber drip cup. The following points of excellence render our Batteries superior to others:

1. They combine the only Portable Galvanic and Faradic Battery in one case.

2. They weigh one-half less than other Batteries of the same number of cells.

3. The cells are made in sections of six, of one solid piece of hard, vulcanized rubber; by this arrangement they can be emptied, cleaned and filled as easily and quickly as one cell, and will not crack, break or leak.

4. A hard rubber drip cup is placed by the side of each section of cells, to receive the zinc and carbon plates when removed from them. By this arrangement we avoid the use of absorbent materials and soiling the Battery

5. The Hydrostat is perfect. The rubber plates which hold the elements project over on one side enough to cover the cells when the zinc and carbon plates are placed in the drip cups. The under side of this projection is covered with thick, soft rubber, which is securely clamped to the cells sections, and makes them water tight.

6. This is the only Battery in which the zinc and carbon plates can be kept clean by simply rinsing them.

7. A zinc or carbon plate can be removed by simply loosening a binding post; and all parts of the Battery can be duplicated, as like parts are made exactly alike. We will be pleased to send circulars and our illustrated catalogue, giving full information, price, etc., free, upon application.

McINTOSH GALVANIC BELT AND BATTERY CO.,

1231-1332 **Nos. 192 and 194 Jackson Street, CHICAGO, ILL.**

TO PHYSICIANS.

IODIA.

FORMULA.—Iodia is a combination of Active Principles obtained from the Green Roots of STILLINGIA, HELONIAS, SAXIFRAGA, Menispermum, and Aromatics. Each *fluid* drachm also contains *five* grains IOD.-POTAS. and *three* grains PHOS.-IRON.

DOSE.—One or two *fluid* drachms (more or less, as indicated) *three* times a day, before meals.

IODIA is the *Ideal* Alterative. It has been LARGELY PRESCRIBED in Syphilitic, Scrofulous, Cutaneous, and Female Diseases, and has an Established Reputation as being the best Alterative ever introduced to the Profession.

BROMIDIA.

FORMULA.—Every *fluid drachm* contains fifteen grains EACH of pure Brom.-Potas. and *purified* Chloral, and one-eighth grain EACH of *gen. imp. ext.* Cannabis-Ind. and Hyoscyam.

DOSE.—*One-half* to *one fluid drachm* in WATER or SYRUP, every hour until sleep is produced.

BROMIDIA is *the* Hypnotic *par excellence*. It produces refreshing sleep, and is *exceedingly* valuable in Sleeplessness, Nervousness, Neuralgia, Headache, Convulsions, Colic, etc., and will relieve *when opiates fail. Unlike* preparations of opium, *it does not lock up the secretions.* In the Restlessness and Delirium of Fevers *it is absolutely invaluable.*

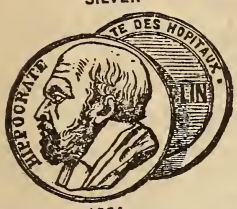
MATHEY-CAYLUS' GLUTEN

SILVER



1854

CAPSULES

OF

PURE COPAIBA AND OTHER MEDICINES.

SILVER

1854

Adapted and recommended for the cure of recent or chronic Gleets, Fluor Albus, etc., etc.

The MATHEY-CAYLUS' CAPSULES, *coated with gluten*, present the most perfect mode for administering Copaiba, Cubebs, Norway Tar, Turpentine, and other remedies, the disagreeable odor and taste of which are often a hindrance to their use. This mode of preparing capsules, which has been approved by the Academy of Medicine, has been recommended in their clinical lectures by eminent Professors in the hospitals of Paris, as well as in those of New York and London.

By the first physicians of the hospitals of Paris, London, and New York.

SPECIAL ADVANTAGES OF MATHEY-CAYLUS' GLUTEN CAPSULES.—Being formed of thin, transparent, and readily assimilated coating, they so cover and disguise the medicine to be given, that it can be taken without disgust, but with ease. In this respect, they differ widely from the gelatine capsules, which have a hard, thick coating, which swells beyond measure, in the stomach, are hard to be swallowed, and what is of great importance, they create disturbance in the digestive functions.

The special advantage of the coating of gluten consists in the fact that, notwithstanding its extra thinness, and although it softens under the action of the gastric juice, it can pass the stomach without breaking, and only in the intestines is the medicinal matter liberated; this accounts for the fact that Mathey-Caylus' Capsules never cause the nausea, eructations, and dyspeptic symptoms, which are complained of by many persons using other preparations.

Finally, their regular ovoid form, which is so favorable to swallowing, their pleasant appearance, which dispels all disgust, and the advantage of being entirely free from taste and smell, recommend the use of these capsules even to the most delicate persons.

Thankful to the Medical Profession for the liberal patronage heretofore bestowed upon us, we hope that they will continue their favors, and we are convinced that they will never have any reason to regret the generous welcome they have given to our preparations.

MATHEY-CAYLUS' CAPSULES are never sold, except in bottles having the following inscription printed in the glass: MATHEY-CAYLUS A PARIS. And each bottle contains 64 capsules, making them the cheapest capsules in the market.

The following different kinds of Mathey-Caylus' Gluten Capsules are now offered:

COPAIBA AND TANNIC ACID,
COPAIBA AND S. N. OF BISMUTH,
COPAIBA AND CATECHU,
COPAIBA AND MAGNESIA,
COPAIBA, CUBEBS AND ALUM,
COPAIBA, CUBEBS AND RHATANY,
COPAIBA AND RHATANY,
COPAIBA AND CITRATE OF IRON,
COPAIBA AND CUBEBS,
COPAIBA PURE,
COPAIBA, CUBEBS AND CARB. OF IRON,
VENICE TURPENTINE, NORWAY TAR, PURIFIED,
CUBEBS AND TURPENTINE,
CUBEBS AND TANNATE OF IRON,
CUBEBS AND ALUM,
CUBEBS PURE,
COPAIBA AND MATICO,
COPAIBA, IRON AND OIL OF SANDAL,
COPAIBA AND OIL OF SANDAL,
COPAIBA, PEPSIN AND BISMUTH,
COPAIBA AND TAR,
COPAIBA, CUBEBS AND OIL OF SANDAL.

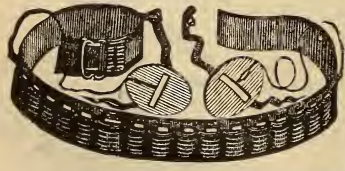
DR. McINTOSH'S ELECTRIC OR GALVANIC BELT.



This Belt is a perfect Galvanic Battery, composed of sixteen cells, placed in pockets on a belt. Each cell is made of hard vulcanized rubber, lined with copper, which constitutes the negative plate. The rubber coating perfectly insulates each cell. The positive plates are of zinc, wrapped in a porous material to absorb the exciting fluid, preventing contact with the copper, and permitting the current to pass from the copper to the zinc. The cells are charged without wetting the belt.

A current selector is so arranged that one or more cells can be used at pleasure. The electrodes are covered similar to ordinary battery electrodes, and connected with the cells by connecting cords. By this arrangement, a current from the belt can be applied to any part of the body. Physicians who have used this belt in their practice do not hesitate to recommend it to the profession.

Our pamphlet on "Medical Electricity," containing a full description of the belt and diseases, with manner of treatment, sent free on application. Address

Registered COSMOLINE Trade Mark.

Unguentum Petrolei

Prepared by E.F.Houghton & Co. Philadelphia, U.S.A.

Put up in 1, 5, 10, 25, 50, and 100-lb. cans. Samples furnished on application. The post-office laws forbid anything of an oleaginous nature being sent through the mail.

In chemical composition, Cosmoline [Unguentum Petrolei] is an oleaginous hydrocarbon, corresponding to the heavy petroleum oils, and containing a large amount of the paraffines and olefines of the formulæ $C_{16}H_{34}$ and $C_{16}H_{32}$. It contains but a small percentage of the paraffines and olefines, corresponding to the formulæ C_7H_{16} and C_7H_{14}, respectively, and the offensive and irritating properties of the crude oil have been carefully removed. In the process of purification, no acids, alkalies, or other chemicals are employed, and no injurious additions of any kind are made to the natural product. The result is a semi-solid, translucent substance, with a faint odor and unctuous feel.

Cosmoline [Unguentum Petrolei] melts at about 100° Fah. (38° Cent.); and boils at about 625° Fah. (329° Cent.); its specific gravity is about 0.875 at 60° Fah.

As it contains no oxydizable or organic matter capable of change by putrefaction or fermentation, and is absolutely without affinity for moisture, it offers to the profession an admirable unguent, which can never decompose, ferment, or become rancid in any climate or temperature.

291 MADISON AVENUE, NEW YORK, February 26th 1878.

I have examined the preparations of Cosmoline as manufactured by E. F. Houghton & Co., Philadelphia, and believe them well adapted to the purposes for which they are designed. As lubricants, and as the bases of simple or medicated ointments, they have a decided advantage over the fixed oils and fatty substances in ordinary use, in that they do not become rancid, and do not acquire irritating qualities from atmospheric exposure. ALFRED C. POST, M.D., LL.D.,
Emeritus Professor of Clinical Surgery in the University of New York, Visiting Surgeon to Presbyterian Hospital, etc.

PHILADELPHIA, July 10, 1880.

MESSRS. E. F. HOUGHTON & CO.:

I have for a number of years made extensive use of Cosmoline [Unguentum Petrolei] and consider it a most valuable article for surgical purposes. Either as a dressing by itself, or as a vehicle for the application of medicaments, it is greatly superior to lard or other fatty matters, especially by reason of its non-liability to change by time or temperature.

Yours truly,
JOHN H. PACKARD, M.D.
1031 WALNUT ST., PHILADELPHIA.

MESSRS. E. F. HOUGHTON & CO.:

I have used extensively Cosmoline [Unguentum Petrolei] both in Dispensary and private practice, with very great satisfaction. As a vehicle in making ointments it is invaluable, and far superior to lard, for the reason that it will not become rancid or undergo chemical change like the latter, when exposed to the atmosphere. I cannot too highly commend it as an application in various skin diseases.

Yours truly, JOHN V. SHOEMAKER, A.M., M.D.,
Physician to the Pennsylvania Free Dispensary for Skin Diseases

208 WEST 34TH ST., NEW YORK.

MESSRS. E. F. HOUGHTON & CO.:

Gents:—I fully appreciate the value of your Cosmoline, or Unguentum Petrolei, and prescribe it frequently in ointments. Fluid Cosmoline I have used constantly for several years, as a lubricant of urethral sounds. It is the cleanest oil I know of for this purpose.

Yours truly, GEO. HENRY FOX.

NEW MEDICINAL AGENTS

WORTHY OF THE

Attention of Therapeutists.

JAMAICA DOGWOOD.

[Piscidia Erythrina.]

This remedy, introduced by us to the profession of the United States, has already largely taken the place of opium, as an anodyne and narcotic. It obtunds sensibility, and allays nervous irritability, inducing sleep, without "locking up the secretions" or producing the constipation and gastric disturbance following the use of opium. It has been submitted to a sufficient physiological test, and accorded a sufficient therapeutic trial to test these claims, and it may now be regarded as a remedy of fixed and decided therapeutic properties.

QUEBRACHO.

[Aspidosperma Quebracho Blanco.]

The experiments of Penzoldt, of Germany, justified that observer in speaking of quebracho as an article supplying a place in medicine hitherto unoccupied, and making it, literally, a "long felt want." He found it to increase the depth of inspiration, and to facilitate oxygenation of the blood in dyspnœa from whatever cause. It is thus a desideratum in the treatment of emphysema, capillary bronchitis, pneumonia, asthma, etc. Its use in the hands of physicians in this country has corroborated this estimate of its properties.

EXTRACT OF DUBOISIA.

[Duboisia Myoporoides.]

Duboisia, the new mydriatic, has been found to be more prompt than atropia as a dilator of the pupil and as a paralyzer of the muscles of accommodation, while at the same time it is less prone to cause the conjunctivitis, cerebral disturbance, dryness of the throat, etc., so intimately connected with the use of the belladonna alkaloid. It is now largely employed by ophthalmologists, and bids fair to almost, if not entirely, supplant atropia in eye practice.

We are in receipt of a large direct importation of this rare drug.

MANACA.

[Franciscea Uniflora.]

This drug, although long officinal in the Brazilian Dispensatories, was unknown to the profession of this country until introduced by us, a little over a year ago. It is highly esteemed in Brazil as an alterative, and in the damp, shady forests of that country, where rheumatism is very prevalent, it is regarded as a valuable anti-rheumatic, particularly in the chronic and subacute varieties of the affection.

Believing it to be an article of much value in these forms of rheumatism, we ask for it a thorough trial.

TO THOSE DESIRING FULLER INFORMATION ON THE ABOVE DRUGS,

We will furnish Descriptive Circulars Free, on application.

PARKE, DAVIS & CO., Detroit, Mich.,

MANUFACTURING CHEMISTS.

McKESSON & ROBBINS'

BI-MURIATE QUINIA WITH UREA

(Quinia Bi-Muriatica Carbamidata),

THE MOST SOLUBLE SALT OF QUINIA.

Specially Adapted to Hypodermic Use.

Will completely dissolve in double its weight of cold water, or in its own weight of boiling distilled water, which is preferable.

This Salt may be procured through retail druggists, from McKesson & Robbins, in original vials of 1, 2 and 4 grammes, and their solution, containing 50 per cent. of the Salt, in $\frac{1}{3}$ oz. and one ounce vials.

ALOIN AND STRYCHNIA GRANULES

LAXATIVE AND TONIC.

INVALUABLE IN CHRONIC CONSTIPATION.

Prescribed with the most satisfactory results in cases in which, from infirmity or morbid condition, the tone of the system is impaired, and in which the administration of more violent purgatives might be attended with danger.

Write McKesson & Robbins on your Prescriptions and Orders.

McKESSON & ROBBINS, Manufacturing Chemists,

91 FULTON STREET, NEW YORK.

1297-1348eow.

SCOTT'S EMULSION

PURE COD LIVER OIL

WITH

HYPOPHOSPHITES OF LIME AND SODA

PERFECT, PERMANENT, PALATABLE.

The well-known virtues of this preparation, that has now been before the profession for a number of years, hardly requires comment from us. But we desire, for the information of those whose attention may not have been directed to it, to present the following facts:—

FIRST.—We use in the manufacture of our Emulsion, Cod-Liver Oil that is prepared expressly for us, and is strictly pure, which is the most important consideration to the Physician.

SECOND.—By our process of Emulsifying, we so thoroughly incorporate the Oil with the Hypophosphite Salts, that the mixture is perfectly homogeneous and remains in that condition, without the slightest separation or change, for years, unless exposed to the air or intense heat.

THIRD.—It is so palatable and easy of digestion that it can be administered to children and persons with most sensitive stomachs without the slightest repugnance, and we are confident, from the results that have been obtained in the use of this preparation, and the flattering testimonials we have received from prominent physicians, that the proper manner of administering Cod-Liver Oil, even to patients that can tolerate the crude oil, is in the form of a palatable and easily digested Emulsion. There are some in the profession who adhere to the use of the plain oil, but, with all due deference, if they will make a trial of our Emulsion, we believe their prejudices will be removed, and they will find it much more beneficial to their patients.

With all the numerous Foods, Cereals and so-called Constructive Agents of uncertain value that are being introduced the physician must sometimes be at a loss to know what to prescribe. But we are assured that the profession will bear us out in the statement that in all pulmonary troubles, especially where the lung tissue is involved, in Scrofulous children and in Anæmic women of consumptive tendencies, as well as in general nervous debility, our combination will produce results, if properly administered, unequaled by any other preparation, and most satisfactory to the physician and patient. We most respectfully ask those who have never prescribed or seen its results to give it a trial, and if you desire to make a personal inspection of it we will be pleased to send a sample by express, prepaid.

FORMULA.—50 per cent. of pure Cod-Liver Oil. 6 grains of the Hypophosphite of Lime, and 3 grains of the Hypophosphite of Soda to a fluid ounce. Emulsified with mucilage and glycerine.

BUCKTHORN CORDIAL

RHAMNUS FRANGULA.

We desire to call the attention of the profession to this preparation, and although they may be familiar with its name and general characteristics, yet, on account of there not being a preparation in the market of uniform strength and quality, may not have a proper appreciation of its value. As far as our experience goes in the various tests made by our medical friends, we can present the German bark, *Rhamnus Frangula*, in the form of our *Buckthorn Cordial*, with perfect confidence that we will secure the encouragement and assistance of the profession in promoting its growth and giving it the position it deserves as a medicine. It seems to be almost a specific for Habitual Constipation and Indigestion, acting mildly but efficiently, without causing the nausea that usually accompanies the use of a cathartic. At the same time producing a tonic effect upon the bowels, so that as the patient recovers, the dose may be gradually decreased until a normal condition takes place. We use great care in the selection of the Bark, as we find it necessary that it should be of the proper age and condition, and carefully exhausted, to secure its true active principle.

We combine it with aromatics in such a manner as to make a pleasant cordial, acceptable to the most sensitive stomach. We shall be very glad to furnish samples free to all physicians, upon application, giving instructions for its use, etc. Prepared by SCOTT & BOWNE

SCOTT & BOWNE'S PALATABLE CASTOR OIL

IN AN EMULSION.

We respectfully submit the above elegant preparation to the notice of the profession, and desire them to favor us with a trial. So far as it has been tested, it has met with their entire approval; and we believe it is not only destined to take the place of the crude oil, but to be used much more extensively. In our process of emulsifying, it is not only *permanent* and *palatable*, but is deprived entirely of its griping properties. The inestimable nature of Castor Oil as a laxative and cathartic, in the varied intestinal derangements of children, and in Diarrhœa, Colds, etc., is accepted by all, and in the available form in which we present it, in a perfectly palatable mixture, deprived entirely of its nauseous, sickening properties, and kindly received by the most sensitive stomach, it must occupy the exalted position it deserves as a medicine. In its administration, it requires very little more than the crude oil, but the experience of the physician will soon guide him in its use. It is put up in 4 oz. bottles, that sell for 25 cents; also in quarts for physicians to prescribe as desired. Samples will be furnished free on application. FORMULA:—*50 per cent. of Pure Cold Pressed Castor Oil, 15 per cent. of Chemically Pure Glycerine.* Prepared by

1305-1357eow

SCOTT & BOWNE, Manufacturing Chemists, 108 and 110 Wooster St., N. Y.

FOR PHYSICIANS' USE ONLY.

SVAPNIA

OR

PURIFIED OPIUM.

CONTAINS THE

ANODYNE AND SOPORIFIC

ALKALOIDS

CODEIA,

NARCEIA

AND

MORPHIA.

EXCLUDES THE

POISONOUS & CONVULSIVE

ALKALOIDS

THEBAINE,

NARCOTINE

AND

PAPAVERINE.

DOSE, THE SAME AS OPIUM.

This article is not intended for popular use, but only on prescription of the profession. It is to take the place of Opium in cases where that drug acts injuriously.

Dr. John Harley, of London, in his "Old Vegetable Neurotics," details a large number of experiments upon the human and animal system, with six of what he considers the narcotic alkaloids. He concludes that although all six possess both narcotic and hypnotic properties, yet these are so varied in degree and force as to make their effects, when exhibited singly, very distinct from those following their exhibition in combination.

Taking the experience of practical physicians with Dr. Harley's results, as a basis, we would group them in the following order:

First Group.	Second Group.
Anodyne and Hypnotic Elements.	Narcotic and Convulsive Elements.
1. Morphia.	1. Thebain.
2. Narceia.	2. Cryptopin.
3. Codeia.	3. Papaverin.

Now SVAPNIA *is a distinctive name* given *to the first group, representing* the ANODYNE and HYPNOTIC ELEMENTS; *the second group, or the narcotic and convulsive* elements *of Opium being eliminated;* and is *not*, therefore, a simple principle, or a single constituent of Opium.

The relative values of each being known, we can select and utilize those that are valuable, and reject those known to be deleterious and inert.

This is what we claim, and all we claim for SVAPNIA. *It can be relied upon and given in all cases where Opium or Morphia is indicated, with equally good effects;* and in addition to this, there will be found in the practice of every physician cases occurring almost every day, in which idiosyncrasy and peculiar states and diseases of the brain debar us from the use of Opium and Morphia, but where Svapnia can be exhibited with the happiest results.

In SVAPNIA there is retained all the Morphia and the greater part of the Codeia and Narceia, but combined with the native acids of Opium, meconic and thebolactic, in such a manner as to render those constituents soluble and active.

SVAPNIA IS UNIFORM IN ITS PROPORTIONS, and is prepared to conform to a standard of Opium representing ten per cent. of Morphia. This is done by a simple proportion of the neutral excipient, after determining the actual amount of the alkaloids obtained from the Opium used.

We may safely affirm that the danger of bad results is much diminished by a resort to that preparation of Opium in which the poisonous elements are eliminated, and the anodyne elements in such a state of combination as to reduce their toxic and enhance their hygienic effects, such as has been PROVED TO BE THE CASE WITH SVAPNIA.

TO PHYSICIANS.

HORSFORD'S ACID PHOSPHATE

[LIQUID]

Is a preparation of the phosphates of lime, magnesia, potash and iron with free phosphoric acid ; and extended experience proves that it is in such form as to be readily assimilated by the system.

It is not a secret or quack medicine, but is made in accordance with well-known scientific principles, under the personal supervision of the well-known Prof. Horsford, who has made the subject of the phosphates a life study.

It should not be confounded with the dilute phosphoric acid of the pharmacopœia, or with any acid phosphate compounded in the laboratory.

Dilute phosphoric acid is simply phosphoric acid and water, without any base.

In this preparation of Acid Phosphate a portion of the phosphoric acid is combined with lime, iron, potash, etc. It is not made by compounding these articles together in the laboratory, but is obtained in the form in which it exists in the animal system.

It has been noted by some physicians that while in certain cases dilute phosphoric acid interfered with digestion, this preparation of Acid Phosphate not only caused no trouble with the digestive organs, but promoted, in a marked degree, their healthful action.

It is well understood that "phosphorus," as such, is not found in the human body, but that phosphoric acid in combination with lime, iron, and other bases, *i. e.*, the phosphates, is found in the bones, blood, brain and muscles. In the brain is also found phosphoric acid not combined with any base. It is the phosphates, and not the simple phosphoric acid, that is found in the urine after severe mental and physical exertion, or during wasting disease. Thus the researches of chemists and physiologists would seem to prove that it is a phosphate, with an excess of phosphoric acid, *i. e.*, an acid phosphate, that will better meet the requirements of the system than either phosphoric acid or a simple phosphate, and this theory has been proven beyond a doubt by practice, in a great variety of cases.

We have received a very large number of letters from physicians of the highest standing, in all parts of the country, relating their experience with the Acid Phosphate, and speaking of it in high terms of commendation.

Pamphlet giving further details mailed free, on application to the manufacturers.

Physicians who have not used Horsford's Acid Phosphate, and who wish to test it, will be furnished with a sample without expense, except express charges.

RUMFORD CHEMICAL WORKS,

PROVIDENCE, R. I.

An experience of more than a quarter of a century convinces us that sugar, properly applied, is the only correct coating for a pill.

Physicians should be careful to specify Warner & Co., when prescribing or ordering.

Special attention is called to the following selected Recipes prepared for Physicians' Prescriptions.

PIL: PHOSPHORI COMP: (WARNER & CO.) ℞. Phosphori, - - 1-100 gr. Ext. Nuc. Vom. - ¼ gr.

THERAPEUTICS.—As a nerve tonic and stimulant, this form of pill is well adapted for such nervous disorders as are associated with impaired nutrition and spinal debility, increasing the appetite and stimulating digestion. The practical value of Phosphorus as a therapeutic agent, and its applicability to the cure of disease, and especially in those varied disordered conditions consequent upon OVERWORK, which are characteristic of modern civilization.

Pil. Phosphori Comp. may be taken, one or two pills three times daily, after eating.

Price, per 100, $1.50.

PIL: IODOFORM ET FERRI. (WARNER & CO.) ℞. Iodoform, - - 1 gr. Ferri Redacti, - 1¼ gr.

THERAPEUTICS.—A powerful general tonic and alterative, valuable as a remedy in Anæmia, Scrofula, Neuralgia, Chlorosis, Rheumatism, etc.

Pil. Iodoform et Ferri may be given in doses of from one to two pills, as occasion may require.

Price, per 100, $2.00.

PIL: DIGESTIVA. (WARNER & CO.) ℞. Pepsin Conc't, 1 gr. Gingerine, 1-16 gr. Pv. Nuc. Vom., ¼ gr. Sulphur, ⅛ gr.

THERAPEUTICS.—Useful in relieving various forms of Dyspepsia and Indigestion, and of permanent benefit in cases of enfeebled digestion, where the gastric juices are not properly secreted. It is also a gentle laxative and excellent dinner pill, may be taken one after dinner, or one before each meal, three times daily.

Price, per 100, 75 cts.

PIL: CALCIUM SULPHIDE. (WARNER & CO.) 1-10, ¼, ½ & 1 gr. each.

THERAPEUTICS.—Extremely useful in the treatment of acne, scrofula and cutaneous diseases.

Sulphide of Calcium is usually administered in doses of from 1-10 to ¼ grain four times daily, gradually increasing the dose to one grain six times daily, or according to the progress or severity of the case.

Price, per 100, 1-10 gr. .50; 1-4 gr. .60; 1-2 gr. .75; 1 gr. $1.00.

WARNER & CO.'S PILLS MAY BE OBTAINED FROM ALL DRUGGISTS, OR BY MAIL, ON RECEIPT OF PRICE.

SAVORY & MOORE beg to call the attention of the Profession to some of their Special Preparations, the purity and uniform strength of which are Guaranteed.

PANCREATIC EMULSION,

Prepared in accordance with the direction of the Physician who introduced this purely

MEDICINAL FOOD FOR CONSUMPTION AND WASTING DISEASES.

Pancreatic Emulsion will always take precedence of Cod-Liver Oil, by reason of its introducing the STABLE SOLID FATS INTO THE SYSTEM, instead of the evanescent fluid fats or oils.

Neither Cod-Liver Oil nor EMULSIONS of COD-LIVER OIL can supply the kind of fat necessary for sound and vigorous human life. In addition to this, all the Oily Emulsions are liable to rancidity, and most of them are highly objectionable in consequence of the SAPONIFICATION and ULTIMATE PUTREFACTION, produced by the chemical agents used instead of Pancreatic Juice.

Pancreatic Emulsion (properly so-called), is THE NECESSARY FOOD OF THE CONSUMPTIVE, and the most reliable form of nutriment for counteracting the tendency to Phthisis and other wasting diseases. It presents to the lacteals fat, in essentially the same condition for assimilation and absorption as in a vigorous human frame, and THE AGENT of the important change is THE NATURAL SECRETION of the PANCREAS.

Pancreatic Emulsion may therefore be regarded as Chyle obtained by nature's own process. In certain cases both Cod-Liver Oil and Pancreatic Emulsion are required—one to supply the blood with oil or liquid fat, the other with the more stable solid fats; but it cannot be too strongly urged that both PANCREATIC EMULSION and Cod-Liver Oil are *not to be regarded as Medicines, but as articles of diet*, without which patients, with their defect of health, will as surely starve as healthy persons would if deprived of the most nutritive part of their food

Pancreatized (Digestive) Cod-Liver Oil. By Pancreatized Cod-Liver Oil, the active digestive principle of the Pancreatic Juice is imparted to it, which renders it in a highly favorable condition for rapid and complete digestion and assimilation, preventing nausea, and largely increasing the beneficial properties of the Oil.

Pancreatine effects the digestion and assimilation of Cod-Liver Oil and Fat, as well as Food generally. This palatable and popular remedy is therefore invaluable to PATIENTS WHO ARE UNABLE TO DIGEST COD-LIVER OIL, and who are thus deprived of its nourishing and invigorating properties.

Pancreatine Wine. An excellent vehicle for taking Cod-Liver Oil and promoting the digestion of it.

Tins, 1*s*, 2*s*, 5*s*, 10*s*.

SAVORY & MOORE, 143 New Bond Street, London

1297-1348 **Agents for America, E. FOUGERA & CO., NEW YORK.**

PNEUMATIC ASPIRATION,

AFTER THE MANNER OF DIEULAFOY.

"It is always possible, owing to Aspiration, to search for a fluid collection without any danger, whatever may be its seat or its nature."

"I have thrust these needles into almost every part of the body; into the Joints, the Liver, the Spleen, the Bladder, the Intestines, the Lungs and the Meninges; and I can affirm, and a great number of observers affirm with me, that we have never seen consecutive accidents."—*Dieulafoy on Pneumatic Aspiration*, pp. 21, 24.

We invite the attention of the Medical Profession to this New Apparatus for Aspiration, constructed upon the general plan of Potain's modification of Dieulafoy's Aspirator, but containing the following improvements and inventions of our own:—

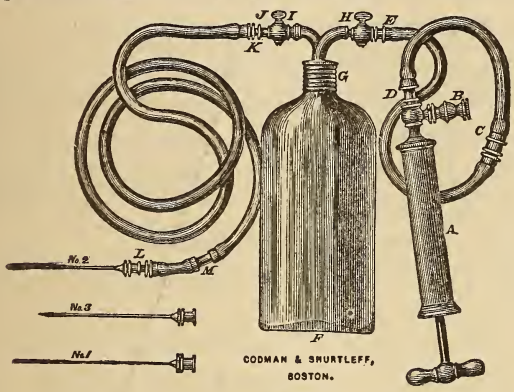

Fig. 68.

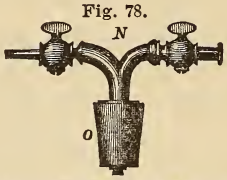
Fig. 77.

Fig. 78.



The Stopper and Cocks supplied with Apparatus No. 2.

1st. Means of changing the pump from an exhaust to a force-pump, and *vice versa*, thereby enabling the operator not only to draw an abnormal fluid, but to inject the cavity through the tubes and needle of the apparatus with one adapted to induce healthy action.—*See Dieulafoy on Aspiration*, pp. 276, 278.

2d. The employment, in our apparatus No. 1, of a metal Screw Cap, fitting the neck of the receiver supplied with this apparatus so securely that it cannot be forced from its place by condensed air while injecting, or accidentally removed while the receiver is in a state of vacuum for aspiration

3d. The substitution, for the ordinary oiled silk valves of other apparatus, of a kind indestructible, both in form and material.

4th. A simple and comparatively inexpensive attachment for evacuating the contents of the stomach, equal, if not superior, to any in use hitherto.

Commendations bestowed upon our Aspirators, by physicians familiar with the latest European and American ones, lead us to believe that, in some important particulars, at least, they are superior to any.

In his work on Pneumatic Aspiration, Dieulafoy shows the harmlessness of the Aspiratory puncture, and its great superiority to the Exploring Trocar as a means of accurate diagnosis in all collections of Pathological Fluids. It has been used with unprecedented success in the Retention of Urine, Reduction of Strangulated Hernia, in Ascites, Hydrothorax, Empyema, Pneumothorax, Effusions into the Pericardium, Serous, Purulent and Hematic Effusions of the Knee, Hydrocele, Hydatid Cysts, Abscesses of the Liver, and in various other Pathological Lesions.

PRICES OF APPARATUS.

No. 1. Air Pump—exhaust or condensing as described; 16 oz. receiver, of strong glass, with screw-cap; three steel, gold plated Aspiratory Needles, together with the necessary tubes, stop-cocks, etc., as shown in Fig. 77, fitted in a neat case, accompanied with printed directions $16.00. Postage 64 cents.

No. 2. The same, without receiver, and with rubber stopper (see Fig. 78) to fit almost any bottle of quart capacity, or less, instead of screw-cap arrangement, also with printed directions $14.00. Postage 32 cents.

No. 3. Dieulafoy's Notched Aspirator, Nickel-plated, with two Needles, Tubes, etc., in case.....$14 00

No. 4. Stomach Attachment, as described, adapted to pump accompanying Nos. 1 and 2, additional $6.00. Postage 22 cents.

The foregoing are the product of our own factory, and are warranted in every respect.

Also, **Dieulafoy on Pneumatic Aspiration,** post-paid, by mail, on receipt of..... 3 40

☞ *Full description on application.*

An illustrated Catalogue of Surgical Instruments, also a New Pamphlet on Atomization of Liquids, with description of Improved Apparatus and Formulæ of Remedies successfully employed, will be forwarded, post-paid, on application.

☞ In corresponding with Advertisers please mention the MEDICAL AND SURGICAL REPORTER.

GRIMAULT & CO.'S PHARMACEUTICAL PRODUCTS.

Prepared with scrupulous care, under the immediate supervision of a practical chemist, at their model laboratory at Neuilly, near Paris.

OFFICES AND SALESROOMS, No. 8 RUE VIVIENNE, PARIS.

The attention of the medical profession is directed to a few leading products:

DUSART'S SYRUP AND WINE OF LACTO-PHOSPHATE OF LIME.

In these preparations phosphate of lime is presented in the combination in which it exists in the stomach, after it has been acted upon by the gastric fluid. They are especially adapted, and have been used with great success in *Rachitic* and *Scrofulous Affections* in children; the *Languor* caused by too rapid a growth and development in youth; the *Debility* attendant upon old age; *Weakness in Females*, caused by the nursing of children; *Slow Convalescence*; certain forms of dyspepsia, caused by the low vitality of the system. In cases of *Fractures*, their use has been found to cause a more *rapid formation of the Callus*, and in cases of wounds, the *cicatrization has been more prompt*, while its administration to children facilitates the general developement, and especially the *the process of Ossification and Dentition*.

Dusart's work on the "Physiological and Therapeutic Action of Phosphate of Lime" will be sent free, on application to Messrs. E. FOUGERA & Co.

LEBAIGUE'S DIALYSED IRON, or Pure Peroxide of Iron,

IN SOLUTION, WITHOUT THE AID OF ACIDS OR OTHER SOLVENTS.

It is nearly tasteless, does not blacken the teeth, is very readily absorbed, will not constipate or cause any disturbance of the digestive apparatus, and is tolerated by persons who could not support any other preparation of iron. It is offered in the form of a *solution*, which is generally preferred; or of an *elixir*, when a slight stimulant is desired.

DEFRESNE'S PILLS AND ELIXIR OF PANCREATINE.

Pancreatine is a very important remedy in a great many cases of *indigestion, atony* of the digestive organs, and *dyspepsia*, where pepsine and other remedies have failed. It is especially serviceable as a help for the digestion of fats. The preparations especially recommended are: *Defresne's Pills*—dose, two to four pills before each meal; the *Elixir* and *Wine*—dose, one or two tablespoonfuls after meals.

GRIMAULT & CO.'S MATICO CAPSULES.

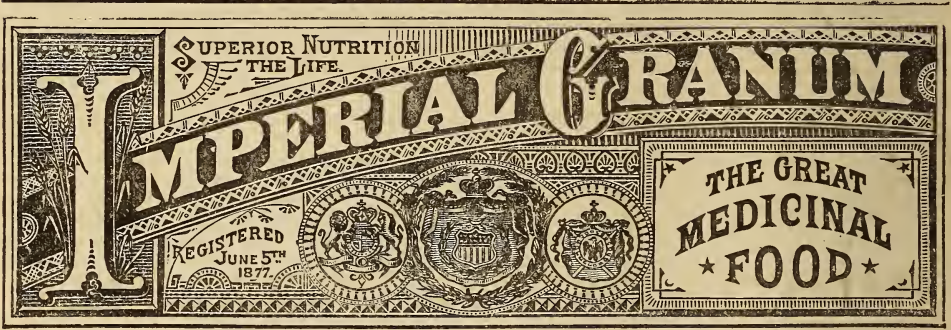
A preparation of the leaves of Matico, of more certain effect than most of the medicines recommended for the same class of diseases. The capsules contain the essential oil of Matico, combined with the balsam of copaiba, and do not cause any unpleasant eructations.

JULIEN'S LAXATIVE FRUIT.

A pleasant confection for constipation, and all diseases resulting therefrom, as *headache, hemorrhoids, cerebral congestions, biliousness.*

The above and all other preparations of *Messrs. Grimault & Co.*, and information in regard to the same, may be obtained at all times from

1294-1319eow ***Messrs. E. FOUGERA & CO., Importing Pharmacists, New York.***



THE INVENTION OF AN EMINENT FRENCH CHEMIST.

The Salvator for Invalids and the Aged. An Incomparable Aliment for the Growth and Protection of Infants and Children. A Superior Nutritive in Continued Fevers, and a Reliable Remedial Agent in all Diseases of the Stomach and Intestines.

TO PHYSICIANS AND THE PUBLIC.

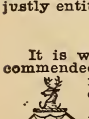
THIS preparation is, as advertised, principally the GLUTEN derived, by chemical process, from VERY SUPERIOR GROWTHS OF WHEAT, and should not be confounded with burnt or boiled Flour, in which the GLUTEN or sanative qualities are destroyed or made medicinally inert, nor with Crushed Wheat, or finely ground Wheaten Grits, styled "Medicinal Food," and sold under various names, in which the starch and impurities contained in wheat are retained in larger quantity.

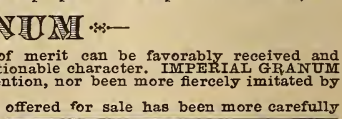
By Dubisson's formula, the starch, impurities and soluble matter found in the Wheat Cereal are effectually excluded, the GLUTEN only retained, which is condensed, granulated and prepared to keep in all climates, and justly entitled

—IMPERIAL GRANUM—

It is well known, and should be fairly considered, that nothing of merit can be favorably received and commended by the public without being followed by imitations of a questionable character. IMPERIAL GRANUM is not the exception, for no preparation has attracted more attention, nor been more fiercely imitated by competition, even to wording and shipping order.

Whilst again it can be truly said that no preparation ever offered for sale has been more carefully prepared and thoroughly tested, nor has met with a more welcome reception and universal approval, or afforded more relief to invalids or to young and suffering children and aged persons. This has been confirmed by thousands of testimonials from Chemists, Physicians, Heads of Families and the Press.





Respectfully,

E. HEATON.

1315-1366eow

MURDOCK LIQUID FOOD CO., Boston,

THE ONLY MANUFACTURERS OF

RAW FOOD EXTRACTS IN THE WORLD.

It can be retained by the weakest stomach, when all other food extracts, and even water, is rejected.

Nutritious food, if raw, condensed, and free from insoluble matter, will cure chronic diseases, as it will make blood faster than all preparations or food, and new blood will cleanse the system.

MURDOCK'S LIQUID FOOD is made from Beef, Mutton and Fruits; contains corpuscles; is 12½ per cent. soluble albumen, and free from insoluble matter, drugs, minerals, salts and acids, and can be retained by the stomach when so weak as to refuse food.

Ask your Druggists, or send to us, for Essays read before the American Medical Association, at Richmond, Va., May 6, 1881, on the value of Raw Food Extracts, by Geo. R. Shepherd, of Hartford, Conn., and other Essays and Testimonials from Medical Journals and Physicians that have used Liquid Food, in cases of Consumption, Scrofula, Nervous and General Debility, Dyspepsia, acute and chronic, Constipation, Diphtheria, Intemperance, Cholera Infantum, Infantile Diarrhœa, Post partum Hemorrhage, Purpura Hemorrhagica with Waxy Liver, Pelvic Cellulitis, Malarial and other Fevers, Chronic Strumous Arthritis, Sclerosis of the Spinal Cord, Senile Gangrene, Perinephritic Abscess, and other diseases of malnutrition. No cases of Cholera Infantum have occurred where it has been used daily, and no lives have been lost from Cholera Infantum where it has been prescribed by a physician. Excellent for Eczema, Diabetes, Rheumatism and Neuralgia.

At the request of any physician who has not tried our Extracts, and would like to, we will deliver sample bottles to the Express in Boston. To any Medical Society wishing to investigate the value of our Extracts, through a committee, hospital, or individual members, we will furnish a supply of Liquid Food equal to a six-ounce bottle for every member present at the time of action. We are induced to do this, knowing that our Extracts are saving life, and that an increased use of them, which will follow after a trial of them, will be the means of saving more lives daily. (*We ask no testimonials of results obtained.*) Raw Extracts are available where cooked ones are not, or if available, contain only one-third as much nourishment.

Liquid Food is in general use at all Hospitals, Infant and Insane Asylums, and Washingtonian Homes, U. S. Navy Hospitals, and by all physicians that have tried it.

If not kept by your Druggist, can be obtained in any of the commercial cities. In Philadelphia, by Johnston, Holloway & Co., Boericke & Tafel; in Pittsburg, by A. Kelly & Co.; in Baltimore, by Thomsen & Wirth; or you can order direct and we will pay express. 1 oz., 15 cents; 6 oz., 55 cents; 12 oz., $1.00.

See Philadelphia MEDICAL AND SURGICAL REPORTER, *Boston Medical and Surgical Journal*, and *New York Medical Record*, for chronic cases that were at our quarterly reception to physicians, in Boston, December 30, 1881—cases of Eczema, Rheumatism, Neuralgia, Diabetes, Consumption, and other diseases. If all were not restored to perfect health, they were gaining daily, and able to enjoy life and attend to their business. 1297-1348

MURDOCK LIQUID FOOD CO., BOSTON.

It is the only food that will relieve the Consumptive from Hunger.

It will make Blood faster than all preparations known.

PARIS, 1867. 1868. 1873, VIENNA.

Prize Medal.

Silver Medal.

Medal of Merit.

BOUDAULT'S PEPSINE

IN POWDER, also WINE, ELIXIR, SYRUP, PILLS, AND LOZENGES OF PEPSINE.

Since the introduction of Pepsine by Boudault in 1854, **BOUDAULT'S PEPSINE HAS BEEN, AND IS STILL CONSIDERED, THE MOST RELIABLE,** as is attested by the awards it has received at the Exhibitions of 1867, 1868, 1872, 1873, and in 1876 at the Centennial Exposition in Philadelphia.

IT IS THE ONLY PEPSINE USED IN THE PARIS HOSPITALS.

Careful tests will enable any one to satisfy himself that **BOUDAULT'S PEPSINE HAS A DIGESTIVE POWER AT LEAST DOUBLE** that of the best Pepsines in the market, and that it is really the cheapest.

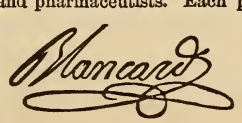
It is Sold in 1 ounce, 8 ounce, and 16 ounce Bottles.

Beware of so-called French Pepsines bearing fictitious names, and prescribe Boudault's only.

BLANCARD'S PILLS

OF UNCHANGEABLE IODIDE OF IRON.

Blancard's Pills of Iodide of Iron are so scrupulously prepared, and so well made, that none other have acquired a so well deserved favor among physicians and pharmaceutists. Each pill, containing one grain of proto-iodide of iron, is covered with finely pulverized iron, and covered with balsam of tolu. Dose, two to six pills a day. The genuine have a *reactive silver seal* attached to the lower part of the cork, and a green label on the wrapper, bearing the fac-simile of the signature of



Pharmacien, No. 40 Rue Bonaparte, Paris

without which none are genuine.

BEWARE OF IMITATIONS.

E. FOUGERA & CO., AGENTS, NEW YORK. 1297 tf.

FELLOWS' HYPO-PHOS-PHITES

CONTAINS

THE ESSENTIAL ELEMENTS to the Animal Organization—Potash and Lime;

The **OXYDIZING AGENTS**—Iron and Manganese;

The **TONICS**— Quinine and Strychnine;

And the **VITALIZING CONSTITUENT**—Phosphorus,

Combined in the form of a Syrup, with *slight alkaline reaction.*

IT DIFFERS IN EFFECT FROM ALL OTHERS, being pleasant to taste, acceptable to the stomach, and harmless under prolonged use.

IT HAS SUSTAINED A HIGH REPUTATION, in America and England, for efficiency in the treatment of Pulmonary Tuberculosis, Chronic Bronchitis, and other affections of the respiratory organs, and is employed also in various nervous and debilitating diseases, with success.

ITS CURATIVE PROPERTIES are largely attributable to Stimulant, Tonic and Nutritive qualities, whereby the various organic functions are recruited.

IN CASES where innervating constitutional treatment is applied, and tonic treatment is desirable, this preparation will be found to act with safety and satisfaction.

ITS ACTION IS PROMPT, stimulating the appetite and the digestion; it promotes assimilation, and enters directly into the circulation with the food products.

THE PRESCRIBED DOSE produces a feeling of buoyancy, removing depression or melancholy, and hence is of great value in the treatment of **mental and nervous affections.**

From its exerting a double tonic effect, and influencing a healthy flow of the secretions, its use is indicated in a wide range of diseases.

Each Bottle of Fellows' Hypophosphites contains 128 Doses.

PREPARED BY

JAMES I. FELLOWS, Chemist,

48 VESEY STREET, NEW YORK.

Circulars and Samples sent to Physicians on application.

☞ **SPECIAL TO PHYSICIANS.**—**ONE** large bottle, containing fifteen ounces (which usually sells for $1.50) will be sent upon receipt of **Fifty Cents** with the application; this will be applied to the prepayment of Expressage, and will afford an opportunity for a thorough test in Chronic Cases of Debility and Nervousness. Express charges prepaid upon all samples.

1304-1355m **FOR SALE BY ALL DRUGGISTS.**

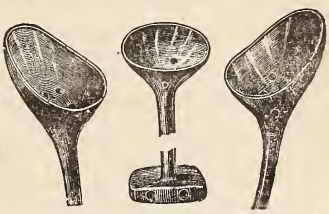
DR. McINTOSH'S
NATURAL UTERINE SUPPORTER.



No instrument has ever been placed before the medical profession which has given such universal satisfaction. The combination is such that the physician is able to meet every indication of Uterine Displacements. Falling Womb, Anteversion, Retroversion and Flexions are overcome by this instrument, where others fail. This is proven by the fact that, since its introduction to the profession it has come into more general use than all other instruments combined.

Among the many reasons which recommend this Supporter to the physician is its self-adjusting qualities. The physician, after applying it, need have no fear that he will be called in haste to remove or readjust it, as is often the case with rings and various pessaries held in position by pressure against the vaginal wall, as the patient can remove it at will, and replace it without assistance.

The Abdominal Supporter is a broad morocco leather belt, with elastic straps to buckle around the hips, with concave front, so shaped as to hold up the abdomen. The Uterine Support is a cup and stem, made of highly polished hard rubber, very light and durable, shaped to fit the neck of the womb, with openings for the secretions to pass out, as shown by the cuts. Cups are made with extended lips, to correct flexions and versions of the womb. The cup and stem is suspended to the belt by two soft elastic rubber tubes, which are fastened to the front of the belt by simple loops, pass down through the stem of the cup and up to the back of the belt. These soft rubber tubes being elastic, adapt themselves to all the varying positions of the body, and perform the service of the ligaments of the womb. The instrument is very comfortable to the patient, can be removed or replaced by her at will, can be worn at all times, will not interfere with nature's necessities, will not corrode, and is lighter than metal. It will answer for all cases of Anteversion, Retroversions, or any Flexions of the womb, and is used by the leading physicians with never-failing success, even in the most difficult cases.

Our Reduced Prices are to Physicians, $6.00; to Patients, $10.00.

Instruments sent by mail, at our risk, on receipt of price, or by Express, C. O. D., with the Express charges for returning the money added.

☞ CAUTION.—Owing to the great sale and popularity of our instrument various and base imitations are sold by unscrupulous parties. In order to get the genuine, it is best to order direct from us.

DR. McINTOSH'S NATURAL UTERINE SUPPORTER CO.,
192 Jackson Street, Chicago, Ill.

Our valuable pamphlet, "Some Practical Facts about Displacements of the Womb," will be sent you free on application. 1281-1332

BEEF PEPTONE,

IN TRANSPARENT GLASSY SCALES,

Containing only the animal or azotized matter of the Beef. Each ounce is equal to 16 ounces of raw beef, easily soluble, and still faster in hot water.

This Beef Peptone is digested from tender, juicy Beef, by the aid of the *Crystal Pepsin,* of my manufacture (Jensen's Crystal Pepsin). Unlike the various BEEF EXTRACTS, this preparation contains all the nutritive constituents of the Beef, in a thoroughly digested state, ready for absorption into the system, while the Beef Extracts are entirely devoid of the chief elements of nutrition, such as the fibrinous, gelatinous and albuminous portions of the Beef, they only consisting of the concentrated saline constituents, with barely a trace of animal matter to keep its consistence. The difficulty so long experienced by the profession throughout the world, in preparing a PEPTONE entirely free from those chemical agents necessary for its manufacture, so as to render it fit for use, is hereby demonstrated to be successfully overcome, as it contains no foreign matter, and will stand the most severely scrutinizing test as to perfectness, also possessing flavor of the Beef, and so palatable as to render it highly agreeable.

Put up in bottles holding One ounce, Eight ounces, and one Pound.

Kept by the Wholesale and Dispensing Druggists in general.

DEPOT—L. WOLFF'S Pharmacy,

Northwest corner Twelfth and Chestnut Streets.

JENSEN'S CRYSTAL PEPSIN,

IN ARTIFICIAL CRYSTALS,

Strictly inodorous and tasteless, and perfectly soluble in water without acid.

THIS PEPSIN, now so popular with the profession, has created an impetus in the consumption of the same and physicians of the highest standing, who before the introduction of this active PEPSIN, with good reason, entirely abandoned the use of PEPSIN, are now the most eager in prescribing JENSEN'S CRYSTAL PEPSIN, whenever it is indicated, and since the knowledge of its great solvent power (gr. j. of it will dissolve the boiled whites from two to three eggs) has been established even among those susceptible to be great doubters it has caused itself to be utilized in many novel ways, by the thinking profession; for instance, in substituting morphia, chloral, etc., as a hypnotic, relieving gastric troubles where the above remedies have been prescribed, creating morphine and chloral habits. In removing diphtheritic patches it is successfully used combined with water, glycerine, and muriatic acid, and the same composition, diluted with more water, as a spray in bronchial troubles, dissolving muco-purulent matter, as well as a spray for same in catarrhal affections.

THIS PEPSIN

Has also been used with success in dissolving and evacuating coagulated blood in the bladder, dispensing with surgical operations in such cases. Many other novel applications could be mentioned, if not in want of space. It is found to be FORTY times stronger than saccharated pepsin. One to three grains is an active dose.

KEPT BY ALL DRUGGISTS.

The above preparations are only manufactured and put up by

CARL L. JENSEN, M.D., PH.G.,

865 North 26th Street, Philadelphia, Pa.

No other Wholesale Agents for this Pepsin are longer engaged, than the Wholesale Druggists throughout the United States.

Instructor in Clinical Medicine.

A. S. PARKER, PH.C.,
Instructor in Pharmacy.

A. M. HAWES, M.D.,
Demonstrator of Anatomy.

This College has for its *collegiate year* two sessions.

Regular Session commences Wednesday, September 7th, 1881, and closes March 1st, 1882.

Recitation Term (optional) commences March 15th, 1882, and closes June 14th, 1882.

Graded Course of three terms, of six months each.

PLAN OF INSTRUCTION.

By *Lectures*, *Recitations* and *Clinics*, together with *practical work* in the Anatomical, Physiological, Chemical and Pharmaceutical Laboratories.

Clinics are held *daily*.

Clinical Work in Hospitals and Dispensaries is given to the Senior Class (see Clinics), in *small sections*, under the charge of a *Clinical Teacher*, in all the departments of Medicine and Surgery.

Three Large Hospitals and *two Dispensaries* afford unlimited material for instruction.

ADMISSION.—Candidates for admission are required to pass a preliminary examination, unless satisfactory documentary evidence can be presented, that is equivalent to the standard adopted. (See Catalogue.)

FEES.

Regular Session.—Matriculation, $5.00; Lecture Tickets, $50.00; Hospital Tickets, $10.00 Examination (final), $25.00.

Recitation Term.—$10.00 for those who have attended Regular Session; all others, $25.00, $15.00 of which will be applied on the next Regular Term.

Board and Rooms can be obtained for $3.00 to $5.00 per week, the average being $4.00.

For Catalogue and other particulars, address

H. O. WALKER, M.D., Secretary,
177 Griswold Street, Detroit, Mich.

1274-tf

CRINON'S HÆMOGLOBIN,

The Albuminoid Ferruginous Principle of Blood.

HÆMOGLOBIN is the only physiological chalybeate. Associated as it is with the phosphates of the blood, it forms the most powerful of tonics, and at the same time a most nourishing food. It is especially useful in cases of *Anæmia, Chlorosis, Cachexias, Exhaustion* caused by excess of work, nervous debility, fatigue resulting from parturition and lactation. It replaces entirely liquid blood, which has been recommended and used with success in *Phthisis* and *wasting away.*

It is offered in two forms: In cachets (wafers), 60 of which are contained in a box; combined with chocolate in small squares, 30 of which are in a box; both forms can be sent by mail.

Prepared by C. CRINON, Paris, Pharmacist of the first class, Laureate of the Hospitals of Paris Samples may be obtained by application to

E. FOUGERA & CO., New York, Agents for the U. S

DOCTOR RABUTEAU'S

(Laureate of the Institute of France.)

DRAGEES, ELIXIR & SYRUP OF IRON.

"The experiments made in the hospitals of Paris have demonstrated that *Dr. Rabuteau's Dragees, Elixir and Syrup* regenerate the red globules of the blood with a rapidity never observed with the use of the other ferruginous preparations. These results have been proved by the various *Compt-Globules.*

"The ferruginous preparations of *Dr. Rabuteau* do not cause any constipation, and are perfectly tolerated by the weakest persons."—*Gazette des Hospitaux.*

Dr. Rabuteau's Elixir is prescribed when some difficulty is experienced in swallowing the Dragees; it is especially adapted to weak persons, whose digestive functions need strengthening or stimulating.

Dr. Rabuteau's Syrup is especially prepared for children, who take it readily, because of its agreeable taste.

FOUGERA'S COMPOUND IODINISED

COD LIVER OIL.

Since the introduction of this oil in 1858, it has been found to be superior to all other kinds of Cod Liver Oil for the treatment of **General Debility, Consumption, Scrofula, Rickets, etc.**

It possesses not only all the **nourishing** qualities of the best Cod Liver Oil, but also the **tonic, stimulant** and **alterative** properties of **Iodine, Bromine** and **Phosphorus,** which are added in such proportions as to render it therapeutically five times as efficacious as pure Cod Liver Oil.

Through its **increased curative action, FOUGERA'S COD LIVER OIL** will be found to cure disease in a much shorter time than the pure oil; while favorable results will be obtained by its use in many advanced cases when the pure Cod Liver Oil would fail entirely.

FOUGERA'S READY-MADE MUSTARD PLASTERS.

A most useful, convenient, clean, and economical preparation. Not liable to change if kept in a dry place. Made of two strengths. Plasters No. 1, of pure mustard; Plasters No. 2, of one-half mustard. Price 40 cents, the tin box, or tin roll, of 10 plasters each. DIRECTIONS.—Dip the Plaster, or Plasters, a minute or two, in cold water; apply on the part, and cover with a band.

FOUGERA'S COMPOUND ICELAND MOSS PASTE.

(Iceland Moss, Lactucarium, Ipecac and Tolu.)

Used with great success against nervous and convulsive coughs, Whooping Cough, Acute Bronchitis, Chronic Catarrh, Influenza, etc.

Wakefulness, Cough, and other sufferings in Consumption, are greatly relieved by the soothing and expectorant properties of this Paste.

FOUGERA'S IODO-FERRO-PHOSPHATED ELIXIR OF HORSE-RADISH.

This Elixir contains Iodine, Pyrophosphate of Iron, the active principles of antiscorbutic and aromatic plants, and acts as a **tonic, stimulant, emmenagogue,** and a **powerful regenerator of the blood.** It is an invaluable remedy for all constitutional disorders due to the impurity and poverty of the blood. One of the advantages of this new preparation consists in combining the virtues of Iodine and Iron without the inky taste of Iodide of Iron.

E. FOUGERA, Pharmacist,
372 Seventh Street, Brooklyn, L. I.,
SOLE PROPRIETOR & MANUFACTURER OF THE ABOVE,
To whom all special communications should be addressed.

E. FOUGERA & CO.,
30 North William Street, New York.
SOLE GENERAL AGENTS for the ABOVE,
To whom all orders should be addressed.

SOLD BY DRUGGISTS GENERALLY.

JOHNSTONE'S IMPROVED

ADAPTABLE POROUS FELT SPLINTS.

AHL'S SPLINT MANUFACTURING COMPANY, LIMITED,

123 & 125 South Eleventh Street, PHILADELPHIA, PA.

THE ADAPTABLE POROUS SPLINTS, invented and improved by W. H. JOHNSTONE, have been tested extensively in both civil and military practice for a number of years, and have been endorsed and recommended in the most unqualified manner by the celebrated and distinguished Surgeons of America.

Their *porosity* is a peculiar and a valuable property. While the material is firm and insoluble, it permits readily the passage of air and fluids, so that, on one hand, the heat from the inflamed surface, the perspiration, and the morbid exhalations, are not confined, to the detriment of the patient, *as is the case in every other kind of splint*, but pass off freely; and on the other hand, lotions of cold or warm water, medicated or not with weak alcohol, carbolic acid, arnica, tincture, solutions of the sulphites, etc., can be constantly applied without disturbing the dressings. This, it will readily be seen, is a most invaluable property when the parts are bruised, lacerated, filled with extravasated blood, or erysipelatous, and give these splints a conspicuous advantage over all others.

From FRANK H. HAMILTON, M. D., Professor of Fractures and Dislocations in the Bellevue Hospital Medical College, author of "A Treatise on Fractures and Dislocations," etc.

Having examined carefully *JOHNSTONE'S IMPROVED ADAPTABLE POROUS FELT SPLINTS*, I feel warranted in recommending them to the Profession as superior to all other manufactured splints now in use. They possess all the essential qualities of a good splint, having firmness, pliability and lightness.

FRANK H. HAMILTON, M. D.,
Prof. Military Surgery and Fractures and Dislocations, Bellevue Hospital Col.

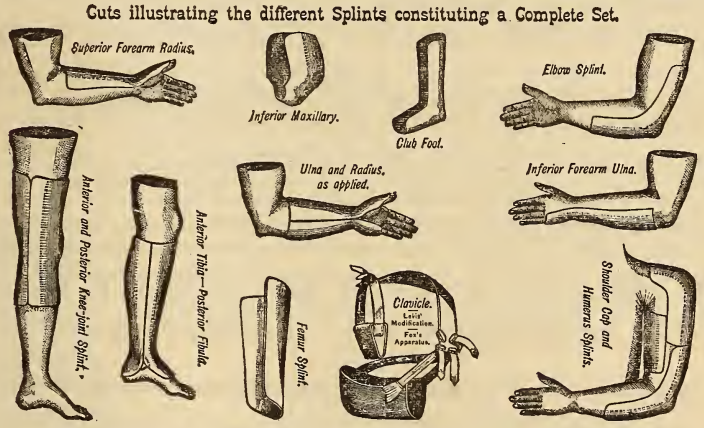
From PROF. D. HAYES AGNEW, Prof. Surgery, University of Penna.

1611 CHESTNUT STREET, PHILADELPHIA, *February 6th*, 1879.

The Adaptable Felt Splints, formerly known as those of Dr. Ahl, with the improvement now made by W. H. Johnstone, which renders them in every way superior to the former, I regard as very excellent appliances in the treatment of fractures.

D. HAYES AGNEW,
Prof. Surgery, University of Pennsylvania.

Cuts illustrating the different Splints constituting a Complete Set.



SPECIAL NOTICE TO THE PROFESSION AND TRADE.

Our *policy* heretofore in the introduction of JOHNSTONE'S IMPROVED ADAPTABLE POROUS FELT SPLINTS, has been to confine the sales and business negotiations directly to the Doctors themselves, declining in every case to sell our goods through Dealers; we having assured the Profession generally, both through our agents and catalogues, that *JOHNSTONE'S IMPROVED SPLINTS* could only be obtained by subscription.

We wish to announce, that owing to the large demand for our goods and the constant importunity on the part of *Surgeons* everywhere to place our Splints on sale with their Instrument Dealer or Druggist, to afford them greater convenience and facility in obtaining the pieces in duplicate, we have at last acceded to that request, and hereafter *JOHNSTONE'S CELEBRATED FELT SPLINTS* can be obtained at most dealers in Instruments and Drugs throughout the United States, at the same price which they were heretofore sold, viz:

A complete set, embracing fifty (50) pieces—twenty-five for adults and twenty-five for children—is thirty ($30) dollars. Extra or duplicate pieces can always be obtained from your DEALER, at one dollar each.

JOHNSTONE'S CELEBRATED SPINAL JACKET, for Curvatures and Deformities, have met with unparalleled success, and, from their merit, secured the unqualified endorsement and approbation of our celebrated orthopædic specialists, and particular expression of gratitude from the patients who are wearing them. For full information, send for Descriptive Circulars.

Should your Instrument dealer fail to have a supply of our Splints, and decline to carry them in stock, orders sent to us will receive prompt attention.

AHL'S SPLINT MANUFACTURING CO., Limited.
W. H. JOHNSTONE, Manager.

N. B.—If the Instrument Dealers of Philadelphia decline to supply its Physicians with our JOHNSTONE'S FELT SPLINTS on call, they will be furnished and delivered by us to any part of the city, at any time, on receipt of the price, viz.,

$1.00 each.

JOHNSTONE'S SPINAL FELT JACKET, any size, - - - - - $25.00

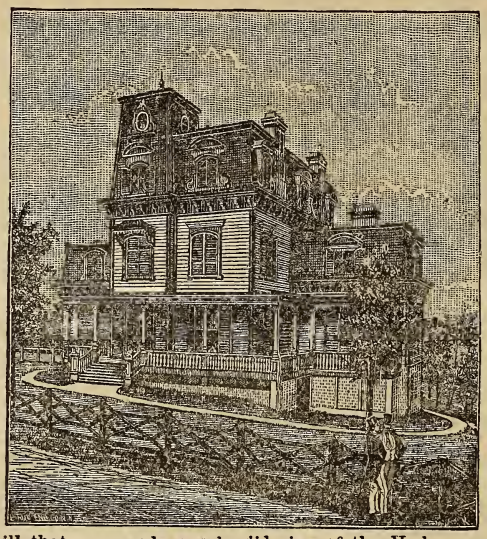
THE DE QUINCEY HOME,

Fort Washington, New York City.

A Private Asylum for the Treatment of the Opium, Morphine, Chloral, Chloroform and Hashisch Habits, Nervous Diseases and Inebriety.



Drs. H. H. Kane
and
W. H. Vittum,
in charge.

Consulting Physicians.

Prof. Wm. A. Hammond,
Prof. T. Gaillard Thomas,
Dr. Edward C. Spitzka,
Dr. Daniel M. Stimson,
Dr. Edward T. Ely,
Dr. G. H. Wynkoop,
Dr. Andrew H. Smith.

Situated upon a high hill that commands a splendid view of the Hudson and Harlem rivers, Spuyten Duyvil Creek, and the beautiful country for miles around; surrounded by ample grounds and magnificent drives; in easy communication with the city by means of the Sixth and Ninth Avenue Elevated and the Hudson River Railroads; away from the dust, noise, crowding and malaria of the city; with hot and cold water in every room, furnace and grate-fire heating, croquet, horses and carriages, boats and fishing, an excellent *cuisine*, trained nurses and careful medical attendance, it possesses unequaled advantages for the treatment of cases of this kind.

The plan of treatment pursued in the cure of opium, morphine and chloral takers is that of *rapid reduction*, which possesses all the advantages, and none of the dangers of Levenstein's *sudden deprivation*, or the prolonged agony of *gradual reduction*. Each case is studied and treated in accordance with its peculiarities and the idiosyncrasies of the patient, no set plan of treatment being pursued, at the expense of the person's health or comfort.

Our Home, furthermore, offers special facilities for the treatment by *rest, diet, and massage*, according to the plan of Weir Mitchell, of that large class of nervous diseases so commonly met with in ladies suffering from uterine troubles. This plan of treatment has been specially studied, and nurses competent to carry out its provisions in every detail will be furnished. For further particulars, etc., address 1299-1350

Drs. KANE and VITTUM, De Quincey Home, Fort Washington, New York City.

UNIVERSITY OF PENNSYLVANIA

POST-GRADUATE INSTRUCTION.

A Post-Graduate Course has been organized for Bedside and Dispensary Instruction in the following named branches:—

ON PHYSICAL DIAGNOSIS AND CLINICAL MEDICINE, Prof. WM. PEPPER and Dr. ED. T. BRUEN.
" NERVOUS DISEASES AND ELECTRO-THERAPEUTICS, - - - Prof. H. C. WOOD.

McINTOSH'S COMBINED

Galvanic AND Faradic Battery.

THIS CELEBRATED BATTERY COMBINES BOTH THE GALVANIC AND FARADIC CURRENT,

Which can be used separately or combined. Any strength and intensity desired can be obtained for use in Electro-therapeutics. THIS BATTERY is constructed on an IMPROVED PLAN, as follows: The zinc and carbon plates are arranged in couples, securely clamped to hard rubber plates, with thumb screws. These screws are also used for binding posts. All the connections are positive. The cells are made in sections of six, of hard rubber, with hard rubber drip cup. The following points of excellence render our Batteries superior to others:

1. They combine the only Portable Galvanic and Faradic Battery in one case.

2. They weigh one-half less than other Batteries of the same number of cells.

3. The cells are made in sections of six, of one solid piece of hard, vulcanized rubber; by this arrangement they can be emptied, cleaned and filled as easily and quickly as one cell, and will not crack, break or leak.

4. A hard rubber drip cup is placed by the side of each section of cells, to receive the zinc and carbon plates when removed from them. By this arrangement we avoid the use of absorbent materials and soiling the Battery

5. The Hydrostat is perfect. The rubber plates which hold the elements project over on one side enough to cover the cells when the zinc and carbon plates are placed in the drip cups. The under side of this projection is covered with thick, soft rubber, which is securely clamped to the cells sections, and makes them water tight.

6. This is the only Battery in which the zinc and carbon plates can be kept clean by simply rinsing them.

7. A zinc or carbon plate can be removed by simply loosening a binding post; and all parts of the Battery can be duplicated, as like parts are made exactly alike. We will be pleased to send circulars and our illustrated catalogue, giving full information, price, etc., free, upon application.

ORIGINALITY AND RELIABILITY. QUALITY IS OF FIRST IMPORTANCE.
HIGHEST AWARDS, MEDALS AND DIPLOMAS, OVER ALL AMERICAN AND EUROPEAN COMPETITORS.

IMPORTANT!

SPECIAL NOTICE FROM MESSRS. SEABURY & JOHNSON.

Physicians will please remember that it is not only necessary to distinctly specify our goods, but it is also imperative that they are dispensed by your pharmacist. Many complaints from practitioners have recently reached us, to the effect that the uniformity and excellent quality which have always distinguished our goods must have, or seem to have, undergone a change.

Being jealous of our reputation, we carefully investigated every complaint, and find *that in each instance, instead of delivering our articles, inferior or cheaper goods were substituted;* therefore the necessity of insisting on receiving what is prescribed. There can be no failure in our articles, as every preparation is made conscientiously, after officinal formulæ.

PHYTOLACCA DECANDRA, PLAIN.

SEABURY & JOHNSON'S U. S. P. BELLADONNA PLASTER.

Our article is incorporated with the Alcoholic extract of Belladonna, prepared from the root. The plaster mass is freed from all irritating and stimulating properties, thus promoting, to its fullest extent, the uninfluenced action of this valuable sedative.

ANALYSIS OF BELLADONNA PLASTERS,

By Prof. R. OGDEN DOREMUS.

Messrs. SEABURY & JOHNSON:— { BELLEVUE HOSPITAL MEDICAL COLLEGE, NEW YORK, September 7, 1878.

"GENTLEMEN—I obtained from Messrs. W. H. Schieffelin & Co., of this city, samples of Belladonna Plasters prepared by Grosvenor & Richards, Boston; Mitchell's Novelty Plaster Works, Seabury & Johnson, New York. I have examined these varieties for the purpose of determining which possesses the largest quantity of Atropine. I employed equal surfaces of each, and *my analysis demonstrated that Seabury & Johnson's contains the greatest proportion* of the active principle of Belladonna, and is the most reliable plaster.

PROF. R. OGDEN DOREMUS, M.D., LL.D."

ANALYSIS OF BELLADONNA PLASTERS,

By J. P. BATTERSHALL, PH.D., Analytical Chemist.

Messrs. SEABURY & JOHNSON:— NEW YORK, June 7, 1878.

"GENTLEMEN—Samples of the Belladonna Plaster manufactured by your firm and by Dr. Grosvenor's, were purchased by me of a well-known drug house, and comparative tests made of the same, for the purpose of determining the relative amount of Extract of Belladonna in each. The tests used were applied to an equal quantity of each plaster, and under similar conditions. I find that a larger amount of the Solid Extract of Belladonna is contained in your preparation, **which result was corroborated by repeated trials.**

Respectfully yours, J. P. BATTERSHALL, PH.D., *Analytical and Consulting Chemist.*"

Practitioners who have not yet received our complete special Physicians' Catalogue of Pharmacopœia and Surgical Rubber Plasters, porous and spread, absorbent and antiseptic dressings, will be furnished same, on application. Yours very truly,

SEABURY & JOHNSON,

1312-1351eow 21 PLATT STREET, NEW YORK.

MEAT AND QUINIA.

AROUD'S WINE WITH QUINIA,

And all the Nutritive Principles of Meat.

Aroud's Preparations recommend themselves to the most serious attention of Physicians, and deserve their preference:

1st.—Because they combine all the active principles of the richest barks of quinia carefully selected.

2d.—Because 30 grammes of them contain 3 grammes of quinia and all the nutritious principles of 27 grammes of meat, which are soluble in alcohol and water.

3d.—Because the combination of meat with the barks of quinia has not only the advantage of acting as a tonic, nutritive, and febrifuge, but also that of paralyzing and guarding against any local irritation caused by the prolonged use of quinia barks, and of preparing the stomach to endure the salutary influence of this friendly compound.

4th.—Because these preparations with meat as a basis, containing in their composition the entire nutritious elements of muscular fibre, blood and bone, answer alone to the immortal maxim of Hippocrates, fundamental basis of all good reparative medication, "*Ars imitatio natura.*"

5th.—Because, if meat occupies the first rank among the articles of food, if quinia is placed at the head of tonics, the combination of these highly reparative substances must necessarily be a reconstructor par excellence.

Finally, because the experiments with Aroud's Wine and Quinia prove, better than theory, that, to reconstruct the shattered and enfeebled forces, no other tonic can be compared to it.

MEAT, IRON AND QUINIA.

AROUD'S

FERRUGINOUS WINE WITH QUINIA,

And all the Nutritive Principles of Meat.

MEAT, IRON AND QUINIA, that is so say, the most reparative food combined with a reconstituent and a nerve tonic par excellence: such is the remarkable composition of this ferruginous preparation, which, in all respects, merits the preference of physicians. It prevents impoverishment of the blood, anæmia, chlorosis, etc.; presented in a form at once attractive to the eye and pleasant to the palate—an assimilable iron united with all the constitutive principles of bone and of muscle; it can, therefore, form and regenerate the forces, and this without causing nausea, constipation, or disturbing the digestive organs. By its generous alimentation it corrects and modifies the bad effect of the prolonged use of quinia.

The excellence of this preparation justifies that which Hippocrates proclaimed over 2000 years ago, and all clinics have confirmed: "That the soluble nutritive principles of meat is the food best adapted for the sick and convalescents; that these principles, being the integral parts of muscle, have the faculty of forming flesh rapidly, and of restoring muscle."

It is, therefore, a precious specific for all the maladies caused by impoverishment or deterioration of the blood, because meat, iron and quinia combined give nourishment, act as a tonic, regenerate, reconstitute, and regulate the entire system. 1261-1312-eow

PROCTER'S PEPSIN (SACCHARATED.

This standard article is prepared from *Pepsin*, carefully purified and freed from mucus, and is not a *dried Peptone*. It is inodorous and non deliquescent, and retains its digestive power indefinitely. It is so well known that extended comment is superfluous. We would, however, call attention to its uniform purity and solubility, which, with extraordinary *digestive power*, commend its use in preference to other less carefully *made* articles. It is tested to the solution of 250 grains of coagulated albumen by 10 grains of Pepsin.

PROCTER'S "PEPSIN FORTIOR," (Stronger or Concentrated Pepsin.) A powerful form of Pepsin, eligible when minimum dose is desirable. It is of the same exceptional purity with our *Procter's Pepsin*, while the strength is far greater. Dose one to three grains. 1275-1308, 1y.

Manufactured by WM. PROCTER, Jr., CO., S. W. Cor. 9th and Lombard Sts., Phila.

Matriculates who do not furnish evidence of sufficient preliminary education are required to pass an examination in English and Physics, and to attend three graded winter courses of instruction of six months each, consisting of didactic lectures, clinical lectures, and practical work in laboratories and hospitals.

A VOLUNTARY FOURTH YEAR, OR POST-GRADUATE COURSE, purely practical has been established, for particulars of which see Catalogue.

The Lectures of the Winter Session of 1882-83 *will begin on Monday, October* 2, *and end on the last day of March.*

The Preliminary Course will begin on the second Monday in September.

In the *Spring Months* the laboratories of Chemistry, Pharmacy, Histology, Physiology, and Pathology are open, and the post-graduate clinical course is continued.

FEES IN ADVANCE.—Matriculation $5. For each session, including dissection, operating, and bandaging, $150. No graduation fee.

☞ No Doctor will fail to recommend or furnish them after knowing their value.

DR. McINTOSH'S ELECTRIC OR GALVANIC BELT.

This Belt is a perfect Galvanic Battery, composed of sixteen cells, placed in pockets on a belt. Each cell is made of hard vulcanized rubber, lined with copper, which constitutes the negative plate. The rubber coating perfectly insulates each cell. The positive plates are of zinc, wrapped in a porous material to absorb the exciting fluid, preventing contact with the copper, and permitting the current to pass from the copper to the zinc. The cells are charged without wetting the belt.

A current selector is so arranged that one or more cells can be used at pleasure. The electrodes are covered similar to ordinary battery electrodes, and connected with the cells by connecting cords. By this arrangement, a current from the belt can be applied to any part of the body. Physicians who have used this belt in their practice do not hesitate to recommend it to the profession.

Our pamphlet on "Medical Electricity," containing a full description of the belt and diseases, with manner of treatment, sent free on application. Address

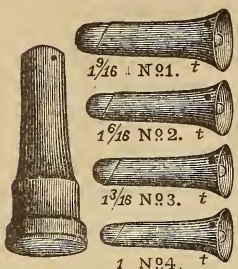
STAUFER'S

HARD RUBBER UTERINE EXAMINING INSTRUMENTS.

SERIES OF SPECULUMS ENCASED.



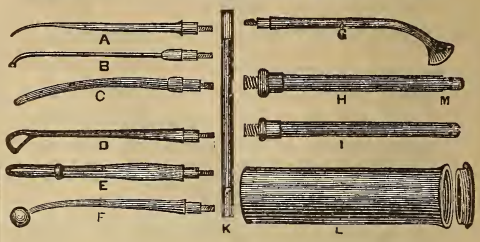
Prices —The series of four speculums and conductors, encased, $12.00. Weight, about 12 oz., made so compact as to carry in an inside coat pocket. Single with conductor, $2.50. Taken back at cost when a case is desired.

This screw top hard rubber case contains four graduated, hard rubber speculums, Dental red enamelled inside. By trial it was found that this color attracts the light to greater advantage than any other, and the admission of a converging column by their being slightly taper; together with the admission of a size by the conductor that takes in the entire cervix, and thus reveals it as plainly as if located externally. This clear view is seen by holding the hand against the bevel, while the funnel points towards a window even at a distance.

Position.—The dorsal (fully explained in full catalogue) admits the shading of the lower part of a window and draws the light from the upper; when sight from opposite is to be excluded. The slight taper of three-eights inch from mouth to (t) displays room to work within, and admits a second person to see as plainly as the operator. The rounded conductor enters easily, and the speculum with its slight taper moves freely after.

Obviating Exposure —A thin sheet thrown over the patient and the edge surrounding the funnel end of the speculum, completely prevents exposure, and yet does not interfere with the rotation of the speculum, nor its manipulation. Full direction and exchange privilege accompanies each purchase of a speculum.

HARD RUBBER UTERINE EXAMINING CASE.



Prices.—Full case, $8.00; Quill Caustic Holder H, or Camel's Hair Brush Holder and case I, each $1.00. Any two of the first seven, with centre piece K, $2.50.

This case contains 10 articulating instruments, all of hard rubber except the screw joints at each end of K, and M, on caustic holder H. Also flexible sound B, is of metal. The series and hard rubber case weighs but four ounces. Lengths of parts when screwed together is 11 to 12 inches.

A, is a thin, cervix probe without bulb end, as rubber is not cutting like metal.

C, a strong sound also without bulb end to straighten up a retroverted uterus.

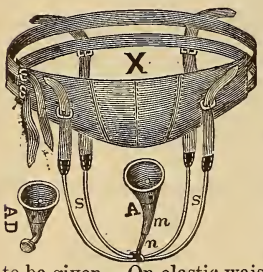
D, a fenestrated mover of cervix, and scraper of ropy mucus when suspended from the os. As a mover or shifter, it is required in almost every case, and when used as a mucus scraper swab E, should be screwed on the opposite end of K.

F, and G, are used to straighten up the anteverted and retroverted uterus before introducing the speculum.

Any of this series of instruments delivered free by the Medical and Surgical Reporter Office, on receipt of quotation prices. The Catalogue, illustrating and describing over 150 in size and style uterine examining and supporting instruments, also obtained through this Office.

STAUFER'S

SERIES OF HARD RUBBER UTERINE INSTRUMENTS SIMPLIFIED.



Pessary and Abdominal Supporter combined. Fig. x represents a fine satteen belt, with whalebone stay, elastic back straps and spring stem Uterine Supporter. Shifting Cup A, to be transformed into self sustaining Cup A. D. Price, (A X) $7.00. Hip measure to be given. On elastic waist belt, (or A Z), $600, waist measure. Permanent Stem Cup (or *E. C. Economy*) on belt x, $5.50, or E C, on waist belt, Z, only $4.50. Belt (X), alone, $2.00.

The full catalogue and plate exhibit in addition, Retroversion Cups; Anteversion and posterior cul-de-sac levers; Globe Tops and Oblong Tops; all on spring or permanent stems, to be selected according to the requirements of cases; Also Intra-uterine stem cup. The cups are graded even ⅛ inch, from 1¼ to 2½ inches. Globe Tops from 1 to 2¼ inches; thus, making about 125 in style and size Stem Uterine Supporters to meet the various displacements. The medium, 1¾ inch cup meets over three-fourths of the cases presented.

Examining Instruments.—This series contains the much admired Examining Case of ten articulating pieces, probes, sounds, swab, movers, caustic, and brush-holders and cases; wt. 4 oz. Reflector, Fenestrated Vaginal, Anal and Hymen, together with the series of Vaginal Speculums, by which the examination is reduced to great simplicity, and the vaginal portion of the uterus to be seen without exposure; manipulated upon, and can be shown to husband or member of the family as clear as if locateed externally. The case Q, contains four graded Speculums, with shifting conductors; compact and weight but 12 oz. No. 2, or next to largest answers in over three fourths of cases called for treatment. Dental red enameled inside. Price, full case, $12.00; single, $2.50 each.

Exchanges.—All the hard rubber parts in the catalogue have the exchange and interchange privilege, at cost. Even single Speculums received back when a case becomes preferable. All without limit of time. Necessary repairs only to be paid for.

Staufer's Catalogue and Physician's Price List, with instructions to the use of these instruments, is mailed free, on application to this office.

Delivery—All the instruments on the catalogue are mailed all over the United States, on receipt of quotation prices, from this office.

Registered COSMOLINE Trade Mark.

Unguentum Petrolei

Prepared by E. F. Houghton & Co. Philadelphia, U.S.A.

Put up in 1, 5, 10, 25, 50, and 100-lb. cans. Samples furnished on application. The post-office laws forbid anything of an oleaginous nature being sent through the mail.

In chemical composition, Cosmoline [Unguentum Petrolei] is an oleaginous hydrocarbon, corresponding to the heavy petroleum oils, and containing a large amount of the paraffines and olefines of the formulæ $C_{16}H_{34}$ and $C_{16}H_{32}$. It contains but a small percentage of the paraffines and olefines, corresponding to the formulæ C_7H_{16} and C_7H_{14}, respectively, and the offensive and irritating properties of the crude oil have been carefully removed. In the process of purification, no acids, alkalies, or other chemicals are employed, and no injurious additions of any kind are made to the natural product. The result is a semi-solid, translucent substance, with a faint odor and unctuous feel.

Cosmoline [Unguentum Petrolei] melts at about 100° Fah, (38° Cent.); and boils at about 625° Fah. (329° Cent.); its specific gravity is about 0.875 at 60° Fah.

As it contains no oxydizable or organic matter capable of change by putrefaction or fermentation, and is absolutely without affinity for moisture, it offers to the profession an admirable unguent, which can never decompose, ferment, or become rancid in any climate or temperature.

291 MADISON AVENUE, NEW YORK, February 26th 1878.

I have examined the preparations of Cosmoline as manufactured by E. F. Houghton & Co., Philadelphia, and believe them well adapted to the purposes for which they are designed. As lubricants, and as the bases of simple or medicated ointments, they have a decided advantage over the fixed oils and fatty substances in ordinary use, in that they do not become rancid, and do not acquire irritating qualities from atmospheric exposure. ALFRED C. POST, M.D., LL.D.,
Emeritus Professor of Clinical Surgery in the University of New York, Visiting Surgeon to Presbyterian Hospital, etc.

PHILADELPHIA, July 10, 1880.

MESSRS. E. F. HOUGHTON & CO.:

I have for a number of years made extensive use of Cosmoline [Unguentum Petrolei] and consider it a most valuable article for surgical purposes. Either as a dressing by itself, or as a vehicle for the application of medicaments, it is greatly superior to lard or other fatty matters, especially by reason of its non-liability to change by time or temperature.

Yours truly,
JOHN H. PACKARD, M.D.
1031 WALNUT ST., PHILADELPHIA.

MESSRS. E. F. HOUGHTON & CO.:

I have used extensively Cosmoline [Unguentum Petrolei] both in Dispensary and private practice, with very great satisfaction. As a vehicle in making ointments it is invaluable, and far superior to lard, for the reason that it will not become rancid or undergo chemical change like the latter, when exposed to the atmosphere. I cannot too highly commend it as an application in various skin diseases.

Yours truly, JOHN V. SHOEMAKER, A.M., M.D.,
Physician to the Pennsylvania Free Dispensary for Skin Diseases

208 WEST 34TH ST., NEW YORK.

MESSRS. E. F. HOUGHTON & CO.:

Gents :—I fully appreciate the value of your Cosmoline, or Unguentum Petrolei, and prescribe it frequently in ointments. Fluid Cosmoline I have used constantly for several years, as a lubricant of urethral sounds. It is the cleanest oil I know of for this purpose.

Yours truly, GEO. HENRY FOX.

PREPARED BY

E. F. HOUGHTON & CO.,

1297-1348 **211 S. Front Street, Philadelphia.**

TO THE MEDICAL PROFESSION.

LACTOPEPTINE.

We take pleasure in calling the attention of the Profession to LACTOPEPTINE. After a long series of careful experiments, we are able to produce its various components in an absolutely pure state, thus removing all unpleasant odor and taste (also slightly changing the color). We can confidently claim that its digestive properties are largely increased thereby, and can assert without hesitation that it is as perfect a digestive as can be produced.

LACTOPEPTINE is the most important remedial agent ever presented to the Profession for Indigestion, Dyspepsia, Vomiting in Pregnancy, Cholera Infantum, Constipation, and all diseases arising from imperfect nutrition. It contains the five active agents of digestion, viz: Pepsin, Pancreatine, Diastase, or Veg. Ptyalin, Lactic and Hydrochloric Acids, in combination with Sugar of Milk.

FORMULA OF LACTOPEPTINE.

Sugar of Milk	40 ounces.	Veg. Ptyalin or Diastase	4 drachms.
Pepsin	8 ounces.	Lactic Acid	5 fl. drachms.
Pancreatine	6 ounces.	Hydrochloric Acid	5 fl. drachms.

LACTOPEPTINE is sold entirely by Physicians' Prescriptions, and its almost universal adoption by physicians is the strongest guarantee we can give that its therapeutic value has been most thoroughly established.

The undersigned having tested LACTOPEPTINE, recommend it to the profession.

For Consumption and Wasting Diseases.

HYDROLEINE

Has been proved of the highest value in CONSUMPTION and all WASTING DISEASES, invariably producing IMMEDIATE INCREASE in FLESH and WEIGHT.

FORMULA OF HYDROLEINE.

Each dose of two teaspoonfuls, equal to 120 drops, contains:

Pure Oil,	**80 m. (drops.)**	**Soda,**	**1-3 grain.**
Distilled Water,	**35 m.**	**Boric Acid,**	**1-4 "**
Soluble Pancreatin,	**5 grains.**	**Hyocholic Acid,**	**1-20 "**

DOSE.—Two teaspoonfuls alone, or mixed with twice the quantity of soft water, to be taken thrice daily, with meals.

The principles upon which this discovery is based have been described in a treatise on "THE DIGESTION AND ASSIMILATION OF FATS IN THE HUMAN BODY," by H. C. BARTLETT, PH.D., F.C.S., and the experiments which were made, together with cases illustrating the effect of Hydrated Oil in practice, are concisely stated in a treatise on "CONSUMPTION AND WASTING DISEASES," by G. OVEREND DREWRY, M.D.

In these treatises the Chemistry and Physiology of the Digestion of the Fats and Oils is made clear, not only by the description of a large number of experiments scientifically conducted, but by cases in which the deductions are most fully borne out by the results.

☞ *Copies of these valuable works will be sent free, on application, to all who mention THE MEDICAL AND SURGICAL REPORTER.*

HYDRATED OIL,

HYDROLEINE,

WATER AND OIL,

May be described as partially digested oil, which will nourish and produce increase in weight in those cases where oils or fats not so treated are difficult or impossible to digest. In CONSUMPTION and other WASTING DISEASES the most prominent symptom is EMACIATION, of which the first is the starvation of the fatty tissues of the body, including the brain and nerves. This tendency to emaciation and loss of weight is arrested by the regular use of HYDROLEINE, which may be discontinued when the usual average weight has been permanently regained.

The ordinary so-called emulsions of Cod-liver oil and other fats, WHETHER PANCREATIZED OR NOT, merely remain in the form of a coarse mechanical mixture for a short time after agitation. The digestion of oil having in no sense been artificially produced, still devolves upon those functional powers the deficiency of which is the most prominent symptom in these cases.

HYDROLEINE is not a patent medicine or a secret preparation; the formula is on every bottle. Can be taken by the most delicate stomach; is immediately assimilated.

The permanence and perfection of the emulsion, and the extreme solubility of the HYDRATED OIL, solely prepared and sold by us under the name of HYDROLEINE, is shown by its retaining its cream-like condition as long as the purest Cod-liver Oil will retain its sweetness. Unlike the preparations mentioned, or simple Cod-liver Oil, it produces no unpleasant eructation or sense of nausea, and should be taken in such very much smaller doses, according to the directions, as will insure its complete assimilation; this, at the same time, renders its use economical in the highest degree.

To brain-workers of all classes, Hydrated Oil is invaluable, supplying as it does the true brain food.

Economical in use—certain in result Tonic—Digestive and Highly Nutritive.

NEW PRINCIPLE FOR THE ASSIMILATION FAT.

NEW PHARMACEUTICALS

WORTHY OF THE

Attention of Physicians.

SOLUTION OF

Chloride of Bromine Compound.

The ingredients which enter into the formation of this compound are those which science has long recognized as the most effective destroyers of the products of decomposition. They are true disinfectants, entering into chemical union with noxious exhalations to form innocuous compounds.

Solution of Chloride of Bromine Compound is especially adapted to the purifying of cesspools, privy vaults, sewers, drains, etc., and to the disinfection of clothing and apartments after contagious diseases.

Ozonized Aromatic Liquid.

The disinfecting principle of this combination is ozone—nature's own disinfectant—possessing also antiseptic properties in a high degree. As active as bromine and chlorine, it possesses none of the irritant nature of these agents, but is of entirely unobjectionable odor, and a positively agreeable perfume in the sick chamber. Its method of employment is extremely simple, all that is required being to place a tablespoonful in a shallow dish or saucer, from which it readily evaporates with the aid of heat. The ozone thus given off may be inhaled without producing any sense of discomfort.

Empty Capsules.

The advantages accruing from the use of gelatine capsules in practice need not be enumerated.

The capsules of our manufacture are very readily soluble in the juices of the stomach. The facility with which they may be filled after a little practice makes them scarcely less desirable, on the score of convenience, than powders.

We put them up in boxes containing 100 each, which may be conveniently carried in a physician's pocket.

Our capsules do not absorb moisture, and thus become sticky, an objection very often attaching to capsules.

Gelatine-Coated Pills.

We solicit a critical comparison of our gelatine-coated pills with those of other manufacturers. We claim for them a regularity of shape and a degree of solubility not excelled. In their manufacture, also, a process peculiar to ourselves is employed, through which perfect continuity in the coating is secured. We employ no metallic points, in the use of which holes are apt to be left, through which volatile principles are liable to escape, and chemical changes take place from contact of the pill mass with the metallic substance.

RECTAL SUPPOSITO-RIES.

The use of Gelatin as a basis for preparations designed for local medication is fast superseding all other forms, as it offers the advantages of cleanliness, great flexibility and elasticity, rapid solubility, and prompt and thorough action of the remedial agent.

The remedies can be readily carried on the person of the patient or the physician, and can be freely handled without danger of melting or breaking.

These preparations are made of a soluble compound of Gelatin and Glycerin, easily liquefied by the heat and secretions of the body. The medicating ingredient is incorporated with this compound, and by its solution is brought into gradual and prolonged contact with the diseased surfaces of the part to which the remedy is applied.

Samples and full descriptive circulars of these articles will be furnished to the medical profession by enclosing stamp to

HOLLOW VAGINAL SUPPOSITO-RIES.

FOR PHYSICIANS' USE ONLY.

SVAPNIA

OR

PURIFIED OPIUM.

CONTAINS THE

ANODYNE AND SOPORIFIC

ALKALOIDS

CODEIA,

NARCEIA

AND

MORPHIA.

EXCLUDES THE

POISONOUS & CONVULSIVE

ALKALOIDS

THEBAIN

NARCOTIN

AND

PAPAVERIN

DOSE, THE SAME AS OPIUM.

This article is not intended for popular use, but only on prescription of the profession. It is to take the place of Opium in cases where that drug acts injuriously.

Dr. John Harley, of London, in his "Old Vegetable Neurotics," details a large number of experiments upon the human and animal system, with six of what he considers the narcotic alkaloids. He concludes that although all six possess both narcotic and hypnotic properties, yet these are so varied in degree and force as to make their effects, when exhibited singly, very distinct from those following their exhibition in combination.

Taking the experience of practical physicians with Dr. Harley's results, as a basis, we would group them in the following order:

First Group.	Second Group.
Anodyne and Hypnotic Elements.	Narcotic and Convulsive Elements.
1. Morphia.	1. Thebain.
2. Narceia.	2. Cryptopin.
3. Codeia.	3. Papaverin.

Now SVAPNIA *is a distinctive name* given *to the first group, representing* the ANODYNE and HYPNOTIC ELEMENTS; *the second group, or the narcotic and convulsive* elements *of Opium being eliminated;* and is *not*, therefore, a simple principle, or a single constituent of Opium.

The relative values of each being known, we can select and utilize those that are valuable, and reject those known to be deleterious and inert.

This is what we claim, and all we claim for SVAPNIA. *It can be relied upon and given in all cases where Opium or Morphia is indicated, with equally good effects;* and in addition to this, there will be found in the practice of every physician cases occurring almost every day, in which idiosyncrasy and peculiar states and diseases of the brain debar us from the use of Opium and Morphia, but where Svapnia can be exhibited with the happiest results.

In SVAPNIA there is retained all the Morphia and the greater part of the Codeia and Narceia, but combined with the native acids of Opium, meconic and thebolactic, in such a manner as to render those constituents soluble and active.

SVAPNIA IS UNIFORM IN ITS PROPORTIONS, and is prepared to conform to a standard of Opium representing ten per cent. of Morphia. This is done by a simple proportion of the neutral excipient, after determining the actual amount of the alkaloids obtained from the Opium used.

We may safely affirm that the danger of bad results is much diminished by a resort to that preparation of Opium in which the poisonous elements are eliminated, and the anodyne elements in such a state of combination as to reduce their toxic and enhance their hygienic effects, such as has been PROVED TO BE THE CASE WITH SVAPNIA.

TO PHYSICIANS.

HORSFORD'S ACID PHOSPHATE

[LIQUID]

Is a preparation of the phosphates of lime, magnesia, potash and iron with free phosphoric acid ; and extended experience proves that it is in such form as to be readily assimilated by the system.

It is not a secret or quack medicine, but is made in accordance with well-known scientific principles, under the personal supervision of the well-known Prof. Horsford, who has made the subject of the phosphates a life study.

It should not be confounded with the dilute phosphoric acid of the pharmacopœia, or with any acid phosphate compounded in the laboratory.

Dilute phosphoric acid is simply phosphoric acid and water, without any base.

In this preparation of Acid Phosphate a portion of the phosphoric acid is combined with lime, iron, potash, etc. It is not made by compounding these articles together in the laboratory, but is obtained in the form in which it exists in the animal system.

It has been noted by some physicians that while in certain cases dilute phosphoric acid interfered with digestion, this preparation of Acid Phosphate not only caused no trouble with the digestive organs, but promoted, in a marked degree, their healthful action.

It is well understood that "phosphorus," as such, is not found in the human body, but that phosphoric acid in combination with lime, iron, and other bases, *i. e.*, the phosphates, is found in the bones, blood, brain and muscles. In the brain is also found phosphoric acid not combined with any base. It is the phosphates, and not the simple phosphoric acid, that is found in the urine after severe mental and physical exertion, or during wasting disease. Thus the researches of chemists and physiologists would seem to prove that it is a phosphate, with an excess of phosphoric acid, *i. e.*, an acid phosphate, that will better meet the requirements of the system than either phosphoric acid or a simple phosphate, and this theory has been proven beyond a doubt by practice, in a great variety of cases.

We have received a very large number of letters from physicians of the highest standing, in all parts of the country, relating their experience with the Acid Phosphate, and speaking of it in high terms of commendation.

Pamphlet giving further details mailed free, on application to the manufacturers.

Physicians who have not used Horsford's Acid Phosphate, and who wish to test it, will be furnished with a sample without expense, except express charges.

RUMFORD CHEMICAL WORKS,

PROVIDENCE, R. I.

An experience of more than a quarter of a century convinces us that sugar, properly applied, is the only correct coating for a pill.

Physicians should be careful to specify Warner & Co., when prescribing or ordering.

Special attention is called to the following selected Recipes prepared for Physicians' Prescriptions.

PIL: PHOSPHORI COMP: (WARNER & CO.) ℞. Phosphori, - - 1-100 gr. Ext. Nuc. Vom. - ¼ gr.

THERAPEUTICS.—As a nerve tonic and stimulant, this form of pill is well adapted for such nervous disorders as are associated with impaired nutrition and spinal debility, increasing the appetite and stimulating digestion.

The practical value of Phosphorus as a therapeutic agent, and its applicability to the cure of disease, and especially in those varied disordered conditions consequent upon OVERWORK, which are characteristic of modern civilization.

Pil. Phosphori Comp. may be taken, one or two pills three times daily, after eating.

Price, per 100, $1.50.

PIL: IODOFORM ET FERRI. (WARNER & CO.) ℞. Iodoform, - - 1 gr. Ferri Redacti, - 1¼ gr.

THERAPEUTICS.—A powerful general tonic and alterative, valuable as a remedy in Anæmia, Scrofula, Neuralgia, Chlorosis, Rheumatism, etc.

Pil. Iodoform et Ferri may be given in doses of from one to two pills, as occasion may require.

Price, per 100, $2.00.

PIL: DIGESTIVA. (WARNER & CO.) ℞. Pepsin Conc't, 1 gr. Gingerine, 1-16 gr. Pv. Nuc. Vom., ¼ gr. Sulphur, ⅛ gr.

THERAPEUTICS.—Useful in relieving various forms of Dyspepsia and Indigestion, and of permanent benefit in cases of enfeebled digestion, where the gastric juices are not properly secreted. It is also a gentle laxative and excellent dinner pill, may be taken one after dinner, or one before each meal, three times daily.

Price, per 100, 75 cts

PIL: CALCIUM SULPHIDE. (WARNER & CO.) 1-10, ¼, ½ & 1 gr. each.

THERAPEUTICS.—Extremely useful in the treatment of acne, scrofula and cutaneous diseases.

Sulphide of Calcium is usually administered in doses of from 1-10 to ¼ grain four times daily, gradually increasing the dose to one grain six times daily, or according to the progress or severity of the case.

Price, per 100, 1-10 gr. .50; 1-4 gr. .60; 1-2 gr. .75; 1 gr. $1.00.

WARNER & CO.'S PILLS MAY BE OBTAINED FROM ALL DRUGGISTS, OR BY MAIL, ON RECEIPT OF PRICE.

WM. R. WARNER & CO., Pharmaceutical Chemists,

1297-1348 **PHILADELPHIA and NEW YORK.**

Apollinaris

"THE QUEEN OF TABLE WATERS."—BRITISH MEDICAL JOURNAL

ANNUAL SALE, 10 MILLIONS.

"Apollinaris Water, by its absolute purity, affords complete guarantee against the dangers of zymotic disease incidental to ordinary drinking-water. Its sparkling and refreshing character renders quite unnecessary the introduction of ice into it. There is, of course, no objection to icing Apollinaris, as champagne is iced, by the external application of cold until its temperature is brought down, in hot weather, to a pleasant coolness. So treated, it is a beverage as refreshing and agreeable as it is pure and wholesome.

EARL SPENCER, K.G., the President of the International Medical Exhibition, at the great Medical Congress in London, recently, referred to Apollinaris, in his opening address, as a typical beverage approved by the Faculty. This approval is ratified by the unerring tastes of the cultivated populations of the world. The desiderata of original purity laid down by the RIGHT HON. LYON PLAYFAIR as the indispensable conditions for water, which can never be freed from sewage pollutions when once they have been allowed to pass into it, are amply fulfilled by Apollinaris."

SANITARY RECORD, March, 1882.

MATHEY-CAYLUS' GLUTEN

CAPSULES

OF

PURE COPAIBA AND OTHER MEDICINES.

Adapted and recommended for the cure of recent or chronic Gleets, Fluor Albus, etc., etc.

The MATHEY-CAYLUS' CAPSULES, *coated with gluten*, present the most perfect mode for administering Copaiba, Cubebs, Norway Tar, Turpentine, and other remedies, the disagreeable odor and taste of which are often a hindrance to their use. This mode of preparing capsules, which has been approved by the Academy of Medicine, has been recommended in their clinical lectures by eminent Professors in the hospitals of Paris, as well as in those of New York and London.

By the first physicians of the hospitals of Paris, London, and New York.

SPECIAL ADVANTAGES OF MATHEY-CAYLUS' GLUTEN CAPSULES.—Being formed of thin, transparent, and readily assimilated coating, they so cover and disguise the medicine to be given, that it can be taken without disgust, but with ease. In this respect, they differ widely from the gelatine capsules, which have a hard, thick coating, which swells beyond measure, in the stomach, are hard to be swallowed, and what is of great importance, they create disturbance in the digestive functions.

The special advantage of the coating of gluten consists in the fact that, notwithstanding its extra thinness, and although it softens under the action of the gastric juice, it can pass the stomach without breaking, and only in the intestines is the medicinal matter liberated; this accounts for the fact that Mathey-Caylus' Capsules never cause the nausea, eructations, and dyspeptic symptoms, which are complained of by many persons using other preparations.

Finally, their regular ovoid form, which is so favorable to swallowing, their pleasant appearance, which dispels all disgust, and the advantage of being entirely free from taste and smell, recommend the use of these capsules even to the most delicate persons.

Thankful to the Medical Profession for the liberal patronage heretofore bestowed upon us, we hope that they will continue their favors, and we are convinced that they will never have any reason to regret the generous welcome they have given to our preparations.

MATHEY-CAYLUS' CAPSULES are never sold, except in bottles having the following inscription printed in the glass: MATHEY-CAYLUS A PARIS. And each bottle contains 64 capsules, making them the cheapest capsules in the market.

The following different kinds of Mathey-Caylus' Gluten Capsules are now offered:

COPAIBA AND TANNIC ACID,
COPAIBA AND S. N. OF BISMUTH,
COPAIBA AND CATECHU,
COPAIBA AND MAGNESIA,
COPAIBA, CUBEBS AND ALUM,
COPAIBA, CUBEBS AND RHATANY,
COPAIBA AND RHATANY,
COPAIBA AND CITRATE OF IRON,
COPAIBA AND CUBEBS,
COPAIBA PURE,
COPAIBA, CUBEBS AND CARB. OF IRON,
VENICE TURPENTINE, NORWAY TAR, PURIFIED,
CUBEBS AND TURPENTINE,
CUBEBS AND TANNATE OF IRON,
CUBEBS AND ALUM,
CUBEBS PURE,
COPAIBA AND MATICO,
COPAIBA, IRON AND OIL OF SANDAL,
COPAIBA AND OIL OF SANDAL,
COPAIBA, PEPSIN AND BISMUTH,
COPAIBA AND TAR,
COPAIBA, CUBEBS AND OIL OF SANDAL.

NEW HYPODERMIC SYRINGES.

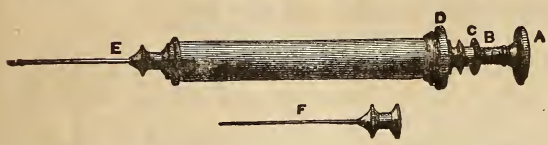

FIG. 4c.—No. 2.

These cuts (two-thirds the actual size) represent a New Hypodermic Syringe of our Manufacture. With the exception of the needles, it is of German Silver, a material chosen as possessing, next to steel, the greatest rigidity and durability, while free from liability to oxydation. The barrel is formed by a process peculiar to ourselves, securing uniformity of calibre without soldered joint or seam. It is plated inside and outside with nickel. The piston is packed in the double parachute form, with leather prepared expressly for the purpose. It will be found to retain its elasticity, to operate smoothly, to resist all tendency of fluid to pass above, as of air below it. A nicely-engraved scale upon the piston-rod indicates minims, thirty being the capacity of the syringe.

Syringes Nos. 2, 3, and 4 have also a screw thread upon the piston-rod, and a traverse nut, thereby favoring the utmost nicety in the graduation of doses.

No. 3, Compact, has hollow piston-rod to receive one needle, also a protecting cover and fluid retainer; it may be carried in the Pocket Instrument or Vial Case, or without any case.

No. 4, Compact, is like No. 3, with the addition of a second needle, carried upon the syringe in the usual place, protected by a metal shield.

Nos. 1 and 2 are put up in neat morocco-covered case, with vial.

Two sizes of needles are furnished with each instrument, Nos. 1, 2, and 4; one only with No. 3. They are of refined steel, carefully tempered, and thoroughly plated with gold; they are of small diameter and large relative calibre, sharpened to such an angle as will offer least resistance to penetration, and therefore cause least pain. At the point of union with the socket they are reinforced with an outer covering of German silver, thereby overcoming the tendency to become broken at this place. They are connected with the barrels by a screw thread.

Prices: No. 1, *$3.50* No. 2, *$4.00* Postage, .03
" No. 3, *2.50* No. 4, *3.50* " .02

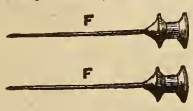
No. 3.

These Syringes are so thoroughly and strongly made as to be free from the annoying accidents common to most Hypodermic Syringes; and we believe that, for convenience, durability, and nicety of construction, they have no superior.

OTHER HYPODERMIC SYRINGES.

		Postage.
No. 7, glass-barrel, graduation engraved on barrel, with screw nut on piston, nickel-plated mountings, two best steel gilt needles, in neat case	*$3.00*	.02
No. 9, glass, graduation engraved and numbered on piston-rod, with screw nut, best steel gilt needles, in neat case	*3.00*	.02
No. 7 or No. 9, with two steel unplated needles, either	*2.50*	.02
No. 10, glass, Luer's (French), graduation as No. 9, one gold needle and two steel needles, silver mountings, neat velvet-lined morocco case	*12.00*	.02

No. 11, glass cylinder, fenestrated, nickel-plated metal mounting (see cut).



No. 11.

		Postage.
As represented in the cut, the glass cylinder is encased in a metal mounting, fenestrated to show the graduations for minims. The instrument may readily be taken apart for cleaning, and for those who prefer glass, is recommended for its non-liability to breakage. Price, with two best steel gilt needles, in a neat case	*$3.50*	.02

☞ *Any of the above will be sent by return mail on receipt of Price and Postage.* ☜

HYPODERMIC SYRINGES OF ALL KINDS PROMPTLY REPAIRED.

Our new *Illustrated Catalogue of Surgical Instruments,* also a new Pamphlet on Inhalation of Atomized Liquids, by distinguished medical authority, with many valuable formulas, will be forwarded, postpaid, on application.

Buffalo Lithia Water.

FOR THE GOUTY OR URIC ACID DIATHESIS.

Dr. J. Marion Sims, of New York, says of this water, in general terms:

"I have used in my practice the Buffalo Lithia Water, Spring No. 2, for two years past, and have, in many cases, found it highly efficacious."

Dr. Wm. A. Hammond, of New York, Surgeon General U. S. Army (retired), Professor of Diseases of the Mind and Nervous System in the University of New York, etc.

"I have for some time made use of the Buffalo Lithia Water in cases of affections of the Nervous System, complicated with Bright's Disease of the Kidneys, or with a Gouty Diathesis. The results have been eminently satisfactory. Lithia has for many years been a favorite remedy with me in like cases, but the Buffalo Water certainly acts better than any extemporaneous solution of the lithia salts, and is, moreover, better borne by the stomach."

Dr. Hunter McGuire, Richmond, Va., late Prof. Surgery, Medical College of Virginia; Vice President of the International Med. Congress; Vice President American Med. Association.

"Buffalo Lithia Water, Spring No. 2, as an Alkaline Diuretic, is invaluable. In Gravel dependent upon the Uric Acid Diathesis, and, indeed, in diseases generally of that diathesis, it is a remedy of extraordinary potency. I have prescribed it in cases of Rheumatic Gout which had resisted the ordinary remedies, with wonderfully good results. I have also used it in my own case, being a great sufferer from this malady, and have derived more benefit from it than from any other remedy."

Dr. Alexander B. Mott, of New York, Professor Surgery, Bellevue Hospital Medical College; Surgeon, Bellevue Hospital.

"I have made sufficient use of the Buffalo Lithia Water to be satisfied that it posseses very valuable therapeutic properties. In the Gouty Diatheses, Chronic Inflammations of the Bladder, and other diseases affecting the Urinary Organs, it may be relied on to give the most satisfactory results."

Dr. Harvey L. Byrd, of Baltimore, President and Prof. of Obstetrics and Diseases of Women and Children, in the Baltimore Med. College; formerly Prof. of Practical Medicine, etc.

"I have witnessed the best results from the action of the Buffalo Lithia Water, Spring No. 2, in Chronic Gout, Rheumatic Gout, Rheumatism, Gravel and Stone in the Bladder, and I do not hesitate to express the opinion that in all diseases depending upon or having their origin in the Uric Acid Diathesis, it is unsurpassed, if indeed it is equaled by any water thus far known to the profession."

Dr. E. J. Doering, of Chicago, Ill., late Surgeon U. S. Marine Hospital Service.

"In my experience the Buffalo Lithia Water is an efficient remedy in the treatment of diseases depending on the Uric Acid Diathesis. I have prescribed it quite extensively in Catarrhal Affections of the Bladder, with excellent results."

Dr. William F. Carrington, of Virginia, Surgeon U. S. Navy (retired), Surgeon Confederate States Navy.

"The Buffalo Lithia Water, Spring No. 2, has signally demonstrated its remedial power in Gout, Rheumatism, Uric Acid Gravel, and other maladies dependent upon the Uric Acid Diathesis. It not only eliminates from the blood the deleterious agent before it crystallizes, but dissolves it in the form of calculi, at least to a size that renders its passage along the ureters and urethra comparatively easy."

Dr. J. S. Wellford, Prof. of Diseases of Women and Children, Medical College of Virginia.

"I have paid a great deal of attention to Urinary Troubles, and have frequently and freely prescribed the Lithia Water in their treatment, with the very best results. In all the various forms of the Uric Acid Diathesis, whether as well-formed Gravel or Gout, or in the milder forms of Gouty Dyspepsia or Nettle-rash, in their varieties, I know of no mineral water which I consider at all equal to that of Spring No. 2. In many Skin Diseases of old age, dependent on the Uric Acid Diathesis, such as Eczema, etc., this water acts most beneficially."

1297-1348eow

Water in Cases of Six Gallons, at the Springs, $5.00

SPRINGS OPEN JUNE 1st. **Pamphlets sent to any address.**

THOMAS F. GOODE, Proprietor,

BUFFALO LITHIA SPRINGS, VIRGINIA.

MURDOCK LIQUID FOOD CO., Boston,

THE ONLY MANUFACTURERS OF

RAW FOOD EXTRACTS IN THE WORLD.

It can be retained by the weakest stomach, when all other food extracts, and even water, is rejected.

Nutritious food, if raw, condensed, and free from insoluble matter, will cure chronic diseases, as it will make blood faster than all preparations or food, and new blood will cleanse the system.

MURDOCK'S LIQUID FOOD is made from Beef, Mutton and Fruits; contains corpuscles; is 12½ per cent. soluble albumen, and free from insoluble matter, drugs, minerals, salts and acids, and can be retained by the stomach when so weak as to refuse food.

Ask your Druggists, or send to us, for Essays read before the American Medical Association, at Richmond, Va., May 6, 1881, on the value of Raw Food Extracts, by Geo. R. Shepherd, of Hartford, Conn., and other Essays and Testimonials from Medical Journals and Physicians that have used Liquid Food, in cases of Consumption, Scrofula, Nervous and General Debility, Dyspepsia, acute and chronic, Constipation, Diphtheria, Intemperance, Cholera Infantum, Infantile Diarrhœa, Post partum Hemorrhage, Purpura Hemorrhagica with Waxy Liver, Pelvic Cellulitis, Malarial and other Fevers, Chronic Strumous Arthritis, Sclerosis of the Spinal Cord, Senile Gangrene, Perinephritic Abscess, and other diseases of malnutrition. No cases of Cholera Infantum have occurred where it has been used daily, and no lives have been lost from Cholera Infantum where it has been prescribed by a physician. Excellent for Eczema, Diabetes, Rheumatism and Neuralgia.

At the request of any physician who has not tried our Extracts, and would like to, we will deliver sample bottles to the Express in Boston. To any Medical Society wishing to investigate the value of our Extracts, through a committee, hospital, or individual members, we will furnish a supply of Liquid Food equal to a six-ounce bottle for every member present at the time of action. We are induced to do this, knowing that our Extracts are saving life, and that an increased use of them, which will follow after a trial of them, will be the means of saving more lives daily. (*We ask no testimonials of results obtained.*) Raw Extracts are available where cooked ones are not, or if available, contain only one-third as much nourishment.

Liquid Food is in general use at all Hospitals, Infant and Insane Asylums, and Washingtonian Homes, U. S. Navy Hospitals, and by all physicians that have tried it.

If not kept by your Druggist, can be obtained in any of the commercial cities In Philadelphia, by Johnston, Holloway & Co., Boericke & Tafel; in Pittsburg, by A. Kelly & Co.; in Baltimore, by Th msen & Wirth; or you can order direct and we will pay express. 1 oz, 15 cents; 6 oz., 55 cents; 12 oz., $1.00.

See Philadelphia MEDICAL AND SURGICAL REPORTER, *Boston Medical and Surgical Journal*, and *New York Medical Record*, for chronic cases that were at our quarterly reception to physicians, in Boston, December 30, 1881—cases of Eczema, Rheumatism, Neuralgia, Diabetes, Consumption, and other diseases. If all were not restored to perfect health, they were gaining daily, and able to enjoy life and attend to their business. 1297–1348

MURDOCK LIQUID FOOD CO., BOSTON.

It is the only food that will relieve the Consumptive from Hunger.

It will make Blood faster than all preparations known.

Boudault's Pepsine.

IN POWDER, also WINE, ELIXIR, SYRUP, PILLS, AND LOZENGES OF PEPSINE.

Since the introduction of Pepsine by Boudault, in 1854, BOUDAULT'S PEPSINE HAS BEEN, AND IS STILL CONSIDERED, THE MOST RELIABLE, as is attested by the awards it has received at the Exhibitions of 1867, 1868, 1872, 1873, and in 1876 at the Centennial Exposition in Philadelphia.

IT IS THE ONLY PEPSINE USED IN THE PARIS HOSPITALS.

Careful tests will enable any one to satisfy himself that BOUDAULT'S PEPSINE HAS A DIGESTIVE POWER AT LEAST DOUBLE that of the best Pepsines in the market, and that it is really the cheapest.

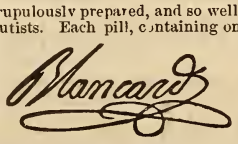
It is Sold in 1 ounce, 8 ounce, and 16 ounce Bottles.

Beware of so-called French Pepsines bearing fictitious names, and prescribe Boudault's only.

BLANCARD'S PILLS

OF UNCHANGEABLE IODIDE OF IRON.

Blancard's Pills of Iodide of Iron are so scrupulously prepared, and so well made, that none other have acquired a so well deserved favor among physicians and pharmaceutists. Each pill, containing one grain of proto-iodide of iron, is covered with finely pulverized iron, and covered with balsam of tolu. Dose, two to six pills a day. The genuine have a *reactive silver seal* attached to the lower part of the cork, and a green label on the wrapper, bearing the fac-simile of the signature of



Pharmacien, No. 40 Rue Bonaparte, Paris.

Without which none are genuine.

BEWARE OF IMITATIONS. 1297 1348 eow

E. FOUGERA & CO., AGENTS, NEW YORK.

For Consumption and Wasting Diseases.

HYDROLEINE

Has been proved of the highest value in CONSUMPTION and all WASTING DISEASES, invariably producing IMMEDIATE INCREASE in FLESH and WEIGHT.

FORMULA OF HYDROLEINE.

Each dose of two teaspoonfuls, equal to 120 drops, contains:

Pure Oil,	**80 m. (drops.)**	**Soda,**	**1-3 grain.**
Distilled Water,	**35 m.**	**Boric Acid,**	**1-4 "**
Soluble Pancreatin,	**5 grains.**	**Hyocholic Acid,**	**1-20 "**

DOSE.—Two teaspoonfuls alone, or mixed with twice the quantity of soft water, to be taken thrice daily, with meals.

The principles upon which this discovery is based have been described in a treatise on "THE DIGESTION AND ASSIMILATION OF FATS IN THE HUMAN BODY," by H. C. BARTLETT, PH.D., F.C.S., and the experiments which were made, together with cases illustrating the effect of Hydrated Oil in practice, are concisely stated in a treatise on "CONSUMPTION AND WASTING DISEASES," by G. OVEREND DREWRY, M.D.

In these treatises the Chemistry and Physiology of the Digestion of the Fats and Oils is made clear, not only by the description of a large number of experiments scientifically conducted, but by cases in which the deductions are most fully borne out by the results.

☞ *Copies of these valuable works will be sent free, on application, to all who mention THE MEDICAL AND SURGICAL REPORTER.*

HYDRATED OIL,

HYDROLEINE,

WATER AND OIL,

May be described as partially digested oil, which will nourish and produce increase in weight in those cases where oils or fats not so treated are difficult or impossible to digest. In CONSUMPTION and other WASTING DISEASES the most prominent symptom is EMACIATION, of which the first is the starvation of the fatty tissues of the body, including the brain and nerves. This tendency to emaciation and loss of weight is arrested by the regular use of HYDROLEINE, which may be discontinued when the usual average weight has been permanently regained.

The ordinary so-called emulsions of Cod-liver oil and other fats, WHETHER PANCREATIZED OR NOT, merely remain in the form of a coarse mechanical mixture for a short time after agitation. The digestion of oil having in no sense been artificially produced, still devolves upon those functional powers the deficiency of which is the most prominent symptom in these cases.

HYDROLEINE is not a patent medicine or a secret preparation; the formula is on every bottle. Can be taken by the most delicate stomach; is immediately assimilated.

The permanence and perfection of the emulsion, and the extreme solubility of the HYDRATED OIL, solely prepared and sold by us under the name of HYDROLEINE, is shown by its retaining its cream-like condition as long as the purest Cod-liver Oil will retain its sweetness. Unlike the preparations mentioned, or simple Cod-liver Oil, it produces no unpleasant eructation or sense of nausea, and should be taken in such very much smaller doses, according to the directions, as will insure its complete assimilation; this, at the same time, renders its use economical in the highest degree.

To brain-workers of all classes Hydrated Oil is invaluable, supplying as it does the true brain food.

Economical in use—certain in result Tonic—Digestive and Highly Nutritive.

NEW PRINCIPLE FOR THE ASSIMILATION FAT.

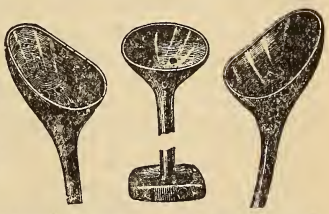
DR. McINTOSH'S
NATURAL UTERINE SUPPORTER.



No instrument has ever been placed before the medical profession which has given such universal satisfaction. The combination is such that the physician is able to meet every indication of Uterine Displacements. Falling Womb, Anteversion, Retroversion and Flexions are overcome by this instrument, where others fail. This is proven by the fact that, since its introduction to the profession it has come into more general use than all other instruments combined.

Among the many reasons which recommend this Supporter to the physician is its self-adjusting qualities. The physician, after applying it, need have no fear that he will be called in haste to remove or readjust it, as is often the case with rings and various pessaries held in position by pressure against the vaginal wall, as the patient can remove it at will, and replace it without assistance.

The Abdominal Supporter is a broad morocco leather belt, with elastic straps to buckle around the hips, with concave front, so shaped as to hold up the abdomen. The Uterine Support is a cup and stem, made of highly polished hard rubber, very light and durable, shaped to fit the neck of the womb, with openings for the secretions to pass out, as shown by the cuts. Cups are made with extended lips, to correct flexions and versions of the womb. The cup and stem is suspended to the belt by two soft elastic rubber tubes, which are fastened to the front of the belt by simple loops, pass down through the stem of the cup and up to the back of the belt. These soft rubber tubes being elastic, adapt themselves to all the varying positions of the body, and perform the service of the ligaments of the womb. The instrument is very comfortable to the patient, can be removed or replaced by her at will, can be worn at all times, will not interfere with nature's necessities, will not corrode, and is lighter than metal. It will answer for all cases of Anteversion, Retroversions, or any Flexions of the womb, and is used by the leading physicians with never-failing success, even in the most difficult cases.

Our Reduced Prices are to Physicians, $6.00; to Patients, $10.00.

Instruments sent by mail, at our risk, on receipt of price, or by Express, C. O. D., with the Express charges for returning the money added.

☞ CAUTION.—Owing to the great sale and popularity of our instrument various and base imitations are sold by unscrupulous parties. In order to get the genuine, it is best to order direct from us.

DR. McINTOSH'S NATURAL UTERINE SUPPORTER CO.,
192 Jackson Street, Chicago, Ill.

Our valuable pamphlet, "Some Practical Facts about Displacements of the Womb," will be sent you free on application. 1281-1332

In corresponding with Advertisers please mention THE MEDICAL AND SURGICAL REPORTER.

BEEF PEPTONE,

IN TRANSPARENT GLASSY SCALES,

Containing only the animal or azotized matter of the Beef. Each ounce is equal to 16 ounces of raw beef, easily soluble, and still faster in hot water.

This Beef Peptone is digested from tender, juicy Beef, by the aid of the *Crystal Pepsin,* of my manufacture (Jensen's Crystal Pepsin). Unlike the various BEEF EXTRACTS, this preparation contains all the nutritive constituents of the Beef, in a thoroughly digested state, ready for absorption into the system, while the Beef Extracts are entirely devoid of the chief elements of nutrition, such as the fibrinous, gelatinous and albuminous portions of the Beef, they only consisting of the concentrated saline constituents, with barely a trace of animal matter to keep its consistence. The difficulty so long experienced by the profession throughout the world, in preparing a PEPTONE entirely free from those chemical agents necessary for its manufacture, so as to render it fit for use, is hereby demonstrated to be successfully overcome, as it contains no foreign matter, and will stand the most severely scrutinizing test as to perfectness, also possessing flavor of the Beef, and so palatable as to render it highly agreeable.

Put up in bottles holding One ounce, Eight ounces, and one Pound.

Kept by the Wholesale and Dispensing Druggists in general.

DEPOT—L. WOLFF'S Pharmacy,

Northwest corner Twelfth and Chestnut Streets.

JENSEN'S CRYSTAL PEPSIN,

IN ARTIFICIAL CRYSTALS,

Strictly inodorous and tasteless, and perfectly soluble in water without acid.

THIS PEPSIN, now so popular with the profession, has created an impetus in the consumption of the same and physicians of the highest standing, who before the introduction of this active PEPSIN, with good reason, entirely abandoned the use of PEPSIN, are now the most eager in prescribing JENSEN'S CRYSTAL PEPSIN, whenever it is indicated, and since the knowledge of its great solvent power (gr. j. of it will dissolve the boiled whites from two to three eggs) has been established even among those susceptible to be great doubters it has caused itself to be utilized in many novel ways, by the thinking profession; for instance, in substituting morphia, chloral, etc., as a hypnotic, relieving gastric troubles where the above remedies have been prescribed, creating morphine and chloral habits In removing diphtheritic patches it is successfully used combined with water, glycerine, and muriatic acid, and the same composition, diluted with more water, as a spray in bronchial troubles, dissolving muco-purulent matter, as well as a spray for same in catarrhal affections.

THIS PEPSIN.

Has also been used with success in dissolving and evacuating coagulated blood in the bladder, dispensing with surgical operations in such cases. Many other novel applications could be mentioned, if not in want of space. It is found to be FORTY times stronger than saccharated pepsin. One to three grains is an active dose.

KEPT BY ALL DRUGGISTS.

The above preparations are only manufactured and put up by

CARL L. JENSEN, M.D., PH.G.,

865 North 26th Street, Philadelphia, Pa.

No other Wholesale Agents for this Pepsin are longer engaged, than the Wholesale Druggists throughout the United States.

Instructor in Pharmacy.

A. M. HAWES, M.D.,
Demonstrator of Anatomy.

This College has for its *collegiate year* two sessions.

Regular Session commences Wednesday, September 7th, 1881, and closes March 1st, 1882.

Recitation Term (optional) commences March 15th, 1882, and closes June 14th, 1882.

Graded Course of three terms, of six months each.

PLAN OF INSTRUCTION.

By *Lectures*, *Recitations* and *Clinics*, together with *practical work* in the Anatomical, Physiological, Chemical and Pharmaceutical Laboratories.

Clinics are held *daily*.

Clinical Work in Hospitals and Dispensaries is given to the Senior Class (see Clinics), in *small sections*, under the charge of a *Clinical Teacher*, in all the departments of Medicine and Surgery.

Three Large Hospitals and *two Dispensaries* afford unlimited material for instruction.

ADMISSION.—Candidates for admission are required to pass a preliminary examination, unless satisfactory documentary evidence can be presented, that is equivalent to the standard adopted. (See Catalogue.)

FEES.

Regular Session.—Matriculation, $5.00; Lecture Tickets, $50.00; Hospital Tickets, $10.00 Examination (final), $25.00.

Recitation Term.—$10.00 for those who have attended Regular Session; all others, $25.00, $15.00 of which will be applied on the next Regular Term.

Board and Rooms can be obtained for $3.00 to $5.00 per week, the average being $4.00.

For Catalogue and other particulars, address

☞ No Doctor will fail to recommend or furnish them after knowing their value.

DR. McINTOSH'S ELECTRIC OR GALVANIC BELT.

This Belt is a perfect Galvanic Battery, composed of sixteen cells, placed in pockets on a belt. Each cell is made of hard vulcanized rubber, lined with copper, which constitutes the negative plate. The rubber coating perfectly insulates each cell. The positive plates are of zinc, wrapped in a porous material to absorb the exciting fluid, preventing contact with the copper, and permitting the current to pass from the copper to the zinc. The cells are charged without wetting the belt.
A current selector is so arranged that one or more cells can be used at pleasure. The electrodes are covered similar to ordinary battery electrodes, and connected with the cells by connecting cords. By this arrangement, a current from the belt can be applied to any part of the body. Physicians who have used this belt in their practice do not hesitate to recommend it to the profession.
Our pamphlet on "Medical Electricity," containing a full description of the belt and diseases, with manner of treatment, sent free on application. Address

McINTOSH GALVANIC BATTERY CO.,

JOHNSTONE'S IMPROVED

ADAPTABLE POROUS FELT SPLINTS.

AHL'S SPLINT MANUFACTURING COMPANY, LIMITED,

123 & 125 South Eleventh Street, PHILADELPHIA, PA.

THE ADAPTABLE POROUS SPLINTS, invented and improved by W. H. JOHNSTONE, have been tested extensively in both civil and military practice for a number of years, and have been endorsed and recommended in the most unqualified manner by the celebrated and distinguished Surgeons of America.

Their *porosity* is a peculiar and a valuable property. While the material is firm and insoluble, it permits readily the passage of air and fluids, so that, on one hand, the heat from the inflamed surface, the perspiration, and the morbid exhalations, are not confined, to the detriment of the patient, *as is the case in every other kind of splint*, but pass off freely; and on the other hand, lotions of cold or warm water, medicated or not with weak alcohol, carbolic acid, arnica, tincture, solutions of the sulphites, etc., can be constantly applied without disturbing the dressings. This, it will readily be seen, is a most invaluable property when the parts are bruised, lacerated, filled with extravasated blood, or erysipelatous, and give these splints a conspicuous advantage over all others.

From FRANK H. HAMILTON, M. D., Professor of Fractures and Dislocations in the Bellevue Hospital Medical College, author of "A Treatise on Fractures and Dislocations," etc.

Having examined carefully *JOHNSTONE'S IMPROVED ADAPTABLE POROUS FELT SPLINTS*, I feel warranted in recommending them to the Profession as superior to all other manufactured splints now in use. They possess all the essential qualities of a good splint, having firmness, pliability and lightness.

FRANK H. HAMILTON, M. D.,
Prof. Military Surgery and Fractures and Dislocations, Bellevue Hospital Col.

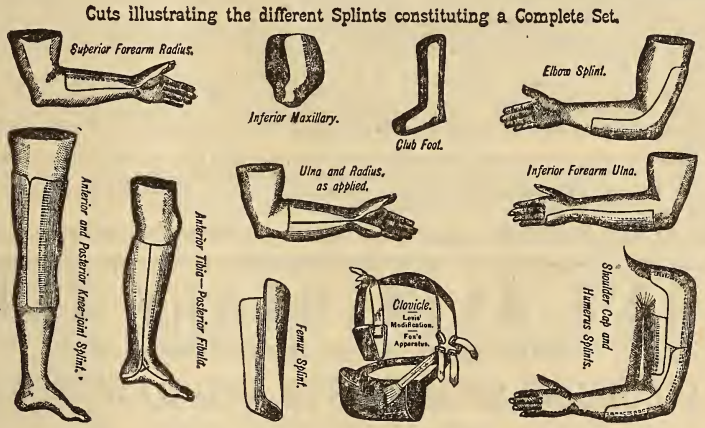
From PROF. D. HAYES AGNEW, Prof. Surgery, University of Penna.

1611 CHESTNUT STREET, PHILADELPHIA, *February 6th*, 1879.

The Adaptable Felt Splints, formerly known as those of Dr. Ahl, with the improvement now made by W. H. Johnstone, which renders them in every way superior to the former, I regard as very excellent appliances in the treatment of fractures.

D. HAYES AGNEW,
Prof. Surgery, University of Pennsylvania.

Cuts illustrating the different Splints constituting a Complete Set.



SPECIAL NOTICE TO THE PROFESSION AND TRADE.

Our *policy* heretofore in the introduction of JOHNSTONE'S IMPROVED ADAPTABLE POROUS FELT SPLINTS, has been to confine the sales and business negotiations directly to the Doctors themselves, declining in every case to sell our goods through Dealers; we having assured the Profession generally, both through our agents and catalogues, that *JOHNSTONE'S IMPROVED SPLINTS* could only be obtained by subscription.

We wish to announce, that owing to the large demand for our goods and the constant importunity on the part of *Surgeons* everywhere to place our Splints on sale with their Instrument Dealer or Druggist, to afford them greater convenience and facility in obtaining the pieces in duplicate, we have at last acceded to that request, and hereafter *JOHNSTONE'S CELEBRATED FELT SPLINTS* can be obtained at most dealers in Instruments and Drugs throughout the United States, at the same price which they were heretofore sold, viz:

A complete set, embracing fifty (50) pieces—twenty-five for adults and twenty-five for children—is thirty ($30) dollars. Extra or duplicate pieces can always be obtained from your DEALER, at one dollar each.

JOHNSTONE'S CELEBRATED SPINAL JACKET, for Curvatures and Deformities, have met with unparalleled success, and, from their merit, secured the unqualified endorsement and approbation of our celebrated orthopædic specialists, and particular expression of gratitude from the patients who are wearing them. For full information, send for Descriptive Circulars.

Should your Instrument dealer fail to have a supply of our Splints, and decline to carry them in stock, orders sent to us will receive prompt attention.

AHL'S SPLINT MANUFACTURING CO., Limited.
W. H. JOHNSTONE, Manager.

N. B.—If the Instrument Dealers of Philadelphia decline to supply its Physicians with our JOHNSTONE'S FELT SPLINTS on call, they will be furnished and delivered by us to any part of the city, at any time, on receipt of the price, viz.

$1.00 each.

JOHNSTONE'S SPINAL FELT JACKET, any size, - - - - $25.00
JOHNSTONE'S LACED SPLINT FOR THE LIMBS, any size, - - - 10.00

THE DE QUINCEY HOME,

Fort Washington,

A Private Asylum for the Treatment of the Opium, Morphine, Chloral, Chloroform and Hashisch Habits, Nervous Diseases and Inebriety.

Drs. H. H. Kane
and
W. H. Vittum,
in charge.

New York City.

Consulting Physicians.

Prof. Wm. A. Hammond,
Prof. T. Gaillard Thomas,
Dr. Edward C. Spitzka,
Dr. Daniel M. Stimson,
Dr. Edward T. Ely,
Dr. G. H. Wynkoop,
Dr. Andrew H. Smith.

Situated upon a high hill that commands a splendid view of the Hudson and Harlem rivers, Spuyten Duyvil Creek, and the beautiful country for miles around; surrounded by ample grounds and magnificent drives; in easy communication with the city by means of the Sixth and Ninth Avenue Elevated and the Hudson River Railroads; away from the dust, noise, crowding and malaria of the city; with hot and cold water in every room, furnace and grate-fire heating, croquet, horses and carriages, boats and fishing, an excellent *cuisine*, trained nurses and careful medical attendance, it possesses unequaled advantages for the treatment of cases of this kind.

The plan of treatment pursued in the cure of opium, morphine and chloral takers is that of *rapid reduction*, which possesses all the advantages, and none of the dangers of Levenstein's *sudden deprivation*, or the prolonged agony of *gradual reduction*. Each case is studied and treated in accordance with its peculiarities and the idiosyncrasies of the patient, no set plan of treatment being pursued, at the expense of the person's health or comfort.

Our Home, furthermore, offers special facilities for the treatment by *rest, diet, and massage*, according to the plan of Weir Mitchell, of that large class of nervous diseases so commonly met with in ladies suffering from uterine troubles. This plan of treatment has been specially studied, and nurses competent to carry out its provisions in every detail will be furnished. For further particulars, etc., address 1299-1350

Drs. KANE and VITTUM, De Quincey Home, Fort Washington, New York City.

Price, $3.00. Sent per mail on receipt of price. The Rubber Tubes are free from all woolen or silk covering thus avoiding all friction sounds arising from this source. ☞ A Descriptive Circular sent to any address.

TANRET'S PELLETIERINE.

For the TREATMENT of TAPE-WORM (Tænia Solium).

This new Tænifuge, the Active Alkaloid of Pomegranate Bark, has of late come into extensive use in France, for the treatment of Tape-worm (Tænia Solium). The results of numerous experiments with it at the Marine Hospitals of Toulon, St. Mandrier, etc., and in the Hospitals of Paris, St. Antoine, La Charité, Neckar, Beaujon, etc., have all been most satisfactory. Doctor Dujardin Beaumetz, Member of the Academy of Medicine, and Prof. Laboulbene, in their report to the Society of Therapeutics, have given it their unqualified approval, after the most searching experiments. This preparation is pleasant to administer, and if certain preliminaries are observed success will be insured.

PELLETIERINE is prepared by Mr. CHAS. TANRET, Pharmacien de First Class, 64 Rue Basse du Rempart, Paris.

GENERAL AGENTS, E. FOUGERA & CO., 30 N. William St., N. Y.

McINTOSH'S COMBINED

Galvanic AND Faradic Battery.

THIS CELEBRATED BATTERY COMBINES BOTH THE GALVANIC AND FARADIC CURRENT,

Which can be used separately or combined. Any strength and intensity desired can be obtained for use in Electro-therapeutics. THIS BATTERY is constructed on an IMPROVED PLAN, as follows: The zinc and carbon plates are arranged in couples, securely clamped to hard rubber plates, with thumb screws. These screws are also used for binding posts. All the connections are positive. The cells are made in sections of six, of hard rubber, with hard rubber drip cup. The following points of excellence render our Batteries superior to others:

1. They combine the only Portable Galvanic and Faradic Battery in one case.

2. They weigh one-half less than other Batteries of the same number of cells.

3. The cells are made in sections of six, of one solid piece of hard, vulcanized rubber; by this arrangement they can be emptied, cleaned and filled as easily and quickly as one cell, and will not crack, break or leak.
4. A hard rubber drip cup is placed by the side of each section of cells, to receive the zinc and carbon plates when removed from them. By this arrangement we avoid the use of absorbent materials and soiling the Battery
5. The Hydrostat is perfect. The rubber plates which hold the elements project over on one side enough to cover the cells when the zinc and carbon plates are placed in the drip cups. The under side of this projection is covered with thick, soft rubber, which is securely clamped to the cells sections, and makes them water tight.
6. This is the only Battery in which the zinc and carbon plates can be kept clean by simply rinsing them.
7. A zinc or carbon plate can be removed by simply loosening a binding post; and all parts of the Battery can be duplicated, as like parts are made exactly alike. We will be pleased to send circulars and our illustrated catalogue, giving full information, price, etc., free, upon application.

McINTOSH GALVANIC BELT AND BATTERY CO.,

TO PHYSICIANS.

IODIA.

FORMULA.—Iodia is a combination of Active Principles obtained from the Green Roots of STILLINGIA, HELONIAS, SAXIFRAGA, Menispermum, and Aromatics. Each *fluid* drachm also contains *five* grains IOD.-POTAS. and *three* grains PHOS.-IRON.

DOSE.—One or two *fluid* drachms (more or less, as indicated) *three* times a day, before meals.

IODIA is the *Ideal* Alterative. It has been LARGELY PRESCRIBED in Syphilitic, Scrofulous, Cutaneous, and Female Diseases, and has an Established Reputation as being the best Alterative ever introduced to the Profession.

Registered COSMOLINE Trade Mark.

Unguentum Petrolei

Prepared by E.F.Houghton & Co. Philadelphia, U.S.A.

Put up in 1, 5, 10, 25, 50, and 100-lb. cans. Samples furnished on application. The post-office laws forbid anything of an oleaginous nature being sent through the mail.

In chemical composition, Cosmoline [Unguentum Petrolei] is an oleaginous hydrocarbon, corresponding to the heavy petroleum oils, and containing a large amount of the paraffines and olefines of the formulæ $C_{16}H_{34}$ and $C_{16}H_{32}$. It contains but a small percentage of the paraffines and olefines, corresponding to the formulæ C_7H_{16} and C_7H_{14}, respectively, and the offensive and irritating properties of the crude oil have been carefully removed. In the process of purification, no acids, alkalies, or other chemicals are employed, and no injurious additions of any kind are made to the natural product. The result is a semi-solid, translucent substance, with a faint odor and unctuous feel.

Cosmoline [Unguentum Petrolei] melts at about 100° Fah. (38° Cent.); and boils at about 625° Fah. (329° Cent.); its specific gravity is about 0.875 at 60° Fah.

As it contains no oxydizable or organic matter capable of change by putrefaction or fermentation, and is absolutely without affinity for moisture, it offers to the profession an admirable unguent, which can never decompose, ferment, or become rancid in any climate or temperature.

291 MADISON AVENUE, NEW YORK, February 26th 1878.

I have examined the preparations of Cosmoline as manufactured by E. F. Houghton & Co., Philadelphia, and believe them well adapted to the purposes for which they are designed. As lubricants, and as the bases of simple or medicated ointments, they have a decided advantage over the fixed oils and fatty substances in ordinary use, in that they do not become rancid, and do not acquire irritating qualities from atmospheric exposure. ALFRED C. POST, M.D., LL.D.,
Emeritus Professor of Clinical Surgery in the University of New York, Visiting Surgeon to Presbyterian Hospital, etc.

PHILADELPHIA, July 10, 1880.

MESSRS. E. F. HOUGHTON & CO.:

I have for a number of years made extensive use of Cosmoline [Unguentum Petrolei] and consider it a most valuable article for surgical purposes. Either as a dressing by itself, or as a vehicle for the application of medicaments, it is greatly superior to lard or other fatty matters, especially by reason of its non-liability to change by time or temperature.

Yours truly,
JOHN H. PACKARD, M.D.
1031 WALNUT ST., PHILADELPHIA.

MESSRS. E. F. HOUGHTON & CO.:

I have used extensively Cosmoline [Unguentum Petrolei] both in Dispensary and private practice, with very great satisfaction. As a vehicle in making ointments it is invaluable, and far superior to lard, for the reason that it will not become rancid or undergo chemical change like the latter, when exposed to the atmosphere. I cannot too highly commend it as an application in various skin diseases.

Yours truly, JOHN V. SHOEMAKER, A.M., M.D.,
Physician to the Pennsylvania Free Dispensary for Skin Diseases

208 WEST 34TH ST., NEW YORK.

MESSRS. E. F. HOUGHTON & CO.:

Gents:—I fully appreciate the value of your Cosmoline, or Unguentum Petrolei, and prescribe it frequently in ointments. Fluid Cosmoline I have used constantly for several years, as a lubricant of urethral sounds. It is the cleanest oil I know of for this purpose.

Yours truly, GEO. HENRY FOX.

NEW PHARMACEUTICALS

WORTHY OF THE

Attention of Physicians.

NITRO-GLYCERINE PILLS.

Nitro-glycerine is introduced on the authority of Dr. Murrell, of London, as a remedy in angina pectoris and in cases of chronic neuralgia in any part of the body. Cases of angina pectoris which had resisted all attempts at even alleviation, much less cure, have promptly yielded to nitro-glycerine, and a number of cases of actual cure are reported. This is more than can be said of any other known remedy. In neuralgia the effects of this drug have, in some instances, been scarcely less marked.

The pill form is very eligible, besides ensuring exactness of dose.

Liquor Ergotæ Purificatus.

This form of ergot is of constant strength. In its preparation only the active principles of the drug are retained, all inert and noxious ingredients being removed. As these active principles are assayed the l quor contains them in constant and definite proportions, and thus is obviated the uncertainty of strength due to variability in the quality of the sample of the drug employed. Liquor ergotæ purificatus is as constant in its strength as morphia, quinia, or any of the other alkaloids of vegetable drugs.

Sanguis Bovinus Exsiccatus.

In this preparation of blood we have a true food, the albumen being entirely retained. In this respect it differs from the various beef extracts, beef essences, etc., in the market. These preparations are, from the very methods of their manufacture, entirely deprived of albumen, the true nutritive principle of beef, and are thus not foods in any proper sense of the word.

Sanguis bovinus exsiccatus is blood deprived of nothing but its water and fibrin, which latter is naturally small in quantity and practically of no nutritive value.

CASCARA CORDIAL.

This laxative and alterative preparation stands unequaled among pharmaceutical preparations as a remedy in constipation. Its agreeable and efficient action has been abundantly attested by the medical profession of this country, and it stands now as a remedy of unquestionable efficacy in chronic constipation. Great care should be exercised in not prescribing too large a dose, inasmuch as cascara sagrada, its active ingredient, overcomes constipation by its tonic action on the bowel, rather than by direct laxative influence.

—FULL DESCRIPTIVE CIRCULARS OF THE ABOVE—

WILL BE SENT FREE, ON APPLICATION TO

PARKE, DAVIS & CO., DETROIT, MICHIGAN,

MANUFACTURING CHEMISTS AND SPECIAL DEALERS IN NEW AND RARE DRUGS.

An experience of more than a quarter of a century convinces us that sugar, properly applied, is the only correct coating for a pill.

Physicians should be careful to specify Warner & Co., when prescribing or ordering.

Special attention is called to the following selected Recipes prepared for Physicians' Prescriptions.

PIL: PHOSPHORI COMP: (WARNER & CO.) ℞. Phosphori, - - 1-100 gr. Ext. Nuc. Vom. - ¼ gr.

THERAPEUTICS.—As a nerve tonic and stimulant, this form of pil is well adapted for such nervous disorders as are associated with impaired nutrition and spinal debility, increasing the appetite and stimulating digestion.

The practical value of Phosphorus as a therapeutic agent, and its applicability to the cure of disease, and especially in those varied disordered conditions consequent upon OVERWORK, which are characteristic of modern civilization.

Pil. Phosphori Comp. may be taken, one or two pills three times daily, after eating.

Price, per 100, $1.50.

PIL: IODOFORM ET FERRI. (WARNER & CO.) ℞. Iodoform, - - 1 gr. Ferri Redacti, - 1¼ gr.

THERAPEUTICS.—A powerful general tonic and alterative, valuable as a remedy in Anæmia, Scrofula, Neuralgia, Chlorosis, Rheumatism, etc.

Pil. Iodoform et Ferri may be given in doses of from one to two pills, as occasion may require.

Price, per 100, $2.00.

PIL: DIGESTIVA. (WARNER & CO.) ℞. Pepsin Conc't, 1 gr. Gingerine, 1-16 gr. Pv. Nuc. Vom., ¼ gr. Sulphur, ⅛ gr.

THERAPEUTICS.—Useful in relieving various forms of Dyspepsia and Indigestion, and of permanent benefit in cases of enfeebled digestion, where the gastric juices are not properly secreted. It is also a gentle laxative and excellent dinner pill, may be taken one after dinner, or one before each meal, three times daily.

Price, per 100, 75 cts.

PIL: CALCIUM SULPHIDE. (WARNER & CO.) 1-10, ¼, ½ & 1 gr. each.

THERAPEUTICS.—Extremely useful in the treatment of acne, scrofula and cutaneous diseases.

Sulphide of Calcium is usually administered in doses of from 1-10 to ¼ grain four times daily, gradually increasing the dose to one grain six times daily, or according to the progress or severity of the case.

Price, per 100, 1-10 gr. .50; 1-4 gr. .60; 1-2 gr. .75; 1 gr. $1.00.

WARNER & CO.'S PILLS MAY BE OBTAINED FROM ALL DRUGGISTS, OR BY MAIL, ON RECEIPT OF PRICE.

WM. R. WARNER & CO., Pharmaceutical Chemists,

1297-1348 **PHILADELPHIA and NEW YORK.**

Apollinaris

"THE QUEEN OF TABLE WATERS."—BRITISH MEDICAL JOURNAL.

ANNUAL SALE, 10 MILLIONS.

"Apollinaris Water, by its absolute purity, affords complete guarantee against the dangers of zymotic disease incidental to ordinary drinking-water. Its sparkling and refreshing character renders quite unnecessary the introduction of ice into it. There is, of course, no objection to icing Apollinaris, as champagne is iced, by the external application of cold until its temperature is brought down, in hot weather, to a pleasant coolness. So treated, it is a beverage as refreshing and agreeable as it is pure and wholesome.

EARL SPENCER, K.G., the President of the International Medical Exhibition, at the great Medical Congress in London, recently, referred to Apollinaris, in his opening address, as a typical beverage approved by the Faculty. This approval is ratified by the unerring tastes of the cultivated populations of the world. The desiderata of original purity laid down by the RIGHT HON. LYON PLAYFAIR as the indispensable conditions for water, which can never be freed from sewage pollutions when once they have been allowed to pass into it, are amply fulfilled by Apollinaris."

SANITARY RECORD, March, 1882.

THE APOLLINARIS COMPANY (LIMITED),

F. DE BARY & CO., Sole Agents for the United States, 41 & 43 WARREN ST., NEW YORK.

1317-1325

SAVORY & MOORE beg to call the attention of the Profession to some of their Special Preparations, the purity and uniform strength of which are Guaranteed.

PANCREATIC EMULSION,

Prepared in accordance with the direction of the Physician who introduced this purely

MEDICINAL FOOD FOR CONSUMPTION AND WASTING DISEASES.

Pancreatic Emulsion will always take precedence of Cod-Liver Oil, by reason of its introducing the STABLE SOLID FATS INTO THE SYSTEM, instead of the evanescent fluid fats or oils.

Neither Cod-Liver Oil nor EMULSIONS of COD-LIVER OIL can supply the kind of fat necessary for sound and vigorous human life. In addition to this, all the Oily Emulsions are liable to rancidity, and most of them are highly objectionable in consequence of the SAPONIFICATION and ULTIMATE PUTREFACTION, produced by the chemical agents used instead of Pancreatic Juice.

Pancreatic Emulsion (properly so-called), is THE NECESSARY FOOD OF THE CONSUMPTIVE, and the most reliable form of nutriment for counteracting the tendency to Phthisis and other wasting diseases. It presents to the lacteals fat, in essentially the same condition for assimilation and absorption as in a vigorous human frame, and THE AGENT of the important change is THE NATURAL SECRETION of the PANCREAS.

Pancreatic Emulsion may therefore be regarded as Chyle obtained by nature's own process. In certain cases both Cod-Liver Oil and Pancreatic Emulsion are required—one to supply the blood with oil or liquid fat, the other with the more stable solid fats; but it cannot be too strongly urged that both PANCREATIC EMULSION and Cod-Liver Oil are *not to be regarded as Medicines, but as articles of diet*, without which patients, with their defect of health, will as surely starve as healthy persons would if deprived of the most nutritive part of their food.

Pancreatized (Digestive) Cod-Liver Oil. By Pancreatized Cod-Liver Oil, the active digestive principle of the Pancreatic Juice is imparted to it, which renders it in a highly favorable condition for rapid and complete digestion and assimilation, preventing nausea, and largely increasing the beneficial properties of the Oil.

Pancreatine effects the digestion and assimilation of Cod-Liver Oil and Fat, as well as Food generally. This palatable and popular remedy is therefore invaluable to PATIENTS WHO ARE UNABLE TO DIGEST COD-LIVER OIL, and who are thus deprived of its nourishing and invigorating properties.

Pancreatine Wine. An excellent vehicle for taking Cod-Liver Oil and promoting the digestion of it.

Tins, 1*s*, 2*s*, 5*s*, 10*s*.

VACCINE VIRUS,

AND

PRICES REDUCED. VACCINATORS PRICES REDUCED.

We continue, as for several years, to supply **ANIMAL VIRUS** propagated at our own stables from lymph of the "Beaugency Stock," imported by ourselves expressly for this purpose. Results of experience enable us to recommend it as of unsurpassed excellence.

The establishment is under the care of a competent physician of long experience in this specialty, who will spare no pains to produce a perfectly *reliable* and *pure* article, which we are prepared at all times to furnish in *fresh* and *active* condition.

Our new method Kine Crusts will be found much superior to the ordinary form, though points are recommended as the most reliable form of virus attainable.

All our Virus is put up in strong, *air-tight*, *sealed packages*, for safe conveyance by mail or express, and will be sent (postpaid if by mail) upon the following terms:—

Fifteen large Ivory Points, well charged on both sides.....$2.00
Seven large Ivory Points, well charged on both sides. 1.00
Large Ivory Points, less than seven, well charged on both sides, each..... .25
One Crust, new method, in air-tight Glass Capsule, prepared for immediate use..... 2.00

Also **Humanized Virus,** from HEALTHY CHILDREN, procured for us by physicians of undoubted reliability.

One Crust from Unruptured Vesicles (one remove from heifer if preferred).....$2.00

We will give a fresh supply, in case of failure reported within twenty days for Points, thirty days for Human, and ninety days for Kine Crusts.

Orders by mail or telegraph answered by return train.

Liberal discounts upon large supplies for Cities, Towns and Institutions.

Scarifying Vaccinator. Steel, Nickel Plated. (See Cut.) Each 25 cents.

IMPORTANT!

SPECIAL NOTICE FROM MESSRS. SEABURY & JOHNSON.

Physicians will please remember that it is not only necessary to distinctly specify our goods, but it is also imperative that they are dispensed by your pharmacist. Many complaints from practitioners have recently reached us, to the effect that the uniformity and excellent quality which have always distinguished our goods must have, or seem to have, undergone a change.

Being jealous of our reputation, we carefully investigated every complaint, and find *that in each instance, instead of delivering our articles, inferior or cheaper goods were substituted;* therefore the necessity of insisting on receiving what is prescribed. There can be no failure in our articles, as every preparation is made conscientiously, after officinal formulæ.

SEABURY & JOHNSON'S U. S. P. BELLADONNA PLASTER.

Our article is incorporated with the Alcoholic extract of Belladonna, prepared from the root. The plaster mass is freed from all irritating and stimulating properties, thus promoting, to its fullest extent, the uninfluenced action of this valuable sedative.

ANALYSIS OF BELLADONNA PLASTERS,

By Prof. R. OGDEN DOREMUS.

Messrs. SEABURY & JOHNSON:— { BELLEVUE HOSPITAL MEDICAL COLLEGE, NEW YORK, September 7, 1878.

"GENTLEMEN—I obtained from Messrs. W. H. Schieffelin & Co., of this city, samples of Belladonna Plasters prepared by Grosvenor & Richards, Boston; Mitchell's Novelty Plaster Works, Seabury & Johnson, New York. I have examined these varieties for the purpose of determining which possesses the largest quantity of Atropine. I employed equal surfaces of each, and *my analysis demonstrated that Seabury & Johnson's contains the greatest proportion* of the active principle of Belladonna, and is the most reliable plaster.

PROF. R. OGDEN DOREMUS, M.D., LL.D."

ANALYSIS OF BELLADONNA PLASTERS,

By J. P. BATTERSHALL, PH.D., Analytical Chemist.

Messrs. SEABURY & JOHNSON:— NEW YORK, June 7, 1878.

"GENTLEMEN—Samples of the Belladonna Plaster manufactured by your firm and by Dr. Grosvenor's, were purchased by me of a well-known drug house, and comparative tests made of the same, for the purpose of determining the relative amount of Extract of Belladonna in each. The tests used were applied to an equal quantity of each plaster, and under similar conditions. I find that a larger amount of the Solid Extract of Belladonna is contained in your preparation, which result was corroborated by repeated trials.

Respectfully yours, J. P. BATTERSHALL, PH.D., *Analytical and Consulting Chemist.*"

Practitioners who have not yet received our complete special Physicians' Catalogue of Pharmacopœia and Surgical Rubber Plasters, porous and spread, absorbent and antiseptic dressings, will be furnished same, on application. Yours very truly,

SEABURY & JOHNSON,

1312-1351eow 21 PLATT STREET, NEW YORK.

DOCTOR RABUTEAU'S

(Laureate of the Institute of France.)

DRAGEES, ELIXIR & SYRUP OF IRON.

"The experiments made in the hospitals of Paris have demonstrated that *Dr. Rabuteau's Dragees, Elixir and Syrup* regenerate the red globules of the blood with a rapidity never observed with the use of the other ferruginous preparations. These results have been proved by the various *Compt-Globules.*

"The ferruginous preparations of *Dr. Rabuteau* do not cause any constipation, and are perfectly tolerated by the weakest persons."—*Gazette des Hospitaux.*

Dr. Rabuteau's Elixir is prescribed when some difficulty is experienced in swallowing the Dragees; it is especially adapted to weak persons, whose digestive functions need strengthening or stimulating.

Dr. Rabuteau's Syrup is especially prepared for children, who take it readily, because of its agreeable taste.

CRINON'S HÆMOGLOBIN,

The Albuminoid Ferruginous Principle of Blood.

HÆMOGLOBIN is the only physiological chalybeate. Associated as it is with the phosphates of the blood, it forms the most powerful of tonics, and at the same time a most nourishing food. It is especially useful in cases of *Anæmia, Chlorosis, Cachexias, Exhaustion* caused by excess of work, nervous debility, fatigue resulting from parturition and lactation. It replaces entirely liquid blood, which has been recommended and used with success in *Phthisis* and *wasting away.*

It is offered in two forms: In cachets (wafers), 60 of which are contained in a box; combined with chocolate in small squares, 30 of which are in a box; both forms can be sent by mail.

Prepared by C. CRINON, Paris, Pharmacist of the first class, Laureate of the Hospitals of Paris Samples may be obtained by application to

THE INVENTION OF AN EMINENT FRENCH CHEMIST.

The Salvator for Invalids and the Aged. An Incomparable Ailment for the Growth and Protection of Infants and Children. A Superior Nutritive in Continued Fevers, and a Reliable Remedial Agent in all Diseases of the Stomach and Intestines.

TO PHYSICIANS AND THE PUBLIC.

THIS preparation is, as advertised, principally the GLUTEN derived, by chemical process, from VERY SUPERIOR GROWTHS OF WHEAT, and should not be confounded with burnt or boiled Flour, in which the GLUTEN or sanative qualities are destroyed or made medicinally inert, nor with Crushed Wheat, or finely ground Wheaten Grits, styled "Medicinal Food," and sold under various names, in which the starch and impurities contained in wheat are retained in larger quantity.

By Dubisson's formula, the starch, impurities and soluble matter found in the Wheat Cereal are effectually excluded, the GLUTEN only retained, which is condensed, granulated and prepared to keep in all climates, and justly entitled

—⁂ IMPERIAL GRANUM ⁂—

It is well known, and should be fairly considered, that nothing of merit can be favorably received and commended by the public without being followed by imitations of a questionable character. IMPERIAL GRANUM is not the exception, for no preparation has attracted more attention, nor been more fiercely imitated by competition, even to wording and shipping order.

Whilst again it can be truly said that no preparation ever offered for sale has been more carefully prepared and thoroughly tested, nor has met with a more welcome reception and universal approval, or afforded more relief to invalids or to young and suffering children and aged persons. This has been confirmed by thousands of testimonials from Chemists, Physicians, Heads of Families and the Press.

Respectfully,

E. HEATON.

In corresponding with Advertisers please mention THE MEDICAL AND SURGICAL REPORTER.

For Consumption and Wasting Diseases.

HYDROLEINE

Has been proved of the highest value in CONSUMPTION and all WASTING DISEASES, invariably producing IMMEDIATE INCREASE in FLESH and WEIGHT.

FORMULA OF HYDROLEINE.

Each dose of two teaspoonfuls, equal to 120 drops, contains:

Pure Oil,	**80 m. (drops.)**	**Soda,**	**1-3 grain.**
Distilled Water,	**35 m.**	**Boric Acid,**	**1-4 "**
Soluble Pancreatin,	**5 grains.**	**Hyocholic Acid,**	**1-20 "**

DOSE.—Two teaspoonfuls alone, or mixed with twice the quantity of soft water, to be taken thrice daily, with meals.

The principles upon which this discovery is based have been described in a treatise on "THE DIGESTION AND ASSIMILATION OF FATS IN THE HUMAN BODY," by H. C. BARTLETT, PH.D., F.C.S., and the experiments which were made, together with cases illustrating the effect of Hydrated Oil in practice, are concisely stated in a treatise on "CONSUMPTION AND WASTING DISEASES," by G. OVEREND DREWRY, M.D.

In these treatises the Chemistry and Physiology of the Digestion of the Fats and Oils is made clear, not only by the description of a large number of experiments scientifically conducted, but by cases in which the deductions are most fully borne out by the results.

☞ *Copies of these valuable works will be sent free, on application, to all who mention THE MEDICAL AND SURGICAL REPORTER.*

HYDRATED OIL,

HYDROLEINE,

WATER AND OIL,

May be described as partially digested oil, which will nourish and produce increase in weight in those cases where oils or fats not so treated are difficult or impossible to digest. In CONSUMPTION and other WASTING DISEASES the most prominent symptom is EMACIATION, of which the first is the starvation of the fatty tissues of the body, including the brain and nerves. This tendency to emaciation and loss of weight is arrested by the regular use of HYDROLEINE, which may be discontinued when the usual average weight has been permanently regained.

The ordinary so-called emulsions of Cod-liver oil and other fats, WHETHER PANCREATIZED OR NOT, merely remain in the form of a coarse mechanical mixture for a short time after agitation. The digestion of oil having in no sense been artificially produced, still devolves upon those functional powers the deficiency of which is the most prominent symptom in these cases.

HYDROLEINE is not a patent medicine or a secret preparation; the formula is on every bottle. Can be taken by the most delicate stomach; is immediately assimilated.

The permanence and perfection of the emulsion, and the extreme solubility of the HYDRATED OIL, solely prepared and sold by us under the name of HYDROLEINE, is shown by its retaining its cream-like condition as long as the purest Cod-liver Oil will retain its sweetness. Unlike the preparations mentioned, or simple Cod-liver Oil, it produces no unpleasant eructation or sense of nausea, and should be taken in such very much smaller doses, according to the directions, as will insure its complete assimilation; this, at the same time, renders its use economical in the highest degree.

To brain-workers of all classes Hydrated Oil is invaluable, supplying as it does the true brain food.
Economical in use—certain in result Tonic—Digestive and Highly Nutritive.

HERCULES MALT WINE,

MANUFACTURED BY

CHAS. WOLTERS,

PROSPECT BREWERY, PHILADELPHIA.

This new and extremely palatable *Extract of Malt* is designed as an *invigorating Health and Table Beverage.* It is an agreeable and reliable remedy for *Indigestion, Debility, Anæmia* and *Malnutrition*, and is peculiarly adapted to *Enfeebled Persons, Convalescents* and *Nursing Mothers.*

The perfection of this excellent article has been reached after a long series of careful experiments, and it surpasses other Malt Extracts in flavor, efficacy, cheapness, and in the quality and combination of its constituents, as it essentially contains a large proportion of *Peptones*, which act as Digestors, a rich quantity of *Phosphates*, which are valuable Nutrients, and a medium proportion of *Hops*, serving as a general Stomachic and Nervine. 1301-1352m

Sold in Drug Stores, at 25 cents per Pint Bottle.

DR. McINTOSH'S ELECTRIC OR GALVANIC BELT.

This Belt is a perfect Galvanic Battery, composed of sixteen cells, placed in pockets on a belt. Each cell is made of hard vulcanized rubber, lined with copper, which constitutes the negative plate. The rubber coating perfectly insulates each cell. The positive plates are of zinc, wrapped in a porous material to absorb the exciting fluid, preventing contact with the copper, and permitting the current to pass from the copper to the zinc. The cells are charged without wetting the belt.

A current selector is so arranged that one or more cells can be used at pleasure. The electrodes are covered similar to ordinary battery electrodes, and connected with the cells by connecting cords. By this arrangement, a current from the belt can be applied to any part of the body. Physicians who have used this belt in their practice do not hesitate to recommend it to the profession.

Our pamphlet on "Medical Electricity," containing a full description of the belt and diseases, with manner of treatment, sent free on application. Address

McINTOSH GALVANIC BATTERY CO.,

BEEF PEPTONE,

IN TRANSPARENT GLASSY SCALES,

Containing only the animal or azotized matter of the Beef. Each ounce is equal to 16 ounces of raw beef, easily soluble, and still faster in hot water.

This Beef Peptone is digested from tender, juicy Beef, by the aid of the *Crystal Pepsin,* of my manufacture (Jensen's Crystal Pepsin). Unlike the various BEEF EXTRACTS, this preparation contains all the nutritive constituents of the Beef, in a thoroughly digested state, ready for absorption into the system, while the Beef Extracts are entirely devoid of the chief elements of nutrition, such as the fibrinous, gelatinous and albuminous portions of the Beef, they only consisting of the concentrated saline constituents, with barely a trace of animal matter to keep its consistence. The difficulty so long experienced by the profession throughout the world, in preparing a PEPTONE entirely free from those chemical agents necessary for its manufacture, so as to render it fit for use, is hereby demonstrated to be successfully overcome, as it contains no foreign matter, and will stand the most severely scrutinizing test as to perfectness, also possessing flavor of the Beef, and so palatable as to render it highly agreeable.

Put up in bottles holding One ounce, Eight ounces, and one Pound.

Kept by the Wholesale and Dispensing Druggists in general.

DEPOT—L. WOLFF'S Pharmacy,

Northwest corner Twelfth and Chestnut Streets.

JENSEN'S CRYSTAL PEPSIN,

IN ARTIFICIAL CRYSTALS,

Strictly inodorous and tasteless, and perfectly soluble in water without acid.

THIS PEPSIN, now so popular with the profession, has created an impetus in the consumption of the same and physicians of the highest standing, who before the introduction of this active PEPSIN, with good reason, entirely abandoned the use of PEPSIN, are now the most eager in prescribing JENSEN'S CRYSTAL PEPSIN, whenever it is indicated, and since the knowledge of its great solvent power (gr. j. of it will dissolve the boiled whites from two to three eggs) has been established even among those susceptible to be great doubters it has caused itself to be utilized in many novel ways, by the thinking profession; for instance, in substituting morphia, chloral, etc., as a hypnotic, relieving gastric troubles where the above remedies have been prescribed, creating morphine and chloral habits. In removing diphtheritic patches it is successfully used combined with water, glycerine, and muriatic acid, and the same composition, diluted with more water, as a spray in bronchial troubles, dissolving muco-purulent matter, as well as a spray for same in catarrhal affections.

THIS PEPSIN.

Has also been used with success in dissolving and evacuating coagulated blood in the bladder, dispensing with surgical operations in such cases. Many other novel applications could be mentioned, if not in want of space. It is found to be FORTY times stronger than saccharated pepsin. One to three grains is an active dose.

KEPT BY ALL DRUGGISTS.

The above preparations are only manufactured and put up by

CARL L. JENSEN, M.D., PH.G.,

865 North 26th Street, Philadelphia, Pa.

No other Wholesale Agents for this Pepsin are longer engaged, than the Wholesale Druggists throughout the United States.

This College has for its *collegiate year* two sessions.

Regular Session commences Wednesday, September 7th, 1881, and closes March 1st, 1882.

Recitation Term (optional) commences March 15th, 1882, and closes June 14th, 1882.

Graded Course of three terms, of six months each.

PLAN OF INSTRUCTION.

By *Lectures*, *Recitations* and *Clinics*, together with *practical work* in the Anatomical, Physiological, Chemical and Pharmaceutical Laboratories.

Clinics are held *daily*.

Clinical Work in Hospitals and Dispensaries is given to the Senior Class (see Clinics), in *small sections*, under the charge of a *Clinical Teacher*, in all the departments of Medicine and Surgery.

Three Large Hospitals and *two Dispensaries* afford unlimited material for instruction.

ADMISSION.—Candidates for admission are required to pass a preliminary examination, unless satisfactory documentary evidence can be presented, that is equivalent to the standard adopted. (See Catalogue.)

FEES.

Regular Session.—Matriculation, $5.00; Lecture Tickets, $50.00; Hospital Tickets, $10.00 Examination (final), $25.00.

Recitation Term.—$10.00 for those who have attended Regular Session; all others, $25.00, $15.00 of which will be applied on the next Regular Term.

Board and Rooms can be obtained for $3.00 to $5.00 per week, the average being $4.00.

Institutes of Medicine and Medical Jurisprudence.

SAMUEL W. GROSS, M.D.,
Principles of Surgery and Clinical Surgery.

JOHN H. BRINTON, M.D.,
Practice of Surgery and Clinical Surgery.

WILLIAM THOMSON, M.D.,
Professor of Ophthalmology.

The recent enlargement of the College has enabled the Faculty to perfect the system of *Practical Laboratory Instruction*, in all the Departments. Rooms are assigned in which each Professor, with his Demonstrators, instructs the Class, in Sections, in direct observation and hand-work in the Chemical, Pharmaceutical, Physiological, and Pathological Laboratories. Operative and Minor Surgery, and investigation of Gynæcological and Obstetric conditions on the *Cadaver*, are taught, as also Diagnosis of Disease on the living subject. The experience of the past Session has abundantly proven the great value of this Practical Teaching.

This course of instruction is *free of charge, but obligatory upon* candidates for the Degree, except those who are Graduates of other Colleges, of ten years' standing.

A SPRING COURSE of Lectures is given, beginning early in April, and ending early in June. There is no additional charge for this Course to matriculates of the College, except a registration fee of five dollars; non-matriculates pay forty dollars, *thirty-five of which, however, are credited on the amount of fees paid for the ensuing Winter Course.*

CLINICAL INSTRUCTION is given *daily*, at the HOSPITAL OF THE JEFFERSON MEDICAL COLLEGE, throughout the year, by Members of the Faculty, and by the Hospital Staff.

FEES.

Matriculation Fee (paid once), - -	$5.00	Practical Anatomy, - - - - - - -	$10.00
Ticket for each Branch (7) $20. - -	140.00	Graduation Fee, - - - - - - - -	30.00

Fees for a full course of Lectures to those who have attended two full courses at other (recognized) Colleges—the matriculation fee, and - - - - - - - - - $70.00
To Graduates, of less than ten years, of such Colleges—the matriculation fee, and 50.00
To Graduates, of ten years, and upward, of such Colleges—the matriculation fee only.

The Annual Announcement, giving full particulars, will be sent on application to

1318-1330 eow **ELLERSLIE WALLACE, DEAN.**

JOHNSTONE'S IMPROVED

ADAPTABLE POROUS FELT SPLINTS.

AHL'S SPLINT MANUFACTURING COMPANY, LIMITED,

123 & 125 South Eleventh Street, PHILADELPHIA, PA.

THE ADAPTABLE POROUS SPLINTS, invented and improved by W. H. JOHNSTONE, have been tested extensively in both civil and military practice for a number of years, and have been endorsed and recommended in the most unqualified manner by the celebrated and distinguished Surgeons of America.

Their *porosity* is a peculiar and a valuable property. While the material is firm and insoluble, it permits readily the passage of air and fluids, so that, on one hand, the heat from the inflamed surface, the perspiration, and the morbid exhalations, are not confined, to the detriment of the patient, *as is the case in every other kind of splint*, but pass off freely; and on the other hand, lotions of cold or warm water, medicated or not with weak alcohol, carbolic acid, arnica, tincture, solutions of the sulphites, etc., can be constantly applied without disturbing the dressings. This, it will readily be seen, is a most invaluable property when the parts are bruised, lacerated, filled with extravasated blood, or erysipelatous, and give these splints a conspicuous advantage over all others.

From FRANK H. HAMILTON, M. D., Professor of Fractures and Dislocations in the Bellevue Hospital Medical College, author of "A Treatise on Fractures and Dislocations," etc.

Having examined carefully *JOHNSTONE'S IMPROVED ADAPTABLE POROUS FELT SPLINTS*, I feel warranted in recommending them to the Profession as superior to all other manufactured splints now in use. They possess all the essential qualities of a good splint, having firmness, pliability and lightness.

FRANK H. HAMILTON, M. D.,
Prof. Military Surgery and Fractures and Dislocations, Bellevue Hospital Col.

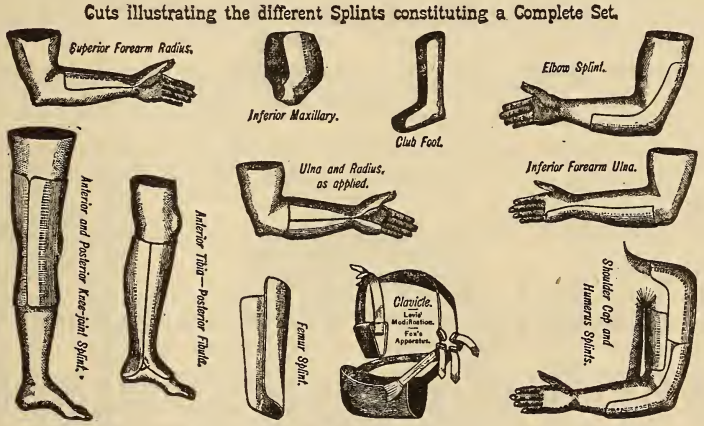
From PROF. D. HAYES AGNEW, Prof. Surgery, University of Penna.

1611 CHESTNUT STREET, PHILADELPHIA, *February 6th*, 1879.

The Adaptable Felt Splints, formerly known as those of Dr. Ahl, with the improvement now made by W. H. Johnstone, which renders them in every way superior to the former, I regard as very excellent appliances in the treatment of fractures.

D. HAYES AGNEW,
Prof. Surgery, University of Pennsylvania.

Cuts illustrating the different Splints constituting a Complete Set.



SPECIAL NOTICE TO THE PROFESSION AND TRADE.

Our *policy* heretofore in the introduction of JOHNSTONE'S IMPROVED ADAPTABLE POROUS FELT SPLINTS, has been to confine the sales and business negotiations directly to the Doctors themselves, declining in every case to sell our goods through Dealers; we having assured the Profession generally, both through our agents and catalogues, that *JOHNSTONE'S IMPROVED SPLINTS* could only be obtained by subscription.

We wish to announce, that owing to the large demand for our goods and the constant importunity on the part of *Surgeons* everywhere to place our Splints on sale with their Instrument Dealer or Druggist, to afford them greater convenience and facility in obtaining the pieces in duplicate, **we have at last acceded to that request, and hereafter *JOHNSTONE'S CELEBRATED FELT SPLINTS* can be obtained at most dealers in Instruments and Drugs throughout the United States, at the same price which they were heretofore sold, viz:**

A complete set, embracing fifty (50) pieces—twenty-five for adults and twenty-five for children—is thirty ($30) dollars. Extra or duplicate pieces can always be obtained from your DEALER, at one dollar each.

JOHNSTONE'S CELEBRATED SPINAL JACKET, for Curvatures and Deformities, have met with unparalleled success, and, from their merit, secured the unqualified endorsement and approbation of our celebrated orthopædic specialists, and particular expression of gratitude from the patients who are wearing them. For full information, send for Descriptive Circulars.

Should your Instrument dealer fail to have a supply of our Splints, and decline to carry them in stock, orders sent to us will receive prompt attention.

AHL'S SPLINT MANUFACTURING CO., Limit
W. H. JOHNSTONE, Manager.

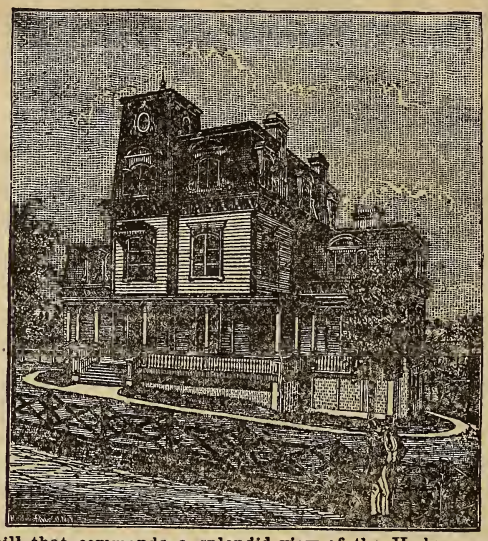
THE DE QUINCEY HOME,

Fort Washington, **New York City.**

A Private Asylum for the Treatment of the Opium, Morphine, Chloral, Chloroform and Hashisch Habits, Nervous Diseases and Inebriety.



Drs. H. H. Kane and W. H. Vittum, in charge.

Consulting Physicians.

Prof. Wm. A. Hammond,

Prof. T. Gaillard Thomas,

Dr. Edward C. Spitzka,

Dr. Daniel M. Stimson,

Dr. Edward T. Ely,

Dr. G. H. Wynkoop,

Dr. Andrew H. Smith.

Situated upon a high hill that commands a splendid view of the Hudson and Harlem rivers, Spuyten Duyvil Creek, and the beautiful country for miles around; surrounded by ample grounds and magnificent drives; in easy communication with the city by means of the Sixth and Ninth Avenue Elevated and the Hudson River Railroads; away from the dust, noise, crowding and malaria of the city; with hot and cold water in every room, furnace and grate-fire heating, croquet, horses and carriages, boats and fishing, an excellent *cuisine*, trained nurses and careful medical attendance, it possesses unequaled advantages for the treatment of cases of this kind.

The plan of treatment pursued in the cure of opium, morphine and chloral takers is that of *rapid reduction*, which possesses all the advantages, and none of the dangers of Levenstein's *sudden deprivation*, or the prolonged agony of *gradual reduction*. Each case is studied and treated in accordance with its peculiarities and the idiosyncrasies of the patient, no set plan of treatment being pursued, at the expense of the person's health or comfort.

Our Home, furthermore, offers special facilities for the treatment by *rest*, *diet*, *and massage*, according to the plan of Weir Mitchell, of that large class of nervous diseases so commonly met with in ladies suffering from uterine troubles. This plan of treatment has been specially studied, and nurses competent to carry out its provisions in every detail will be furnished. For further particulars, etc., address 1299-1350

ANGLO MILK FOOD

(The Best.)

SWISS

FOR INFANTS and INVALIDS.

RECOMMENDATIONS
OF THE STRONGEST KIND
FROM PROMINENT
PHYSICIANS.

CLOSEST RESEMBLANCE TO MOTHER'S MILK.

CEREALS AND MILK
SCIENTIFICALLY PREPARED.
IN POUND CANS OF
FULL WEIGHT.

SEE ANALYSIS ON EVERY CAN.

THIS IS NOT A SHORT WEIGHT INFANTS' FOOD.

"The starchy constituents ordinarily objectionable in prepared Foods are, in the Anglo-Swiss Milk Food, in a great degree, converted into soluble and more easily digestible Dextrine and Sugar; effecting in the food itself changes which, in other foods, are left to the digestive organs to accomplish.

"*A simple test:* Mix one part Food to three parts cold water—a smaller proportion of water than for use—occupy five to eight minutes in bringing it slowly to boiling point; boil one minute; the result is not a pulp or pap, but a liquid resembling milk. Submit other prepared foods to same test, and you obtain a mucilaginous paste. A heavy, pasty appearance should not be accepted as evidence or measure of nutriment; it only betrays the raw or unconverted starch contained."

☞ *See pamphlet at Drug Stores.*

MEAT AND QUINIA.

AROUD'S WINE WITH QUINIA,

And all the Nutritive Principles of Meat.

Aroud's Preparations recommend themselves to the most serious attention of Physicians, and deserve their preference:

1st.—Because they combine all the active principles of the richest barks of quinia carefully selected.

2d.—Because 30 grammes of them contain 3 grammes of quinia and all the nutritious principles of 27 grammes of meat, which are soluble in alcohol and water.

3d.—Because the combination of meat with the barks of quinia has not only the advantage of acting as a tonic, nutritive, and febrifuge, but also that of paralyzing and guarding against any local irritation caused by the prolonged use of quinia barks, and of preparing the stomach to endure the salutary influence of this friendly compound.

4th.—Because these preparations with meat as a basis, containing in their composition the entire nutritious elements of muscular fibre, blood and bone, answer alone to the immortal maxim of Hippocrates, fundamental basis of all good reparative medication, "*Ars imitatio natura.*"

5th.—Because, if meat occupies the first rank among the articles of food, if quinia is placed at the head of tonics, the combination of these highly reparative substances must necessarily be a reconstructor par excellence.

Finally, because the experiments with Aroud's Wine and Quinia prove, better than theory, that, to reconstruct the shattered and enfeebled forces, no other tonic can be compared to it.

MEAT, IRON AND QUINIA.

AROUD'S

FERRUGINOUS WINE WITH QUINIA,

And all the Nutritive Principles of Meat.

MEAT, IRON AND QUINIA, that is so say, the most reparative food combined with a reconstituent and a nerve tonic par excellence: such is the remarkable composition of this ferruginous preparation, which, in all respects, merits the preference of physicians. It prevents impoverishment of the blood, anæmia, chlorosis, etc.; presented in a form at once attractive to the eye and pleasant to the palate—an assimilable iron united with all the constitutive principles of bone and of muscle; it can, therefore, form and regenerate the forces, and this without causing nausea, constipation, or disturbing the digestive organs. By its generous alimentation it corrects and modifies the bad effect of the prolonged use of quinia.

The excellence of this preparation justifies that which Hippocrates proclaimed over 2000 years ago, and all clinics have confirmed: "That the soluble nutritive principles of meat is the food best adapted for the sick and convalescents; that these principles, being the integral parts of muscle, have the faculty of forming flesh rapidly, and of restoring muscle."

It is, therefore, a precious specific for all the maladies caused by impoverishment or deterioration of the blood, because meat, iron and quinia combined give nourishment, act as a tonic, regenerate, reconstitute, and regulate the entire system. 1297-1348-eow

Matriculates who do not furnish evidence of sufficient preliminary education are required to pass an examination in English and Physics, and to attend three graded winter courses of instruction of six months each, consisting of didactic lectures, clinical lectures, and practical work in laboratories and hospitals.

A VOLUNTARY FOURTH YEAR, OR POST GRADUATE COURSE, purely practical has been established, for particulars of which see Catalogue.

The Lectures of the Winter Session of 1882-83 *will begin on Monday, October 2, and end on the last day of March.*

The Preliminary Course will begin on the second Monday in September.

In the *Spring Months* the laboratories of Chemistry, Pharmacy, Histology, Physiology, and Pathology are open, and the post-graduate clinical course is continued.

FEES IN ADVANCE.—Matriculation $5. For each session, including dissection, operating, and bandaging, $150. No graduation fee.

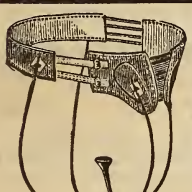
DR. McINTOSH'S

NATURAL UTERINE SUPPORTER.



No instrument has ever been placed before the medical profession which has given such universal satisfaction. The combination is such that the physician is able to meet every indication of Uterine Displacements. Falling Womb, Anteversion, Retroversion and Flexions are overcome by this instrument, where others fail. This is proven by the fact that, since its introduction to the profession it has come into more general use than all other instruments combined.

Among the many reasons which recommend this Supporter to the physician is its self-adjusting qualities. The physician, after applying it, need have no fear that he will be called in haste to remove or readjust it, as is often the case with rings and various pessaries held in position by pressure against the vaginal wall, as the patient can remove it at will, and replace it without assistance.

The Abdominal Supporter is a broad morocco leather belt, with elastic straps to buckle around the hips, with concave front, so shaped as to hold up the abdomen. The Uterine Support is a cup and stem, made of highly polished hard rubber, very light and durable, shaped to fit the neck of the womb, with openings for the secretions to pass out, as shown by the cuts. Cups are made with extended lips, to correct flexions and versions of the womb. The cup and stem is suspended to the belt by two soft elastic rubber tubes, which are fastened to the front of the belt by simple loops, pass down through the stem of the cup and up to the back of the belt. These soft rubber tubes being elastic, adapt themselves to all the varying positions of the body, and perform the service of the ligaments of the womb. The instrument is very comfortable to the patient, can be removed or replaced by her at will, can be worn at all times, will not interfere with nature's necessities, will not corrode, and is lighter than metal. It will answer for all cases of Anteversion, Retroversions, or any Flexions of the womb, and is used by the leading physicians with never-failing success, even in the most difficult cases.

Our Reduced Prices are to Physicians, $6.00; to Patients, $10.00.

Instruments sent by mail, at our risk, on receipt of price, or by Express, C. O. D., with the Express charges for returning the money added.

☞ CAUTION.—Owing to the great sale and popularity of our instrument various and base imitations are sold by unscrupulous parties. In order to get the genuine, it is best to order direct from us.

DR. McINTOSH'S NATURAL UTERINE SUPPORTER CO.,
192 Jackson Street, Chicago, Ill.

Our valuable pamphlet, "Some Practical Facts about Displacements of the Womb," will be sent you free on application. 1281-1332

FELLOWS' HYPO-PHOS-PHITES

CONTAINS

THE ESSENTIAL ELEMENTS to the Animal Organization—Potash and Lime;

The **OXYDIZING AGENTS**—Iron and Manganese;

The **TONICS**— Quinine and Strychnine;

And the **VITALIZING CONSTITUENT**—Phosphorus,

Combined in the form of a Syrup, with *slight alkaline reaction.*

IT DIFFERS IN EFFECT FROM ALL OTHERS, being pleasant to taste, acceptable to the stomach, and harmless under prolonged use.

IT HAS SUSTAINED A HIGH REPUTATION, in America and England, for efficiency in the treatment of Pulmonary Tuberculosis, Chronic Bronchitis, and other affections of the respiratory organs, and is employed also in various nervous and debilitating diseases, with success.

ITS CURATIVE PROPERTIES are largely attributable to Stimulant, Tonic and Nutritive qualities, whereby the various organic functions are recruited.

IN CASES where innervating constitutional treatment is applied, and tonic treatment is desirable, this preparation will be found to act with safety and satisfaction.

ITS ACTION IS PROMPT, stimulating the appetite and the digestion; it promotes assimilation, and enters directly into the circulation with the food products.

THE PRESCRIBED DOSE produces a feeling of buoyancy, removing depression or melancholy, and hence is of great value in the treatment of **mental and nervous affections.**

From its exerting a double tonic effect, and influencing a healthy flow of the secretions, its use is indicated in a wide range of diseases.

Each Bottle of Fellows' Hypophosphites contains 128 Doses.

PREPARED BY

JAMES I. FELLOWS, Chemist,

48 VESEY STREET, NEW YORK.

Circulars and Samples sent to Physicians on application.

☞ **SPECIAL TO PHYSICIANS.—ONE** large bottle, containing fifteen ounces (which usually sells for $1.50) will be sent upon receipt of **Fifty Cents** with the application; this will be applied to the prepayment of Expressage, and will afford an opportunity for a thorough test in Chronic Cases of Debility and Nervousness. Express charges prepaid upon all samples.

1304-1355m **FOR SALE BY ALL DRUGGISTS.**

MURDOCK LIQUID FOOD CO., Boston,

THE ONLY MANUFACTURERS OF

RAW FOOD EXTRACTS IN THE WORLD.

It can be retained by the weakest stomach, when all other food extracts, and even water, is rejected.

It is the only food that will relieve the Consumptive from Hunger.

Nutritious food, if raw, condensed, and free from insoluble matter, will cure chronic diseases, as it will make blood faster than all preparations or food, and new blood will cleanse the system.

MURDOCK'S LIQUID FOOD is made from Beef, Mutton and Fruits; contains corpuscles; is 12½ per cent. soluble albumen, and free from insoluble matter, drugs, minerals, salts and acids, and can be retained by the stomach when so weak as to refuse food.

Ask your Druggists, or send to us, for Essays read before the American Medical Association, at Richmond, Va., May 6, 1881, on the value of Raw Food Extracts, by Geo. R. Shepherd, of Hartford, Conn., and other Essays and Testimonials from Medical Journals and Physicians that have used Liquid Food, in cases of Consumption, Scrofula, Nervous and General Debility, Dyspepsia, acute and chronic, Constipation, Diphtheria, Intemperance, Cholera Infantum, Infantile Diarrhœa, Post-partum Hemorrhage, Purpura Hemorrhagica with Waxy Liver, Pelvic Cellulitis, Malarial and other Fevers, Chronic Strumous Arthritis, Sclerosis of the Spinal Cord, Senile Gangrene, Perinephritic Abscess, and other diseases of malnutrition. No cases of Cholera Infantum have occurred where it has been used daily, and no lives have been lost from Cholera Infantum where it has been prescribed by a physician. Excellent for Eczema, Diabetes, Rheumatism and Neuralgia.

At the request of any physician who has not tried our Extracts, and would like to, we will deliver sample bottles to the express in Boston, Philadelphia, or Pittsburg. *If any physician has a Chronic case that will not yield to his treatment, of any disease, we will furnish, at his request, sufficient Liquid Food to satisfy him that Liquid Food will make blood faster than all preparations or food known, and that new blood will cleanse the system of disease. Our claims are that it is a Raw Extract, condensed many fold, free of insoluble matter, and contains corpuscles. It can be retained when the stomach is so weak that it will refuse water.* We are induced to do this, knowing that our Extracts are saving life, and that an increased use of them, which will follow after a trial of them, will be the means of saving more lives daily. (*We ask no testimonials of results obtained.*) Raw Extracts are available where cooked ones are not, or if available contain only one-third as much nourishment.

Liquid Food is in general use at all Hospitals, Infant and Insane Asylums, and Washingtonian Homes, U. S. Navy Hospitals, and by all the physicians that have tried it.

If not kept by your Druggist, can be obtained in any of the commercial cities. In Philadelphia, by Johnston, Holloway & Co., Boericke & Tafel; in Pittsburgh, by A. Kelly & Co; in Baltimore, by Thomsen & Wirth; or you can order direct and we will pay express. 1 oz., 15 cents; 6 oz., 55 cents; 12 oz., $1.00.

MURDOCK LIQUID FOOD CO.,

BOSTON. 1297-1348

It will make Blood faster than all preparations known.

McINTOSH'S COMBINED

Galvanic AND Faradic Battery.

THIS CELEBRATED BATTERY COMBINES BOTH THE GALVANIC AND FARADIC CURRENT,

Which can be used separately or combined. Any strength and intensity desired can be obtained for use in Electro-therapeutics. THIS BATTERY is constructed on an IMPROVED PLAN, as follows: The zinc and carbon plates are arranged in couples, securely clamped to hard rubber plates, with thumb screws. These screws are also used for binding posts. All the connections are positive. The cells are made in sections of six, of hard rubber, with hard rubber drip cup. The following points of excellence render our Batteries superior to others:

1. They combine the only Portable Galvanic and Faradic Battery in one case.

2. They weigh one-half less than other Batteries of the same number of cells.

3. The cells are made in sections of six, of one solid piece of hard, vulcanized rubber; by this arrangement they can be emptied, cleaned and filled as easily and quickly as one cell, and will not crack, break or leak.

4. A hard rubber drip cup is placed by the side of each section of cells, to receive the zinc and carbon plates when removed from them. By this arrangement we avoid the use of absorbent materials and soiling the Battery

5. The Hydrostat is perfect. The rubber plates which hold the elements project over on one side enough to cover the cells when the zinc and carbon plates are placed in the drip cups. The under side of this projection is covered with thick, soft rubber, which is securely clamped to the cells sections, and makes them water tight.

6. This is the only Battery in which the zinc and carbon plates can be kept clean by simply rinsing them.

7. A zinc or carbon plate can be removed by simply loosening a binding post; and all parts of the Battery can be duplicated, as like parts are made exactly alike. We will be pleased to send circulars and our illustrated catalogue, giving full information, price, etc., free, upon application.

McINTOSH GALVANIC AND FARADIC BATTERY CO.,

Registered COSMOLINE Trade Mark.

Unguentum Petrolei

Prepared by E.F.Houghton & Co. Philadelphia, U.S.A.

Put up in 1, 5, 10, 25, 50, and 100-lb. cans. Samples furnished on application. The post-office laws forbid anything of an oleaginous nature being sent through the mail.

In chemical composition, Cosmoline [Unguentum Petrolei] is an oleaginous hydrocarbon, corresponding to the heavy petroleum oils, and containing a large amount of the paraffines and olefines of the formulæ $C_{16}H_{34}$ and $C_{16}H_{32}$. It contains but a small percentage of the paraffines and olefines, corresponding to the formulæ C_7H_{16} and C_7H_{14}, respectively, and the offensive and irritating properties of the crude oil have been carefully removed. In the process of purification, no acids, alkalies, or other chemicals are employed, and no injurious additions of any kind are made to the natural product. The result is a semi-solid, translucent substance, with a faint odor and unctuous feel.

Cosmoline [Unguentum Petrolei] melts at about 100° Fah. (38° Cent.); and boils at about 625° Fah. (329° Cent.); its specific gravity is about 0.875 at 60° Fah.

As it contains no oxydizable or organic matter capable of change by putrefaction or fermentation, and is absolutely without affinity for moisture, it offers to the profession an admirable unguent, which can never decompose, ferment, or become rancid in any climate or temperature.

291 MADISON AVENUE, NEW YORK, February 26th 1878.

I have examined the preparations of Cosmoline as manufactured by E. F. Houghton & Co., Philadelphia, and believe them well adapted to the purposes for which they are designed. As lubricants, and as the bases of simple or medicated ointments, they have a decided advantage over the fixed oils and fatty substances in ordinary use, in that they do not become rancid, and do not acquire irritating qualities from atmospheric exposure. ALFRED C. POST, M.D., LL.D.,
Emeritus Professor of Clinical Surgery in the University of New York, Visiting Surgeon to Presbyterian Hospital, etc.

PHILADELPHIA, July 10, 1880.

MESSRS. E. F. HOUGHTON & CO.:

I have for a number of years made extensive use of Cosmoline [Unguentum Petrolei] and consider it a most valuable article for surgical purposes. Either as a dressing by itself, or as a vehicle for the application of medicaments, it is greatly superior to lard or other fatty matters, especially by reason of its non-liability to change by time or temperature.

Yours truly,
JOHN H. PACKARD, M.D.
1031 WALNUT ST., PHILADELPHIA.

MESSRS. E. F. HOUGHTON & CO.:

I have used extensively Cosmoline [Unguentum Petrolei] both in Dispensary and private practice, with very great satisfaction. As a vehicle in making ointments it is invaluable, and far superior to lard, for the reason that it will not become rancid or undergo chemical change like the latter, when exposed to the atmosphere. I cannot too highly commend it as an application in various skin diseases.

Yours truly, JOHN V. SHOEMAKER, A.M., M.D.,
Physician to the Pennsylvania Free Dispensary for Skin Diseases

208 WEST 34TH ST., NEW YORK.

MESSRS. E. F. HOUGHTON & CO.:

Gents:—I fully appreciate the value of your Cosmoline, or Unguentum Petrolei, and prescribe it frequently in ointments. Fluid Cosmoline I have used constantly for several years, as a lubricant of urethral sounds. It is the cleanest oil I know of for this purpose.

Yours truly, GEO. HENRY FOX.

TO THE MEDICAL PROFESSION.

LACTOPEPTINE.

We take pleasure in calling the attention of the Profession to LACTOPEPTINE. After a long series of careful experiments, we are able to produce its various components in an absolutely pure state, thus removing all unpleasant odor and taste (also slightly changing the color). We can confidently claim that its digestive properties are largely increased thereby, and can assert without hesitation that it is as perfect a digestive as can be produced.

LACTOPEPTINE is the most important remedial agent ever presented to the Profession for Indigestion, Dyspepsia, Vomiting in Pregnancy, Cholera Infantum, Constipation, and all diseases arising from imperfect nutrition. It contains the five active agents of digestion, viz: Pepsin, Pancreatine, Diastase, or Veg. Ptyalin, Lactic and Hydrochloric Acids, in combination with Sugar of Milk.

FORMULA OF LACTOPEPTINE.

Sugar of Milk	40 ounces.	Veg. Ptyalin or Diastase	4 drachms.
Pepsin	8 ounces.	Lactic Acid	5 fl. drachms.
Pancreatine	6 ounces.	Hydrochloric Acid	5 fl. drachms.

LACTOPEPTINE is sold entirely by Physicians' Prescriptions, and its almost universal adoption by physicians is the strongest guarantee we can give that its therapeutic value has been most thoroughly established.

The undersigned having tested LACTOPEPTINE, recommend it to the profession.

COMPRESSED SOLUBLE HYPODERMIC TABLETS.

We have recently given much attention to the preparation of Soluble Compressed Tablets to be used in hypodermic medication. This idea was brought to the notice of the medical profession by H. Augustus Wilson, M.D., of this city, in a paper read before the Philadelphia County Medical Society. His views were based upon carefully made experiments, and were received with much interest. At his instance we undertook to prepare in this manner a number of combinations, which have upon trial proved eminently satisfactory. We therefore feel warranted in offering these articles to the profession as superior in several respects to all other forms for hypodermic purposes.

They are convenient, both to carry and to use; they are accurate, enabling the physician to administer precisely the dose desired; and they are not liable to change by keeping. Solutions are bulky, the bottles are apt to break or to leak, and the liquid often becomes decomposed or deteriorated by time. Powders become inert, from atmospheric influences; the papers become torn and part of the medicament is often lost in the necessary handling. The patented gelatine discs are not quickly soluble, and are sometimes slow in taking effect. Their use is apt to be followed by abscesses, which is rarely the case with crystalloid substances.

An extensive experience of many years in the manufacture of compressed powders (or pills), and the precision and accuracy of our mechanical appliances, enable us to make these articles with a degree of perfection not attainable in any other way, or by any other process. The exact amount specified of each drug is thoroughly incorporated and distributed throughout every tablet. In water at ordinary temperatures a perfect solution may be made in from thirty to sixty seconds.

No extraneous material is employed, except the Sulphate of Sodium, and this only in such proportions as to facilitate solution.

CAUTION.—The dose of Morphia for hypodermic use varies from $\frac{1}{12}$ to $\frac{1}{2}$ of a grain. We would suggest to the profession the necessity for caution. The large doses sometimes recommended—$\frac{1}{2}$, $\frac{3}{4}$ and even 1 grain—are unsafe for the first trial, unless the conditions requiring the injection be exceptional. *In commencing, it should not exceed one-third of that ordinarily administered internally.*

DIRECTIONS.—The syringe is charged with about twenty minims of water, which is poured into a teaspoon or other convenient receptacle; the pellet being dropped in, is crushed with the end of the syringe, to which the needle fits, and after all the lumps are broken the solution is drawn up and forced out three or four times, when usually the whole mass will be entirely dissolved and ready for use.

If warm water is used or the spoon is heated over a lamp or gas jet, a perfect solution is effected in a moment. The tablets may be readily powdered with the blade of a knife, and a solution is even more speedily made in this way.

The following formulæ and combinations embrace all those in general request. Others will be added as the demands of the profession warrant their manufacture.

We claim for our Hypodermic Tablets: Absolute accuracy of dose. Ready and entire solubility. Perfect preservation of the drug.

Their convenience and utility will at once be apparent on examination.

We are under many obligations to Professor Roberts Bartholow, who, from his thorough scientific investigations and extensive experience in hypodermic medication, is recognized as the highest authority on the subcutaneous treatment of disease, for suggestions and advice in regard to the care required in preparing our Hypodermic Tablets, also for the kind interest in devising the above formulæ.

His book on "Hypodermic Medication" is well known as the standard work on that subject, and has reached a third edition.

The success of our efforts to furnish the medical profession a much needed improvement in hypodermic medication is due to the happy suggestion of Dr. H. Augustus Wilson and to the kind interest of other medical friends, who have advised us as to the absolute essentials in preparing so delicate and important a series of medicaments.

SUGAR-COATED PILLS.

Our list of Sugar-coated Pills of the United States and British Pharmacopœias comprises most of the officinal and popular formulæ known to the profession, to which we have added several new and valuable combinations. Our pills are made entirely by hand, from the purest materials, and are sugar and gelatine-coated by the latest and most approved processes. For solubility, regularity of shape, and beauty of finish, they are excelled by none.

IMPORTANT.—Our pills being coated while the mass is yet soft, will remain so for years. To be convinced of their extraordinary solubility, it is only necessary to open a few of them—for instance, quinine, cinchonidia, or blue pills, all of which are usually found in the market, hard and insoluble. Note also the rapidity with which the coating is dissolved in the saliva.

GELATINE PHARMACEUTICALS.

One of the greatest improvements of modern pharmacy is the use of Gelatine in various forms to render medicines more sightly, and to disguise their nauseous taste. This has given origin to the Gelatine-coated Pill—a full line of which, of similar formulæ to our sugar-coated pills, will be found in our list—and also to the Hard and the Soft Gelatine Capsules. We are dispensing Hard Capsules, empty and filled. The Soft Elastic Capsules, however, are, from the nature of their formation, always filled before leaving our laboratory. These Capsules are so soft and elastic that their walls may be brought into juxtaposition, and yet they will regain their original shape and size when the pressure is removed. This property renders them very easy of deglutition, and they will slip down like an oyster or the yolk of an egg, though the largest of them have a capacity of half a fluidounce.

RECTAL SUPPOSITORIES.

The use of Gelatin as a basis for preparations designed for local medication is fast superseding all other forms, as it offers the advantages of cleanliness, great flexibility and elasticity, rapid solubility, and prompt and thorough action of the remedial agent.

The remedies can be readily carried on the person of the patient or the physician, and can be freely handled without danger of melting or breaking.

These preparations are made of a soluble compound of Gelatin and Glycerin, easily liquefied by the heat and secretions of the body. The medicating ingredient is incorporated with this compound, and by its solution is brought into gradual and prolonged contact with the diseased surfaces of the part to which the remedy is applied.

Samples and full descriptive circulars of these articles will be furnished to the medical profession by enclosing stamp to

"The Most Popular and Practically Useful Medical Journals in the United States."

THE MEDICAL AND SURGICAL REPORTER,

PUBLISHED EVERY WEEK.

THE COMPENDIUM OF MEDICAL SCIENCE,

PUBLISHED HALF-YEARLY.

The REPORTER gives 1500 pages yearly, the COMPENDIUM 600 pages of the best quality of reading matter. No better and no cheaper medical journals are published in America or elsewhere.

The Medical and Surgical Reporter,

A WEEKLY JOURNAL.

Edited by D. G. BRINTON, M. D.

ISSUED EVERY SATURDAY.

Large Octavo, Double Columns, 26 to 28 Pages of Reading Matter in Each Number.

The REPORTER was established in 1848, and now has attained as large, if not the largest, circulation of any medical weekly in this country. It has achieved this through its independence of all cliques, its steady devotion to the highest interests of the regular profession, its energy in obtaining the most important scientific news, the value of its original articles, its broad national character, and its attention to the practical and clinical aspects of professional study.

FOR 1882.

Some important improvements will be added to the REPORTER in 1882, and we have arranged with several of the most distinguished American medical writers to contribute to its pages. We suggest to our subscribers to send in their renewals at an early date, and should be glad to have them bring the REPORTER to the notice of their friends. We can guarantee them a satisfactory periodical the coming year.

PRICES:

The regular price for the COMPENDIUM for one year (two numbers, 300 pages each, bound in paper,) is $2.50.

A discount is allowed on the REPORTER and COMPENDIUM when taken together, as follows:

The Weekly Medical and Surgical Reporter, - -	$5 00
The Half-Yearly Compendium of Medical Science, - -	2 50
The Reporter and Compendium, taken together, - -	7 00

☞Payable in advance, direct to the publisher.

A *Table of Contents* of a number of Half-Yearly Compendium will be sent on application to the publisher.

A single copy will be sent for examination for One Dollar.

Specimen copy of the REPORTER free on application.

☞ **Catalogue of Publications from this office mailed on application.**

FOR PHYSICIANS' USE ONLY.

SVAPNIA

OR

PURIFIED OPIUM.

CONTAINS THE

ANODYNE AND SOPORIFIC

ALKALOIDS

CODEIA,

NARCEIA

AND

MORPHIA.

EXCLUDES THE

POISONOUS & CONVULSIVE

ALKALOIDS

THEBAIN,

NARCOTIN

AND

PAPAVERIN.

DOSE, THE SAME AS OPIUM.

This article is not intended for popular use, but only on prescription of the profession. It is to take the place of Opium in cases where that drug acts injuriously.

Dr. John Harley, of London, in his "Old Vegetable Neurotics," details a large number of experiments upon the human and animal system, with six of what he considers the narcotic alkaloids. He concludes that although all six possess both narcotic and hypnotic properties, yet these are so varied in degree and force as to make their effects, when exhibited singly, very distinct from those following their exhibition in combination.

Taking the experience of practical physicians with Dr. Harley's results, as a basis, we would group them in the following order:

First Group. Anodyne and Hypnotic Elements.	Second Group. Narcotic and Convulsive Elements.
1. Morphia.	1. Thebain.
2. Narceia.	2. Cryptopin.
3. Codeia.	3. Papaverin.

Now SVAPNIA *is a distinctive name* given *to the first group, representing* the ANODYNE and HYPNOTIC ELEMENTS; *the second group, or the narcotic and convulsive* elements *of Opium being eliminated;* and is *not*, therefore, a simple principle, or a single constituent of Opium.

The relative values of each being known, we can select and utilize those that are valuable, and reject those known to be deleterious and inert.

This is what we claim, and all we claim for SVAPNIA. *It can be relied upon and given in all cases where Opium or Morphia is indicated, with equally good effects;* and in addition to this, there will be found in the practice of every physician cases occurring almost every day, in which idiosyncrasy and peculiar states and diseases of the brain debar us from the use of Opium and Morphia, but where Svapnia can be exhibited with the happiest results.

In SVAPNIA there is retained all the Morphia and the greater part of the Codeia and Narceia, but combined with the native acids of Opium, meconic and thebolactic, in such a manner as to render those constituents soluble and active.

SVAPNIA IS UNIFORM IN ITS PROPORTIONS, and is prepared to conform to a standard of Opium representing ten per cent. of Morphia. This is done by a simple proportion of the neutral excipient, after determining the actual amount of the alkaloids obtained from the Opium used.

We may safely affirm that the danger of bad results is much diminished by a resort to that preparation of Opium in which the poisonous elements are eliminated, and the anodyne elements in such a state of combination as to reduce their toxic and enhance their hygienic effects, such as has been PROVED TO BE THE CASE WITH SVAPNIA.

TO PHYSICIANS.

HORSFORD'S ACID PHOSPHATE

[LIQUID]

Is a preparation of the phosphates of lime, magnesia, potash and iron with free phosphoric acid ; and extended experience proves that it is in such form as to be readily assimilated by the system.

It is not a secret or quack medicine, but is made in accordance with well-known scientific principles, under the personal supervision of the well-known Prof. Horsford, who has made the subject of the phosphates a life study.

It should not be confounded with the dilute phosphoric acid of the pharmacopœia, or with any acid phosphate compounded in the laboratory.

Dilute phosphoric acid is simply phosphoric acid and water, without any base.

In this preparation of Acid Phosphate a portion of the phosphoric acid is combined with lime, iron, potash, etc. It is not made by compounding these articles together in the laboratory, but is obtained in the form in which it exists in the animal system.

It has been noted by some physicians that while in certain cases dilute phosphoric acid interfered with digestion, this preparation of Acid Phosphate not only caused no trouble with the digestive organs, but promoted, in a marked degree, their healthful action.

It is well understood that "phosphorus," as such, is not found in the human body, but that phosphoric acid in combination with lime, iron, and other bases, *i. e.*, the phosphates, is found in the bones, blood, brain and muscles. In the brain is also found phosphoric acid not combined with any base. It is the phosphates, and not the simple phosphoric acid, that is found in the urine after severe mental and physical exertion, or during wasting disease. Thus the researches of chemists and physiologists would seem to prove that it is a phosphate, with an excess of phosphoric acid, *i. e.*, an acid phosphate, that will better meet the requirements of the system than either phosphoric acid or a simple phosphate, and this theory has been proven beyond a doubt by practice, in a great variety of cases.

We have received a very large number of letters from physicians of the highest standing, in all parts of the country, relating their experience with the Acid Phosphate, and speaking of it in high terms of commendation.

Pamphlet giving further details mailed free, on application to the manufacturers.

Physicians who have not used Horsford's Acid Phosphate, and who wish to test it, will be furnished with a sample without expense, except express charges.

RUMFORD CHEMICAL WORKS,

PROVIDENCE, R. I.

An experience of more than a quarter of a century convinces us that sugar, properly applied, is the only correct coating for a pill.

Physicians should be careful to specify Warner & Co., when prescribing or ordering.

Special attention is called to the following selected Recipes prepared for Physicians' Prescriptions.

PIL: PHOSPHORI COMP: (WARNER & CO.) ℞. Phosphori, - - 1-100 gr. Ext. Nuc. Vom. - ¼ gr.

THERAPEUTICS.—As a nerve tonic and stimulant, this form of pill is well adapted for such nervous disorders as are associated with impaired nutrition and spinal debility, increasing the appetite and stimulating digestion.

The practical value of Phosphorus as a therapeutic agent, and its applicability to the cure of disease, and especially in those varied disordered conditions consequent upon OVERWORK, which are characteristic of modern civilization.

Pil. Phosphori Comp. may be taken, one or two pills three times daily, after eating.

Price, per 100, $1.50.

PIL: IODOFORM ET FERRI. (WARNER & CO.) ℞. Iodoform, - - 1 gr. Ferri Redacti, - 1¼ gr.

THERAPEUTICS.—A powerful general tonic and alterative, valuable as a remedy in Anæmia, Scrofula, Neuralgia, Chlorosis, Rheumatism, etc.

Pil. Iodoform et Ferri may be given in doses of from one to two pills, as occasion may require.

Price, per 100, $2.00.

PIL: DIGESTIVA. (WARNER & CO.) ℞. Pepsin Conc't, 1 gr. Gingerine, 1-16 gr. Pv. Nuc. Vom., ¼ gr. Sulphur, ⅛ gr.

THERAPEUTICS.—Useful in relieving various forms of Dyspepsia and Indigestion, and of permanent benefit in cases of enfeebled digestion, where the gastric juices are not properly secreted. It is also a gentle laxative and excellent dinner pill, may be taken one after dinner, or one before each meal, three times daily.

Price, per 100, 75 cts.

PIL: CALCIUM SULPHIDE. (WARNER & CO.) 1-10, ¼, ½ & 1 gr. each.

THERAPEUTICS.—Extremely useful in the treatment of acne, scrofula and cutaneous diseases.

Sulphide of Calcium is usually administered in doses of from 1-10 to ¼ grain four times daily, gradually increasing the dose to one grain six times daily, or according to the progress or severity of the case.

Price, per 100, 1-10 gr. .50; 1-4 gr. .60; 1-2 gr. .75; 1 gr. $1.00.

WARNER & CO.'S PILLS MAY BE OBTAINED FROM ALL DRUGGISTS, OR BY MAIL, ON RECEIPT OF PRICE.

1297-1348 **PHILADELPHIA and NEW YORK.**

Apollinaris

"THE QUEEN OF TABLE WATERS."—BRITISH MEDICAL JOURNAL.

ANNUAL SALE, 10 MILLIONS.

There is a popular but entirely mistaken notion that ice is in its nature pure and innocuous; it is, on the contrary, very apt to be impure and noxious, and may easily contain the germs of fatal disease.

Apollinaris Water, by its absolute purity, affords complete guarantee against the dangers of zymotic disease incidental to ordinary drinking-water. Its sparkling and refreshing character renders quite unnecessary the introduction of ice into it. There is, of course, no objection to icing Apollinaris, as champagne is iced, by the external application of cold until its temperature is brought down, in hot weather, to a pleasant coolness. So treated, it is a beverage as refreshing and agreeable as it is pure and wholesome.

EARL SPENCER, K.G., the President of the International Medical Exhibition, at the great Medical Congress in London, recently, referred to Apollinaris, in his opening address, as a typical beverage approved by the Faculty. This approval is ratified by the unerring tastes of the cultivated populations of the world. The desiderata of original purity laid down by the RIGHT HON. LYON PLAYFAIR as the indispensable conditions for water, which can never be freed from sewage pollutions when once they have been allowed to pass into it, are amply fulfilled by Apollinaris.

SANITARY RECORD, March, 1882.

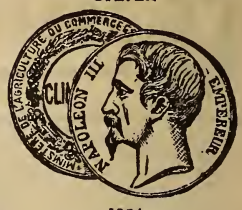
MATHEY-CAYLUS' GLUTEN

CAPSULES

OF

PURE COPAIBA AND OTHER MEDICINES.



Adapted and recommended for the cure of recent or chronic Gleets, Fluor Albus, etc., etc.

The MATHEY-CAYLUS' CAPSULES, *coated with gluten*, present the most perfect mode for administering Copaiba, Cubebs, Norway Tar, Turpentine, and other remedies, the disagreeable odor and taste of which are often a hindrance to their use. This mode of preparing capsules, which has been approved by the Academy of Medicine, has been recommended in their clinical lectures by eminent Professors in the hospitals of Paris, as well as in those of New York and London.

By the first physicians of the hospitals of Paris, London, and New York.

SPECIAL ADVANTAGES OF MATHEY-CAYLUS' GLUTEN CAPSULES.—Being formed of thin, transparent, and readily assimilated coating, they so cover and disguise the medicine to be given, that it can be taken without disgust, but with ease. In this respect, they differ widely from the gelatine capsules, which have a hard, thick coating, which swells beyond measure, in the stomach, are hard to be swallowed, and what is of great importance, they create disturbance in the digestive functions.

The special advantage of the coating of gluten consists in the fact that, notwithstanding its extra thinness, and although it softens under the action of the gastric juice, it can pass the stomach without breaking, and only in the intestines is the medicinal matter liberated; this accounts for the fact that Mathey-Caylus' Capsules never cause the nausea, eructations, and dyspeptic symptoms, which are complained of by many persons using other preparations.

Finally, their regular ovoid form, which is so favorable to swallowing, their pleasant appearance, which dispels all disgust, and the advantage of being entirely free from taste and smell, recommend the use of these capsules even to the most delicate persons.

Thankful to the Medical Profession for the liberal patronage heretofore bestowed upon us, we hope that they will continue their favors, and we are convinced that they will never have any reason to regret the generous welcome they have given to our preparations.

MATHEY-CAYLUS' CAPSULES are never sold, except in bottles having the following inscription printed in the glass: MATHEY-CAYLUS A PARIS. And each bottle contains 64 capsules, making them the cheapest capsules in the market.

The following different kinds of Mathey-Caylus' Gluten Capsules are now offered:

COPAIBA AND TANNIC ACID,
COPAIBA AND S. N. OF BISMUTH,
COPAIBA AND CATECHU,
COPAIBA AND MAGNESIA,
COPAIBA, CUBEBS AND ALUM,
COPAIBA, CUBEBS AND RHATANY,
COPAIBA AND RHATANY,
COPAIBA AND CITRATE OF IRON,
COPAIBA AND CUBEBS,
COPAIBA PURE,
COPAIBA, CUBEBS AND CARB. OF IRON,
VENICE TURPENTINE, NORWAY TAR, PURIFIED,
CUBEBS AND TURPENTINE,
CUBEBS AND TANNATE OF IRON,
CUBEBS AND ALUM,
CUBEBS PURE,
COPAIBA AND MATICO,
COPAIBA, IRON AND OIL OF SANDAL,
COPAIBA AND OIL OF SANDAL,
COPAIBA, PEPSIN AND BISMUTH,
COPAIBA AND TAR,
COPAIBA, CUBEBS AND OIL OF SANDAL.

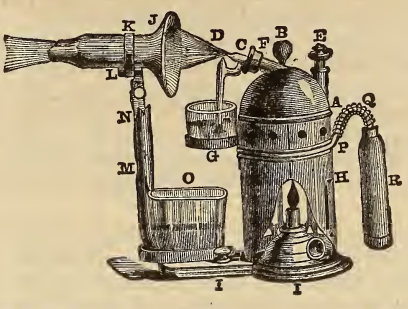
CODMAN & SHURTLEFF'S

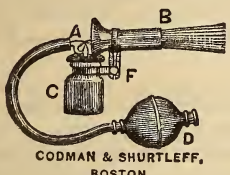
ATOMIZING APPARATUS.

PRICES REDUCED.

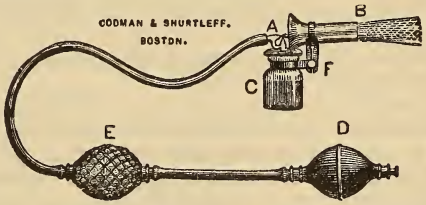


THE COMPLETE STEAM ATOMIZER (Patented March 24, 1868.)

All its joints are hard-soldered.
Every one is tested by hydrostatic pressure, to more than one hundred pounds to the square inch.
It cannot be injured by exhaustion of water, or any attainable pressure, and will last for many years.
It does not throw spirts of hot water, is convenient, durable, portable, compact, and cheap, in the best sense of the word. Price $5.00. Postage 59c.
Brass parts, nickel-plated, additional, $2.00.
Neatly made, strong Black Walnut Box, with convenient Handle, additional, $2.50. Postage 44c.



THE BOSTON ATOMIZER. (Patented.)



SHURTLEFF'S ATOMIZING APPARATUS. (Patented.)

The most desirable Hand Apparatus. Rubber warranted of the very best quality. Valves imperishable, every one carefully fitted, and will work perfectly in all positions. Price $3.50.
The Bulbs are adapted to all the Atomizing Tubes made by us.
Each of the above Apparatus is supplied with two carefully-made annealed glass Atomizing Tubes, and accompanied with directions for use. Each Apparatus is carefully packed for transportation, and warranted perfect.

The Antiseptic Atomizer		*$15.00, $25.00, $45.00, and $50.00*
Atomizer by Compressed Air, with Regulating Self-acting Cut-off		*45.00*

Buffalo Lithia Water.

FOR THE GOUTY OR URIC ACID DIATHESIS.

Dr. J. Marion Sims, of New York, says of this water, in general terms:

"I have used in my practice the Buffalo Lithia Water, Spring No. 2, for two years past, and have, in many cases, found it highly efficacious."

Dr. Wm. A. Hammond, of New York, Surgeon General U. S. Army (retired), Professor of Diseases of the Mind and Nervous System in the University of New York, etc.

"I have for some time made use of the Buffalo Lithia Water in cases of affections of the Nervous System, complicated with Bright's Disease of the Kidneys, or with a Gouty Diathesis. The results have been eminently satisfactory. Lithia has for many years been a favorite remedy with me in like cases, but the Buffalo Water certainly acts better than any extemporaneous solution of the lithia salts, and is, moreover, better borne by the stomach."

Dr. Hunter McGuire, Richmond, Va., late Prof. Surgery, Medical College of Virginia; Vice President of the International Med. Congress; Vice President American Med. Association.

"Buffalo Lithia Water, Spring No. 2, as an Alkaline Diuretic, is invaluable. In Gravel dependent upon the Uric Acid Diathesis, and, indeed, in diseases generally of that diathesis, it is a remedy of extraordinary potency. I have prescribed it in cases of Rheumatic Gout which had resisted the ordinary remedies, with wonderfully good results. I have also used it in my own case, being a great sufferer from this malady, and have derived more benefit from it than from any other remedy."

Dr. Alexander B. Mott, of New York, Professor Surgery, Bellevue Hospital Medical College; Surgeon, Bellevue Hospital.

"I have made sufficient use of the Buffalo Lithia Water to be satisfied that it posseses very valuable therapeutic properties. In the Gouty Diatheses, Chronic Inflammations of the Bladder, and other diseases affecting the Urinary Organs, it may be relied on to give the most satisfactory results."

Dr. Harvey L. Byrd, of Baltimore, President and Prof. of Obstetrics and Diseases of Women and Children, in the Baltimore Med. College; formerly Prof. of Practical Medicine, etc.

"I have witnessed the best results from the action of the Buffalo Lithia Water, Spring No. 2, in Chronic Gout, Rheumatic Gout, Rheumatism, Gravel and Stone in the Bladder, and I do not hesitate to express the opinion that in all diseases depending upon or having their origin in the Uric Acid Diathesis, it is unsurpassed, if indeed it is equaled by any water thus far known to the profession."

Dr. E. J. Doering, of Chicago, Ill., late Surgeon U. S. Marine Hospital Service.

"In my experience the Buffalo Lithia Water is an efficient remedy in the treatment of diseases depending on the Uric Acid Diathesis. I have prescribed it quite extensively in Catarrhal Affections of the Bladder, with excellent results."

Dr. William F. Carrington, of Virginia, Surgeon U. S. Navy (retired), Surgeon Confederate States Navy.

"The Buffalo Lithia Water, Spring No. 2, has signally demonstrated its remedial power in Gout, Rheumatism, Uric Acid Gravel, and other maladies dependent upon the Uric Acid Diathesis. It not only eliminates from the blood the deleterious agent before it crystallizes, but dissolves it in the form of calculi, at least to a size that renders its passage along the ureters and urethra comparatively easy."

Dr. J. S. Wellford, Prof. of Diseases of Women and Children, Medical College of Virginia.

"I have paid a great deal of attention to Urinary Troubles, and have frequently and freely prescribed the Lithia Water in their treatment, with the very best results. In all the various forms of the Uric Acid Diathesis, whether as well-formed Gravel or Gout, or in the milder forms of Gouty Dyspepsia or Nettle-rash, in their varieties, I know of no mineral water which I consider at all equal to that of Spring No. 2. In many Skin Diseases of old age, dependent on the Uric Acid Diathesis, such as Eczema, etc., this water acts most beneficially."

THOMAS F. GOODE, Proprietor,

BUFFALO LITHIA SPRINGS, VIRGINIA.

MURDOCK LIQUID FOOD CO., Boston,

THE ONLY MANUFACTURERS OF

RAW FOOD EXTRACTS IN THE WORLD.

It can be retained by the weakest stomach, when all other food extracts, and even water, is rejected.

Nutritious food, if raw, condensed, and free from insoluble matter, will cure chronic diseases, as it will make blood faster than all preparations or food, and new blood will cleanse the system.

MURDOCK'S LIQUID FOOD is made from Beef, Mutton and Fruits; contains corpuscles; is 12½ per cent. soluble albumen, and free from insoluble matter, drugs, minerals, salts and acids, and can be retained by the stomach when so weak as to refuse food.

Ask your Druggists, or send to us, for Essays read before the American Medical Association, at Richmond, Va., May 6, 1881, on the value of Raw Food Extracts, by Geo. R. Shepherd, of Hartford, Conn., and other Essays and Testimonials from Medical Journals and Physicians that have used Liquid Food, in cases of Consumption, Scrofula, Nervous and General Debility, Dyspepsia, acute and chronic, Constipation, Diphtheria, Intemperance, Cholera Infantum, Infantile Diarrhœa, Post partum Hemorrhage, Purpura Hemorrhagica with Waxy Liver, Pelvic Cellulitis, Malarial and other Fevers, Chronic Strumous Arthritis, Sclerosis of the Spinal Cord, Senile Gangrene, Perinephritic Abscess, and other diseases of malnutrition. No cases of Cholera Infantum have occurred where it has been used daily, and no lives have been lost from Cholera Infantum where it has been prescribed by a physician. Excellent for Eczema, Diabetes, Rheumatism and Neuralgia.

At the request of any physician who has not tried our Extracts, and would like to, we will deliver sample bottles to the express in Boston, Philadelphia, or Pittsburg. *If any physician has a Chronic case that will not yield to his treatment, of any disease, we will furnish, at his request, sufficient Liquid Food to satisfy him that Liquid Food will make blood faster than all preparations or food known, and that new blood will cleanse the system of disease. Our claims are that it is a Raw Extract, condensed many fold, free of insoluble matter, and contains corpuscles. It can be retained when the stomach is so weak that it will refuse water.* We are induced to do this, knowing that our Extracts are saving life, and that an increased use of them, which will follow after a trial of them, will be the means of saving more lives daily. (*We ask no testimonials of results obtained.*) Raw Extracts are available where cooked ones are not, or if available contain only one-third as much nourishment.

Liquid Food is in general use at all Hospitals, Infant and Insane Asylums, and Washingtonian Homes, U. S. Navy Hospitals, and by all the physicians that have tried it.

If not kept by your Druggist, can be obtained in any of the commercial cities. In Philadelphia, by Johnston, Holloway & Co., Boericke & Tafel; in Pittsburgh, by A. Kelly & Co; in Baltimore, by Thomsen & Wirth: or you can order direct and we will pay express. 1 oz., 15 cents; 6 oz., 55 cents; 12 oz., $1.00.

MURDOCK LIQUID FOOD CO.,

BOSTON. 1297-1348

Boudault's Pepsine.

IN POWDER, also WINE, ELIXIR, SYRUP, PILLS, AND LOZENGES OF PEPSINE.

Since the introduction of Pepsine by Boudault, in 1854, **BOUDAULT'S PEPSINE HAS BEEN, AND IS STILL CONSIDERED, THE MOST RELIABLE,** as is attested by the awards it has received at the Exhibitions of 1867, 1868, 1872, 1873, and in 1876 at the Centennial Exposition in Philadelphia.

IT IS THE ONLY PEPSINE USED IN THE PARIS HOSPITALS.

Careful tests will enable any one to satisfy himself that **BOUDAULT'S PEPSINE HAS A DIGESTIVE POWER AT LEAST DOUBLE** that of the best Pepsines in the market, and that it is really the cheapest.

It is Sold in 1 ounce, 8 ounce, and 16 ounce Bottles.

Beware of so-called French Pepsines bearing fictitious names, and prescribe Boudault's only.

BLANCARD'S PILLS

OF UNCHANGEABLE IODIDE OF IRON.

Blancard's Pills of Iodide of Iron are so scrupulously prepared, and so well made, that none other have acquired a so well deserved favor among physicians and pharmaceutists. Each pill, containing one grain of proto-iodide of iron, is covered with finely pulverized iron, and covered with balsam of tolu. Dose, two to six pills a day. The genuine have a *reactive silver seal* attached to the lower part of the cork, and a green label on the wrapper, bearing the fac-simile of the signature of

Blancard

Pharmacien, No. 40 Rue Bonaparte, Paris.

Without which none are genuine.

BEWARE OF IMITATIONS. 1297-1348-eow

E. FOUGERA & CO., AGENTS, NEW YORK.

For Consumption and Wasting Diseases.

HYDROLEINE

Has been proved of the highest value in CONSUMPTION and all WASTING DISEASES, invariably producing IMMEDIATE INCREASE in FLESH and WEIGHT.

FORMULA OF HYDROLEINE.

Each dose of two teaspoonfuls, equal to 120 drops, contains:

Pure Oil,	**80 m. (drops.)**	**Soda,**	**1-3 grain.**
Distilled Water,	**35 m.**	**Boric Acid,**	**1-4 "**
Soluble Pancreatin,	**5 grains.**	**Hyocholic Acid,**	**1-20 "**

DOSE.—Two teaspoonfuls alone, or mixed with twice the quantity of soft water, to be taken thrice daily, with meals.

The principles upon which this discovery is based have been described in a treatise on "THE DIGESTION AND ASSIMILATION OF FATS IN THE HUMAN BODY," by H. C. BARTLETT, PH.D., F.C.S., and the experiments which were made, together with cases illustrating the effect of Hydrated Oil in practice, are concisely stated in a treatise on "CONSUMPTION AND WASTING DISEASES," by G. OVEREND DREWRY, M.D.

In these treatises the Chemistry and Physiology of the Digestion of the Fats and Oils is made clear, not only by the description of a large number of experiments scientifically conducted, but by cases in which the deductions are most fully borne out by the results.

☞ *Copies of these valuable works will be sent free, on application, to all who mention THE MEDICAL AND SURGICAL REPORTER.*

HYDRATED OIL,

HYDROLEINE,

WATER AND OIL,

May be described as partially digested oil, which will nourish and produce increase in weight in those cases where oils or fats not so treated are difficult or impossible to digest. In CONSUMPTION and other WASTING DISEASES the most prominent symptom is EMACIATION, of which the first is the starvation of the fatty tissues of the body, including the brain and nerves. This tendency to emaciation and loss of weight is arrested by the regular use of HYDROLEINE, which may be discontinued when the usual average weight has been permanently regained.

The ordinary so-called emulsions of Cod-liver oil and other fats, WHETHER PANCREATIZED OR NOT, merely remain in the form of a coarse mechanical mixture for a short time after agitation. The digestion of oil having in no sense been artificially produced, still devolves upon those functional powers the deficiency of which is the most prominent symptom in these cases.

HYDROLEINE is not a patent medicine or a secret preparation; the formula is on every bottle. Can be taken by the most delicate stomach; is immediately assimilated.

The permanence and perfection of the emulsion, and the extreme solubility of the HYDRATED OIL, solely prepared and sold by us under the name of HYDROLEINE, is shown by its retaining its cream-like condition as long as the purest Cod-liver Oil will retain its sweetness. Unlike the preparations mentioned, or simple Cod-liver Oil, it produces no unpleasant eructation or sense of nausea, and should be taken in such very much smaller doses, according to the directions, as will insure its complete assimilation; this, at the same time, renders its use economical in the highest degree.

To brain-workers of all classes Hydrated Oil is invaluable, supplying as it does the true brain food.

Economical in use—certain in result Tonic—Digestive and Highly Nutritive.

NEW PRINCIPLE FOR THE ASSIMILATION FAT.

KIDDER & LAIRD,

1278–1330eow

TANRET'S PELLETIERINE.

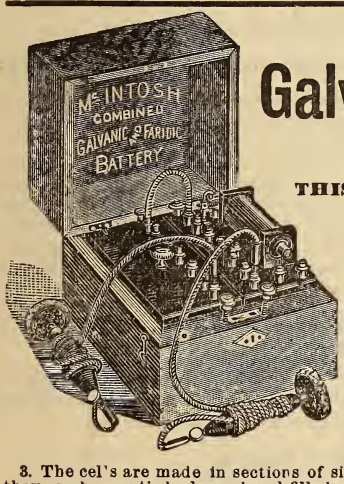
For the TREATMENT of TAPE-WORM (Tænia Solium).

This new Tænifuge, the Active Alkaloid of Pomegranate Bark, has of late come into extensive use in France, for the treatment of Tape-worm (Tænia Solium). The results of numerous experiments with it at the Marine Hospitals of Toulon, St. Mandrier, etc., and in the Hospitals of Paris, St. Antoine, La Charité, Neckar, Beaujon, etc., have all been most satisfactory. Doctor Dujardin Beaumetz, Member of the Academy of Medicine, and Prof. Laboulbene, in their report to the Society of Therapeutics, have given it their unqualified approval, after the most searching experiments. This preparation is pleasant to administer, and if certain preliminaries are observed success will be insured.

PELLETIERINE is prepared by Mr. CHAS. TANRET, Pharmacien de First Class, 64 Rue Basse du Rempart, Paris.

GENERAL AGENTS, E. FOUGERA & CO., 30 N. William St., N. Y.

1293–1345eow



McINTOSH'S COMBINED

Galvanic AND Faradic Battery.

THIS CELEBRATED BATTERY COMBINES BOTH THE GALVANIC AND FARADIC CURRENT,

Which can be used separately or combined. Any strength and intensity desired can be obtained for use in Electro-therapeutics. THIS BATTERY is constructed on an IMPROVED PLAN, as follows: The zinc and carbon plates are arranged in couples, securely clamped to hard rubber plates, with thumb screws. These screws are also used for binding posts. All the connections are positive. The cells are made in sections of six, of hard rubber, with hard rubber drip cup. The following points of excellence render our Batteries superior to others:

1. They combine the only Portable Galvanic and Faradic Battery in one case.

2. They weigh one-half less than other Batteries of the same number of cells.

3. The cells are made in sections of six, of one solid piece of hard, vulcanized rubber; by this arrangement they can be emptied, cleaned and filled as easily and quickly as one cell, and will not crack, break or leak.

4. A hard rubber drip cup is placed by the side of each section of cells, to receive the zinc and carbon plates when removed from them. By this arrangement we avoid the use of absorbent materials and soiling the Battery

5. The Hydrostat is perfect. The rubber plates which hold the elements project over on one side enough to cover the cells when the zinc and carbon plates are placed in the drip cups. The under side of this projection is covered with thick, soft rubber, which is securely clamped to the cells sections, and makes them water tight.

6. This is the only Battery in which the zinc and carbon plates can be kept clean by simply rinsing them.

7. A zinc or carbon plate can be removed by simply loosening a binding post; and all parts of the Battery can be duplicated, as like parts are made exactly alike. We will be pleased to send circulars and our illustrated catalogue, giving full information, price, etc., free, upon application.

McINTOSH GALVANIC AND FARADIC BATTERY CO.,

1281-1332 **Nos. 192 and 194 Jackson Street, CHICAGO, ILL.**

BEEF PEPTONE,

IN TRANSPARENT GLASSY SCALES,

Containing only the animal or azotized matter of the Beef. Each ounce is equal to 16 ounces of raw beef, easily soluble, and still faster in hot water.

This Beef Peptone is digested from tender, juicy Beef, by the aid of the *Crystal Pepsin,* of my manufacture (Jensen's Crystal Pepsin). Unlike the various BEEF EXTRACTS, this preparation contains all the nutritive constituents of the Beef, in a thoroughly digested state, ready for absorption into the system, while the Beef Extracts are entirely devoid of the chief elements of nutrition, such as the fibrinous, gelatinous and albuminous portions of the Beef, they only consisting of the concentrated saline constituents, with barely a trace of animal matter to keep its consistence. The difficulty so long experienced by the profession throughout the world, in preparing a PEPTONE entirely free from those chemical agents necessary for its manufacture, so as to render it fit for use, is hereby demonstrated to be successfully overcome, as it contains no foreign matter, and will stand the most severely scrutinizing test as to perfectness, also possessing flavor of the Beef, and so palatable as to render it highly agreeable.

Put up in bottles holding One ounce, Eight ounces, and one Pound.

Kept by the Wholesale and Dispensing Druggists in general.

DEPOT—L. WOLFF'S Pharmacy,

Northwest corner Twelfth and Chestnut Streets.

JENSEN'S CRYSTAL PEPSIN,

IN ARTIFICIAL CRYSTALS,

Strictly inodorous and tasteless, and perfectly soluble in water without acid.

THIS PEPSIN, now so popular with the profession, has created an impetus in the consumption of the same and physicians of the highest standing, who before the introduction of this active PEPSIN, with good reason, entirely abandoned the use of PEPSIN, are now the most eager in prescribing JENSEN'S CRYSTAL PEPSIN, whenever it is indicated, and since the knowledge of its great solvent power (gr. j. of it will dissolve the boiled whites from two to three eggs) has been established even among those susceptible to be great doubters it has caused itself to be utilized in many novel ways, by the thinking profession; for instance, in substituting morphia, chloral, etc., as a hypnotic, relieving gastric troubles where the above remedies have been prescribed, creating morphine and chloral habits In removing diphtheritic patches it is successfully used combined with water, glycerine, and muriatic acid, and the same composition, diluted with more water, as a spray in bronchial troubles, dissolving muco-purulent matter, as well as a spray for same in catarrhal affections.

THIS PEPSIN

Has also been used with success in dissolving and evacuating coagulated blood in the bladder, dispensing with surgical operations in such cases. Many other novel applications could be mentioned, if not in want of space. It is found to be FORTY times stronger than saccharated pepsin. One to three grains is an active dose.

KEPT BY ALL DRUGGISTS.

The above preparations are only manufactured and put up by

CARL L. JENSEN, M.D., PH.G.,

865 North 26th Street, Philadelphia, Pa.

No other Wholesale Agents for this Pepsin are longer engaged, than the Wholesale Druggists throughout the United States.

1299-1350.

This College has for its *collegiate year* two sessions.

Regular Session commences Wednesday, September 7th, 1881, and closes March 1st, 1882.

Recitation Term (optional) commences March 15th, 1882, and closes June 14th, 1882.

Graded Course of three terms, of six months each.

PLAN OF INSTRUCTION.

By *Lectures*, *Recitations* and *Clinics*, together with *practical work* in the Anatomical, Physiological, Chemical and Pharmaceutical Laboratories.

Clinics are held *daily*.

Clinical Work in Hospitals and Dispensaries is given to the Senior Class (see Clinics), in *small sections*, under the charge of a *Clinical Teacher*, in all the departments of Medicine and Surgery.

Three Large Hospitals and *two Dispensaries* afford unlimited material for instruction.

ADMISSION.—Candidates for admission are required to pass a preliminary examination, unless satisfactory documentary evidence can be presented, that is equivalent to the standard adopted. (See Catalogue.)

FEES.

Regular Session.—Matriculation, $5.00; Lecture Tickets, $50.00; Hospital Tickets, $10.00 Examination (final), $25.00.

Recitation Term.—$10.00 for those who have attended Regular Session; all others, $25.00, $15.00 of which will be applied on the next Regular Term.

Board and Rooms can be obtained for $3.00 to $5.00 per week, the average being $4.00.

For Catalogue and other particulars, address

H. O. WALKER, M.D., Secretary,
177 Griswold Street, Detroit, Mich.

1274-tf

TO PHYSICIANS.

IODIA.

FORMULA.—Iodia is a combination of Active Principles obtained from the Green Roots of STILLINGIA, HELONIAS, SAXIFRAGA, Menispermum, and Aromatics. Each *fluid* drachm also contains *five* grains IOD.-POTAS. and *three* grains PHOS.-IRON.

DOSE.—One or two *fluid* drachms (more or less, as indicated) *three* times a day, before meals.

IODIA is the *Ideal* Alterative. It has been LARGELY PRESCRIBED in Syphilitic, Scrofulous, Cutaneous, and Female Diseases, and has an Established Reputation as being the best Alterative ever introduced to the Profession.

JOHNSTONE'S IMPROVED

ADAPTABLE POROUS FELT SPLINTS.

AHL'S SPLINT MANUFACTURING COMPANY, LIMITED,

123 & 125 South Eleventh Street, PHILADELPHIA, PA.

THE ADAPTABLE POROUS SPLINTS, invented and improved by W. H. JOHNSTONE, have been tested extensively in both civil and military practice for a number of years, and have been endorsed and recommended in the most unqualified manner by the celebrated and distinguished Surgeons of America.

Their *porosity* is a peculiar and a valuable property. While the material is firm and insoluble, it permits readily the passage of air and fluids, so that, on one hand, the heat from the inflamed surface, the perspiration, and the morbid exhalations, are not confined, to the detriment of the patient, *as is the case in every other kind of splint*, but pass off freely; and on the other hand, lotions of cold or warm water, medicated or not with weak alcohol, carbolic acid, arnica, tincture, solutions of the sulphites, etc., can be constantly applied without disturbing the dressings. This, it will readily be seen, is a most invaluable property when the parts are bruised, lacerated, filled with extravasated blood, or erysipelatous, and give these splints a conspicuous advantage over all others.

From FRANK H. HAMILTON, M. D., Professor of Fractures and Dislocations in the Bellevue Hospital Medical College, author of "A Treatise on Fractures and Dislocations," etc.

Having examined carefully *JOHNSTONE'S IMPROVED ADAPTABLE POROUS FELT SPLINTS*, I feel warranted in recommending them to the Profession as superior to all other manufactured splints now in use. They possess all the essential qualities of a good splint, having firmness, pliability and lightness.

FRANK H. HAMILTON, M. D.,
Prof. Military Surgery and Fractures and Dislocations, Bellevue Hospital Col.

From PROF. D. HAYES AGNEW, Prof. Surgery, University of Penna.

1611 CHESTNUT STREET, PHILADELPHIA, *February 6th*, 1879.

The Adaptable Felt Splints, formerly known as those of Dr. Ahl, with the improvement now made by W. H. Johnstone, which renders them in every way superior to the former, I regard as very excellent appliances in the treatment of fractures.

D. HAYES AGNEW,
Prof. Surgery, University of Pennsylvania.

Cuts illustrating the different Splints constituting a Complete Set.

SPECIAL NOTICE TO THE PROFESSION AND TRADE.

Our *policy* heretofore in the introduction of JOHNSTONE'S IMPROVED ADAPTABLE POROUS FELT SPLINTS, has been to confine the sales and business negotiations directly to the Doctors themselves, declining in every case to sell our goods through Dealers; we having assured the Profession generally, both through our agents and catalogues, that *JOHNSTONE'S IMPROVED SPLINTS* could only be obtained by subscription.

We wish to announce, that owing to the large demand for our goods and the constant importunity on the part of *Surgeons* everywhere to place our Splints on sale with their Instrument Dealer or Druggist, to afford them greater convenience and facility in obtaining the pieces in duplicate, **we have at last acceded to that request, and hereafter *JOHNSTONE'S CELEBRATED FELT SPLINTS* can be obtained at most dealers in Instruments and Drugs throughout the United States, at the same price which they were heretofore sold, viz:**

A complete set, embracing fifty (50) pieces—twenty-five for adults and twenty-five for children—is thirty ($30) dollars. Extra or duplicate pieces can always be obtained from your DEALER, at one dollar each.

JOHNSTONE'S CELEBRATED SPINAL JACKET, for Curvatures and Deformities, have met with unparalleled success, and, from their merit, secured the unqualified endorsement and approbation of our celebrated orthopædic specialists, and particular expression of gratitude from the patients who are wearing them. For full information, send for Descriptive Circulars.

Should your Instrument dealer fail to have a supply of our Splints, and decline to carry them in stock, orders sent to us will receive prompt attention.

AHL'S SPLINT MANUFACTURING CO., Limit.
W. H. JOHNSTONE, Manager.

N. B.—If the Instrument Dealers of Philadelphia decline to supply its Physicians with our JOHNSTONE'S FELT SPLINTS on call, they will be furnished and delivered by us to any part of the city, at any time, on receipt of the price, viz.,

$1.00 each.

Prof. T. Gaillard Thomas,
Dr. Edward C. Spitzka,
Dr. Daniel M. Stimson,
Dr. Edward T. Ely,
Dr. G. H. Wynkoop,
Dr. Andrew H. Smith.

Situated upon a high hill that commands a splendid view of the Hudson and Harlem rivers, Spuyten Duyvil Creek, and the beautiful country for miles around; surrounded by ample grounds and magnificent drives; in easy communication with the city by means of the Sixth and Ninth Avenue Elevated and the Hudson River Railroads; away from the dust, noise, crowding and malaria of the city; with hot and cold water in every room, furnace and grate-fire heating, croquet, horses and carriages, boats and fishing, an excellent *cuisine*, trained nurses and careful medical attendance, it possesses unequaled advantages for the treatment of cases of this kind.

The plan of treatment pursued in the cure of opium, morphine and chloral takers is that of *rapid reduction*, which possesses all the advantages, and none of the dangers of Levenstein's *sudden deprivation*, or the prolonged agony of *gradual reduction*. Each case is studied and treated in accordance with its peculiarities and the idiosyncrasies of the patient, no set plan of treatment being pursued, at the expense of the person's health or comfort.

Our Home, furthermore, offers special facilities for the treatment by *rest, diet, and massage*, according to the plan of Weir Mitchell, of that large class of nervous diseases so commonly met with in ladies suffering from uterine troubles. This plan of treatment has been specially studied, and nurses competent to carry out its provisions in every detail will be furnished. For further particulars, etc., address 1299-1350

DR. McINTOSH'S ELECTRIC OR GALVANIC BELT.

This Belt is a perfect Galvanic Battery, composed of sixteen cells, placed in pockets on a belt. Each cell is made of hard vulcanized rubber, lined with copper, which constitutes the negative plate. The rubber coating perfectly insulates each cell. The positive plates are of zinc, wrapped in a porous material to absorb the exciting fluid, preventing contact with the copper, and permitting the current to pass from the copper to the zinc. The cells are charged without wetting the belt.

A current selector is so arranged that one or more cells can be used at pleasure. The electrodes are covered similar to ordinary battery electrodes, and connected with the cells by connecting cords. By this arrangement, a current from the belt can be applied to any part of the body. Physicians who have used this belt in their practice do not hesitate to recommend it to the profession.

Our pamphlet on "Medical Electricity," containing a full description of the belt and diseases, with manner of treatment, sent free on application. Address

PROCTER'S PEPSIN (SACCHARATED.

This standard article is prepared from *Pepsin*, carefully purified and freed from mucus, and is not a *dried Peptone*. It is inodorous and non-deliquescent, and retains its digestive power indefinitely. It is so well known that extended comment is superfluous. We would, however, call attention to its uniform purity and solubility, which, with extraordinary *digestive power*, commend its use in preference to other less carefully *made* articles. It is tested to the solution of 250 grains of coagulated albumen by 10 grains of Pepsin.

PROCTER'S "PEPSIN FORTIOR," (Stronger or Concentrated Pepsin.) A powerful form of Pepsin, eligible when minimum dose is desirable. It is of the same exceptional purity with our *Procter's Pepsin*, while the strength is far greater. Dose one to three grains. 1275–1308, 1y.

Manufactured by **WM. PROCTER, Jr., CO.**, S. W. Cor. 9th and Lombard Sts., Phila.

DR. McINTOSH'S NATURAL UTERINE SUPPORTER.

No instrument has ever been placed before the medical profession which has given such universal satisfaction. The combination is such that the physician is able to meet every indication of Uterine Displacements. Falling Womb, Anteversion, Retroversion and Flexions are overcome by this instrument, where others fail. This is proven by the fact that, since its introduction to the profession it has come into more general use than all other instruments combined.

Among the many reasons which recommend this Supporter to the physician is its self-adjusting qualities. The physician, after applying it, need have no fear that he will be called in haste to remove or readjust it, as is often the case with rings and various pessaries held in position by pressure against the vaginal wall, as the patient can remove it at will, and replace it without assistance.

The Abdominal Supporter is a broad morocco leather belt, with elastic straps to buckle around the hips, with concave front, so shaped as to hold up the abdomen. The Uterine Support is a cup and stem, made of highly polished hard rubber, very light and durable, shaped to fit the neck of the womb, with openings for the secretions to pass out, as shown by the cuts. Cups are made with extended lips, to correct flexions and versions of the womb. The cup and stem is suspended to the belt by two soft elastic rubber tubes, which are fastened to the front of the belt by simple loops, pass down through the stem of the cup and up to the back of the belt. These soft rubber tubes being elastic, adapt themselves to all the varying positions of the body, and perform the service of the ligaments of the womb. The instrument is very comfortable to the patient, can be removed or replaced by her at will, can be worn at all times, will not interfere with nature's necessities, will not corrode, and is lighter than metal. It will answer for all cases of Anteversion, Retroversions, or any Flexions of the womb, and is used by the leading physicians with never-failing success, even in the most difficult cases.

Our Reduced Prices are to Physicians, $6.00; to Patients, $10.00.

Instruments sent by mail, at our risk, on receipt of price, or by Express, C. O. D., with the Express charges for returning the money added.

☞ CAUTION.—Owing to the great sale and popularity of our instrument various and base imitations are sold by unscrupulous parties. In order to get the genuine, it is best to order direct from us.

DR. McINTOSH'S NATURAL UTERINE SUPPORTER CO.,
192 Jackson Street, Chicago, Ill.

Our valuable pamphlet, "Some Practical Facts about Displacements of the Womb," will be sent you free on application. 1281-1332

Registered COSMOLINE Trade Mark.

Unguentum Petrolei

Prepared by E.F.Houghton & Co. Philadelphia, U.S.A.

Put up in 1, 5, 10, 25, 50, and 100-lb. cans. Samples furnished on application. The post-office laws forbid anything of an oleaginous nature being sent through the mail.

In chemical composition, Cosmoline [Unguentum Petrolei] is an oleaginous hydrocarbon, corresponding to the heavy petroleum oils, and containing a large amount of the paraffines and olefines of the formulæ $C_{16}H_{34}$ and $C_{16}H_{32}$. It contains but a small percentage of the paraffines and olefines, corresponding to the formulæ C_7H_{16} and C_7H_{14}, respectively, and the offensive and irritating properties of the crude oil have been carefully removed. In the process of purification, no acids, alkalies, or other chemicals are employed, and no injurious additions of any kind are made to the natural product. The result is a semi-solid, translucent substance, with a faint odor and unctuous feel.

Cosmoline [Unguentum Petrolei] melts at about 100° Fah. (38° Cent.); and boils at about 625° Fah. (329° Cent.); its specific gravity is about 0.875 at 60° Fah.

As it contains no oxydizable or organic matter capable of change by putrefaction or fermentation, and is absolutely without affinity for moisture, it offers to the profession an admirable unguent, which can never decompose, ferment, or become rancid in any climate or temperature.

291 MADISON AVENUE, NEW YORK, February 26th 1878.

I have examined the preparations of Cosmoline as manufactured by E. F. Houghton & Co., Philadelphia, and believe them well adapted to the purposes for which they are designed. As lubricants, and as the bases of simple or medicated ointments, they have a decided advantage over the fixed oils and fatty substances in ordinary use, in that they do not become rancid, and do not acquire irritating qualities from atmospheric exposure. ALFRED C. POST, M.D., LL.D.,
Emeritus Professor of Clinical Surgery in the University of New York, Visiting Surgeon to Presbyterian Hospital, etc.

PHILADELPHIA, July 10, 1880.

MESSRS. E. F. HOUGHTON & CO.:

I have for a number of years made extensive use of Cosmoline [Unguentum Petrolei] and consider it a most valuable article for surgical purposes. Either as a dressing by itself, or as a vehicle for the application of medicaments, it is greatly superior to lard or other fatty matters, especially by reason of its non-liability to change by time or temperature.

Yours truly,
JOHN H. PACKARD, M.D.
1031 WALNUT ST., PHILADELPHIA.

MESSRS. E. F. HOUGHTON & CO.:

I have used extensively Cosmoline [Unguentum Petrolei] both in Dispensary and private practice, with very great satisfaction. As a vehicle in making ointments it is invaluable, and far superior to lard, for the reason that it will not become rancid or undergo chemical change like the latter, when exposed to the atmosphere. I cannot too highly commend it as an application in various skin diseases.

Yours truly, JOHN V. SHOEMAKER, A.M., M.D.,
Physician to the Pennsylvania Free Dispensary for Skin Diseases

208 WEST 34TH ST., NEW YORK.

MESSRS. E. F. HOUGHTON & CO.:

Gents:—I fully appreciate the value of your Cosmoline, or Unguentum Petrolei, and prescribe it frequently in ointments. Fluid Cosmoline I have used constantly for several years, as a lubricant of urethral sounds. It is the cleanest oil I know of for this purpose.

Yours truly, GEO. HENRY FOX.

SOLUBLE

ELASTIC FILLED CAPSULES.

One of the most desirable improvements of modern pharmacy for the administration of medicine is the Soft Elastic Capsule. These capsules, although so soft that the sides may be pressed together without injuring their walls, are so remarkable in their elasticity that they will immediately regain their original shape and size, when the pressure is removed. This property renders them easy of deglutition, and they can be as readily swallowed as an oyster, or the yolk of an egg. The composition of which they are manufactured is a compound of the finest French gelatine with glycerine, and is very soluble.

By employing the soft elastic capsule, the most nauseous dose is rendered sightly and palatable, for, covered by the capsule, its taste and appearance are completely disguised. Though the largest of them will contain a tablespoonful, capsules of this size are more easily swallowed than an ordinary pill. For this reason they are peculiarly adapted for the use of ladies and children. They are filled with castor oil, cod-liver oil, and other fixed oils, the various balsams, essential oils, ethereal extracts, etc., etc.

Our present list comprises sixty-seven formulæ, and is periodically revised, at which time additions are made of new compounds, to keep pace with the demands of the profession.

The ingredients of capsules known as Nos. 6, 18, 21, 22, 24, 27, 34, 44 and 56 on our price list, exist only in mechanical admixture. The heavy solid constituents, therefore, are merely held in suspension, and on standing they are deposited as an apparent sediment. This separation, however, does not impair the activity of the drug.

These capsules are made at an equable temperature, below that of extreme summer heat, and if subjected to a higher temperature and a moist atmosphere, may adhere slightly to one another, or, especially in the case of the larger-sized capsules, may become somewhat collapsed. These changes do not in the least impair the medicinal properties of the contents, and do not imply any deterioration in the capsule itself. Such adhering or collapsed capsules regain their former condition in a cooler, lower temperature and drier atmosphere. These peculiarities are common to all soft or elastic capsules.

In ordering, please specify our make of these capsules, by writing the initials P., D. & Co. on your prescriptions. Only by doing so are you sure of obtaining the products of our laboratory.

YOURS VERY TRULY,

PARKE, DAVIS & CO.,

MANUFACTURING CHEMISTS,

DETROIT, MICHIGAN.

New York: 60 Maiden Lane and 21 Liberty Street.

McKESSON & ROBBINS'

BI-MURIATE QUINIA WITH UREA

(Quinia Bi-Muriatica Carbamidata),

THE MOST SOLUBLE SALT OF QUINIA.

Specially Adapted to Hypodermic Use.

Will completely dissolve in double its weight of cold water, or in its own weight of boiling distilled water, which is preferable.

This Salt may be procured through retail druggists, from McKesson & Robbins, in original vials of 1, 2 and 4 grammes, and their solution, containing 50 per cent. of the Salt, in $\frac{1}{8}$ oz. and one ounce vials.

ALOIN AND STRYCHNIA GRANULES

LAXATIVE AND TONIC.

INVALUABLE IN CHRONIC CONSTIPATION.

Prescribed with the most satisfactory results in cases in which, from infirmity or morbid condition, the tone of the system is impaired, and in which the administration of more violent purgatives might be attended with danger.

Write McKesson & Robbins on your Prescriptions and Orders.

McKESSON & ROBBINS, Manufacturing Chemists,

91 FULTON STREET, NEW YORK.

SCOTT'S EMULSION

PURE COD LIVER OIL

WITH

HYPOPHOSPHITES OF LIME AND SODA

PERFECT, PERMANENT, PALATABLE.

The well-known virtues of this preparation, that has now been before the profession for a number of years, hardly requires comment from us. But we desire, for the information of those whose attention may not have been directed to it, to present the following facts:—

FIRST.—We use in the manufacture of our Emulsion, Cod-Liver Oil that is prepared expressly for us, and is strictly pure, which is the most important consideration to the Physician.

SECOND.—By our process of Emulsifying, we so thoroughly incorporate the Oil with the Hypophosphite Salts, that the mixture is perfectly homogeneous and remains in that condition, without the slightest separation or change, for years, unless exposed to the air or intense heat.

THIRD.—It is so palatable and easy of digestion that it can be administered to children and persons with most sensitive stomachs without the slightest repugnance, and we are confident, from the results that have been obtained in the use of this preparation, and the flattering testimonials we have received from prominent physicians, that the proper manner of administering Cod-Liver Oil, even to patients that can tolerate the crude oil, is in the form of a palatable and easily digested Emulsion. There are some in the profession who adhere to the use of the plain oil, but, with all due deference, if they will make a trial of our Emulsion, we believe their prejudices will be removed, and they will find it much more beneficial to their patients.

With all the numerous Foods, Cereals and so-called Constructive Agents of uncertain value that are being introduced the physician must sometimes be at a loss to know what to prescribe. But we are assured that the profession will bear us out in the statement that in all pulmonary troubles, especially where the lung tissue is involved, in Scrofulous children and in Anæmic women of consumptive tendencies, as well as in general nervous debility, our combination will produce results, if properly administered, unequaled by any other preparation, and most satisfactory to the physician and patient. We most respectfully ask those who have never prescribed or seen its results to give it a trial, and if you desire to make a personal inspection of it we will be pleased to send a sample by express, prepaid.

FORMULA.—50 per cent. of pure Cod-Liver Oil, 6 grains of the Hypophosphite of Lime, and 3 grains of the Hypophosphite of Soda to a fluid ounce. Emulsified with mucilage and glycerine.

BUCKTHORN CORDIAL

RHAMNUS FRANGULA.

We desire to call the attention of the profession to this preparation, and although they may be familiar with its name and general characteristics, yet, on account of there not being a preparation in the market of uniform strength and quality, may not have a proper appreciation of its value. As far as our experience goes in the various tests made by our medical friends, we can present the German bark, *Rhamnus Frangula*, in the form of our *Buckthorn Cordial*, with perfect confidence that we will secure the encouragement and assistance of the profession in promoting its growth and giving it the position it deserves as a medicine. It seems to be almost a specific for Habitual Constipation and Indigestion, acting mildly but efficiently, without causing the nausea that usually accompanies the use of a cathartic. At the same time producing a tonic effect upon the bowels, so that as the patient recovers, the dose may be gradually decreased until a normal condition takes place. We use great care in the selection of the Bark, as we find it necessary that it should be of the proper age and condition, and carefully exhausted, to secure its true active principle.

We combine it with aromatics in such a manner as to make a pleasant cordial, acceptable to the most sensitive stomach. We shall be very glad to furnish samples free to all physicians, upon application, giving instructions for its use, etc. Prepared by SCOTT & BOWNE

SCOTT & BOWNE'S PALATABLE CASTOR OIL

IN AN EMULSION.

We respectfully submit the above elegant preparation to the notice of the profession, and desire them to favor us with a trial. So far as it has been tested, it has met with their entire approval; and we believe it is not only destined to take the place of the crude oil, but to be used much more extensively. In our process of emulsifying, it is not only *permanent* and *palatable*, but is deprived entirely of its griping properties. The inestimable nature of Castor Oil as a laxative and cathartic, in the varied intestinal derangements of children, and in Diarrhœa, Colds, etc., is accepted by all, and in the available form in which we present it, in a perfectly palatable mixture, deprived entirely of its nauseous, sickening properties, and kindly received by the most sensitive stomach, it must occupy the exalted position it deserves as a medicine. In its administration, it requires very little more than the crude oil, but the experience of the physician will soon guide him in its use. It is put up in 4 oz. bottles, that sell for 25 cents; also in quarts for physicians to prescribe as desired. Samples will be furnished free on application. FORMULA:—50 *per cent. of Pure Cold Pressed Castor Oil*, 15 *per cent. of Chemically Pure Glycerine.* Prepared by

1306-1357eow **SCOTT & BOWNE, Manufacturing Chemists, 108 and 110 Wooster St., N. Y.**

FOR PHYSICIANS' USE ONLY.

SVAPNIA

OR

PURIFIED OPIUM.

CONTAINS THE

ANODYNE AND SOPORIFIC

ALKALOIDS

CODEIA,

NARCEIA

AND

MORPHIA.

EXCLUDES THE

POISONOUS & CONVULSIVE

ALKALOIDS

THEBAIN,

NARCOTIN

AND

PAPAVERIN.

DOSE, THE SAME AS OPIUM.

This article is not intended for popular use, but only on prescription of the profession. It is to take the place of Opium in cases where that drug acts injuriously.

Dr. John Harley, of London, in his "Old Vegetable Neurotics," details a large number of experiments upon the human and animal system, with six of what he considers the narcotic alkaloids. He concludes that although all six possess both narcotic and hypnotic properties, yet these are so varied in degree and force as to make their effects, when exhibited singly, very distinct from those following their exhibition in combination.

Taking the experience of practical physicians with Dr. Harley's results, as a basis, we would group them in the following order:

First Group.	Second Group.
Anodyne and Hypnotic Elements.	Narcotic and Convulsive Elements.
1. Morphia.	1. Thebain.
2. Narceia.	2. Cryptopin.
3. Codeia.	3. Papaverin.

Now SVAPNIA *is a distinctive name* given *to the first group, representing* the ANODYNE and HYPNOTIC ELEMENTS; *the second group, or the narcotic and convulsive* elements *of Opium being eliminated;* and is *not*, therefore, a simple principle, or a single constituent of Opium.

The relative values of each being known, we can select and utilize those that are valuable, and reject those known to be deleterious and inert.

This is what we claim, and all we claim for SVAPNIA. *It can be relied upon and given in all cases where Opium or Morphia is indicated, with equally good effects;* and in addition to this, there will be found in the practice of every physician cases occurring almost every day, in which idiosyncrasy and peculiar states and diseases of the brain debar us from the use of Opium and Morphia, but where Svapnia can be exhibited with the happiest results.

In SVAPNIA there is retained all the Morphia and the greater part of the Codeia and Narceia, but combined with the native acids of Opium, meconic and thebolactic, in such a manner as to render those constituents soluble and active.

SVAPNIA IS UNIFORM IN ITS PROPORTIONS, and is prepared to conform to a standard of Opium representing ten per cent. of Morphia. This is done by a simple proportion of the neutral excipient, after determining the actual amount of the alkaloids obtained from the Opium used.

We may safely affirm that the danger of bad results is much diminished by a resort to that preparation of Opium in which the poisonous elements are eliminated, and the anodyne elements in such a state of combination as to reduce their toxic and enhance their hygienic effects, such as has been PROVED TO BE THE CASE WITH SVAPNIA.

TO PHYSICIANS.

HORSFORD'S ACID PHOSPHATE

[LIQUID]

Is a preparation of the phosphates of lime, magnesia, potash and iron with free phosphoric acid ; and extended experience proves that it is in such form as to be readily assimilated by the system.

It is not a secret or quack medicine, but is made in accordance with well-known scientific principles, under the personal supervision of the well-known Prof. Horsford, who has made the subject of the phosphates a life study.

It should not be confounded with the dilute phosphoric acid of the pharmacopœia, or with any acid phosphate compounded in the laboratory.

Dilute phosphoric acid is simply phosphoric acid and water, without any base.

In this preparation of Acid Phosphate a portion of the phosphoric acid is combined with lime, iron, potash, etc. It is not made by compounding these articles together in the laboratory, but is obtained in the form in which it exists in the animal system.

It has been noted by some physicians that while in certain cases dilute phosphoric acid interfered with digestion, this preparation of Acid Phosphate not only caused no trouble with the digestive organs, but promoted, in a marked degree, their healthful action.

It is well understood that "phosphorus," as such, is not found in the human body, but that phosphoric acid in combination with lime, iron, and other bases, *i. e.*, the phosphates, is found in the bones, blood, brain and muscles. In the brain is also found phosphoric acid not combined with any base. It is the phosphates, and not the simple phosphoric acid, that is found in the urine after severe mental and physical exertion, or during wasting disease. Thus the researches of chemists and physiologists would seem to prove that it is a phosphate, with an excess of phosphoric acid, *i. e.*, an acid phosphate, that will better meet the requirements of the system than either phosphoric acid or a simple phosphate, and this theory has been proven beyond a doubt by practice, in a great variety of cases.

We have received a very large number of letters from physicians of the highest standing, in all parts of the country, relating their experience with the Acid Phosphate, and speaking of it in high terms of commendation.

Pamphlet giving further details mailed free, on application to the manufacturers.

Physicians who have not used Horsford's Acid Phosphate, and who wish to test it, will be furnished with a sample without expense, except express charges.

RUMFORD CHEMICAL WORKS,

PROVIDENCE, R. I.

In corresponding with Advertisers, please mention THE MEDICAL AND SURGICAL REPORTER.

An experience of more than a quarter of a century convinces us that sugar, properly applied, is the only correct coating for a pill.

Physicians should be careful to specify Warner & Co., when prescribing or ordering.

Special attention is called to the following selected Recipes prepared for Physicians' Prescriptions.

PIL: PHOSPHORI COMP: (WARNER & CO.) ℞. Phosphori, - - 1-100 gr. Ext. Nuc. Vom. - ¼ gr.

THERAPEUTICS.—As a nerve tonic and stimulant, this form of pil is well adapted for such nervous disorders as are associated with impaired nutrition and spinal debility, increasing the appetite and stimulating digestion.

The practical value of Phosphorus as a therapeutic agent, and its applicability to the cure of disease, and especially in those varied disordered conditions consequent upon OVERWORK, which are characteristic of modern civilization.

Pil. Phosphori Comp. may be taken, one or two pills three times daily, after eating.

Price, per 100, $1.50.

PIL: IODOFORM ET FERRI. (WARNER & CO.) ℞. Iodoform, - - 1 gr. Ferri Redacti, - 1¼ gr.

THERAPEUTICS.—A powerful general tonic and alterative, valuable as a remedy in Anæmia, Scrofula, Neuralgia, Chlorosis, Rheumatism, etc.

Pil. Iodoform et Ferri may be given in doses of from one to two pills, as occasion may require.

Price, per 100, $2.00.

PIL: DIGESTIVA. (WARNER & CO.) ℞. Pepsin Conc't, 1 gr. Gingerine, 1-16 gr. Pv. Nuc. Vom., ¼ gr. Sulphur, ⅛ gr.

THERAPEUTICS.—Useful in relieving various forms of Dyspepsia and Indigestion, and of permanent benefit in cases of enfeebled digestion, where the gastric juices are not properly secreted. It is also a gentle laxative and excellent dinner pill, may be taken one after dinner, or one before each meal, three times daily.

Price, per 100, 75 cts.

PIL: CALCIUM SULPHIDE. (WARNER & CO.) 1-10, ¼, ½ & 1 gr. each.

THERAPEUTICS.—Extremely useful in the treatment of acne, scrofula and cutaneous diseases.

Sulphide of Calcium is usually administered in doses of from 1-10 to ¼ grain four times daily, gradually increasing the dose to one grain six times daily, or according to the progress or severity of the case.

Price, per 100, 1-10 gr. .50; 1-4 gr. .60; 1-2 gr. .75; 1 gr. $1.00.

WARNER & CO.'S PILLS MAY BE OBTAINED FROM ALL DRUGGISTS, OR BY MAIL, ON RECEIPT OF PRICE.

WM. R. WARNER & CO., Pharmaceutical Chemists,
1297-1348 **PHILADELPHIA and NEW YORK.**

Apollinaris

"THE QUEEN OF TABLE WATERS."—BRITISH MEDICAL JOURNAL.

ANNUAL SALE, 10 MILLIONS.

There is a popular but entirely mistaken notion that ice is in its nature pure and innocuous; it is, on the contrary, very apt to be impure and noxious, and may easily contain the germs of fatal disease.

Apollinaris Water, by its absolute purity, affords complete guarantee against the dangers of zymotic disease incidental to ordinary drinking-water. Its sparkling and refreshing character renders quite unnecessary the introduction of ice into it. There is, of course, no objection to icing Apollinaris, as champagne is iced, by the external application of cold until its temperature is brought down, in hot weather, to a pleasant coolness. So treated, it is a beverage as refreshing and agreeable as it is pure and wholesome.

EARL SPENCER, K.G., the President of the International Medical Exhibition, at the great Medical Congress in London, recently, referred to Apollinaris, in his opening address, as a typical beverage approved by the Faculty. This approval is ratified by the unerring tastes of the cultivated populations of the world. The desiderata of original purity laid down by the RIGHT HON. LYON PLAYFAIR as the indispensable conditions for water, which can never be freed from sewage pollutions when once they have been allowed to pass into it, are amply fulfilled by Apollinaris.

SANITARY RECORD, March, 1882.

In corresponding with Advertisers, please mention THE MEDICAL AND SURGICAL REPORTER.

SAVORY & MOORE beg to call the attention of the Profession to some of their Special Preparations, the purity and uniform strength of which are Guaranteed.

PANCREATIC EMULSION,

Prepared in accordance with the direction of the Physician who introduced this purely

MEDICINAL FOOD FOR CONSUMPTION AND WASTING DISEASES.

Pancreatic Emulsion will always take precedence of Cod-Liver Oil, by reason of its introducing the STABLE SOLID FATS INTO THE SYSTEM, instead of the evanescent fluid fats or oils.

Neither Cod-Liver Oil nor EMULSIONS of COD-LIVER OIL can supply the kind of fat necessary for sound and vigorous human life. In addition to this, all the Oily Emulsions are liable to rancidity, and most of them are highly objectionable in consequence of the SAPONIFICATION and ULTIMATE PUTREFACTION, produced by the chemical agents used instead of Pancreatic Juice.

Pancreatic Emulsion (properly so-called), is THE NECESSARY FOOD OF THE CONSUMPTIVE, and the most reliable form of nutriment for counteracting the tendency to Phthisis and other wasting diseases. It presents to the lacteals fat, in essentially the same condition for assimilation and absorption as in a vigorous human frame, and THE AGENT of the important change is THE NATURAL SECRETION of the PANCREAS.

Pancreatic Emulsion may therefore be regarded as Chyle obtained by nature's own process. In certain cases both Cod-Liver Oil and Pancreatic Emulsion are required—one to supply the blood with oil or liquid fat, the other with the more stable solid fats; but it cannot be too strongly urged that both PANCREATIC EMULSION and Cod-Liver Oil are *not to be regarded as Medicines, but as articles of diet*, without which patients, with their defect of health, will as surely starve as healthy persons would if deprived of the most nutritive part of their food

Pancreatized (Digestive) Cod-Liver Oil. By Pancreatized Cod-Liver Oil, the active digestive principle of the Pancreatic Juice is imparted to it, which renders it in a highly favorable condition for rapid and complete digestion and assimilation, preventing nausea, and largely increasing the beneficial properties of the Oil.

Pancreatine effects the digestion and assimilation of Cod-Liver Oil and Fat, as well as Food generally. This palatable and popular remedy is therefore invaluable to PATIENTS WHO ARE UNABLE TO DIGEST COD-LIVER OIL, and who are thus deprived of its nourishing and invigorating properties.

Pancreatine Wine. An excellent vehicle for taking Cod-Liver Oil and promoting the digestion of it.

Tins, 1*s*, 2*s*, 5*s*, 10*s*.

SAVORY & MOORE, 143 New Bond Street, London.

1297-1348eow **Agents for America, E. FOUGERA & CO., NEW YORK.**

PNEUMATIC ASPIRATION,

AFTER THE MANNER OF DIEULAFOY.

"It is always possible, owing to Aspiration, to search for a fluid collection without any danger, whatever may be its seat or its nature."

"I have thrust these needles into almost every part of the body; into the Joints the Liver, the Spleen, the Bladder, the Intestines, the Lungs and the Meninges; and I can affirm, and a great number of observers affirm with me, that we have never seen consecutive accidents."—*Dieulafoy on Pneumatic Aspiration*, pp. 21, 24.

We invite the attention of the Medical Profession to this New Apparatus for Aspiration, constructed upon the general plan of Potain's modification of Dieulafoy's Aspirator, but containing the following improvements and inventions of our own:—

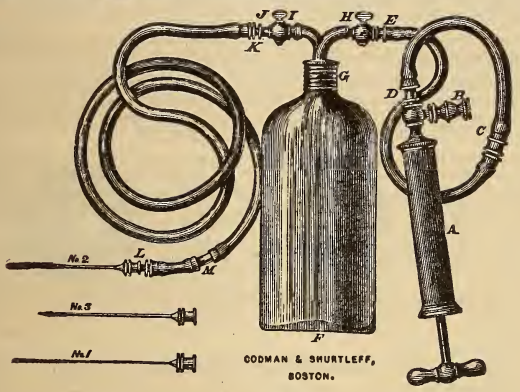

Fig. 68.

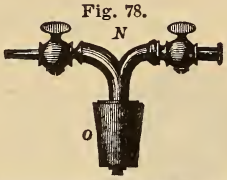
Fig. 78.



The Stopper and Cocks supplied with Apparatus No. 2.

Fig. 77.

1st. Means of changing the pump from an exhaust to a force-pump, and *vice versa*, thereby enabling the operator not only to draw an abnormal fluid, but to inject the cavity through the tubes and needle of the apparatus with one adapted to induce healthy action.—*See Dieulafoy on Aspiration*, pp. 276, 278.

2d. The employment, in our apparatus No. 1, of a metal Screw Cap, fitting the neck of the receiver supplied with this apparatus so securely that it cannot be forced from its place by condensed air while injecting, or accidentally removed while the receiver is in a state of vacuum for aspiration

3d. The substitution, for the ordinary oiled silk valves of other apparatus, of a kind indestructible, both in form and material.

4th. A simple and comparatively inexpensive attachment for evacuating the contents of the stomach, equal, if not superior, to any in use hitherto.

Commendations bestowed upon our Aspirators, by physicians familiar with the latest European and American ones, lead us to believe that, in some important particulars, at least, they are superior to any.

In his work on Pneumatic Aspiration, Dieulafoy shows the harmlessness of the Aspiratory puncture, and its great superiority to the Exploring Trocar as a means of accurate diagnosis in all collections of Pathological Fluids. It has been used with unprecedented success in the Retention of Urine, Reduction of Strangulated Hernia, in Ascites, Hydrothorax, Empyema, Pneumothorax, Effusions into the Pericardium, Serous, Purulent and Hematic Effusions of the Knee, Hydrocele, Hydatid Cysts, Abscesses of the Liver, and in various other Pathological Lesions.

PRICES OF APPARATUS.

No. 1. Air Pump—exhaust or condensing as described; 16 oz. receiver, of strong glass, with screw-cap; three steel, gold plated Aspiratory Needles, together with the necessary tubes, stop-cocks, etc., as shown in Fig. 77, fitted in a neat case, accompanied with printed directions $16.00. Postage 64 cents.

No. 2. The same, without receiver, and with rubber stopper (see Fig. 78) to fit almost any bottle of quart capacity, or less, instead of screw-cap arrangement, also with printed directions $14.00. Postage 32 cents.

No. 3. Dieulafoy's Notched Aspirator, Nickel-plated, with two Needles, Tubes, etc., in case.....$14 60

No. 4. Stomach Attachment, as described, adapted to pump accompanying Nos. 1 and 2, additional $6.00. Postage 22 cents.

The foregoing are the product of our own factory, and are warranted in every respect.

Also, **Dieulafoy on Pneumatic Aspiration,** post paid, by mail, on receipt of..... 3 40

☞ *Full description on application.*

SEABURY & JOHNSON'S U. S. P. BELLADONNA PLASTER.

Our article is incorporated with the Alcoholic extract of Belladonna, prepared from the root. The plaster mass is freed from all irritating and stimulating properties, thus promoting, to its fullest extent, the uninfluenced action of this valuable sedative.

ANALYSIS OF BELLADONNA PLASTERS,

By Prof. R. OGDEN DOREMUS.

Messrs. SEABURY & JOHNSON:— { BELLEVUE HOSPITAL MEDICAL COLLEGE, NEW YORK, September 7, 1878.

"GENTLEMEN—I obtained from Messrs. W. H. Schieffelin & Co., of this city, samples of Belladonna Plasters prepared by Grosvenor & Richards, Boston; Mitchell's Novelty Plaster Works, Seabury & Johnson, New York. I have examined these varieties for the purpose of determining which possesses the largest quantity of Atropine. I employed equal surfaces of each, and *my analysis demonstrated that Seabury & Johnson's contains the greatest proportion* of the active principle of Belladonna, and is the most reliable plaster.

PROF. R. OGDEN DOREMUS, M.D., LL.D."

ANALYSIS OF BELLADONNA PLASTERS,

By J. P. BATTERSHALL, PH.D., Analytical Chemist.

Messrs. SEABURY & JOHNSON:— NEW YORK, June 7, 1878.

"GENTLEMEN—Samples of the Belladonna Plaster manufactured by your firm and by Dr. Grosvenor's, were purchased by me of a well-known drug house, and comparative tests made of the same, for the purpose of determining the relative amount of Extract of Belladonna in each. The tests used were applied to an equal quantity of each plaster, and under similar conditions. I find that a larger amount of the Solid Extract of Belladonna is contained in your preparation, **which result was corroborated by repeated trials.**

Respectfully yours, J. P. BATTERSHALL, PH.D., *Analytical and Consulting Chemist.*"

Practitioners who have not yet received our complete special Physicians' Catalogue of Pharmacopœia and Surgical Rubber Plasters, porous and spread, absorbent and antiseptic dressings, will be furnished same, on application. Yours very truly,

SEABURY & JOHNSON,

1312-1351eow

21 PLATT STREET, NEW YORK.

DOCTOR RABUTEAU'S

(Laureate of the Institute of France.)

DRAGEES, ELIXIR & SYRUP

OF IRON.

"The experiments made in the hospitals of Paris have demonstrated that *Dr. Rabuteau's Dragees, Elixir and Syrup* regenerate the red globules of the blood with a rapidity never observed with the use of the other ferruginous preparations. These results have been proved by the various *Compt-Globules.*

"The ferruginous preparations of *Dr. Rabuteau* do not cause any constipation, and are perfectly tolerated by the weakest persons."—*Gazette des Hospitaux.*

Dr. Rabuteau's Elixir is prescribed when some difficulty is experienced in swallowing the Dragees; it is especially adapted to weak persons, whose digestive functions need strengthening or stimulating.

Dr. Rabuteau's Syrup is especially prepared for children, who take it readily, because of its agreeable taste.

CRINON'S HÆMOGLOBIN,

The Albuminoid Ferruginous Principle of Blood.

HÆMOGLOBIN is the only physiological chalybeate. Associated as it is with the phosphates of the blood, it forms the most powerful of tonics, and at the same time a most nourishing food. It is especially useful in cases of *Anæmia, Chlorosis, Cachexias, Exhaustion* caused by excess of work, nervous debility, fatigue resulting from parturition and lactation. It replaces entirely liquid blood, which has been recommended and used with success in *Phthisis* and *wasting away.*

It is offered in two forms: In cachets (wafers), 60 of which are contained in a box; combined with chocolate in small squares, 30 of which are in a box; both forms can be sent by mail.

Prepared by C. CRINON, Paris, Pharmacist of the first class, Laureate of the Hospitals of Paris. Samples may be obtained by application to

E. FOUGERA & CO., New York, Agents for the U. S.

1297-1348eow

THE INVENTION OF AN EMINENT FRENCH CHEMIST.

The Salvator for Invalids and the Aged. An Incomparable Aliment for the Growth and Protection of Infants and Children. A Superior Nutritive in Continued Fevers, and a Reliable Remedial Agent in all Diseases of the Stomach and Intestines.

TO PHYSICIANS AND THE PUBLIC.

THIS preparation is, as advertised, principally the GLUTEN derived, by chemical process, from VERY SUPERIOR GROWTHS OF WHEAT, and should not be confounded with burnt or boiled Flour, in which the GLUTEN or sanative qualities are destroyed or made medicinally inert, nor with Crushed Wheat, or finely ground Wheaten Grits, styled "Medicinal Food," and sold under various names, in which the starch and impurities contained in wheat are retained in larger quantity.

By Dubisson's formula, the starch, impurities and soluble matter found in the Wheat Cereal are effectually excluded, the GLUTEN only retained, which is condensed, granulated and prepared to keep in all climates, and justly entitled

—⁂ IMPERIAL GRANUM ⁂—

It is well known, and should be fairly considered, that nothing of merit can be favorably received and commended by the public without being followed by imitations of a questionable character. IMPERIAL GRANUM is not the exception, for no preparation has attracted more attention, nor been more fiercely imitated by competition, even to wording and shipping order.

Whilst again it can be truly said that no preparation ever offered for sale has been more carefully prepared and thoroughly tested, nor has met with a more welcome reception and universal approval, or afforded more relief to invalids or to young and suffering children and aged persons. This has been confirmed by thousands of testimonials from Chemists, Physicians, Heads of Families and the Press.

Respectfully,

E. HEATON.

THE JEFFERSON MEDICAL COLLEGE,

OF PHILADELPHIA.

The Fifty-eighth Session of the Jefferson Medical College will begin on Monday, October 2d, 1882, and will continue until the end of March, 1883. Preliminary Lectures will be held from Monday, 11th of September.

PROFESSORS.

S. D. GROSS, M.D., LL.D., D.C.L. Oxon., LL.D. Cantab. (Emeritus).
Institutes and Practice of Surgery.

ELLERSLIE WALLACE, M.D.,
Obstetrics and Diseases of Women and Children.

J. M. DA COSTA, M.D.,
Practice of Medicine.

WM. H. PANCOAST, M.D.,
General, Descriptive, and Surgical Anatomy.

ROBERT E. ROGERS, M.D.
Medical Chemistry and Toxicology.

ROBERTS BARTHOLOW, M.D., LL.D.,
Materia Medica and General Therapeutics.

HENRY C. CHAPMAN, M.D.,
Institutes of Medicine and Medical Jurisprudence.

SAMUEL W. GROSS, M.D.,
Principles of Surgery and Clinical Surgery.

JOHN H. BRINTON, M.D.,
Practice of Surgery and Clinical Surgery.

WILLIAM THOMSON, M.D.,
Professor of Ophthalmology.

The recent enlargement of the College has enabled the Faculty to perfect the system of *Practical Laboratory Instruction*, in all the Departments. Rooms are assigned in which each Professor, with his Demonstrators, instructs the Class, in Sections, in direct observation and hand-work in the Chemical, Pharmaceutical, Physiological, and Pathological Laboratories. Operative and Minor Surgery, and investigation of Gynæcological and Obstetric conditions on the *Cadaver*, are taught, as also Diagnosis of Disease on the living subject. The experience of the past Session has abundantly proven the great value of this Practical Teaching.

This course of instruction is *free of charge, but obligatory upon* candidates for the Degree, except those who are Graduates of other Colleges, of ten years' standing.

A SPRING COURSE of Lectures is given, beginning early in April, and ending early in June. There is no additional charge for this Course to matriculates of the College, except a registration fee of five dollars; non-matriculates pay forty dollars, *thirty-five of which, however, are credited on the amount of fees paid for the ensuing Winter Course.*

CLINICAL INSTRUCTION is given *daily*, at the HOSPITAL OF THE JEFFERSON MEDICAL COLLEGE, throughout the year, by Members of the Faculty, and by the Hospital Staff.

FEES.

Matriculation Fee (paid once). - -	$5.00	Practical Anatomy, - - - - - - -	$10.00
Ticket for each Branch (7) $20. - -	140.00	Graduation Fee, - - - - - - - -	30.00

Fees for a full course of Lectures to those who have attended two full courses at other (recognized) Colleges—the matriculation fee, and - - - - - - - - - $70.00
To Graduates, of less than ten years, of such Colleges—the matriculation fee, and 50.00
To Graduates, of ten years, and upward, of such Colleges—the matriculation fee only.

The Annual Announcement, giving full particulars, will be sent on application to

1318-1330 eow **ELLERSLIE WALLACE, DEAN.**

MURDOCK LIQUID FOOD CO., Boston,

THE ONLY MANUFACTURERS OF

RAW FOOD EXTRACTS IN THE WORLD.

It can be retained by the weakest stomach, when all other food extracts, and even water, is rejected.

Nutritious food, if raw, condensed, and free from insoluble matter, will cure chronic diseases, as it will make blood faster than all preparations or food, and new blood will cleanse the system.

MURDOCK'S LIQUID FOOD is made from Beef, Mutton and Fruits; contains corpuscles; is 12½ per cent. soluble albumen, and free from insoluble matter, drugs, minerals, salts and acids, and can be retained by the stomach when so weak as to refuse food.

Ask your Druggists, or send to us, for Essays read before the American Medical Association, at Richmond, Va., May 6, 1881, on the value of Raw Food Extracts, by Geo. R. Shepherd, of Hartford, Conn., and other Essays and Testimonials from Medical Journals and Physicians that have used Liquid Food, in cases of Consumption, Scrofula, Nervous and General Debility, Dyspepsia, acute and chronic, Constipation, Diphtheria, Intemperance, Cholera Infantum, Infantile Diarrhœa, Post partum Hemorrhage, Purpura Hemorrhagica with Waxy Liver, Pelvic Cellulitis, Malarial and other Fevers, Chronic Strumous Arthritis, Sclerosis of the Spinal Cord, Senile Gangrene, Perinephritic Abscess, and other diseases of malnutrition. No cases of Cholera Infantum have occurred where it has been used daily, and no lives have been lost from Cholera Infantum where it has been prescribed by a physician. Excellent for Eczema, Diabetes, Rheumatism and Neuralgia.

At the request of any physician who has not tried our Extracts, and would like to, we will deliver sample bottles to the express in Boston, Philadelphia, or Pittsburg. *If any physician has a Chronic case that will not yield to his treatment, of any disease, we will furnish, at his request, sufficient Liquid Food to satisfy him that Liquid Food will make blood faster than all preparations or food known, and that new blood will cleanse the system of disease. Our claims are that it is a Raw Extract, condensed many fold, free of insoluble matter, and contains corpuscles. It can be retained when the stomach is so weak that it will refuse water.* We are induced to do this, knowing that our Extracts are saving life, and that an increased use of them, which will follow after a trial of them, will be the means of saving more lives daily. (*We ask no testimonials of results obtained.*) Raw Extracts are available where cooked ones are not, or if available contain only one-third as much nourishment.

Liquid Food is in general use at all Hospitals, Infant and Insane Asylums and Washingtonian Homes, U. S. Navy Hospitals, and by all the physicians that have tried it.

If not kept by your Druggist, can be obtained in any of the commercial cities. In Philadelphia, by Johnston, Holloway & Co., Boericke & Tafel: in Pittsburgh, by A. Kelly & Co; in Baltimore, by Thomsen & Wirth: or you can order direct and we will pay express. 1 oz., 15 cents; 6 oz., 55 cents; 12 oz., $1.00.

MURDOCK LIQUID FOOD CO.,

BOSTON. 1297-1348

It is the only food that will relieve the Consumptive from Hunger.

It will make Blood faster than all preparations known.

McINTOSH'S COMBINED

Galvanic AND Faradic Battery.

THIS CELEBRATED BATTERY COMBINES BOTH THE GALVANIC AND FARADIC CURRENT,

Which can be used separately or combined. Any strength and intensity desired can be obtained for use in Electro-therapeutics. THIS BATTERY is constructed on an IMPROVED PLAN, as follows: The zinc and carbon plates are arranged in couples, securely clamped to hard rubber plates, with thumb screws. These screws are also used for binding posts. All the connections are positive. The cells are made in sections of six, of hard rubber, with hard rubber drip cup. The following points of excellence render our Batteries superior to others:

1. They combine the only Portable Galvanic and Faradic Battery in one case.

2. They weigh one-half less than other Batteries of the same number of cells.

3. The cells are made in sections of six, of one solid piece of hard, vulcanized rubber; by this arrangement they can be emptied, cleaned and filled as easily and quickly as one cell, and will not crack, break or leak.

4. A hard rubber drip cup is placed by the side of each section of cells, to receive the zinc and carbon plates when removed from them. By this arrangement we avoid the use of absorbent materials and soiling the Battery

5. The Hydrostat is perfect. The rubber plates which hold the elements project over on one side enough to cover the cells when the zinc and carbon plates are placed in the drip cups. The under side of this projection is covered with thick, soft rubber, which is securely clamped to the cells sections, and makes them water tight.

6. This is the only Battery in which the zinc and carbon plates can be kept clean by simply rinsing them.

7. A zinc or carbon plate can be removed by simply loosening a binding post; and all parts of the Battery can be duplicated, as like parts are made exactly alike. We will be pleased to send circulars and our illustrated catalogue, giving full information, price, etc., free, upon application.

McINTOSH GALVANIC AND FARADIC BATTERY CO.,

1281-1332 **Nos. 192 and 194 Jackson Street, CHICAGO, ILL.**

BEEF PEPTONE,

IN TRANSPARENT GLASSY SCALES,

Containing only the animal or azotized matter of the Beef. Each ounce is equal to 16 ounces of raw beef, easily soluble, and still faster in hot water.

This Beef Peptone is digested from tender, juicy Beef, by the aid of the *Crystal Pepsin,* of my manufacture (Jensen's Crystal Pepsin). Unlike the various BEEF EXTRACTS, this preparation contains all the nutritive constituents of the Beef, in a thoroughly digested state, ready for absorption into the system, while the Beef Extracts are entirely devoid of the chief elements of nutrition, such as the fibrinous, gelatinous and albuminous portions of the Beef, they only consisting of the concentrated saline constituents, with barely a trace of animal matter to keep its consistence. The difficulty so long experienced by the profession throughout the world, in preparing a PEPTONE entirely free from those chemical agents necessary for its manufacture, so as to render it fit for use, is hereby demonstrated to be successfully overcome, as it contains no foreign matter, and will stand the most severely scrutinizing test as to perfectness, also possessing flavor of the Beef, and so palatable as to render it highly agreeable.

Put up in bottles holding One ounce, Eight ounces, and one Pound.

Kept by the Wholesale and Dispensing Druggists in general.

DEPOT—L. WOLFF'S Pharmacy,

Northwest corner Twelfth and Chestnut Streets.

JENSEN'S CRYSTAL PEPSIN,

IN ARTIFICIAL CRYSTALS,

Strictly inodorous and tasteless, and perfectly soluble in water without acid.

THIS PEPSIN, now so popular with the profession, has created an impetus in the consumption of the same and physicians of the highest standing, who before the introduction of this active PEPSIN, with good reason, entirely abandoned the use of PEPSIN, are now the most eager in prescribing JENSEN'S CRYSTAL PEPSIN, whenever it is indicated, and since the knowledge of its great solvent power (gr. j. of it will dissolve the boiled whites from two to three eggs) has been established even among those susceptible to be great doubters it has caused itself to be utilized in many novel ways, by the thinking profession; for instance, in substituting morphia, chloral, etc., as a hypnotic, relieving gastric troubles where the above remedies have been prescribed, creating morphine and chloral habits In removing diphtheritic patches it is successfully used combined with water, glycerine, and muriatic acid, and the same composition, diluted with more water, as a spray in bronchial troubles, dissolving muco-purulent matter, as well as a spray for same in catarrhal affections.

THIS PEPSIN

Has also been used with success in dissolving and evacuating coagulated blood in the bladder, dispensing with surgical operations in such cases. Many other novel applications could be mentioned, if not in want of space. It is found to be FORTY times stronger than saccharated pepsin. One to three grains is an active dose.

KEPT BY ALL DRUGGISTS.

The above preparations are only manufactured and put up by

CARL L. JENSEN, M.D., PH.G.,

865 North 26th Street, Philadelphia, Pa.

No other Wholesale Agents for this Pepsin are longer engaged, than the Wholesale Druggists throughout the United States.

Instructor in Clinical Medicine.

A. S. PARKER, PH.C.,
Instructor in Pharmacy.

A. M. HAWES, M.D.,
Demonstrator of Anatomy.

This College has for its *collegiate year* two sessions.

Regular Session commences Wednesday, September 7th, 1881, and closes March 1st, 1882.

Recitation Term (optional) commences March 15th, 1882, and closes June 14th, 1882.

Graded Course of three terms, of six months each.

PLAN OF INSTRUCTION.

By *Lectures*, *Recitations* and *Clinics*, together with *practical work* in the Anatomical, Physiological, Chemical and Pharmaceutical Laboratories.

Clinics are held *daily*.

Clinical Work in Hospitals and Dispensaries is given to the Senior Class (see Clinics), in *small sections*, under the charge of a *Clinical Teacher*, in all the departments of Medicine and Surgery.

Three Large Hospitals and *two Dispensaries* afford unlimited material for instruction.

ADMISSION.—Candidates for admission are required to pass a preliminary examination, unless satisfactory documentary evidence can be presented, that is equivalent to the standard adopted. (See Catalogue.)

FEES.

Regular Session.—Matriculation, $5.00; Lecture Tickets, $50.00; Hospital Tickets, $10.00
Examination (final), $25.00.

Recitation Term.—$10.00 for those who have attended Regular Session; all others, $25.00, $15.00 of which will be applied on the next Regular Term.

Board and Rooms can be obtained for $3.00 to $5.00 per week, the average being $4.00.

For Catalogue and other particulars, address

H. O. WALKER, M.D., Secretary,
177 Griswold Street, Detroit, Mich.

JOHNSTONE'S IMPROVED

ADAPTABLE POROUS FELT SPLINTS.

AHL'S SPLINT MANUFACTURING COMPANY, LIMITED,

123 & 125 South Eleventh Street, PHILADELPHIA, PA.

THE ADAPTABLE POROUS SPLINTS, invented and improved by W. H. JOHNSTONE, have been tested extensively in both civil and military practice for a number of years, and have been endorsed and recommended in the most unqualified manner by the celebrated and distinguished Surgeons of America.

Their *porosity* is a peculiar and a valuable property. While the material is firm and insoluble, it permits readily the passage of air and fluids, so that, on one hand, the heat from the inflamed surface, the perspiration, and the morbid exhalations, are not confined, to the detriment of the patient, *as is the case in every other kind of splint*, but pass off freely; and on the other hand, lotions of cold or warm water, medicated or not with weak alcohol, carbolic acid, arnica, tincture, solutions of the sulphites, etc., can be constantly applied without disturbing the dressings. This, it will readily be seen, is a most invaluable property when the parts are bruised, lacerated, filled with extravasated blood, or erysipelatous, and give these splints a conspicuous advantage over all others.

From FRANK H. HAMILTON, M. D., Professor of Fractures and Dislocations in the Bellevue Hospital Medical College, author of "A Treatise on Fractures and Dislocations," etc.

Having examined carefully *JOHNSTONE'S IMPROVED ADAPTABLE POROUS FELT SPLINTS*, I feel warranted in recommending them to the Profession as superior to all other manufactured splints now in use. They possess all the essential qualities of a good splint, having firmness, pliability and lightness.

FRANK H. HAMILTON, M. D.,
Prof. Military Surgery and Fractures and Dislocations, Bellevue Hospital Col.

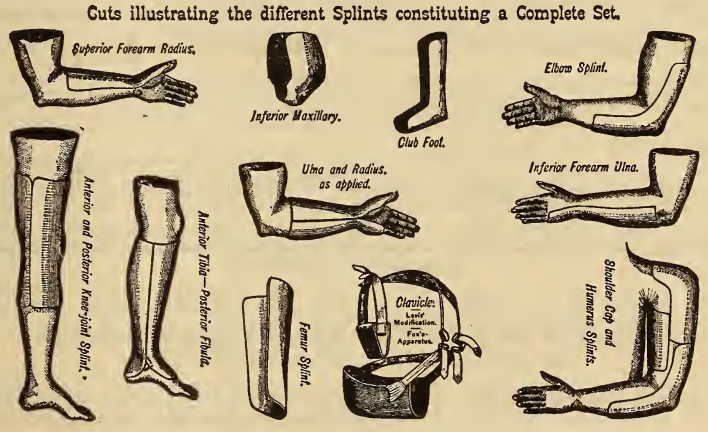
From PROF. D. HAYES AGNEW, Prof. Surgery, University of Penna.

1611 CHESTNUT STREET, PHILADELPHIA, *February 6th*, 1879.

The Adaptable Felt Splints, formerly known as those of Dr. Ahl, with the improvement now made by W. H. Johnstone, which renders them in every way superior to the former, I regard as very excellent appliances in the treatment of fractures.

D. HAYES AGNEW,
Prof. Surgery, University of Pennsylvania.

Cuts illustrating the different Splints constituting a Complete Set.



SPECIAL NOTICE TO THE PROFESSION AND TRADE.

Our *policy* heretofore in the introduction of JOHNSTONE'S IMPROVED ADAPTABLE POROUS FELT SPLINTS, has been to confine the sales and business negotiations directly to the Doctors themselves, declining in every case to sell our goods through Dealers; we having assured the Profession generally, both through our agents and catalogues, that *JOHNSTONE'S IMPROVED SPLINTS* could only be obtained by subscription.

We wish to announce, that owing to the large demand for our goods and the constant importunity on the part of *Surgeons* everywhere to place our Splints on sale with their Instrument Dealer or Druggist, to afford them greater convenience and facility in obtaining the pieces in duplicate, we have at last acceded to that request, and hereafter *JOHNSTONE'S CELEBRATED FELT SPLINTS* can be obtained at most dealers in Instruments and Drugs throughout the United States, at the same price which they were heretofore sold, viz:

A complete set, embracing fifty (50) pieces—twenty-five for adults and twenty-five for children—is thirty ($30) dollars. Extra or duplicate pieces can always be obtained from your DEALER, at one dollar each.

JOHNSTONE'S CELEBRATED SPINAL JACKET, for Curvatures and Deformities, have met with unparalleled success, and, from their merit, secured the unqualified endorsement and approbation of our celebrated orthopædic specialists, and particular expression of gratitude from the patients who are wearing them. For full information, send for Descriptive Circulars.

Should your Instrument dealer fail to have a supply of our Splints, and decline to carry them in stock, orders sent to us will receive prompt attention.

AHL'S SPLINT MANUFACTURING CO., Limit
W. H. JOHNSTONE, Manager.

N. B.—If the Instrument Dealers of Philadelphia decline to supply its Physicians with our JOHNSTONE'S FELT SPLINTS on call, they will be furnished and delivered by us to any part of the city, at any time, on receipt of the price, viz., $1.00 each.

Situated upon a high hill that commands a splendid view of the Hudson and Harlem rivers, Spuyten Duyvil Creek, and the beautiful country for miles around; surrounded by ample grounds and magnificent drives; in easy communication with the city by means of the Sixth and Ninth Avenue Elevated and the Hudson River Railroads; away from the dust, noise, crowding and malaria of the city; with hot and cold water in every room, furnace and grate-fire heating, croquet, horses and carriages, boats and fishing, an excellent *cuisine*, trained nurses and careful medical attendance, it possesses unequaled advantages for the treatment of cases of this kind.

The plan of treatment pursued in the cure of opium, morphine and chloral takers is that of *rapid reduction*, which possesses all the advantages, and none of the dangers of Levenstein's *sudden deprivation*, or the prolonged agony of *gradual reduction*. Each case is studied and treated in accordance with its peculiarities and the idiosyncrasies of the patient, no set plan of treatment being pursued, at the expense of the person's health or comfort.

Our Home, furthermore, offers special facilities for the treatment by *rest, diet, and massage*, according to the plan of Weir Mitchell, of that large class of nervous diseases so commonly met with in ladies suffering from uterine troubles. This plan of treatment has been specially studied, and nurses competent to carry out its provisions in every detail will be furnished. For further particulars, etc., address 1299-1350

DR. McINTOSH'S ELECTRIC OR GALVANIC BELT.

This Belt is a perfect Galvanic Battery, composed of sixteen cells, placed in pockets on a belt. Each cell is made of hard vulcanized rubber, lined with copper, which constitutes the negative plate. The rubber coating perfectly insulates each cell. The positive plates are of zinc, wrapped in a porous material to absorb the exciting fluid, preventing contact with the copper, and permitting the current to pass from the copper to the zinc. The cells are charged without wetting the belt.

A current selector is so arranged that one or more cells can be used at pleasure. The electrodes are covered similar to ordinary battery electrodes, and connected with the cells by connecting cords. By this arrangement, a current from the belt can be applied to any part of the body. Physicians who have used this belt in their practice do not hesitate to recommend it to the profession.

Our pamphlet on "Medical Electricity," containing a full description of the belt and diseases, with manner of treatment, sent free on application. Address

PACKER'S TAR SOAP.

ABSOLUTELY PURE AND NON-IRRITATING.

MADE FROM VEGETABLE OILS, PINE TAR AND GLYCERINE.

Extensively used in public and private practice in the treatment of **Diseases of the Skin,** and as a disinfectant cleanser for Sores, Ulcers, Leucorrhœa etc.

Its antiseptic properties make it especially valuable as a preventive of infection and of contagion, and it thoroughly cleanses the body during and after an attack.

For **washing infants,** the use of PACKER'S SOAP prevails with several Asylums. For the bath, toilet and shampoo it is unrivaled. 25 cents per cake, from Druggists.

It is supplied to Hospitals, Asylums and Physicians, in one pound bars, at reasonable prices.

P. O. Box 2985. **THE PACKER MFG. CO., 100 Fulton St., New York.**

MEAT AND QUINIA.

AROUD'S WINE WITH QUINIA,

And all the Nutritive Principles of Meat.

Aroud's Preparations recommend themselves to the most se ious attent on of Physicians, and deserve their preference:

1st.—Because they combine all the active principles of the richest barks of quinia carefully selected.

2d.—Because 30 grammes of them contain 3 grammes of quinia and all the nutritious principles of 27 grammes of meat, which are soluble in alcohol and water.

3d.—Because the combination of meat with the barks of quinia has not only the advantage of acting as a tonic, nutritive, and febrifuge, but also that of paralyzing and guarding against any local irritation caused by the prolonged use of quinia barks, and of preparing the stomach to endure the salutary influence of this friendly compound.

4th.—Because these preparations with meat as a basis, containing in their composition the entire nutritious elements of muscular fibre, blood and bone, answer alone to the immortal maxim of Hippocrates, fundamental basis of all good reparative medication, "*Ars imitatio natura.*"

5th.—Because, if meat occupies the first rank among the articles of food, if quinia is placed at the head of tonics, the combination of these highly reparative substances must necessarily be a reconstructor par excellence.

Finally, because the experiments with Aroud's Wine and Quinia prove, better than theory, that, to reconstruct the shattered and enfeebled forces, no other tonic can be compared to it.

MEAT, IRON AND QUINIA.

AROUD'S

FERRUGINOUS WINE WITH QUINIA,

And all the Nutritive Principles of Meat.

MEAT, IRON AND QUINIA, that is so say, the most reparative food combined with a reconstituent and a nerve tonic par excellence: such is the remarkable composition of this ferruginous preparation, which, in all respects, merits the preference of physicians. It prevents impoverishment of the blood, anæmia, chlorosis, etc.; presented in a form at once attractive to the eye and pleasant to the palate—an assimilable iron united with all the constitutive principles of bone and of muscle; it can, therefore, form and regenerate the forces, and this without causing nausea, constipation, or disturbing the digestive organs. By its generous alimentation it corrects and modifies the bad effect of the prolonged use of quinia.

The excellence of this preparation justifies that which Hippocrates proclaimed over 2000 years ago, and all clinics have confirmed: "That the soluble nutritive principles of meat is the food best adapted for the sick and convalescents; that these principles, being the integral parts of muscle, have the faculty of forming flesh rapidly, and of restoring muscle."

It is, therefore, a precious specific for all the maladies caused by impoverishment or deterioration of the blood, because meat, iron and quinia combined give nourishment, act as a tonic, regenerate, reconstitute, and regulate the entire system. 1297-134e-eow

VINUM D CESTIVUM (PROCTER.)

DIGESTIVE WINE, used with unvarying success by so many of our prominent physicians for the last three years, is offered with increased confidence to the profession as a sure and rapid means for the exhibition of the artificial digestive function. The nausea of pregnancy and sea sickness are greatly alleviated or entirely relieved by its use. One fluid-ounce dissolves 500 grains of coagulated albumen. One or two teaspoonfuls may be given, or varied as desired. We would suggest that the above title be used in prescribing. 1257-1308, 1y.

Manufactured by **WM. PROCTER, Jr., CO.**, S. W. Cor. 9th and Lombard Sts., Phila.

IMPROVED ARTIFICIAL LIMBS.

Legs with sub-astragalus joint, for lateral ankle movement. Arms with finger, wrist and elbow movement.

Also extension apparatus for shortened and deformed limbs. These limbs are undoubtedly the most perfect in use.

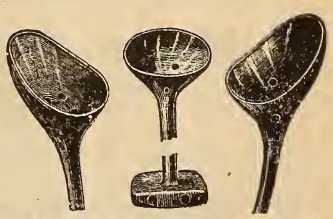
DR. McINTOSH'S

NATURAL UTERINE SUPPORTER.



No instrument has ever been placed before the medical profession which has given such universal satisfaction. The combination is such that the physician is able to meet every indication of Uterine Displacements. Falling Womb, Anteversion, Retroversion and Flexions are overcome by this instrument, where others fail. This is proven by the fact that, since its introduction to the profession it has come into more general use than all other instruments combined.

Among the many reasons which recommend this Supporter to the physician is its self-adjusting qualities. The physician, after applying it, need have no fear that he will be called in haste to remove or readjust it, as is often the case with rings and various pessaries held in position by pressure against the vaginal wall, as the patient can remove it at will, and replace it without assistance.

The Abdominal Supporter is a broad morocco leather belt, with elastic straps to buckle around the hips, with concave front, so shaped as to hold up the abdomen. The Uterine Support is a cup and stem, made of highly polished hard rubber, very light and durable, shaped to fit the neck of the womb, with openings for the secretions to pass out, as shown by the cuts. Cups are made with extended lips, to correct flexions and versions of the womb. The cup and stem is suspended to the belt by two soft elastic rubber tubes, which are fastened to the front of the belt by simple loops, pass down through the stem of the cup and up to the back of the belt. These soft rubber tubes being elastic, adapt themselves to all the varying positions of the body, and perform the service of the ligaments of the womb. The instrument is very comfortable to the patient, can be removed or replaced by her at will, can be worn at all times, will not interfere with nature's necessities, will not corrode, and is lighter than metal. It will answer for all cases of Anteversion, Retroversions, or any Flexions of the womb, and is used by the leading physicians with never-failing success, even in the most difficult cases.

Our Reduced Prices are to Physicians, $6.00; to Patients, $10.00.

Instruments sent by mail, at our risk, on receipt of price, or by Express, C. O. D., with the Express charges for returning the money added.

☞ CAUTION.—Owing to the great sale and popularity of our instrument various and base imitations are sold by unscrupulous parties. In order to get the genuine, it is best to order direct from us.

A MANUAL OF

OPHTHALMIC PRACTICE.

A COURSE OF LECTURES DELIVERED AT THE "ÉCOLE PRATIQUE,"

BY DR. E. LANDOLT,

Directeur-Adjoint of the Ophthalmological Laboratory at the Sorbonne, Paris.

TRANSLATED BY

SWAN M. BURNETT, M.D.,

Lecturer on Ophthalmology and Otology in the Medical Department of the University of Georgetown, and Ophthalmic Surgeon to the Central Dispensary, Washington, D. C.

REVISED AND ENLARGED BY THE AUTHOR.

1 vol. 8vo, pp. 307. With numerous Illustrations and a large Chart. Price, cloth, $3.00.

This entirely new and valuable work has received the very highest testimonials, both in Europe and America We quote the following from the American press:—

"Dr. Landolt is one of the clearest writers of the day This little manual will certainly, in its English dress, prove of very great value to students of ophthalmology, and to those general practitioners who have a taste for examining eyes, for it gives instructions on very complicated subjects in a very terse and clear way. It would hardly seem possible to get so great an amount of matter into so small a space as Dr. Landolt has done in this book."—*Cincinnati Lancet and Clinic*, April, 1879.

"The author of this excellent work has succeeded in simplifying the subjects which he has put before the profession to such an extent as to render his book far superior to anything of the kind that has yet appeared in print.

"The plain, easy, and yet scientific manner in which Dr. Landolt presents the various subjects contained in his work is emphatically suggestive of an honest, earnest, astute student, and shows at once that the contents of the volume are the result of the work of a careful and conscientious observer. The book has no scent of scissors or paste pot. Although reference is made to other authors, I believe there is not a single quotation in it.

"The twenty-second lecture is upon examination of the fundus in detail. The special feature of this lecture is the manner in which the optic nerve and its sheaths are described. Nowhere can there be found a cut which so nearly represents the true nature and relations of the optic nerve and its sheaths. I believe that it is unique: at all events, it far excels all other efforts in this direction.

"The book is one that can be recommended to the doctor and student, with the assurance that it will meet every demand. May the author live long and continue his work in the same direction, is the wish of the reviewer."—*Louisville Medical News*, July, 1879.

"This book is a most admirable and complete *exposé* of our means and methods of making a thorough scientific examination of the human eye. Written in the attractive, easy style of lectures, unincumbered by unnecessary mathematical formulas, printed on heavy paper and in large and clear type, translated with care and skill into fluent English, this book will contribute largely toward awakening greater interest for ophthalmology among the reading members of our profession."—*Chicago Medical Journal and Examiner*, August, 1879.

"In the diseases of this organ diagnosis is of prime importance. Accurate diagnosis is impossible except as based on an exhaustive examination. Directions for making such examinations are here given with great explicitness. * * * Many other points of general interest we had marked, but the foregoing must suffice to indicate the character of the work. Two charts are added to the text, exhibiting the various movements of the eyes and their derangements, and the general laws of paralysis of the ocular muscles.

"The book is an excellent one for specialist, practitioner and medical student. Written in good style, thoroughly abreast with modern investigation, broad in its statements and reasonings, it cannot fail to meet with a hearty welcome from all interested in its subject matter."—*The Detroit Lancet*, August, 1879.

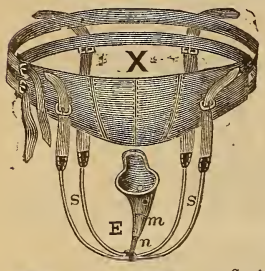
"We often see book notices containing the phrase, "This book supplies a want long felt in the profession." While we do not want to say anything against this phrase as applied to some publications, we will say that there is certainly no book, from the pen of even the ablest medical writers of the age, of which this can more truly be said than of the above volume. There was a want in the profession of just such a work, which is especially of great value to the busy practitioner, who has no time to spend in wading through the many volumes on Diseases of the Eye, in order to learn how to properly examine an eye, and diagnosticate its diseases correctly. It is a system of twenty-four lectures delivered by the author, in which he lays down correct rules for a systematic examination of the eye, so as to guard against errors in diagnosis, which in this branch of medicine are only too frequent. It is admirably written, clear and comprehensive, so that no one can help understanding the meaning of the author, and by following his directions many mistakes will be avoided, which, in as delicate an organ as the eye, would cause its destruction."—*The Southern Practitioner*, May, 1879.

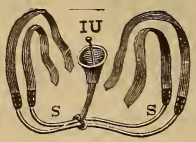
PUBLISHED AND FOR SALE BY

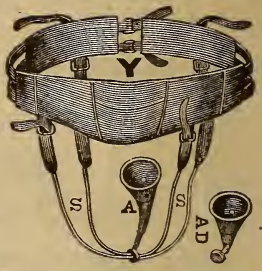
D. G. BRINTON,

No. 115 South Seventh Street, Philadelphia.

STAUFER'S
HARD RUBBER INSTRUMENTS AND PRICE LIST.





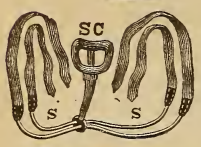


Prices.—Spring Stem Retroversion (E) on belt X, or Y, $8.00; or on Z, $7.00.

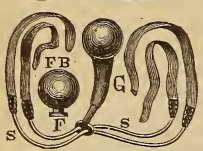
Intra-Uterine Stem Cup (I U).—Price on belt X, or Y, $7.00; on Z, $6.00. The intra-uterine stem cup may be first introduced and the cup turned. The stem has no spring, but joints the cup when in position by lodging in a socket.

Spring Stem Prolapsus and Procidentia cup (A) on belt X, or Y, $7.00; on Z, $6.00.

Spring Stem Anteversion (S C) Spring Stem Globe Top (G). Spring Stem Oblong (H); and Spring Stem Lever (J). Each on X, or Y, $7.00, or on Z, $6.00.



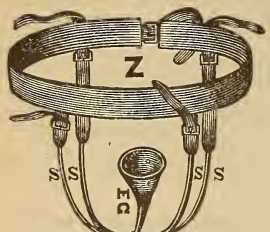
Springs.—The tops of all spring stems unscrew, and a non-corrosive coil spring is placed in tube *m*, Fig. X. The base stem *n*, slides against the spring and arrests any external touch. This together with the pure elastic gums S S, suspends the heretofore displaced uterus on a double elastic motion.



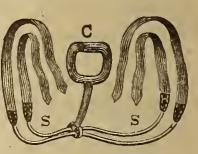
Transformation.—The self-sustaining cup A D, is formed by covering the screw when cup A, is unscrewed. So is also F B, with globe G. They are to be pressed in position at night, in sensitive cases, and stem and bandage laid aside. They have a similar use when contraction of the vagina takes place, before it is safe to suspend the support entirely.

Curve.—All the stems are curved so as the base does not become struck from seating. And the cups even in the *Economy*, moulded oblique to set in the normal axis of the uterus and vagina, as plainly seen in E, Fig. X.

ECONOMY AND PERMANENT STEMS.



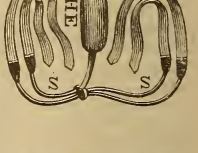
Prices.—E C, on elastic waist belt Z, is a permanent deep stem cup, no spring, but elastic gums S S, at only $4.50. On X, or Y. $5.50. Retroversion E, on Economy stem and belt Z, $6.00; X, or Y. $7.00. Permanent stems Anteversion C; Stem Globe G E; Oblong H E; and I, on Z, $4.50, and on X or Y, each $5.50. These deep leaning cups, if correct in size, correct all prolapsus uteri and procidentia, and also overcome by mere elevation partial anteversion and partial retroversion. Stem Globes and Stem Levers, by alternating the cups, assist the straightening up the uterus in difficult cases. ***Cystocele*** is drawn in by G, H, G E. or H E.



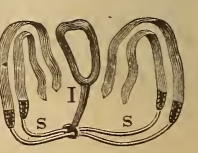
Belts.—X, and Y. have fine satteen, whale bone stay, fronts. X, two elastic back straps and closing on right hip. Y, closes on back and has elastic hip straps. Strict hip measure required. Waist measure for Z. Overlap is allowed here.

Self-Sustaining Globe B.—This is a mere hard rubber shell graded a little less than ⅛ inch from 1 to 2½ inches. It ascends in the vagina by its lightness. A cord attached to a non-corrosive staple for removal; and all the objectionable features of the glass balls are overcome. It is simple and entirely manageable by the patient at will. Harmless and still of more service, especially in the beginning of uterine troubles than any ring or lever. Actual wear does not depreciate them in value. They are always exchangeable at cost, for another style; when found not to answer, by reason of a too heavy uterus; collapsed vagina, or the case of too long standing. No. 10, 1⅞; 11, 2 inches, are the usual sizes used after having had several children. ***Price,*** $1.50 each.

Cup D.—This sustains itself by its brim and suction. Some physicians use it as a common supporter; but it is mostly used to alternate Cup E C; for which purpose it should be selected ⅛ to ¼ inch larger than the E C, in use. ***Price,*** $1.50 each.



Selection.—The correction of a displaced womb and its successful support, depends entirely on the instrument and its proper selection in size and style. Since the elastic support from outside and spring stem within for sensitive cases; this important department in gynecology is rendered simple and within the scope of every family physician. The construction of this series of stem supporters obviates hindrance to seating and all objection to the external protrusion is overcome. The cups are usually selected by giving the full diameter across the top, thus for nullipara, 1¼ to 1⅝; Multipara, 1⅝ to 2, and procidentia. 1⅞ to 2¼ inches and over some times. Stems, longer or shorter than ordinary, are made to order and among the exchange privileges. Stem Globes are numbered—Stem Levers and oblong, are usually designated by small, medium and large.



Description of Cases.—Age of patient, state of catamenia; now and heretofore. If children, miscarriages, and how many? If urine trouble, helplessness in the spine, bed-ridden, &c., whether by accident or unknown cause. If a pessary already worn, its name, size, and result. How displaced; as the touch or speculum reveals.

Exchanges.—All the hard rubber parts in the catalogue are exchanged and interchanged without limit of time. Only needed repair and difference of higher price instruments charged when required for complicated cases.

Obtained through the Medical and Surgical Reporter Office.

MAILED ON RECEIPT OF QUOTATION PRICES. CATALOGUES ON APPLICATION.

Registered COSMOLINE Trade Mark.

Unguentum Petrolei

Prepared by E. F. Houghton & Co. Philadelphia, U.S.A.

Put up in 1, 5, 10, 25, 50, and 100-lb. cans. Samples furnished on application. The post-office laws forbid anything of an oleaginous nature being sent through the mail.

In chemical composition, Cosmoline [Unguentum Petrolei] is an oleaginous hydrocarbon, corresponding to the heavy petroleum oils, and containing a large amount of the paraffines and olefines of the formulæ $C_{16}H_{34}$ and $C_{16}H_{32}$. It contains but a small percentage of the paraffines and olefines, corresponding to the formulæ C_7H_{16} and C_7H_{14}, respectively, and the offensive and irritating properties of the crude oil have been carefully removed. In the process of purification, no acids, alkalies, or other chemicals are employed, and no injurious additions of any kind are made to the natural product. The result is a semi-solid, translucent substance, with a faint odor and unctuous feel.

Cosmoline [Unguentum Petrolei] melts at about 100° Fah. (38° Cent.); and boils at about 625° Fah. (329° Cent.); its specific gravity is about 0.875 at 60° Fah.

As it contains no oxydizable or organic matter capable of change by putrefaction or fermentation, and is absolutely without affinity for moisture, it offers to the profession an admirable unguent, which can never decompose, ferment, or become rancid in any climate or temperature.

291 MADISON AVENUE, NEW YORK, February 26th 1878.

I have examined the preparations of Cosmoline as manufactured by E. F. Houghton & Co., Philadelphia, and believe them well adapted to the purposes for which they are designed. As lubricants, and as the bases of simple or medicated ointments, they have a decided advantage over the fixed oils and fatty substances in ordinary use, in that they do not become rancid, and do not acquire irritating qualities from atmospheric exposure. ALFRED C. POST, M.D., LL.D.,
Emeritus Professor of Clinical Surgery in the University of New York, Visiting Surgeon to Presbyterian Hospital, etc.

PHILADELPHIA, July 10, 1880.

MESSRS. E. F. HOUGHTON & CO.:

I have for a number of years made extensive use of Cosmoline [Unguentum Petrolei] and consider it a most valuable article for surgical purposes. Either as a dressing by itself, or as a vehicle for the application of medicaments, it is greatly superior to lard or other fatty matters, especially by reason of its non-liability to change by time or temperature.

Yours truly,
JOHN H. PACKARD, M.D.
1031 WALNUT ST., PHILADELPHIA.

MESSRS. E. F. HOUGHTON & CO.:

I have used extensively Cosmoline [Unguentum Petrolei] both in Dispensary and private practice, with very great satisfaction. As a vehicle in making ointments it is invaluable, and far superior to lard, for the reason that it will not become rancid or undergo chemical change like the latter, when exposed to the atmosphere. I cannot too highly commend it as an application in various skin diseases.

Yours truly, JOHN V. SHOEMAKER, A.M., M.D.,
Physician to the Pennsylvania Free Dispensary for Skin Diseases

208 WEST 34TH ST., NEW YORK.

MESSRS. E. F. HOUGHTON & CO.:

Gents:—I fully appreciate the value of your Cosmoline, or Unguentum Petrolei, and prescribe it frequently in ointments. Fluid Cosmoline I have used constantly for several years, as a lubricant of urethral sounds. It is the cleanest oil I know of for this purpose.

Yours truly, GEO. HENRY FOX.

PREPARED BY

E. F. HOUGHTON & CO.,

1297-1348 211 S. Front Street, Philadelphia.

TO THE MEDICAL PROFESSION.

LACTOPEPTINE.

We take pleasure in calling the attention of the Profession to LACTOPEPTINE. After a long series of careful experiments, we are able to produce its various components in an absolutely pure state, thus removing all unpleasant odor and taste (also slightly changing the color). We can confidently claim that its digestive properties are largely increased thereby, and can assert without hesitation that it is as perfect a digestive as can be produced.

LACTOPEPTINE is the most important remedial agent ever presented to the Profession for Indigestion, Dyspepsia, Vomiting in Pregnancy, Cholera Infantum, Constipation, and all diseases arising from imperfect nutrition. It contains the five active agents of digestion, viz: Pepsin, Pancreatine, Diastase, or Veg. Ptyalin, Lactic and Hydrochloric Acids, in combination with Sugar of Milk.

FORMULA OF LACTOPEPTINE.

Sugar of Milk	40 ounces.	Veg. Ptyalin or Diastase	4 drachms.
Pepsin	8 ounces.	Lactic Acid	5 fl. drachms.
Pancreatine	6 ounces.	Hydrochloric Acid	5 fl. drachms.

LACTOPEPTINE is sold entirely by Physicians' Prescriptions, and its almost universal adoption by physicians is the strongest guarantee we can give that its therapeutic value has been most thoroughly established.

The undersigned having tested LACTOPEPTINE, recommend it to the profession.

For Consumption and Wasting Diseases.

HYDROLEINE

Has been proved of the highest value in CONSUMPTION and all WASTING DISEASES, invariably producing IMMEDIATE INCREASE in FLESH and WEIGHT.

FORMULA OF HYDROLEINE.

Each dose of two teaspoonfuls, equal to 120 drops, contains:

Pure Oil,	**80 m. (drops.)**	**Soda,**	**1-3 grain.**
Distilled Water,	**35 m.**	**Boric Acid,**	**1-4 "**
Soluble Pancreatin,	**5 grains.**	**Hyocholic Acid,**	**1-20 "**

DOSE.—Two teaspoonfuls alone, or mixed with twice the quantity of soft water, to be taken thrice daily, with meals.

The principles upon which this discovery is based have been described in a treatise on "THE DIGESTION AND ASSIMILATION OF FATS IN THE HUMAN BODY," by H. C. BARTLETT, PH.D., F.C.S., and the experiments which were made, together with cases illustrating the effect of Hydrated Oil in practice, are concisely stated in a treatise on "CONSUMPTION AND WASTING DISEASES," by G. OVEREND DREWRY, M.D.

In these treatises the Chemistry and Physiology of the Digestion of the Fats and Oils is made clear, not only by the description of a large number of experiments scientifically conducted, but by cases in which the deductions are most fully borne out by the results.

☞ *Copies of these valuable works will be sent free, on application, to all who mention THE MEDICAL AND SURGICAL REPORTER.*

HYDRATED OIL,

HYDROLEINE,

WATER AND OIL,

May be described as partially digested oil, which will nourish and produce increase in weight in those cases where oils or fats not so treated are difficult or impossible to digest. In CONSUMPTION and other WASTING DISEASES the most prominent symptom is EMACIATION, of which the first is the starvation of the fatty tissues of the body, including the brain and nerves. This tendency to emaciation and loss of weight is arrested by the regular use of HYDROLEINE, which may be discontinued when the usual average weight has been permanently regained.

The ordinary so-called emulsions of Cod-liver oil and other fats, WHETHER PANCREATIZED OR NOT, merely remain in the form of a coarse mechanical mixture for a short time after agitation. The digestion of oil having in no sense been artificially produced, still devolves upon those functional powers the deficiency of which is the most prominent symptom in these cases.

HYDROLEINE is not a patent medicine or a secret preparation; the formula is on every bottle. Can be taken by the most delicate stomach; is immediately assimilated.

The permanence and perfection of the emulsion, and the extreme solubility of the HYDRATED OIL, solely prepared and sold by us under the name of HYDROLEINE, is shown by its retaining its cream-like condition as long as the purest Cod-liver Oil will retain its sweetness. Unlike the preparations mentioned, or simple Cod-liver Oil, it produces no unpleasant eructation or sense of nausea, and should be taken in such very much smaller doses, according to the directions, as will insure its complete assimilation; this, at the same time, renders its use economical in the highest degree.

To brain-workers of all classes, Hydrated Oil is invaluable, supplying as it does the true brain food.

Economical in use—certain in result Tonic—Digestive and Highly Nutritive.

NEW PRINCIPLE FOR THE ASSIMILATION FAT.

MANACA.

(FRANCISCEA UNIFLORA.)

The nature of the reports received from our special representative sent to explore the materia medica of Brazil, led us to originally undertake the introduction of this drug to scientific notice in the United States; and it has been received with so much appreciation by the medical profession, that we feel justified in calling special attention to it as an agent well worthy of investigation.

Manaca is highly regarded by the Brazilians as an ANTISYPHILITIC, and as a remedy in SCROFULA and RHEUMATISM. The whole plant, but especially the root, of which we are preparing a fluid extract, is said to powerfully excite the lymphatic system, eliminating morbid matters by the skin and kidneys. In small doses it appears to act as a resolvent; in larger, purgative, diuretic, and emmenagogue. In large doses it is an acrid poison.

We are furthering the investigation of the drug by our "Working Bulletin"* system, and samples have been sent, for test, to the hospitals and dispensaries throughout the country, and to the profession at large, to secure the results of its use in hospital and private practice. We shall be most happy to receive reports from the medical profession, with regard to the therapeutic value of Manaca, favorable or otherwise. That it is a powerful drug there can be no manner of doubt, and it is so well spoken of that its investigation promises a valuable addition to our materia medica.

Preparation—Extractum Manacæ Fluidum. Dose—5 to 20 minims.

PARKE, DAVIS & CO.,

MANUFACTURING CHEMISTS, DETROIT, MICH., U. S. A.

JAMAICA DOGWOOD.

(PISCIDIA ERYTHRINA.)

The extensive investigations of the physiological actions of this valuable narcotic agent, which we have been so instrumental in bringing to the notice of the medical profession in the United States, in the hands of that distinguished investigator, Professor Ott, would seem to point to a special position as a therapeutic agent of peculiar value. Dr. Ott says that Jamaica Dogwood, like morphia, produces sleep, and that the sleep produced by Piscidia resembles in feeling that produced by bromide of potassium. In his experiment on himself, he took half a teaspoonful of the fluid extract, and soon became drowsy. The pupil was dilated. In about three hours the effect passed off, and he felt as well as ever, having no nausea, or the peculiar shaking up of the nerves that ensues after opium. From his numerous experiments with regard to the physiological action of this drug, Dr. Ott is of the opinion that in Jamaica Dogwood we possess a powerful narcotic agent, without the disagreeable after effects of opium. Like morphia, it stimulates the vaso-motor centre, but it does not contract the pupil; and though it possesses, with belladonna, the power of dilating the pupil, it differs from it materially in its action. It cannot, therefore, be classed with either of these drugs, and must be given a special place of its own.

It is hardly to be supposed that in all cases Jamaica Dogwood will act in the pleasant manner noted in the report of Dr. Ott. It is well known that nearly all drugs, under certain conditions of the system, produce untoward, or side effects, and disagreeable sequelæ. This is true with regard to opium, bromide of potassium, chloral, belladonna, and the rest of the list of narcotics. It is, therefore, a question to be solved by clinical experience, which drug produces the best effect with the least amount of untoward effect or unpleasant sequelæ. We therefore call the attention of the profession to Jamaica Dogwood, that its true value may be ascertained in this respect. A "Working Bulletin,"* containing the results of the investigations of Ott and others, has been sent out by our scientific department, and will be forwarded to the address of any one who will apply for the same.

Preparation—Extractum Piscidiæ Erythrinæ Fluidum. Dose—1½ to 2 fluidrachms.

PARKE, DAVIS & CO.,

MANUFACTURING CHEMISTS, DETROIT, MICH., U. S. A.

* WORKING BULLETIN.—A pamphlet containing the botanical description of *each plant*, with chemical, microscopical physiological, therapeutical investigations, etc., etc. Sent free, by mail, on application.

An experience of more than a quarter of a century convinces us that sugar, properly applied, is the only correct coating for a pill.

Physicians should be careful to specify Warner & Co., when prescribing or ordering.

Special attention is called to the following selected Recipes prepared for Physicians' Prescriptions.

PIL: PHOSPHORI COMP: (WARNER & CO.) ℞. Phosphori, - - 1-100 gr. Ext. Nuc. Vom. - ¼ gr.

THERAPEUTICS.—As a nerve tonic and stimulant, this form of pill is well adapted for such nervous disorders as are associated with impaired nutrition and spinal debility, increasing the appetite and stimulating digestion.

The practical value of Phosphorus as a therapeutic agent, and its applicability to the cure of disease, and especially in those varied disordered conditions consequent upon OVERWORK, which are characteristic of modern civilization.

Pil. Phosphori Comp. may be taken, one or two pills three times daily, after eating.

Price, per 100, $1.50.

PIL: IODOFORM ET FERRI. (WARNER & CO.) ℞. Iodoform, - - 1 gr. Ferri Redacti, - 1¼ gr.

THERAPEUTICS.—A powerful general tonic and alterative, valuable as a remedy in Anæmia, Scrofula, Neuralgia, Chlorosis, Rheumatism, etc.

Pil. Iodoform et Ferri may be given in doses of from one to two pills, as occasion may require.

Price, per 100, $2.00.

PIL: DIGESTIVA. (WARNER & CO.) ℞. Pepsin Conc't, 1 gr. Gingerine, 1-16 gr. Pv. Nuc. Vom., ¼ gr. Sulphur, ⅛ gr.

THERAPEUTICS.—Useful in relieving various forms of Dyspepsia and Indigestion, and of permanent benefit in cases of enfeebled digestion, where the gastric juices are not properly secreted. It is also a gentle laxative and excellent dinner pill, may be taken one after dinner, or one before each meal, three times daily.

Price, per 100, 75 cts.

PIL: CALCIUM SULPHIDE. (WARNER & CO.) 1-10, ¼, ½ & 1 gr. each.

THERAPEUTICS.—Extremely useful in the treatment of acne, scrofula and cutaneous diseases.

Sulphide of Calcium is usually administered in doses of from 1-10 to ¼ grain four times daily, gradually increasing the dose to one grain six times daily, or according to the progress or severity of the case.

Price, per 100, 1-10 gr. .50; 1-4 gr. .60; 1-2 gr. .75; 1 gr. $1.00.

WARNER & CO.'S PILLS MAY BE OBTAINED FROM ALL DRUGGISTS, OR BY MAIL, ON RECEIPT OF PRICE.

Apollinaris

"THE QUEEN OF TABLE WATERS."—BRITISH MEDICAL JOURNAL.

ANNUAL SALE, 10 MILLIONS.

There is a popular but entirely mistaken notion that ice is in its nature pure and innocuous; it is, on the contrary, very apt to be impure and noxious, and may easily contain the germs of fatal disease.

Apollinaris Water, by its absolute purity, affords complete guarantee against the dangers of zymotic disease incidental to ordinary drinking-water. Its sparkling and refreshing character renders quite unnecessary the introduction of ice into it. There is, of course, no objection to icing Apollinaris, as champagne is iced, by the external application of cold until its temperature is brought down, in hot weather, to a pleasant coolness. So treated, it is a beverage as refreshing and agreeable as it is pure and wholesome.

EARL SPENCER, K.G., the President of the International Medical Exhibition, at the great Medical Congress in London, recently, referred to Apollinaris, in his opening address, as a typical beverage approved by the Faculty. This approval is ratified by the unerring tastes of the cultivated populations of the world. The desiderata of original purity laid down by the RIGHT HON. LYON PLAYFAIR as the indispensable conditions for water, which can never be freed from sewage pollutions when once they have been allowed to pass into it, are amply fulfilled by Apollinaris.

SANITARY RECORD, March, 1882.

MATHEY-CAYLUS' GLUTEN

SILVER

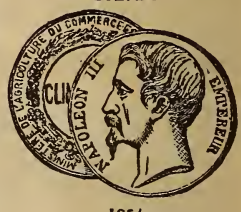
1854

CAPSULES

OF

PURE COPAIBA AND OTHER MEDICINES.

SILVER



1854

Adapted and recommended for the cure of recent or chronic Gleets, Fluor Albus, etc., etc.

The MATHEY-CAYLUS' CAPSULES, *coated with gluten*, present the most perfect mode for administering Copaiba, Cubebs, Norway Tar, Turpentine, and other remedies, the disagreeable odor and taste of which are often a hindrance to their use. This mode of preparing capsules, which has been approved by the Academy of Medicine, has been recommended in their clinical lectures by eminent Professors in the hospitals of Paris, as well as in those of New York and London.

By the first physicians of the hospitals of Paris, London, and New York.

SPECIAL ADVANTAGES OF MATHEY-CAYLUS' GLUTEN CAPSULES.—Being formed of thin, transparent, and readily assimilated coating, they so cover and disguise the medicine to be given, that it can be taken without disgust, but with ease. In this respect, they differ widely from the gelatine capsules, which have a hard, thick coating, which swells beyond measure, in the stomach, are hard to be swallowed, and what is of great importance, they create disturbance in the digestive functions.

The special advantage of the coating of gluten consists in the fact that, notwithstanding its extra thinness, and although it softens under the action of the gastric juice, it can pass the stomach without breaking, and only in the intestines is the medicinal matter liberated; this accounts for the fact that Mathey-Caylus' Capsules never cause the nausea, eructations, and dyspeptic symptoms, which are complained of by many persons using other preparations.

Finally, their regular ovoid form, which is so favorable to swallowing, their pleasant appearance, which dispels all disgust, and the advantage of being entirely free from taste and smell, recommend the use of these capsules even to the most delicate persons.

Thankful to the Medical Profession for the liberal patronage heretofore bestowed upon us, we hope that they will continue their favors, and we are convinced that they will never have any reason to regret the generous welcome they have given to our preparations.

MATHEY-CAYLUS' CAPSULES are never sold, except in bottles having the following inscription printed in the glass: MATHEY-CAYLUS A PARIS. And each bottle contains 64 capsules, making them the cheapest capsules in the market.

The following different kinds of Mathey-Caylus' Gluten Capsules are now offered:

COPAIBA AND TANNIC ACID,
COPAIBA AND S. N. OF BISMUTH,
COPAIBA AND CATECHU,
COPAIBA AND MAGNESIA,
COPAIBA, CUBEBS AND ALUM,
COPAIBA, CUBEBS AND RHATANY,
COPAIBA AND RHATANY,
COPAIBA AND CITRATE OF IRON,

NEW HYPODERMIC SYRINGES.

FIG. 4.—NO. 2.

These cuts (two-thirds the actual size) represent a New Hypodermic Syringe of our Manufacture. With the exception of the needles, it is of German Silver, a material chosen as possessing, next to steel, the greatest rigidity and durability, while free from liability to oxydation. The barrel is formed by a process peculiar to ourselves, securing uniformity of calibre without soldered joint or seam. It is plated inside and outside with nickel. The piston is packed in the double parachute form, with leather prepared expressly for the purpose. It will be found to retain its elasticity, to operate smoothly, to resist all tendency of fluid to pass above, as of air below it. A nicely-engraved scale upon the piston-rod indicates minims. thirty being the capacity of the syringe.

Syringes Nos. 2, 3, and 4 have also a screw thread upon the piston-rod, and a traverse nut, thereby favoring the utmost nicety in the graduation of doses.

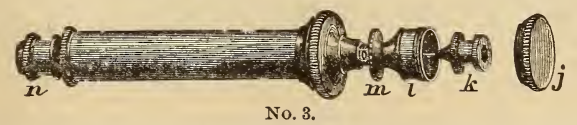
No. 3, Compact, has hollow piston-rod to receive one needle, also a protecting cover and fluid retainer; it may be carried in the Pocket Instrument or Vial Case, or without any case.

No. 4, Compact, is like No. 3, with the addition of a second needle, carried upon the syringe in the usual place, protected by a metal shield.

Nos. 1 and 2 are put up in neat morocco-covered case, with vial.

Two sizes of needles are furnished with each instrument, Nos. 1, 2, and 4; one only with No 3. They are of refined steel, carefully tempered, and thoroughly plated with gold; they are of small diameter and large relative calibre, sharpened to such an angle as will offer least resistance to penetration, and therefore cause least pain. At the point of union with the socket they are reinforced with an outer covering of German silver, thereby overcoming the tendency to become broken at this place. They are connected with the barrels by a screw thread.

Prices: No. 1, *$3.50* No. 2, *$4.00* Postage, .03
" No. 3, *2.50* No. 4, *3.50* " .02



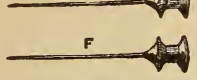
No. 3.

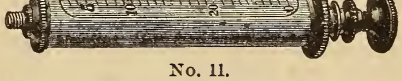
These Syringes are so thoroughly and strongly made as to be free from the annoying accidents common to most Hypodermic Syringes; and we believe that, for convenience, durability, and nicety of construction, they have no superior.

OTHER HYPODERMIC SYRINGES.

		Postage
No. 7, glass-barrel, graduation engraved on barrel, with screw nut on piston, nickel-plated mountings, two best steel gilt needles, in neat case	*$3.00*	.02
No. 9, glass, graduation engraved and numbered on piston-rod, with screw nut, best steel gilt needles, in neat case	*3.00*	.02
No. 7 or No. 9, with two steel unplated needles either	*2.50*	.02
No. 10, glass, Luer's (French), graduation as No. 9, one gold needle and two steel needles, silver mountings, neat velvet-lined morocco case	*12.00*	.02

No. 11, glass cylinder, fenestrated, nickel plated metal mounting (see cut).





No. 11.

		Postage.
As represented in the cut, the glass cylinder is encased in a metal mounting, fenestrated to show the graduations for minims. The instrument may readily be taken apart for cleaning, and for those who prefer glass, is recommended for its non-liability to breakage. Price, with two best steel gilt needles, in a neat case	*$3.50*	.02

☞ *Any of the above will be sent by return mail on receipt of Price and Postage.* ☜

HYPODERMIC SYRINGES OF ALL KINDS PROMPTLY REPAIRED.

Our new *Illustrated Catalogue of Surgical Instruments,* also a new Pamphlet on Inhalation of Atomized Liquids, by distinguished medical authority, with many valuable formulas, will be forwarded, postpaid, on application.

Buffalo Lithia Water.

FOR THE GOUTY OR URIC ACID DIATHESIS.

Dr. J. Marion Sims, of New York, says of this water, in general terms:

"I have used in my practice the Buffalo Lithia Water, Spring No. 2, for two years past, and have, in many cases, found it highly efficacious."

Dr. Wm. A. Hammond, of New York, Surgeon General U. S. Army (retired), Professor of Diseases of the Mind and Nervous System in the University of New York, etc.

"I have for some time made use of the Buffalo Lithia Water in cases of affections of the Nervous System, complicated with Bright's Disease of the Kidneys, or with a Gouty Diathesis. The results have been eminently satisfactory. Lithia has for many years been a favorite remedy with me in like cases, but the Buffalo Water certainly acts better than any extemporaneous solution of the lithia salts, and is, moreover, better borne by the stomach."

Dr. Hunter McGuire, Richmond, Va., late Prof. Surgery, Medical College of Virginia; Vice President of the International Med. Congress; Vice President American Med. Association.

"Buffalo Lithia Water, Spring No. 2, as an Alkaline Diuretic, is invaluable. In Gravel dependent upon the Uric Acid Diathesis, and, indeed, in diseases generally of that diathesis, it is a remedy of extraordinary potency. I have prescribed it in cases of Rheumatic Gout which had resisted the ordinary remedies, with wonderfully good results. I have also used it in my own case, being a great sufferer from this malady, and have derived more benefit from it than from any other remedy."

Dr. Alexander B. Mott, of New York, Professor Surgery, Bellevue Hospital Medical College; Surgeon, Bellevue Hospital.

"I have made sufficient use of the Buffalo Lithia Water to be satisfied that it posseses very valuable therapeutic properties. In the Gouty Diatheses, Chronic Inflammations of the Bladder, and other diseases affecting the Urinary Organs, it may be relied on to give the most satisfactory results."

Dr. Harvey L. Byrd, of Baltimore, President and Prof. of Obstetrics and Diseases of Women and Children, in the Baltimore Med. College; formerly Prof. of Practical Medicine, etc.

"I have witnessed the best results from the action of the Buffalo Lithia Water, Spring No. 2, in Chronic Gout, Rheumatic Gout, Rheumatism, Gravel and Stone in the Bladder, and I do not hesitate to express the opinion that in all diseases depending upon or having their origin in the Uric Acid Diathesis, it is unsurpassed, if indeed it is equaled by any water thus far known to the profession."

Dr. E. J. Doering, of Chicago, Ill., late Surgeon U. S. Marine Hospital Service.

"In my experience the Buffalo Lithia Water is an efficient remedy in the treatment of diseases depending on the Uric Acid Diathesis. I have prescribed it quite extensively in Catarrhal Affections of the Bladder, with excellent results."

Dr. William F. Carrington, of Virginia, Surgeon U. S. Navy (retired), Surgeon Confederate States Navy.

"The Buffalo Lithia Water, Spring No. 2, has signally demonstrated its remedial power in Gout, Rheumatism, Uric Acid Gravel, and other maladies dependent upon the Uric Acid Diathesis. It not only eliminates from the blood the deleterious agent before it crystallizes, but dissolves it in the form of calculi, at least to a size that renders its passage along the ureters and urethra comparatively easy."

Dr. J. S. Wellford, Prof. of Diseases of Women and Children, Medical College of Virginia.

"I have paid a great deal of attention to Urinary Troubles, and have frequently and freely prescribed the Lithia Water in their treatment, with the very best results. In all the various forms of the Uric Acid Diathesis, whether as well-formed Gravel or Gout, or in the milder forms of Gouty Dyspepsia or Nettle-rash, in their varieties, I know of no mineral water which I consider at all equal to that of Spring No. 2. In many Skin Diseases of old age, dependent on the Uric Acid Diathesis, such as Eczema, etc., this water acts most beneficially."

1297-1348eow

Water in Cases of Six Gallons, at the Springs, $5.00

THOMAS F. GOODE, Proprietor,

BUFFALO LITHIA SPRINGS, VIRGINIA.

MURDOCK LIQUID FOOD CO., Boston,

THE ONLY MANUFACTURERS OF

RAW FOOD EXTRACTS IN THE WORLD.

It can be retained by the weakest stomach, when all other food extracts, and even water, is rejected.

Nutritious food, if raw, condensed, and free from insoluble matter, will cure chronic diseases, as it will make blood faster than all preparations or food, and new blood will cleanse the system.

MURDOCK'S LIQUID FOOD is made from Beef, Mutton and Fruits; contains corpuscles; is 12½ per cent. soluble albumen, and free from insoluble matter, drugs, minerals, salts and acids, and can be retained by the stomach when so weak as to refuse food.

Ask your Druggists, or send to us, for Essays read before the American Medical Association, at Richmond, Va., May 6, 1881, on the value of Raw Food Extracts, by Geo. R. Shepherd, of Hartford, Conn., and other Essays and Testimonials from Medical Journals and Physicians that have used Liquid Food, in cases of Consumption, Scrofula, Nervous and General Debility, Dyspepsia, acute and chronic, Constipation, Diphtheria, Intemperance, Cholera Infantum, Infantile Diarrhœa, Post partum Hemorrhage, Purpura Hemorrhagica with Waxy Liver, Pelvic Cellulitis, Malarial and other Fevers, Chronic Strumous Arthritis, Sclerosis of the Spinal Cord, Senile Gangrene, Perinephritic Abscess, and other diseases of malnutrition. No cases of Cholera Infantum have occurred where it has been used daily, and no lives have been lost from Cholera Infantum where it has been prescribed by a physician. Excellent for Eczema, Diabetes, Rheumatism and Neuralgia.

At the request of any physician who has not tried our Extracts, and would like to, we will deliver sample bottles to the express in Boston, Philadelphia, or Pittsburg. *If any physician has a Chronic case that will not yield to his treatment, of any disease, we will furnish, at his request, sufficient Liquid Food to satisfy him that Liquid Food will make blood faster than all preparations or food known, and that new blood will cleanse the system of disease. Our claims are that it is a Raw Extract, condensed many fold, free of insoluble matter, and contains corpuscles. It can be retained when the stomach is so weak that it will refuse water.* We are induced to do this, knowing that our Extracts are saving life, and that an increased use of them, which will follow after a trial of them, will be the means of saving more lives daily. (*We ask no testimonials of results obtained.*) Raw Extracts are available where cooked ones are not, or if available contain only one-third as much nourishment.

Liquid Food is in general use at all Hospitals, Infant and Insane Asylums, and Washingtonian Homes, U. S. Navy Hospitals, and by all the physicians that have tried it.

If not kept by your Druggist, can be obtained in any of the commercial cities. In Philadelphia, by Johnston, Holloway & Co., Boericke & Tafel; in Pittsburgh, by A. Kelly & Co; in Baltimore, by Thomsen & Wirth; or you can order direct and we will pay express. 1 oz., 15 cents; 6 oz., 55 cents; 12 oz., $1.00.

It is the only food that will relieve the Consumptive from Hunger.

MURDOCK LIQUID FOOD CO.,

BOSTON. 1297-1348

Boudault's Pepsine.

IN POWDER, also WINE, ELIXIR, SYRUP, PILLS, AND LOZENGES OF PEPSINE.

Since the introduction of Pepsine by Boudault, in 1854, **BOUDAULT'S PEPSINE HAS BEEN, AND IS STILL CONSIDERED, THE MOST RELIABLE,** as is attested by the awards it has received at the Exhibitions of 1867, 1868, 1872, 1873, and in 1876 at the Centennial Exposition in Philadelphia.

IT IS THE ONLY PEPSINE USED IN THE PARIS HOSPITALS.

Careful tests will enable any one to satisfy himself that **BOUDAULT'S PEPSINE HAS A DIGESTIVE POWER AT LEAST DOUBLE** that of the best Pepsines in the market, and that it is really the cheapest.

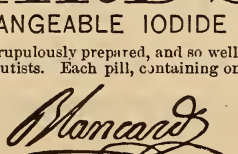
It is Sold in 1 ounce, 8 ounce, and 16 ounce Bottles.

Beware of so-called French Pepsines bearing fictitious names, and prescribe Boudault's only.

BLANCARD'S PILLS

OF UNCHANGEABLE IODIDE OF IRON.

Blancard's Pills of Iodide of Iron are so scrupulously prepared, and so well made, that none other have acquired a so well deserved favor among physicians and pharmaceutists. Each pill, containing one grain of proto-iodide of iron, is covered with finely pulverized iron, and covered with balsam of tolu. Dose, two to six pills a day. The genuine have a *reactive silver seal* attached to the lower part of the cork, and a green label on the wrapper, bearing the fac-simile of the signature of



Pharmacien, No. 40 Rue Bonaparte, Paris.

Without which none are genuine.

BEWARE OF IMITATIONS. 1297-1348-eow

E. FOUGERA & CO., AGENTS, NEW YORK.

For Consumption and Wasting Diseases.

HYDROLEINE

Has been proved of the highest value in CONSUMPTION and all WASTING DISEASES, invariably producing IMMEDIATE INCREASE in FLESH and WEIGHT.

FORMULA OF HYDROLEINE.

Each dose of two teaspoonfuls, equal to 120 drops, contains:

Pure Oil,	**80 m. (drops.)**	**Soda,**	**1-3 grain.**
Distilled Water,	**35 m.**	**Boric Acid,**	**1-4 "**
Soluble Pancreatin,	**5 grains.**	**Hyocholic Acid,**	**1-20 "**

DOSE.—Two teaspoonfuls alone, or mixed with twice the quantity of soft water, to be taken thrice daily, with meals.

The principles upon which this discovery is based have been described in a treatise on "THE DIGESTION AND ASSIMILATION OF FATS IN THE HUMAN BODY," by H. C. BARTLETT, PH.D., F.C.S., and the experiments which were made, together with cases illustrating the effect of Hydrated Oil in practice, are concisely stated in a treatise on "CONSUMPTION AND WASTING DISEASES," by G. OVEREND DREWRY, M.D.

In these treatises the Chemistry and Physiology of the Digestion of the Fats and Oils is made clear, not only by the description of a large number of experiments scientifically conducted, but by cases in which the deductions are most fully borne out by the results.

☞ *Copies of these valuable works will be sent free, on application, to all who mention THE MEDICAL AND SURGICAL REPORTER.*

HYDRATED OIL,

HYDROLEINE,

WATER AND OIL,

May be described as partially digested oil, which will nourish and produce increase in weight in those cases where oils or fats not so treated are difficult or impossible to digest. In CONSUMPTION and other WASTING DISEASES the most prominent symptom is EMACIATION, of which the first is the starvation of the fatty tissues of the body, including the brain and nerves. This tendency to emaciation and loss of weight is arrested by the regular use of HYDROLEINE, which may be discontinued when the usual average weight has been permanently regained.

The ordinary so-called emulsions of Cod-liver oil and other fats, WHETHER PANCREATIZED OR NOT, merely remain in the form of a coarse mechanical mixture for a short time after agitation. The digestion of oil having in no sense been artificially produced, still devolves upon those functional powers the deficiency of which is the most prominent symptom in these cases.

HYDROLEINE is not a patent medicine or a secret preparation; the formula is on every bottle. Can be taken by the most delicate stomach; is immediately assimilated.

The permanence and perfection of the emulsion, and the extreme solubility of the HYDRATED OIL, solely prepared and sold by us under the name of HYDROLEINE, is shown by its retaining its cream-like condition as long as the purest Cod-liver Oil will retain its sweetness. Unlike the preparations mentioned, or simple Cod-liver Oil, it produces no unpleasant eructation or sense of nausea, and should be taken in such very much smaller doses, according to the directions, as will insure its complete assimilation; this, at the same time, renders its use economical in the highest degree.

To brain-workers of all classes Hydrated Oil is invaluable, supplying as it does the true brain food.

Economical in use—certain in result Tonic—Digestive and Highly Nutritive.

TANRET'S PELLETIERINE.

For the TREATMENT of TAPE-WORM (Tænia Solium).

This new Tænifuge, the Active Alkaloid of Pomegranate Bark, has of late come into extensive use in France, for the treatment of Tape-worm (Tænia Solium). The results of numerous experiments with it at the Marine Hospitals of Toulon, St. Mandrier, etc., and in the Hospitals of Paris, St. Antoine, La Charité, Neckar, Beaujon, etc., have all been most satisfactory. Doctor Dujardin Beaumetz, Member of the Academy of Medicine, and Prof. Laboulbene, in their report to the Society of Therapeutics, have given it their unqualified approval, after the most searching experiments. This preparation is pleasant to administer, and if certain preliminaries are observed success will be insured.

PELLETIERINE is prepared by Mr. CHAS. TANRET, Pharmacien de First Class, 64 Rue Basse du Rempart, Paris.

GENERAL AGENTS, E. FOUGERA & CO., 30 N. William St., N. Y.

McINTOSH'S COMBINED

Galvanic AND Faradic Battery.

THIS CELEBRATED BATTERY COMBINES BOTH THE GALVANIC AND FARADIC CURRENT,

Which can be used separately or combined. Any strength and intensity desired can be obtained for use in Electro-therapeutics. THIS BATTERY is constructed on an IMPROVED PLAN, as follows: The zinc and carbon plates are arranged in couples, securely clamped to hard rubber plates, with thumb screws. These screws are also used for binding posts. All the connections are positive. The cells are made in sections of six, of hard rubber, with hard rubber drip cup. The following points of excellence render our Batteries superior to others:

1. They combine the only Portable Galvanic and Faradic Battery in one case.

2. They weigh one-half less than other Batteries of the same number of cells.

3. The cells are made in sections of six, of one solid piece of hard, vulcanized rubber; by this arrangement they can be emptied, cleaned and filled as easily and quickly as one cell, and will not crack, break or leak.
4. A hard rubber drip cup is placed by the side of each section of cells, to receive the zinc and carbon plates when removed from them. By this arrangement we avoid the use of absorbent materials and soiling the Battery
5. The Hydrostat is perfect. The rubber plates which hold the elements project over on one side enough to cover the cells when the zinc and carbon plates are placed in the drip cups. The under side of this projection is covered with thick, soft rubber, which is securely clamped to the cells sections, and makes them water tight.
6. This is the only Battery in which the zinc and carbon plates can be kept clean by simply rinsing them.
7. A zinc or carbon plate can be removed by simply loosening a binding post; and all parts of the Battery can be duplicated, as like parts are made exactly alike. We will be pleased to send circulars and our illustrated catalogue, giving full information, price, etc., free, upon application.

McINTOSH GALVANIC AND FARADIC BATTERY CO.,

1281-1332 **Nos. 192 and 194 Jackson Street, CHICAGO, ILL.**

BEEF PEPTONE,

IN TRANSPARENT GLASSY SCALES,

Containing only the animal or azotized matter of the Beef. Each ounce is equal to 16 ounces of raw beef, easily soluble, and still faster in hot water.

This Beef Peptone is digested from tender, juicy Beef, by the aid of the *Crystal Pepsin,* of my manufacture (Jensen's Crystal Pepsin). Unlike the various BEEF EXTRACTS, this preparation contains all the nutritive constituents of the Beef, in a thoroughly digested state, ready for absorption into the system, while the Beef Extracts are entirely devoid of the chief elements of nutrition, such as the fibrinous, gelatinous and albuminous portions of the Beef, they only consisting of the concentrated saline constituents, with barely a trace of animal matter to keep its consistence. The difficulty so long experienced by the profession throughout the world, in preparing a PEPTONE entirely free from those chemical agents necessary for its manufacture, so as to render it fit for use, is hereby demonstrated to be successfully overcome, as it contains no foreign matter, and will stand the most severely scrutinizing test as to perfectness, also possessing flavor of the Beef, and so palatable as to render it highly agreeable.

Put up in bottles holding One ounce, Eight ounces, and one Pound.

Kept by the Wholesale and Dispensing Druggists in general.

DEPOT—L. WOLFF'S Pharmacy,

Northwest corner Twelfth and Chestnut Streets.

JENSEN'S CRYSTAL PEPSIN,

IN ARTIFICIAL CRYSTALS,

Strictly inodorous and tasteless, and perfectly soluble in water without acid.

THIS PEPSIN, now so popular with the profession, has created an impetus in the consumption of the same and physicians of the highest standing, who before the introduction of this active PEPSIN, with good reason, entirely abandoned the use of PEPSIN, are now the most eager in prescribing JENSEN'S CRYSTAL PEPSIN, whenever it is indicated, and since the knowledge of its great solvent power (gr. j. of it will dissolve the boiled whites from two to three eggs) has been established even among those susceptible to be great doubters it has caused itself to be utilized in many novel ways, by the thinking profession; for instance, in substituting morphia, chloral, etc., as a hypnotic, relieving gastric troubles where the above remedies have been prescribed, creating morphine and chloral habits In removing diphtheritic patches it is successfully used combined with water, glycerine, and muriatic acid, and the same composition, diluted with more water, as a spray in bronchial troubles, dissolving muco-purulent matter, as well as a spray for same in catarrhal affections.

THIS PEPSIN

Has also been used with success in dissolving and evacuating coagulated blood in the bladder, dispensing with surgical operations in such cases. Many other novel applications could be mentioned, if not in want of space. It is found to be FORTY times stronger than saccharated pepsin. One to three grains is an active dose.

KEPT BY ALL DRUGGISTS.

The above preparations are only manufactured and put up by

CARL L. JENSEN, M.D., PH.G.,

865 North 26th Street, Philadelphia, Pa.

No other Wholesale Agents for this Pepsin are longer engaged, than the Wholesale Druggists throughout the United States.

Instructor in Clinical Medicine.

A. S. PARKER, PH.C.,
Instructor in Pharmacy.

A. M. HAWES, M.D.,
Demonstrator of Anatomy.

This College has for its *collegiate year* two sessions.

Regular Session commences Wednesday, September 7th, 1881, and closes March 1st, 1882.

Recitation Term (optional) commences March 15th, 1882, and closes June 14th, 1882.

Graded Course of three terms, of six months each.

PLAN OF INSTRUCTION.

By *Lectures*, *Recitations* and *Clinics*, together with *practical work* in the Anatomical, Physiological, Chemical and Pharmaceutical Laboratories.

Clinics are held *daily*.

Clinical Work in Hospitals and Dispensaries is given to the Senior Class (see Clinics), in *small sections*, under the charge of a *Clinical Teacher*, in all the departments of Medicine and Surgery.

Three Large Hospitals and *two Dispensaries* afford unlimited material for instruction.

ADMISSION.—Candidates for admission are required to pass a preliminary examination, unless satisfactory documentary evidence can be presented, that is equivalent to the standard adopted. (See Catalogue.)

FEES.

Regular Session.—Matriculation, $5.00; Lecture Tickets, $50.00; Hospital Tickets, $10.00
Examination (final), $25.00.

Recitation Term.—$10.00 for those who have attended Regular Session; all others, $25.00, $15.00 of which will be applied on the next Regular Term.

Board and Rooms can be obtained for $3.00 to $5.00 per week, the average being $4.00.

For Catalogue and other particulars, address

H. O. WALKER, M.D., Secretary,
177 Griswold Street, Detroit, Mich.

JOHNSTONE'S IMPROVED

ADAPTABLE POROUS FELT SPLINTS.

AHL'S SPLINT MANUFACTURING COMPANY, LIMITED,

123 & 125 South Eleventh Street, PHILADELPHIA, PA.

THE ADAPTABLE POROUS SPLINTS, invented and improved by W. H. JOHNSTONE, have been tested extensively in both civil and military practice for a number of years, and have been endorsed and recommended in the most unqualified manner by the celebrated and distinguished Surgeons of America.

Their *porosity* is a peculiar and a valuable property. While the material is firm and insoluble, it permits readily the passage of air and fluids, so that, on one hand, the heat from the inflamed surface, the perspiration, and the morbid exhalations, are not confined, to the detriment of the patient, *as is the case in every other kind of splint*, but pass off freely; and on the other hand, lotions of cold or warm water, medicated or not with weak alcohol, carbolic acid, arnica, tincture, solutions of the sulphites, etc., can be constantly applied without disturbing the dressings. This, it will readily be seen, is a most invaluable property when the parts are bruised, lacerated, filled with extravasated blood, or erysipelatous, and give these splints a conspicuous advantage over all others.

From FRANK H. HAMILTON, M. D., Professor of Fractures and Dislocations in the Bellevue Hospital Medical College, author of "A Treatise on Fractures and Dislocations," etc.

Having examined carefully *JOHNSTONE'S IMPROVED ADAPTABLE POROUS FELT SPLINTS*, I feel warranted in recommending them to the Profession as superior to all other manufactured splints now in use. They possess all the essential qualities of a good splint having firmness, pliability and lightness.

FRANK H. HAMILTON, M. D.,
Prof. Military Surgery and Fractures and Dislocations, Bellevue Hospital Col.

From PROF. D. HAYES AGNEW, Prof. Surgery, University of Penna.

1611 CHESTNUT STREET, PHILADELPHIA, *February 6th*, 1879.

The Adaptable Felt Splints, formerly known as those of Dr. Ahl, with the improvement now made by W. H. Johnstone, which renders them in every way superior to the former, I regard as very excellent appliances in the treatment of fractures.

D. HAYES AGNEW,
Prof. Surgery, University of Pennsylvania.

Cuts illustrating the different Splints constituting a Complete Set.

SPECIAL NOTICE TO THE PROFESSION AND TRADE.

Our *policy* heretofore in the introduction of JOHNSTONE'S IMPROVED ADAPTABLE POROUS FELT SPLINTS, has been to confine the sales and business negotiations directly to the Doctors themselves, declining in every case to sell our goods through Dealers; we having assured the Profession generally, both through our agents and catalogues, that *JOHNSTONE'S IMPROVED SPLINTS* could only be obtained by subscription.

We wish to announce, that owing to the large demand for our goods and the constant importunity on the part of *Surgeons* everywhere to place our Splints on sale with their Instrument Dealer or Druggist, to afford them greater convenience and facility in obtaining the pieces in duplicate, **we have at last acceded to that request, and hereafter *JOHNSTONE'S CELEBRATED FELT SPLINTS* can be obtained at most dealers in Instruments and Drugs throughout the United States, at the same price which they were heretofore sold, viz:**

A complete set, embracing fifty (50) pieces—twenty-five for adults and twenty-five for children—is thirty ($30) dollars.
Extra or duplicate pieces can always be obtained from your DEALER, at one dollar each.

JOHNSTONE'S CELEBRATED SPINAL JACKET, for Curvatures and Deformities, have met with unparalleled success, and, from their merit, secured the unqualified endorsement and approbation of our celebrated orthopædic specialists, and particular expression of gratitude from the patients who are wearing them. For full information, send for Descriptive Circulars.

Should your Instrument dealer fail to have a supply of our Splints, and decline to carry them in stock, orders sent to us will receive prompt attention.

AHL'S SPLINT MANUFACTURING CO., Limited.
W. H. JOHNSTONE, Manager.

N. B.—If the Instrument Dealers of Philadelphia decline to supply its Physicians with our JOHNSTONE'S FELT SPLINTS on call, they will be furnished and delivered by us to any part of the city, at any time, on receipt of the price, viz.
$1.00 each.

Consulting Physicians.

Prof. Wm. A. Hammond,
Prof. T. Gaillard Thomas,
Dr. Edward C. Spitzka,
Dr. Daniel M. Stimson,
Dr. Edward T. Ely,
Dr. G. H. Wynkoop,
Dr. Andrew H. Smith.

Situated upon a high hill that commands a splendid view of the Hudson and Harlem rivers, Spuyten Duyvil Creek, and the beautiful country for miles around; surrounded by ample grounds and magnificent drives; in easy communication with the city by means of the Sixth and Ninth Avenue Elevated and the Hudson River Railroads; away from the dust, noise, crowding and malaria of the city; with hot and cold water in every room, furnace and grate-fire heating, croquet, horses and carriages, boats and fishing, an excellent *cuisine*, trained nurses and careful medical attendance, it possesses unequaled advantages for the treatment of cases of this kind.

The plan of treatment pursued in the cure of opium, morphine and chloral takers is that of *rapid reduction*, which possesses all the advantages, and none of the dangers of Levenstein's *sudden deprivation*, or the prolonged agony of *gradual reduction*. Each case is studied and treated in accordance with its peculiarities and the idiosyncrasies of the patient, no set plan of treatment being pursued, at the expense of the person's health or comfort.

Our Home, furthermore, offers special facilities for the treatment by *rest, diet, and massage*, according to the plan of Weir Mitchell, of that large class of nervous diseases so commonly met with in ladies suffering from uterine troubles. This plan of treatment has been specially studied, and nurses competent to carry out its provisions in every detail will be furnished. For further particulars, etc., address 1299-1350

Drs. KANE and VITTUM, De Quincey Home, Fort Washington, New York City.

PROCTER'S PEPSIN (SACCHARATED.

This standard article is prepared from *Pepsin*, carefully purified and freed from mucus, and is not a *dried Peptone*. It is inodorous and non-deliquescent, and retains its digestive power indefinitely. It is so well known that extended comment is superfluous. We would, however, call attention to its uniform purity and solubility, which, with extraordinary *digestive power*, commend its use in preference to other less carefully *made* articles. It is tested to the solution of 250 grains of coagulated albumen by 10 grains of Pepsin.

PROCTER'S "PEPSIN FORTIOR," (Stronger or Concentrated Pepsin.) A powerful form of Pepsin, eligible when minimum dose is desirable. It is of the same exceptional purity with our *Procter's Pepsin*, while the strength is far greater. Dose one to three grains. 1275-1308, 1y.

Manufactured by **WM. PROCTER, Jr., CO.,** S. W. Cor. 9th and Lombard Sts., Phila.

DR. McINTOSH'S ELECTRIC OR GALVANIC BELT.

This Belt is a perfect Galvanic Battery, composed of sixteen cells, placed in pockets on a belt. Each cell is made of hard vulcanized rubber, lined with copper, which constitutes the negative plate. The rubber coating perfectly insulates each cell. The positive plates are of zinc, wrapped in a porous material to absorb the exciting fluid, preventing contact with the copper, and permitting the current to pass from the copper to the zinc. The cells are charged without wetting the belt.

A current selector is so arranged that one or more cells can be used at pleasure. The electrodes are covered similar to ordinary battery electrodes, and connected with the cells by connecting cords. By this arrangement, a current from the belt can be applied to any part of the body. Physicians who have used this belt in their practice do not hesitate to recommend it to the profession.

Our pamphlet on "Medical Electricity," containing a full description of the belt and diseases, with manner of treatment, sent free on application. Address

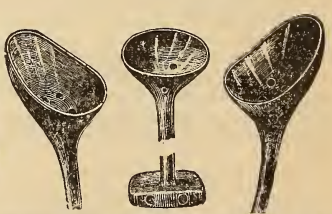
DR. McINTOSH'S
NATURAL UTERINE SUPPORTER.



No instrument has ever been placed before the medical profession which has given such universal satisfaction. The combination is such that the physician is able to meet every indication of Uterine Displacements. Falling Womb, Anteversion, Retroversion and Flexions are overcome by this instrument, where others fail. This is proven by the fact that, since its introduction to the profession it has come into more general use than all other instruments combined.

Among the many reasons which recommend this Supporter to the physician is its self-adjusting qualities. The physician, after applying it, need have no fear that he will be called in haste to remove or readjust it, as is often the case with rings and various pessaries held in position by pressure against the vaginal wall, as the patient can remove it at will, and replace it without assistance.

The Abdominal Supporter is a broad morocco leather belt, with elastic straps to buckle around the hips, with concave front, so shaped as to hold up the abdomen. The Uterine Support is a cup and stem, made of highly polished hard rubber, very light and durable, shaped to fit the neck of the womb, with openings for the secretions to pass out, as shown by the cuts. Cups are made with extended lips, to correct flexions and versions of the womb. The cup and stem is suspended to the belt by two soft elastic rubber tubes, which are fastened to the front of the belt by simple loops, pass down through the stem of the cup and up to the back of the belt. These soft rubber tubes being elastic, adapt themselves to all the varying positions of the body, and perform the service of the ligaments of the womb. The instrument is very comfortable to the patient, can be removed or replaced by her at will, can be worn at all times, will not interfere with nature's necessities, will not corrode, and is lighter than metal. It will answer for all cases of Anteversion, Retroversions, or any Flexions of the womb, and is used by the leading physicians with never-failing success, even in the most difficult cases.

Our Reduced Prices are to Physicians, $6.00; to Patients, $10.00.

Instruments sent by mail, at our risk, on receipt of price, or by Express, C. O. D., with the Express charges for returning the money added.

☞ CAUTION.—Owing to the great sale and popularity of our instrument various and base imitations are sold by unscrupulous parties. In order to get the genuine, it is best to order direct from us.

DR. McINTOSH'S NATURAL UTERINE SUPPORTER CO.,
192 Jackson Street, Chicago, Ill.

Our valuable pamphlet, "Some Practical Facts about Displacements of the Womb," will be sent you free on application. 1281-1332

Put up in 1, 5, 10, 25, 50, and 100-lb. cans. Samples furnished on application. The post-office laws forbid anything of an oleaginous nature being sent through the mail.

In chemical composition, Cosmoline [Unguentum Petrolei] is an oleaginous hydrocarbon, corresponding to the heavy petroleum oils, and containing a large amount of the paraffines and olefines of the formulæ $C_{16}H_{34}$ and $C_{16}H_{32}$. It contains but a small percentage of the paraffines and olefines corresponding to the formulæ C_7H_{16} and C_7H_{14}, respectively, and the offensive and irritating properties of the crude oil have been carefully removed. In the process of purification, no acids, alkalies, or other chemicals are employed, and no injurious additions of any kind are made to the natural product. The result is a semi-solid, translucent substance, with a faint odor and unctuous feel.

Cosmoline [Unguentum Petrolei] melts at about 100° Fah. (38° Cent.); and boils at about 625° Fah. (329° Cent.); its specific gravity is about 0.875 at 60° Fah.

As it contains no oxydizable or organic matter capable of change by putrefaction or fermentation, and is absolutely without affinity for moisture, it offers to the profession an admirable unguent, which can never decompose, ferment, or become rancid in any climate or temperature.

291 MADISON AVENUE, NEW YORK, February 26th 1878.

I have examined the preparations of Cosmoline as manufactured by E. F. Houghton & Co., Philadelphia, and believe them well adapted to the purposes for which they are designed. As lubricants, and as the bases of simple or medicated ointments, they have a decided advantage over the fixed oils and fatty substances in ordinary use, in that they do not become rancid, and do not acquire irritating qualities from atmospheric exposure. ALFRED C. POST, M.D., LL.D.,
Emeritus Professor of Clinical Surgery in the University of New York, Visiting Surgeon to Presbyterian Hospital, etc.

PHILADELPHIA, July 10, 1880.

MESSRS. E. F. HOUGHTON & CO.:

I have for a number of years made extensive use of Cosmoline [Unguentum Petrolei] and consider it a most valuable article for surgical purposes. Either as a dressing by itself, or as a vehicle for the application of medicaments, it is greatly superior to lard or other fatty matters, especially by reason of its non-liability to change by time or temperature.

Yours truly,
JOHN H. PACKARD, M.D.
1031 WALNUT ST., PHILADELPHIA.

MESSRS. E. F. HOUGHTON & CO.:

I have used extensively Cosmoline [Unguentum Petrolei] both in Dispensary and private practice, with very great satisfaction. As a vehicle in making ointments it is invaluable, and far superior to lard, for the reason that it will not become rancid or undergo chemical change like the latter, when exposed to the atmosphere. I cannot too highly commend it as an application in various skin diseases.

Yours truly, JOHN V. SHOEMAKER, A.M., M.D.,
Physician to the Pennsylvania Free Dispensary for Skin Diseases

208 WEST 34TH ST., NEW YORK.

MESSRS. E. F. HOUGHTON & CO.:

Gents:—I fully appreciate the value of your Cosmoline, or Unguentum Petrolei, and prescribe it frequently in ointments. Fluid Cosmoline I have used constantly for several years, as a lubricant of urethral sounds. It is the cleanest oil I know of for this purpose.

Yours truly, GEO. HENRY FOX.

MALTINE,

A CONCENTRATED EXTRACT OF

MALTED WHEAT, OATS, AND BARLEY.

In its preparation the temperature employed does not exceed 150 deg. Fahr., thereby retaining all the nutritive and digestive agents unimpaired. Extracts of Malt are made from Barley alone, by the German process, which directs that the mash be heated to 212 deg. Fahr., thereby coagulating the Albuminoids, and almost wholly destroying the starch digestive principle, Diastase.

LIST OF MALTINE PREPARATIONS.

MALTINE (Plain).

MALTO-VIBURNIN.

MEDICAL ENDORSEMENTS.

We append, *by permission*, a few names of the many prominent Members of the Medical Profession who are prescribing our Maltine Preparations :

K. BAUDUY, M. D., St. Louis, Mo.,
Physician to St. Vincent's Insane Asylum, and Prof. Nervous Diseases and Clinical Medicine, Missouri Medical College.

M. PORTER, A. M., M. D., St. Louis, Mo.

S. DUNSTER, M. D., Ann Harbor, Mich.,
Prof. Obs. and Dis. Women and Children University and in Dartmouth College.

THOMAS H. ANDREWS, M.D., Philadelphia, Pa.,
Demonstrator of Anatomy, Jefferson Medical College.

F. HAMMEL, M. D., Philadelphia, Pa.,
Supt. Hospital of the University of Penn.

R. PALMER, M. D., Louisville, Ky.,
Prof. of Physiology and Personal Diagnosis, University of Louisville.

HUNTER McGUIRE, M. D., Richmond, Va.,
Prof. of Surgery, Med. Col. of Virginia.

A. MARDEN, M. D., Milwaukee, Wis.,
Supt. and Physician, Milwaukee County Hospital.

P. YANDELL, M. D., Louisville, Ky.,
Prof. of Clinical Medicine and Diseases of Children, University, Louisville.

JOHN. [illegible] CARRABEE, M. D., Louisville, Ky.,
Professor of Materia Medica and Therapeutics, and Clinical Lecturer on Diseases of Children in the Hospital College of Medicine.

A. OGDEN DOREMUS, M.D., LL.D., New York,
Professor of Chemistry and Toxicology, Bellevue Hospital Medical College; Professor of Chemistry and Physics, College of the City of New York.

WALTER S. HAINES, M. D., Chicago, Ill.,
Professor of Chemistry and Toxicology, Rush Medical College, Chicago.

C. F. INGALLS, A. M., M. D., Chicago, Ill.,
Clinical Professor of Diseases of Chest and Throat, Woman's Medical College.

H. F. BIGGAR, M. D.,
Prof. of Surgical and Medical Diseases of Women, Homœopathic Hospital College, Cleveland, Ohio.

DR. DOBELL, London, England,
Consulting Physician to Royal Hospital for Diseases of the Chest.

DR. T. F. GRIMSDALE, Liverpool, England,
Consulting Physician, Ladies' Charity and Lying-in-Hospital.

WM. ROBERTS, M.D., F.R.C.P., F.R.S., Manchester, England,
Prof. of Clinical Medicine, Owens' College School of Medicine: Physician Manchester Royal Infirmary and Lunatic Hospital.

J. C. THOROWGOOD, M.D., F.R.C.P., London, England,
Physician City of London Hospital for Chest Diseases; Physician West London Hospital.

W. C. PLAYFAIR, M. D., F.R.C.P., London, England,
Prof. of Obstetric Medicine in King's College, and Physician for the Diseases of Women and Children to King's College Hospital.

W. H. WALSHE, M.D., F.R.C.P., Brompton, England,
Consulting Physician Consumption Hospital, Brompton, and to the University College Hospital.

A. WYNN WILLIAMS, M.D., M.R.C.S., London, England,
Physician Samaritan Free Hospital for Diseases of Women and Children.

A. C. MACRAE, M.D., Calcutta, Ind.,
Dep. Insp.-Gen. Hosp. Indian Service, late Pres. Surg., Calcutta.

EDWARD SHOPPEE, M. D., L. R. C. P., M.R.C.S., London, England.

LENNOX BROWN, M.R.C.S., London, England,
Senior Surgeon, Central Throat and Ear Hospital.

J. CARRICK MURRAY, M. D., Newcastle-on-Tyne, England,
Physician to the N. C. H. for Diseases of Chest.

J. A. GRANT, D., F.R.C.S., Ottawa, Canada.

A. A. MEUNIER, M.D., Montreal, Canada,
Prof. Victoria University.

MALTINE is prescribed by the most eminent members of the Medical Profession in the United States, Great Britain, India, China and the English Colonies, and is largely used for patients at the principal Hospitals in preference to any of the Extracts of Malt.

We will furnish gratuitously a one pound bottle of any of the Maltine Preparations to Physicians who will pay the express charges. Send for our 28 page Pamphlet on Maltine for further particulars. Address,

SUGAR-COATED PILLS.

Our list of Sugar-coated Pills of the United States and British Pharmacopœias comprises most of the officinal and popular formulæ known to the profession, to which we have added several new and valuable combinations. Our pills are made entirely by hand, from the purest materials, and are sugar and gelatine-coated by the latest and most approved processes. For solubility, regularity of shape, and beauty of finish, they are excelled by none.

IMPORTANT.—Our pills being coated while the mass is yet soft, will remain so for years. To be convinced of their extraordinary solubility, it is only necessary to open a few of them—for instance, quinine, cinchonidia, or blue pills, all of which are usually found in the market, hard and insoluble. Note also the rapidity with which the coating is dissolved in the saliva.

GELATINE PHARMACEUTICALS.

One of the greatest improvements of modern pharmacy is the use of Gelatine in various forms to render medicines more sightly, and to disguise their nauseous taste. This has given origin to the Gelatine-coated Pill—a full line of which, of similar formulæ to our sugar-coated pills, will be found in our list—and also to the Hard and the Soft Gelatine Capsules. We are dispensing Hard Capsules, empty and filled. The Soft Elastic Capsules, however, are, from the nature of their formation, always filled before leaving our laboratory. These Capsules are so soft and elastic that their walls may be brought into juxtaposition, and yet they will regain their original shape and size when the pressure is removed. This property renders them very easy of deglutition, and they will slip down like an oyster or the yolk of an egg, though the largest of them have a capacity of half a fluidounce.
